SOLVED PAPER 2021 (II)

PAPER I : Mathematics

1. If $x^2 + x + 1 = 0$, then what is the value of $x^{199} + x^{200} + x^{201}$?

- (a) -1 (b) 0
(c) 1 (d) 3

⊙ (b) Given that,

$$\begin{aligned}x^2 + x + 1 &= 0 && \dots(i) \\ \therefore x^{199} + x^{200} + x^{201} &= x^{199}(1 + x + x^2) \\ &= x^{199} \times 0 \\ &= 0\end{aligned}$$

2. If x, y, z are in GP, then which of the following is/are correct?

1. $\ln(3x), \ln(3y), \ln(3z)$ are in AP.
2. $xyz + \ln(x), xyz + \ln(y), xyz + \ln(z)$ are in HP.

Select the correct answer using the code given below.

- (a) 1 only
(b) 2 only
(c) Both 1 and 2
(d) Neither 1 nor 2

⊙ (a) Given that x, y, z are in GP.

$$\Rightarrow y^2 = xz \quad \dots(i)$$

(1) If $\log(3x), \log(3y), \log(3z)$ are in AP

$$\text{Then, } 2 \log(3y) = \log(3x) + \log(3z)$$

$$9y^2 = (9xz)$$

$$9y^2 = (9xz)$$

$$y^2 = xz$$

Hence, statement (1) is correct.

Hence, we can say if x, y, z are in GP.

$\therefore \log x, \log y, \log z$ are in AP.

$\Rightarrow xyz + \log x, xyz + \log y, xyz + \log z$ are in AP.

Hence, Statement (2) is wrong.

\therefore Option (a) is correct.

3. If $\log_{10} 2, \log_{10}(2^x - 1), \log_{10}(2^x + 3)$ are in AP, then what is x equal to?

- (a) 0 (b) 1
(c) $\log_2 5$ (d) $\log_5 2$

⊙ (c) Given that, $\log_{10} 2, \log_{10}(2^x - 1),$

$\log_{10}(2^x + 3)$ are in AP.

$$\therefore 2 \log_{10}(2^x - 1) = \log_{10} 2 + \log_{10}(2^x + 3)$$

$$\log_{10}(2^x - 1)^2 = \log_{10} 2(2^x + 3)$$

$$\Rightarrow 2^{2x} + 1 - 2 \cdot 2^x = 2 \cdot 2^x + 6$$

$$\Rightarrow (2^x)^2 - 4(2^x) - 5 = 0$$

Let $2^x = y$

$$\Rightarrow y^2 - 4y - 5 = 0$$

$$(y - 5)(y + 1) = 0$$

$$\Rightarrow y = 5 \text{ or } y = -1$$

(Ignore because 2^x cannot be negative)

$$\Rightarrow y = 5 \Rightarrow 2^x = 5$$

$$x = \log_2 5$$

Hence, option (c) is correct.

4. Let $S = \{2, 3, 4, 5, 6, 7, 9\}$. How many different 3-digit numbers (with all digits different) from S can be made which are less than 500?

- (a) 30 (b) 49
(c) 90 (d) 147

⊙ (c) Let $S = \{2, 3, 4, 5, 6, 7, 9\}$

$$\Rightarrow n(S) = 7$$

Three digit number less than

$$500 = \begin{array}{|c|c|c|} \hline \square & \square & \square \\ \hline \downarrow & \downarrow & \downarrow \\ 3 & 6 & 5 \\ \hline \end{array}$$

$$= 3 \times 6 \times 5 = 90$$

\therefore Option (c) is correct.

Note Hundreds digit can be filled with 3 choices that are 2, 3, 4.

Similarly, tens digit can be filled with 6 ways and unit digit can be filled with 5 ways.

5. If $p = (1111 \dots \text{ up to } n \text{ digits})$, then what is the value of $9p^2 + p$?

- (a) $10^n p$ (b) $2p \cdot 10^n$
(c) $10^n p - 1$ (d) $10^n p + 1$

⊙ (a) Given that,

$$p = (1111 \dots \text{ upto } n \text{ digits})$$

$$= 1 + 10 + 10^2 + \dots + 10^{n-1}$$

$$= \frac{1(10^n - 1)}{10 - 1}$$

$$\left[\because a + ar + ar^2 + \dots + ar^{n-1} = \frac{a(r^n - 1)}{r - 1} \right]$$

$$\Rightarrow p = \frac{10^n - 1}{9}$$

$$\Rightarrow 9p = 10^n - 1$$

$$\Rightarrow 9p + 1 = 10^n$$

$$\Rightarrow 9p^2 + p = 10^n \cdot p$$

\therefore Hence, option (a) is correct.

6. The quadratic equation $3x^2 - (k^2 + 5k)x + 3k^2 - 5k = 0$ has real roots of equal magnitude and opposite sign. Which one of the following is correct?

(a) $0 < k < \frac{5}{3}$

(b) $0 < k < \frac{3}{5}$ only

(c) $\frac{3}{5} < k < \frac{5}{3}$

(d) No such value of k exists.

⊙ (d) Since, we know that if a quadratic equation $ax^2 + bx + c = 0$ has real roots of equal magnitude and opposite sign.

$$\text{Then, } b = 0 \quad \dots(i)$$

$$\text{and product of roots} < 0 \quad \dots(ii)$$

In the given quadratic equation,
 $3x^2 - (k^2 - 5k)x + 3k^2 - 5k = 0$
 $a = 3, b = -(k^2 + 5k), c = 3k^2 - 5k$

By Eq. (i), $b = 0$
 $\Rightarrow -(k^2 + 5k) = 0$
 $\Rightarrow k(k + 5) = 0$
 $\therefore k = 0, -5$

By Eq. (ii), Product of roots < 0

$$\frac{c}{a} < 0$$

$$\Rightarrow \frac{3k^2 - 5k}{3} < 0$$

$$\Rightarrow k(3k - 5) < 0$$

$$\therefore 0 < k < \frac{5}{3}$$

From (i) and (ii) no such values of k exists.
 Hence, option (d) is correct.

7. If $a_n = n(n!)$, then what is $a_1 + a_2 + a_3 + \dots + a_{10}$ equal to?

- (a) $10! - 1$ (b) $11! + 1$
 (c) $10! + 1$ (d) $11! - 1$

⊙ (d) Given, $a_n = n(n!)$
 $= (n + 1 - 1)(n!)$
 $= (n + 1)n! - n!$
 $= (n + 1)! - n!$
 $\therefore a_1 = 2! - 1!$
 $a_2 = 3! - 2!$
 $\dots \dots \dots$
 $a_{10} = 11! - 10!$
 $\therefore a_1 + a_2 + a_3 + \dots + a_{10}$
 $= 2! + 1! + 3! - 2! + 4! - 3! + \dots + 11! - 10!$
 $= 11! - 1!$
 $= 11! - 1$
 \therefore Option (d) is correct.

8. If p and q are the non-zero roots of the equation $x^2 + px + q = 0$, then how many possible values can q have?

- (a) Nil (b) One
 (c) Two (d) Three

⊙ (b) Given quadratic equation
 $x^2 + px + q = 0$
 and roots are p and q (non zero)
 \therefore Sum of roots = $-\frac{\text{coefficient of } x}{\text{coefficient of } x^2}$
 $p + q = -p \dots(i)$
 \therefore Product of roots = $\frac{\text{constant term}}{\text{coefficient of } x^2}$
 $pq = q \dots(ii)$
 $\Rightarrow pq - q = 0$
 $q(p - 1) = 0$
 $\therefore q \neq 0 \Rightarrow p - 1 = 0$
 $p = 1$
 From Eq. (i)
 $p + q = -p$

$$q = -2p = -2(1)$$

$$q = -2$$

\therefore Option (b) is correct.

9. If $\Delta = \begin{vmatrix} a & b & c \\ d & e & f \\ g & h & i \end{vmatrix}$

then what is

$$\begin{vmatrix} 3d + 5g & 4a + 7g & 6g \\ 3e + 5h & 4b + 7h & 6h \\ 3f + 5i & 4c + 7i & 6i \end{vmatrix} \text{ equal to?}$$

- (a) Δ (b) 7Δ
 (c) 72Δ (d) -72Δ

⊙ (d) Given, $\Delta = \begin{vmatrix} a & b & c \\ d & e & f \\ g & h & i \end{vmatrix}$

$$= \begin{vmatrix} 3d + 5g & 4a + 7g & 6g \\ 3e + 5h & 4b + 7h & 6h \\ 3f + 5i & 4c + 7i & 6i \end{vmatrix}$$

$$= 6 \begin{vmatrix} 3d + 5g & 4a + 7g & g \\ 3e + 5h & 4b + 7h & h \\ 3f + 5i & 4c + 7i & i \end{vmatrix}$$

By $C_1 \rightarrow C_1 - 5C_3, C_2 \rightarrow C_2 - 7C_3$

$$= 6 \begin{vmatrix} 3d & 4a & g \\ 3e & 4b & h \\ 3f & 4c & i \end{vmatrix}$$

$$= 6 \times 3 \times 4 \begin{vmatrix} d & a & g \\ e & b & h \\ f & c & i \end{vmatrix} \text{ By } C_2 \leftrightarrow C_1$$

$$= -72 \begin{vmatrix} a & d & g \\ b & e & h \\ c & f & i \end{vmatrix} \text{ By } R \leftrightarrow C$$

$$= -72 \begin{vmatrix} a & b & c \\ d & e & f \\ g & h & i \end{vmatrix} = -72\Delta$$

Hence, option (d) is correct.

10. If $\frac{1}{b+c}, \frac{1}{c+a}, \frac{1}{a+b}$ are in HP, then

which of the following is/are correct?
 1. a, b, c are in AP
 2. $(b+c)^2, (c+a)^2, (a+b)^2$ are in GP.
 Select the correct answer using the code given below.

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) Given that,
 $\frac{1}{b+c}, \frac{1}{c+a}, \frac{1}{a+b}$ are in HP.
 $\Rightarrow b+c, c+a, a+b$ are in AP.
 $\Rightarrow (a+b+c) - (b+c), (a+b+c) - (c+a), (a+b+c) - (a+b)$ are in AP.
 $\Rightarrow a, b, c$ are in AP.

2. From 1; a, b, c are in AP.

$$\therefore b = a + d, c = a + 2d$$

where, d is common difference.

$$\therefore (b+c)^2 = (a+d+a+2d)^2 = (2a+3d)^2$$

$$(c+a)^4 = (a+2d+a)^4 = (2a+2d)^4$$

$$(a+b)^2 = (a+a+d)^2 = (2a+d)^2$$

Here, $(c+a)^4 = (b+c)^2 \cdot (a+b)^2$
 So, $(b+c)^2, (c+a)^2, (a+b)^2$ are not in G.P.
 Hence, option (a) is correct.

11. If $A = \begin{bmatrix} 1 & a \\ 0 & 1 \end{bmatrix}$,

where $a \in \mathbb{N}$, then what is $A^{100} - A^{50} - 2A^{25}$ equal to?

- (a) $-2I$ (b) $-I$
 (c) $2I$ (d) I

where I is the identity matrix.

⊙ (a) $A = \begin{bmatrix} 1 & a \\ 0 & 1 \end{bmatrix} a \in \mathbb{N}$

The sequence for given matrix A is

$$A^n = \begin{bmatrix} 1 & na \\ 0 & 1 \end{bmatrix}$$

$$\therefore A^{100} - A^{50} - 2A^{25} = \begin{bmatrix} 1 & 100a \\ 0 & 1 \end{bmatrix} - \begin{bmatrix} 1 & 50a \\ 0 & 1 \end{bmatrix} - 2 \begin{bmatrix} 1 & 25a \\ 0 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 1-1-2 & 100a-50a-50a \\ 0-0-0 & 1-1-2 \end{bmatrix}$$

$$= \begin{bmatrix} -2 & 0 \\ 0 & -2 \end{bmatrix} = -2I$$

Hence, option (a) is correct.

12. If $\begin{vmatrix} a & -b & a-b-c \\ -a & b & -a+b-c \\ -a & -b & -a-b+c \end{vmatrix} - kabc = 0$

($a \neq 0, b \neq 0, c \neq 0$) then what is the value of k ?

- (a) -4 (b) -2
 (c) 2 (d) 4

⊙ (a) Given that,

$$\begin{vmatrix} a & -b & a-b-c \\ -a & b & -a+b-c \\ -a & -b & -a-b+c \end{vmatrix} - kabc = 0$$

($a \neq 0, b \neq 0, c \neq 0$)

$$R_1 \rightarrow R_1 + R_2$$

$$\begin{vmatrix} 0 & 0 & -2c \\ -a & b & -a+b-c \\ -a & -b & -a-b+c \end{vmatrix} - kabc = 0$$

$$-2c[(-a)(-b) - (-a)b] - kabc = 0$$

$$-2c(2ab) - kabc = 0$$

$$-kabc = 4abc$$

$$\Rightarrow k = -4$$

Hence, option (a) is correct.

13. What is $\sum_{n=1}^{8n+7} i^n$ equal to,

where $i = \sqrt{-1}$

- (a) -1 (b) 1
(c) i (d) -i

⊙ (a) Let $S = \sum_{n=1}^{8n+7} i^n$

$$\begin{aligned} S &= i + i^2 + i^3 + \dots + i^{8n+7} \\ &= i \left[\frac{(i)^{8n+7} - 1}{i - 1} \right] = i \left[\frac{i^{4(2n+1)+3} - 1}{i - 1} \right] \\ &= i \left(\frac{i^3 - 1}{i - 1} \right) \quad [\because i^{4n+r} = i^r] \\ &= i \left[\frac{-i - 1}{i - 1} \right] = \frac{-i^2 - i}{i - 1} \\ &= \frac{1 - i}{i - 1} = -1 \end{aligned}$$

14. If $z = x + iy$, where $i = \sqrt{-1}$, then what does the equation

$$z\bar{z} + |z|^2 + 4(z + \bar{z}) - 48 = 0$$

represent?

- (a) Straight line
(b) Parabola
(c) Circle
(d) Pair of straight lines

⊙ (c) Given, $z = x + iy$

$$\therefore \bar{z} = x - iy$$

$$\therefore z + \bar{z} = 2x$$

$$\text{and } |z|^2 = x^2 + y^2$$

$$\therefore z\bar{z} + |z|^2 + 4(z + \bar{z}) - 48 = 0$$

$$(x + iy)(x - iy) + x^2 + y^2 + 4(2x) - 48 = 0$$

$$x^2 + y^2 + x^2 + y^2 + 8x - 48 = 0$$

$$2x^2 + 2y^2 + 8x - 48 = 0$$

$$x^2 + y^2 + 4x - 24 = 0$$

which represents circle.

Hence, option (c) is correct.

15. Which one of the following is a square root of $2a + 2\sqrt{a^2 + b^2}$,

where $a, b \in \mathbb{R}$?

- (a) $\sqrt{a + ib} + \sqrt{a - ib}$
(b) $\sqrt{a + ib} - \sqrt{a - ib}$
(c) $2a + ib$
(d) $2a - ib$, where $i = \sqrt{-1}$

⊙ (a) $2a + 2\sqrt{a^2 + b^2}$

$$= 2a + ib - ib + 2\sqrt{a^2 - i^2b^2}$$

$$= (a + ib) + (a - ib)$$

$$+ 2\sqrt{(a + ib)(a - ib)}$$

$$= (\sqrt{a + ib} + \sqrt{a - ib})^2$$

Hence, square root of

$$2a + 2\sqrt{a^2 + b^2} = \sqrt{a + ib} + \sqrt{a - ib}$$

16. If $\sin\theta$ and $\cos\theta$ are the roots of the equation $ax^2 + bx + c = 0$, then which one of the following is correct?

- (a) $a^2 + b^2 - 2ac = 0$
(b) $-a^2 + b^2 + 2ac = 0$
(c) $a^2 - b^2 + 2ac = 0$
(d) $a^2 + b^2 + 2ac = 0$

⊙ (c) Given, equation $ax^2 + bx + c = 0 \dots (i)$

\therefore Roots are $\sin\theta$ and $\cos\theta$

$$\therefore \sin\theta + \cos\theta = -\frac{b}{a}$$

$$\text{and } \sin\theta \cdot \cos\theta = \frac{c}{a}$$

On squaring both sides, we get

$$\sin^2\theta + \cos^2\theta + 2\sin\theta\cos\theta = \frac{b^2}{a^2}$$

$$1 + 2\frac{c}{a} = \frac{b^2}{a^2}$$

$$a(a + 2c) = b^2$$

$$\Rightarrow a^2 - b^2 + 2ac = 0$$

\therefore Option (c) is correct.

17. If $C(n, 4)$, $C(n, 5)$ and $C(n, 6)$ are in AP, then what is the value of n ?

- (a) 7 (b) 8 (c) 9 (d) 10

⊙ (a) ${}^nC_4 \cdot {}^nC_5$ and nC_6 are in AP.

$$\Rightarrow 2 \cdot {}^nC_5 = {}^nC_4 + {}^nC_6$$

$$\frac{2n!}{5!(n-5)!} = \frac{n!}{4!(n-4)!} + \frac{n!}{6!(n-6)!}$$

$$\frac{2(n!)}{5(4!)(n-5)(n-6)!}$$

$$= \frac{n!}{4!(n-6)!} \left[\frac{1}{(n-4)(n-5)} + \frac{1}{6 \times 5} \right]$$

$$\frac{2}{5(n-5)} = \frac{1}{(n-4)(n-5)} + \frac{1}{30}$$

$$\frac{2n - 8 - 5}{5(n^2 - 9n + 20)} = \frac{1}{30}$$

$$30(2n - 13) = 5n^2 - 45n + 100$$

$$5n^2 - 105n + 490 = 0$$

$$n^2 - 21n + 98 = 0$$

$$(n - 14)(n - 7) = 0$$

$$n = 14 \text{ or } n = 7$$

\therefore Option (a) is correct.

18. How many 4-letter words (with or without meaning) containing two vowels can be constructed using only the letters (without repetition) of the word 'LUCKNOW'?

- (a) 240 (b) 200
(c) 150 (d) 120

⊙ (a) In LUCKNOW, there are 2 vowels and 5 consonants.

$$\therefore 4 \text{ letter words} = {}^5C_2 \cdot {}^2C_2 \cdot 4!$$

$$= 10 \times 1 \times 24 = 240$$

\therefore Option (a) is correct.

19. Suppose 20 distinct points are placed randomly on a circle. Which of the following statements is/are correct?

- The number of straight lines that can be drawn by joining any two of these points is 380.
- The number of triangles that can be drawn by joining any three of these points is 1140.

Select the correct answer using the code given below.

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (b) Given, that there are 20 distinct points on a circle and we have to draw a straight line by joining any two of these points.

Hence, number of straight lines

$$= {}^{20}C_2 = \frac{20 \times 19}{2} = 190$$

\therefore Statement (1) is wrong.

and Number of triangle

$$= {}^{20}C_3 = \frac{20 \times 19 \times 18}{1 \times 2 \times 3} = 1140$$

\therefore Statement (2) is correct.

Hence, option (b) is correct.

20. How many terms are there in the

$$\text{expansion of } \left(\frac{a^2}{b^2} + \frac{b^2}{a^2} + 2 \right)^{21}$$

where $a \neq 0, b \neq 0$?

- (a) 21 (b) 22
(c) 42 (d) 43

⊙ (d) $\left(\frac{a^2}{b^2} + \frac{b^2}{a^2} + 2 \right)^{21}$

$$\Rightarrow \left[\left(\frac{a}{b} + \frac{b}{a} \right)^2 + 1 \right]^{21} = \left(\frac{a}{b} + \frac{b}{a} \right)^{42}$$

Since, we know that number of terms in the expansion of $(a + b)^n = n + 1$

Hence, total number of terms

$$= 42 + 1 = 43$$

\therefore Option (d) is correct.

21. For what values of k is the system of equations $2k^2x + 3y - 1 = 0$, $7x - 2y + 3 = 0$, $6kx + y + 1 = 0$ consistent?

- (a) $\frac{3 \pm \sqrt{11}}{10}$ (b) $\frac{21 \pm \sqrt{161}}{10}$
(c) $\frac{3 \pm \sqrt{7}}{10}$ (d) $\frac{4 \pm \sqrt{11}}{10}$

⊙ (b) Given equations,

$$2k^2x + 3y - 1 = 0$$

$$7x - 2y + 3 = 0$$

$$6kx + y + 1 = 0$$

For consistency, determinant formed by the equations

$$\begin{vmatrix} 2k^2 & 3 & -1 \\ 7 & -2 & 3 \\ 6k & 1 & 1 \end{vmatrix} = 0$$

$$2k^2(-2-3) - 3(7-18k) - 1(7+12k) = 0$$

$$-10k^2 - 21 + 54k - 7 - 12k = 0$$

$$-10k^2 - 42k - 28 = 0$$

$$5k^2 - 21k + 14 = 0$$

$$k = \frac{21 \pm \sqrt{441 - 280}}{10}$$

$$k = \frac{21 \pm \sqrt{161}}{10}$$

Hence, option (b) is correct.

22. The inverse of a matrix A is given

$$\text{by } \begin{bmatrix} -2 & 1 \\ 3 & -1 \\ 2 & 2 \end{bmatrix}$$

What is A equal to?

$$(a) \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} \quad (b) \begin{bmatrix} 1 & -2 \\ -3 & 4 \end{bmatrix}$$

$$(c) \begin{bmatrix} 1 & 2 \\ 3 & -4 \end{bmatrix} \quad (d) \begin{bmatrix} -1 & 2 \\ 3 & 4 \end{bmatrix}$$

$$\textcircled{>} (a) A = \begin{bmatrix} -2 & 1 \\ 3 & -1 \\ 2 & 2 \end{bmatrix}$$

$$\therefore |A| = (-2) \left(-\frac{1}{2} \right) - \frac{3}{2} = -\frac{1}{2} \neq 0$$

$$A_{11} = -\frac{1}{2}, A_{12} = -\frac{3}{2}$$

$$A_{21} = -1, A_{22} = -2$$

$$\therefore \text{adj } A = \begin{bmatrix} -\frac{1}{2} & -1 \\ -\frac{3}{2} & -2 \end{bmatrix}$$

$$\therefore A^{-1} = \frac{1}{|A|} \text{adj } A = \frac{1}{-\frac{1}{2}} \begin{bmatrix} -\frac{1}{2} & -1 \\ -\frac{3}{2} & -2 \end{bmatrix}$$

$$= 2 \begin{bmatrix} \frac{1}{2} & 1 \\ \frac{3}{2} & 2 \end{bmatrix} = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$$

Hence, option (a) is correct.

23. What is the period of the function $f(x) = \ln(2 + \sin^2 x)$?

$$(a) \frac{\pi}{2} \quad (b) \pi \quad (c) 2\pi \quad (d) 3\pi$$

$$\textcircled{>} (b) f(x) = \ln(2 + \sin^2 x)$$

\therefore Period of $\sin^2 x$ is π .

$$\begin{aligned} \text{and } f(\pi + x) &= \log \{2 + \sin^2(\pi + x)\} \\ &= \log \{2 + \sin^2 x\} \\ &= f(x) \end{aligned}$$

Hence, period of $\ln(2 + \sin^2 x) = \pi$

\therefore Option (b) is correct.

24. If $\sin(A + B) = 1$ and

$$2\sin(A - B) = 1, \text{ where } 0 < A, B < \frac{\pi}{2},$$

then what is $\tan A : \tan B$ equal to?

$$(a) 1 : 2 \quad (b) 2 : 1$$

$$(c) 1 : 3 \quad (d) 3 : 1$$

$$\textcircled{>} (d) \text{ Given, } \sin(A + B) = 1$$

$$\text{and } 2\sin(A - B) = 1$$

$$0 < A, B < \frac{\pi}{2}$$

$$\therefore \sin(A + B) = 1 = \sin \frac{\pi}{2}$$

$$\Rightarrow A + B = \frac{\pi}{2} \quad \dots(i)$$

$$2\sin(A - B) = 1$$

$$\Rightarrow \sin(A - B) = \frac{1}{2} = \sin \frac{\pi}{6}$$

$$\Rightarrow A - B = \frac{\pi}{6} \quad \dots(ii)$$

Now, adding Eq. (i) and Eq. (ii), we get

$$2A = \frac{\pi}{2} + \frac{\pi}{6} = \frac{4\pi}{6}$$

$$A = \frac{\pi}{3}, B = \frac{\pi}{6}$$

$$\begin{aligned} \therefore \tan A : \tan B &= \tan \frac{\pi}{3} : \tan \frac{\pi}{6} \\ &= \sqrt{3} : \frac{1}{\sqrt{3}} = 3 : 1 \end{aligned}$$

\therefore Option (d) is correct.

25. Consider a regular polygon with 10 sides. What is the number of triangles that can be formed by joining the vertices which have no common side with any of the sides of the polygon?

$$(a) 25 \quad (b) 50 \\ (c) 75 \quad (d) 100$$

$$\textcircled{>} (b) \text{ Given number of sides } (n) = 10$$

Number of triangles which have no common side with any of the sides of the

$$\text{polygon} = \frac{n(n-4)(n-5)}{3!}$$

\therefore Number of triangles

$$= \frac{10(10-4)(10-5)}{6}$$

$$= \frac{10 \times 6 \times 5}{6}$$

$$= 50$$

Hence, option (b) is correct.

26. Consider all the real roots of the equation $x^4 - 10x^2 + 9 = 0$.

What is the sum of the absolute values of the roots?

$$(a) 4 \quad (b) 6 \\ (c) 8 \quad (d) 10$$

$$\textcircled{>} (c) \text{ Given equation,}$$

$$x^4 - 10x^2 + 9 = 0$$

$$\text{Let } y = x^2$$

$$\therefore y^2 - 10y + 9 = 0$$

$$(y-9)(y-1) = 0$$

$$\Rightarrow y = 9 \text{ or } y = 1$$

$$x^2 = 9 \text{ or } y = 1$$

$$x^2 = 9 \text{ or } x^2 = 1$$

$$x = \pm 3, x = \pm 1$$

$$\therefore \text{Sum} = |3| + |-3| + |1| + |-1| = 8$$

Hence, option (c) is correct.

27. Consider the expansion of $(1+x)^n$.

Let p, q, r and s be the coefficients of first, second, n th and $(n+1)$ th terms respectively. What is $(ps+qr)$ equal to?

$$(a) 1+2n \quad (b) 1+2n^2$$

$$(c) 1+n^2 \quad (d) 1+4n$$

$$\textcircled{>} (c) \text{ Given, } (1+x)^n$$

In the above expansion, $(r+1)$ th term

$$T_{r+1} = {}^n C_r x^r$$

$$\therefore T_1 = {}^n C_0 x^0, T_2 = {}^n C_1 x^1$$

$$p = 1 \quad \dots(i)$$

$$\therefore {}^n C_1 = q$$

$$n = q \quad \dots(ii)$$

$$T_n = {}^n C_{n-1} x^{n-1},$$

$$T_{n+1} = {}^n C_n x^n$$

$$\therefore r = n \quad \dots(iii)$$

$$\therefore s = 1 \quad \dots(iv)$$

$$\therefore (ps+qr) = 1 \cdot 1 + n \cdot n = 1 + n^2 = (1+n^2)$$

Hence, option (c) is correct.

28. Let $\sin^{-1} x + \sin^{-1} y + \sin^{-1} z = \frac{3\pi}{2}$

for $0 \leq x, y, z \leq 1$. What is the value of $x^{1000} + y^{1001} + z^{1002}$?

$$(a) 0 \quad (b) 1 \\ (c) 3 \quad (d) 6$$

$$\textcircled{>} (c) \text{ Let } \sin^{-1} x + \sin^{-1} y + \sin^{-1} z = \frac{3\pi}{2}$$

Which is only possible when,

$$\sin^{-1} x = \frac{\pi}{2}, \sin^{-1} y = \frac{\pi}{2},$$

$$\sin^{-1} z = \frac{\pi}{2}$$

$$\Rightarrow x = 1, y = 1, z = 1$$

$$\therefore x^{1000} + y^{1001} + z^{1002}$$

$$= 1 + 1 + 1 = 3$$

Hence, option (c) is correct.

29. Let $\sin x + \sin y = \cos x + \cos y$ for all $x, y \in \mathbb{R}$. What is $\tan\left(\frac{x}{2} + \frac{y}{2}\right)$

equal to?

- (a) 1 (b) 2
(c) $\sqrt{2}$ (d) $2\sqrt{2}$

⊙ (a) Given that,

$$\sin x + \sin y = \cos x + \cos y \quad \forall x, y \in \mathbb{R}$$

$$2 \sin\left(\frac{x+y}{2}\right) \cos\left(\frac{x-y}{2}\right)$$

$$= 2 \cos\left(\frac{x+y}{2}\right) \cdot \cos\left(\frac{x-y}{2}\right)$$

$$\Rightarrow \frac{2 \sin\left(\frac{x+y}{2}\right) \cdot \cos\left(\frac{x-y}{2}\right)}{2 \cos\left(\frac{x+y}{2}\right) \cdot \cos\left(\frac{x-y}{2}\right)} = 1$$

$$\tan\left(\frac{x+y}{2}\right) = 1 \quad \text{or} \quad \tan\left(\frac{x}{2} + \frac{y}{2}\right) = 1$$

Hence, option (a) is correct.

30. Let $A = \begin{bmatrix} 0 & 2 \\ -2 & 0 \end{bmatrix}$

and $(mI + nA)^2 = A$, where m, n are positive real numbers and I is the identity matrix. What is $(m + n)$ equal to?

- (a) 0 (b) $\frac{1}{2}$
(c) 1 (d) $\frac{3}{2}$

⊙ (d) Let $A = \begin{bmatrix} 0 & 2 \\ -2 & 0 \end{bmatrix}$ and $(mI + nA)^2 = A$

where, I is identity matrix

$$\therefore mI + nA = m \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} + n \begin{bmatrix} 0 & 2 \\ -2 & 0 \end{bmatrix}$$

$$= \begin{bmatrix} m & 0 \\ 0 & m \end{bmatrix} + \begin{bmatrix} 0 & 2n \\ -2n & 0 \end{bmatrix}$$

$$= \begin{bmatrix} m & 2n \\ -2n & m \end{bmatrix}$$

$$\therefore (mI + nA)^2 = A$$

$$\begin{bmatrix} m & 2n \\ -2n & m \end{bmatrix} \begin{bmatrix} m & 2n \\ -2n & m \end{bmatrix} = \begin{bmatrix} 0 & 2 \\ -2 & 0 \end{bmatrix}$$

$$\begin{bmatrix} m^2 - 4n^2 & 4mn \\ -4mn & m^2 - 4n^2 \end{bmatrix} = \begin{bmatrix} 0 & 2 \\ -2 & 0 \end{bmatrix}$$

$$\Rightarrow 4mn = 2 \quad \text{and} \quad m^2 - 4n^2 = 0$$

$$mn = \frac{1}{2} \quad \text{and} \quad m = \pm 2n$$

When, $m = 2n$

$$(2n)(n) = \frac{1}{2}$$

$$n = \pm \frac{1}{2} \Rightarrow m = \pm 1$$

$$\therefore m + n = 1 + \frac{1}{2} = \frac{3}{2}$$

Hence, option (d) is correct.

31. What is the value of the following?

$$\cot \left[\sin^{-1} \left(\frac{3}{5} \right) + \cot^{-1} \left(\frac{3}{2} \right) \right]$$

- (a) $\frac{6}{17}$ (b) $\frac{7}{16}$
(c) $\frac{16}{7}$ (d) $\frac{17}{6}$

⊙ (a) $\cot \left[\sin^{-1} \frac{3}{5} + \cot^{-1} \frac{3}{2} \right]$

$$\Rightarrow \cot \left[\cot^{-1} \left(\frac{\sqrt{1 - \left(\frac{3}{5}\right)^2}}{\frac{3}{5}} \right) + \cot^{-1} \frac{3}{2} \right]$$

$$[\because \sin^{-1} x = \cot^{-1} \left(\frac{\sqrt{1-x^2}}{x} \right)]$$

$$\text{and } \cot x + \cot^{-1} y = \cot^{-1} \left(\frac{xy-1}{x+y} \right)$$

$$\Rightarrow \cot \left[\cot^{-1} \left(\frac{4}{3} \right) + \cot^{-1} \left(\frac{3}{2} \right) \right]$$

$$\Rightarrow \cot \left[\cot^{-1} \left(\frac{\frac{4}{3} \times \frac{3}{2} - 1}{\frac{4}{3} + \frac{3}{2}} \right) \right]$$

$$\Rightarrow \frac{1}{\frac{17}{6}} = \frac{6}{17}$$

Hence, option (a) is correct.

32. Let $4 \sin^2 x = 3$, where $0 \leq x \leq \pi$.

What is $\tan 3x$ equal to?

- (a) -2 (b) -1
(c) 0 (d) 1

⊙ (c) Given that $4 \sin^2 x = 3$, $0 \leq x \leq \pi$

$$\therefore \sin^2 x = \frac{3}{4}$$

$$\Rightarrow \sin x = \frac{\sqrt{3}}{2} = \sin \frac{\pi}{3} \quad \text{or} \quad \sin \frac{2\pi}{3}$$

$$\therefore x = \frac{\pi}{3}, \frac{2\pi}{3}$$

$$\therefore \tan 3x = \tan \frac{3\pi}{3}$$

$$= \tan \pi = 0$$

$$\text{Also } \tan 3x = \tan 3 \left(\frac{2\pi}{3} \right)$$

$$= \tan 2\pi = 0$$

\therefore Option (c) is correct.

33. Let p, q and 3 be respectively the first, third and fifth terms of an AP. Let d be the common difference. If the product (pq) is minimum, then what is the value of d ?

- (a) 1 (b) $\frac{3}{8}$
(c) $\frac{9}{8}$ (d) $\frac{9}{4}$

⊙ (c) Given that first term of AP = p

$$\Rightarrow a = p \quad \dots(i)$$

Where, a denotes first term.

$$\text{and } a_3 = q, a_5 = 3$$

$$\Rightarrow a + 2d = q \quad \dots(ii)$$

$$a + 4d = 3 \quad \dots(iii)$$

$$\therefore pq = a(a + 2d)$$

$$= (3 - 4d)(3 - 4d + 2d)$$

$$= (3 - 4d)(3 - 2d)$$

$$= 9 - 18d + 8d^2$$

$$\text{Let } f = 9 - 18d + 8d^2$$

$$f' = 0 - 18 + 16d$$

$$= -18 + 16d$$

For maxima and minima

$$f' = 0$$

$$\Rightarrow -18 + 16d = 0$$

$$\Rightarrow d = \frac{18}{16} = \frac{9}{8}$$

Now, $f'' = 16$ (Positive)

So, f will be maximum at $d = \frac{9}{8}$.

Hence, option (c) is correct.

34. Consider the following statements in respect of the roots of the equation $x^3 - 8 = 0$

- The roots are non-collinear.
- The roots lie on a circle of unit radius.

Which of the above statements is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) $x^3 - 8 = 0$

$$\Rightarrow (x - 2)(x^2 + 2x + 4) = 0$$

$$x = 2, 2\omega, 2\omega^2$$

$$\text{Where, } \omega = \frac{-1 + \sqrt{3}i}{2}$$

Hence, roots are non-collinear and will lie on a circle of 2 unit radius.

Hence, option (a) is correct.

35. Let the equation $\sec x \cdot \operatorname{cosec} x = p$ have a solution, where p is a positive real number. What should be the smallest value of p ?

- (a) $\frac{1}{2}$ (b) 1

(c) 2

(d) Minimum does not exist

⊙ (c) $\sec x \cdot \operatorname{cosec} x = p$

$$\Rightarrow \frac{1}{\sin x \cdot \cos x} = p$$

$$\Rightarrow \frac{2}{2 \sin x \cos x} = p$$

$$\frac{2}{\sin 2x} = p$$

Where, $\sin 2x \in [-1, 1]$
 If $\sin 2x = 1$
 Then $p = 2$ will be the smallest value.
 Hence, option (c) is correct.

36. For what value of θ , where $0 < \theta < \frac{\pi}{2}$, does $\sin \theta + \sin \theta \cos \theta$ attain maximum value?

- (a) $\frac{\pi}{2}$ (b) $\frac{\pi}{3}$
- (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{6}$

⊙ (b) Let $P = \sin \theta + \sin \theta \cdot \cos \theta$
 $\therefore \frac{dP}{d\theta} = \cos \theta + \cos^2 \theta - \sin^2 \theta$

For maxima-minima $\frac{dP}{d\theta} = 0$
 $\cos \theta + \cos^2 \theta - \sin^2 \theta = 0$
 $\cos \theta + \cos^2 \theta - 1 + \cos^2 \theta = 0$
 $2 \cos^2 \theta + \cos \theta - 1 = 0$
 $(\cos \theta + 1)(2 \cos \theta - 1) = 0$
 $\Rightarrow \cos \theta = -1$ or $\cos \theta = \frac{1}{2}$
 $\Rightarrow \theta = \pi$ or $\theta = \frac{\pi}{3}$

$\theta = \pi$ can be neglected as $\theta \in (0, \frac{\pi}{2})$.

$\therefore \theta = \frac{\pi}{3}$

Hence, option (b) is correct.

37. Consider the following statements in respect of sets.

1. The union over intersection of sets is distributive.
2. The complement of union of two sets is equal to intersection of their complements.
3. If the difference of two sets is equal to empty set, then the two sets must be equal.

Which of the above statements are correct ?

- (a) 1 and 2 (b) 2 and 3
- (c) 1 and 3 (d) 1, 2 and 3

⊙ (a) Since, we know that distributive property for sets A, B and C.

$$A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$$

and $(A \cup B)' = A' \cap B'$
 (By De Morgan's Law)

Also, if $A - B = \phi$

\Rightarrow We cannot say $A = B$
 e.g., if $A = \phi$ and $B = \{1, 2\}$
 $\Rightarrow A - B = \phi$ and $A \neq B$
 \therefore Option (a) is correct.

38. Consider three sets X, Y and Z having 6, 5 and 4 elements respectively. All these 15 elements are distinct. Let $S = (X - Y) \cup Z$. How many proper subsets does S have?

- (a) 255 (b) 256
- (c) 1023 (d) 1024

⊙ (c) Given, $n(X) = 6, n(Y) = 5, n(Z) = 4$
 $S = (X - Y) \cup Z$

Since, all 15 elements are different.
 Hence, $n(X - Y) = 6$
 and $n(S) = 6 + 4 = 10$
 \Rightarrow Number of proper subsets of S
 $= 2^{10} - 1$
 $= 1024 - 1$
 $= 1023$

\therefore Option (c) is correct.

39. Consider the following statements in respect of relations and functions.

1. All relations are functions but all functions are not relations.
2. A relation from A to B is a subset of Cartesian product $A \times B$.
3. A relation in A is a subset of Cartesian product $A \times A$.

Which of the above statements are correct?

- (a) 1 and 2 (b) 2 and 3
- (c) 1 and 3 (d) 1, 2 and 3

⊙ (b) Since, we know that relations can be function iff every element has unique image.

Hence, first statement is wrong.

If $R : A \rightarrow A$ then $R \subseteq A \times A$

and if $R : A \rightarrow B$ then $R \subseteq A \times B$

Hence, 2nd and 3rd statements are correct.

\therefore Option (b) is correct.

40. If $\log_{10} 2 \log_2 10 + \log_{10}(10^x) = 2$, then what is the value of x?

- (a) 0 (b) 1
- (c) $\log_2 10$ (d) $\log_5 2$

⊙ (b) Given that,

$$\log_{10} 2 \cdot \log_2 10 + \log_{10}(10^x) = 2$$

$$\log_{10} 2 \times \frac{1}{\log_{10} 2} + x \log_{10} 10 = 2$$

$$1 + x = 2$$

$$\Rightarrow x = 1$$

\therefore Option (b) is correct.

41. Let ABC be a triangle.

If $\cos 2A + \cos 2B + \cos 2C = -1$, then which one of the following is correct?

- (a) $\sin A \sin B \sin C = 0$
- (b) $\sin A \sin B \cos C = 0$
- (c) $\cos A \sin B \sin C = 0$
- (d) $\cos A \cos B \cos C = 0$

⊙ (d) Given that, ABC is a triangle and

$$\cos 2A + \cos 2B + \cos 2C = -1$$

$$\Rightarrow 1 + \cos 2A + \cos 2B + \cos 2C = 0$$

$$\Rightarrow 2 \cos^2 A + 2 \cos \left(\frac{2B+2C}{2} \right)$$

$$\cdot \cos \left(\frac{2B-2C}{2} \right) = 0$$

$$\Rightarrow 2 \cos^2 A + 2 \cos(B+C)$$

$$\cdot \cos(B-C) = 0$$

$$\{ \because A+B+C = 180^\circ \}$$

$$\Rightarrow 2 \cos^2 A + 2 \cos(180^\circ - A)$$

$$\cdot \cos(B-C) = 0$$

$$\Rightarrow 2 \cos^2 A - 2 \cos A \cdot \cos(B-C) = 0$$

$$\Rightarrow 2 \cos A [\cos A - \cos(B-C)] = 0$$

$$\Rightarrow 2 \cos A [\cos(180^\circ - (B+C))$$

$$- \cos(B-C)] = 0$$

$$\Rightarrow -2 \cos A [\cos(B+C) + \cos(B-C)] = 0$$

$$\Rightarrow -2 \cos A \left(2 \cos \frac{B+C+B-C}{2} \right)$$

$$\cdot \cos \frac{B+C-B+C}{2} = 0$$

$$- 4 \cos A \cdot \cos B \cdot \cos C = 0$$

$$\Rightarrow \cos A \cdot \cos B \cdot \cos C = 0$$

\therefore Option (d) is correct.

42. What is the value of the following determinant?

$$\begin{vmatrix} \cos C & \tan A & 0 \\ \sin B & 0 & -\tan A \\ 0 & \sin B & \cos C \end{vmatrix}$$

(a) -1

(b) 0

(c) $2 \tan A \sin B \sin C$

(d) $-2 \tan A \sin B \sin C$

⊙ (b) Let $\Delta = \begin{vmatrix} \cos C & \tan A & 0 \\ \sin B & 0 & -\tan A \\ 0 & \sin B & \cos C \end{vmatrix}$

$$\Delta = \cos C [0 + \sin B \tan A]$$

$$- \tan A [\sin B \cos C - 0]$$

$$= \tan A \sin B \cos C$$

$$- \tan A \sin B \cos C$$

$\therefore \Delta = 0$

Hence, option (b) is correct.

43. Suppose set A consists of first 250 natural numbers that are multiples of 3 and set B consists of first 200 even natural numbers. How many elements does $A \cup B$ have?

- (a) 324 (b) 364
(c) 384 (d) 400

⊙ (c) Given that, A consists of first 250 natural numbers that are multiple of 3.

$$\therefore A = \{3, 6, 9, 12, \dots, 750\},$$

$$n(A) = 250$$

Set B consists of first 200 even natural numbers.

$$\therefore B = \{2, 4, 6, 8, \dots, 400\}$$

$$\therefore A \cap B = \{6, 12, \dots, 750\}$$

$$\therefore n(A \cup B) = n(A) + n(B) - n(A \cap B)$$

$$= 250 + 200 - 66$$

$$n(A \cup B) = 384$$

Hence, option (c) is correct.

44. Let S_k denote the sum of first k

terms of an AP. What is $\frac{S_{30}}{S_{20} - S_{10}}$

equal to?

- (a) 1 (b) 2
(c) 3 (d) 4

⊙ (c) Let's take first K terms are first K natural numbers.

$$\therefore S_K = \frac{K(K+1)}{2}$$

$$\text{Consider } \frac{S_{30}}{S_{20} - S_{10}} = \frac{\frac{30(31)}{2}}{\frac{20(21)}{2} - \frac{10(11)}{2}}$$

$$= \frac{930}{310} = 3$$

∴ Option (c) is correct.

45. If the roots of the equation $4x^2 - (5k + 1)x + 5k = 0$ differ by unity, then which one of the following is a possible value of k ?

- (a) $-\frac{3}{5}$ (b) $-\frac{1}{5}$
(c) $-\frac{1}{5}$ (d) $-\frac{3}{5}$

⊙ (c) Given equation,

$$4x^2 - (5k + 1)x + 5k = 0 \quad \dots(i)$$

Let the roots are α and β .

$$\alpha + \beta = \frac{-(- (5k + 1))}{4}$$

$$= \frac{5k + 1}{4}$$

$$\alpha \cdot \beta = \frac{5k}{4}$$

Given that, $\alpha - \beta = 1$

$$\sqrt{(\alpha + \beta)^2 - 4\alpha\beta} = 1$$

$$\left(\frac{5k + 1}{4}\right)^2 - 4\left(\frac{5k}{4}\right) = 1$$

$$\frac{25K^2 + 1 + 10K}{16} = 1 + 5K$$

$$\Rightarrow 25K^2 + 10K + 1 = 80K + 16$$

$$\Rightarrow 25K^2 - 70K - 15 = 0$$

$$5K^2 - 14K - 3 = 0$$

$$5K^2 - 15K + K - 3 = 0$$

$$5K(K - 3) + 1(K - 3) = 0$$

$$(K - 3)(5K + 1) = 0$$

$$\Rightarrow K = 3 \text{ or } -\frac{1}{5}$$

Hence, option (c) is correct.

46. Consider the digits 3, 5, 7, 9. What is the number of 5-digit numbers formed by these digits in which each of these four digits appears?

- (a) 240 (b) 180
(c) 120 (d) 60

⊙ (a) Given digits are 3, 5, 7, 9.

Since, the number of ways to find 5-digit numbers = $5!$

but using 3, 5, 7, 9 every time one-digit will be repeated.

Hence number of 5-digit numbers with digit 3 repeated = $\frac{5!}{2!}$

Number of 5-digit numbers with digit 5 repeated = $\frac{5!}{2!}$

Number of 5-digit numbers with digit 7 repeated = $\frac{5!}{2!}$

Number of 5-digit numbers with digit 9 repeated = $\frac{5!}{2!}$

∴ Total 5-digit numbers

$$= \frac{5!}{2!} + \frac{5!}{2!} + \frac{5!}{2!} + \frac{5!}{2!}$$

$$= 4 \times \left(\frac{5 \times 4 \times 3 \times 2!}{2!}\right)$$

$$= 4 \times \left(\frac{5 \times 4 \times 3 \times 2!}{2!}\right)$$

$$= 240$$

Hence, option (a) is correct.

47. How many distinct matrices exist with all four entries taken from $\{1, 2\}$?

- (a) 16 (b) 24
(c) 32 (d) 48

⊙ (a) Given digits are 1, 2.

$$\text{Let matrix} = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$$

∴ Each entries can filled with 2 ways.

Therefore, number of distinct matrices

$$= 2 \times 2 \times 2 \times 2$$

$$= 16$$

Hence, option (a) is correct.

48. If $i = \sqrt{-1}$, then how many values does i^{-2n} have for different $n \in \mathbb{Z}$?

- (a) One (b) Two
(c) Four (d) Infinite

⊙ (b) Given that, $i = \sqrt{-1}$

To find $(i)^{-2n}$

Let $i = r(\cos \theta + i \sin \theta)$

$$\Rightarrow r = 1, \theta = \frac{\pi}{2}$$

$$\therefore i = \left(\cos \frac{\pi}{2} + i \sin \frac{\pi}{2}\right)$$

$$\therefore (i)^{-2n} = \left(\cos \frac{\pi}{2} + i \sin \frac{\pi}{2}\right)^{-2n}$$

$$= \cos\left(\frac{-2n\pi}{2}\right) + i \sin\left(\frac{-2n\pi}{2}\right)$$

$$= \cos(n\pi) - i \sin(n\pi)$$

$$= (-1)^n = \begin{cases} -1; & \text{if } n \text{ is odd} \\ 1; & \text{if } n \text{ is even} \end{cases}$$

∴ Option (b) is correct.

49. If $x = \frac{a}{b-c}, y = \frac{b}{c-a}, z = \frac{c}{a-b}$,

then what is the value of the following?

$$\begin{vmatrix} 1 & -x & x \\ 1 & 1 & -y \\ 1 & z & 1 \end{vmatrix}$$

- (a) 0 (b) 1
(c) abc (d) $ab + bc + ca$

⊙ (a) Given, $x = \frac{a}{b-c}, y = \frac{b}{c-a}, z = \frac{c}{a-b}$

$$\therefore \begin{vmatrix} 1 & -x & x \\ 1 & 1 & -y \\ 1 & z & 1 \end{vmatrix}$$

$$R_2 \rightarrow R_2 - R_1 \text{ and } R_3 \rightarrow R_3 - R_1$$

$$= \begin{vmatrix} 1 & -x & x \\ 0 & 1+x & -y-x \\ 0 & z+x & 1-x \end{vmatrix}$$

$$= (1+x)(1-x) - (-y-x)(z+x)$$

$$= 1 - x^2 + x^2 + (y+z)x + yz$$

$$= 1 + \left(\frac{b}{c-a} + \frac{c}{a-b}\right) \left(\frac{a}{b-c}\right)$$

$$+ \left(\frac{b}{c-a} \times \frac{c}{a-b}\right)$$

$$= 1 + \left(\frac{ab - b^2 + c^2 - ac}{(a-b)(c-a)}\right) \left(\frac{a}{b-c}\right)$$

$$+ \left(\frac{bc}{(c-a)(a-b)}\right)$$

$$= 1 + \frac{(b-c)(a-b-c)a}{(a-b)(c-a)(b-c)}$$

$$+ \frac{bc}{(c-a)(a-b)}$$

$$= \frac{(a-b)(c-a) + a^2 - ab - ac + bc}{(a-b)(c-a)}$$

$$= \frac{ac - a^2 - bc + ab + a^2 - ab - ac + bc}{(a-b)(c-a)}$$

$$= 0$$

Hence, option (a) is correct.

50. Consider the following in respect of the matrix

$$A = \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$$

1. Inverse of A does not exist
2. $A^3 = A$
3. $3A = A^2$

Which of the above are correct ?

- (a) 1 and 2 only (b) 2 and 3 only
(c) 1 and 3 only (d) 1, 2 and 3

⊙ (c) Given matrix, $A = \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$

$$\because |A| = 1(1-1) - 1(1-1) + 1(1-1) = 0$$

$\therefore A^{-1}$ doesn't exist.

$$\text{Now, } A^2 = \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix} \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 3 & 3 & 3 \\ 3 & 3 & 3 \\ 3 & 3 & 3 \end{bmatrix} = 3A$$

$$\text{and } A^3 = \begin{bmatrix} 3 & 3 & 3 \\ 3 & 3 & 3 \\ 3 & 3 & 3 \end{bmatrix} \begin{bmatrix} 1 & 1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 9 & 9 & 9 \\ 9 & 9 & 9 \\ 9 & 9 & 9 \end{bmatrix} \neq A$$

Hence, option (c) is correct.

Directions (Q.Nos. 51 and 52)

Consider the following for the next two questions that follow.

A circle is passing through the points $(5, -8)$, $(-2, 9)$ and $(2, 1)$.

51. What are the coordinate of the centre of the circle?

- (a) $(-2, -50)$ (b) $(-50, -20)$
(c) $(-24, -58)$ (d) $(-58, -24)$

- ⊙ (d) Given that, circle is passing through the points $(5, -8)$, $(-2, 9)$ and $(2, 1)$.

Let the equation of circle be

$$x^2 + y^2 + 2gx + 2fy + c = 0 \quad \dots(i)$$

If Eq. (i) passes through $(5, -8)$

$$\therefore 25 + 64 + 10g - 16f + c = 0$$

$$\Rightarrow 10g - 16f + c + 89 = 0 \quad \dots(ii)$$

If Eq. (i) passes through $(-2, 9)$

$$4 + 81 - 4g + 18f + c = 0$$

$$-4g + 18f + c + 85 = 0 \quad \dots(iii)$$

If Eq. (i) passes through $(2, 1)$

$$\Rightarrow 4 + 1 + 4g + 2f + c = 0$$

$$4g + 2f + c + 5 = 0 \quad \dots(iv)$$

On solving Eqs. (ii), (iii) and (iv)

Eqs. (ii) - Eq. (iii)

$$\Rightarrow 14g - 34f + 4 = 0$$

$$\Rightarrow 7g - 17f + 2 = 0 \quad \dots(v)$$

Eq. (iv) - Eq. (iii)

$$\Rightarrow 8g - 16f - 80 = 0$$

$$g - 2f - 10 = 0 \quad \dots(vi)$$

Eq. (v) - 7 × Eq. (vi)

$$-3f + 72 = 0$$

$$f = 24$$

From Eq. (vi)

$$g = 2f + 10$$

$$g = 58$$

From Eq. (iv) $c = -4g - 2f - 5$

$$= -232 - 48 - 5$$

$$c = -285$$

\therefore Centre = $(-g, -f)$

$$= (-58, -24)$$

\therefore Option (d) is correct.

52. If r is the radius of the circle, then which one of the following is correct?

- (a) $r < 10$ (b) $10 < r < 30$
(c) $30 < r < 60$ (d) $r > 60$

- ⊙ (d) Since, the centre of the above circle = $(-58, -24)$

$$g = 58, f = 24 \text{ and } c = -285$$

$$\therefore \text{Radius} = \sqrt{g^2 + f^2 - c}$$

$$= \sqrt{(58)^2 + (24)^2 - (-285)}$$

$$= \sqrt{3364 + 576 + 285}$$

$$= \sqrt{4225}$$

$$r = 65 \text{ unit.}$$

\therefore Option (d) is correct.

Directions (Q.Nos. 53 and 54)

Consider the following for the next two questions that follow.

The two vertices of an equilateral triangle are $(0, 0)$ and $(2, 2)$.

53. Consider the following statements.

1. The third vertex has atleast one irrational coordinate.
2. The area is irrational.

Which of the above statements is/are correct?

- (a) 1 only
(b) 2 only
(c) Both 1 and 2
(d) Neither 1 nor 2

- ⊙ (c) Let vertex of $A = (0, 0)$
 $B = (2, 2)$

$C = (x, y)$

$\therefore \triangle ABC$ is equilateral triangle.

$\therefore AB = BC$

$$\Rightarrow \sqrt{(2-0)^2 + (2-0)^2}$$

$$= \sqrt{(2-x)^2 + (2-y)^2}$$

$$\Rightarrow 8 = 4 + x^2 - 4x + 4 + y^2 - 4y$$

$$\Rightarrow x^2 + y^2 - 4x - 4y = 0 \quad \dots(i)$$

and $AB = AC$

$$\Rightarrow \sqrt{(2-0)^2 + (2-0)^2}$$

$$= \sqrt{(x-0)^2 + (y-0)^2}$$

$$\Rightarrow 8 = x^2 + y^2 \quad \dots(ii)$$

and $AC = BC$

$$\Rightarrow \sqrt{x^2 + y^2} = \sqrt{(x-2)^2 + (y-2)^2}$$

$$\Rightarrow x^2 + y^2 = x^2 + y^2 - 4x - 4y + 8$$

$$\Rightarrow x + y = 2 \quad \dots(iii)$$

From Eqs. (ii) and (iii)

$$8 = x^2 + (2-x)^2$$

$$x^2 + 4 + x^2 - 4x = 8$$

$$x^2 - 2x - 2 = 0$$

$$x = \frac{2 \pm \sqrt{4+8}}{2}$$

$$= \frac{1 \pm \sqrt{3}}{2}$$

Hence, third vertex atleast one irrational coordinate.

\Rightarrow Area will also be irrational.

Hence, option (c) is correct.

54. The difference of coordinates of the third vertex is

- (a) 0 (b) $\sqrt{3}$
(c) $2\sqrt{2}$ (d) $2\sqrt{3}$

- ⊙ (d) Since, $x = \frac{1 \pm \sqrt{3}}{2}$

and $y = 2 - x$

$$y = 2 - \frac{1 \pm \sqrt{3}}{2}$$

$$y = \frac{3 \pm \sqrt{3}}{2}$$

$$\text{If } x = \frac{1 + \sqrt{3}}{2}, y = \frac{3 - \sqrt{3}}{2}$$

$$\therefore |x - y| = 2\sqrt{3}$$

Hence, option (d) is correct.

Directions (Q. Nos. 55 and 56)

Consider the following for the questions that follow.

The coordinates of three consecutive vertices of a parallelogram ABCD are A(1, 3), B(-1, 2) and C(3, 5).

55. What is the equation of the diagonal BD?
- (a) $2x - 3y + 2 = 0$
 (b) $3x - 2y + 5 = 0$
 (c) $2x - 3y + 8 = 0$
 (d) $3x - 2y - 5 = 0$
- ⊙ (c) Given, vertices of parallelogram are A = (1, 3), B = (-1, 2), C = (3, 5)

ABCD is a parallelogram, then
 Mid-point of AC = Mid-point of BD
 $\Rightarrow \left(\frac{1+3}{2}, \frac{3+5}{2}\right) = \left(\frac{-1+x}{2}, \frac{2+y}{2}\right)$
 $\Rightarrow \frac{-1+x}{2} = \frac{4}{2} \Rightarrow x = 5$
 and $\frac{2+y}{2} = \frac{8}{2} \Rightarrow y = 6$
 \therefore Point = (5, 6)
 \therefore Equation of BD,
 where B = (-1, 2) and D = (5, 6)
 $y - 2 = \frac{6-2}{5-(-1)}(x+1)$
 $y - 2 = \frac{4}{6}(x+1)$
 $6y - 12 = 4x + 4$
 $\Rightarrow 2x - 3y + 8 = 0$
 \therefore Option (c) is correct.

56. What is the area of the parallelogram?
- (a) 1 sq. unit (b) $\frac{3}{2}$ sq. units
 (c) 2 sq. units (d) $\frac{5}{2}$ sq. units

⊙ (c) The vertices of parallelogram are A(1, 3), B(-1, 2), C(3, 5) and D(5, 6).
 \therefore Area = | Area of $\triangle ABC$ + Area of $\triangle ACD$ |
 $= \frac{1}{2} | 1(2-5) - 1(5-3) + 3(3-2) |$
 $+ \frac{1}{2} | 1(5-6) + 3(6-3) + 5(3-5) |$
 $= \frac{1}{2} | -3 - 2 + 3 + (-1) + 9 - 10 |$
 $= 2$ sq. units
 \therefore Option (c) is correct.

Directions (Q. Nos. 57 and 58)

Consider the following for the next two questions that follow.

The equations of the sides AB, BC and CA of a triangle ABC are $x - 2 = 0$, $y + 1 = 0$ and $x + 2y - 4 = 0$ respectively.

57. What is the equation of the altitude through B on AC?
- (a) $x - 3y + 1 = 0$ (b) $x - 3y + 4 = 0$
 (c) $2x - y + 4 = 0$ (d) $2x - y - 5 = 0$
- ⊙ (d) Equation of AB $\Rightarrow x - 2 = 0$... (i)
 Equation of BC $\Rightarrow y + 1 = 0$... (ii)
 Equation of AC $\Rightarrow x + 2y - 4 = 0$... (iii)

On solving Eq. (i) and Eq. (ii), we get
 $x = 2, y = -1$
 $\therefore B = (2, -1)$
 Slope of AC = $\frac{-\text{coefficient of } x}{\text{coefficient of } y}$
 $m_1 = -\frac{1}{2}$
 \therefore Slope of altitude BD = $\frac{-1}{m_1} = \frac{-1}{-\frac{1}{2}} = 2$
 \therefore Equation of altitude BD drawn from B on AC having slope 2.
 $y + 1 = 2(x - 2)$
 $y + 1 = 2x - 4$
 $\Rightarrow 2x - y - 5 = 0$
 Hence, option (d) is correct.

58. What are the coordinates of circumcentre of the triangle?
- (a) (4, 0) (b) (2, 1)
 (c) (0, 4) (d) (2, -1)

⊙ (a) Slope of line AB
 $\Rightarrow \frac{-\text{coefficient of } x}{\text{coefficient of } y} = \frac{-1}{0} = \infty$
 Slope of line BC = $-\frac{0}{1} = 0$
 \therefore Angle between AB and BC
 $= \left| \frac{\infty - (0)}{1 + \infty \cdot (0)} \right|$
 $\Rightarrow \tan \theta = \infty \quad \left| \theta = \frac{\pi}{2} \right|$
 $\therefore \triangle ABC$ is right angled triangle.
 \therefore Circumcentre will lie on Hypotenuse AC i.e. $x + 2y - 4 = 0$ at mid point.
 Equation of AB : $x - 2 = 0$... (i)
 Equation of AC : $x + 2y - 4 = 0$... (ii)
 Equation of BC : $y + 1 = 0$... (iii)

On solving Eqs. (i) and (ii)
 $x = 2, y = 1$
 $\therefore A = (2, 1)$
 On solving Eqs. (ii) and (iii)
 $y = -1, x = 6$
 $\therefore C = (6, -1)$
 \therefore Circumcentre will be mid-point of AC
 $AC = \left(\frac{2+6}{2}, \frac{1-1}{2}\right) = (4, 0)$
 \therefore Option (a) is correct.

Directions (Q. Nos. 59 and 60)

Consider the following for the next two questions that follow.

The two ends of the latus rectum of a parabola are (-2, 4) and (-2, -4).

59. What is the maximum number of parabolas that can be drawn through these two points as end points of latusrectum?
- (a) Only one (b) Two
 (c) Four (d) Infinite
- ⊙ (b) The maximum number of parabolas that can be drawn through

These two points as end points of latusrectum = two
 \therefore Option (b) is correct.

60. Consider the following statements in respect of such parabolas

- One of the parabolas passes through the origin (0, 0).
- The focus of one of the parabolas lies at (-2, 0).

Which of the above statements is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

- ⊙ (a) Let parabola-1 passes through origin.

It's equation will be
 $y^2 = -4ax$

Whose leading points of latusrectum will be $(-a, 2a)$ and $(-a, -2a)$

$\therefore a = 2$
 \therefore Focus = $(-2, 0)$
 Hence, option (a) is correct.

- 61.** The locus of a point $P(x, y, z)$ which moves in such a way that $z = 7$ is a
- line parallel to X -axis
 - line parallel to Y -axis
 - line parallel to Z -axis
 - plane parallel to xy -plane
- ⊙ (d) Since, point moves in a plane $z = 7$ which will be parallel to xy -plane.

Hence, option (d) is correct.

- 62.** Consider the following statements
- A line in space can have infinitely many direction ratios.
 - It is possible for certain line that the sum of the squares of direction cosines can be equal to sum of its direction cosines.

Which of the above statements is/are correct?

- 1 only
 - 2 only
 - Both 1 and 2
 - Neither 1 nor 2
- ⊙ (c) Since, we know that A line in space can have infinitely many direction ratio and also it is possible for certain line that the sum of the squares of direction cosine can be equal to sum of its direction cosines.

For example, $(1, 0, 0)$ is the direction cosines for X -axis.

$\therefore l = 1, m = 0, n = 0$, then
 $l^2 + m^2 + n^2 = 1^2 + 0^2 + 0^2$

Hence, option (c) is correct.

- 63.** The xy -plane divides the line segment joining the points $(-1, 3, 4)$ and $(2, -5, 6)$.
- internally in the ratio 2 : 3
 - internally in the ratio 3 : 2
 - externally in the ratio 2 : 3
 - externally in the ratio 2 : 1
- ⊙ (c) Since, we know that xy -plane divides the line segment joining the points (x_1, y_1, z_1) and (x_2, y_2, z_2) in the ratio $\left(-\frac{z_1}{z_2}\right)$.

Hence, $-\frac{4}{6} = -\frac{2}{3}$
 where $(-)$ indicates externally division.
 Hence, option (c) is correct.

- 64.** The number of spheres of radius r touching the coordinate axes is
- 4
 - 6
 - 8
 - infinite

⊙ (c) Since, we know that the number of spheres of radius r touching the coordinate axes is 8.
 Hence, option (c) is correct.

- 65.** $ABCDEFGH$ is a cuboid with base $ABCD$. Let $A(0, 0, 0)$, $B(12, 0, 0)$, $C(12, 6, 0)$ and $G(12, 6, 4)$ be the vertices. If α is the angle between AB and AG . β is the angle between AC and AG , then what is the value of $\cos 2\alpha + \cos 2\beta$?

- $\frac{40}{49}$
- $\frac{64}{49}$
- $\frac{120}{49}$
- $\frac{160}{49}$

⊙ (b) Given, $ABCDEFGH$ is a cuboid.

\therefore Angle between AB and $AG = \alpha$
 d.r.'s of $AB = (12 - 0, 0 - 0, 0 - 0)$
 $= (12, 0, 0)$
 d.r.'s of $AG = (12 - 0, 6 - 0, 4 - 0)$
 $= (12, 6, 4)$

$$\therefore \cos \alpha = \frac{a_1 a_2 + b_1 b_2 + c_1 c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}}$$

$$= \frac{144 + 0 + 0}{\sqrt{12^2} \sqrt{12^2 + 6^2 + 4^2}}$$

$$\cos \alpha = \frac{144}{12 \times 14} = \frac{6}{7}$$

Now, d.r.'s of $AC = (12, 6, 0)$

d.r.'s of $AG = (12, 6, 4)$

$$\therefore \cos \beta = \frac{144 + 36}{\sqrt{180} \times 14}$$

$$= \frac{180}{\sqrt{180} \times 14} = \frac{\sqrt{180}}{14}$$

$$\therefore \cos 2\alpha + \cos 2\beta$$

$$= 2 \cos^2 \alpha - 1 + 2 \cos^2 \beta - 1$$

$$= 2 \left(\left(\frac{6}{7}\right)^2 + \left(\frac{\sqrt{180}}{14}\right)^2 \right) - 2$$

$$= 2 \left(\frac{36}{49} + \frac{180}{196} \right) - 2$$

$$= \frac{72}{49} + \frac{90}{49} - 2$$

$$= \frac{162 - 98}{49} = \frac{64}{49}$$

Hence, option (b) is correct.

- 66.** Let \mathbf{a} , \mathbf{b} and \mathbf{c} be unit vectors such that $\mathbf{a} \times \mathbf{b}$ is perpendicular to \mathbf{c} . If θ is the angle between \mathbf{a} and \mathbf{b} , then which of the following is/are correct?

- $\mathbf{a} \times \mathbf{b} = \sin \theta \mathbf{c}$
 - $\mathbf{a} \cdot (\mathbf{b} \times \mathbf{c}) = 0$
- Select the correct answer using the code given below.

- only
- 2 only
- Both 1 and 2
- Neither 1 nor 2

⊙ (c) Given, that \mathbf{a} , \mathbf{b} and \mathbf{c} be unit vectors such that $\mathbf{a} \times \mathbf{b}$ is perpendicular to \mathbf{c} .
 angle between \mathbf{a} and $\mathbf{b} = \theta$

$$\therefore \mathbf{a} \times \mathbf{b} = |\mathbf{a}| |\mathbf{b}| \sin \theta \cdot \mathbf{c}$$

{ \cdot $\mathbf{a} \times \mathbf{b}$ is the vector perpendicular to \mathbf{a} and \mathbf{b} }

$$= 1 \cdot 1 \cdot \sin \theta \cdot \mathbf{c}$$

$$= \sin \theta \mathbf{c}$$

Since, \mathbf{a} , \mathbf{b} and \mathbf{c} are lying on the same plane.

$$\therefore \mathbf{a} \cdot (\mathbf{b} \times \mathbf{c}) = 0$$

Hence, option (c) is correct.

- 67.** If $\mathbf{a} + 3\mathbf{b} = 3\hat{\mathbf{i}} - \hat{\mathbf{j}}$ and

$2\mathbf{a} + \mathbf{b} = \hat{\mathbf{i}} - 2\hat{\mathbf{j}}$, then what is the angle between \mathbf{a} and \mathbf{b} ?

- 0
- $\frac{\pi}{6}$
- $\frac{\pi}{3}$
- $\frac{\pi}{2}$

⊙ (d) Given, $\mathbf{a} + 3\mathbf{b} = 3\hat{\mathbf{i}} - \hat{\mathbf{j}}$... (i)

and $2\mathbf{a} + \mathbf{b} = \hat{\mathbf{i}} - 2\hat{\mathbf{j}}$... (ii)

Eq. (i) $\times 2$ - Eq. (ii)

$$(2\mathbf{a} + 6\mathbf{b}) - (2\mathbf{a} + \mathbf{b}) = 2(3\hat{\mathbf{i}} - \hat{\mathbf{j}}) - (\hat{\mathbf{i}} - 2\hat{\mathbf{j}})$$

$$5\mathbf{b} = 5\hat{\mathbf{i}}$$

$$\therefore \mathbf{b} = \hat{\mathbf{i}}$$

From Eq. (i)

$$\mathbf{a} = (3\hat{\mathbf{i}} - \hat{\mathbf{j}}) - 3\mathbf{b}$$

$$\mathbf{a} = 3\hat{\mathbf{i}} - \hat{\mathbf{j}} - 3\hat{\mathbf{i}}$$

$$\mathbf{a} = -\hat{\mathbf{j}}$$

$$\therefore \mathbf{a} \cdot \mathbf{b} = |\mathbf{a}| |\mathbf{b}| \cos \theta$$

where θ is the angle between \mathbf{a} and \mathbf{b} .

$$(-\hat{\mathbf{j}}) \cdot (\hat{\mathbf{i}}) = 1 \cdot 1 \cdot \cos \theta$$

$$0 = \cos \theta$$

$$\therefore \theta = \frac{\pi}{2}$$

Hence, option (d) is correct.

- 68.** If $(\mathbf{a} + \mathbf{b})$ is perpendicular to \mathbf{a} and magnitude of \mathbf{b} is twice that of \mathbf{a} , then what is the value of $(4\mathbf{a} + \mathbf{b}) \cdot \mathbf{b}$ equal to?

- 0
- 1
- $8|\mathbf{a}|^2$
- $8|\mathbf{b}|^2$

⊙ (a) Given, $\mathbf{a} + \mathbf{b}$ is perpendicular to \mathbf{a} .

$$\therefore (\mathbf{a} + \mathbf{b}) \cdot \mathbf{a} = 0$$

$$\Rightarrow |\mathbf{a}|^2 + \mathbf{b} \cdot \mathbf{a} = 0$$

$$\mathbf{a} \cdot \mathbf{b} = -|\mathbf{a}|^2$$

and $|\mathbf{b}| = 2|\mathbf{a}|$

$$\therefore (4\mathbf{a} + \mathbf{b}) \cdot \mathbf{b} = 4\mathbf{a} \cdot \mathbf{b} + \mathbf{b} \cdot \mathbf{b}$$

$$= 4(-|\mathbf{a}|^2) + |\mathbf{b}|^2$$

$$= -4|\mathbf{a}|^2 + (2|\mathbf{a}|)^2$$

$$= -4|\mathbf{a}|^2 + 4|\mathbf{a}|^2$$

$$= 0$$

Hence, option (a) is correct.

69. Let \mathbf{a} , \mathbf{b} and \mathbf{c} be three vectors such \mathbf{a} , \mathbf{b} and \mathbf{c} are coplanar. Which of the following is/are correct?

1. $(\mathbf{a} \times \mathbf{b}) \times \mathbf{c}$ is coplanar with \mathbf{a} and \mathbf{b}

2. $(\mathbf{a} \times \mathbf{b}) \times \mathbf{c}$ is perpendicular to $\mathbf{a} \times \mathbf{b}$

Select the correct answer using the code given below.

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (c) Given that \mathbf{a} , \mathbf{b} , \mathbf{c} are coplanar.

$$\Rightarrow \mathbf{a} \cdot (\mathbf{b} \times \mathbf{c}) = 0 = \mathbf{b} \cdot (\mathbf{c} \times \mathbf{a})$$

$$= \mathbf{c} \cdot (\mathbf{a} \times \mathbf{b})$$

$$\Rightarrow [\mathbf{a} \ \mathbf{b} \ \mathbf{c}] = [\mathbf{b} \ \mathbf{c} \ \mathbf{a}] = [\mathbf{c} \ \mathbf{a} \ \mathbf{b}] = 0$$

$$\therefore (\mathbf{a} \times \mathbf{b}) \times \mathbf{c} = -\mathbf{c} \times (\mathbf{a} \times \mathbf{b})$$

$$= -[(\mathbf{c} \cdot \mathbf{b})\mathbf{a} - (\mathbf{c} \cdot \mathbf{a})\mathbf{b}]$$

$$= -[[\mathbf{c} \ \mathbf{b} \ \mathbf{a}] - [\mathbf{c} \ \mathbf{a} \ \mathbf{b}]]$$

$$= 2[\mathbf{c} \ \mathbf{a} \ \mathbf{b}] = 0$$

Hence, $\{(\mathbf{a} \times \mathbf{b}) \times \mathbf{c}\} \cdot (\mathbf{a} \times \mathbf{b}) = 0$
 $\Rightarrow (\mathbf{a} \times \mathbf{b}) \times \mathbf{c}$ is perpendicular to $\mathbf{a} \times \mathbf{b}$.
 and coplanar with \mathbf{a} and \mathbf{b} .
 Hence, option (c) is correct.

70. If the position vectors of A and B are $(\sqrt{2} - 1)\hat{i} - \hat{j}$ and $\hat{i} + (\sqrt{2} + 1)\hat{j}$ respectively, then what is the magnitude of \mathbf{AB} ?

- (a) $2\sqrt{2}$
- (b) $3\sqrt{2}$
- (c) $2\sqrt{3}$
- (d) $3\sqrt{3}$

⊙ (c) Given that, $\mathbf{OA} = (\sqrt{2} - 1)\hat{i} - \hat{j}$

and $\mathbf{OB} = \hat{i} + (\sqrt{2} + 1)\hat{j}$

$$\therefore \mathbf{AB} = \mathbf{OB} - \mathbf{OA}$$

$$= (1 - \sqrt{2} + 1)\hat{i} + (\sqrt{2} + 1 + 1)\hat{j}$$

$$\mathbf{AB} = (2 - \sqrt{2})\hat{i} + (\sqrt{2} + 2)\hat{j}$$

$$\therefore |\mathbf{AB}| = \sqrt{(2 - \sqrt{2})^2 + (2 + \sqrt{2})^2}$$

$$= \sqrt{4 + 2 - 4\sqrt{2} + 4 + 2 + 4\sqrt{2}}$$

$$= \sqrt{12} = 2\sqrt{3}$$

Hence, option (c) is correct.

71. If $y = (1+x)(1+x^2)(1+x^4)(1+x^8)(1+x^{16})$, then what is $\frac{dy}{dx}$ at $x = 0$

equal to?

- (a) 0
- (b) 1
- (c) 2
- (d) 4

⊙ (b) Given, $y = (1+x)(1+x^2)(1+x^4)(1+x^8)(1+x^{16})$

$$\therefore \frac{dy}{dx} = (1+x)(1+x^2)(1+x^4)$$

$$+ (1+x)(1+x^2)(1+x^4)(8x^7)(1+x^{16})$$

$$+ (1+x)(1+x^2)(4x^3)(1+x^8)(1+x^{16})$$

$$+ (1+x)(2x)(1+x^4)(1+x^8)(1+x^{16})$$

$$+ (1)(1+x^2)(1+x^4)(1+x^8)(1+x^{16})$$

$$\therefore \left. \frac{dy}{dx} \right|_{x=0} = 0 + 0 + 0 + 0 + 1 = 1$$

Hence, option (b) is correct.

72. If $y = \cos x \cdot \cos 4x \cdot \cos 8x$, then what is $\frac{1}{y} \frac{dy}{dx}$ at $x = \frac{\pi}{4}$ equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) 3

⊙ (a) Given, $y = \cos x \cdot \cos 4x \cdot \cos 8x$

$$\therefore \log y = \log \cos x + \log \cos 4x + \log \cos 8x$$

On differentiating w.r.t 'x'.

$$\frac{1}{y} \cdot \frac{dy}{dx} = \frac{1}{\cos x} (-\sin x) + \frac{1}{\cos 4x}$$

$$(-4 \sin 4x) + \frac{1}{\cos 8x} (-8 \sin 8x)$$

$$= -\tan x - 4 \tan 4x - 8 \tan 8x$$

$$\therefore \left(\frac{1}{y} \frac{dy}{dx} \right)_{\text{at } x = \frac{\pi}{4}} = -\tan \frac{\pi}{4} - 4 \tan \pi - 8 \tan 2\pi$$

$$= -1 - 0 - 0 = -1$$

Hence, option (a) is correct.

73. Let $f(x)$ be a polynomial function such that $f \circ f(x) = x^4$. What is $f'(1)$ equal to?

- (a) 0
- (b) 1
- (c) 2
- (d) 4

⊙ (c) Given, $f(x)$ be a polynomial such that $f \circ f(x) = x^4$

To find $f'(1) = ?$

$$\therefore f \circ f(x) = x^4 \Rightarrow f(x) = x^2$$

$$\therefore f'(x) = 2x$$

$$\Rightarrow f'(1) = 2 \times 1 = 2$$

Hence, option (c) is correct.

74. What is $\lim_{n \rightarrow \infty} \frac{a^n + b^n}{a^n - b^n}$

where $a > b > 1$, equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) Limit does not exist

⊙ (c) Given, $\lim_{n \rightarrow \infty} \frac{a^n + b^n}{a^n - b^n}$ where $a > b > 1$

$$\Rightarrow \lim_{n \rightarrow \infty} \frac{a^n \left[1 + \left(\frac{b}{a} \right)^n \right]}{a^n \left[1 - \left(\frac{b}{a} \right)^n \right]} \quad \left[\because \frac{b}{a} < 1 \right]$$

$$\therefore = \frac{1 + 0}{1 - 0} = 1$$

$$\therefore \left(\frac{b}{a} \right)^\infty = 0$$

Hence, option (c) is correct.

75. Let $f(x) = \begin{cases} 1 + \frac{x}{2k}, & 0 < x < 2 \\ kx, & 2 \leq x < 4 \end{cases}$

If $\lim_{x \rightarrow 2} f(x)$ exists, then what is the value of k ?

- (a) -2
- (b) -1
- (c) 0
- (d) 1

⊙ (d) Let $f(x) = \begin{cases} 1 + \frac{x}{2k}; & 0 < x < 2 \\ kx; & 2 \leq x < 4 \end{cases}$

$$\therefore \lim_{x \rightarrow 2} f(x) \text{ exists}$$

$$\Rightarrow \lim_{x \rightarrow 2^-} f(x) = \lim_{x \rightarrow 2^+} f(x)$$

$$\lim_{x \rightarrow 2^-} \left(1 + \frac{x}{2k} \right) = \lim_{x \rightarrow 2^+} (kx)$$

$$1 + \frac{2}{2k} = 2k$$

$$\frac{2}{2k} = 2k - 1$$

$$2 = 4k^2 - 2k$$

$$4k^2 - 2k - 2 = 0$$

$$2k^2 - k - 1 = 0$$

$$(2k + 1)(k - 1) = 0$$

$$\Rightarrow k = 1 \text{ or } k = -\frac{1}{2}$$

Hence, option (d) is correct.

76. Consider the following statements in respect of $f(x) = |x| - 1$:

- 1. $f(x)$ is continuous at $x = 1$.
- 2. $f(x)$ is differentiable at $x = 0$.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (a) Given, $f(x) = |x| - 1$

Since, modulus function is continuous.

$\Rightarrow f(x)$ is continuous at $x = 1$

and $|x|$ is not differentiable if $x = 0$

$\therefore f(x) = |x| - 1$ is not differentiable at $x = 0$

Hence, statement (1) is correct and (2) is false.

Hence, option (a) is correct.

77. If $f(x) = \frac{[x]}{[x]}$, $x \neq 0$,

where $[]$ denotes the greatest integer function, then what is the right-hand limit of $f(x)$ at $x = 1$?

- (a) -1
- (b) 0
- (c) 1
- (d) Right-hand limit of $f(x)$ at $x = 1$ does not exist

(c) Given that, $f(x) = \frac{[x]}{|x|}$, $x \neq 0$

$$= \lim_{x \rightarrow 1^+} \frac{[x]}{|x|}$$

$x = 1 + h$, where $h \rightarrow 0$

$$\therefore \lim_{h \rightarrow 0} \frac{[1+h]}{[1+h]} = \frac{1}{|1+0|} = 1$$

Hence, option (c) is correct.

78. Consider the following statements in respect of the function.

$f(x) = \sin\left(\frac{1}{x^2}\right)$, $x \neq 0$.

1. It is continuous at $x = 0$, if $f(0) = 0$.
2. It is continuous at $x = \frac{2}{\sqrt{x}}$.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

(b) Given that, $f(x) = \sin\left(\frac{1}{x^2}\right)$, $x \neq 0$

At $x = 0$,

LHL $\lim_{x \rightarrow 0^-} \sin\left(\frac{1}{x^2}\right)$

= value in between -1 and +1

RHL $\lim_{x \rightarrow 0^+} \sin\left(\frac{1}{x^2}\right)$

= value in between -1 and +1

\therefore Limit doesn't exist $\Rightarrow f(x)$ is not continuous at $x = 0$.

At $x = \frac{2}{\sqrt{\pi}}$,

$$\lim_{x \rightarrow \frac{2}{\sqrt{\pi}}} \sin\left(\frac{1}{x^2}\right) = \sin\frac{\pi}{4} = \frac{1}{\sqrt{2}}$$

Also $f\left(\frac{2}{\sqrt{\pi}}\right) = \sin\left(\frac{1}{\left(\frac{2}{\sqrt{\pi}}\right)^2}\right) = \frac{1}{\sqrt{2}}$

$\therefore f(x)$ is continuous at $x = \frac{2}{\sqrt{\pi}}$

Hence, option (b) is correct.

79. What is the range of the function $f(x) = 1 - \sin x$ defined on entire real line?

- (a) (0, 2)
- (b) [0, 2]
- (c) (-1, 1)
- (d) [-1, 1]

(b) Given that, $f(x) = 1 - \sin x$
 Since, the range of $\sin x$ is $[-1, 1]$.

$-1 \leq \sin x \leq 1$

$-1 \leq -\sin x \leq 1$

$1 - 1 \leq 1 - \sin x \leq 1 + 1$

$0 \leq 1 - \sin x \leq 2$

\therefore Range = $[0, 2]$

Hence, option (b) is correct.

80. What is the slope of the tangent of

$y = \cos^{-1}(\cos x)$ at $x = -\frac{\pi}{4}$?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

(a) Given that, $y = \cos^{-1}(\cos x)$

Since range of $\cos^{-1} x$ is $[0, \pi]$.

$\therefore y = \cos^{-1}(\cos x) = -x$,

if $x \in (-\pi, 0)$

$\therefore x = -\frac{\pi}{4}$

$\therefore y = -x$

$\Rightarrow \frac{dy}{dx} = -1$

\therefore Slope of tangent = -1

Hence, option (a) is correct.

81. What is the integral of

$f(x) = 1 + x^2 + x^4$ with respect to x^2 ?

(a) $x + \frac{x^3}{3} + \frac{x^5}{5} + C$

(b) $\frac{x^3}{3} + \frac{x^5}{5} + C$

(c) $x^2 + \frac{x^4}{4} + \frac{x^6}{6} + C$

(d) $x^2 + \frac{x^4}{2} + \frac{x^6}{3} + C$

(d) Given function, $f(x) = 1 + x^2 + x^4$

\therefore Integral of $f(x)$ w.r.t x^2 .

$= \int (1 + x^2 + x^4) \cdot 2x dx$

$= \int (2x + 2x^3 + 2x^5) dx$

$= x^2 + \frac{x^4}{2} + \frac{x^6}{3} + C$

Hence, option (d) is correct.

82. Consider the following statements in respect of the function

$f(x) = x^2 + 1$ in the interval (1, 2).

1. The maximum value of the function is 5.
2. The minimum value of the function is 2.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

(c) Given function,

$f(x) = x^2 + 1$ in (1, 2)

$\Rightarrow y = x^2 + 1$
 $x^2 = (y - 1)$

Which is the equation of parabola with vertex (0, 1).

At $x = 1$

$f(1) = 1^2 + 1 = 2$

$f(2) = 2^2 + 1 = 5$

Hence, maximum value of the function in (1, 2) is 5 and minimum value is 2.

Hence, option (c) is correct.

83. If $f(x)$ satisfies $f(1) = f(4)$, then

what is $\int_1^4 f'(x) dx$ equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

(b) $f(1) = f(4)$

$\therefore \int_1^4 f'(x) dx = [f(x)]_1^4 = f(4) - f(1)$
 $= f(1) - f(1) = 0$

84. What is $\int_0^{\frac{\pi}{2}} e^{\ln(\cos x)} dx$ equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

(c) Let $I = \int_0^{\frac{\pi}{2}} e^{\ln(\cos x)} dx = \int_0^{\frac{\pi}{2}} (\cos x) dx$
 $= [\sin x]_0^{\frac{\pi}{2}} = \sin\frac{\pi}{2} - \sin 0 = 1$

Hence, option (c) is correct.

85. If $\int \sqrt{1 - \sin 2x} dx = A$

$\sin x + B \cos x + C$, where

$0 < x < \frac{\pi}{4}$, then which one of the

following is correct?

- (a) $A + B = 0$
- (b) $A + B - 2 = 0$
- (c) $A + B + 2 = 0$
- (d) $A + B - 1 = 0$

(b) Given that,

$\int \sqrt{1 - \sin 2x} dx = A \sin x + B \cos x + C$,

where $0 \leq x \leq \frac{\pi}{4}$.

Let

$I = \int \sqrt{\cos^2 x + \sin^2 x - 2 \sin x \cdot \cos x} dx$

$I = \int \sqrt{(\cos x - \sin x)^2} dx$

$\therefore \cos x > \sin x$ when $0 < x < \frac{\pi}{4}$

$$I = \int (\cos x - \sin x) dx$$

$$I = \sin x + \cos x + C$$

$$= A \sin x + B \cos x + C$$

∴ $A = 1, B = 1$
 ∴ $A + B - 2 = 1 + 1 - 2 = 0$
 Hence, option (b) is correct.

86. What is the order of the differential equation of all ellipses whose axes are along the coordinate axes?

- (a) 1 (b) 2
 (c) 3 (d) 4

⊙ (b) Since, the equation of ellipse

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

∴ There are 2 variable a and b .
 ∴ Order of the differential equation = 2
 Hence option (d) is correct.

87. What is the degree of the differential equation of all circles touching both the coordinate axes in the first quadrant?

- (a) 1 (b) 2
 (c) 3 (d) 4

⊙ (b) If r be the radius of circle.
 Since, the circle touching both the coordinate axes in the first quadrant.

∴ Centre = (r, r) and radius = r
 ∴ Equation of circle

$$(x - r)^2 + (y - r)^2 = r^2$$

$$x^2 + y^2 - 2xr - 2yr + r^2 = 0 \quad \dots(i)$$

$$2x + 2yy' - 2r - 2ry' = 0$$

$$r(1 + y') = x + yy'$$

$$r = \frac{x + yy'}{1 + y'}$$

Putting the value of r in Eq. (i)

$$x^2 + y^2 - 2x \frac{(x + yy')}{1 + y'} - 2y \frac{(x + yy')}{1 + y'} + \left(\frac{x + yy'}{1 + y'} \right)^2 = 0$$

$$(1 + y')^2 x^2 + (1 + y')^2 y^2 - 2x(x + yy') - 2y(x + yy')(1 + y') + (x + yy')^2 = 0$$

$$(1 + y')^2 (x^2 + y^2) - 2(x - y)(x + yy') + (1 + y') + (x + yy')^2 = 0$$

Hence, the degree of the differential equation is 2.

88. What is the differential equation of $y = A - \frac{B}{x}$?

- (a) $xy_2 + y_1 = 0$ (b) $xy_2 + 2y_1 = 0$
 (c) $xy_2 - 2y_1 = 0$ (d) $2xy_2 + y_1 = 0$

⊙ (b) Given, $y = A - \frac{B}{x}$
 On differentiating w.r.t 'x'

$$\frac{dy}{dx} = 0 - B \left(-\frac{1}{x^2} \right) = \frac{B}{x^2}$$

$$x^2 \frac{dy}{dx} = B$$

On differentiating again w.r.t 'x'.

$$x^2 \cdot \frac{d^2y}{dx^2} + \frac{dy}{dx} \cdot (2x) = 0$$

$$\Rightarrow x(xy_2 + 2y_1) = 0$$

$$\Rightarrow xy_2 + 2y_1 = 0$$

Hence, option (b) is correct.

89. What is $\int_0^{\pi} \ln \left(\tan \frac{x}{2} \right) dx$ equal to?

- (a) 0 (b) $\frac{1}{2}$ (c) 1 (d) 2

⊙ (a) Let $I = \int_0^{\pi} \ln \left(\tan \frac{x}{2} \right) dx \quad \dots(i)$

$$I = \int_0^{\pi} \ln \left(\cot \left(\frac{\pi - x}{2} \right) \right) dx$$

$$I = \int_0^{\pi} \ln \left(\cot \left(\frac{x}{2} \right) \right) dx \quad \dots(ii)$$

Adding Eq. (i) and Eq. (ii)

$$2I = \int_0^{\pi} \left\{ \ln \left(\tan \frac{x}{2} \right) + \ln \left(\cot \frac{x}{2} \right) \right\} dx$$

$$= \int_0^{\pi} \ln \left(\tan \frac{x}{2} \cdot \cot \frac{x}{2} \right) dx = \int_0^{\pi} \ln(1) dx$$

$$2I = 0$$

∴ $I = 0$
 Hence, option (a) is correct.

90. Where does the tangent to the curve $y = e^x$ at the point $(0, 1)$ meet X-axis?

- (a) $(1, 0)$ (b) $(-1, 0)$
 (c) $(2, 0)$ (d) $\left(-\frac{1}{2}, 0 \right)$

⊙ (b) Given curve, $y = e^x$
 ∴ $\frac{dy}{dx} = e^x$
 $\left(\frac{dy}{dx} \right)_{at(0, 1)} = e^0 = 1$

∴ Equation of tangent at $(0, 1)$.

$$y - 1 = \left(\frac{dy}{dx} \right)_{at(0, 1)} (x - 0)$$

$$y - 1 = x$$

Since, $(-1, 0)$ satisfies above equation.
 Hence, option (b) is correct.

91. Consider the following statements in respect of the function

$$f(x) = x + \frac{1}{x}$$

- The local maximum value of $f(x)$ is less than its local minimum value.
- The local maximum value of $f(x)$ occurs at $x = 1$.

Which of the above statements is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) Given, $f(x) = x + \frac{1}{x}$
 $f'(x) = 1 - \frac{1}{x^2}$ and $f''(x) = \frac{2}{x^3}$

For critical points $f'(x) = 0$

$$1 - \frac{1}{x^2} = 0$$

$$x = \pm 1$$

At $x = 1, f''(x) = 2 > 0$

$\Rightarrow f(x)$ is minimum at $x = 1$

$\Rightarrow f(1) = 2$

At $x = -1, f''(x) = -2 < 0$

$\Rightarrow f(x)$ is maximum at $x = -1$

$\Rightarrow f(-1) = -2$

Hence, statement (1) is correct and (2) is false.

∴ Option (a) is correct.

92. What is the maximum area of a rectangle that can be inscribed in a circle of radius 2 units?

- (a) 4 sq. units (b) 6 sq. units
 (c) 8 sq. units (d) 16 sq. units

⊙ (c) Let x and y be the length and breadth of rectangle respectively.

In $\triangle ABC,$

$$x^2 + y^2 = 16$$

$$\Rightarrow y = \sqrt{16 - x^2}$$

∴ Area of rectangle, $A = xy$

$$A = x\sqrt{16 - x^2}$$

$$\frac{dA}{dx} = \sqrt{16 - x^2} + \frac{x}{2\sqrt{16 - x^2}}(-2x)$$

$$= \frac{16 - x^2 - x^2}{\sqrt{16 - x^2}} = \frac{16 - 2x^2}{\sqrt{16 - x^2}}$$

For maximum A,

$$\frac{dA}{dx} = 0$$

$$\Rightarrow \frac{16 - 2x^2}{\sqrt{16 - x^2}} = 0 \Rightarrow 16 - 2x^2 = 0$$

$$\Rightarrow x^2 = 8 \Rightarrow x = \pm 2\sqrt{2}$$

$$\frac{-4x \cdot \sqrt{16 - x^2} - (16 - 2x^2)}{16 - x^2} (-2x)$$

Now, $\frac{d^2A}{dx^2} = \frac{2\sqrt{16 - x^2}}{16 - x^2}$

$$= \frac{-4x(16 - x^2) + x(16 - 2x^2)}{(16 - x^2)^{3/2}}$$

$$= \frac{-3x(16 - x^2)}{(16 - x^2)^{3/2}}$$

$$\left(\frac{d^2A}{dx^2}\right)_{\text{at } x=2\sqrt{2}} = \frac{-3(2\sqrt{2})(16 - 8)}{(16 - 8)^{3/2}} \text{ (Negative)}$$

$$\therefore y = \sqrt{16 - (2\sqrt{2})^2} = 2\sqrt{2}$$

$$\text{Area} = 2\sqrt{2} \times 2\sqrt{2} = 8 \text{ sq. units}$$

Hence, A is maximum at $x = 2\sqrt{2}$.

93. What is $\int \frac{dx}{x(x^2 + 1)}$ equal to?

- (a) $\frac{1}{2} \ln \left(\frac{x^2}{x^2 + 1} \right) + C$
- (b) $\ln \left(\frac{x^2}{x^2 + 1} \right) + C$
- (c) $\frac{3}{2} \ln \left(\frac{x^2}{x^2 + 1} \right) + C$
- (d) $\frac{1}{2} \ln \left(\frac{x^2 + 1}{x^2} \right) + C$

⊙ (a) Let $I = \int \frac{dx}{x(x^2 + 1)}$

$$\therefore \frac{1}{x(x^2 + 1)} = \frac{A}{x} + \frac{Bx + C}{x^2 + 1}$$

(by using partial fraction)

$$\frac{1}{x(x^2 + 1)} = \frac{Ax^2 + A + Bx^2 + Cx}{x(x^2 + 1)}$$

$$1 = (A + B)x^2 + Cx + A$$

$$\Rightarrow A + B = 0, C = 0, A = 1$$

$$\therefore B = -A = -1$$

$$\therefore I = \int \frac{dx}{x(x^2 + 1)} = \int \left(\frac{1}{x} - \frac{x}{x^2 + 1} \right) dx$$

$$= \ln x - \frac{1}{2} \ln(x^2 + 1) + C$$

$$= \frac{1}{2} (2 \ln x) - \frac{1}{2} \ln(x^2 + 1) + C$$

$$= \frac{1}{2} (\ln x^2 - \ln(x^2 + 1)) + C$$

$$= \frac{1}{2} \ln \left(\frac{x^2}{x^2 + 1} \right) + C$$

Hence, option (a) is correct.

94. What is the derivative of e^{e^x} with respect to e^x ?

- (a) e^{e^x}
- (b) e^x
- (c) $e^{e^x} e^x$
- (d) ee^x

⊙ (a) Let $y_1 = e^{e^x}$ and $y_2 = e^x$

$$\therefore \frac{dy_1}{dx} = e^{e^x} \cdot e^x, \frac{dy_2}{dx} = e^x$$

$$\Rightarrow \frac{dy_1}{dy_2} = \frac{e^{e^x} \cdot e^x}{e^x} = e^{e^x}$$

∴ Option (a) is correct.

95. What is the condition that $f(x) = x^3 + x^2 + kx$ has no local extremum?

- (a) $4k < 1$
- (b) $3k > 1$
- (c) $3k < 1$
- (d) $3k \leq 1$

⊙ (b) Given that, $f(x) = x^3 + x^2 + kx$

∴ $f(x)$ has no local extremum.

$$\Rightarrow f'(x) \neq 0$$

$$\Rightarrow 3x^2 + 2x + k \neq 0$$

for no extremum, $D < 0$

$$\Rightarrow (2)^2 - 4(3)(k) < 0$$

$$\Rightarrow 4 - 12k < 0$$

$$3k > 1$$

∴ Option (b) is correct.

96. If $f(x) = 2^x$, then what is

$\int_2^{10} \frac{f'(x)}{f(x)} dx$ equal to?

- (a) $4 \ln 2$
- (b) $\ln 4$
- (c) $\ln 5$
- (d) $8 \ln 2$

⊙ (d) Given, $f(x) = 2^x$

$$\therefore \int_2^{10} \frac{f'(x)}{f(x)} dx = [\ln f(x)]_2^{10} = [\ln 2^x]_2^{10}$$

$$= [x \ln 2]_2^{10}$$

$$= 10 \ln 2 - 2 \ln 2$$

$$= 8 \ln 2$$

∴ Option (d) is correct.

97. If $\int_{-2}^0 f(x) dx = k$, then

$\int_{-2}^0 |f(x)| dx$ is

- (a) less than k
- (b) greater than k
- (c) less than or equal to k
- (d) greater than or equal to k

⊙ (d) Given, $\int_{-2}^0 f(x) dx = k$

To find $\int_{-2}^0 |f(x)| dx$

Let $f(x) = x$

$$\therefore \int_{-2}^0 x dx = \left[\frac{x^2}{2} \right]_{-2}^0 = -2 = k$$

$$\therefore \int_{-2}^0 |x| dx = - \int_{-2}^0 x dx$$

$$= -(-2) = 2 \geq k$$

∴ Option (d) is correct.

98. If the function $f(x) = x^2 - kx$ is monotonically increasing in the interval $(1, \infty)$, then which one of the following is correct?

- (a) $k < 2$
- (b) $2 < k < 3$
- (c) $3 < k < 4$
- (d) $k > 4$

⊙ (a) Let the function $f(x) = x^2 - kx$ is monotonically increasing in $(1, \infty)$.

$$\Rightarrow f'(x) \geq 0$$

$$\Rightarrow 2x - k \geq 0$$

$$\Rightarrow k \leq 2x \text{ in } (1, \infty) \text{ at lower value}$$

at $x = 1$

$$k < 2$$

Hence, option (a) is correct.

99. What is the area bounded by $y = [x]$, where $[\cdot]$ is the greatest integer function, the X-axis and the lines $x = -1.5$ and $x = -1.8$?

- (a) 0.3 sq. unit
- (b) 0.4 sq. unit
- (c) 0.6 sq. unit
- (d) 0.8 sq. unit

⊙ (c) Given, $y = [x]$

$$\therefore \text{Area} = \int_{-1.8}^{-1.5} [x] dx = \int_{-1.8}^{-1.5} (-2) dx$$

$$= -2(x)_{-1.8}^{-1.5}$$

$$= -2(-1.5 + 1.8) = -0.6$$

∴ Area = 0.6 sq. unit
Hence, option (c) is correct.

100. The tangent to the curve $x^2 = y$ at $(1, 1)$ makes an angle θ with the positive direction of X-axis. Which one of the following is correct?

- (a) $\theta < \frac{\pi}{6}$
- (b) $\frac{\pi}{6} < \theta < \frac{\pi}{4}$
- (c) $\frac{\pi}{4} < \theta < \frac{\pi}{3}$
- (d) $\frac{\pi}{3} < \theta < \frac{\pi}{2}$

⊙ (d) Given, curve $y = x^2$

$$\frac{dy}{dx} = 2x$$

$$\left. \frac{dy}{dx} \right|_{\text{at } (1, 1)} = 2 \times 1 = 2$$

$$\Rightarrow \tan \theta = 2$$

$$\therefore \tan \frac{\pi}{3} = \sqrt{3} = 1.732 \text{ and } \tan \frac{\pi}{2} = \infty$$

$$\therefore \frac{\pi}{3} < \theta < \frac{\pi}{2}$$

Hence, option (d) is correct.

101. Consider the following relations for two events E and F .

1. $P(E \cap F) \geq P(E) + P(F) - 1$
2. $P(E \cup F) = P(E) + P(F) + P(E \cap F)$
3. $P(E \cup F) \leq P(E) + P(F)$

Which of the above relations is/are correct?

- (a) 1 only (b) 3 only
(c) 1 and 3 only (d) 1, 2 and 3

⊗ (c) Let E and F be two events.

Then, $P(E \cup F) = P(E) + P(F) - P(E \cap F)$... (i)

or $P(E \cup F) \leq P(E) + P(F)$

$$P(E \cup F) \leq 1$$

$$-P(E \cap F) \geq -1$$

$$\Rightarrow P(E) + P(F) - P(E \cap F) \geq P(E) + P(F) - 1$$

$$\Rightarrow P(E \cap F) \geq P(E) + P(F) - 1$$

Hence, option (c) is correct.

102. If $P(A/B) < P(A)$, then which one of the following is correct?

- (a) $P(B|A) < P(B)$ (b) $P(B|A) > P(B)$
(c) $P(B|A) = P(B)$ (d) $P(B|A) > P(A)$

⊗ (a) If $P\left(\frac{A}{B}\right) < P(A)$

$$\therefore P\left(\frac{A}{B}\right) = \frac{P(A \cap B)}{P(B)} < P(A)$$

$$\Rightarrow \frac{P(A \cap B)}{P(A)} < P(B)$$

$$\Rightarrow P\left(\frac{B}{A}\right) < P(B)$$

Hence, option (a) is correct.

103. When the measure of central tendency is available in the form of mean, which one of the following is the most reliable and accurate measure of variability?

- (a) Range
(b) Mean deviation
(c) Standard deviation
(d) Quartile deviation

⊗ (c) When the measure of central tendency is available in the form of mean then, we know that Standard Deviation is the most reliable and accurate measure of variability.

Hence, option (c) is correct.

104. A problem is given to three students A , B and C , whose probabilities of solving the problem independently are $\frac{1}{2}$, $\frac{3}{4}$ and p , respectively. If the probability that the problem can be solved is $\frac{29}{32}$, then what is the value of p ?

- (a) $\frac{2}{5}$ (b) $\frac{2}{3}$
(c) $\frac{1}{3}$ (d) $\frac{1}{4}$

⊗ (d) Given, $P(A) = \frac{1}{2}$, $P(B) = \frac{3}{4}$, $P(C) = p$

\therefore Probability that the problem can not be solved = $P(\bar{A}) \cdot P(\bar{B}) \cdot P(\bar{C})$

$$= \left(1 - \frac{1}{2}\right) \left(1 - \frac{3}{4}\right) (1 - p)$$

$$= \frac{1}{2} \times \frac{1}{4} (1 - p)$$

$$= \frac{1 - p}{8}$$

\therefore Probability that the problem can be solved

= $1 -$ Probability that the problem cannot be solved

$$\frac{29}{32} = 1 - \frac{(1 - p)}{8}$$

$$\frac{1 - p}{8} = 1 - \frac{29}{32}$$

$$\frac{1 - p}{8} = \frac{3}{32}$$

$$1 - p = \frac{3}{4}$$

$$\therefore p = \frac{1}{4}$$

Hence, option (d) is correct.

105. In a cricket match a batsman hits a six 8 times out of 60 balls he plays. What is the probability that on a ball played he does not hit a six?

- (a) $\frac{2}{3}$ (b) $\frac{1}{15}$ (c) $\frac{2}{15}$ (d) $\frac{13}{15}$

⊗ (d) Since, the batsman hits a six 8 times out of 60 balls.

The batsman could not hit sixes in (60-8) balls.

\therefore Probability that on a ball played he does not hit six = $\frac{52}{60}$

$$p = \frac{13}{15}$$

Hence, option (d) is correct.

Directions (Q. Nos. 106 and 107)

Consider the following for the questions that follow.

Two regression lines are given as $3x - 4y + 8 = 0$ and $4x - 3y - 1 = 0$

106. Consider the following statements.

1. The regression line of y on x is

$$y = \frac{3}{4}x + 2$$

2. The regression line of x on y is

$$x = \frac{3}{4}y + \frac{1}{4}$$

Which of the above statements is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (c) Two regression lines are

$$3x - 4y + 8 = 0, 4x - 3y - 1 = 0$$

for finding the regression line of y on x

$$3x - 4y + 8 = 0$$

$$4y = 3x + 8$$

$$y = \left(\frac{3}{4}\right)x + 2 \quad \dots(i)$$

and the regression line of x on y :

$$4x - 3y - 1 = 0$$

$$4x = 3y + 1$$

$$x = \frac{3}{4}y + \frac{1}{4} \quad \dots(ii)$$

Hence, option (c) is correct.

107. Consider the following statements.

1. The coefficient of correlations

$$r \text{ is } \frac{3}{4}$$

2. The means of x and y are 3 and 4 respectively.

Which of the above statements is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (a) Since, regression line of y on x

$$\Rightarrow y = \frac{3}{4}x + 2$$

$$\therefore b_{xy} = \frac{3}{4}$$

and regression line of x on y

$$\Rightarrow x = \frac{3}{4}y + \frac{1}{4}$$

$$\therefore b_{yx} = \frac{3}{4}$$

\therefore Coefficient of correlations

$$r = \sqrt{b_{xy} \times b_{yx}} = \sqrt{\frac{3}{4} \times \frac{3}{4}}$$

$$r = \frac{3}{4}$$

Means of x and y are nothing but the solution of regression lines

$$3x - 4y + 8 = 0$$

$$\text{and } 4x - 3y - 1 = 0$$

$$3x - 4y = -8 \quad \dots(i)$$

$$4x - 3y = 1 \quad \dots(ii)$$

Eq. (i) $\times 4 -$ Eq. (ii) $\times 3$

$$12x - 16y = -32$$

$$12x - 9y = 3$$

$$7y = 35 \Rightarrow y = 5$$

$$\therefore 4x = 1 + 3 \times 5$$

$$x = 4$$

\therefore Statement (2) is wrong.

Hence, option (a) is correct.

Directions (Q. Nos. 108 and 109)

Consider the following for the questions that follow.

The marks obtained by 60 students in a certain subject out of 75 are given below.

Marks	Number of students
15-20	4
20-25	5
25-30	11
30-35	6
35-40	5
40-45	8
45-50	9
50-55	6
55-60	4
60-65	2

108. What is the median?

- (a) 35 (b) 38
(c) 39 (d) 40

⊙ (c)

Marks	Frequency	Cumulative frequency
15-20	4	4
20-25	5	9
25-30	11	20
30-35	6	26 = Cf
35-40	5	31
40-45	8	39
45-50	9	48
50-55	6	54
55-60	4	58
60-65	2	60
N = 60		

$$\therefore \frac{N}{2} = 30 \Rightarrow \text{model class will be } 35 - 40.$$

$$\therefore \text{lower limit } (l) = 35$$

$$h = 40 - 35 = 5$$

$$\therefore \text{Median} = l + \frac{\frac{N}{2} - C.f}{f} \times h$$

$$= 35 + \frac{30 - 26}{5} \times 5 = 39$$

Hence, option (c) is correct.

109. What is the mode?

- (a) 27.27 (b) 27.73
(c) 27.93 (d) 28.27

Marks	Frequency
15-20	4
20-25	5 $\rightarrow f_0$
25-30	11 $\rightarrow f_1$
30-35	6 $\rightarrow f_2$
35-40	5

Marks	Frequency
40-45	8
45-50	9
50-55	6
55-60	4
60-65	2

⊙ (b) Highest frequency is given for class 25-30.

\therefore Model class will be 25-30.

$$\therefore l = 25, h = 5$$

$$\therefore f_1 = 11, f_0 = 5, f_2 = 6$$

$$\therefore \text{Mode} = l + \frac{f_1 - f_0}{2f_1 - f_0 - f_2} \times h$$

$$= 25 + \frac{11 - 5}{22 - 5 - 6} \times 5$$

$$= 25 + \frac{6}{11} \times 5 = \frac{275 + 30}{11}$$

$$= 27.73$$

Hence, option (b) is correct.

110. What is the mean of natural numbers contained in the interval [15, 64]?

- (a) 36.8 (b) 38.3
(c) 39.5 (d) 40.3

⊙ (c) Mean of natural numbers contained in [15, 64].

$$= \frac{15 + 16 + 17 + \dots + 64}{50}$$

$$= \frac{\sum_{n=1}^{64} n - \sum_{r=1}^{14} r}{50}$$

$$= \frac{64 \times 65}{2} - \frac{14 \times 15}{2}$$

$$= \frac{2080 - 105}{50} = 39.5$$

Hence, option (c) is correct.

111. For the set of numbers $x, x, x + 2, x + 3, x + 10$ where x is a natural number, which of the following is/are correct?

1. Mean > Mode
2. Median > Mean
Select the correct answer using the code given below.
(a) 1 only
(b) 2 only
(c) Both 1 and 2
(d) Neither 1 nor 2

⊙ (a) Given data $x, x, x + 2, x + 3, x + 10$ where $x \in N$.

$$\therefore \text{Mean} = \frac{x + x + x + 2 + x + 3 + x + 10}{5}$$

$$= \frac{5x + 15}{5} = x + 3$$

\therefore Mode = x

$$\text{Median} = \left(\frac{5 + 1}{2} \right)^{\text{th}} \text{ term} = 3^{\text{rd}} \text{ term}$$

$$= x + 2$$

\therefore Mean > Mode and Median < Mean

Hence, correct option is (a).

112. The mean of 10 observations is 5.5. If each observation is multiplied by 4 and subtracted from 44, then what is the new mean?

- (a) 20 (b) 22
(c) 34 (d) 44

⊙ (b) Given that, the mean of 10 observation is 5.5.

$$\therefore \text{Mean} = \frac{x_1 + x_2 + \dots + x_{10}}{10}$$

$$5.5 = \frac{x_1 + x_2 + \dots + x_{10}}{10}$$

$$\therefore \sum_{i=1}^{10} x_i = 55$$

Also, given that new observations are obtained by multiplying by 4 and subtracting from 44.

$$\text{Hence, new mean} = 44 - 4 \times 5.5$$

$$= 44 - 22 = 22$$

Hence, correct option is (b).

113. If g is the geometric mean of 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024, then which one of the following is correct?

- (a) $8 < g < 16$ (b) $16 < g < 32$
(c) $32 < g < 64$ (d) $g > 64$

⊙ (c) Given that, geometric mean of 2, 4, 8, 16, 32, 64, 126, 256, 512, 1024 is g .

$$\therefore g = \sqrt[10]{2 \times 4 \times 8 \times 16 \times 32 \times 64 \times 128 \times 256 \times 512 \times 1024}$$

$$= (2^{1+2+3+\dots+10})^{\frac{1}{10}}$$

$$g = (2^{55})^{\frac{1}{10}} \Rightarrow g = (2^{\frac{11}{2}})^{\frac{1}{10}}$$

$$\therefore 2^5 < g < 2^6 \Rightarrow 32 < g < 64$$

Hence, option (c) is correct.

114. If the harmonic mean of 60 and x is 48, then what is the value of x ?

- (a) 32 (b) 36
(c) 40 (d) 44

⊙ (c) Given, harmonic mean of 60 and x is 48.

$$\therefore H = \frac{2ab}{a+b}$$

$$48 = \frac{2 \times 60 \times x}{60 + x}$$

$$2880 + 48x = 120x$$

$$72x = 2880$$

$$x = 40$$

Hence, option (c) is correct.

115. What is the mean deviation of first 10 even natural numbers?

- (a) 5 (b) 5.5
(c) 10 (d) 10.5

⊙ (a) Mean deviation of first 10 even natural numbers

$$\begin{aligned} \text{Since, mean } (\bar{x}) &= \frac{2 + 4 + 6 + \dots + 20}{10} \\ &= \frac{2(10 \times 11)}{20} = 11 \end{aligned}$$

$$\begin{aligned} \therefore \text{Mean deviation} &= \frac{|2 - 11| + |4 - 11| + |6 - 11| + \dots + |20 - 11|}{10} \\ &= \frac{9 + 7 + 5 + 3 + 1 + 1 + 3 + 5 + 7 + 9}{10} \\ &= 5 \end{aligned}$$

Hence, option (a) is correct.

116. If $\sum_{i=1}^{10} x_i = 110$ and $\sum_{i=1}^{10} x_i^2 = 1540$,

then what is the variance?

- (a) 22 (b) 33
(c) 44 (d) 55

⊙ (b) Given, $\sum_{i=1}^{10} x_i = 110$

$$\text{and } \sum_{i=1}^{10} x_i^2 = 1540$$

$$\begin{aligned} \therefore \text{Variance} &= \frac{\sum x_i^2}{n} - \left(\frac{\sum x_i}{n} \right)^2 \\ &= \frac{1540}{10} - \left(\frac{110}{10} \right)^2 \\ &= 154 - 121 \\ &= 33 \end{aligned}$$

Hence, option (b) is correct.

117. 3-digit numbers are formed using the digits 1, 3, 7 without repetition of digits. A number is randomly selected. What is the probability that the number is divisible by 3?

- (a) 0 (b) $\frac{1}{3}$
(c) $\frac{1}{4}$ (d) $\frac{1}{8}$

⊙ (a) Let 3-digit numbers using the digits without repetition 1, 3, 7 are 3!

$$\begin{aligned} \text{Since, the sum of the digits} &= 1 + 3 + 7 = 11 \end{aligned}$$

which is not divisible by 3.

$$\therefore P(\text{number of divisible by 3}) = \frac{0}{3!} = 0$$

Hence, option (a) is correct.

118. What is the probability that the roots of the equation $x^2 + x + n = 0$ are real, where $n \in N$ and $n < 4$?

- (a) 0 (b) $\frac{1}{4}$
(c) $\frac{1}{3}$ (d) $\frac{1}{2}$

⊙ (a) Given, equation $x^2 + x + n = 0$, where $n \in N, n < 4$

$$\therefore n \in \{1, 2, 3\}$$

Since, above equation is quadratic.

So, for each value of n , we have two roots.

\therefore Total number of roots = 6

When $n = 1$

$$\begin{aligned} x^2 + x + 1 &= 0 \\ x &= \frac{-1 \pm \sqrt{1 - 4}}{2} = \frac{-1 \pm \sqrt{-3}}{2} \end{aligned}$$

when $n = 2$,

$$\begin{aligned} x^2 + x + 2 &= 0 \\ \Rightarrow x &= \frac{-1 \pm \sqrt{1 - 8}}{2} = \frac{-1 \pm \sqrt{-7}}{2} \end{aligned}$$

and $n = 3, x^2 + x + 3 = 0$

$$\Rightarrow x = \frac{-1 \pm \sqrt{1 - 12}}{2}$$

There are no real roots.

$$\therefore P(\text{roots are real}) = \frac{0}{6} = 0$$

Hence, option (a) is correct.

119. If A and B are two events such that

$$P(\text{not } A) = \frac{7}{10}, P(\text{not } B) = \frac{3}{10} \text{ and}$$

$$P(A | B) = \frac{3}{14}, \text{ then what is } P(B | A)$$

equal to?

- (a) $\frac{11}{14}$ (b) $\frac{9}{14}$
(c) $\frac{1}{4}$ (d) $\frac{1}{2}$

⊙ (d) Given, $P(\text{not } A) = \frac{7}{10}, P(\text{not } B) = \frac{3}{10}$

$$P\left(\frac{A}{B}\right) = \frac{3}{14}$$

$$\therefore P\left(\frac{B}{A}\right) = \frac{P(A \cap B)}{P(A)} \dots (i)$$

$$\therefore P(\text{not } A) = \frac{7}{10}$$

$$\therefore P(A) = 1 - \frac{7}{10} = \frac{3}{10}$$

$$P(\text{not } B) = \frac{3}{10}$$

$$\therefore P(B) = 1 - \frac{3}{10} = \frac{7}{10}$$

$$P\left(\frac{A}{B}\right) = \frac{P(A \cap B)}{P(B)}$$

$$\frac{3}{14} = \frac{P(A \cap B)}{\frac{7}{10}}$$

$$\therefore P(A \cap B) = \frac{3}{20}$$

$$\text{Eq. (i)} \Rightarrow P\left(\frac{B}{A}\right) = \frac{\frac{3}{20}}{\frac{3}{10}} = \frac{1}{2}$$

Hence, option (d) is correct.

120. Seven white balls and three black balls are randomly placed in a row. What is the probability that no two black balls are placed adjacently?

- (a) $\frac{7}{15}$ (b) $\frac{8}{15}$
(c) $\frac{11}{15}$ (d) $\frac{13}{15}$

⊙ (a) There are 10 balls among which 7 are white and 3 are black.

\therefore Number of ways to arrange 10 balls = 10!

If we put the balls in such a way that no two black balls are placed adjacently.

\therefore Number of arrangements = $7! \times {}^8P_3$

$$\begin{aligned} \therefore P &= \frac{7! \times 8!}{5! \times 10!} \\ &= \frac{6 \times 7}{9 \times 10} = \frac{7}{15} \end{aligned}$$

Hence, option (a) is correct.

PAPER II : English Language and General Studies

Part A (English Language)

Directions (Q. Nos. 1-10) *Each item in this section consists of a sentence with an underlined word followed by four words (a), (b), (c) and (d). Select the option that is nearest in meaning to the underlined word.*

1. He is essentially a lowbrow person.
(a) coarse (b) proud
(c) passionate (d) pathetic
⊗ (a) 'Lowbrow' means not highly cultured and lacking in refinement. Hence, 'coarse' is its correct synonym.
2. His nostalgia is deep.
(a) excitement (b) longing
(c) happiness (d) ability
⊗ (b) 'Nostalgia' means a sentimental longing for a period in the past. Hence, option (b) is the correct answer.
3. His truancy is detrimental.
(a) loyalty (b) integrity
(c) honesty (d) absenteeism
⊗ (d) 'Truancy' refers to the problem or situation of children being absent from school regularly without permission. Hence, 'absenteeism' is its correct synonym.
4. He is a maleficent person.
(a) generous (b) cunning
(c) criminal (d) friendly
⊗ (c) 'Maleficent' means working or productive of harm or evil. Hence, 'criminal' is nearest in meaning to maleficent.
5. His solemnity is celebrated.
(a) greed (b) desire
(c) trust (d) dignity
⊗ (d) 'Solemnity' refers to the state of being serious and dignified. Hence 'dignity' is its correct synonym.
6. His bounty is limitless.
(a) benevolence (b) gallantry
(c) nepotism (d) chivalry
⊗ (a) 'Bounty' means generosity. Hence, 'benevolence' is its correct synonym.
7. The Holocaust was experienced by millions.
(a) celebration (b) destruction
(c) construction (d) beautiful
⊗ (b) 'Holocaust' refers to destruction that occurred on a massive scale. Hence, option (b) is the correct answer.

8. His aversion is known to all.
(a) hospitality (b) hostility
(c) humility (d) humbleness
⊗ (b) 'Aversion' refers to a strong dislike or disinclination towards something. Hence, 'hostility' is its correct synonym.
9. To be able to decipher something is wonderful.
(a) decode (b) encode
(c) simulate (d) animate
⊗ (a) 'Decipher' means to convert a coded text or signal into normal language. Hence, 'decode' is its correct synonym.
10. It is the opportune time to think about investment in the real estate sector.
(a) honorary (b) appropriate
(c) difficult (d) unsuitable
⊗ (b) 'Opportune' time means a time that is suitable for doing something. Hence 'appropriate' is its correct synonym.

Directions (Q. Nos. 11-20) *Each question in this section has a sentence with three parts labelled (a), (b) and (c). Read each sentence to find out whether there is any error in any part. If you find no error, your responses should be indicated as (d).*

11. Nursery classes (a) / for the children (b) / starts on April every year. (c) / No error (d)
⊗ (c) Part (c) contains the error. Replace 'on' with 'in' to make the sentence error free.
12. The pollution level is very (a) / high in our city, and (b) / becomes a health hazard. (c) / No error (d)
⊗ (c) Part (c) contains the error. Replace 'becomes' with 'has become' to make the sentence error free.
13. Indian is a country of linguistic (a) / and cultural diversity with (b) / multiple ethnic and social groups. (c) / No error (d)
⊗ (d) The given sentence is error free.
14. Why does the lapse rate (a) / effect the tendency (b) / of air to rise ? (c) / No error (d)
⊗ (b) Part (b) contains the error. Replace 'effect' with 'affect' to make the sentence grammatically correct.

15. The thorax is the upper part (a) / of your body from the neck down (b) / to the bottom of the ribs and diaphragm. (c) / No error (d)
⊗ (b) Part (b) contains the error. Replace 'from' with 'extending from' to make the sentence error free.
16. The practical uses of astrology (a) / have seldom been seriously (b) / studied outside India. (c) / No error (d)
⊗ (d) The given sentence is error free and grammatically correct.
17. She collected (a) / some armful of medicines and (b) / poured them down a drain. (c) / No error (d)
⊗ (c) Part (c) contains the error. Replace 'a' with 'the' to make the sentence error free.
18. In many countries, the United Nations (a) / or other internationally organised (b) / peacekeeping forces are trying to keep the peace. (c) / No error (d)
⊗ (b) Part (b) contains the error. Replace 'or' with 'and' to make the sentence error free.
19. Early cities rely on food and water (a) / from the surrounding countryside, (b) / but today cities often depend on distant sources. (c) / No error (d)
⊗ (a) Part (a) contains the error. Replace 'early cities rely' with 'earlier cities relied' to make the sentence grammatically correct.
20. Climate change, whether it is (a) / natural or human-induced, (b) / is stressful for the people. (c) / No error (d)
⊗ (c) Part (c) contains the error. Replace 'for' with 'to' to make the sentence error free.

Directions (Q. Nos. 21-30) *Each question in this section consists of a sentence with an underlined word followed by four words (a), (b), (c) and (d). Select the option that is opposite in meaning to the underlined word.*

- 21.** His opinion is lopsided.
 (a) partial (b) crooked
 (c) unequal (d) balanced
 > (d) 'Lopsided' means not equally balanced. Hence, 'balanced' is its correct antonym.
- 22.** His work is praiseworthy.
 (a) admirable (b) condemnable
 (c) commendable (d) creditable
 > (b) 'Praiseworthy' means deserving approval and admiration. Hence, 'condemnable' meaning blamable is opposite in meaning to 'praiseworthy'.
- 23.** His deeds had retrograde results .
 (a) progressive (b) negative
 (c) retreating (d) reverse
 > (a) 'Retrograde' means to revert to an earlier and inferior conditions. Hence, 'progressive' meaning forward-moving is its correct antonym.
- 24.** He always offers palatable solutions.
 (a) acceptable (b) agreeable
 (c) unacceptable (d) pleasant
 > (c) 'Palatable' means acceptable or satisfactory. Hence, 'unacceptable' is its correct antonym.
- 25.** His views on the subject are microscopic.
 (a) broad-based (b) minute
 (c) precise (d) fine
 > (a) 'Microscopic' means concerned with minute details. Hence, 'broad-based' is opposite in meaning to 'microscopic'.
- 26.** He is always obdurate in his behaviour towards other people.
 (a) flexible (b) callous
 (c) insensible (d) obnoxious
 > (a) 'Obdurate' means stubbornly refusing to change one's opinion. Hence, 'flexible' is its correct antonym.
- 27.** Mohan always had profound respect for Sohan.
 (a) deep (b) extreme
 (c) sincere (d) superficial
 > (d) 'Profound' means very great or intense. Hence, 'superficial' is its correct antonym. 'Superficial' means Seeming to have a particular quality, although this is not true or real.
- 28.** We were living in turbulent times.
 (a) destructive (b) unstable
 (c) calm (d) stormy
 > (c) 'Turbulent' means involving a lot of sudden changes, arguments ore violence. Hence, 'calm' is its correct antonym.

- 29.** Amit is a dogmatic person.
 (a) assertive (b) amenable
 (c) bold (d) rigid
 > (b) 'Dogmatic' means of a person completely certain of their bailiffs and expecting other people to accept them. Hence, 'amenable' is its correct antonym as its means willing to accept what someone says or does without arguing.
- 30.** Sachin is very fickle in his behaviour.
 (a) stable (b) capricious
 (c) mercurial (d) vacillating
 > (a) 'Fickle' means frequently changing one's loyalties and affections. Hence, 'stable' is its correct antonym.

Directions (Q. Nos. 31-40) Each of the following items in this section consists of a sentence, the parts of which have been jumbled. These parts have been labelled P, Q, R and S. Given below each sentence are four sequences namely (a), (b), (c) and (d), You are required to re-arrange the jumbled parts of the sentence and mark your answer carefully.

- 31.** symbolic of peace, and prosperity (P)/the Gupta Empire in India is (Q)/represented through numismatic archaeological (R) / and literary evidences of multiple kinds (S)
 The correct sequence should be
 (a) QPRS (b) QSRP
 (c) PSQR (d) RSQP
 > (a) QPRS
- 32.** the transportation system so that it (P) / and not just the affluent section of society (Q) / provides mobility to everyone (R) / there are many ways to restructure (S)
 The correct sequence should be :
 (a) PQRS (b) RQPS
 (c) SPRQ (d) QRPS
 > (c) SPRQ
- 33.** and accurately displays spatial (P) / relationships between landforms and water bodies (Q) / the globe shows Earth's spherical shape (R) / and comparative distance between locations (S)
 The correct sequence should be :
 (a) PQRS (b) RPQS
 (c) SPQR (d) QRPS
 > (b) RPQS
- 34.** the function of the capillaries (P) / and other material to all the cells in (Q) / is to take nutrients, oxygen (R) / the body and to take away their waste material (S)

The correct sequence should be :
 (a) PRQS (b) RPQS
 (c) SPQR (d) QRPS

- > (a) PRQS
- 35.** like mine (P) / even to someone with (Q) / a tin ear (R) / her singing sounded pretty melodious (S)
 The correct sequence should be
 (a) PRQS (b) RPQS
 (c) SPQR (d) QRPS
 > (d) QRPS
- 36.** The sorry state of affairs in the modern factories (P) / the Government of India (Q) / under the British was pro-capitalist (R) / though it took some half-hearted steps to mitigate (S)
 The correct sequence should be :
 (a) PRQS (b) QRSP
 (c) SPQR (d) QPSR
 > (b) QRSP
- 37.** of extreme poverty among its people (P) / economic policies was the prevalence (Q)/a major characteristic of British rule in India (R) / and the net result of British (S)
 The correct sequence should be :
 (a) PRQS (b) QRSP
 (c) RSQP (d) QPSR
 > (c) RSQP
- 38.** you can't judge (P) / very intelligent, but (Q) / a book by its cover (R) / he doesn't look (S)
 The correct sequence should be :
 (a) SQPR (b) QRSP
 (c) RSQP (d) QPSR
 > (a) SQPR
- 39.** membership and partisanship as well as (P) / can be found in the decline in party (Q) / evidence of a crisis in party politics (R) / in the rise of antiparty groups and movements (S)
 The correct sequence should be :
 (a) RQPS (b) QRSP
 (c) RSQP (d) QPSR
 > (a) RQPS
- 40.** government, market and voluntary organisations (P) / mixture of contributions from (Q) / the provision of public goods (R) / and services can be regarded as a complex (S)
 The correct sequence should be
 (a) RQPS (b) QRSP
 (c) RSQP (d) QPSR
 > (c) RSQP

Directions (Q. Nos. 41-50) *Given below are some idioms / phrases followed by four alternative meanings for each. Choose the most appropriate answer from among the options (a), (b), (c) or (d).*

- 41. Once-over**
 (a) To do something quickly
 (b) To do something elaborately
 (c) To do something perforce
 (d) To do something for others
- ⊗ (a) The phrase 'once-over' means to review, inspect or examine something in a quick fashion.
 Hence, option (a) is the correct answer.
- 42. A bag of bones**
 (a) An extremely fat person
 (b) An extremely thin person
 (c) A wealthy person
 (d) A healthy person
- ⊗ (b) The idiom 'a bag of bones' means a very thin person or animal.
 Hence, option (b) is the correct answer.
- 43. Muddy the waters**
 (a) To spread dirt around
 (b) To make a situation easy
 (c) To make one's life happy
 (d) To make the situation complicated
- ⊗ (d) The idiom 'muddy the waters' means to make a situation more complicated or confusing than it was before.

- 51. Girth of stem of a plant increases due to division of cells in**
 (a) apical meristem only
 (b) lateral meristem only
 (c) apical and intercalary meristem
 (d) both apical and lateral meristem
- ⊗ (b) The girth of the stem of a plant increases due to the division of cells in lateral meristem only. Lateral meristems are known as secondary meristems because they are responsible for secondary growth or increase in stem girth and thickness.
- 52. Different varieties of the same gene are called**
 (a) Genotypes (b) Sib pairs
 (c) Alleles (d) Isomers
- ⊗ (c) Different varieties of the same gene are called alleles because an allele is a variant form of a gene. Some genes have a variety of different forms, which are located at the same position, or genetic locus, on a chromosome.

- 44. To level with**
 (a) To be honest
 (b) To be on a plain
 (c) To cheat someone
 (d) To take revenge
- ⊗ (a) The phrase 'to level with' someone means to tell someone the truth, especially when it may be unpleasant. Hence, 'To be honest' gives its correct meaning.
- 45. Show your hand**
 (a) To tell people about the past
 (b) To tell people about the future
 (c) To tell people about them
 (d) To tell people about your plans
- ⊗ (d) The idiom 'show your hands' means to allow people to know about your intentions.
 Hence, option (d) is the correct answer.
- 46. To pull up**
 (a) To lift heavy weights
 (b) To check oneself
 (c) To shorten the distance
 (d) Too short of destination
- ⊗ (b) The phrase 'pull up' means to life cense someone to stop ore pause: check. So, 'To check' oneself given its correct meaning.
- 47. Be out of action**
 (a) To get punishment
 (b) To get reward

- (c) To become dysfunctional
 (d) To become superlative
- ⊗ (c) The idiom 'be out of action' means broken or not working. Hence, option (c) given its correct meaning.
- 48. Learning from the school of hard knocks**
 (a) Learning things from experience
 (b) Learning things from others
 (c) Learning things from environment
 (d) Learning things through difficult experiences
- ⊗ (d) The idiom 'leaning form the school of hard knacks' means leaning thing through difficult experiences.
- 49. Raise some hackles**
 (a) To annoy
 (b) To make someone happy
 (c) To do a great task
 (d) To sit idle
- ⊗ (a) The idiom 'raise some hackles' means to annoy or upset someone.
 Hence, option (a) is the correct answer.
- 50. A man of letters**
 (a) An excellent artist
 (b) A scholar in literature
 (c) An outstanding sportsman
 (d) A known novelist
- ⊗ (b) 'A man of letters' means a man, usually a writer, who knows a lot about literature. Hence, 'A Scholar in literature gives its correct meaning.

Part B (General Studies)

Alleles contribute to the organism's phenotype, which is the outward appearance of the organism. Some alleles are dominant or recessive.

- 53. Which one of the following viruses used to be responsible for highly infectious disease smallpox?**
 (a) Adenovirus (b) Variola virus
 (c) Aichi virus (d) Coxsackie virus
- ⊗ (b) Variola virus was used to be responsible for the highly infectious disease smallpox.
 The disease is spread through person-to-person contact, most often from inhalation of air droplets expelled through the infected person. The disease was eradicated worldwide in 1976 through vaccination.
- 54. Buoyancy is a/an**
 (a) upward pressure
 (b) downward pressure
 (c) downward force
 (d) upward force

- ⊗ (d) Buoyancy or upthrust, is an upward force exerted by a fluid that opposes the weight of a partially or fully immersed object. In a column of fluid, pressure increases with depth as a result of the weight of the overlying fluid.
- 55. Weight and mass of an object are defined with Newton's laws of motion. Which among the following is true?**
 (a) Weight is a constant of proportionality
 (b) Mass is a constant of proportionality
 (c) Mass is not a constant of proportionality
 (d) Weight is a universal constant.
- ⊗ (b) The weight of an object is defined as the force of gravity on the object and may be calculated as the mass times the acceleration of gravity, $w = mg$. Since the weight is a force, its SI unit is the newton. Thus mass is a constant of proportionality.

56. Fundamental laws of physics require

- (a) conservation of energy and non-conservation of charge
- (b) conservation of charge and non-conservation of linear momentum
- (c) conservation of charge and non-conservation of energy
- (d) conservation of energy, momentum and charge

⊙ (d) Fundamental laws of physics require conservation of energy, momentum and Charge. With respect to classical physics, conservation laws include conservation of energy, mass (or matter), linear momentum, angular momentum, and electric charge. Most conservation laws are exact, or absolute, in the sense that they apply to all possible processes.

57. Work is said to be one Joule when a force of

- (a) 4 N moves an object by 25 cm
- (b) 2 N moves an object by 1 m
- (c) 1 N moves an object by 1 cm
- (d) 1 N moves an object by 50 cm

⊙ (a) One joule is defined as the amount of work done when a force of one newton is exerted through a distance of one meter. Thus force of 4 N moves an object by 25 cm resulting in 1 joule of work.

58. A uniform motion of a car along a circular path experiences

- (a) a change in speed due to a change in its direction of motion
- (b) a change in velocity due to a change in its direction of motion
- (c) a change in momentum due to no change in its direction of motion
- (d) a constant momentum due to a change in its direction of motion

⊙ (b) A uniform motion of a car along with a circular path experiences a change in velocity due to a change in its direction of motion.

Since velocity is a vector, changes in direction constitute changes in velocity. A change in velocity is known as acceleration. The change in velocity due to circular motion is known as centripetal acceleration.

59. Three equal resistors are connected in parallel configuration in a closed electrical circuit. Then the total resistance in the circuit becomes

- (a) one-third of the individual resistance
- (b) two-third of the individual resistance
- (c) equal to the individual resistance
- (d) three times of the individual resistance

⊙ (a) One-third of the individual resistance because if three or more resistors each with the same value are connected in parallel, then the equivalent resistance will be equal to $\frac{R}{n}$ where R is the value of the resistor and n is the number of individual resistances in the combination.

60. Rutherford's alpha-particle (α) scattering experiment was responsible for the discovery of which one of the following?

- (a) Electron
- (b) Proton
- (c) Atomic Nucleus
- (d) Neutron

⊙ (c) Rutherford's alpha-particle experiment was responsible for the discovery Of Atomic Nucleus. Ernest Rutherford's most famous experiment is the gold foil experiment. A beam of alpha particles was aimed at a piece of gold foil. Most alpha particles passed through the foil, but a few were scattered backward. This showed that most of the atom is empty space surrounding a tiny nucleus.

61. What is the maximum number of electrons in the M-Shell?

- (a) 6
- (b) 8
- (c) 18
- (d) 32

⊙ (c) Maximum number of electrons in the M-Shell is 18. Each shell has a fixed number of electrons. The formula to determine the number of electrons in a shell is $2(n)^2$.

For the M shell principle, the quantum number is 3.

So, the maximum number of electrons is $= 2(3)^2$

Maximum number of electrons = 18.

62. Chlorine occurs in nature in two isotopic forms of masses 35 u and 37 u in the ratio of 3 : 1

respectively. What is the average atomic mass of the Chlorine atom?

- (a) 36.1 u
- (b) 35.5 u
- (c) 36.5 u
- (d) 35.1 u

⊙ (c) The average atomic mass for an element is calculated by summing the masses of the element's isotopes, each multiplied by its natural abundance on Earth.

$$\begin{aligned} \text{Average atomic mass} &= \frac{P_1x_1 + P_2x_2}{P_1 + P_2} \\ &= \frac{(35 \times 1) + (37 \times 3)}{3 + 1} = 36.5 \text{ u} \end{aligned}$$

63. Which one of the following elements' isotopes is used in the treatment of cancer?

- (a) Iodine
- (b) Sodium
- (c) Cobalt
- (d) Uranium

⊙ (c) Cobalt therapy is the medical use of gamma rays from the radioisotope cobalt-60 to treat conditions such as cancer. Beginning in the 1950s, cobalt-60 was widely used in external beam radiotherapy (teletherapy) machines, which produced a beam of gamma rays that was directed into the patient's body to kill tumor tissue.

64. To protect steel and iron from rusting, a thin layer of which one of the following metals is applied?

- (a) Magnesium
- (b) Zinc
- (c) Aluminium
- (d) Lead

⊙ (b) Zinc metal present on the surface of iron and steel forms a thin protective layer of basic zinc carbonate due to the reaction between zinc, oxygen, CO_2 and moisture in the air. The standard reduction potential of Zinc is less than iron, or Zinc is more reactive than Iron. Hence, Iron will not undergo corrosion.

65. Cinnabar is an ore of which one of the following?

- (a) Copper
- (b) Zinc
- (c) Mercury
- (d) Manganese

⊙ (c) Cinnabar is a toxic ore of mercury, composed of mercury sulfide (HgS). It is the only important ore of mercury. It has a bright red color that has caused people to use it as a pigment, and carve it into jewelry and ornaments for thousands of years in many parts of the world.

66. Imagine a current-carrying straight conductor with magnetic field of lines in anti-clockwise direction. Then the direction of current is determined by

- (a) the Right-Hand Thumb rule and it would be in the downward direction.
- (b) the Left-Hand Thumb rule and it would be in the downward direction.
- (c) the Right-Hand Thumb rule and it would be in the upward direction.
- (d) the Left-Hand Thumb rule and it would be in the upward direction.

⊙ (c) The right-hand thumb rule is used to find the direction of the magnetic field around a current carrying a straight conductor. Thus, a current-carrying straight conductor with the magnetic field of lines in the anti-clockwise direction would be in the upward direction according to the right-hand thumb rule.

67. The device used to produce electric current is known as

- (a) motor
- (b) generator
- (c) ammeter
- (d) galvanometer

- ⊗ (b) The device used to produce electric current is called a Generator. Electric generator, also called a dynamo, is any machine that converts mechanical energy to electricity for transmission and distribution over power lines to domestic, commercial, and industrial customers. Generators also produce the electrical power required for automobiles, aircraft, ships, and trains.
- 68.** Myopia is a defect in human vision where an image of a
- (a) nearby object is focused beyond the retina.
 (b) nearby object is focused before the retina.
 (c) distant object is focused before the retina.
 (d) distant object is focused beyond the retina.
- ⊗ (c) Nearsightedness (myopia) is a common vision condition in which you can see objects near to you clearly, but objects farther away are blurry. It occurs when the shape of your eye causes light rays to bend (refract) incorrectly, focusing images in front of your retina instead of on your retina.
- 69.** Tyndall effect is a phenomenon of
- (a) scattering of light by the colloidal particles
 (b) refraction of light by the colloidal particles
 (c) dispersion of light by dust particles
 (d) refraction of light by dust particles
- ⊗ (a) Tyndall effect, also called Tyndall phenomenon, scattering of a beam of light by a medium containing small suspended particles. For e.g., smoke or dust in a room, which makes visible a light beam entering a window. The effect is named for the 19th-century British physicist John Tyndall, who first studied it extensively.
- 70.** Twinkling of stars is primarily due to the atmospheric
- (a) refraction (b) reflection
 (c) polarisation (d) dispersion
- ⊗ (a) The twinkling of a star is due to the atmospheric refraction of starlight. The starlight, on entering the earth's atmosphere, undergoes refraction continuously before it reaches the earth. The atmospheric refraction occurs in a medium of gradually changing refractive index.
- 71.** Dingko Singh, an Asian Games gold medallist, who died recently, was associated with which one of the following games?
- (a) Swimming (b) Boxing
 (c) Archery (d) Gymnastics
- ⊗ (b) Dingko Singh was an Indian boxer who won the gold medal at 1998 Asian Games in Bangkok. He was from the North-eastern Indian state of Manipur. He was awarded the Padma Shri by the Government of India in 2013.
- 72.** Who among the following is the lone Indian Cricketer included in the ICC Hall of Fame special inductions to mark the inaugural ICC World Test Championship Final?
- (a) Dilip Vengsarkar
 (b) Ravi Shastri
 (c) Mohinder Amarnath
 (d) Vinoo Mankad
- ⊗ (d) Vinoo Mankad is the lone Indian Cricketer included in the ICC Hall of Fame special inductions to mark the inaugural ICC World Test Championship Final. The BCCI commemorated Vinoo Mankad's contribution to Indian cricket, naming the domestic Under-19 One day tournament as the Vinoo Mankad Trophy.
- 73.** Which one of the following nations is not a permanent member of G7?
- (a) India (b) Canada
 (c) France (d) Italy
- ⊗ (a) India is not the permanent member of G7. The Group of Seven is an inter-governmental political forum consisting of Canada, France, Germany, Italy, Japan, the United Kingdom and the United States.
- 74.** Operation Olivia, an initiative to protect Olive Ridley turtles, is undertaken by
- (a) Indian Navy
 (b) Indian Coast Guard
 (c) Ministry of Environment Forest and Climate Change
 (d) Ministry of Earth Sciences
- ⊗ (b) Operation Olivia, an initiative to protect Olive Ridley turtles, is undertaken by Indian Coast Guard. Operation Olivia was started by the Indian Coast Guard (ICG), first in early 1980s. This operation helps in protecting Olive Ridley turtles every year when they start nesting along Odisha coast for breeding in months of November to December.
- 75.** Who among the following is the winner of French Open 2021 Men's Singles Final?
- (a) Novak Djokovic
 (b) Rafael Nadal
 (c) Stefanos Tsitsipas
 (d) Daniil Medvedev
- ⊗ (a) Novak Djokovic is the winner of the French Open 2021 Men's Singles Final. Novak Djokovic defeated Stefanos Tsitsipas in the final, 6–7, 2–6, 6–3, 6–2, 6–4 to win the Men's Singles tennis title at the 2021 French Open. He is from Serbia and is currently (as of November, 2021) the No.1 Ranked tennis player in the world.
- 76.** Economist Rebeca Grynspan, who recently became the first woman to be appointed as the head of the United Nations Conference on Trade and Development (UNCTAD), hails from
- (a) Germany (b) Poland
 (c) Costa Rica (d) Mexico
- ⊗ (c) Economist Rebeca Grynspan, who recently became the first woman to be appointed as the head of the United Nations Conference on Trade and Development (UNCTAD), hails from Costa Rica. UNCTAD is a permanent intergovernmental body established by the United Nations General Assembly in 1964. Its headquarters are located in Geneva, Switzerland. It also have offices in New York and Addis Ababa.
- 77.** 'Belt and Road Initiative' is a foreign policy initiative of
- (a) China (b) USA
 (c) Canada (d) Japan
- ⊗ (a) 'Belt and Road Initiative' is a foreign policy initiative of China. It is also known as One Belt One Road or OBOR and is a global infrastructure development strategy adopted by the Chinese government in 2013 to invest in nearly 70 countries and international organizations.
- 78.** Which one of the following is the theme of the International Day of Yoga 2021?
- (a) Yoga at home and yoga with family
 (b) Yoga for climate action
 (c) Yoga for well-being
 (d) Yoga for peace.
- ⊗ (c) Yoga for well-being is the theme of the International Day of Yoga 2021. The International Day of Yoga has been celebrated annually on 21st June since 2015, following its inception in the United Nations General Assembly in 2014. Yoga is a physical, mental and spiritual practice which originated in India.
- 79.** Kenneth Kaunda, who died recently at the age of 97, was the former President of
- (a) Brazil (b) Mexico
 (c) Zambia (d) South Sudan
- ⊗ (c) Kenneth Kaunda, who died recently at the age of 97, was the former President of Zambia. He was the first

- President of Zambia from 1964 to 1991. He was at the forefront of the struggle for independence from British rule. Zambia, in southern Africa, is a landlocked country of rugged terrain and diverse wildlife, with many parks and safari areas.
- 80.** The maiden Indian Navy - European Union Naval Force (IN-EUNAVFOR) Exercise (2021) was conducted in
- (a) Gulf of Mannar
(b) Gulf of Aden
(c) Gulf of Khambhat
(d) Gulf of Aqaba
- ⊗ (b) Indian Navy - European Union Naval Force (IN-EUNAVFOR) Exercise (2021) was conducted in Gulf of Aden. Along with Indian Navy, other naval forces are from Italy, Spain and France. The naval exercise included advanced air defence and anti-submarine exercises, tactical manoeuvres, Search & Rescue, and other maritime security operations.
- 81.** The pH value of Milk of Magnesia is approximately
- (a) Zero (b) 7
(c) 10 (d) 14
- ⊗ (c) pH value of Milk of Magnesia is approximately 10. It is a base and is used to neutralize the excess acid in the stomach.
- 82.** Which one of the following compounds is used in 'black and white' photography?
- (a) AgF (b) AgBr
(c) AgCl (d) Ag₂SO₄
- ⊗ (b) AgBr (Silver Bromide) is used in black and white photography. Its use in black and white photography is an example of Photochemical reaction. Silver chloride is sensitive to light and breaks down to bromide form metallic silver, which appears black.
- 83.** What is the number of water molecules present in a Ferrous Sulphate crystal?
- (a) 1 (b) 3
(c) 5 (d) 7
- ⊗ (d) 7 water molecules are present in a Ferrous Sulphate crystal known as the water of crystallization. The colour in ferrous sulphate is due to the presence of water molecule in it.
- 84.** What is the colour of the precipitate obtained by passing CO₂ gas through lime water?
- (a) Green (b) Blue
(c) White (d) Brown
- ⊗ (c) White colour precipitate is obtained by passing CO₂ (carbon dioxide) gas through lime water. Carbon dioxide reacts with limewater (a solution of calcium hydroxide, Ca(OH)₂, to form a white precipitate (appears milky) of calcium carbonate, CaCO₃. Adding more carbon dioxide results in the precipitate dissolving to form a colourless solution of calcium hydrogencarbonate.
- 85.** Which one of the following pairs of elements is liquid at room temperature and at normal pressure?
- (a) Gallium and Bromine
(b) Mercury and Bromine
(c) Gallium and Mercury
(d) Gallium and Caesium
- ⊗ (b) The two liquid elements at room temperature and at normal pressure are Mercury (symbol Hg and atomic number 80) and Bromine (symbol Br and atomic number 35). Mercury is the only metal that is a liquid at room temperature.
- 86.** Which one of the following methods can be used to separate anthracene from a mixture of salt and anthracene?
- (a) Distillation (b) Sublimation
(c) Evaporation (d) Chromatography
- ⊗ (b) Sublimation is the conversion between the solid and the gaseous phases of matter, with no intermediate liquid stage. Thus, Sublimation can be used to separate anthracene from a mixture of salt and anthracene.
- 87.** Shoots of plant show upward movement and it can be designated to be
- (a) Negatively phototropic
(b) Positively chemotropic
(c) Positively hydrotropic
(d) Negatively geotropic
- ⊗ (d) The tendency of plant stems and other parts to grow upwards. This is called negative geotropism because the plant is growing away from the force of gravity. A negative geotropism is a turning away from the earth, such as by a plant stem that grows upward.
- 88.** Which one of the following statements about the process of photosynthesis is correct ?
- (a) Chemical energy is converted into light energy.
(b) Carbon dioxide is oxidised to form carbohydrate.
(c) Water molecule splits into hydrogen and oxygen.
(d) Light energy is directly used to split water.
- ⊗ (d) Photosynthesis is a process used by plants and other organisms to convert light energy into chemical energy that, through cellular respiration, can later be released to fuel the organism's activities. Here, light energy is directly used to split water.
- 89.** How are evergreen plants with woody stems having naked seed classified?
- (a) Angiosperms
(b) Monocotyledons
(c) Pteridophytes
(d) Gymnosperms
- ⊗ (d) Gymnosperms are woody plants, either shrubs, trees, or, rarely, vines (some gnetophytes). They differ from flowering plants in that the seeds are not enclosed in an ovary but are exposed (naked seeds) within any of a variety of structures, the most familiar being cones.
- 90.** Which one of the following tissues is known as basic packing tissue and found" in xylem and phloem?
- (a) Collenchyma (b) Parenchyma
(c) Sclerenchyma (d) Vessels
- ⊗ (b) Parenchyma forms the bulk of plant ground tissue, where they may be specialised to function in photosynthesis, storage, or transport. Parenchyma is integral to vascular tissue, where it provides a route of exchange for materials within and between the xylem and the phloem.
- 91.** Which one from among the following planets is largest in size?
- (a) Earth (b) Venus
(c) Mars (d) Mercury
- ⊗ (a) Size of the planets in order from smallest to largest is Mercury, Mars, Venus, Earth, Neptune, Uranus, Saturn, and Jupiter. Thus, Earth is the bigger in size as compared to Mercury, Mars and Venus.
- 92.** Match List I with List-II and select the correct answer using the codes given below the lists :
- | List I
(Place) | List II
(Feature) |
|-------------------|-------------------------------------|
| A. Mumbai | 1. Queen of the Arabian Sea |
| B. Visakhapatnam | 2. Biggest port of India |
| C. Chennai | 3. Land-locked harbour |
| D. Kochi | 4. Oldest port on the Eastern Coast |

Codes

	A	B	C	D		A	B	C	D
(a)	2	4	3	1	(b)	2	3	4	1
(c)	1	3	4	2	(d)	1	4	3	2

- ⊗ (b) The correct matching is A-2, B-3, C-4, D-1.

Mumbai Port is India's largest port by size and shipping traffic. Located in West Mumbai on the western coast of India, the Mumbai Port is situated in a natural harbor.

Visakhapatnam port is the land locked port in India and the only major port of Andhra Pradesh. It is India's third largest state-owned port by volume of cargo handled and largest on the Eastern Coast.

Chennai is the oldest port on the eastern coast of India. It is formerly known as Madras Port, is the second largest container port of India, behind Mumbai's Nhava Sheva. The port is the largest one in the Bay of Bengal.

Kochi port is known as the 'Queen of Arabian Sea' as it was an important trade center for spices on the western coast of India from the 14th century.

- 93.** Which one of the following is a crater lake in India?

(a) Lonar lake
(b) Sambhar lake
(c) Chilika lake
(d) Vembanad lake

- ⊗ (a) Lonar Lake, also known as Lonar crater, is a notified National Geo-heritage Monument situated in the state of Maharashtra and is a crater lake. It was created due to a meteorite. It is the only major hoverback in the basalt.

- 94.** Fine-grained bed of ephemeral lake in a desert is also known as

(a) Playa (b) Oasis
(c) Drumlin (d) Natural levee

- ⊗ (a) Playa is a fine-grained bed of ephemeral lake in a desert. A playa is a dry, vegetation-free, flat area at the lowest part of an undrained desert basin. It is a location where ephemeral lakes form during wet periods, and is underlain by stratified clay, silt, and sand, and commonly, soluble salts.

- 95.** Which one of the following factors does not affect the distribution of groundwater?

(a) Amount of precipitation
(b) Rate of evaporation
(c) Ability of the ground surface to allow water to infiltrate into the groundwater system
(d) Distance from the sea

- ⊗ (d) The factors affecting the occurrence and distribution of ground water includes eight criteria; land use, soil, slope, rainfall, elevation, lithology, lineament density and drainage density.

Thus amount of precipitation (rainfall), Rate of evaporation and the infiltration of the water to the ground (drainage density) are relevant factors. Distance from sea has no bearing on distribution of ground water.

- 96.** The Constitution (35th Amendment) Act of 1974 is related to which one of the following States?

(a) Mizoram
(b) Sikkim
(c) Nagaland
(d) Arunachal Pradesh

- ⊗ (b) 35th amendment to the constitution is related to the state of sikkim. It gives effect to the wishes of the people of Sikkim for strengthening Indo-Sikkim co-operation and inter-relationship, the Bill seeks to amend the Constitution to provide for the terms and conditions of association to Sikkim with the Union.

- 97.** Which one of the following best describes the electoral system of India?

(a) First-Past-the-Post System
(b) Proportional Representation
(c) Mixed System
(d) General Ticket

- ⊗ (a) First past the post system is the electoral system of India. In a first-past-the-post electoral system, voters cast their vote for a candidate of their choice, and the candidate who receives the most votes wins (even if the top candidate gets less than 50%, which can happen when there are more than two popular candidates).

- 98.** Which one of the following is a non-justiciable right?

(a) Right to adequate livelihood
(b) Right against exploitation
(c) Right of accused
(d) Right to life and personal liberty

- ⊗ (a) Right to adequate means of livelihood under Article 39 is a non-justiciable right mentioned in part IV as Directive principal of state policy. Right against exploitation (Article 23), Right of accused (Article 20) and Right to life and personal liberty (Article 21) are all fundamental rights enshrined in part III of the Constitution and are justiciable in nature under Article 32 of the Indian Constitution.

- 99.** Which one of the following is not a writ?

(a) Mandamus (b) Habeas Corpus
(c) Certiorari (d) Severability

- ⊗ (d) Severability is not a writ. There are 5 writs mentioned under Article 32 viz, Habeas Corpus; Mandamus; Prohibition; Certiorari; Quo-Warranto. Under these Writs, Judiciary can protect the rights of the aggrieved parties.

- 100.** Which one of the following is not a part of Fundamental Rights?

(a) Right to education
(b) Right to establish educational institutions by minorities
(c) Right to be conferred with titles
(d) Right against untouchability

- ⊗ (c) Right to be conferred with titles is not a fundamental rights as Article 18(1) abolishes all titles. It prohibits the State to confer titles on anybody whether a citizen or a non-citizen.

Military and academic distinctions are, however, exempted from the prohibition.

- 101.** Which one of the following is not a function of the Constitution of India?

(a) To ensure participation of good people in politics.
(b) To guarantee a set of rights to citizens.
(c) To define the power of the different organs of government.
(d) To create conditions for a just society.

- ⊗ (a) To ensure participation of good people in politics is not a function of the constitution of India as it provides everyone an opportunity as a freedom to participate in democratic politics.

Rights of the citizens are mentioned in Part III, Separation of powers of executive, judiciary and legislature is also defined in the constitution and Directive principles of state policy mentions provisions for a just society.

- 102.** Which one of the following statements about biodiversity is not correct?

(a) The term 'biodiversity' was coined by Walter G. Rosen in 1986.
(b) The term 'biodiversity hotspots' was coined by Norman Myers in 1988.
(c) The regions having richest biodiversity are called 'biodiversity hotspots'.
(d) More than 100 hotspots of biodiversity are identified in the world.

- ⊗ (d) Statement (d) is incorrect. There are 36 biodiversity hotspots in the world. These regions have very high level of species richness or high level of biodiversity concentration. The term biodiversity was given by Walter G. Rosen in 1986, while 'Biodiversity Hotspot' term was coined by Norman Myers in 1988.
- 103.** The Earth's atmosphere is mainly heated by which one of the following?
 (a) Short wave solar radiation
 (b) Reflected solar radiation
 (c) Long wave terrestrial radiation
 (d) Scattered solar radiation
- ⊗ (c) Earth's atmosphere is mainly heated by Long wave terrestrial radiation. The insolation received by the earth is in the form of shortwaves. The earth after being heated itself becomes a radiating body and it radiates energy to the atmosphere in the long waveform.
- 104.** Which one of the following is the correct sequence of layers as we move from the Earth's surface upwards?
 (a) Troposphere, Stratosphere, Thermosphere, Mesosphere
 (b) Troposphere, Stratosphere, Mesosphere, Thermosphere
 (c) Thermosphere, Mesosphere, Stratosphere, Troposphere
 (d) Stratosphere, Mesosphere, Troposphere, Thermosphere
- ⊗ (b) Moving upward from ground level, the correct sequence of atmospheric layers are the troposphere (upto 12 km), stratosphere (located between 12-50 km), mesosphere (located between 50-80 km), thermosphere (80-700 km) and exosphere (located between 700-10000 km).
- 105.** Which one of the following is not a soil forming factor?
 (a) Parent material
 (b) Topography
 (c) Climate
 (d) Human habitation
- ⊗ (d) Human habitation is not a soil forming factor. The whole soil, from the surface to its lowest depths, develops naturally as a result of five factors. The five factors are: 1. parent material, 2. relief or topography, 3. organisms (including humans), 4. climate, and 5. time.
- 106.** Which one of the following best describes the Lithosphere?
 (a) Upper and lower mantle
 (b) Crust and core
 (c) Crust and upper mantle
 (d) Lower mantle and core
- ⊗ (c) The lithosphere includes the crust and, below, the uppermost layer of the mantle; it floats on the weaker asthenosphere. The lithosphere is the outer solid shell of the Earth. As the cooling surface layer of the Earth's convective system, the lithosphere thickens over time.
- 107.** Which one of the following countries has the maximum time difference from Greenwich Mean Time (GMT) ?
 (a) India (b) Nepal
 (c) Sri Lanka (d) Bhutan
- ⊗ (d) Bhutan (GMT+6) has the maximum time difference from the Greenwich Mean Time. India (GMT+5:30), Nepal (GMT +5:45) and Sri Lanka (GMT+5:30) are all behind Bhutan and closer to GMT.
- 108.** Which one of the following is not a feature of the Constitution of India?
 (a) It provides a set of basic rules.
 (b) It specifies the power of the Government.
 (c) It is the supreme law of the land.
 (d) It specifies the supremacy of the judiciary.
- ⊗ (d) Primacy of judiciary is not one of the provisions of the Indian constitution. It provides a set of rights in Part III of the constitution, it also provides a basic set of rules in the form separation of powers between different organs of the government and is the supreme law of the land and nothing in contravention of the constitution can be done in the country.
- 109.** Which one of the following statements about the Attorney General of India is not correct?
 (a) He has the right of audience only in the Supreme Court of India.
 (b) He shall receive such remuneration as the President may determine.
 (c) He shall be qualified to be appointed as a Judge of the Supreme Court.
 (d) He shall give advice to the Government of India on all legal matters.
- ⊗ (a) Statement (a) is not correct. The Attorney General for India is the Indian government's chief legal advisor, and is its principal Advocate before the Supreme Court of India. The Attorney General has the right of audience in all Courts in India as well as the right to participate in the proceedings of the Parliament, though not to vote.
- 110.** Who among the following described the Directive Principles of State Policy as the novel feature of the Constitution of India?
 (a) Jawaharlal Nehru
 (b) Rajendra Prasad
 (c) S.N. Mukherjee
 (d) B.R. Ambedkar
- ⊗ (d) Dr. B.R. Ambedkar described the Directive Principles of State Policy as the novel feature of the Constitution of India. Directive Principle of State Policy's ("DPSP") are a set of social and economic obligation imposed on the Government (Union & State) to establish a welfare society.
- 111.** Cornea in human eye
 (a) is a light sensitive screen.
 (b) is a muscular diaphragm.
 (c) contains blood vessels.
 (d) is composed of proteins and cells.
- ⊗ (d) Cornea in human eye is composed of protein and cells. The cornea is made up of cellular and acellular components. The cellular components include the epithelial cells, keratocytes, and endothelial cells. The acellular component includes collagen and glycosaminoglycans. The epithelial cells are derived from epidermal ectoderm.
- 112.** Power of a lens of focal length 25 cm is
 (a) + 2.5 Dioptre (b) + 3 Dioptre
 (c) + 4 Dioptre (d) + 5 Dioptre
- ⊗ (c) Power of a lens of focal length 25 cm is +4 Dioptre.
 First we will convert the focal length in meters.
 $\Rightarrow 25 \text{ cm} = 0.25 \text{ m}$
 Now, substituting the value of focal length in the formula of power of lens we get

$$P = 10.25 \text{ m}^{-1}$$

$$\Rightarrow P = 4 \text{ m}^{-1}$$
 m⁻¹ is also expressed as diopters or D
 As it is a convex lens so its power is positive. Thus, the power of the lens is +4D.
- 113.** What is the total number of chambers in the stomach of domestic animals like cattle, buffalo, goat and sheep ?
 (a) Four (b) Two
 (c) One (d) Three
- ⊗ (a) There are four chambers in stomach of domestic animals like cattle, buffalo, goat and sheep. Ruminant stomachs have four compartments: the rumen, the reticulum, the omasum and the abomasum.

- 114.** Intestinal bacteria are main source of which one of the following vitamins?
 (a) Vitamin E (b) Vitamin C
 (c) Vitamin B₁₂ (d) Vitamin A
- ⊙ (c) Intestinal bacteria are main source of Vitamin B₁₂. Vitamin B₁₂ is readily absorbed in the last part of the small intestine (ileum), which leads to the large intestine. However, to be absorbed, the vitamin must combine with intrinsic factor, a protein produced in the stomach.
- 115.** Which one of the following hormones is responsible for the development of female sexual characters?
 (a) Prolactin (b) Estrogen
 (c) Oxytocin (d) Progesterone
- ⊙ (b) Estrogen is a hormone responsible for development of female sexual characters. It acts on organs in the body (including the breast and uterus) and as a chemical messenger in the brain, controlling key aspects of the reproductive system, including childbirth and lactation, and aspects of human behaviour.
- 116.** Spherical mirror formula relating an object distance 'u', image distance 'v' and focal length of mirror 'f' may be applied to a plane mirror when
 (a) focal length goes to infinity.
 (b) focal length goes to zero.
 (c) image distance goes to zero.
 (d) image distance goes to infinity.
- ⊙ (a) Spherical mirror formula relating an object distance u, image distance v and focal length of mirror f may be applied to a plane mirror when focal length goes to infinity. For plane Mirror focal length is infinite. Thus power = 1/focal length results in power being Zero.
- 117.** Nuclear energy is generated by
 (a) nuclear fission and its expression was proposed by Einstein.
 (b) nuclear fission and its expression was proposed by Rutherford.
 (c) nuclear fusion and its expression was proposed by Bohr.
 (d) nuclear fusion and its expression was proposed by Heisenberg.
- ⊙ (b) Nuclear energy is generated by nuclear fission and its expression was proposed by Rutherford. A nuclear reactor is driven by the splitting of atoms, a process called fission, where a particle (a 'neutron') is fired at an atom, which then fissions into two smaller atoms and some additional neutrons.

- 118.** Reverberation is a phenomenon associated with a
 (a) multiple refraction of sound.
 (b) multiple reflection of sound.
 (c) single refraction of sound.
 (d) single reflection of sound.
- ⊙ (b) Reverberation is a phenomenon associated with a multiple reflection of sound. Reverberation is the phenomenon of persistence of sound after it has been stopped as a result of multiple reflections from surfaces such as furniture, people, air, etc. These reflections build up with each reflection and decay gradually as they are absorbed by the surfaces of objects in the space enclosed.
- 119.** Which among the following is true for propagation of sound waves?
 (a) Sound can travel in vacuum and it is a transverse wave in air.
 (b) Sound cannot travel in vacuum and it is a longitudinal wave in air.
 (c) Sound can travel in vacuum and it is a longitudinal wave in air.
 (d) Sound cannot travel in vacuum and it is a transverse wave in air.
- ⊙ (b) Statement (b) is true. Sound cannot travel in vacuum and it is a longitudinal wave in air. Sound propagates through air or other mediums as a longitudinal wave, in which the mechanical vibration constituting the wave occurs along the direction of propagation of the wave.
- 120.** A tennis ball is thrown in the vertically upward direction and the ball attains a maximum height of 20 m. The ball was thrown approximately with an upward velocity of
 (a) 8 m/s (b) 12 m/s
 (c) 16 m/s (d) 20 m/s
- ⊙ (d) In this question
 $H(\text{max}) = 20\text{m}$
 and $g = 10\text{ m/s}^2$.
 According to formula
 $\text{Height}(\text{max}) = \frac{u^2}{g}$
 Hence, the answer will be 20 m/s.
- 121.** An object of mass 2000 g possesses 100 J kinetic energy. The object must be moving with a speed of
 (a) 10.0 m/s (b) 11.1 m/s
 (c) 11.2 m/s (d) 12.1 m/s
- ⊙ (a) In this question,
 Mass (M) = 2000 g
 Kinetic energy (K) = 100 J

According to formula,

$$K = \frac{1}{2}mv^2$$

$$100 = \frac{1}{2} \times 2000 \times v^2$$

$$100 = 1000 \times v^2$$

$$v^2 = 100$$

$$v = 10.0\text{ m/s}$$

Hence, the correct answer is 10.0 m/s

- 122.** Which one of the following ions is not iso-electronic with F⁻?
 (a) O²⁻ (b) Na⁺
 (c) Ne (d) N⁻
- ⊙ (d) N negative is not iso-electronic with F⁻ because Isoelectronic species are known as atoms or ions that have the same number of electrons. In isoelectronic species, there the number of electrons would be equal but the elements would be different. In other words, ions and atoms which are having equal numbers of electrons are called the isoelectronic species.
- 123.** What is the total number of covalent bonds in methanol?
 (a) 3 (b) 4
 (c) 5 (d) 6
- ⊙ (c) There are total number of 5 covalent bonds in methanol as carbon is attached to 3 H and 1 OH with 4 covalent bonds. O and H in OH are bonded with 1 covalent bond. So there are total 5 covalent bonds.
- 124.** Which one of the following is the chemical formula of Plaster of Paris?
 (a) CaSO₄ · $\frac{1}{2}$ H₂O
 (b) CaSO₄ · 2H₂O
 (c) CaSO₄ · 5H₂O
 (d) CaSO₄ · 4H₂O
- ⊙ (a) Plaster of paris is calcium sulphate hemihydrate. Its chemical formula is: CaSO₄ · $\frac{1}{2}$ H₂O. It is prepared by heating gypsum to a temperature of 100°C in a kiln; it loses 3/4th of its water of crystallisation and forms plaster of paris.
- 125.** The unit of the ratio between thrust and impulse is same as that of
 (a) frequency
 (b) speed
 (c) wavelength
 (d) acceleration
- ⊙ (a) Thrust is force. Impulse is the integral of a force, F, over the time interval, t, for which it acts.
 Thus the ratio of thrust i.e F and Impulse would give time inverse which is equivalent to Frequency.

126. Which one of the following figures correctly shows the path of a ray of light through a glass prism?

⊙ (a) Figure a correctly shows the path of a ray of light through a glass prism as it shows the rays moving towards normal while going from rarer to denser medium and away from normal while moving from denser to rarer medium.

127. When a light beam falls on a triangular glass prism, a band of colours is obtained. Which one of the following statements is correct in this regard?

- (a) Red light bends the most, as the refractive index of glass for red light is greatest.
- (b) Red light bends the most, as the refractive index of glass for red light is lowest.
- (c) Violet light bends the most, as the refractive index of glass for violet light is greatest.
- (d) Violet light bends the most, as the refractive index of glass for violet light is lowest.

⊙ (c) Each beam of light, with its own particular wavelength (or color), is slowed differently by the glass. The light waves are refracted as they enter and leave the prism. The shorter the wavelength of the light, the more it is refracted. Violet light is refracted the most as it has the shortest wavelength causing the coloured light to spread out to form a spectrum.

128. The image of an object formed by a plane mirror is

- (a) erect, real and larger.
- (b) erect, virtual and same size.
- (c) inverted, virtual and same size.
- (d) inverted, real and smaller.

⊙ (b) The image formed by a plane mirror is always virtual (meaning that the light rays do not actually come from the image), erect (upright), and of the same shape and size as the object it is reflecting.

A virtual image is a copy of an object formed at the location from which the light rays appear to come.

129. Which one of the following is not a conservative force?

- (a) Frictional force
- (b) Electric force
- (c) Gravitational force
- (d) Spring force

⊙ (a) Frictional forces are not conservative forces because the amount of work done by friction depends on the path. One can associate a potential energy with a conservative force but not with a non-conservative force. A conservative force is one for which the work done is independent of path.

130. A negative work is done when an applied force F and the corresponding displacement S are

- (a) perpendicular to each other.
- (b) parallel to each other.
- (c) anti-parallel to each other.
- (d) equal in magnitude.

⊙ (c) A negative work is done when an applied force and the corresponding displacement S are anti-parallel to each other. The work W that a force F does on an object is the product of the magnitude F of the force, times the magnitude d of the displacement, times the cosine of the angle θ between them. In symbols, $W = fd \cos \theta$. So, if angle is 180 degree, W will be negative.

131. Which of the following statements about the Indian Councils Act of 1861 is/are correct?

1. It enlarged the Governor General's Council for the purpose of making laws.
2. The Governor General was not authorised to increase the number of members.

Select the correct answer using the codes given below:

- (a) Only 1
- (b) Only 2
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (a) Statement 1 is correct. Indian Councils Act of 1861 enlarged the Governor General's Council for the purpose of making laws. For the executive functions of the Council, a fifth member was added. Now there were five members for home, military, law, revenue, and finance. (A sixth member for public works was added in 1874.)

132. Which one of the following statements about Tattvabodhini Patrika is correct?

- (a) It promoted a systematic study of India's past in the Bengali language.

- (b) It promoted a systematic study of India's past through Sanskrit sources.

- (c) It promoted a systematic study of India's past through Persian sources.

- (d) It promoted a systematic study of India's past through Western sources.

⊙ (a) Statement a is correct. Tattvabodhini Patrika promoted a systematic study of India's past in the Bengali language. On 6 October 1839 Debendranath Tagore established Tattvaranjini Sabha which was shortly thereafter renamed the Tattvabodhini (Truth-seekers) Sabha. The objective of Tattvabodhini Sabha was to encourage religious inquiries and disseminate the essence of Upanishads.

133. In which one of the following years did the British demarcate a large area of land as Damin-i-koh for settling the Santhals?

- (a) 1810
- (b) 1793
- (c) 1885
- (d) 1832

⊙ (d) It was in the year 1832 that the British demarcated a large area of land as Damin-i-Koh for settling the Santhals. Damin-i Koh is in the area of Sahebganj, Pakur, and Godda districts in the Jharkhand. British persuaded the local tribe of Rajmahal Hills i.e. Santhals to live in the foothills of Rajmahal by giving land to them. "Damin-i-Koh" is a Persian term that means 'skirts of the hills'.

134. The Tropic of Cancer does not pass through which one of the following States?

- (a) Manipur
- (b) West Bengal
- (c) Gujarat
- (d) Jharkhand

⊙ (a) The tropic of cancer does not pass through the state of Manipur. The Tropic of Cancer passes through eight states in India: Gujarat (Jasdan), Rajasthan (Kalinjarh), Madhya Pradesh (Shajapur), Chhattisgarh (Sonhat), Jharkhand (Lohardaga), West Bengal (Krishnanagar), Tripura (Udaipur) and Mizoram (Champhai).

135. Which of the following pairs of crop and product is/are correctly matched?

1. Food crop Ragi
2. Cash crop Jute
3. Plantation crop Coconut

Select the correct answer using the codes given below:

- (a) Only 1
- (b) 2 and 3
- (c) 1, 2 and 3
- (d) Only 3

⊙ (c) All are correctly matched.

'Ragi' also known as Finger Millet, is a robust, popular food crop and marvelous grain crop in India. It is called dryland crops. Jute is also known as the golden fiber and is India's major cash crop. Jute fiber is obtained from the inner bark of the jute plant. It is used in making gunny bags, mats, ropes, yarn, carpets and other artifacts.

The term plantation crop refers to those crops which are cultivated on an extensive scale in contiguous areas, owned and managed by an individual or a company. The crops include tea, coffee, rubber, cocoa, **coconut**, arecanut, oil palm, palmyrah and cashew.

136. Which one of the following coalfields is not located in Jharkhand?

- (a) Jharia (b) Ramgarh
(c) Deogarh (d) Umaria

⊙ (d) Umaria Coalfield is located in Umaria district in the Indian state of Madhya Pradesh in the valley of the Umrer River, a tributary of the Son River.

137. Which one of the following is the longest parallel of latitude?

- (a) Tropic of Cancer
(b) Tropic of Capricorn
(c) Arctic Circle
(d) Equator

⊙ (d) Equator is the longest parallel of latitude. The Equator is at 0°, and the North Pole and the South Pole are at 90° north and 90° south, respectively. The Equator is the longest circle of latitude and is the only circle of latitude which also is a great circle.

138. The periodic rise and fall of ocean water in response to gravitational forces is called

- (a) Current (b) Waves
(c) Tides (d) Tsunami

⊙ (c) The periodic rise and fall of ocean water in response to gravitational forces is called Tides. Tides are long-period waves that move through the oceans in response to the forces exerted by the moon and sun. Tides originate in the oceans and progress toward the coastlines where they appear as the regular rise and fall of the sea surface.

139. Which of the following statements about the first Indian Factory Act passed in 1881 is/are correct?

- The Act dealt primarily with the problem of child labour.
- The Act laid down that children between 7 years and 12 years of age would not work for more than 9 hours a day.

Select the correct answer using the code given below:

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) Both 1 and 2 are correct. In 1875, a committee was appointed to inquire the conditions of all factories. After effect of this committee, factory act 1881 was adopted. The act prohibited the employment of children under the age of 7. Children between the ages of 7-12 were to work for a maximum of 9 hours. It was passed during viceroyship of Lord Rippon.

140. Which of the following statements about Mahatma Gandhi's anti-untouchability campaign is/are correct?

- The All India Harijan Sevak Sangh was founded for this purpose.
- The campaign was to root out untouchability, since it did not enjoy the sanction of the Hindu Shastras.

Select the correct answer using the codes given below:

- (a) Only 1
(b) Only 2
(c) Both 1 and 2
(d) Neither 1 nor 2

⊙ (a) Statement 1 is correct. In 1932, Gandhi founded the Harijan Sevak Sangh as part of his efforts to eradicate the concept of untouchability from India's caste system.

Statement 2 is incorrect-Untouchability did not enjoy the sanction of shastras as it is based on the caste-based system mentioned as varna system in Rig Veda dividing society into four classes.

141. The founders of the Paramhansa Mandali founded in Maharashtra believed in which one of the following?

- Social distancing along caste lines
- Glorification of caste system
- Forbidding widow remarriage
- One God and in breaking caste rules

⊙ (d) The founders of the Paramhansa Mandali founded in Maharashtra believed in One God and in breaking caste rules.

Paramahansa Mandali was a secret socio-religious group, established in 1849, in Bombay and is closely related to Manav Dharma Sabha which was founded in 1844. It was started by Durgaram Mehtaji, Dadoba Pandurang, and a group of his friends.

142. Which one of the following statements about the ishtahars issued 'during the Revolt of 1857 is correct?

- (a) They glorified the Muslim rule in India.
(b) They glorified the co-existence of different communities under the Mughal Empire.
(c) They glorified the message of Islam.
(d) They glorified the role of Queen Victoria.

⊙ (b) Statement b is correct. Ishtahars glorified the co-existence of different communities under the Mughal Empire. During the revolt only a few proclamations and 'ishtahars' (notification) were issued by rebel leaders to propagate their ideas and persuade people to join the revolt. Proclamation issued by rebel leaders appealed to all sections of the population irrespective of cast and creed. The rebellion was seen as a war in which both Hindus and Muslims were equally to lose or gain. It was remarkable that during the uprising, the religious division between Hindus and Muslims was hardly noticeable despite the attempt of the British government.

143. During the Industrial Revolution, who among the following designed the 'flying shuttle loom'?

- (a) Samuel Crompton
(b) Edmund Cartwright
(c) John Kay
(d) Richard Arkwright

⊙ (c) John Kay was an English inventor whose most important creation was the flying shuttle, which was a key contribution to the Industrial Revolution. Through this machine one person could operate a shuttle across a very wide loom, which greatly increased the rate of cloth production.

144. Match List I with List II and select the correct answer using the codes given below the lists :

List I (Dam)	List II (State)
A. Hirakud	1. Gujarat
B. Panchet	2. Bihar
C. Kosi	3. Odisha
D. Ukai	4. Jharkhand

Codes

- A B C D A B C D
(a) 3 4 2 1 (b) 3 2 4 1
(c) 1 2 4 3 (d) 1 4 2 3

⊙ (a) The correct matching is A-3, B-4, C-2, D-1.

Hirakud Dam Project is a multipurpose scheme intended for flood control, irrigation and power generation. The dam is built across river Mahanadi at about 15 km upstream of Sambalpur town in the state of Odisha.

Panchet dam is built across the Damodar River in Dhanbad District's Panchet area in Jharkhand.

Koshi High Dam, is a multipurpose project proposed to be constructed on the Saptakoshi River of Nepal. The project is primarily aimed to control floods in south-east Nepal and northern Bihar of India.

Ukai dam is the largest multipurpose project so far completed in Gujarat state. The Ukai dam is located across Tapi River near Ukai village of Fort-Songadh taluka in Surat district.

145. Which one of the following features is the result of erosion and deposition work of a river?

- (a) Pothole
- (b) Oxbow lake
- (c) Levee
- (d) Rapid

➤ (a) Pothole is the result of erosion and deposition work of a river. Pothole is a cylindrical, bowl-shaped, or irregular hollow that is usually deeper than wide. It is formed in the rocky bed of a stream by either the grinding action of sediment whirled around by stream eddies or the force of fast flowing water. Potholes usually have spirally grooved surfaces.

146. Which one of the following is not a feature of agriculture in India?

- (a) Subsistence agriculture
- (b) Pressure of population on agriculture
- (c) Dependence upon Monsoon
- (d) Predominance of cash crops

➤ (d) Predominance of cash crops is not a feature of agriculture in India.

Contrary to staple and food crops, cash crops form a small part of Indian agriculture and are entirely sold and exported. Indian agriculture is subsistence-based, dependent on Monsoon rains and 1.25 billion people are dependent on only 2.4 percent of arable land in the world.

147. Which one of the following is not a specified Sub-Mission of the National Livestock Mission?

- (a) Livestock development
- (b) Pig development in North-Western region
- (c) Fodder and feed development
- (d) Skill development, technology transfer and extension

➤ (b) Pig development in the north-western region is not a specified Sub-Mission of the National Livestock Mission. National Livestock Mission scheme is implemented with the following three Sub-Missions: Sub-Mission on Breed Development of Livestock & Poultry, Sub-Mission on Feed and Fodder development, Sub-Mission on Extension and Innovation.

148. Who among the following wrote the famous text 'A Discourse on Political Economy'?

- (a) Montesquieu
- (b) Voltaire
- (c) Rousseau
- (d) Adam Smith

➤ (c) Jean-Jacques Rousseau wrote the famous text 'A Discourse on Political Economy' in 1775. A revolutionary and controversial work, this book is a classic of political theory and a key source of democratic ideals.

149. Which of the following statements about the resolution adopted in the Karachi session of the Indian National Congress with regard to fundamental rights and economic policy is/are correct?

1. It was opposed by Ambalal Sarabhai.
2. Its 20 points included demands for civil liberties and adult suffrage.

Select the correct answer using the codes given below :

- (a) Only 1
- (b) Only 2
- (c) Both 1 and 2
- (d) Neither 1 nor 2

➤ (b) Option 2 is correct. The Karachi Resolution was passed by the Indian National Congress at its 1931 Karachi session.

Elections on the basis of Universal Adult Franchise and Basic civil rights of freedom of speech, Freedom of Press, Freedom of assembly, Freedom of association were included in the 20 points put forward in the resolution.

150. Which of the following statements about the Law Commission headed by Lord Macaulay is/are correct ?

1. It attempted to codify the laws.
2. It was opposed to uniform system of Courts.

Select the correct answer using the codes given below:

- (a) Only 1
- (b) Only 2
- (c) Both 1 and 2
- (d) Neither 1 nor 2

➤ (a) Option 1 is correct. Lord Macaulay headed the first such Law Commission established in 1834 under the Charter Act of 1833. It recommended codification of the Penal Code, the Criminal Procedure Code, and a few other matters.

The statement (2) is incorrect as it supported the idea of uniform system of courts.

National Defence Academy/Naval Academy

SOLVED PAPER 2021 (I)

PAPER I : Mathematics

1. The smallest positive integer n for which

$$\left(\frac{1-i}{1+i}\right)^{n^2} = 1$$

where $i = \sqrt{-1}$, is

- (a) 2 (b) 4 (c) 6 (d) 8

⊙ (a) $\left(\frac{1-i}{1+i}\right)^{n^2} = 1$, where $i = \sqrt{-1}$

$$\left(\frac{1-i}{1+i} \times \frac{1-i}{1-i}\right)^{n^2} = 1$$

$$\left(\frac{1+i^2-2i}{1-i^2}\right)^{n^2} = 1$$

$$\left(\frac{1-1-2i}{1+1}\right)^{n^2} = 1$$

$$\Rightarrow (-i)^{n^2} = (-i)^4$$

$$\Rightarrow n^2 = 4$$

$$n = 2$$

Hence, option (a) is correct.

2. The value of x , satisfying the equation $\log_{\cos x} \sin x = 1$, where

$$0 < x < \frac{\pi}{2}, \text{ is}$$

- (a) $\frac{\pi}{12}$ (b) $\frac{\pi}{3}$ (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{6}$

⊙ (c) $\log_{\cos x} \sin x = 1$, where $0 < x < \frac{\pi}{2}$

$$\Rightarrow (\cos x)^1 = \sin x \Rightarrow \cos x = \sin x$$

$$\Rightarrow \tan x = 1 \Rightarrow \tan x = \tan \pi/4$$

$$\Rightarrow x = \pi/4$$

Hence, option (c) is correct.

3. If Δ is the value of the determinant

$$\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$$

then what is the value of the following determinant?

$$\begin{vmatrix} pa_1 & b_1 & qc_1 \\ pa_2 & b_2 & qc_2 \\ pa_3 & b_3 & qc_3 \end{vmatrix}$$

$$(p \neq 0 \text{ or } 1, q \neq 0 \text{ or } 1)$$

- (a) $p\Delta$ (b) $q\Delta$
(c) $(p+q)\Delta$ (d) $pq\Delta$

⊙ (d) Given, $\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} = \Delta$

$$\therefore \begin{vmatrix} pa_1 & b_1 & qc_1 \\ pa_2 & b_2 & qc_2 \\ pa_3 & b_3 & qc_3 \end{vmatrix}$$

$$= p \cdot q \cdot \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$$

$$= pq\Delta$$

Hence, option (d) is correct.

4. If $C_0, C_1, C_2, \dots, C_n$ are the coefficients in the expansion of $(1+x)^n$, then what is the value of

$$C_1 + C_2 + C_3 + \dots + C_n?$$

- (a) 2^n (b) $2^n - 1$
(c) 2^{n-1} (d) 2^{n-2}

⊙ (b) $\therefore (1+x)^n = {}^nC_0 + {}^nC_1x + {}^nC_2x^2 + \dots + {}^nC_nx^n$

and we know that

$${}^nC_0 + {}^nC_1 + {}^nC_2 + \dots + {}^nC_n = 2^n$$

$$\therefore {}^nC_1 + {}^nC_2 + \dots + {}^nC_n = 2^n - {}^nC_0$$

$$= 2^n - 1$$

Hence, option (b) is correct.

5. If $a + b + c = 4$ and $ab + bc + ca = 0$, then what is the value of the following determinant?

$$\begin{vmatrix} a & b & c \\ b & c & a \\ c & a & b \end{vmatrix}$$

- (a) 32 (b) -64
(c) -128 (d) 64

⊙ (b) Let

$$\Delta = \begin{vmatrix} a & b & c \\ b & c & a \\ c & a & b \end{vmatrix}$$

$$= \begin{vmatrix} a+b+c & b & c \\ a+b+c & c & a \\ a+b+c & a & b \end{vmatrix}$$

$$\text{(by } C_1 \rightarrow C_1 + C_2 + C_3)$$

$$= (a+b+c) \begin{vmatrix} 1 & b & c \\ 1 & c & a \\ 1 & a & b \end{vmatrix}$$

$$\text{(To take common } a+b+c \text{ from } C_1)$$

$$= (a+b+c) \begin{vmatrix} 0 & b-c & c-a \\ 0 & c-a & a-b \\ 1 & a & b \end{vmatrix}$$

$$\text{(by } R_1 \rightarrow R_1 - R_2, R_2 \rightarrow R_2 - R_3)$$

$$= (a+b+c) [(b-c)(a-b) - (c-a)^2]$$

$$= (a+b+c)(ab - b^2 - ca + bc)$$

$$\begin{aligned}
 &= -(a + b + c)(a^2 + b^2 + c^2 - ab - bc - ca) \\
 &= -(a + b + c)[(a + b + c)^2 - 3(ab + bc + ca)] \\
 &= -(4)[16 - 0] = -64.
 \end{aligned}$$

6. The number of integer values of k , for which the equation $2\sin x = 2k + 1$ has a solution, is

- (a) zero
- (b) one
- (c) two
- (d) four

(c) Given,

$$\begin{aligned}
 2\sin x &= 2k + 1 \\
 \therefore -1 \leq \sin x \leq 1 &\Rightarrow -2 \leq 2\sin x \leq 2 \\
 -2 - 1 &\leq 2\sin x - 1 \leq 2 - 1 \\
 -3 &\leq 2k \leq 1 \\
 \frac{-3}{2} \leq k &\leq \frac{1}{2} \Rightarrow -1.5 \leq k \leq 0.5
 \end{aligned}$$

\therefore Integer values of $k = -1, 0$
Hence, option (c) is correct.

7. If $a_1, a_2, a_3, \dots, a_9$ are in GP, then what is the value of the following determinant?

$$\begin{vmatrix} \ln a_1 & \ln a_2 & \ln a_3 \\ \ln a_4 & \ln a_5 & \ln a_6 \\ \ln a_7 & \ln a_8 & \ln a_9 \end{vmatrix}$$

- (a) 0
- (b) 1
- (c) 2
- (d) 4

(a) Let first term and common ratio of GP are a and r respectively.

$$\begin{aligned}
 \therefore \begin{vmatrix} \log a_1 & \log a_2 & \log a_3 \\ \log a_4 & \log a_5 & \log a_6 \\ \log a_7 & \log a_8 & \log a_9 \end{vmatrix} &= \begin{vmatrix} \log a & \log ar & \log ar^2 \\ \log ar^3 & \log ar^4 & \log ar^5 \\ \log ar^6 & \log ar^7 & \log ar^8 \end{vmatrix} \\
 &= \begin{vmatrix} \log a & \log a + \log r & \log a + 2 \log r \\ \log a + 3 \log r & \log a + 4 \log r & \log a + 5 \log r \\ \log a + 6 \log r & \log a + 7 \log r & \log a + 8 \log r \end{vmatrix} \\
 & \quad [\because \log mn = \log m + \log n] \\
 &= \begin{vmatrix} \log a & \log r & \log r \\ \log a + 3 \log r & \log r & \log r \\ \log a + 6 \log r & \log r & \log r \end{vmatrix} \\
 & \quad (\text{by } C_2 \rightarrow C_2 - C_1, \text{ and } C_3 \rightarrow C_3 - C_2) \\
 & \quad [\because C_2 = C_3] \\
 &= 0
 \end{aligned}$$

8. If the roots of the quadratic equation $x^2 + 2x + k = 0$ are real, then

- (a) $k < 0$
- (b) $k \leq 0$
- (c) $k < 1$
- (d) $k \leq 1$

(d) Given quadratic equation,

$$x^2 + 2x + k = 0 \quad \dots (i)$$

Since, roots are real

$$\Rightarrow D \geq 0 \Rightarrow b^2 - 4ac \geq 0$$

$$(2)^2 - 4(1)(k) \geq 0 \Rightarrow 4 \geq 4k \Rightarrow k \leq 1$$

Hence, option (d) is correct.

9. If $n = 100!$, then what is the value of the following?

$$\frac{1}{\log_2 n} + \frac{1}{\log_3 n} + \frac{1}{\log_4 n} + \dots + \frac{1}{\log_{100} n}$$

- (a) 0
- (b) 1
- (c) 2
- (d) 3

$$\begin{aligned}
 \text{(b)} \quad &\frac{1}{\log_2 n} + \frac{1}{\log_3 n} + \dots + \frac{1}{\log_{100} n} \\
 &= \log_n 2 + \log_n 3 + \log_n 4 + \dots + \log_n 100 \\
 &= \log_n (2 \cdot 3 \cdot 4 \cdot 5 \dots 100) \\
 &= \log_{100!} (100!) \quad [\because n = 100!] \\
 &= 1 \quad [\because \log_a^a = 1]
 \end{aligned}$$

Hence, option (b) is correct.

10. If $z = 1 + i$, where $i = \sqrt{-1}$, then what is the modulus of

$$z + \frac{2}{z}$$

- (a) 1
- (b) 2
- (c) 3
- (d) 4

(b) $z = 1 + i$, where $i = \sqrt{-1}$

$$\begin{aligned}
 \left| z + \frac{2}{z} \right| &= \left| (1 + i) + \frac{2}{(1 + i)} \right| = \left| (1 + i) + \frac{2}{(1 + i)} \times \frac{(1 - i)}{(1 - i)} \right| \\
 &= \left| (1 + i) + \frac{2(1 - i)}{2} \right| = |1 + i + 1 - i| = |2| = 2
 \end{aligned}$$

Hence, option (b) is correct.

11. If A and B are two matrices such that AB is of order $n \times n$, then which one of the following is correct?

- (a) A and B should be square matrices of same order.
- (b) Either A or B should be a square matrix.
- (c) Both A and B should be of same order.
- (d) Orders of A and B need not be the same.

(d) Given that, order of matrix $AB = n \times n$

If we take $A_{n \times p}$ and $B_{p \times n}$, then AB will be of order $n \times n$.

So, orders of A and B need not be the same, is correct.

Hence, option (d) is correct.

12. How many matrices of different orders are possible with elements comprising all prime numbers less than 30?

- (a) 2
- (b) 3
- (c) 4
- (d) 6

(c) \because Prime numbers less than 30 = {2, 3, 5, 7, 11, 13, 17, 19, 23, 29}

\Rightarrow Number of elements = 10

\therefore Possible order of matrices with 10 elements = $10 \times 1, 1 \times 10, 2 \times 5, 5 \times 2$

\therefore Number of matrices of different order = 4

Hence, option (c) is correct.

13. Let, $A = \begin{vmatrix} p & q \\ r & s \end{vmatrix}$

where p, q, r and s are any four different prime numbers less than 20. What is the maximum value of the determinant?

- (a) 215
- (b) 311
- (c) 317
- (d) 323

(c) $A = \begin{vmatrix} p & q \\ r & s \end{vmatrix}$, prime numbers less than 20

$$= \{2, 3, 5, 7, 11, 13, 17, 19\} \Rightarrow A = ps - rq$$

For maximum values of A , p and s must be maximum and r and q must be minimum.

Then, $p = 17, s = 19, r = 2, q = 3$

$$\therefore A = 17 \times 19 - 2 \times 3$$

$$= 323 - 6 = 317$$

Hence, option (c) is correct.

14. If A and B are square matrices of order 2 such that $\det(AB) = \det(BA)$, then which one of the following is correct?

- (a) A must be a unit matrix
- (b) B must be a unit matrix
- (c) Both A and B must be unit matrices
- (d) A and B need not be unit matrices

⊙ (d) $A_{2 \times 2}$ and $B_{2 \times 2}$ are two matrices and $|AB| = |BA| \Rightarrow |A||B| = |B||A|$

Let $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}, B = \begin{bmatrix} -2 & 1 \\ 3/2 & -1/2 \end{bmatrix}$ then, $|AB| = |BA|$

Hence, we can say A and B need not be the unit matrices. Hence, option (d) is correct.

15. What is $\cot 2x \cot 4x - \cot 4x \cot 6x - \cot 6x \cot 2x$ equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

⊙ (c) $\because \cot 6x = \cot(2x + 4x)$

$$\cot 6x = \frac{\cot 2x \cdot \cot 4x - 1}{\cot 2x + \cot 4x} \quad \left[\because \cot(A + B) = \frac{\cot A \cot B - 1}{\cot A + \cot B} \right]$$

$$\Rightarrow \cot 6x \cdot \cot 2x + \cot 6x \cdot \cot 4x = \cot 2x \cdot \cot 4x - 1$$

$$\therefore \cot 2x \cdot \cot 4x - \cot 4x \cdot \cot 6x - \cot 6x \cdot \cot 2x = 1$$

Hence, option (c) is correct.

16. If $\tan x = -\frac{3}{4}$ and x is in the second quadrant, then what is the value of $\sin x \cdot \cos x$?

- (a) $\frac{6}{25}$
- (b) $\frac{12}{25}$
- (c) $-\frac{6}{25}$
- (d) $-\frac{12}{25}$

⊙ (d) Given,

$$\tan x = -\frac{3}{4} \text{ and } x \text{ is in the 2nd quadrant.}$$

Let perpendicular be $3k$ and base be $4k$, then

$$\text{Hypotenuse} = \sqrt{(3k)^2 + (4k)^2} = 5k$$

$$\sin x = \frac{3}{5} \text{ and } \cos x = -\frac{4}{5}$$

$$\therefore \sin x \cdot \cos x = \frac{3}{5} \times \left(-\frac{4}{5}\right) = -\frac{12}{25}$$

Hence, option (d) is correct.

17. What is the value of the following?

$$\operatorname{cosec}\left(\frac{7\pi}{6}\right) \sec\left(\frac{5\pi}{3}\right)$$

- (a) $\frac{4}{3}$
- (b) 4
- (c) -4
- (d) $-\frac{4}{\sqrt{3}}$

⊙ (c) $\operatorname{cosec}\left(\frac{7\pi}{6}\right) \cdot \sec\left(\frac{5\pi}{3}\right) = \operatorname{cosec}\left(\pi + \frac{\pi}{6}\right) \cdot \sec\left(2\pi - \frac{\pi}{3}\right)$
 $= -\operatorname{cosec}\frac{\pi}{6} \cdot \sec\frac{\pi}{3} = -2 \times 2 = -4$

Hence, option (c) is correct.

18. If the determinant

$$\begin{vmatrix} x & 1 & 3 \\ 0 & 0 & 1 \\ 1 & x & 4 \end{vmatrix} = 0$$

then what is x equal to?

- (a) -2 or 2
- (b) -3 or 3
- (c) -1 or 1
- (d) 3 or 4

⊙ (c) Given, $\begin{vmatrix} x & 1 & 3 \\ 0 & 0 & 1 \\ 1 & x & 4 \end{vmatrix} = 0 \dots (i)$

$$-1(x^2 - 1) = 0 \Rightarrow x^2 - 1 = 0 \Rightarrow x^2 = 1$$

$$\Rightarrow x = \pm 1 \Rightarrow 1 - x^2 = 0$$

$$\therefore x^2 = 1$$

$$x = +1, -1$$

Hence, option (c) is correct.

19. What is the value of the following?

$$\tan 31^\circ \tan 33^\circ \tan 35^\circ \dots \tan 57^\circ \tan 59^\circ$$

- (a) -1
- (b) 0
- (c) 1
- (d) 2

⊙ (c) $\tan 31^\circ \cdot \tan 33^\circ \cdot \tan 35^\circ \dots \tan 57^\circ \cdot \tan 59^\circ$

$$= \tan 31^\circ \cdot \tan 33^\circ \cdot \tan 35^\circ \dots x \tan 45^\circ x \dots \tan(90^\circ - 33^\circ) \cdot \tan(90^\circ - 31^\circ)$$

$$= \tan 31^\circ \cdot \tan 33^\circ \cdot \tan 35^\circ \dots \cot 35^\circ \cdot \cot 33^\circ \cdot \cot 31^\circ$$

$$= (\tan 31^\circ \cdot \cot 31^\circ) \cdot (\tan 33^\circ \cdot \cot 33^\circ) \cdot (\tan 35^\circ \cdot \cot 35^\circ) \dots$$

$$= 1 \cdot 1 \cdot 1 \dots = 1$$

Hence, option (c) is correct.

20. If $f(x) = \begin{vmatrix} 1 & x & x+1 \\ 2x & x(x-1) & x(x+1) \\ 3x(x-1) & 2(x-1)(x-2) & x(x+1)(x-1) \end{vmatrix}$

then what is $f(-1) + f(0) + f(1)$ equal to?

- (a) 0
- (b) 1
- (c) 100
- (d) -100

⊙ (a) $f(x) = \begin{vmatrix} 1 & x & x+1 \\ 2x & x(x-1) & x(x+1) \\ 3x(x-1) & 2(x-1)(x-2) & x(x+1)(x-1) \end{vmatrix}$

$$f(-1) = \begin{vmatrix} 1 & -1 & 0 \\ -2 & 2 & 0 \\ 6 & 12 & 0 \end{vmatrix} = 0 \Rightarrow f(0) = \begin{vmatrix} 1 & 0 & 1 \\ 0 & 0 & 0 \\ 0 & 4 & 0 \end{vmatrix} = 0$$

$$f(1) = \begin{vmatrix} 1 & 1 & 2 \\ 2 & 0 & 2 \\ 0 & 0 & 0 \end{vmatrix} = 0$$

$$\therefore f(-1) + f(0) + f(1) = 0 + 0 + 0 = 0$$

Hence, option (a) is correct.

21. The equation $\sin^{-1} x - \cos^{-1} x = \frac{\pi}{6}$ has

- (a) no solution
- (b) unique solution
- (c) two solutions
- (d) infinite number of solutions

⊙ (b) $\because \sin^{-1} x - \cos^{-1} x = \frac{\pi}{6} \dots (i)$

and we know that $\sin^{-1} x + \cos^{-1} x = \frac{\pi}{2} \dots (ii)$

Adding Eqs. (i) and (ii), we get

$$2 \sin^{-1} x = \frac{\pi}{6} + \frac{\pi}{2} \Rightarrow 2 \sin^{-1} x = \frac{2\pi}{3}$$

$$\Rightarrow \sin^{-1} x = \frac{\pi}{3}$$

$$x = \sin \frac{\pi}{3} = \frac{\sqrt{3}}{2}$$

Hence, the given equation has a unique solution.

Hence, option (b) is correct.

- 22.** What is the value of the following?
 $(\sin 24^\circ + \cos 66^\circ)(\sin 24^\circ - \cos 66^\circ)$
 (a) -1 (b) 0 (c) 1 (d) 2
- ⊙ (b) $(\sin 24^\circ + \cos 66^\circ)(\sin 24^\circ - \cos 66^\circ)$
 $= (\sin 24^\circ + \cos 66^\circ)$
 $\{ \sin(90^\circ - 66^\circ) - \cos 66^\circ \}$
 $[\because \sin(90^\circ - \theta) = \cos \theta]$
 $= (\sin 24^\circ + \cos 66^\circ)(\cos 66^\circ - \cos 66^\circ)$
 $= (\sin 24^\circ + \cos 66^\circ)(0) = 0$
 Hence, option (b) is correct.

- 23.** A chord subtends an angle 120° at the centre of a unit circle. What is the length of the chord?
 (a) $\sqrt{2} - 1$ units (b) $\sqrt{3} - 1$ units
 (c) $\sqrt{2}$ units (d) $\sqrt{3}$ units
- ⊙ (d) Given, radius of the circle = 1 unit

$\angle AOB = 120^\circ$
 By using cosine rule,
 $\cos 120^\circ = \frac{OA^2 + OB^2 - AB^2}{2 \cdot OA \cdot OB} \dots (i)$
 Let $AB = x$ unit, $OA = 1$ unit, $OB = 1$ unit
 From Eq. (i),
 $\frac{-1}{2} = \frac{1 + 1 - x^2}{2 \cdot 1 \cdot 1} \Rightarrow -1 = 2 - x^2$
 $\Rightarrow x^2 = 3 \Rightarrow x = \sqrt{3}$ unit
 Hence, option (d) is correct.

- 24.** What is $(1 + \cot \theta - \operatorname{cosec} \theta)$
 $(1 + \tan \theta + \sec \theta)$ equal to?
 (a) 1 (b) 2 (c) 3 (d) 4
- ⊙ (b) $(1 + \cot \theta - \operatorname{cosec} \theta)$
 $(1 + \tan \theta + \sec \theta)$
 $= \left(1 + \frac{\cos \theta}{\sin \theta} - \frac{1}{\sin \theta}\right) \left(1 + \frac{\sin \theta}{\cos \theta} + \frac{1}{\cos \theta}\right)$
 $= \left(\frac{\sin \theta + \cos \theta - 1}{\sin \theta}\right) \left(\frac{\sin \theta + \cos \theta + 1}{\cos \theta}\right)$
 $= \frac{(\sin \theta + \cos \theta)^2 - 1^2}{\sin \theta \cdot \cos \theta}$
 $= \frac{\sin^2 \theta + \cos^2 \theta + 2 \sin \theta \cos \theta - 1}{\sin \theta \cos \theta}$
 $= \frac{1 + 2 \sin \theta \cos \theta - 1}{\sin \theta \cdot \cos \theta} = 2$
 Hence, option (b) is correct.

- 25.** What is $\frac{1 + \tan^2 \theta}{1 + \cot^2 \theta} - \left(\frac{1 - \tan \theta}{1 - \cot \theta}\right)^2$ equal to?

- (a) 0 (b) 1
 (c) $2 \tan \theta$ (d) $2 \cot \theta$
- ⊙ (a) $\frac{1 + \tan^2 \theta}{1 + \cot^2 \theta} - \left(\frac{1 - \tan \theta}{1 - \cot \theta}\right)^2$
 $= \frac{1 + \tan^2 \theta}{1 + \frac{1}{\tan^2 \theta}} - \left(\frac{1 - \tan \theta}{1 - \frac{1}{\tan \theta}}\right)^2$
 $= \tan^2 \theta \left(\frac{1 + \tan^2 \theta}{\tan^2 \theta + 1}\right) - \left(\frac{\tan \theta(1 - \tan \theta)}{\tan \theta - 1}\right)^2$
 $= \tan^2 \theta - \tan^2 \theta = 0$
 Hence, option (a) is correct.

- 26.** What is the interior angle of a regular octagon of side length 2 cm?
 (a) $\frac{\pi}{2}$ (b) $\frac{3\pi}{4}$ (c) $\frac{3\pi}{5}$ (d) $\frac{3\pi}{8}$
- ⊙ (b) Given, length of side of regular octagon = 2 cm
 \therefore Sum of interior angles of octagon
 $= (8 - 2) \times 180^\circ$
 $= 6 \times 180^\circ$
 $[\because \text{sum of interior angles of polygon} = (n - 2) \times 180^\circ]$
 \therefore Interior angle = $\frac{6 \times 180^\circ}{8}$
 $= 135^\circ = \frac{3\pi}{4}$
 Hence, option (b) is correct.

- 27.** If $7 \sin \theta + 24 \cos \theta = 25$, then what is the value of $(\sin \theta + \cos \theta)$?
 (a) 1 (b) $\frac{26}{25}$ (c) $\frac{6}{5}$ (d) $\frac{31}{25}$
- ⊙ (d) Given, $7 \sin \theta + 24 \cos \theta = 25$
 Since, we know that if
 $a \sin \theta + b \cos \theta = c$
 then $b \sin \theta - a \cos \theta = \sqrt{a^2 + b^2 - c^2}$
 $\therefore 7 \sin \theta + 24 \cos \theta = 25 \dots (i)$
 $\therefore 24 \sin \theta - 7 \cos \theta = \sqrt{7^2 + 24^2 - 25^2}$
 $24 \sin \theta - 7 \cos \theta = 0 \dots (ii)$
 Eq. (i) $\times 7$ + Eq. (ii) $\times 24$
 $49 \sin \theta + 168 \cos \theta = 175$
 $576 \sin \theta - 168 \cos \theta = 0$
 $625 \sin \theta = 175$
 $\sin \theta = \frac{175}{625} = \frac{7}{25}$
 $\therefore \cos \theta = \sqrt{1 - \left(\frac{7}{25}\right)^2} = \frac{24}{25}$
 $\therefore \sin \theta + \cos \theta = \frac{7}{25} + \frac{24}{25} = \frac{31}{25}$
 Hence, option (d) is correct.

- 28.** A ladder 6 m long reaches a point 6 m below the top of a vertical flagstaff. From the foot of the

- ladder, the elevation of the top of the flagstaff is 75° . What is the height of the flagstaff?
 (a) 12 m (b) 9 m
 (c) $(6 + \sqrt{3})$ m (d) $(6 + 3\sqrt{3})$ m
- ⊙ (d) Let AC be a vertical flagstaff.
 $\therefore CD = 6$ m, $BD = 6$ m
 $\angle CBD = 75^\circ$

Let $AD = h$ meter
 In $\triangle ABC$
 $90 + 75 + \angle C = 180^\circ$ [\because sum of interior angle of triangle is 180°]
 $\angle C = 15^\circ$
 In $\triangle BCD$,
 $BD = CD \Rightarrow \angle BCD = \angle CBD = 15^\circ$
 $\therefore \angle ABD = 75^\circ - 15^\circ = 60^\circ$
 In $\triangle ABD$, $\sin 60^\circ = \frac{h}{6} \Rightarrow \frac{\sqrt{3}}{2} = \frac{h}{6}$
 $h = 3\sqrt{3}$ m
 \therefore Height of the flagstaff = $(h + 6)$ m
 $= (3\sqrt{3} + 6)$ m
 Hence, option (d) is correct.

- 29.** The shadow of a tower is found to be x metre longer, when the angle of elevation of the sun changes from 60° to 45° . If the height of the tower is $5(3 + \sqrt{3})$ m, then what is x equal to?
 (a) 8 m (b) 10 m
 (c) 12 m (d) 15 m
- ⊙ (b) In the given diagram,
 AB represents the position of tower, where $h = 5(3 + \sqrt{3})$ m

$CD = x$ m
 In $\triangle ABC$,
 $\tan 60^\circ = \frac{5(3 + \sqrt{3})}{BC} \Rightarrow \sqrt{3} = \frac{5(3 + \sqrt{3})}{BC}$

∴ $BC = 5(\sqrt{3} + 1)m$
 In $\triangle ABD$,
 $\tan 45^\circ = \frac{5(3 + \sqrt{3})}{BD}$
 $\Rightarrow 1 = \frac{5(3 + \sqrt{3})}{BD}$
 ∴ $BD = 5(3 + \sqrt{3})m$
 Since, $x = BD - BC$
 $x = 5(3 + \sqrt{3}) - 5(\sqrt{3} + 1)$
 $x = 5(3 + \sqrt{3} - \sqrt{3} - 1)$
 $x = 10m$

Hence, option (b) is correct.

30. If $3\cos\theta = 4\sin\theta$, then what is the value of $\tan(45^\circ + \theta)$?

- (a) 10 (b) 7 (c) $\frac{7}{2}$ (d) $\frac{7}{4}$

⊙ (b) If $3\cos\theta = 4\sin\theta$

$$\Rightarrow \frac{3}{4} = \frac{\sin\theta}{\cos\theta}$$

$$\Rightarrow \tan\theta = \frac{3}{4}$$

$$\therefore \tan(45^\circ + \theta) = \frac{\tan 45^\circ + \tan\theta}{1 - \tan 45^\circ \cdot \tan\theta}$$

$$= \frac{1 + \frac{3}{4}}{1 - 1 \times \frac{3}{4}} = \frac{4 + 3}{4 - 3} = 7$$

Hence, option (b) is correct.

31. $\tan^{-1}x + \cot^{-1}x = \frac{\pi}{2}$ holds, when

- (a) $x \in R$
 (b) $x \in R - (-1, 1)$ only
 (c) $x \in R - \{0\}$ only
 (d) $x \in R - [-1, 1]$ only

⊙ (a) Since, $\tan^{-1}x + \cot^{-1}x = \frac{\pi}{2}$

for all $x \in R$.

Hence, option (a) is correct.

32. If $\tan A = \frac{1}{7}$, then what is $\cos 2A$ equal to?

- (a) $\frac{24}{25}$ (b) $\frac{18}{25}$ (c) $\frac{12}{25}$ (d) $\frac{6}{25}$

⊙ (a) $\tan A = \frac{1}{7}$

$$\therefore \cos 2A = \frac{1 - \tan^2 A}{1 + \tan^2 A} = \frac{1 - (1/7)^2}{1 + (1/7)^2}$$

$$= \frac{49 - 1}{49 + 1} = \frac{48}{50}$$

$$\cos 2A = \frac{24}{25}$$

Hence, option (a) is correct.

33. The sides of a triangle are m, n and

$\sqrt{m^2 + n^2 + mn}$. What is the sum

of the acute angles of the triangle?

- (a) 45° (b) 60° (c) 75° (d) 90°

⊙ (b) Let $AB = m, AC = n$

$$BC = \sqrt{m^2 + n^2 + mn}$$

By using cosine rule,

$$\cos A = \frac{AB^2 + AC^2 - BC^2}{2AB \cdot AC}$$

$$\Rightarrow \cos A = \frac{m^2 + n^2 - m^2 - n^2 - mn}{2mn}$$

$$\Rightarrow \cos A = \frac{-1}{2} \Rightarrow A = 120^\circ$$

$$\therefore \angle B + \angle C = 180 - \angle A$$

[∵ sum of interior angle is 180°]

$$= 180^\circ - 120^\circ$$

$$\angle B + \angle C = 60^\circ$$

Hence, option (b) is correct.

34. What is the area of the triangle ABC with sides $a = 10\text{cm}$, $c = 4\text{cm}$ and angle $B = 30^\circ$?

- (a) 16 cm^2 (b) 12 cm^2
 (c) 10 cm^2 (d) 8 cm^2

⊙ (c) Given, $a = 10\text{ cm}$

$$c = 4\text{ cm}$$

$$\angle B = 30^\circ$$

$$\therefore \text{Area of triangle} = \frac{1}{2} ac \sin(\angle B)$$

$$= \frac{1}{2} \times 10 \times 4 \times \sin 30^\circ = \frac{1}{2} \times 40 \times \frac{1}{2}$$

$$= 10\text{ sq cm}$$

Hence, option (c) is correct.

35. Consider the following statements

- $A = \{1, 3, 5\}$ and $B = \{2, 4, 7\}$ are equivalent sets.
- $A = \{1, 5, 9\}$ and $B = \{1, 5, 5, 9, 9\}$ are equal sets

Which of the above statements

is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) $A = \{1, 3, 5\}$ and $B = \{2, 4, 7\}$

Since, number of elements are same in both the sets.

$\Rightarrow A$ and B are equivalent sets.

If $A = \{1, 5, 9\}$, $B = \{1, 5, 5, 9, 9\}$

Which is nothing but $B = \{1, 5, 9\}$

Since, elements are same in A and B

$\Rightarrow A$ and B are equal sets

Hence, option (c) is correct.

36. Consider the following statements

- The null set is a subset of every set.
- Every set is a subset of itself.
- If a set has 10 elements, then its power set will have 1024 elements.

Which of the above statements are correct?

- (a) 1 and 2 only (b) 2 and 3 only
 (c) 1 and 3 only (d) 1, 2 and 3

⊙ (d) Since we know that null set is a subset of every set and every set is a subset of itself.

$$\text{If } n(A) = 10$$

$$\therefore n(P(A)) = 2^{10} = 1024$$

\therefore all the given statements are true.

Hence, option (d) is correct.

37. Let R be a relation defined as xRy if and only if $2x + 3y = 20$, where $x, y \in N$. How many elements of the form (x, y) are there in R ?

- (a) 2 (b) 3
 (c) 4 (d) 6

⊙ (b) $\because xRy \Leftrightarrow 2x + 3y = 20$

where, $x, y \in N$

$$\therefore y = \frac{20 - 2x}{3}$$

All ordered pair which satisfies the given relations are $(1, 6), (4, 4), (7, 2)$.

$$\therefore R = \{(1, 6), (4, 4), (7, 2)\}$$

$$\therefore n(R) = 3$$

Hence, option (b) is correct.

38. Consider the following statements

- A function $f: \mathbb{Z} \rightarrow \mathbb{Z}$, defined by $f(x) = x + 1$, is one-one as well as onto.
- A function $f: \mathbb{N} \rightarrow \mathbb{N}$, defined by $f(x) = x + 1$, is one-one but not onto.

Which of the above statement(s) is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) Statement I

$$f: \mathbb{Z} \rightarrow \mathbb{Z}$$

$$f(x) = x + 1$$

Let $f(x_1) = f(x_2)$

$$\Rightarrow x_1 + 1 = x_2 + 1$$

$$\Rightarrow x_1 = x_2$$

$$\Rightarrow f \text{ is one-one in } \mathbb{Z}.$$

and every element of co-domain has its pre-image in domain.
 $\Rightarrow f$ is onto.

Statement II

$$f: \mathbb{N} \rightarrow \mathbb{N}$$

$$f(x) = x + 1$$

Let $f(x_1) = f(x_2)$

$$x_1 + 1 = x_2 + 1$$

$$\Rightarrow x_1 = x_2$$

$$\Rightarrow f \text{ is one-one in } \mathbb{N}.$$

But there is no element in \mathbb{N} such that

$$f(x) = 1$$

Hence, f is not onto on \mathbb{N} .

Given statements are correct.

Hence, option (c) is correct.

39. Consider the following in respect of a complex number z .

1. $(z^{-1}) = (\bar{z})^{-1}$
2. $z z^{-1} = |z|^2$

Which of the above is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) Let $z = x + iy$

$$\bar{z} = x - iy$$

$$(\bar{z})^{-1} = \frac{1}{x - iy} = \frac{x + iy}{x^2 + y^2}$$

Also, $z^{-1} = \frac{1}{x + iy} = \frac{x - iy}{x^2 + y^2}$

$$(\overline{z^{-1}}) = \frac{x + iy}{x^2 + y^2} = (\bar{z})^{-1}$$

∴ Statement 1 is correct.

$$|z| = \sqrt{x^2 + y^2}$$

$$\Rightarrow |z|^2 = x^2 + y^2$$

But $z z^{-1} = (x + iy) \frac{(x - iy)}{x^2 + y^2}$

$$= \frac{x^2 + y^2}{x^2 + y^2} = 1 \neq |z|^2$$

∴ Statement 2 is wrong.

Hence, option (a) is correct.

40. Consider the following statements in respect of an arbitrary complex number z .

1. The difference of z and its conjugate is an imaginary number.

2. The sum of z and its conjugate is a real number.

Which of the above statement(s) is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) Let $z = x + iy$

$$\bar{z} = x - iy$$

∴ $z - \bar{z} = x + iy - x + iy = 2iy$ which is an imaginary number.

\Rightarrow Statement-1 is correct.

Also, $z + \bar{z} = x + iy + x - iy = 2x$ which is real.

\Rightarrow Statement-2 is correct.

Hence, option (c) is correct.

41. What is the modulus of the complex number $i^{2n+1}(-i)^{2n-1}$, where $n \in \mathbb{N}$ and $i = \sqrt{-1}$?

- (a) -1 (b) 1 (c) $\sqrt{2}$ (d) 2

⊙ (b) Let $z = i^{2n+1}(-i)^{2n-1}$, where $n \in \mathbb{N}$

$$= (i)^{2n}(i)(-i)^{2n}(-i)^{-1}$$

$$= (i^{2n})(-1)^{2n} \cdot (i^{2n}) \left(\frac{i}{-i}\right)$$

$$= (i^{4n})(-1) = (i^4)^n \cdot (-1)$$

$$= -1 = -1 + 0i$$

$$\therefore |z| = 1$$

Hence, option (b) is correct.

42. If α and β are the roots of the equation $4x^2 + 2x - 1 = 0$, then which one of the following is correct?

- (a) $\beta = -2\alpha^2 - 2\alpha$ (b) $\beta = 4\alpha^2 - 3\alpha$
 (c) $\beta = \alpha^2 - 3\alpha$ (d) $\beta = -2\alpha^2 + 2\alpha$

⊙ (a) Given quadratic equation

$$4x^2 + 2x - 1 = 0 \quad \dots (i)$$

If α, β are the roots of Eq. (i), then these value will satisfy the given equation.

$$4\alpha^2 + 2\alpha - 1 = 0 \quad \dots (ii)$$

and $4\beta^2 + 2\beta - 1 = 0 \quad \dots (iii)$

From Eq. (i),

$$\text{Sum of roots} = \frac{-2}{4}$$

$$\alpha + \beta = \frac{-1}{2}$$

$$\beta = \frac{-1}{2} - \alpha$$

On putting the value of β in Eq. (iii),

$$4\left(\frac{-1}{2} - \alpha\right)^2 + 2\beta - 1 = 0$$

$$4\left(\frac{1}{4} + \alpha^2 + \alpha\right) - 1 = -2\beta$$

$$1 + 4\alpha^2 + 4\alpha - 1 = -2\beta$$

$$\Rightarrow \beta = \frac{4(\alpha^2 + \alpha)}{-2}$$

$$\beta = -2\alpha^2 - 2\alpha$$

Hence, option (a) is correct.

43. If one root of $5x^2 + 26x + k = 0$ is reciprocal of the other, then what is the value of k ?

- (a) 2 (b) 3 (c) 5 (d) 8

⊙ (c) Given quadratic equation

$$5x^2 + 26x + k = 0 \quad \dots (i)$$

Let α and β be the roots.

According to question, $\beta = \frac{1}{\alpha}$

∴ Product of roots = $\frac{k}{5}$

$$\alpha \cdot \beta = \frac{k}{5}$$

$$\Rightarrow \alpha \cdot \frac{1}{\alpha} = \frac{k}{5} \Rightarrow 1 = \frac{k}{5}$$

$$\Rightarrow k = 5$$

Hence, option (c) is correct.

44. In how many ways can a team of 5 players be selected from 8 players so as not to include a particular player?

- (a) 42 (b) 35
 (c) 21 (d) 20

⊙ (c) Given that there are 8 players among which one particular player is there.

Hence, number of ways to select 5 players = ${}^{8-1}C_5$

$$= {}^7C_5 = \frac{7 \times 6}{1 \times 2} = 21$$

Hence, option (c) is correct.

45. What is the coefficient of the middle term in the expansion of $(1 + 4x + 4x^2)^5$?

- (a) 8064 (b) 4032
 (c) 2016 (d) 1008

⊙ (a) $(1 + 4x + 4x^2)^5$

$$= \{(1 + 2x)^2\}^5 = (1 + 2x)^{10}$$

∴ Total number of term in the expansion of $(1 + 2x)^{10} = 10 + 1 = 11$

∴ Middle term = $\left(\frac{11+1}{2}\right)$ th term

$$= 6 \text{th term}$$

$$T_6 = T_{5+1} = {}^{10}C_5 (2x)^5$$

$$= {}^{10}C_5 \times 2^5 \times x^5$$

∴ Coefficient of middle term = ${}^{10}C_5 \cdot 2^5$

$$= \frac{10 \times 9 \times 8 \times 7 \times 6}{1 \times 2 \times 3 \times 4 \times 5} \times 2^5 = 8064$$

Hence, option (a) is correct.

46. What is

$C(n, 1) + C(n, 2) + \dots + C(n, n)$ equal to?

- (a) $2 + 2^2 + 2^3 + \dots + 2^n$
- (b) $1 + 2 + 2^2 + 2^3 + \dots + 2^n$
- (c) $1 + 2 + 2^2 + 2^3 + \dots + 2^{n-1}$
- (d) $2 + 2^2 + 2^3 + \dots + 2^{n-1}$

⊙ (c) $C(n, 1) + C(n, 2) + \dots + C(n, n)$
 $= {}^nC_1 + {}^nC_2 + {}^nC_3 + \dots + {}^nC_n$
 $\{ \because {}^nC_0 + {}^nC_1 + {}^nC_2 + \dots + {}^nC_n = 2^n \}$
 $= 2^n - {}^nC_0 = 2^n - 1$

Now, we shall solve the option to check whether sum is $2^n - 1$ or not.

Let's take

$S = 1 + 2 + 2^2 + 2^3 + \dots + 2^{n-1}$ which forms a GP.

where $a = 1$

$$r = \frac{2}{1} = 2 > 1$$

$$\therefore S = \frac{a(r^n - 1)}{r - 1}$$

$$\therefore S = \frac{1(2^n - 1)}{2 - 1} = 2^n - 1$$

Hence, $2^n - 1 = {}^nC_1 + {}^nC_2 + \dots + {}^nC_n$

∴ Option (c) is correct.

47. What is the sum of the coefficients of first and last terms in the expansion of $(1 + x)^{2n}$, where n is a natural number?

- (a) 1
- (b) 2
- (c) n
- (d) $2n$

⊙ (b) Expand $(1 + x)^{2n}$ by using binomial expansion

$$= {}^{2n}C_0 x^0 + {}^{2n}C_1 x^1 + {}^{2n}C_2 x^2 + \dots + {}^{2n}C_{2n} x^{2n}$$

∴ The coefficient of first and last term of the expansion

$$= {}^{2n}C_0 + {}^{2n}C_{2n}$$

$$= 1 + 1 = 2$$

Hence, option (b) is correct.

48. If the first term of an AP is 2 and the sum of the first five terms is equal to one-fourth of the sum of the next five terms, then what is the sum of the first ten terms?

- (a) - 500
- (b) - 250
- (c) 500
- (d) 250

⊙ (b) Given, first term of an AP (a) = 2

$$\text{and } a_1 + a_2 + a_3 + a_4 + a_5 = \frac{1}{4}$$

$$(a_6 + a_7 + a_8 + a_9 + a_{10}), \text{ where } a_n = a + (n - 1)d$$

$$\Rightarrow \frac{5}{2} [2a + (5 - 1)d]$$

$$= \frac{1}{4} \times \frac{5}{2} [2a_6 + (5 - 1)d]$$

[∵ sum of n terms of AP,

$$S_n = \frac{n}{2} [2a + (n - 1)d]$$

$$4(2 \times 2 + 4d) = 2a_6 + 4d$$

$$16 + 16d = 2a_6 + 4d$$

$$16 + 16d = 2(a + 5d) + 4d$$

$$16 + 16d = 2a + 14d$$

$$16 + 16d = 2 \times 2 + 14d$$

$$2d = -12 \Rightarrow d = -6$$

$$\therefore S_{10} = \frac{10}{2} [2a + (10 - 1)d]$$

$$= 5[2 \times 2 + 9(-6)]$$

$$= 5[4 - 54]$$

$$S_{10} = -250$$

Hence, option (b) is correct.

49. Consider the following statements

1. If each term of a GP is multiplied by same non-zero number, then the resulting sequence is also a GP.
2. If each term of a GP is divided by same non-zero number, then the resulting sequence is also a GP.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (c) Let us take a GP.

a, ar, ar^2, \dots is in GP.

$\Rightarrow ak, akr, akr^2, \dots$ will also be in GP

where, k is non-zero number.

$$\text{If } k = \frac{1}{m}, m \neq 0$$

$$\Rightarrow \frac{a}{m}, \frac{a}{m}r, \frac{a}{m}r^2, \dots \text{ will also be in GP.}$$

Hence, both statements are correct.

50. How many 5-digit prime numbers can be formed using the digits 1, 2, 3, 4, 5 if the repetition of digits is not allowed?

- (a) 5
- (b) 4
- (c) 3
- (d) 0

⊙ (d) Given digits are 1, 2, 3, 4, 5

Since, the sum of digits = $1 + 2 + 3 + 4 + 5 = 15$ is divisible by 3.

\Rightarrow Every 5 digit number formed by the given digits will be divisible by 3.

\Rightarrow There is no prime number.

Hence, option (d) is correct.

51. If $f(x + 1) = x^2 - 3x + 2$, then what is $f(x)$ equal to?

- (a) $x^2 - 5x + 4$
- (b) $x^2 - 5x + 6$
- (c) $x^2 + 3x + 3$
- (d) $x^2 - 3x + 1$

⊙ (b) If $f(x + 1) = x^2 - 3x + 2$

Let $x + 1 = y$

$$\Rightarrow x = y - 1 \text{ or } x \rightarrow x - 1$$

$$\therefore f(x) = (x - 1)^2 - 3(x - 1) + 2$$

$$= x^2 + 1 - 2x - 3x + 3 + 2$$

$$= x^2 - 5x + 6$$

Hence, option (b) is correct.

52. If $x^2, x, -8$ are in AP, then which one of the following is correct?

- (a) $x \in \{-2\}$
- (b) $x \in \{4\}$
- (c) $x \in \{-2, 4\}$
- (d) $x \in \{-4, 2\}$

⊙ (c) If $x^2, x, -8$ are in AP, then

$$2x = x^2 - 8$$

$$\Rightarrow x^2 - 2x - 8 = 0$$

$$\Rightarrow (x - 4)(x + 2) = 0$$

$$x \in \{-2, 4\}$$

Hence, option (c) is correct.

53. The third term of a GP is 3. What is the product of its first five terms?

- (a) 81
- (b) 243
- (c) 729
- (d) Cannot be determined due to insufficient data

⊙ (b) Given

$$a_3 = 3$$

$$\therefore a_3 = ar^2 \text{ in GP } [\because a_n = ar^{n-1} \text{ in GP}]$$

$$ar^2 = 3 \quad \dots (i)$$

To find $a_1 \cdot a_2 \cdot a_3 \cdot a_4 \cdot a_5$

$$= a(ar)(ar^2)(ar^3)(ar^4)$$

$$= a^5 r^{10} = (ar^2)^5 = 3^5 = 243$$

Hence, option (b) is correct.

54. The element in the i th row and the j th column of a determinant of third order is equal to $2(i + j)$. What is the value of the determinant?

- (a) 0
- (b) 2
- (c) 4
- (d) 6

⊙ (a) Given,

$$a_{ij} = 2(i + j)$$

$$\therefore a_{11} = 2(1 + 1) = 4, a_{21} = 2(2 + 1) = 6$$

$$a_{12} = 2(1 + 2) = 6, a_{22} = 2(2 + 2) = 8$$

$$a_{13} = 2(1 + 3) = 8, a_{23} = 2(2 + 3) = 10$$

$$a_{31} = 2(3 + 1) = 8, a_{32} = 2(3 + 2) = 10,$$

$$a_{33} = 2(3 + 3) = 12$$

$$\Delta = \begin{vmatrix} 4 & 6 & 8 \\ 6 & 8 & 10 \\ 8 & 10 & 12 \end{vmatrix} = 2 \cdot 2 \cdot 2 \begin{vmatrix} 2 & 3 & 4 \\ 3 & 4 & 5 \\ 4 & 5 & 6 \end{vmatrix}$$

$$= 8[2(24 - 25) - 3(18 - 20) + 4(15 - 16)]$$

$$\Delta = 8[-2 + 6 - 4]$$

$$\Delta = 0$$

Hence, option (a) is correct.

55. With the numbers 2, 4, 6, 8, all the possible determinants with these four different elements are constructed. What is the sum of the values of all such determinants?

- (a) 128 (b) 64 (c) 32 (d) 0

⊙ (d) Given numbers are 2, 4, 6, 8.
∴ We can form determinant of order 2.
Number of determinants

$$= 4 \times 3 \times 2 \times 1 = 24$$

Let's observe some determinants

$$\begin{vmatrix} 2 & 6 \\ 8 & 4 \end{vmatrix} = 8 - 48 = -40, \begin{vmatrix} 6 & 2 \\ 4 & 8 \end{vmatrix} = 40$$

$$\begin{vmatrix} 2 & 8 \\ 6 & 4 \end{vmatrix} = 8 - 48 = -40, \begin{vmatrix} 6 & 4 \\ 2 & 8 \end{vmatrix} = 40$$

$$\begin{vmatrix} 4 & 8 \\ 6 & 2 \end{vmatrix} = 8 - 48 = -40, \begin{vmatrix} 8 & 4 \\ 2 & 6 \end{vmatrix} = 40$$

$$\begin{vmatrix} 4 & 6 \\ 8 & 2 \end{vmatrix} = 8 - 48 = -40, \begin{vmatrix} 8 & 2 \\ 4 & 6 \end{vmatrix} = 40$$

Hence, we can see that we are getting a pattern where each determinant value will be neutralised by other value.

Hence, sum of the values of all determinants = 0

Hence, option (d) is correct.

56. What is the radius of the circle

$$4x^2 + 4y^2 - 20x + 12y - 15 = 0?$$

- (a) 14 units (b) 10.5 units
(c) 7 units (d) 3.5 units

⊙ (d) Given equation of circle
 $4x^2 + 4y^2 - 20x + 12y - 15 = 0$
 $\Rightarrow x^2 + y^2 - 5x + 3y - \frac{15}{4} = 0$

On comparing with
 $x^2 + y^2 + 2gx + 2fy + c = 0$

$$g = \frac{-5}{2}, f = \frac{3}{2}, c = \frac{-15}{4}$$

$$\therefore \text{Radius} = \sqrt{g^2 + f^2 - c}$$

$$= \sqrt{\frac{25}{4} + \frac{9}{4} + \frac{15}{4}} = \frac{7}{2} = 3.5 \text{ unit}$$

Hence, option (d) is correct.

57. A parallelogram has three consecutive vertices $(-3, 4)$, $(0, -4)$ and $(5, 2)$. The fourth vertex is

- (a) (2, 10) (b) (2, 9)
(c) (3, 9) (d) (4, 10)

⊙ (a)

Let the fourth vertex be $D(x, y)$

Diagonals of a parallelogram bisect each other.

O is mid-point of AC.

$$\Rightarrow \text{Coordinate of } O \left(\frac{-3+5}{2}, \frac{4+2}{2} \right) \text{ or } (1, 3)$$

O is mid-point of BD.

$$\Rightarrow \text{Coordinate of } O \text{ is } \left(\frac{x+0}{2}, \frac{y-4}{2} \right) \text{ or } \left(\frac{x}{2}, \frac{y-4}{2} \right)$$

Therefore, compare the coordinate of O

$$\Rightarrow \frac{x}{2} = 1 \Rightarrow x = 2$$

$$\text{and } \frac{y-4}{2} = 3 \Rightarrow y = 10$$

Hence, the fourth vertex is $(2, 10)$.

58. If the lines $y + px = 1$ and $y - qx = 2$ are perpendicular, then which one of the following is correct?

- (a) $pq + 1 = 0$ (b) $p + q + 1 = 0$
(c) $pq - 1 = 0$ (d) $p - q + 1 = 0$

⊙ (c) Given $y + px = 1$... (i)
 $y - qx = 2$... (ii)

Eqs. (i) and (ii) are perpendicular
 $\Rightarrow m_1 \cdot m_2 = -1$ where m_1 and m_2 are the slope of Eqs. (i) and (ii)

$$\text{and } m = \frac{-\text{coefficient of } x}{\text{coefficient of } y}$$

$$\Rightarrow \frac{-p}{1} \times \frac{-(-q)}{1} = -1$$

$$\Rightarrow -pq = -1$$

$$\Rightarrow pq - 1 = 0$$

Hence, option (c) is correct.

59. If A, B and C are in AP, then the straight line $Ax + 2By + C = 0$ will always pass through a fixed point.

The fixed point is

- (a) (0, 0) (b) $(-1, 1)$
(c) $(1, -2)$ (d) $(1, -1)$

⊙ (d) Given A, B, C are in AP.

$$\Rightarrow 2B = A + C$$

$$\Rightarrow A - 2B + C = 0 \quad \dots (i)$$

$$\text{On comparing } A - 2B + C = 0$$

$$\text{with the given line } Ax + 2By + C = 0,$$

$$\text{we get } x = 1, y = -1$$

Hence, line $Ax + 2By + C = 0$ will pass through $(1, -1)$

Hence, option (d) is correct.

60. If the image of the point $(-4, 2)$ by a line mirror is $(4, -2)$, then what is the equation of the line mirror?

- (a) $y = x$ (b) $y = 2x$
(c) $4y = x$ (d) $y = 4x$

⊙ (b) Let $A = (-4, 2)$

image point

$$A' = (4, -2)$$

∴ Mid-point of

$$AA' = \left(\frac{-4+4}{2}, \frac{2+(-2)}{2} \right) = (0, 0)$$

$$\text{Slope of } AA' = \frac{-2-2}{4-(-4)}$$

$$= \frac{-4}{8} = \frac{-1}{2}$$

Since, AA' and mirror line are perpendicular.

Slope of line mirror

$$= \frac{-1}{\text{Slope of } AA'} = \frac{-1}{-1/2} = 2$$

$$\text{Equation of a line is } y - y_1 = m(x - x_1)$$

∴ Equation of a line mirror is

$$y - 0 = 2(x - 0)$$

$$\Rightarrow y = 2x$$

Hence, option (b) is correct.

61. Consider the following statements in respect of the points $(p, p - 3)$, $(q + 3, q)$ and $(6, 3)$

- The points lie on a straight line.
- The points always lie in the first quadrant only for any value of p and q .

Which of the above statement(s) is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) Given points are $A(p, p - 3)$,

$$B(q + 3, q) \text{ and } C(6, 3)$$

As, Points lie on a straight line,

so slope of $AB =$ slope of BC

$$\frac{q - p + 3}{q + 3 - p} = \frac{3 - q}{6 - q - 3}$$

$$\therefore \text{slope of a line} = \frac{y_2 - y_1}{x_2 - x_1}$$

$$1 = 1$$

∴ Statement 1 is correct.

But it's not necessary that the collinear points lie in the first quadrant only.

∴ Statement 2 is wrong.

Hence, option (a) is correct.

- 62.** What is the acute angle between the lines $x - 2 = 0$ and $\sqrt{3}x - y - 2 = 0$?
- (a) 0° (b) 30° (c) 45° (d) 60°

⊙ (b) $l_1 : x - 2 = 0$
 $l_2 : \sqrt{3}x - y - 2 = 0$
 \therefore Slope of line $l_1, m_1 = \frac{-\text{Coefficient of } x}{\text{Coefficient of } y}$
 $= \frac{-1}{0} = \infty$

The line l_1 is parallel to Y-axis or perpendicular to X-axis.

\therefore Slope of line, $l_2, m_2 = \frac{-\sqrt{3}}{-1} = \sqrt{3}$

The line l_2 makes an angle 60° from positive X-axis.

\therefore Angle between l_1 and

$$l_2 = 90^\circ - 60^\circ = 30^\circ$$

Hence, option (b) is correct.

- 63.** The point of intersection of diagonals of a square ABCD is at the origin and one of its vertices is at A(4, 2). What is the equation of the diagonal BD?

- (a) $2x + y = 0$ (b) $2x - y = 0$
 (c) $x + 2y = 0$ (d) $x - 2y = 0$

- ⊙ (a) Since, diagonal BD passes through the origin O(0, 0).

\therefore Slope of OA = $\frac{0 - 2}{0 - 4} = \frac{1}{2}$

\therefore OA and OB are perpendicular to each other

\therefore slope of OB = $\frac{-1}{\text{slope of OA}} = \frac{-1}{1/2} = -2$

\therefore Eqs. of BD having slope -2 and passes through (0, 0)

$$y - 0 = -2[x - 0]$$

[\therefore Equation of a line $\Rightarrow y - y_1 = m(x - x_1)$]

$\Rightarrow 2x + y = 0$

Hence, option (a) is correct.

- 64.** If any point on a hyperbola is $(3\tan\theta, 2\sec\theta)$, then what is the eccentricity of the hyperbola?

- (a) $\frac{3}{2}$ (b) $\frac{5}{2}$ (c) $\frac{\sqrt{11}}{2}$ (d) $\frac{\sqrt{13}}{2}$

- ⊙ (d) Given point is $(3\tan\theta, 2\sec\theta)$

$\Rightarrow x = 3\tan\theta, y = 2\sec\theta$

$\frac{x}{3} = \tan\theta, \frac{y}{2} = \sec\theta$

$\therefore \sec^2\theta - \tan^2\theta = 1$

$\frac{y^2}{4} - \frac{x^2}{9} = 1$ which represents conjugate

Hyperbola.

$\Rightarrow a^2 = 9, b^2 = 4$

$\therefore e = \sqrt{1 + \frac{a^2}{b^2}}$
 $= \sqrt{1 + \frac{9}{4}} = \sqrt{\frac{13}{4}}$
 $e = \frac{\sqrt{13}}{2}$

Hence, option (d) is correct.

- 65.** Consider the following with regard to eccentricity (e) of a conic section

1. $e = 0$ for circle
 2. $e = 1$ for parabola
 3. $e < 1$ for ellipse

Which of the above are correct?

- (a) 1 and 2 (b) 2 and 3
 (c) 1 and 3 (d) 1, 2 and 3

- ⊙ (d) Since, we know that circle has eccentricity 0

and parabola has eccentricity 1

and ellipse has eccentricity $e < 1$

and hyperbola has eccentricity $e > 1$.

Hence, option (d) is correct.

- 66.** What is the angle between the two lines having direction ratios $\langle 6, 3, 6 \rangle$ and $\langle 3, 3, 0 \rangle$?

- (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{4}$
 (c) $\frac{\pi}{3}$ (d) $\frac{\pi}{2}$

- ⊙ (b) Direction ratios of line $l_1 = \langle 6, 3, 6 \rangle$

$a_1 = 6, b_1 = 3, c_1 = 6$

Direction ratios of line $l_2 = \langle 3, 3, 0 \rangle$

$\Rightarrow a_2 = 3, b_2 = 3, c_2 = 0$

$\therefore \cos\theta = \frac{a_1a_2 + b_1b_2 + c_1c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}}$

$= \frac{6 \times 3 + 3 \times 3 + 6 \times 0}{\sqrt{6^2 + 3^2 + 6^2} \cdot \sqrt{3^2 + 3^2 + 0}}$

$\Rightarrow \cos\theta = \frac{27}{9 \times 3\sqrt{2}}$

$\Rightarrow \cos\theta = \frac{1}{\sqrt{2}} = \cos \frac{\pi}{4}$

$\therefore \theta = \frac{\pi}{4}$

Hence, option (b) is correct.

- 67.** If l, m, n are the direction cosines of the line $x - 1 = 2(y + 3) = 1 - z$, then what is $l^4 + m^4 + n^4$ equal to?

- (a) 1 (b) $\frac{11}{27}$ (c) $\frac{13}{27}$ (d) 4

- ⊙ (b) Given line is

$x - 1 = 2(y + 3) = 1 - z$

$\Rightarrow \frac{x - 1}{2} = \frac{y + 3}{1} = \frac{1 - z}{2}$

$\Rightarrow \frac{x - 1}{2} = \frac{y - (-3)}{1} = \frac{z - 1}{-2}$

\therefore Direction ratios are $\langle 2, 1, -2 \rangle$

\therefore Direction cosines are

$\langle \frac{2}{\sqrt{2^2 + 1^2 + (-2)^2}}, \frac{1}{\sqrt{2^2 + 1^2 + (-2)^2}}, \frac{-2}{\sqrt{2^2 + 1^2 + (-2)^2}} \rangle$

$\sqrt{2^2 + 1^2 + (-2)^2}$

$\therefore l = \frac{2}{3}, m = \frac{1}{3}, n = \frac{-2}{3}$

$\therefore l^4 + m^4 + n^4 = \left(\frac{2}{3}\right)^4 + \left(\frac{1}{3}\right)^4 + \left(\frac{-2}{3}\right)^4$

$= \frac{16 + 1 + 16}{81} = \frac{33}{81} = \frac{11}{27}$

Hence, option (b) is correct.

- 68.** What is the projection of the line segment joining A(1, 7, -5) and B(-3, 4, -2) on Y-axis?

- (a) 5 (b) 4 (c) 3 (d) 2

- ⊙ (c) A = (1, 7, -5) and B = (-3, 4, -2)

\therefore Direction ratios of

AB = $\langle -3 - 1, 4 - 7, (-2 + 5) \rangle$

$= \langle -4, -3, 3 \rangle$

$\Rightarrow a = -4, b = -3, c = 3$

Direction cosines of Y-axis = $\langle 0, 1, 0 \rangle$

$l = 0, m = 1, n = 0$

\therefore Projection of AB on Y-axis

$= |al + bm + cn|$

$= |-4 \times 0 + (-3) \times 1 + 3 \times 0| = 3$

Hence, option (c) is correct.

- 69.** What is the number of possible values of k for which the line joining the points $(k, 1, 3)$ and $(1, -2, k + 1)$ also passes through the point $(15, 2, -4)$?

- (a) Zero (b) One (c) Two (d) Infinite

- ⊙ (c) Let A = $(k, 1, 3)$, B = $(1, -2, k + 1)$

and C = $(15, 2, -4)$

Since, line AB passes through C also.

Hence, points A, B and C are collinear.

$\therefore \begin{vmatrix} k & 1 & 3 \\ 1 & -2 & k + 1 \\ 15 & 2 & -4 \end{vmatrix} = 0$

$k(8 - 2k - 2) - 1(-4 - 15k - 15) + 3(2 + 30) = 0$

$$6k - 2k^2 + 19 + 15k + 96 = 0$$

$$2k^2 - 21k - 115 = 0 \text{ which is quadratic equation.}$$

$\Rightarrow k$ has two values.
Hence, option (c) is correct.

70. The foot of the perpendicular drawn from the origin to the plane

$$x + y + z = 3 \text{ is}$$

- (a) (0, 1, 2)
- (b) (0, 0, 3)
- (c) (1, 1, 1)
- (d) (-1, 1, 3)

\Rightarrow (c) Let the foot of the perpendicular drawn from the origin to the plane $x + y + z = 3$ be (a, b, c) .

Direction ratios of the plane = $\langle 1, 1, 1 \rangle$
 \therefore Direction ratios of OA and normal will be in the same ratio.

$$\therefore \frac{a-0}{1} = \frac{b-0}{1} = \frac{c-0}{1}$$

$$\Rightarrow a = 1, b = 1, c = 1$$

$$\therefore A = (1, 1, 1)$$

Hence, option (c) is correct.

71. A vector $r = a\hat{i} + b\hat{j}$ is equally inclined to both x and y axes. If the magnitude of the vector is 2 units, then what are the values of a and b respectively?

- (a) $\frac{1}{2}, \frac{1}{2}$
- (b) $\frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}$
- (c) $\sqrt{2}, \sqrt{2}$
- (d) 2, 2

\Rightarrow (c) $r = a\hat{i} + b\hat{j}$

$$|r| = \sqrt{a^2 + b^2} = 2$$

Since, r is equally inclined from X -axis and Y -axis.

Hence, r makes 45° from the X -axis.

$$\therefore a = |r| \cos 45^\circ \text{ and } b = |r| \sin 45^\circ$$

$$a = 2 \times \frac{1}{\sqrt{2}}, \text{ and } b = 2 \times \frac{1}{\sqrt{2}}$$

$$a = \sqrt{2} \text{ and } b = \sqrt{2}$$

Hence, option (c) is correct.

72. Consider the following statements in respect of a vector $c = a + b$, where $|a| = |b| \neq 0$

- 1. c is perpendicular to $(a - b)$.
- 2. c is perpendicular to $(a \times b)$.

Which of the above statements is/are correct?

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

\Rightarrow (c) $c = a + b$ where $a = b \neq 0$

$$\text{Consider, } c \cdot (a - b) = (a + b) \cdot (a - b)$$

$$= |a|^2 - |b|^2 = |b|^2 - |b|^2 = 0$$

$\Rightarrow c$ is perpendicular to $(a - b)$.

$$\text{Also, } c \cdot (a \times b) = (a + b) \cdot (a \times b)$$

$$= a \cdot (a \times b) + b \cdot (a \times b)$$

$$= 0 + 0 = 0$$

$\Rightarrow c$ is perpendicular to $(a \times b)$

Hence, option (c) is correct.

73. If a and b are two vectors such that $|a + b| = |a - b| = 4$, then which one of the following is correct?

- (a) a and b must be unit vectors
- (b) a must be parallel to b
- (c) a must be perpendicular to b
- (d) a must be equal to b

\Rightarrow (c) Given, $|a + b| = |a - b| = 4$

$$\Rightarrow |a + b|^2 = |a - b|^2$$

$$|a|^2 + |b|^2 + 2a \cdot b$$

$$= |a|^2 + |b|^2 - 2a \cdot b$$

$$\Rightarrow 4a \cdot b = 0 \Rightarrow a \cdot b = 0$$

$\Rightarrow a$ must be perpendicular to b .

Hence, option (c) is correct.

74. If a, b and c are coplanar, then what is $(2a \times 3b) \cdot 4c + (5b \times 3c) \cdot 6a$ equal to?

- (a) 114
- (b) 66
- (c) 0
- (d) -66

\Rightarrow (c) Given that, a, b and c are coplanar

$$\Rightarrow [a \ b \ c] = 0 \quad \dots (i)$$

$$\therefore (2a \times 3b) \cdot 4c + (5b \times 3c) \cdot 6a$$

$$= 2 \cdot 3 \cdot 4[a \ b \ c] + 5 \cdot 3 \cdot 6[b \ c \ a]$$

$$= 24[a \ b \ c] + 90[a \ b \ c] \{ \because [a \ b \ c] = [b \ c \ a] \}$$

$$= 24 \times 0 + 90 \times 0 = 0$$

Hence, option (c) is correct.

75. Consider the following statements

- 1. The cross product of two unit vectors is always a unit vector.
- 2. The dot product of two unit vectors is always unity.
- 3. The magnitude of sum of two unit vectors is always greater than the magnitude of their difference.

Which of the above statements are not correct?

- (a) 1 and 2
- (b) 2 and 3
- (c) 1 and 3
- (d) 1, 2 and 3

\Rightarrow (d) **Statement I**

Let a and b are unit vectors

$$\text{i.e. } |a| = |b| = 1$$

$$a \times b = |a| |b| \sin \theta \hat{n}$$

$$|a \times b| = |a| |b| \sin \theta$$

$$= \sin \theta \in [-1, 1]$$

Therefore, statement I is incorrect.

Statement II

Let a and b are unit vectors

$$\text{i.e. } a \cdot b = |a| |b| \cos \theta$$

$$= \cos \theta \in [-1, 1]$$

Therefore, statement II is also incorrect.

Statement III

Let $a = \hat{i}$ and $b = \hat{j}$

$$\Rightarrow |a| = 1, |b| = 1$$

$$|a + b| = |\hat{i} + \hat{j}| = \sqrt{2}$$

$$|a - b| = |\hat{i} - \hat{j}| = \sqrt{2}$$

76. If $\lim_{x \rightarrow a} \frac{a^x - x^a}{x^a - a^a} = -1$

then what is the value of a ?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

\Rightarrow (c) $\lim_{x \rightarrow a} \frac{a^x - x^a}{x^a - a^a} = -1$

$$\Rightarrow \lim_{x \rightarrow a} \frac{a^x - x^a}{x^a - a^a} = -1 \left(\frac{0}{0} \text{ form} \right)$$

By using L' Hospital rule,

$$\lim_{x \rightarrow a} \frac{a^x \log_e a - ax^{a-1}}{ax^{a-1} - 0} = -1$$

$$\Rightarrow \frac{a^a \log_e a - a \cdot a^{a-1}}{a \cdot a^{a-1}} = -1$$

$$\Rightarrow \frac{a^a (\log_e a - 1)}{a^a} = -1$$

$$\Rightarrow \log_e a = -1 + 1$$

$$\Rightarrow \log_e a = 0$$

$$\therefore a = e^0 = 1$$

$$\therefore a = 1$$

Hence, option (c) is correct.

77. A particle starts from origin with a velocity (in m/s) given by the

$$\text{equation } \frac{dx}{dt} = x + 1. \text{ The time (in}$$

second) taken by the particle to traverse a distance of 24 m is

- (a) $\ln 24$
- (b) $\ln 5$
- (c) $2 \ln 5$
- (d) $2 \ln 4$

\Rightarrow (c) $\frac{dx}{dt} = x + 1$

$$\Rightarrow \frac{dx}{x+1} = dt$$

On integrating both sides

$$\int \frac{dx}{x+1} = \int dt$$

$$\ln(x+1) = t + c \quad \dots (i)$$

Since, at $t = 0$, distance $(x) = 0$

$$\therefore \ln(0+1) = 0 + c$$

$$\boxed{0=c}$$

$$\therefore \ln(x+1) = t$$

At $x = 24$ m

$$t = \ln(24+1) = \ln 25 = \ln 5^2$$

$$t = 2 \ln 5$$

Hence, option (c) is correct.

78. What is $\int_0^a \frac{f(a-x)}{f(x)+f(a-x)} dx$ equal to?

- (a) a (b) $2a$
(c) 0 (d) $\frac{a}{2}$

⊙ (d) Let $I = \int_0^a \frac{f(a-x)}{f(x)+f(a-x)} dx \quad \dots (i)$

$$x \rightarrow a-x$$

$$I = \int_0^a \frac{f(a-a+x)}{f(a-x)+f(a-a+x)} dx$$

$$I = \int_0^a \frac{f(x)}{f(a-x)+f(x)} dx \quad \dots (ii)$$

Adding Eqs. (i) and (ii), we get

$$2I = \int_0^a \frac{f(a-x)+f(x)}{f(a-x)+f(x)} dx$$

$$2I = \int_0^a 1 \cdot dx$$

$$2I = x \Big|_0^a$$

$$2I = a - 0$$

$$I = \frac{a}{2}$$

Hence, option (d) is correct.

79. What is $\lim_{x \rightarrow -1} \frac{x^3 + x^2}{x^2 + 3x + 2}$ equal to?

- (a) 0 (b) 1 (c) 2 (d) 3

⊙ (b) Given, $\lim_{x \rightarrow -1} \frac{x^3 + x^2}{x^2 + 3x + 2} \left(\frac{0}{0} \text{ form} \right)$

By using L' Hospital rule

$$\lim_{x \rightarrow -1} \frac{3x^2 + 2x}{2x + 3}$$

$$= \frac{3(-1)^2 + 2(-1)}{2(-1) + 3} = \frac{3-2}{-2+3} = 1$$

Hence, option (b) is correct.

80. If $\int_0^a [f(x) + f(-x)] dx = \int_{-a}^a g(x) dx$ then what is $g(x)$ equal to?

- (a) $f(x)$ (b) $f(-x) + f(x)$
(c) $-f(x)$ (d) None of these

⊙ (a) Given that,

$$\int_0^a [f(x) + f(-x)] dx = \int_{-a}^a g(x) dx$$

$$\text{If } g(x) = f(x)$$

R.H.S. Let $I = \int_{-a}^a g(x) dx$

$$\Rightarrow I = \int_{-a}^a f(x) dx \quad \dots (i)$$

$$[\because \int_a^b f(x) dx = \int_a^b f(a+b-x) dx]$$

$$I = \int_{-a}^a f(-x) dx \quad \dots (ii)$$

Adding Eqs. (i) and (ii), we get

$$2I = \int_{-a}^a [f(x) + f(-x)] dx \quad (\text{even function})$$

$$\Rightarrow 2I = 2 \int_0^a [f(x) + f(-x)] dx$$

$$I = \int_0^a [f(x) + f(-x)] dx = \text{L.H.S}$$

$$\Rightarrow g(x) = f(x) \text{ and}$$

Hence, option (a) is correct.

81. What is the area bounded by

$$y = \sqrt{16 - x^2}, y \geq 0 \text{ and the } X\text{-axis?}$$

- (a) 16π sq. units (b) 8π sq. units
(c) 4π sq. units (d) 2π sq. units

⊙ (b) Shaded portion in the diagram represents the area bounded by $y = \sqrt{16 - x^2}, y \geq 0$ and X -axis.

$$\text{Put } y = 0, \text{ then } 16 - x^2 = 0$$

$$\Rightarrow x = \pm 4$$

$$\therefore \text{Required area} = \int_{-4}^4 \sqrt{16 - x^2} dx$$

$$= 2 \int_0^4 \sqrt{16 - x^2} dx$$

$$= 2 \left[\frac{x}{2} \sqrt{16 - x^2} + \frac{16}{2} \sin^{-1} \frac{x}{4} \right]_0^4$$

$$= 2 [0 + 8 \sin^{-1} 1] = 2 \times \frac{8\pi}{2}$$

$$= 8\pi \text{ sq units}$$

Hence, option (b) is correct.

82. The curve $y = -x^3 + 3x^2 + 2x - 27$ has the maximum slope at

- (a) $x = -1$ (b) $x = 0$
(c) $x = 1$ (d) $x = 2$

⊙ (c) Given that, $y = -x^3 + 3x^2 + 2x - 27$

$$\text{Slope} = \frac{dy}{dx} = -3x^2 + 6x + 2$$

$$\therefore f'(x) = -3x^2 + 6x + 2$$

For maxima/minima of $f'(x)$,

$$\frac{d}{dx} [f'(x)] = -6x + 6 = 0$$

$$\Rightarrow 6x = 6 \Rightarrow x = 1$$

$$\text{At } x = 1, \frac{d^2}{dx^2} f'(x) = -6 < 0$$

\therefore At $x = 1, f'(x)$ is maximum.

Hence, option (c) is correct.

83. A 24 cm long wire is bent to form a triangle with one of the angles as 60° . What is the altitude of the triangle having the greatest possible area?

- (a) $4\sqrt{3}$ cm (b) $2\sqrt{3}$ cm
(c) 6 cm (d) 3 cm

⊙ (a)

Given, $a + b + c = 24$

$$\Rightarrow c = 24 - (a + b)$$

$$\text{Again } \cos C = \frac{a^2 + b^2 - c^2}{2ab}$$

$$\Rightarrow \cos 60^\circ = \frac{a^2 + b^2 - c^2}{2ab}$$

$$\Rightarrow \frac{1}{2} = \frac{a^2 + b^2 - c^2}{2ab}$$

$$\Rightarrow ab = a^2 + b^2 - c^2$$

$$\Rightarrow ab = a^2 + b^2 - [24 - (a + b)]^2$$

$$\Rightarrow ab = a^2 + b^2 - 576$$

$$- (a + b)^2 + 48(a + b)$$

$$\Rightarrow ab = a^2 + b^2 - 576 - a^2 - b^2$$

$$- 2ab + 48(a + b)$$

$$\Rightarrow 3ab - 48(a + b) = -576$$

$$\Rightarrow ab - 16(a + b) = -192$$

$$\Rightarrow ab - 16a = 16b - 192$$

$$\Rightarrow a(b - 16) = 16(b - 12)$$

$$\Rightarrow a = \frac{16(b - 12)}{b - 16}$$

$$\text{Again } \text{ar}(\triangle ABC), A = \frac{1}{2} ab \sin C$$

$$= \frac{1}{2} \times \frac{16(b - 12)b}{b - 16} \times \sin 60^\circ$$

$$= \frac{1}{2} \times \frac{16(b - 12)b}{b - 16} \times \frac{\sqrt{3}}{2}$$

$$= \frac{4\sqrt{3}(b^2 - 12b)}{b - 16}$$

$$\therefore \frac{dA}{db} = 4\sqrt{3}$$

$$\left[\frac{(2b - 12)(b - 16) - (b^2 - 12b) \cdot 1}{b - 16} \right]$$

Maximum value for A

$$\frac{dA}{db} = 0$$

$$\Rightarrow \frac{4\sqrt{3}}{b - 16} [2b^2 - 32b - 12b]$$

$$+ 192 - b^2 + 12b] = 0$$

$$\Rightarrow b^2 - 32b + 192 = 0$$

$$\Rightarrow (b - 24)(b - 8) = 0$$

$$\Rightarrow b = 24, 8$$

when, $b = 24$

$$a = \frac{16(24 - 12)}{24 - 16} = \frac{16 \times 12}{8} = 24$$

$$\text{and } c = 24 - (24 + 24) = -24$$

It is impossible,

when, $b = 8$

$$a = \frac{16(8 - 12)}{8 - 16} = \frac{16(-4)}{-8} = 8$$

$$\text{and } c = 24 - (8 + 8) = 8$$

\therefore So triangle will be equilateral

$$\therefore \text{ Height} = \frac{\sqrt{3}}{2} (\text{side})$$

$$= \frac{\sqrt{3}}{2} \times 8 = 4\sqrt{3} \text{ cm}$$

84. If $f(x) = e^{|x|}$, then which one of the following is correct?

- (a) $f'(0) = 1$ (b) $f'(0) = -1$
 (c) $f'(0) = 0$ (d) $f'(0)$ does not exist

\Rightarrow (d) Given that, $f(x) = e^{|x|}$

$$\Rightarrow f(x) = \begin{cases} e^x & ; x \geq 0 \\ e^{-x} & ; x < 0 \end{cases}$$

LHD at $x = 0$,

$$\begin{aligned} f'(0^-) &= \lim_{h \rightarrow 0^-} \frac{f(0+h) - f(0)}{h} \\ &= \lim_{h \rightarrow 0^-} \frac{e^{-h} - e^0}{h} \\ &\quad \text{(by using L' Hospital rule)} \\ &= \lim_{h \rightarrow 0^-} -\frac{e^{-h}}{1} = -1 \end{aligned}$$

RHD at $x = 0$,

$$\begin{aligned} f'(0^+) &= \lim_{h \rightarrow 0^+} \frac{f(0+h) - f(0)}{h} \\ &= \lim_{h \rightarrow 0^+} \frac{e^h - e^0}{h} \\ &= \lim_{h \rightarrow 0^+} \frac{e^h}{1} = e^0 = 1 \end{aligned}$$

\therefore LHD \neq RHD

$\therefore f'(x)$ does not exist at $x = 0$

Hence, option (d) is correct.

85. What is $\int \frac{dx}{\sec x + \tan x}$ equal to?

- (a) $\ln(\sec x) + \ln|\sec x + \tan x| + c$
 (b) $\ln(\sec x) - \ln|\sec x + \tan x| + c$
 (c) $\sec x \tan x - \ln|\sec x - \tan x| + c$
 (d) $\ln|\sec x + \tan x| - \ln|\sec x| + c$

\Rightarrow (d) Let $I = \int \frac{dx}{\sec x + \tan x}$

$$I = \int \frac{1}{(\sec x + \tan x)} \times \frac{(\sec x - \tan x)}{(\sec x - \tan x)} dx$$

$$I = \int \frac{(\sec x - \tan x)}{\sec^2 x - \tan^2 x} dx$$

$$I = \int \frac{(\sec x - \tan x)}{1} dx$$

$$= \int \sec x dx - \int \tan x dx$$

$$I = \log|\sec x + \tan x| - \log|\sec x| + C$$

Hence, option (d) is correct.

86. What is $\int \frac{dx}{\sec^2(\tan^{-1} x)}$ equal to?

- (a) $\sin^{-1} x + c$ (b) $\tan^{-1} x + c$
 (c) $\sec^{-1} x + c$ (d) $\cos^{-1} x + c$

\Rightarrow (b) Let $I = \int \frac{dx}{\sec^2(\tan^{-1} x)}$

$$I = \int \frac{dx}{1 + \tan^2(\tan^{-1} x)}$$

$$[\because \sec^2 x = 1 + \tan^2 x]$$

$$= \int \frac{dx}{1 + x^2}$$

$$I = \tan^{-1} x + C$$

Hence, option (b) is correct.

87. If $x + y = 20$ and $P = xy$, then what is the maximum value of P ?

- (a) 100 (b) 96
 (c) 84 (d) 50

\Rightarrow (a) Given, $x + y = 20$

$$\Rightarrow y = 20 - x$$

$$P = xy$$

$$P = x(20 - x)$$

$$P = 20x - x^2$$

$$\therefore \frac{dP}{dx} = 20 - 2x$$

$$\text{For maxima/minima, } \frac{dP}{dx} = 0$$

$$20 - 2x = 0$$

$$\Rightarrow x = 10$$

$$\text{At } x = 10, \frac{d^2P}{dx^2} = -2 < 0$$

$$\therefore P \text{ is maximum at } x = 10$$

$$\Rightarrow y = 20 - 10 = 10$$

$$\therefore \text{Maximum value of } P = xy$$

$$= 10 \times 10 = 100$$

Hence, option (a) is correct.

88. What is the derivative of $\sin(\ln x) + \cos(\ln x)$ with respect to x at $x = e$?

- (a) $\frac{\cos 1 - \sin 1}{e}$ (b) $\frac{\sin 1 - \cos 1}{e}$
 (c) $\frac{\cos 1 + \sin 1}{e}$ (d) 0

\Rightarrow (a) Let $y = \sin(\ln x) + \cos(\ln x)$

$$\therefore \frac{dy}{dx} = \cos(\ln x) \cdot \frac{1}{x} + \left(-\sin(\ln x) \cdot \frac{1}{x} \right)$$

$$= \frac{1}{x} [\cos(\ln x) - \sin(\ln x)]$$

At $x = e$,

$$\frac{dy}{dx} = \frac{1}{e} [\cos(\ln e) - \sin(\ln e)]$$

$$= \frac{1}{e} [\cos 1 - \sin 1]$$

$[\because \ln e = 1]$

Hence, option (a) is correct.

89. If $x = e^t \cos t$ and $y = e^t \sin t$, then

what is $\frac{dx}{dy}$ at $t = 0$ equal to?

- (a) 0 (b) 1 (c) $2e$ (d) -1

\Rightarrow (b) Given that, $x = e^t \cos t$, $y = e^t \sin t$

$$\therefore \frac{dx}{dt} = e^t \frac{d}{dt} \cos t + \cos t \frac{d}{dt} e^t$$

$$= e^t (-\sin t) + \cos t \cdot e^t$$

$$\frac{dy}{dt} = e^t \frac{d}{dt} \sin t + \sin t \cdot \frac{d}{dt} e^t$$

$$\frac{dy}{dt} = e^t \cos t + e^t \sin t$$

$$\therefore \frac{dx}{dy} = \frac{dx/dt}{dy/dt}$$

$$\frac{dx}{dy} = \frac{e^t (\cos t - \sin t)}{e^t (\cos t + \sin t)}$$

At $t = 0$,

$$\therefore \frac{dx}{dy} = \frac{\cos 0^\circ - \sin 0^\circ}{\cos 0^\circ + \sin 0^\circ} = \frac{1 - 0}{1 + 0}$$

$$\left(\frac{dx}{dy} \right)_{t=0} = 1$$

Hence, option (b) is correct.

90. What is the maximum value of $\sin 2x \cdot \cos 2x$?

- (a) $\frac{1}{2}$ (b) 1 (c) 2 (d) 4

\Rightarrow (a) Let $y = \sin 2x \cdot \cos 2x$

$$y = \frac{1}{2} [2 \sin 2x \cdot \cos 2x]$$

$$y = \frac{1}{2} \sin 4x$$

Since, we know that

$$-1 \leq \sin 4x \leq 1 \Rightarrow \frac{-1}{2} \leq \frac{1}{2} \sin 4x \leq \frac{1}{2}$$

$$\therefore \text{Maximum value} = \frac{1}{2}$$

Hence, option (a) is correct.

91. What is the derivative of e^x with respect to x^e ?

- (a) $\frac{xe^x}{e^x}$ (b) $\frac{e^x}{x^e}$ (c) $\frac{xe^x}{x^e}$ (d) $\frac{e^x}{e^x}$

\Rightarrow (a) Let $y_1 = e^x$ and $y_2 = x^e$

$$\therefore \frac{dy_1}{dx} = e^x, \frac{dy_2}{dx} = ex^{e-1}$$

$$\therefore \frac{dy_1}{dy_2} = \frac{e^x}{e^{x^e-1}} = \frac{xe^x}{e^{x^e}}$$

Hence, option (a) is correct.

92. If a differentiable function $f(x)$ satisfies $\lim_{x \rightarrow -1} \frac{f(x)+1}{x^2-1} = -\frac{3}{2}$, then what is $\lim_{x \rightarrow -1} f(x)$ equal to?

- (a) $-\frac{3}{2}$ (b) -1
 (c) 0 (d) 1

⊙ (b) Given, $\lim_{x \rightarrow -1} \frac{f(x)+1}{x^2-1} = -\frac{3}{2}$
 $\therefore \lim_{x \rightarrow -1} \frac{f(x)+1}{x^2-1}$ has denominator 0 at $x = -1$

$$\Rightarrow \lim_{x \rightarrow -1} f(x) + 1 = 0$$

$$\Rightarrow \lim_{x \rightarrow -1} f(x) = -1$$

Hence, option (b) is correct.

93. If the function

$$f(x) = \begin{cases} a + bx, & x < 1 \\ 5, & x = 1 \\ b - ax, & x > 1 \end{cases}$$

is continuous, then what is the value of $(a + b)$?

- (a) 5 (b) 10
 (c) 15 (d) 20

⊙ (a) Given that, $f(x) = \begin{cases} a + bx & ; x < 1 \\ 5 & ; x = 1 \\ b - ax & ; x > 1 \end{cases}$

$\therefore f(x)$ is continuous.

$\Rightarrow f(x)$ will be continuous at $x = 1$

$$\lim_{x \rightarrow 1^-} f(x) = f(1) = \lim_{x \rightarrow 1^+} f(x)$$

$$\lim_{x \rightarrow 1^-} (a + bx) = 5 = \lim_{x \rightarrow 1^+} (b - ax)$$

$$a + b = 5 = b - a$$

$$\Rightarrow a + b = 5$$

Hence, option (a) is correct.

94. Consider the following statements in respect of the function

$$f(x) = \sin x$$

- $f(x)$ increases in the interval $(0, \pi)$.
- $f(x)$ decreases in the interval $(\frac{5\pi}{2}, 3\pi)$.

Which of the above statement is/are correct?

- (a) 1 only
 (b) 2 only
 (c) Both 1 and 2
 (d) Neither 1 nor 2

⊙ (b) Given, $f(x) = \sin x$

From the graph of $\sin x$

We can see that $f(x)$ increases in $[0, \frac{\pi}{2}]$ and decreases in $[\frac{\pi}{2}, \pi]$ and $(\frac{5\pi}{2}, 3\pi)$.

\Rightarrow Statement-1 is wrong and Statement-2 is correct.

Hence, option (b) is correct.

95. What is the domain of the function $f(x) = 3^x$?

- (a) $(-\infty, \infty)$ (b) $(0, \infty)$
 (c) $[0, \infty)$ (d) $(-\infty, \infty) - \{0\}$

⊙ (a) Given, $f(x) = 3^x$

\therefore We know that, domain of exponential function is $(-\infty, \infty)$.

\therefore Domain of $3^x = (-\infty, \infty)$

Hence, option (a) is correct.

96. If the general solution of a differential equation is

$$y^2 + 2cy - cx + c^2 = 0, \text{ where } c \text{ is an arbitrary constant, then what is the order of the differential equation?}$$

- (a) 1 (b) 2 (c) 3 (d) 4

⊙ (a) Given that, $y^2 + 2cy - cx + c^2 = 0$

Since, the above equation contains only one variable constant.

Hence, order of the differential equation = 1

Hence, option (a) is correct.

97. What is the degree of the following differential equation?

$$x = \sqrt{1 + \frac{d^2y}{dx^2}}$$

- (a) 1
 (b) 2
 (c) 3
 (d) Degree is not defined

⊙ (a) Let $x = \sqrt{1 + \frac{d^2y}{dx^2}}$

$$\Rightarrow x^2 = 1 + \frac{d^2y}{dx^2} \Rightarrow \left(\frac{d^2y}{dx^2}\right)^1 = x^2 - 1$$

\therefore Degree = exponent of highest order derivative = 1

Hence, option (a) is correct.

98. Which one of the following differential equations has the general solution $y = ae^x + be^{-x}$?

- (a) $\frac{d^2y}{dx^2} + y = 0$ (b) $\frac{d^2y}{dx^2} - y = 0$
 (c) $\frac{d^2y}{dx^2} + y = 1$ (d) $\frac{dy}{dx} - y = 0$

⊙ (b) Given, $y = ae^x + be^{-x}$

$$\therefore \frac{dy}{dx} = ae^x - be^{-x}$$

$$\frac{d^2y}{dx^2} = ae^x + be^{-x} = y$$

$$\Rightarrow \frac{d^2y}{dx^2} - y = 0$$

Hence, option (b) is correct.

99. What is the solution of the following differential equation?

$$\ln\left(\frac{dy}{dx}\right) + y = x$$

- (a) $e^x + e^y = c$ (b) $e^{x+y} = c$
 (c) $e^x - e^y = c$ (d) $e^{x-y} = c$

⊙ (c) Given, $\ln\left(\frac{dy}{dx}\right) + y = x$

$$\Rightarrow \ln\left(\frac{dy}{dx}\right) = x - y$$

$$\Rightarrow \frac{dy}{dx} = e^{x-y}$$

$$\Rightarrow \frac{dy}{dx} = \frac{e^x}{e^y}$$

$$\Rightarrow e^y dy = e^x dx$$

On integrating both sides,

$$\int e^y dy = \int e^x dx$$

$$e^y + c = e^x \Rightarrow e^x - e^y = c$$

Hence, option (c) is correct.

100. What is $\int e^{(2 \ln x + \ln x^2)} dx$ equal to?

- (a) $\frac{x^4}{4} + C$ (b) $\frac{x^3}{3} + C$
 (c) $\frac{2x^5}{5} + C$ (d) $\frac{x^5}{5} + C$

⊙ (d) Let $I = \int e^{(2 \ln x + \ln x^2)} dx$

$$= \int e^{(\ln x^2 + \ln x^2)} dx$$

$$= \int e^{2 \ln x^2} dx = \int e^{\ln(x^2)^2} dx = \int x^4 dx$$

$$I = \frac{x^5}{5} + C$$

Hence, option (d) is correct.

101. Consider the following measures of central tendency for a set of N numbers

- Arithmetic mean
- Geometric mean

Which of the above uses/use all the data?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) Since, we know that the measures of central tendency are Mean, Median and Mode.

Where Arithmetic Mean and Geometric mean are the type mean.

Hence, option (c) is correct.

102. The numbers of Science, Arts and Commerce graduates working in a company are 30, 70 and 50 respectively. If these figures are represented by a pie chart, then what is the angle corresponding to Science graduates?

- (a) 36° (b) 72°
(c) 120° (d) 168°

⊙ (b) The ratio of Science, Arts and Commerce graduates

$$= 30 : 70 : 50 = 3 : 7 : 5$$

∴ Angle corresponding to Science graduates = $\frac{3}{3 + 7 + 5} \times 360^\circ$

$$= \frac{3}{15} \times 360^\circ = 72^\circ$$

Hence, option (b) is correct.

103. For a histogram based on a frequency distribution with unequal class intervals, the frequency of a class should be proportional to

- (a) the height of the rectangle
(b) the area of the rectangle
(c) the width of the rectangle
(d) the perimeter of the rectangle

⊙ (b) Since, we know that for a histogram, based on a frequency distribution with equal intervals, the frequency of a class is proportional to height of the rectangle and for a histogram based on frequency distribution with unequal intervals, the frequency of a class is proportional to Area of the rectangle.

Hence, option (b) is correct.

104. The coefficient of correlation is independent of

- (a) change of scale only
(b) change of origin only
(c) both change of scale and change of origin
(d) neither change of scale nor change of origin

⊙ (c) Since, we know that coefficient of correlation is independent of both change of scale and change of origin.

Hence, option (c) is correct.

105. The following table gives the frequency distribution of number of peas per pea pod of 198 pods

Number of peas	1	2	3	4	5	6	7
Frequency	4	33	76	50	26	8	1

What is the median of this distribution?

- (a) 3 (b) 4 (c) 5 (d) 6

⊙ (a)

Number of Peas	Frequency	Cumulative frequency
1	4	4
2	33	37
3	76	113
4	50	163
5	26	189
6	8	197
7	1	198
		$\Sigma f = 198$

$$\therefore N = 198, \frac{N}{2} = \frac{198}{2} = 99$$

$$\text{Median} = \frac{\frac{N}{2} \text{th term} + \left(\frac{N}{2} + 1\right) \text{th term}}{2}$$

$$= \frac{99\text{th term} + 100\text{th term}}{2}$$

$$= \frac{3 + 3}{2} = 3$$

∴ Median = 3

Hence, option (a) is correct.

106. If M is the mean of n observations $x_1 - k, x_2 - k, x_3 - k, \dots, x_n - k$, where k is any real number, then what is the mean of

- (a) M (b) $M + k$
(c) $M - k$ (d) kM

⊙ (b) Given that,

Mean of $x_1 - k, x_2 - k, x_3 - k, \dots, x_n - k$

$$\therefore M = \frac{(x_1 - k) + (x_2 - k) + \dots + (x_n - k)}{n}$$

$$M = \frac{(x_1 + x_2 + \dots + x_n)}{n} - \frac{nk}{n}$$

$$M + k = \frac{x_1 + x_2 + \dots + x_n}{n}$$

∴ Mean of $x_1, x_2, x_3, \dots, x_n = M + k$

Hence, option (b) is correct.

107. What is the sum of deviations of the variate values 73, 85, 92, 105, 120 from their mean?

- (a) -2 (b) -1
(c) 0 (d) 5

⊙ (c) Mean of 73, 85, 92, 105, 120

$$\bar{x} = \frac{73 + 85 + 92 + 105 + 120}{5}$$

$$= \frac{475}{5}$$

$$\bar{x} = 95$$

∴ Sum of deviations from their mean = $(73 - 95) + (85 - 95) + (92 - 95) + (105 - 95) + (120 - 95)$
= $-22 - 10 - 3 + 10 + 25 = 0$

Hence, option (c) is correct.

108. Let x be the HM and y be the GM of two positive numbers m and n . If $5x = 4y$, then which one of the following is correct?

- (a) $5m = 4n$ (b) $2m = n$
(c) $4m = 5n$ (d) $m = 4n$

⊙ (d) Given, two positive numbers are m and n .

$$\therefore \text{H.M. of } m \text{ and } n = \frac{2mn}{m + n}$$

$$x = \frac{2mn}{m + n} \quad \dots (i)$$

$$\text{G.M. of } m \text{ and } n = \sqrt{mn}$$

$$y = \sqrt{mn} \quad \dots (ii)$$

∴ $5x = 4y$

$$5 \left(\frac{2mn}{m + n} \right) = 4\sqrt{mn}$$

Squaring both sides, we get

$$\left(\frac{5mn}{m + n} \right)^2 = (2\sqrt{mn})^2$$

$$\Rightarrow \frac{25m^2n^2}{m^2 + n^2 + 2mn} = 4mn$$

$$\Rightarrow 25mn = 4m^2 + 4n^2 + 8mn$$

[∵ $m \neq 0, n \neq 0$]

$$\Rightarrow 4m^2 + 4n^2 - 17mn = 0$$

$$\Rightarrow 4m^2 - 16mn - mn + 4n^2 = 0$$

$$\Rightarrow 4m(m - 4n) - n(m - 4n) = 0$$

$$\Rightarrow (m - 4n)(4m - n) = 0$$

$$\Rightarrow m = 4n \text{ or } n = 4m$$

Hence, option (d) is correct.

109. If the mean of a frequency distribution is 100 and the coefficient of variation is 45%, then what is the value of the variance?

- (a) 2025 (b) 450
(c) 45 (d) 4.5

⊙ (a) Since, we know that Coefficient of variation

$$(CV) = \frac{\sigma}{x} \times 100 \quad \dots (i)$$

Where σ is standard deviation and \bar{x} is mean.

Given, $\bar{x} = 100$ and $CV = 45\%$
 From Eqs. (i), $45 = \frac{\sigma}{100} \times 100$
 $\Rightarrow \sigma = 45$
 \therefore Variance = $\sigma^2 = (45)^2 = 2025$
 Hence, option (a) is correct.

110. Let two events A and B be such that $P(A) = L$ and $P(B) = M$. Which one of the following is correct?

- (a) $P(A|B) < \frac{L + M - 1}{M}$
- (b) $P(A|B) > \frac{L + M - 1}{M}$
- (c) $P(A|B) \geq \frac{L + M - 1}{M}$
- (d) $P(A|B) = \frac{L + M - 1}{M}$

⊙ (c) Given, $P(A) = L, P(B) = M$

$$\therefore P(A|B) = \frac{P(A \cap B)}{P(B)}$$

$$P(A|B) = \frac{P(A) + P(B) - P(A \cup B)}{P(B)}$$

$$P(A|B) = \frac{L + M - P(A \cup B)}{P(B)}$$

$$\therefore P(A \cup B) = L + M - P(B)P(A|B)$$

$$\therefore 0 \leq P(A \cup B) \leq 1$$

$$\Rightarrow L + M - P(B) \cdot P(A|B) \leq 1$$

$$\Rightarrow P(B) \cdot P(A|B) \geq L + M - 1$$

$$P(A|B) \geq \frac{L + M - 1}{M} \quad [\because P(B) = M]$$

Hence, option (c) is correct.

111. For which of the following sets of numbers do the mean, median and mode have the same value?

- (a) 12, 12, 12, 12, 24
- (b) 6, 18, 18, 18, 30
- (c) 6, 6, 12, 30, 36
- (d) 6, 6, 6, 12, 30

⊙ (b) For option (a), Mean

$$= \frac{12 + 12 + 12 + 12 + 24}{5}$$

$$= 14 \cdot 4 \neq \text{mode (12)}$$

For option (b), Mean

$$= \frac{6 + 18 + 18 + 18 + 30}{5} = 18$$

Mode = 18, Median = 18

Hence, for the data 6, 18, 18, 18, 30,

Mean = Mode = Median = 18

Hence, option (b) is correct.

112. The mean of 12 observations is 75. If two observations are discarded, then the mean of the remaining

observations is 65. What is the mean of the discarded observations?

- (a) 250
- (b) 125
- (c) 120
- (d) Cannot be determined due to insufficient data

⊙ (b) Given, mean of 12 observations = 75 and M .

$$\therefore \bar{x} = \frac{\sum_{i=1}^{12} x_i}{12} \Rightarrow 75 = \frac{\sum_{i=1}^{12} x_i}{12}$$

$$\Rightarrow \sum_{i=1}^{12} x_i = 900 \quad \dots (i)$$

Let observations x_{11} and x_{12} is discarded

$$\text{then mean} = \frac{\sum_{i=1}^{10} x_i}{10} = 65$$

$$\therefore \sum_{i=1}^{10} x_i = 10 \times 65 = 650 \quad \dots (ii)$$

From Eqs. (i)

$$\sum_{i=1}^{12} x_i = 900$$

$$\Rightarrow \sum_{i=1}^{10} x_i + x_{11} + x_{12} = 900$$

$$\Rightarrow 650 + x_{11} + x_{12} = 900$$

$$\Rightarrow x_{11} + x_{12} = 250$$

$$\therefore \text{Mean of } x_{11} \text{ and } x_{12} = \frac{250}{2} = 125$$

Hence, option (b) is correct.

113. If k is one of the roots of the equation $x(x + 1) + 1 = 0$, then what is its other root?

- (a) 1
- (b) $-k$
- (c) k^2
- (d) $-k^2$

⊙ (c) Given, quadratic equation

$$x(x + 1) + 1 = 0$$

$$x^2 + x + 1 = 0 \quad \dots (i)$$

Since, we know that ω, ω^2 are the roots of Equation when

$$\omega = \frac{-1 + \sqrt{3}i}{2} \text{ and } \omega^2 = \frac{-1 - \sqrt{3}i}{2}$$

\Rightarrow If one of the roots of Eqs. (i) is k , then other root will be k^2 .

Hence, option (c) is correct.

114. The geometric mean of a set of observations is computed as 10. The geometric mean obtained when each observation x_i is replaced by $3x_i^4$ is

- (a) 810
- (b) 900
- (c) 30000
- (d) 81000

⊙ (c) Given that, geometric mean of a set of observations = 10

Since, we know that if

Geometric mean of $x_1, x_2, x_3, \dots, x_n$ is G .

\Rightarrow Geometric mean of $x_1^2, x_2^2, x_3^2, \dots, x_n^2$

is G^2

Geometric mean of $fx_1^2, fx_2^2, \dots, fx_n^2$ is fG^2 .

\therefore Required geometric mean = $3(10)^4$

$$= 3 \times 10000 = 30000$$

Hence, option (c) is correct.

115. If $P(A \cup B) = \frac{5}{6}, P(A \cap B) = \frac{1}{3}$ and $P(\bar{A}) = \frac{1}{2}$, then which of the

following is/are correct?

1. A and B are independent events.
2. A and B are mutually exclusive events.

Select the correct answer using the code given below.

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (a) Given, $P(A \cup B) = \frac{5}{6}, P(A \cap B) = \frac{1}{3}$

$$P(\bar{A}) = \frac{1}{2}$$

$$\Rightarrow P(A) = 1 - \frac{1}{2} = \frac{1}{2}$$

$$\therefore P(B) = P(A \cup B) - P(A) + P(A \cap B)$$

$$= \frac{5}{6} - \frac{1}{2} + \frac{1}{3} = \frac{4}{6} = \frac{2}{3}$$

\therefore If A and B are independents, then $P(A \cap B) = P(A) \cdot P(B)$

$$\therefore P(A \cap B) = \frac{1}{3}$$

$$\text{and } P(A) \cdot P(B) = \frac{1}{2} \times \frac{2}{3} = \frac{1}{3}$$

\Rightarrow Statement-1 is correct.

If A and B are mutually exclusive, then

$$P(A \cup B) = P(A) + P(B)$$

$$\therefore P(A \cup B) = \frac{5}{6}$$

$$\therefore P(A) + P(B) = \frac{1}{2} + \frac{2}{3} = \frac{7}{6}$$

\Rightarrow Statement-2 is wrong.

Hence, option (a) is correct.

116. The average of a set of 15 observations is recorded, but later it is found that for one observation, the digit in the tens place was wrongly recorded as 8 instead of 3. After correcting the observation, the average is

- (a) reduced by $\frac{1}{3}$
- (b) increased by $\frac{10}{3}$

- (c) reduced by $\frac{10}{3}$
- (d) reduced by 50

⊙ (c) Let unit digit for wrongly recorded observation = b

When tens digit is 8, then number
 $= 10 \times 8 + b = 80 + b$

When tens digit is 3, then number
 $= 10 \times 3 + b = 30 + b$

\Rightarrow One observation is recorded
 $((80 + b) - (30 + b))$ more while
 calculating average.

Hence, after correcting the observation,
 the average will be reduced by

$$= \frac{\{(80 + b) - (30 + b)\}}{15}$$

$$= \frac{50}{15} = \frac{10}{3}$$

Hence, option (c) is correct.

117. A coin is tossed twice. If E and F denote occurrence of head on first toss and second toss respectively, then what is $P(E \cup F)$ equal to?

- (a) $\frac{1}{4}$ (b) $\frac{1}{2}$
 (c) $\frac{3}{4}$ (d) $\frac{1}{3}$

\Rightarrow (c) Given that, a coin is tossed twice.

$$\therefore S = \{HH, HT, TH, TT\}$$

Given, E be the event of occurrence of head on first toss and F be the event of occurrence of head on second toss.

$$\therefore E = \{HH, HT\}$$

$$\therefore P(E) = \frac{n(E)}{n(S)} = \frac{2}{4} = \frac{1}{2}$$

$$F = \{TH, HH\}, P(F) = \frac{2}{4} = \frac{1}{2}$$

$$\therefore E \cap F = \{HH\}$$

$$\therefore P(E \cap F) = \frac{1}{4}$$

$$\therefore P(E \cup F) = P(E) + P(F) - P(E \cap F)$$

$$= \frac{1}{2} + \frac{1}{2} - \frac{1}{4}$$

$$= 1 - \frac{1}{4} = \frac{3}{4}$$

Hence, option (c) is correct.

118. In a binomial distribution, the mean is $\frac{2}{3}$ and variance is $\frac{5}{9}$. What is the probability that random variable $X = 2$?

- (a) $\frac{5}{36}$ (b) $\frac{25}{36}$
 (c) $\frac{25}{54}$ (d) $\frac{25}{216}$

\Rightarrow (d) For a binomial distribution mean
 $= np$ and variance $= npq$

Where p is probability of success and q is the probability of unsuccess and n is number of observations.

$$\therefore \text{Given, } np = \frac{2}{3}, npq = \frac{5}{9}$$

$$\Rightarrow \frac{2}{3} \cdot q = \frac{5}{9}$$

$$q = \frac{5}{6}$$

$$\therefore p = 1 - q = 1 - \frac{5}{6}$$

$$= \frac{1}{6}$$

$$\therefore np = \frac{2}{3}$$

$$\Rightarrow n \left(\frac{1}{6}\right) = \frac{2}{3}$$

$$\Rightarrow n = 4$$

$$\therefore P(X = x) = {}^n C_x p^x q^{n-x}$$

$$\therefore P(X = 2) = {}^4 C_2 p^2 q^{4-2}$$

$$= 6 \times \left(\frac{1}{6}\right)^2 \times \left(\frac{5}{6}\right)^2 = \frac{25}{216}$$

Hence, option (d) is correct.

119. If the mode of the scores 10, 12, 13, 15, 15, 13, 12, 10, x is 15, then what is the value of x ?

- (a) 10 (b) 12
 (c) 13 (d) 15

\Rightarrow (d) Given, observations are
 10, 12, 13, 15, 15, 13, 12, 10, x
 \therefore Mode = 15

Scores	Frequency
10	2
12	2
13	2
15	2

Since, frequency of all other numbers is same as frequency of 15.

But mode is the number of highest frequency.

$\therefore x$ should be 15

Hence, option (d) is correct.

120. If A and B are two events such that

$$P(A) = \frac{3}{4} \text{ and } P(B) = \frac{5}{8}, \text{ then}$$

consider the following statements

1. The minimum value of $P(A \cup B)$ is $\frac{3}{4}$.

2. The maximum value of $P(A \cap B)$ is $\frac{5}{8}$.

Which of the above statements is/are correct?

- (a) 1 only
 (b) 2 only
 (c) Both 1 and 2
 (d) Neither 1 nor 2

\Rightarrow (c) Given, $P(A) = \frac{3}{4}$
 $P(B) = \frac{5}{8}$

$$\therefore P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

$$\text{and } P(A \cap B) = P(A) + P(B) - P(A \cup B)$$

Here $P(A \cup B)$ will be minimum if $P(A \cap B)$ is maximum and vice-versa.

Since, minimum value of $P(A \cap B)$ is zero and maximum value of $P(A \cap B)$ is minimum ($P(A), P(B)$).

$$\Rightarrow \text{maximum } P(A \cap B) = \text{minimum} \left(\frac{3}{4}, \frac{5}{8}\right)$$

$$= \frac{5}{8}$$

\Rightarrow Statement-2 is correct.

Also, minimum value of $P(A \cup B)$ is maximum ($P(A), P(B)$)

$$\therefore \text{Minimum value of } P(A \cup B) = \text{maximum} \left(\frac{3}{4}, \frac{5}{8}\right)$$

$$= \frac{3}{4}$$

\Rightarrow Statement-1 is correct.

Hence, correct option is (c).

PAPER II English Language and General Studies

Part A (English Language)

Directions (Q. Nos. 1-10) *Each question in this section consists of a sentence with an underlined word followed by four words. Select the option that is nearest in meaning to the underlined word and mark your answer.*

1. Her smile was contagious.
(a) arrogant (b) disrespectful
(c) sarcastic (d) catching
⊗ (d) 'Contagious' means infectious. Hence, 'catching' is its correct synonym.
2. Her dynamic nature impressed everyone.
(a) enduring (b) attentive
(c) evolutionary (d) jealous
⊗ (c) 'Dynamic' refers to process or system characterised by constant change, activity or progress. Hence, 'evolutionary' is nearest in meaning to dynamic.
3. She was lamenting her destiny.
(a) celebrating (b) bemoaning
(c) blaming (d) making
⊗ (b) 'Lamenting' means to express regret or disappointment about something. Hence, 'bemoaning' is its correct synonym.
4. Under his leadership the company grew in an organic manner.
(a) natural (b) speedy
(c) unusual (d) disciplined
⊗ (a) 'Organic' means characterised by gradual or natural development. Hence, 'natural' is its correct synonym.
5. His charm lies in his oratory.
(a) deceit
(b) eloquence
(c) looks
(d) nobility
⊗ (b) 'Oratory' means the art or practice of formal speaking in public. Hence, 'eloquence' is its correct synonym.
6. She is a patron of art and culture.
(a) entrepreneur
(b) admirer
(c) critique
(d) backer
⊗ (d) 'Patron' refers to a person who gives financial or other support to a person,

organisation or cause. Hence, 'backer' is its correct synonym.

7. Arrogance is a hallmark of his nature.
(a) concern
(b) unpretentiousness
(c) conceit
(d) simplicity
⊗ (c) 'Arrogance' describes to someone who has an exaggerated sense of their own importance. Hence, 'conceit' meaning excessive pride in oneself is its correct synonym.
8. She undertook a reconnaissance of the entire issue.
(a) reevaluation (b) ratification
(c) investigation (d) regularisation
⊗ (c) 'Reconnaissance' refers to military observation of a region to locate an enemy or ascertain strategic features. Hence, 'investigation' is its correct synonym.
9. My daughter is my replica.
(a) pride (b) clone
(c) love (d) original
⊗ (b) 'Replica' means an exact copy or model of something. Hence, 'clone' is its correct synonym.
10. The sardonic nature of her stories made her stand out among the contemporary writers.
(a) compassionate (b) insightful
(c) mocking (d) comic
⊗ (c) 'Sardonic' means grimly mocking or cynical.

Directions (Q. Nos. 11-20) *Each question in this section consists of a sentence with an underlined word followed by four words. Select the option that is opposite in meaning to the underlined word and mark your answer.*

11. He found her extremely attractive and charming.
(a) unnatural
(b) modern
(c) repulsive
(d) disapproving
⊗ (c) 'Attractive' means pleasing or agreeable. Hence, 'repulsive' meaning arousing intense distaste is its correct antonym.

12. The sky is boundless.
(a) high (b) vast
(c) expansive (d) finite
⊗ (d) 'Boundless' means unlimited or immense. Hence, 'finite' meaning limited in extent or size is its correct antonym.
13. The sky is clear today.
(a) bright (b) opaque
(c) cloudless (d) blue
⊗ (b) The antonym of clear is 'opaque', which means unclear or hard to be seen through.
14. I have a fascination for deep waters.
(a) dark (b) light
(c) dangerous (d) shallow
⊗ (d) The antonym of deep is 'shallow', which means of little or no depth.
15. My boss has been too generous.
(a) stingy (b) rough
(c) evil (d) hostile
⊗ (a) The antonym of generous is 'stingy', which means miserly.
16. Spring is a time of plenty.
(a) ugliness (b) scarcity
(c) roughness (d) dryness
⊗ (b) The antonym of plenty is 'scarcity', which means shortage or lack of something.
17. He is an industrious workman.
(a) active (b) productive
(c) lazy (d) disloyal
⊗ (c) 'Industrious' means hard-working and diligent. Hence, 'lazy' is its correct antonym.
18. Plants grow in abundance here.
(a) shrivel (b) stretch
(c) spread (d) enlarge
⊗ (a) The antonym of grow is 'shrivel', which means to wrinkle or shrink.
19. She rarely comes here.
(a) seldom (b) never
(c) always (d) frequently
⊗ (d) 'Rarely' means not often or seldom. Hence, 'frequently' meaning regularly or habitually is its correct antonym.
20. She is a rather crooked woman.
(a) polite
(b) generous
(c) straightforward
(d) happy

- ⊗ (c) 'Crooked' means dishonest or insincere. Hence, 'straightforward' meaning honest and frank is its correct antonym.

Directions (Q. Nos. 21-30) *Given below are some idioms/phrases followed by four alternative meanings to each. Choose the response (a), (b), (c) or (d), whichever is the most appropriate meaning and mark your answer.*

21. Overstep the mark

- (a) To tell people how successful you are
 (b) To step into someone else's areas of expertise
 (c) To upset someone by doing/saying more than you should
 (d) To do something in an excited way

- ⊗ (c) The idiom 'overstep the mark' means to upset someone by going beyond what was allowed. Hence, option (c) is the correct answer.

22. Palsy-walsy friends

- (a) Good friends
 (b) Friends who help each other in difficult situations
 (c) Friends by choice and not by chance
 (d) Unfriendly

- ⊗ (a) The phrase 'palsy-walsy friends' means good friends.

23. Open a Pandora's box

- (a) To do something that causes a lot of new problems that you did not expect
 (b) To do something out of compulsion
 (c) To do something beyond expectation
 (d) To do something out of the box, that brings award and ceremonies for you

- ⊗ (a) The idiom 'open a Pandora box' means to begin or introduce something that leads to many other problems. Hence, option (a) is the correct answer.

24. Pull your socks up

- (a) To get well-dressed for the occasion
 (b) Improve your work or behaviour
 (c) To speak in an honest way without hesitation
 (d) To be in control of an organisation, often secretly

- ⊗ (b) The idiom 'pull your socks up' means to improve your behaviour or work to achieve something.

25. To get under somebody's skin

- (a) To deceive someone
 (b) To admire someone
 (c) To annoy someone
 (d) To support someone

- ⊗ (c) The idiom 'to get under somebody's skin' means to irritate or upset someone.

26. Turn topsy-turvy

- (a) To completely change something
 (b) To completely evaluate something
 (c) To enjoy yourself greatly
 (d) To exhaust yourself completely

- ⊗ (a) The phrase 'turn topsy-turvy' means to be in utter confusion or disorder. Hence, 'to completely change something' best expresses the meaning of the phrase.

27. A clarion call

- (a) A trumpet call
 (b) An intimidating voice
 (c) A strong request
 (d) An urgent order

- ⊗ (c) The idiom 'a clarion call' means a strong request for something to happen.

28. Fire in the belly

- (a) Fear and hatred
 (b) Powerful ambition
 (c) Love and dedication
 (d) Lethargy and indifference

- ⊗ (b) The idiom 'fire in the belly' means a strong determination to succeed. Hence, option (b) is the correct answer.

29. A hunky-dory situation

- (a) There are serious issues among people
 (b) There are no problems and people are happy
 (c) There is war and bloodshed all over
 (d) There is no work, only enjoyment

- ⊗ (b) The idiom 'a hunky-dory situation' means a very satisfactory and problem free situation. Hence, option (b) is the correct answer.

30. Give somebody a leg up

- (a) To pull someone down
 (b) To deceive and betray someone
 (c) To help someone for their livelihood
 (d) To help someone to be successful

- ⊗ (d) The idiom 'give somebody a leg up' means to help someone/achieve something and become successful.

Directions (Q. Nos. 31-40) *Each question in this section has a sentence with three underlined parts labelled (a), (b) and (c). Read each sentence to find out whether there is any error in any underlined part. If you find no error, your response should be indicated as (d).*

31. You don't have

- (a) a monopoly on suffering;
 (b) other people don't have problems too.
 (c) No error
 (d) No error

(c) other people don't have problems too.

(c) No error

- ⊗ (c) The use of 'too' in the sentence shows that a further point with a similar meaning is being added. Hence, remove 'don't' to make the sentence grammatically correct.

32. If you say that someone

- (a) you admire has feet of clay,
 (b) you mean that they have hidden faults.
 (c) No error
 (d) No error

- ⊗ (d) The given sentence is grammatically correct.

33. He refused to change

- (a) his decision;
 (b) he refused it point out.
 (c) No error
 (d) No error

- ⊗ (c) 'Point out' is used incorrectly in the sentence. It should be replaced by 'point blank', which means in a blunt and direct manner.

34. The importance of trade in Mughal times reinforced

- (a) the cultural definition of wealth as something
 (b) comprising of movable property.
 (c) No error
 (d) No error

- ⊗ (c) The use of 'of' after 'comprising' is invalid, as 'comprise' means consist of. Hence, remove 'of' to make the sentence grammatically correct.

35. In the nineteenth century,

- (a) most traditional scholars
 (b) tried to stay clear from the imperial Government.
 (c) No error
 (d) No error

- ⊗ (c) The preposition 'from' is used incorrectly. It should be replaced by 'of' to make the sentence correct. To 'stay clear of' means to avoid someone or something.

36. He began his discussion by pointing over

(a) that men and women

(b) had different biological functions.

(c) No error
(d)

- ⊗ (a) 'Pointing over' is used incorrectly in the sentence. It should be replaced by 'pointing out', which means to say something to make someone aware of a situation.

37. Though he is poor, but he is

(a) honest. No error
(c) (d)

- ⊗ (b) 'But' should not be used with 'though'. Hence, remove 'but' to make the sentence grammatically correct.

38. My mother has been doing

(a) everything for the family.
(b) (c)

(d) No error

- ⊗ (b) Replace 'has been doing' with 'does' to make the sentence error free and grammatically correct.

39. When learning to dive it is important

(a) to relax in between and take breaks.
(b) (c)

(d) No error

51. Consider the following statements about light year.

1. Light year is a unit for measurement of very large distances.
 2. Light year is a unit for measurement of very large time intervals.
 3. Light year is a unit for measurement of intensity of light.
- Which of the statements given above is/are correct?

- ⊗ (a) Replace 'when' with 'while' to make the sentence error free and grammatically correct.

40. I have the opportunity to study

(a) in American next year. No error
(b) (c) (d)

- ⊗ (d) The given sentence is grammatically correct.

Directions (Q. Nos. 41-50) *Each of the following sentences in this section has a blank space and four words or group of words given after the sentence. Select the word or group of words you consider most appropriate for the blank space and mark your answer.*

41. There was a time when West

Germany was a distinct

- (a) policy (b) polity
(c) abstract (d) hierarchy

- ⊗ (b) 'Polity' means an organised society; a state as a political entity. Hence, it is appropriate to fill the blank.

42. I was with the film; I had expected it to be better.

- (a) disappointed (b) disappointing
(c) annoying (d) prejudiced

- ⊗ (a) Disappointed

43. It was a experience.

Everybody was shocked.

- (a) terrified (b) horrified
(c) terrifying (d) denouncing

- ⊗ (c) Terrifying

44. Elephants when they perceive danger.

- (a) trumpet (b) frolic
(c) whine (d) sing

- ⊗ (a) The sound that elephants make is called 'trumpet'. Hence, it is appropriate to fill the blank.

45. The first film on Tagore was such a success that now they are going to make a

- (a) serial
(b) sequence
(c) sequel
(d) sequential

- ⊗ (c) Sequel

46. The United Nations had 2020 as the International Year of Plant Health.

- (a) ruled
(b) ordered
(c) foretold
(d) declared

- ⊗ (d) Declared

47. My brother is punctual, but he is late today.

- (a) normatively (b) primarily
(c) normally (d) basically

- ⊗ (c) Normally

48. My son is very; he trusts everyone.

- (a) fallible (b) gullible
(c) sensible (d) credible

- ⊗ (b) 'Gullible' means easily persuaded to believe something. Hence, it is appropriate to fill the blank.

49. Mahatma Gandhi was a lover of humanity and a believer in the goodness of human nature.

- (a) staunch (b) powerful
(c) cheerful (d) hopeful

- ⊗ (a) Staunch

50. I wish I her before we met.

- (a) know
(b) have known
(c) knew
(d) known

- ⊗ (c) Knew

Part B (General Studies)

- (a) 1, 2 and 3 (b) 2 and 3
(c) 1 and 2 (d) Only 1

- ⊗ (d) Light year is a unit for measurement of very large distances. It is used to express the distances of celestial bodies.

52. Which one of the following regarding density of water at atmospheric pressure is correct?

- (a) Density of water at 4°C is 1000 kg/m³.
(b) Density of water at 0°C is 1000 kg/m³.
(c) Density of water at 0°C is 100 kg/m³.
(d) Density of water at 4°C is 10 kg/m³.

- ⊗ (a) Density of water at 4°C is 1000 kg/m³ or 10³ kg/m³. It is the maximum density of water. The ratio of mass and volume of substance is known as density.

53. Which of the following pairs of physical phenomena and the discoverer is/are correctly matched?

1. James Chadwick : Photoelectric effect
2. Albert Einstein : Neutron
3. Marie Curie : Radium

Select the correct answer using the codes given below.

- (a) 1, 2 and 3
 (b) 1 and 2
 (c) 2 and 3
 (d) Only 3
- ⊗ (d) **Photoelectric effect by Albert Einstein** According to Einstein, light is made up of little packets, at first called quanta and later photons. When a photon hits the electrons, it gives electrons enough energy to escape from the surface of the metal. This explains the behaviour of light striking the metal.
- **Neutron by James Chadwick** The neutron is a subatomic particle, symbol n , which has a neutral charge, and a mass slightly greater than that of a proton.
 - **Radium by Marie Curie** Radium is a chemical element with the symbol Ra and atomic number 88, also known as the alkaline earth metals. Pure radium is silvery-white, but it readily reacts with nitrogen on exposure to air, forming a black surface layer of radium nitride.
54. LED (a semiconductor device) is an abbreviation that stands for
 (a) Licence for Energy Detector
 (b) Light Energy Device
 (c) Light Emitting Diode
 (d) Lost Energy Detector
- ⊗ (c) LED is an abbreviation that stands for Light Emitting Diode. It is a semiconductor light source that emits light when current flows through it.
55. The statement "friction force is a contact force while magnetic force is a non-contact force" is
 (a) always true
 (b) true only at 0°C
 (c) a false statement
 (d) Either true or false depending upon the temperature of the surroundings
- ⊗ (a) Friction force is a contact force because it works between the contact surface of two bodies and magnetic force is a non-contact force.
56. Which one of the following is the chemical formula of hypobromous acid?
 (a) HBrO_4
 (b) HOBr
 (c) HBr
 (d) HBrO_3
- ⊗ (b) Hypobromous acid is a weak, unstable acid with chemical formula HOBr , where the bromine atom is in the +1 oxidation state. It is also called 'bromanol' or 'hydroxidobromine'.

57. The composition of gases in exosphere is
 (a) helium and hydrogen
 (b) neon and oxygen
 (c) neon and hydrogen
 (d) helium and neon
- ⊗ (a) The exosphere is mainly composed of extremely low densities of hydrogen and helium; and the heavy molecules nitrogen, oxygen and carbon dioxide.
58. Which one of the following is not used as a raw material in the manufacture of glass?
 (a) Soda
 (b) Alumina
 (c) Borax
 (d) Gypsum
- ⊗ (d) The correct answer is gypsum. Glass is made from natural and abundant raw materials (soda, alumina and borax, etc.) that are melted at very high temperature to form a new material glass.
59. In electrolytic refining of copper, the electrolyte is a solution of
 (a) acidified copper chloride
 (b) acidified copper sulphate
 (c) potassium chloride
 (d) sodium sulphate
- ⊗ (b) In the electrolytic refining of copper (electrolyte is CuSO_4 solution + dil. H_2SO_4) or acidified copper sulphate. Pure Cu cathode and impure Cu anode. Metallic impurities having lower oxidation potential than Cu are deposited as sludge.
60. Solder is an alloy of
 (a) Cu and Sn (b) Fe and Zn
 (c) Pb and Sn (d) Ag and Zn
- ⊗ (c) Solder is a mixture of lead (Pb) and tin (Sn). Tin-lead solder is the most popular in solder paste printing and it is mainly composed of tin and lead, with same trace metal element like antimony (Sb).
61. Which one of the following statements about dihydrogen (H_2) is not correct?
 (a) H_2 is lighter than air and insoluble in water.
 (b) H_2 is inert at room temperature due to high H—H bond dissociation enthalpy.
 (c) H_2 reacts with alkali metals at high temperature to yield metal hydrides.
 (d) A mixture of NO_2 and H_2 is known as Syngas.
- ⊗ (d) Statement (d) is incorrect because syngas or synthesis gas is a fuel gas mixture consisting primary of hydrogen, carbon monoxides.

62. Which of the following sets of elements has the same valency?
 (a) Na, Mg, Ca (b) Na, Mg, Al
 (c) Mg, Ca, K (d) Mg, Ca, Ba
- ⊗ (d) Mg, Ca, Ba sets of elements has the same valency. The valency of an element is determined by the number of valence electron in the outermost shell of an atom of an element.
63. Which one of the following is the lowest possible temperature?
 (a) 0° celsius
 (b) -73° celsius
 (c) -173° celsius
 (d) -273° celsius
- ⊗ (d) The lowest possible temperature is the absolute zero. At this temperature, no more heat can be remove from a body. Absolute zero is precisely equivalent to -273.15 degrees celsius on celsius scale.
64. Numerically two thermometers, one in Fahrenheit scale and another in Celsius scale shall read same at
 (a) -40° (b) 0°
 (c) -273° (d) 100°
- ⊗ (a) The relation between the Fahrenheit and Celsius scale is given by the equation. Therefore, Celsius and Fahrenheit scale coincide at -40°.
- $$\frac{(^{\circ}\text{F} - 32)}{180} = \frac{^{\circ}\text{C}}{100}$$
- Now, let us assume that Fahrenheit and Celsius scale coincide at x° , therefore
- $$\Rightarrow \frac{(^{\circ}\text{x} - 32)}{180} = \frac{^{\circ}\text{x}}{100}$$
- On solving, we get
- $$\Rightarrow \frac{5}{9} (^{\circ}\text{x} - 32) = ^{\circ}\text{x}$$
- Therefore, $x = -40^{\circ}$
65. The image we see in plane mirror is
 (a) real and thus can be photographed
 (b) virtual and nearer than the object
 (c) virtual and is laterally inverted
 (d) The real but cannot be photographed
- ⊗ (c) The image in a plane mirror is virtual, erect same size and laterally inverted. For a plane mirror, the size of the image is equal to the size of the object.
66. Which one of the following colours may be obtained by combining green and red colours ?
 (a) Blue (b) Magenta
 (c) Pink (d) Yellow
- ⊗ (d) Yellow colour is obtained by combining green and red colours. It is a secondary colour.

67. Which of the following are the primary colours of light?

- (a) Yellow, red and green
- (b) Blue, red and green
- (c) Violet, red and yellow
- (d) Indigo, violet and green

- ⊙ (b) Primary colours of light are blue, red and green. This is the essential method used to create the precepting of a board range of colours.

68. According to the new cartesian sign convention, which one of the following is correct in respect of the formula $\frac{1}{f} = \frac{1}{v} + \frac{1}{u}$, where symbols

have their usual meanings?

- (a) It applies only to spherical mirrors.
- (b) It applies only to spherical lenses.
- (c) It applies to spherical mirrors as well as spherical lenses.
- (d) It is an invalid formula.

- ⊙ (a) For a spherical mirror, the formula showing the relationship between the distance of the object (u), the distance of the mirror (v) and the distance of the focus (f) is called the mirror formula, which is as follows

$$\frac{1}{f} = \frac{1}{v} + \frac{1}{u}$$

69. Movement of materials to different parts of cytoplasm and nucleus is generally carried out by

- (a) Ribosomes
- (b) Mitochondria
- (c) Lysosomes
- (d) Endoplasmic reticulum

- ⊙ (d) The movement of materials to different parts of the cytoplasm and nucleus is generally carried out Endoplasmic Reticulum (ER). although Golgi bodies have main role in the function of intracellular transporation. ER is the largest membrane-bound organelle in eukaryotic cells and performs a variety of essential cellular functions, including protein and lipid synthesis and biosynthesis of cell and nuclear membrane.

70. In mitochondria, ATP synthesising chemical reactions take place in the

- (a) outer membrane
- (b) matrix
- (c) inner membrane
- (d) DNA of mitochondria

- ⊙ (c) In eukaryotes, Adenosine Triphosphate (ATP) synthesis reaction occurs on the inner membrane of mitochondria which sides toward matrix compartment. It contains the ATP synthesis complex or oxisome or

F_1 -particles which are the site of Electron Transportation System (ETS) of aerobic cellular espiration.

71. Squamous epithelial cells are found in the inner lining of

- (a) oesophagus
- (b) small intestine
- (c) ducts of salivary gland
- (d) kidney

- ⊙ (a) Squamous epithelial cells are found in the inner lining of the oesophagus. Simple squamous epithelium is a single layer of flat scale-shaped cells, which are helpful in transportation of food from buccal cavity to stomach.

72. Transformation of meristematic cells into specific permanent tissues occurs by the process of

- (a) cell differentiation
- (b) cell division
- (c) cell multiplication
- (d) cell regeneration

- ⊙ (a) Transformation of meristematic cells into specific permanent tissue occurs by the process of cell differentiation. In this process, cells formed by meristematic tissues take up a specific role and lose the ability to divide. As a result, they form a permanent tissue taking up a permanent shape, size and function.

73. The gaseous product of a process in plants is a requirement for another vital process that releases energy. Given below are four combinations of the process and product. Identify the correct answer.

- (a) Respiration and nitric oxide
- (b) Transpiration and water vapour
- (c) Photosynthesis and oxygen
- (d) Germination and carbon dioxide

- ⊙ (c) In plants, oxygen gas is produced as by-product of photosynthesis which is required by aerobic cellular respiration to produce energy (ATP). Photosynthesis occurs in chloroplast while aerobic cellular respiration occurs in mitochondria.

74. In a dicot pot herb, vaseline/vegetable oil was applied on the upper surface of one leaf (experimental leaf 1) and on the lower surface of another leaf (experimental leaf 2).

Vaseline/Vegetable oil was not applied on the control leaf. The plant was deliberately not watered for several days. Which leaf will dry up last?

- (a) Experimental leaf 1
- (b) Experimental leaf 2
- (c) Control leaf
- (d) All the leaves will dry up simultaneously

- ⊙ (b) Experimental leaf 2 will dry up last, because in dicot plants, stomata are generally found in lower surface of leaves and applying vaseline/vegetable oil will close these stomata, thus preventing the water loss through transpiration (evaporation of water in the form of vapour form leaf surface) and drying process will take a lot more time compare to other leaves.

75. Which one of the following statements is not correct for light rays ?

- (a) Light travels at different speeds in different media.
- (b) Light travel at almost 300 million metres per second in air.
- (c) Light speeds down as it leaves a water surface and enters the air.
- (d) Light speeds up as it leaves a glass surface and enters the air.

- ⊙ The speed of light in air is 3×10^8 m/s and the speed of light is different in different media.

76. A glass prism splits white light into different colours. This phenomenon is called dispersion of light by prism. Which one of the following statements is correct?

- (a) Red light will deviate the most and it is because of the reflection of light.
- (b) Violet light will deviate the most and it is because of the refraction of light.
- (c) Red light will deviate the most and it is because of the refraction of light.
- (d) Violet light will deviate the most and it is because of the reflection of light.

- ⊙ VIBGYOR (increasing order of wavelength). (Frequency decreases in increasing order). Refractive index is inversely proportional to wavelength. So, violet light will deviate the most.

77. A current of 1.0 A is drawn by a filament of an electric bulb for 10 minutes. The amount of electric charge that flows through the circuit is

- (a) 0.1 C
- (b) 10 C
- (c) 600 C
- (d) 800 C

- ⊙ (c) Given, $I = 1$ A,
 $t = 10$ min = 10×60 s = 600 s
 $\therefore I = \frac{Q}{t}$
 $\Rightarrow Q = It \Rightarrow Q = 1 \times 600$
 $\Rightarrow Q = 600$ C

78. Which one of the following formulae does not represent electrical power?

- (a) I^2R (b) IR^2
(c) VI (d) V^2/R

⊙ (b) Electric power is the rate per unit time at which electrical energy is transferred by an electric circuit,

$$P = I^2R = \frac{V^2}{R} = VI$$

Its SI unit is watt.

79. The sound created in a big hall persists because of the repeated reflections. The phenomenon is called

- (a) reverberation (b) dispersion
(c) refraction (d) diffraction

⊙ (a) The sound created in a big hall persists because of the repeated reflection. The phenomenon is called reverberation.

80. When light is scattered by a molecule and the frequency of the scattered light is changed, this phenomenon is called

- (a) Rayleigh scattering
(b) Raman effect
(c) Photoelectric effect
(d) Rutherford scattering

⊙ (b) When light is scattered by a molecule and the frequency of the scattered light is changed, this phenomenon is called Raman effect.

81. Which one of the following statements about the cleansing action of soap is not true?

- (a) The oil and dirt gets collected in the centre of the micelle.
(b) Soap micelle scatter light.
(c) Soaps are ammonium salts of long chain carboxylic acids.
(d) Soap forms insoluble precipitates with the calcium and magnesium ions in hard water.

⊙ (c) Detergents are ammonium or sulphonate salts of long chain carboxylic acids. Hence, option (c) is not true. Soap is a mixture of sodium salts of various naturally occurring fatty acids.

82. Hydrogenation of vegetable oils using nickel catalyst is an example of

- (a) substitution reaction
(b) elimination reaction
(c) addition reaction
(d) free-radical polymerisation

⊙ (c) Hydrogenation of vegetable oils using nickel catalyst is an example of addition reaction. Hydrogenation is a

process that uses hydrogen gas to change a liquid vegetable oil into a hard spread. This process stabilises the oil and prevents spoilage from oxidation.

83. Which one of the following materials is not an allotrope of carbon?

- (a) Diamond (b) Graphene
(c) Fly ash (d) Fullerene

⊙ (c) Diamond, graphene and fullerene are three allotropes of pure carbon. Fly ash is not an allotrope of carbon.

Hence, option (c) is correct.

84. Which one of the following reactions does not result in the evolution of hydrogen gas?

- (a) Reaction of zinc metal with dilute sulphuric acid solution
(b) Mixing water to Plaster of Paris
(c) Heating zinc metal with sodium hydroxide solution
(d) Reaction of potassium metal with water

⊙ (b) When plaster of Paris is mixed with water, it gets converted into gypsum.

Hence, it doesn't give hydrogen gas.

85. Which one of the following acids is predominantly found in tomatoes?

- (a) Acetic acid (b) Tartaric acid
(c) Oxalic acid (d) Lactic acid

⊙ (c) Oxalic acid a chemical compound that occur naturally in almost every plant to some degree including fruits, vegetables and grain plants. The amount of oxalic in tomatoes is about 50 mg per 100 g.

86. Which one of the following conclusions could not be derived from Rutherford's α -particle scattering experiment?

- (a) Most of the space in the atom is empty.
(b) The radius of the atom is about 10^5 times the radius of the nucleus.
(c) Electrons move in a circular path of fixed energy called orbits.
(d) Nearly all the mass of the atom resides in the nucleus.

⊙ (c) The concept of electrons move in a circular path of fixed energy called orbits was put forward by Bohr and not derived from Rutherford's scattering experiment. Therefore, option (c) is incorrect.

87. Reaction of quick lime (CaO) with water to produce slaked lime (Ca(OH)₂) is an example of

- (a) displacement reaction
(b) endothermic reaction
(c) decomposition reaction
(d) exothermic reaction

⊙ (d) The formation of slaked lime (calcium hydroxide) Ca(OH)₂ when water is added to lime (CaO) is exothermic.

88. Which one of the following is not a bio-mass energy source?

- (a) Wood
(b) Nuclear reactor
(c) Gobar gas
(d) Coal

⊙ (b) Nuclear reactors are sources of nuclear energy, not bio-mass energy. Wood, gobar gas and coal are the organic or bio-mass sources of energy.

89. Twinkling of stars is due to

- (a) particular frequencies of the starlight.
(b) reflection of starlight from the oceanic surface.
(c) atmospheric refraction of starlight.
(d) magnetic field of earth.

⊙ (c) The twinkling of a star is due to atmospheric refraction of starlight. The starlight on entering the earth's atmosphere, undergoes refraction continuously before it reaches the earth. The atmospheric refraction occurs in the medium of gradually changing refractive index.

90. Which one of the following cannot be the unit of frequency of a sound wave?

- (a) dB (b) s⁻¹ (c) Hz (d) min⁻¹

⊙ (a) We know that,

$$\text{Frequency} = \frac{1}{\text{Time period}} \\ = \frac{1}{\text{Second or minute}}$$

Apart from this, the SI unit of frequency is hertz (Hz).

91. 'Beats' is a phenomenon that occurs when frequencies of two harmonic waves are

- (a) equal
(b) far apart
(c) multiples of each other
(d) nearly same

⊙ (d) When two sound waves of approximately equal frequency are produced simultaneously, the intensity of the resultant sound wave increases or decreases with time.

This change in the intensity of sound is called beats.

- 92.** Light waves are incident on an air-glass boundary. Some of the light waves are reflected and some are refracted in the glass. Which one of the following properties is the same for the incident wave and the refracted wave?
 (a) Speed
 (b) Direction
 (c) Brightness
 (d) Frequency
- ⊗ **(d)** Frequency of refracted and reflected wave never changes because the frequency does not depend on the medium.
- 93.** Which one of the following statements is true for a simple harmonic oscillator?
 (a) Force acting is directly proportional to the displacement from the mean position and is in same direction.
 (b) Force acting is directly proportional to the displacement from the mean position and is in opposite direction.
 (c) Acceleration of the oscillator is constant.
 (d) The velocity of the oscillator is not periodic.
- ⊗ **F = -k x** (SHM equation)
 where, x = displacement from mean position and F = acting force.
- 94.** During seed germination, the part of the embryo which grows into root is
 (a) radicle (b) plumule
 (c) cotyledon (d) epicotyl
- ⊗ **(a)** During seed germination, the part of the embryo which grows into root is called radicle. It is the first part of a seedling (a growing plant embryo) to emerge from the seed during the process of germination to form embryonic root of the plant which grows downward in the soil.
- 95.** In a typical flower, germinating pollen grains pass through several parts of the gynoecium before they reach the ovule. A list of the parts of gynoecium is given below in different combinations. Choose the combination that represents the correct sequence of pollen tube pathway/journey.
 (a) Style, Stigma, Ovary
 (b) Stigma, Style, Ovary
 (c) Pistil, Stigma, Ovary
 (d) Ovary, Pistil, Style
- ⊗ **(b)** Pollen grains gather on the surface of stigma of gynoecium through pollination and get germinated to produce pollen tube. This pollen tube elongated in style and reaches ovary to release male gametes in embryo sac of ovule.
- 96.** If human blood is placed in a 2% detergent solution, what will happen to the RBC?
 (a) The RBC will shrink.
 (b) The RBC will swell and become turgid.
 (c) The RBC will swell and burst.
 (d) The RBC will lyse.
- ⊗ **(a)** If human blood is placed in a 2% detergent solution, the RBC will shrink. Detergent solution is a hypertonic solution compared to red blood cells, hence RBCs are, if placed in it, the cell will shrink due to exosmosis, i.e. movement of water from its higher concentration (RBC) to lower concentration (Detergent solution) through cell membrane (SPM) of RBCs.
- 97.** The major source of vitamins and minerals for vegetarians is
 (a) black gram and wheat
 (b) rice and mustard
 (c) vegetables and fruits
 (d) soya bean and milk
- ⊗ **(c)** Vegetables and fruits are major source of vitamins and minerals for vegetarians.
- 98.** If a ray of light enters from a rarer medium to a denser medium at zero angle of incidence, it would
 (a) reflect back
 (b) go straight
 (c) turn towards right
 (d) bend at 45°
- ⊗ **(b)** When light falls normally on the interface of two medium, then light travels in straight line. So, the refraction angle is zero.
- 99.** Mirage is an illustration of
 (a) only dispersion of light
 (b) only reflection of light
 (c) only total internal reflection of light
 (d) both refraction and total internal reflection of light
- ⊗ **(d)** A mirage is a naturally occurring optical phenomenon in which light rays bend via refraction to produce a displaced image of distant objects or the sky.
- 100.** Common salt (NaCl) is not used as a raw material for preparation of which one of the following compounds?
 (a) Bleaching powder
 (b) Baking soda
 (c) Plaster of Paris
 (d) Washing soda
- ⊗ **(c)** Preparation of plaster of Paris doesn't require the use of NaCl. It is simply obtained by heating gypsum ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$) at 120°C in a rotary kiln.
- 101.** Which one of the following Harappan sites was a specialised centre for making shell object?
 (a) Lothal (b) Balakot
 (c) Amri (d) Kot Diji
- ⊗ **(b)** Among the given options, Harappan sites specialised centre for making shell object is Balakot and the other site is Nageshwar. Shell objects like bangles, ladles and inlay were made at these specialised centres.
- 102.** Which one of the following was not a part of the dhamma of King Ashoka?
 (a) Honouring the king
 (b) Tolerance of religions other than one's own
 (c) Respecting Brahmanas
 (d) Promoting the welfare of his subjects
- ⊗ **(a)** Honouring the king was not a part of the Dhamma of king Ashoka. Dhamma of king Ashoka established the idea of paternal kingship. He regarded all his subjects as his children and believed it the king's duty to look after the welfare of the subjects. Ashoka's philosophy state that everybody should serve parents, revere teachers, and practice ahimsa and truthfulness. He asked everyone to avoid animal slaughter and sacrifice. He advocated tolerance towards all religions and sought conquest through Dhamma and not war.
- 103.** Which of the following statements about Saguna Bhakti traditions is/are correct?
 1. Saguna Bhakti traditions focus on the worship of specific deities such as Vishnu or his avatars.
 2. In Saguna Bhakti traditions, Gods and Goddesses are conceptualised in anthropomorphic forms.
 Select the correct answer using the codes given below
 (a) Only 1
 (b) Only 2
 (c) Both 1 and 2
 (d) Neither 1 nor 2
- ⊗ **(c)** Both the statements about Saguna Bhakti are correct. Saguna Bhakti has form, attributes and quality. Saguna saints worshipped the anthropomorphic manifestations of the divine being, particularly Vishnu or his avatars. The

Bhakti saints emphasised on two ways of imaging the nature of the God viz. Nirguna and Saguna. Nirguna is the concept of a formless God, which has no attributes or quality. Saguna has form, attributes and quality.

104. At which one of the following places was a Shiva temple not constructed under the patronage of the Chola rulers?

- (a) Chidambaram
- (b) Thanjavur
- (c) Gangaikonda Cholapuram
- (d) Naneghat

⊗ (d) Shiva Temple was not constructed at Naneghat under the patronage of the Chola rulers. Naneghat, is a mountain pass in the Western Ghats range between the Konkan coast and the ancient town of Junnar in the Deccan plateau. Chola empire was not extended to this region therefore no temple was build in the region.

105. Which of the following statements about the Deccan Riots Commission is/are correct?

1. The Commission did not hold enquiries in the district which were not affected.
2. The Commission did record statements of ryots, sahkars eye-witnesses.

Select the correct answer using the codes given below.

- (a) Only 1
- (b) Only 2
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊗ (c) In 1875, peasants of Maharashtra in some parts of Pune and Ahmednagar districts revolted against increasing agrarian distress. The Deccan Riots of 1875 targeted conditions of debt peonage (kamiuti) to moneylenders. The rioters' specific purpose was to obtain and destroy the bonds, decrees, and other documents in the possession of the moneylenders. The movement also got support from the Poona Sarvajanik Sabha co-founded by M G Ranade. However, the Government of India pressurised Bombay to enquire into the matter for this the Deccan Riots Commission was set up which presented a report to the British Parliament in 1878. The commission did'nt hold inquiries in areas unaffected by it and also did'nt recorded the statements of ryots, sahkars and eye-witnesses.

106. Which one of the following is the correct meaning of ziyarat ?

- (a) Pilgrimage to the tombs of sufi saints.
- (b) The practice of revenue farming
- (c) The death anniversary of a sufi Shaikh
- (d) A form of Islamic divorce

⊗ (a) In Islam, ziyara or ziyarat is a form of pilgrimage to sites associated with Muhammad, his family members and descendants, his companions and other venerated figures in Islam such as the prophets, Sufi auliya, and Islamic scholars.

107. Keppel Island is completely bleached mainly due to the expansion of

- (a) Starfish
- (b) Blue whale
- (c) Octopus
- (d) Sea horse

⊗ (a) Keppel Island is completely bleached mainly due to the expansion of starfish. The population of starfish is growing unconditionally due to which starfish are able to eat coral; a polyp that builds limestone reef on which the coral community lives. Keppel Island is located in the southern Great Barrier reef. Coral bleaching is the process when corals become white due to various stressors, such as changes in temperature, light or nutrients.

108. Which one of the following rivers is not a tributary of river Brahmaputra?

- (a) River Manas
- (b) River Kameng
- (c) River Mahananda
- (d) River Subansiri

⊗ (c) Among the given options, Mahananda river is not a tributary of river Brahmaputra. Tributaries of Brahmaputra: left-Lhasa River, Nyang River, Parlung Zangbo, Lohit River, Dhansiri River, Kolong River/ right-Kameng River, Manas River, Beki River, Raidak River, Jalchaka River, Teesta River, Subansiri River. The Mahananda River is a trans-boundary river that flows through the states of Bihar and West Bengal, and Bangladesh. It is an important tributary of the Ganges.

109. Which one of the following is not a minor plate?

- (a) Cocos plate
- (b) Nazca plate
- (c) Caroline plate
- (d) Antarctic plate

⊗ (d) Antarctic plate is not a minor plate. There are 15 minor plates, these smaller

plates are often not shown on major plate maps. For purposes of this list, a minor plate is any plate with an area less than 20 million km² but greater than 1 million km². They are Somali Plate, Nazca Plate, Indian Plate, Amurian Plate, Sunda Plate, Philippine Sea Plate, Okhotsk Plate, Arabian Plate, Yangtze Plate, Caribbean Plate, Cocos Plate, Caroline Plate, Scotia Plate, Burma Plate, New Hebrides Plate.

110. Advantage(s) of tectonic activity in Iceland include(s)

1. Source of natural geothermal energy
2. Creation of new land
3. Attraction of tourists

Select the correct answer using the codes given below.

- (a) Only 1
- (b) 2 and 3
- (c) 1 and 3
- (d) 1, 2 and 3

⊗ (c) The tectonic plates whose turbulent interactions formed Iceland, are the Eurasian tectonic plate and the North American tectonic plate. Spanning the Mid-Atlantic Ridge, Iceland emerged as a result of the divergent, spreading, boundary between these two plates and the activity of Iceland's own hotspot or mantle plume.

111. The process whereby certain minerals absorb water, expand and change is called as

- (a) Hydration
- (b) Oxidation
- (c) Hydrolysis
- (d) Carbonation

⊗ (a) The process whereby certain minerals absorb water, expand and change is called as Hydration. A good example of hydration is the absorption of water by anhydrite, resulting in the formation of gypsum. Hydration expands volume and also results in rock deformation.

112. Which one of the following is the longest Latitude?

- (a) 90 degree Latitude
- (b) 23-5 degree Latitude
- (c) 0-0 degree Latitude
- (d) 66-5 degree Latitude

⊗ (c) The longest latitude is 0° latitude, known as the Equator which divides the Earth into two equal halves, the northern hemisphere and two southern hemisphere.

113. If it is 12.00 Noon in India, on which meridian will it be 7:00 am of the same day?

- (a) 7.5 degree E. Longitude
 (b) 7.5 degree W. Longitude
 (c) 75 degree E. Longitude
 (d) 75 degree W. Longitude

⊗ (d) If it is 12:00 Noon in India, on 75 degree, W. Longitude it will be 7:00 am of the same day.

Current time in India = 12:00 PM

Time at required meridian = 7:00 AM

Difference in time = 5 Hours, and this time at meridian (7:00 AM) is 5 hours behind. Hence, it is west direction.

As we know the Earth takes 24 hours, for one complete rotation, so

24 hours = 360°

1 hour = $\frac{360}{24} = 15^\circ$, thus the Earth

rotates 15 degree in/hour

In 5 hours = $5 \times 15^\circ = 75^\circ$

Hence, at 75° West longitude, the time will be 7:00 AM.

114. Who among the following was considered to be the preceptor of Mirabai ?

- (a) Dadu (b) Raidas
 (c) Ramanand (d) Surdas

⊗ (b) Guru Raidas, a low caste leather worker was the preceptor of Mirabai. He was low class leather worker. One of the main principle of her philosophy was that one should abandon the comforts of life and devote fully to her God for attainment of peace and salvation.

115. Consider the following statements about the Mahanavami Dibba

1. It was the name of a giant box of sweets distributed at the Mahanavami festival.
2. It was the name of a massive platform with a base covered with relief carvings.

Which of the statements given above is/are correct?

- (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (b) Mahanavami Dibba was the name of massive platform with a base covered with relief carvings was the King's palace in Vijayanagara though there is no definite evidence. The Mahanavami Dibba had a very impressive platform known as "the audience hall". It was surrounded by high double walls a street running between them.

116. Which one of the following statements about the Ain-i-Akbari is not correct?

- (a) It was written by Abu'l Fazl.
 (b) It is a part of a larger work called Akbar Nama.
 (c) It describes the Mughal Empire as having a diverse population and a composite culture.
 (d) It was later revised by Sadullah Khan on the orders of Shah Jahan.

⊗ (d) Abu'l Fazl worked on the 'Akbar Nama'. The Akbar Nama is divided into three books: The first book dealt with Akbar's ancestors, the second recorded the events of Akbar's reign, the third is the Ain-i Akbari. Badshah Nama was written by Abul Hamid Lahori was later revised by Sadullah Khan on the orders of Shah Jahan.

117. Swami Dayanand Saraswati

1. was opposed to the worship of idols of Gods and Goddesses.
2. regarded the Vedas as infallible.
3. had met and had discussions with Ishwar Chandra Vidyasagar.

Which of the statements given above are correct?

- (a) 1, 2 and 3
 (b) 2 and 3
 (c) 1 and 3
 (d) 1 and 2

⊗ (a) All the statements are correct. Swami Dayanand Saraswati was a philosopher, social leader and founder of Arya Samaj. He was opposed to the worship of idols of Gods and Goddesses as he believe that God has no shape and no form. Hence, statement 1 is correct. Swami Dayanand regarded vedas as eternal and infallible. Hence, statement 2 is correct. He met Ishwar Chandra Vidyasagar in Calcutta and had discussions with him. Hence, statement 3 is correct.

118. Consider the following statements.

1. Muhammadan Anglo-Oriental College was founded at Aligarh by Sayyid Ahmad Khan.
2. Sayyid Ahmad Khan was a great believer in religious toleration, and Hindus, Parsis and Christians had contributed to the funds of his college.

Which of the statement(s) given above is/are correct?

- (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (c) Muhammadan Anglo-Oriental College was founded in 1875 by Sir Syed Ahmad Khan, initially as a primary school, with the intention of taking it to a college level institution, known as Muhammadan Anglo Oriental Collegiate School. Sayyid Ahmad Khan was a great believer in religious toleration. He believed that all religions had a certain underlying unity which could be called practical morality. Hindus, Parsis, and Christians had contributed freely to the funds of his college whose doors were open for all the Indians.

119. Basket-of-eggs topography is related to

- (a) Drumlins (b) Eskers
 (c) Cirques (d) Moraines

⊗ (a) Basket of eggs topography is related to Drumlins. Drumlins which is a depositional landform formed by glaciers. They are forms of rounded hummocks resulting from the deposition of glacial till which look like inverted boat or spoon

120. Which one of the following planets has the highest density?

- (a) Mercury (b) Venus
 (c) Jupiter (d) Earth

⊗ (d) Among the given options, Earth has the highest density. Earth is the fourth smallest of the planets. Earth is the densest planet because it is made of dense material and it is heavy planet. The Average Density of Earth is 5.5 grams/cm³.

121. Point of Origin of Earthquake wave is known as

- (a) Epicentre (b) Focus
 (c) Photosphere (d) Seismic Zone

⊗ (b) The focus is the place inside Earth's crust where an earthquake originates. The point on the Earth's surface directly above the focus is the epicenter.

122. The maximum depth of Lithosphere is found in the

- (a) Pacific Ocean
 (b) Siberian Plain
 (c) Patagonian Desert
 (d) Himalayan Mountains

⊗ (a) The maximum depth lithosphere is found in the pacific ocean. Earth's lithosphere, which constitutes the hard and rigid outer vertical layer of the Earth, includes the crust and the uppermost mantle. Mariana Trench is located in the western Pacific Ocean, it is the deepest oceanic trench on Earth and the deepest part of the Earth.

123. A large body of magmatic material that cools in the deeper depth of the Earth's crust and develops in the form of large domes is known as

- (a) Batholiths
- (b) Lacoliths
- (c) Lopoliths
- (d) Phacoliths

- ⊗ (a) A large body of magmatic material that cools in the deeper depth of the Earth's crust and develops in the form of large domes is known as Batholiths. Forms from cooled magma deep in Earth's crust. These areas are exposed to the surface through the process of erosion accelerated by continental uplift acting over many tens of millions to hundreds of millions of years.

124. Which one of the following Oil Refineries is not located in Assam?

- (a) Tatipaka
- (b) Numaligarh
- (c) Bongaigaon
- (d) Digboi

- ⊗ (a) Among the given options, Tatipaka Oil Refinery is not located in Assam, it is located in Andhra Pradesh. It was established in 2001. It is ONGC's first ever oil refinery to produce petro-products.

125. Where and when did Mahatma Gandhi make his first public appearance in India on coming back from South Africa after two decades?

- (a) Champaran in 1917
- (b) Lucknow in 1916
- (c) Banaras Hindu University in 1916
- (d) Ahmedabad in 1918

- ⊗ (c) Gandhi's first public appearance in India was on the occasion of the opening ceremony of the Banaras Hindu University in February 1916, which was distinguished by the presence of many magnets and princes and of the Viceroy himself. He also passed critical comments on the Princes, as a result many princes walked out.

126. When and where was the demand for "Purna Swaraj" or complete independence made by the Indian National Congress?

- (a) Bombay, 1885
- (b) Lahore, 1929
- (c) Kheda, 1917
- (d) Bombay, 1942

- ⊗ (b) The Indian National Congress, on 19th December, 1929, passed the 'Purna Swaraj' – (total independence) resolution – at its Lahore session. A public declaration was made on 26th January, 1930 – a day which the Congress Party urged Indians to

celebrate as 'Independence Day'. The declaration was passed due to the breakdown of negotiations between leaders of the freedom movement and the British over the question of dominion status for India.

127. Which one of the following provides for the complete equality of men and women in India?

- (a) Articles 14 and 15 of the Constitution of India
- (b) Fifth Schedule of the Constitution of India
- (c) The Indian Independence Act
- (d) Article 20 of the Constitution of India

- ⊗ (a) **Article 14** The State shall not deny to any person equality before the law or the equal protection of the laws within the territory of India.

Article 15 secures the citizens from every sort of discrimination by the State, on the grounds of religion, race, caste, sex or place of birth or any of them. However, this Article does not prevent the State from making any special provisions for women or children.

128. Which of the following statements about the non-permanent member of the Security Council of the United Nation is/are correct?

1. Their total number is now 10 but was originally only 6.
2. They are elected for a term of two years only.

Select the correct answer using the codes given below.

- (a) Only 1
- (b) Only 2
- (c) Both 1 and 2
- (d) Neither 1 nor 2

- ⊗ (c) The UNSC is composed of 15 members, 5 permanent and 10 non-permanent. Five permanent members: China, France, the Russian Federation, the United Kingdom, and the United States and Ten non-permanent members: Elected for two-year terms by the General Assembly. Each year, the General Assembly elects five non-permanent members (out of ten in total) for a two-year term. The ten non-permanent seats are distributed on a regional basis. As stipulated in rule 144 of the rules of procedure, a retiring member is not eligible for immediate re-election.

129. At which of the following was the American Declaration of Independence adopted on 4th July, 1776?

- (a) Washington Conference
- (b) San Francisco Confernee
- (c) Second Continental Congress
- (d) First Continental Congress

- ⊗ (c) The United States Declaration of Independence is the pronouncement adopted by the Second Continental Congress meeting in Philadelphia, Pennsylvania, on 4th July, 1776.

130. Who among the following was the head of the Government that was overthrown by the Bolsheviks in the 1917 Revolution?

- (a) Alexander Kerensky
- (b) Prince Lvov
- (c) Grand Duke Sergei
- (d) Tsar Nicholas II

- ⊗ (d) Tsar Nicholas II was the head of the Government that was overthrown by the Bolsheviks in the 1917 Revolution. The Russian Revolution was a period of political and social revolution that took place in the former Russian Empire and began during the First World War. The Russian Revolution was a series of two revolutions: the first of which overthrew the imperial government and the second placed the Bolsheviks in power. that Caused the Tsar of the Russian Empire, Nicholas II, to step down from his throne.

131. Which one of the following is not a form of non-permanent member of the Security condensation?

- (a) Dew
- (b) Fog
- (c) Frost
- (d) Sleet

- ⊗ (d) Condensation is the change of the state of matter from the gas phase into the liquid phase, and is the reverse of vaporisation. The word most often refers to the water cycle. Sleet is Rain and snow mixed is precipitation composed of rain and partially melted snow.

132. Which one of the following clouds is a rain-bearing cloud?

- (a) Cumulus cloud
- (b) Stratus cloud
- (c) Nimbus cloud
- (d) Cirrus cloud

- ⊗ (c) Nimbus cloud is a rain-bearing cloud. Nimbus clouds are dark clouds as they carry a substantial quantity of water droplets. Nimbus comes in union with other cloud forms that bring substantial precipitation.

133. In which one of the following countries is intensive subsistence agriculture not predominantly practised?

- (a) India
- (b) Japan
- (c) Canada
- (d) Indonesia

- ⊗ (c) Intensive subsistence agriculture is not predominantly practised in Canada. Intensive farming is the kind of farming in which farmers grow their crops, fruits, and vegetables on a small piece of land using simple tools.
- 134.** The Headquarters of South-Eastern Railway is located at
 (a) Bilaspur (b) Secunderabad
 (c) Kolkata (d) Bhubaneswar
- ⊗ (c) The Headquarters of South-Eastern Railway is located at Kolkata (Gardern Reach). It is the administrative and purchase office of the entire zone.
- 135.** Bharatmala Pariyojana is related to
 (a) interlinking of Northern and Southern Indian rivers in a garland shape.
 (b) networks of National Highways in India.
 (c) interlinking of all cities of India through Railways.
 (d) interlinking of all industrial regions of India through pipelines.
- ⊗ (b) Bharatmala Pariyojana is an umbrella program for the highways sector envisaged by the Ministry of Road Transport and Highways. To optimise the efficiency of freight and passenger movement across the country by bridging critical infrastructure gaps through effective interventions.
- 136.** The natural vegetation which covers maximum geographical areas of India is
 (a) Tropical deciduous forests
 (b) Tropical thorn forests
 (c) Montane forests
 (d) Tropical evergreen forests
- ⊗ (a) Tropical deciduous are a variety of temperate forest 'dominated' by trees that lose their leaves each year. They are found in areas with warm moist summers and cool winters.
- 137.** River Beas, flowing from Himachal Punjab, joins the river
 (a) Indus (b) Setluj
 (c) Chenab (d) Ravi
- ⊗ (b) River Beas, flowing from Himachal Punjab, joins the river Setluj. The Beas River rises in the Himalayas in central Himachal Pradesh, and flows for some 470 km to the Setluj River in the Indian state of Punjab.
- 138.** With regard to the Constitution of India, which one of the following statements is not correct?
 (a) The words - Socialist and Secular, were not originally part of the Constitution.
 (b) The Preamble states the objects of the Constitution of India,
 (c) The Preamble is enforceable in a Court of Law.
 (d) A Republic refers to the people as the source of all authority under the Constitution.
- ⊗ (c) Preamble is not enforceable in a court of law. A preamble is an introductory statement in a document that explains the document's philosophy and objectives. The preamble basically gives idea of the following things/objects: Source of the Constitution, Nature of Indian State, Statement of its objectives, Date of its adoption.
- 139.** Which one of the following is not a power of the Speaker of the Lok Sabha ?
 (a) Speaker shall preside over the House of the People.
 (b) Speaker will cast vote in the first instance in the House.
 (c) Speaker will have power to maintain order within the House of the People.
 (d) Speaker can adjourn the House or suspend the meeting till there is a quorum.
- ⊗ (b) Speaker does not cast vote in the first instance in the house. Speaker can only cast his vote when both the government and the opposition get equal votes on a particular law or a motion.
- 140.** Which one of the following is included in Article 51A (Part IV A) of the Constitution of India?
 (a) Fundamental Duties
 (b) Suspension of Fundamental Rights
 (c) Special Powers of Governors
 (d) Writs
- ⊗ (a) The idea of Fundamental Duties is inspired from the Constitution of Russia. These were incorporated in Part IV-A of the Constitution by the 42nd Constitutional Amendment Act, 1976 on the recommendations of Swaran Singh Committee. Listed in Article 51-A of the Constitution.
- 141.** As per the data up to November, 2020, released by the Union Finance Ministry, which one of the following countries ranks 1 in terms of ODI (Outward Direct Investment) for the year 2020 - 21 ?
 (a) USA
 (b) Singapore
 (c) Mauritius
 (d) United Kingdom
- ⊗ (b) An Outward Direct Investment (ODI) is a business strategy in which a domestic firm expands its operations to a foreign country. For example, some companies will make a green field investment, which is when a parent company creates a subsidiary in a foreign country.
- 142.** 'Exercise Desert Knight - 21' is a bilateral air exercise between the Indian Air Force and the Air Force of which one of the following countries?
 (a) USA (b) France
 (c) Britain (d) Israel
- ⊗ (b) Indian Air Force (IAF) and French Air and Space Force conducted a bilateral Air exercise, Ex Desert Knight-21 at Air Force Station Jodhpur from 20th to 24th January, 2021. The exercise is unique as it includes fielding of Rafale aircraft by both sides and is indicative of the growing interaction between the two premier Air Forces.
- 143.** Tableau of which one of the following States/Union Territory was adjudged best in the Republic Day Parade, 2021 ?
 (a) Ladakh
 (b) Uttar Pradesh
 (c) Tripura
 (d) Uttarakhand
- ⊗ (b) Uttar Pradesh's tableau depicting the Ram Temple at 2021 Republic Day parade in New Delhi was adjudged the best and awarded by Union Minister Kiren Rijju.
- 144.** In the recently concluded elections in December 2020, Faustin-Archange Touadera has won a second term in office as President of one of the following countries. Identify the country.
 (a) Central African Republic
 (b) Republic of South Africa
 (c) Republic of Ghana
 (d) Republic of Mozambique.
- ⊗ (a) In recently concluded elections in December 2020, Faustin—Archange Touadera has now a second term in office as President of central African Republic.
- 145.** Which one of the following statements is not correct in respect of the 'Legion of Merit' award?
 (a) This award is conferred by the President of the United States of America.

- (b) This award was conferred to the Prime Minister of India in December, 2020.
- (c) This was also awarded to the Prime Minister of Australia, Scott Morrison.
- (d) It is the highest civilian award of the United States of America.

⊙ (d) Legion of Merit award is a military award of the United States Armed forces that is given for exceptionally meritorious conduct in the performance of outstanding services and achievements. This award was conferred to the Prime Minister of India in December, 2020. It was also awarded to the Prime Minister of Australia, Scott Morrison.

146. Which one of the following statements is most appropriate about 'Exercise Kavach' ?

- (a) It is a military exercise of the Indian Army only.
- (b) It is a joint military exercise involving the Indian Army and the Indian Navy only.
- (c) It is a joint military exercise involving the Indian Army, the Indian Navy and the Indian Air Force only.
- (d) It is a joint military exercise involving the Indian Army, the Indian Navy, the Indian Air Force and also the Indian Coast Guard.

⊙ (d) A large-scale Tri service Military 'Exercise Kavach' conducted in January 2021 under the aegis of the Andaman and Nicobar Command (ANC), the only Joint Forces Command of the country. The exercise involves synergised application of maritime surveillance assets, coordinated air and maritime strikes, air defence, submarine and landing operations.

147. Recently a state of emergency has been declared in which one of the following countries?

- (a) Maldives (b) Bhutan
- (c) Nepal (d) Myanmar

⊙ (d) State of emergency was declared in Myanmar. It was declared on 1st February, 2021. The state of emergency was declared for one year.

148. Which one of the following teams is the winner of the Syed Mushtaq Ali Trophy, 2021?

- (a) Uttar Pradesh (b) Punjab
- (c) Tamil Nadu (d) Baroda

⊙ (c) The Indian State of Tamil Nadu won the Syed Mushtaq Ali Trophy, 2021. It is a domestic Twenty 20 cricket championship in India, organised by the Board of control for cricket in India,

among the teams from the Ranji Trophy.

149. Which country has replaced Maldives to host the 2023 Indian Ocean Island Games?

- (a) Madagascar (b) Sri Lanka
- (c) India (d) Mauritius

⊙ (a) Madagascar replaced Maldives to host the 2023 Indian Ocean Island Games. It is a quadrennial multi sport event from Indian ocean Islands nations. The games was created by international Olympic Committee in 1977.

150. Identify the correct reason, out of the following, about Claire Polosak for being in the news.

- (a) She has been honoured with the Pulitzer Prize.
- (b) She recently won a Grand Slam championship.
- (c) She became the first female match official to conduct a men's cricket test match.
- (d) She has been conferred with the Gandhi Peace Prize.

⊙ (c) Claire Polosak was in the news because she became the first female match official to conduct a men's cricket test match.

NDA/NA

National Defence Academy/Naval Academy

SOLVED PAPER 2020 (I & II)

PAPER I: Mathematics

1. If matrix $A = \begin{bmatrix} 1-i & i \\ -i & 1-i \end{bmatrix}$ where

$i = \sqrt{-1}$, then which one of the following is correct?

- (a) A is hermitian
 (b) A is skew-hermitian
 (c) $(\bar{A})^T + A$ is hermitian
 (d) $(\bar{A})^T + A$ is skew-hermitian

⊙ (c) We have

$$A = \begin{bmatrix} 1-i & i \\ -i & 1-i \end{bmatrix}$$

$$\text{Now, } \bar{A} = \begin{bmatrix} 1+i & -i \\ i & 1+i \end{bmatrix}$$

$$(\bar{A})^T = \begin{bmatrix} 1+i & i \\ -i & 1+i \end{bmatrix}$$

Now, consider

$$X = (\bar{A})^T + A = \begin{bmatrix} 1+i & i \\ -i & 1+i \end{bmatrix} + \begin{bmatrix} 1-i & i \\ -i & 1-i \end{bmatrix}$$

$$= \begin{bmatrix} 2 & 2i \\ -2i & 2 \end{bmatrix}$$

$$\bar{X} = \begin{bmatrix} 2 & -2i \\ 2i & 2 \end{bmatrix}$$

$$(\bar{X})^T = \begin{bmatrix} 2 & 2i \\ -2i & 2 \end{bmatrix} = X$$

Hence, $X = (\bar{A})^T + A$ is a hermitian matrix.

2. The term independent of x in the binomial expansion of $\left(\frac{2}{x^2} - \sqrt{x}\right)^{10}$

is equal to

- (a) 180 (b) 120
 (c) 90 (d) 72

⊙ (a) The general term in the binomial expansion of $\left(\frac{2}{x^2} - \sqrt{x}\right)^{10}$ is

$$T_{r+1} = {}^{10}C_r \left(\frac{2}{x^2}\right)^{10-r} (-\sqrt{x})^r$$

$$= {}^{10}C_r (2)^{10-r} x^{-20+2r+\frac{r}{2}} (-1)^r$$

For independent of x , put

$$-20+2r+\frac{r}{2} = 0 \Rightarrow \frac{5r}{2} = 20$$

$$\Rightarrow r = 8$$

$$\therefore T_{8+1} = {}^{10}C_8 (2)^{10-8} (-1)^8 \\ = \frac{10 \times 9}{2 \times 1} \times 2^2 \times 1 \\ = 180$$

3. If $(1+2x-x^2)^6 = a_0 + a_1x + a_2x^2 + \dots + a_{12}x^{12}$, then what is $a_0 - a_1 + a_2 - a_3 + a_4 - \dots + a_{12}$ equal to?

- (a) 32 (b) 64
 (c) 2048 (d) 4096

⊙ (b) We have,

$$(1+2x-x^2)^6 = a_0 + a_1x + a_2x^2 + \dots + a_{12}x^{12}$$

Put $x = -1$ both sides, we get

$$(1-2+1^2)^6 = a_0 - a_1 + a_2 - \dots + a_{12}$$

$$\Rightarrow a_0 - a_1 + a_2 - \dots + a_{12} = (-2)^6 = 64$$

4. If $C(20, n+2) = C(20, n-2)$, then what is n equal to?

- (a) 18 (b) 25
 (c) 10 (d) 12

⊙ (c) Given, $C(20, n+2) = C(20, n-2)$

$$\Rightarrow C(20, 20 - (n+2)) = C(20, n-2)$$

$$[\because C(n, r) = C(n, n-r)]$$

$$\Rightarrow 20 - (n+2) = n-2 \\ \Rightarrow 20 = n+2+n-2 \\ \Rightarrow 2n = 20 \\ \Rightarrow n = 10$$

5. For how many values of k , is the

matrix $\begin{bmatrix} 0 & k & 4 \\ -k & 0 & -5 \\ -k & k & -1 \end{bmatrix}$ singular?

- (a) Only one (b) Only two
 (c) Only four (d) Infinite

⊙ (d) The condition for singular matrix is

$$\begin{vmatrix} 0 & k & 4 \\ -k & 0 & -5 \\ -k & k & -1 \end{vmatrix} = 0$$

Expanding along R_1 , we get

$$0 - k(k-5k) + 4(-k^2+0) = 0$$

$$\Rightarrow 4k^2 - 4k^2 = 0$$

$$\Rightarrow 0 = 0, \forall k \in R$$

Hence, for infinite values of k , given matrix is singular.

6. The number $(1101101 + 1011011)_2$ can be written in decimal system as

- (a) $(198)_{10}$ (b) $(199)_{10}$
 (c) $(200)_{10}$ (d) $(201)_{10}$

⊙ (c) Now, $(1101101)_2 = 1 \times 2^6 + 0 \times 2^5$

$$+ 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0$$

$$= 64 + 0 + 16 + 8 + 0 + 2 + 1$$

$$= (91)_{10}$$

and

$$(1011011)_2 = 1 \times 2^6 + 1 \times 2^5 + 0 \times 2^4$$

$$+ 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0$$

$$= 64 + 32 + 0 + 8 + 4 + 0 + 1 = (109)_{10}$$

$$\begin{aligned} \therefore (1101101 + 1011011)_2 \\ = (1101101)_2 + (1011011)_2 \\ = (91)_{10} + (109)_{10} = (200)_{10} \end{aligned}$$

7. What is the value of

$$\frac{1}{10} \log_5 1024 - \log_5 10 + \frac{1}{5} \log_5 3125?$$

- (a) 0 (b) 1 (c) 2 (d) 3

$$\begin{aligned} \textcircled{>} \text{(a)} \frac{1}{10} \log_5 1024 - \log_5 10 + \frac{1}{5} \log_5 3125 \\ = \frac{1}{10} \log_5 2^{10} - \log_5 (5 \times 2) + \frac{1}{5} \log_5 5^5 \\ = \frac{1}{10} \log_5 2 - [\log_5 5 + \log_5 2] + \frac{5}{5} \log_5 5 \\ \quad [\because \log mn = \log m + \log n] \\ = \log_5 2 - [1 + \log_5 2] + 1 \quad [\because \log_m m = 1] \\ = 0 \end{aligned}$$

8. If $x = \log_c(ab)$, $y = \log_a(bc)$, $z = \log_b(ca)$, then which of the following is correct?

- (a) $xyz = 1$
 (b) $x + y + z = 1$
 (c) $(1+x)^{-1} + (1+y)^{-1} + (1+z)^{-1} = 1$
 (d) $(1+x)^{-2} + (1+y)^{-2} + (1+z)^{-2} = 1$

$$\begin{aligned} \textcircled{>} \text{(c)} \text{ We have, } x &= \log_c(ab) \\ y &= \log_a(bc) \\ z &= \log_b(ca) \\ \text{Now, } 1+x &= \log_c c + \log_c(ab) \\ &= \log_c(abc) \\ 1+y &= \log_a(abc) \\ \text{and } 1+z &= \log_b(abc) \\ \text{Now, } (1+x)^{-1} + (1+y)^{-1} + (1+z)^{-1} \\ &= [\log_c(abc)]^{-1} + [\log_a(abc)]^{-1} \\ &\quad + [\log_b(abc)]^{-1} \\ &= \frac{1}{\log_c(abc)} + \frac{1}{\log_a(abc)} + \frac{1}{\log_b(abc)} \\ &= \frac{\log c}{\log(abc)} + \frac{\log a}{\log(abc)} + \frac{\log b}{\log(abc)} \\ &\quad \left[\because \log_m n = \frac{\log n}{\log m} \right] \\ &= \frac{\log c + \log a + \log b}{\log(abc)} = \frac{\log(abc)}{\log(abc)} = 1 \end{aligned}$$

9. Let $A = \begin{bmatrix} x+y & y \\ 2x & x-y \end{bmatrix}$, $B = \begin{bmatrix} 2 \\ -1 \end{bmatrix}$

and $C = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$. If $AB = C$, then what is

the value of the determinant of the matrix A ?

- (a) -10 (b) -14
 (c) -24 (d) -34

$$\textcircled{>} \text{(b)} \text{ Given, } A = \begin{bmatrix} x+y & y \\ 2x & x-y \end{bmatrix}$$

$$B = \begin{bmatrix} 2 \\ -1 \end{bmatrix} \text{ and } C = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

Also given, $AB = C$

$$\Rightarrow \begin{bmatrix} x+y & y \\ 2x & x-y \end{bmatrix} \begin{bmatrix} 2 \\ -1 \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

$$\Rightarrow \begin{bmatrix} 2x+2y-y \\ 4x-x+y \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

$$\Rightarrow \begin{bmatrix} 2x+y \\ 3x+y \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

On equating the corresponding elements, we get

$$\begin{aligned} 2x + y &= 3 \text{ and } 3x + y = 2 \\ \Rightarrow x &= -1 \text{ and } y = 5 \end{aligned}$$

$$\therefore A = \begin{bmatrix} -1+5 & 5 \\ 2 \times -1 & -1-5 \end{bmatrix} = \begin{bmatrix} 4 & 5 \\ -2 & -6 \end{bmatrix}$$

\therefore The determinant of matrix A is

$$|A| = \begin{vmatrix} 4 & 5 \\ -2 & -6 \end{vmatrix} = -24 + 10 = -14$$

10. If $1.5 \leq x \leq 4.5$, then which one of the following is correct?

- (a) $(2x-3)(2x-9) > 0$
 (b) $(2x-3)(2x-9) < 0$
 (c) $(2x-3)(2x-9) \geq 0$
 (d) $(2x-3)(2x-9) \leq 0$

$\textcircled{>} \text{(d)}$ We have, $1.5 \leq x \leq 4.5$

$$\Rightarrow \frac{3}{2} \leq x \leq \frac{9}{2} \Rightarrow 3 \leq 2x \leq 9$$

$$\Rightarrow (2x-3)(2x-9) \leq 0$$

11. Let $S = \{1, 2, 3, \dots\}$. A relation R on $S \times S$ is defined by xRy if

$$\log_a x > \log_a y \text{ when } a = \frac{1}{2}. \text{ Then}$$

- the relation is
 (a) reflexive only
 (b) symmetric only
 (c) transitive only
 (d) both symmetric and transitive

$\textcircled{>} \text{(c)}$ We have, $S = \{1, 2, 3, \dots\}$

$$\text{and } \log_a x > \log_a y$$

$$\text{Here, } a = \frac{1}{2} \in (0, 1)$$

$$\therefore \log_a x > \log_a y \Rightarrow x < y$$

Now, $xRy \Rightarrow x < y$ which is not possible. So it is not reflexive relation.

$$\text{Now, } xRy \Rightarrow x < y$$

But $y \not< x$, so it is not symmetric relation.

$$\text{Now, } xRy \text{ and } yRz$$

$$\Rightarrow x < y \text{ and } y < z \Rightarrow x < z \Rightarrow xRz$$

Hence, it is transitive relation only.

12. What is the value of the

$$\text{determinant } \begin{vmatrix} i & i^2 & i^3 \\ i^4 & i^6 & i^8 \\ i^9 & i^{12} & i^{15} \end{vmatrix} \text{ where}$$

$$i = \sqrt{-1} ?$$

- (a) 0 (b) -2 (c) $4i$ (d) $-4i$

$$\textcircled{>} \text{(d)} \text{ Let } \Delta = \begin{vmatrix} i & i^2 & i^3 \\ i^4 & i^6 & i^8 \\ i^9 & i^{12} & i^{15} \end{vmatrix} \\ = \begin{vmatrix} i & -1 & -i \\ 1 & -1 & 1 \\ i & 1 & -i \end{vmatrix}$$

$$[\because i^2 = -1, i^3 = -i, i^4 = 1]$$

$$= i(i-1) + 1(-i-i) - i(1+i)$$

[Expanding along R_1]

$$= i^2 - i - 2i - i - i^2 = -4i$$

13. Let $A = \begin{bmatrix} a & h & g \\ h & b & f \\ g & f & c \end{bmatrix}$ and $B = \begin{bmatrix} x \\ y \\ z \end{bmatrix}$,

then what is AB equal to?

(a) $\begin{bmatrix} ax + hy + gz \\ y \\ z \end{bmatrix}$

(b) $\begin{bmatrix} ax + hy + gz \\ hx + by + fz \\ z \end{bmatrix}$

(c) $\begin{bmatrix} ax + hy + gz \\ hx + by + fz \\ gx + fy + cz \end{bmatrix}$

(d) $[ax + hy + gz \quad hx + by + fz \quad gx + fy + cz]$

$\textcircled{>} \text{(c)}$ Now,

$$AB = \begin{bmatrix} a & h & g \\ h & b & f \\ g & f & c \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix}$$

$$= \begin{bmatrix} ax + hy + gz \\ hx + by + fz \\ gx + fy + cz \end{bmatrix}$$

14. What is the number of ways in

which the letters of the word 'ABLE' can be arranged so that the vowels occupy even places?

- (a) 2 (b) 4 (c) 6 (d) 8

$\textcircled{>} \text{(b)}$ In a given word 'ABLE' Vowels are $\{A, E\}$.

$$\underline{1} \quad \underline{2} \quad \underline{3} \quad \underline{4}$$

As, vowel occupy even places, so two vowels occupy the places 2 and 4.

Therefore, the number of ways of occupying the vowels in even places is $2!$.

Now, we have two consonants and these consonants occupy the odd places 1 and 3. Therefore, the number of ways of occupying the consonants in odd places is $2!$.

$$\therefore \text{Total number of ways} = 2! \times 2!$$

$$= 2 \times 2 = 4$$

15. What is the maximum number of points of intersection of 5 non-overlapping circles?
 (a) 10 (b) 15 (c) 20 (d) 25
- ⊙ (c) The maximum number of points of intersection of 5 non-overlapping circles
- = Selection of two circles × 2
 [∵ Two intersecting circles cut at two points]
 = ${}^5C_2 \times 2 = \frac{5 \times 4}{2 \times 1} \times 2 = 20$

Directions (Q. Nos. 16-18)

Consider the following Venn diagram, where X, Y and Z are three sets. Let the number of elements in Z be denoted by n(Z) which is equal to 90.

16. If the number of elements in Y and Z are in the ratio 4 : 5, then what is the value of b?
 (a) 18 (b) 19 (c) 21 (d) 23
17. What is the value of $n(X) + n(Y) + n(Z) - n(X \cap Y) - n(Y \cap Z) - n(X \cap Z) + n(X \cap Y \cap Z)$?
 (a) a + b + 43 (b) a + b + 63
 (c) a + b + 96 (d) a + b + 106
18. If the number of elements belonging to neither X, nor Y, nor Z is equal to p, then what is the number of elements in the complement of X?
 (a) p + b + 60 (b) p + b + 40
 (c) p + a + 60 (d) p + a + 40

Solutions (16-18)

Given $n(Z) = 90$
 $\Rightarrow 12 + 18 + 17 + c = 90$
 $\Rightarrow c = 90 - 47 = 43$

- ⊙ 16. (c) Also given,
 $\frac{n(Y)}{n(Z)} = \frac{4}{5}$
 $\Rightarrow \frac{16 + 18 + 17 + b}{90} = \frac{4}{5}$
 $\Rightarrow 51 + b = 72$
 $\Rightarrow b = 72 - 51 = 21$
- ⊙ 17. (d) Now,
 $n(X) + n(Y) + n(Z) - n(X \cap Y) - n(Y \cap Z) - n(X \cap Z) + n(X \cap Y \cap Z)$
 $= n(X \cup Y \cup Z)$
 $= a + 12 + 18 + 16 + b + 17 + c$
 $= a + b + c + 63$
 $= a + b + 43 + 63$ [∵ c = 43]
 $= a + b + 106$
- ⊙ 18. (a) Complement of X
 $= p + b + c + 17$
 $= p + b + 43 + 17$ [∵ c = 43]
 $= p + b + 60$

Directions (Q. Nos. 19 and 20) Read the following information and answer the two items that follow.

Let $\frac{\tan 3A}{\tan A} = K$, where $\tan A \neq 0$ and $K \neq \frac{1}{3}$.

19. What is $\tan^2 A$ equal to?

- (a) $\frac{K + 3}{3K - 1}$ (b) $\frac{K - 3}{3K - 1}$
 (c) $\frac{3K - 3}{K - 3}$ (d) $\frac{K + 3}{3K + 1}$

- ⊙ (b) Given, $\frac{\tan 3A}{\tan A} = K$
 $= \frac{3 \tan A - \tan^3 A}{(1 - 3 \tan^2 A) \tan A} = K$
 $\Rightarrow \frac{3 - \tan^2 A}{1 - 3 \tan^2 A} = K$
 $\Rightarrow K - 3K \tan^2 A = 3 - \tan^2 A$
 $\Rightarrow K - 3 = \tan^2 A (3K - 1)$
 $\Rightarrow \tan^2 A = \frac{K - 3}{3K - 1}$

20. For real values of tan A, K cannot lie between

- (a) $\frac{1}{3}$ and 3 (b) $\frac{1}{2}$ and 2
 (c) $\frac{1}{5}$ and 5 (d) $\frac{1}{7}$ and 7

- ⊙ (a) For real values of tan A, K lies when
 $\frac{K - 3}{3K - 1} \geq 0$ and $3K - 1 \neq 0$
 $\Rightarrow (K - 3)(3K - 1) \geq 0$ and $K \neq \frac{1}{3}$
 $\Rightarrow K < \frac{1}{3}$ and $K \geq 3$

Hence, for real values of tan A, K cannot lie between $(\frac{1}{3}, 3)$.

Directions (Q. Nos. 21 and 22) Read the following information and answer the two items that follow.

ABCD is a trapezium such that AB and CD are parallel and BC is perpendicular to them. Let $\angle ADB = \theta$, $\angle ABD = \alpha$, $BC = p$ and $CD = q$.

21. Consider the following

- $AD \sin \theta = AB \sin \alpha$
 - $BD \sin \theta = AB \sin(\theta + \alpha)$
- Which of the above is/are correct?
 (a) 1 Only (b) 2 Only
 (c) Both 1 and 2 (d) Neither 1 nor 2

- ⊙ (c) We have, $\angle ADB = \theta$, $\angle ABD = \alpha$,

$BC = p$ and $CD = q$

- In $\triangle ABD$, use Sine rule,
 $\frac{\sin \theta}{AB} = \frac{\sin \alpha}{AD}$
 $\Rightarrow AD \sin \theta = AB \sin \alpha$, which is correct.
- In $\triangle ABD$, $\angle A = \pi - (\theta + \alpha)$
 Use Sine rule in $\triangle ABD$,
 $\frac{\sin A}{BD} = \frac{\sin \theta}{AB}$
 $\Rightarrow \frac{\sin(\pi - (\theta + \alpha))}{BD} = \frac{\sin \theta}{AB}$... (i)
 $\Rightarrow AB \sin(\theta + \alpha) = BD \sin \theta$, which is correct.
 Hence, both statements are correct.

22. What is AB equal to?

- (a) $\frac{(p^2 + q^2) \sin \theta}{p \cos \theta + q \sin \theta}$
 (b) $\frac{(p^2 - q^2) \cos \theta}{p \cos \theta + q \sin \theta}$
 (c) $\frac{(p^2 + q^2) \sin \theta}{q \cos \theta + p \sin \theta}$
 (d) $\frac{(p^2 - q^2) \cos \theta}{q \cos \theta + p \sin \theta}$

- ⊙ (a) In right angle, $\triangle BCD$,
 $\angle B = 90^\circ - \alpha$
 $BD = \sqrt{p^2 + q^2}$
 and $\sin B = \frac{CD}{BD}$
 $\Rightarrow \sin(90^\circ - \alpha) = \frac{q}{\sqrt{p^2 + q^2}}$
 [∵ $\angle B = 90^\circ - \alpha$]

$$\Rightarrow \cos \alpha = \frac{q}{\sqrt{p^2 + q^2}}$$

$$\text{and } \cos B = \frac{BC}{BD}$$

$$\Rightarrow \cos(90^\circ - \alpha) = \frac{p}{\sqrt{p^2 + q^2}}$$

$$\Rightarrow \sin \alpha = \frac{p}{\sqrt{p^2 + q^2}}$$

From eq. (i),

$$\frac{\sin(\pi - (\theta + \alpha))}{BD} = \frac{\sin \theta}{AB}$$

$$\Rightarrow AB = \frac{BD \sin \theta}{\sin(\theta + \alpha)}$$

$$= \frac{\sqrt{p^2 + q^2} \sin \theta}{\sin \theta \cos \alpha + \cos \theta \sin \alpha}$$

$$[\because BD = \sqrt{p^2 + q^2}]$$

$$= \frac{\sqrt{p^2 + q^2} \sin \theta}{\sin \theta \frac{q}{\sqrt{p^2 + q^2}} + \cos \theta \frac{p}{\sqrt{p^2 + q^2}}}$$

$$= \frac{(p^2 + q^2) \sin \theta}{q \sin \theta + p \cos \theta}$$

23. If $\tan \theta = \frac{\cos 17^\circ - \sin 17^\circ}{\cos 17^\circ + \sin 17^\circ}$, then what is the value of θ ?

- (a) 0° (b) 28° (c) 38° (d) 52°

⊙ (b) We have,

$$\begin{aligned} \tan \theta &= \frac{\cos 17^\circ - \sin 17^\circ}{\cos 17^\circ + \sin 17^\circ} \\ &= \frac{1 - \tan 17^\circ}{1 + \tan 17^\circ} \end{aligned}$$

[Divide numerator and denominator by $\cos 17^\circ$]

$$\Rightarrow \tan \theta = \tan(45^\circ - 17^\circ)$$

$$\left[\because \tan(45^\circ - 17^\circ) = \frac{\tan 45^\circ - \tan 17^\circ}{1 + \tan 45^\circ \tan 17^\circ} \right]$$

$$\Rightarrow \tan \theta = \tan 28^\circ$$

$$\Rightarrow \theta = 28^\circ$$

24. A and B are positive acute angles such that $\cos 2B = 3 \sin^2 A$ and $3 \sin 2A = 2 \sin 2B$. What is the value of $(A + 2B)$?

- (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{4}$ (c) $\frac{\pi}{3}$ (d) $\frac{\pi}{2}$

⊙ (d) We have, $\cos 2B = 3 \sin^2 A$

$$\text{and } 3 \sin 2A = 2 \sin 2B$$

$$\therefore \frac{2 \sin 2B}{\cos 2B} = \frac{3 \sin 2A}{3 \sin^2 A}$$

$$\Rightarrow \frac{2 \sin 2B}{\cos 2B} = \frac{2 \times \sin A \cos A}{\sin^2 A}$$

$$\Rightarrow \tan 2B = \cot A$$

$$\Rightarrow \tan 2B = \tan\left(\frac{\pi}{2} - A\right)$$

$$\Rightarrow 2B = \frac{\pi}{2} - A$$

$$\Rightarrow A + 2B = \frac{\pi}{2}$$

25. What is $\sin 3x + \cos 3x + 4 \sin^3 x - 3 \sin x + 3 \cos x - 4 \cos^3 x$ equal to?

- (a) 0 (b) 1
(c) $2 \sin 2x$ (d) $4 \cos 4x$

⊙ (a) $\sin 3x + \cos 3x + (4 \sin^3 x - 3 \sin x) + (3 \cos x - 4 \cos^3 x)$
 $= \sin 3x + \cos 3x - \sin 3x - \cos 3x = 0$

26. The value of ordinate of the graph of $y = 2 + \cos x$ lies in the interval

- (a) $[0, 1]$ (b) $[0, 3]$ (c) $[-1, 1]$ (d) $[1, 3]$

⊙ (d) We know that,

$$-1 \leq \cos x \leq 1$$

$$\Rightarrow -1 + 2 \leq 2 + \cos x \leq 1 + 2$$

$$\Rightarrow 1 \leq y \leq 3$$

$$\therefore y \in [1, 3]$$

27. What is the value of

$$8 \cos 10^\circ \cdot \cos 20^\circ \cdot \cos 40^\circ ?$$

- (a) $\tan 10^\circ$ (b) $\cot 10^\circ$
(c) $\operatorname{cosec} 10^\circ$ (d) $\sec 10^\circ$

⊙ (b) $8 \cos 10^\circ \cos 20^\circ \cos 40^\circ$

$$= 8 \cos 10^\circ \cos 20^\circ \cos 40^\circ \times \frac{\sin 10^\circ}{\sin 10^\circ}$$

$$= \frac{4(2 \sin 10^\circ \cos 10^\circ) \cos 20^\circ \cos 40^\circ}{\sin 10^\circ}$$

$$= \frac{4 \sin 20^\circ \cos 20^\circ \cos 40^\circ}{\sin 10^\circ}$$

$$\because 2 \sin A \cos A = \sin 2A$$

$$= \frac{2(2 \sin 20^\circ \cos 20^\circ) \cos 40^\circ}{\sin 10^\circ}$$

$$= \frac{2 \times \sin 40^\circ \cos 40^\circ}{\sin 10^\circ}$$

$$= \frac{\sin 80^\circ}{\sin 10^\circ} = \frac{\sin(90^\circ - 10^\circ)}{\sin 10^\circ}$$

$$= \frac{\cos 10^\circ}{\sin 10^\circ} = \cot 10^\circ$$

28. What is the value of

$$\cos 48^\circ - \cos 12^\circ ?$$

(a) $\frac{\sqrt{5} - 1}{4}$ (b) $\frac{1 - \sqrt{5}}{4}$

(c) $\frac{\sqrt{5} + 1}{2}$ (d) $\frac{1 - \sqrt{5}}{8}$

⊙ (b) $\cos 48^\circ - \cos 12^\circ$

$$= -2 \sin\left(\frac{48^\circ + 12^\circ}{2}\right) \sin\left(\frac{48^\circ - 12^\circ}{2}\right)$$

$$\left[\because \cos C - \cos D = -2 \sin\left(\frac{C + D}{2}\right) \sin\left(\frac{C - D}{2}\right) \right]$$

$$\begin{aligned} &= -2 \sin 30^\circ \sin 18^\circ \\ &= -2 \times \frac{1}{2} \times \frac{\sqrt{5} - 1}{4} \\ &= \frac{1 - \sqrt{5}}{4} \end{aligned}$$

29. Consider the following statements:

1. If ABC is a right-angled triangle, right-angled at A and if

$$\sin B = \frac{1}{3}, \text{ then } \operatorname{cosec} C = 3.$$

2. If $b \cos B = c \cos C$ and if the triangle ABC is not right-angled, then ABC must be isosceles.

Which of the above statements is/are correct?

- (a) 1 Only (b) 2 Only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (b) 1. We have, $\sin B = \frac{1}{3}$

$$\Rightarrow \frac{AC}{BC} = \frac{1}{3}$$

$$\Rightarrow AC = k \text{ and } BC = 3k$$

Use pythagoras theorem in $\triangle ABC$,

$$\begin{aligned} AB &= \sqrt{(BC)^2 - (AC)^2} \\ &= \sqrt{(3k)^2 - (k)^2} \\ &= \sqrt{9k^2 - k^2} \\ &= \sqrt{8k^2} \\ &= 2\sqrt{2}k \end{aligned}$$

$$\text{Now, } \operatorname{cosec} C = \frac{BC}{AB}$$

$$= \frac{3k}{2\sqrt{2}k} = \frac{3}{2\sqrt{2}}, \text{ which is not correct.}$$

2. Suppose we consider $\triangle ABC$ is an isosceles triangle.

$$\therefore \angle B = \angle C$$

$$\text{Also we have, } b \cos B = c \cos C$$

$$\Rightarrow b \cos C = c \cos C$$

[put $B = C$]

$$\Rightarrow b = c, \text{ Which is correct.}$$

30. Consider the following statements

1. If in a triangle ABC , $A = 2B$ and $b = c$, then it must be an obtuse-angled triangle.
2. There exists no triangle ABC with $A = 40^\circ$, $B = 65^\circ$ and $\frac{a}{c} = \sin 40^\circ \operatorname{cosec} 15^\circ$.

Which of the above statements is/are correct?

- (a) 1 Only (b) 2 Only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (d) 1. We have, in $\triangle ABC$,

$$A = 2B \text{ and } b = c$$

⇒ Angles opposite to equal sides are equal.

$$\therefore \angle C = \angle B$$

$$\text{Also, } A = 2B = 2C$$

$$\text{In } \triangle ABC, \angle A + \angle B + \angle C = 180^\circ$$

$$\Rightarrow 2C + C + C = 180^\circ$$

$$\Rightarrow C = \frac{180^\circ}{4} = 45^\circ$$

$$\Rightarrow B = 45^\circ \text{ and } A = 90^\circ$$

Thus, it shows that $\triangle ABC$ is not an obtuse angle triangle.

Hence, statement 1 is incorrect.

2. We have $A = 40^\circ$, $B = 65^\circ$

In $\triangle ABC$,

$$\angle A + \angle B + \angle C = 180^\circ$$

$$\Rightarrow 40^\circ + 65^\circ + \angle C = 180^\circ$$

$$\Rightarrow \angle C = 75^\circ$$

Use sine rule in $\triangle ABC$,

$$\frac{a}{\sin 40^\circ} = \frac{c}{\sin 75^\circ}$$

$$\frac{a}{c} = \sin 40^\circ \operatorname{cosec} 75^\circ,$$

Hence, Statement 2 is incorrect.

Directions (Q. Nos. 31-33) Read the following information and answer the three items that follow.

Let a $\sin^2 x + b \cos^2 x = c$,

$$b \sin^2 y + a \cos^2 y = d$$

and $p \tan x = q \tan y$

31. What is $\tan^2 x$ equal to?

- (a) $\frac{c-b}{a-c}$ (b) $\frac{a-c}{c-b}$
(c) $\frac{c-a}{c-b}$ (d) $\frac{c-b}{c-a}$

⊙ (a) We have,
 $a \sin^2 x + b \cos^2 x = c$

On dividing both sides by $\cos^2 x$, we get
 $a \tan^2 x + b(1) = c \times \sec^2 x$

$$\Rightarrow a \tan^2 x + b = c(1 + \tan^2 x)$$

$$[\because \sec^2 \theta - \tan^2 \theta = 1]$$

$$\Rightarrow \tan^2 x(a - c) = c - b$$

$$\Rightarrow \tan^2 x = \frac{c - b}{a - c} \quad \dots(i)$$

32. What is $\frac{d-a}{b-d}$ equal to?

- (a) $\sin^2 y$ (b) $\cos^2 y$
(c) $\tan^2 y$ (d) $\cot^2 y$

⊙ (c) We have, $b \sin^2 y + a \cos^2 y = d$

On dividing both sides by $\cos^2 y$, we get

$$b \tan^2 y + a(1) = d(\sec^2 y)$$

$$\Rightarrow b \tan^2 y + a = d(1 + \tan^2 y)$$

$$[\because \sec^2 \theta - \tan^2 \theta = 1]$$

$$\Rightarrow \tan^2 y(b - d) = d - a$$

$$\Rightarrow \frac{d - a}{b - d} = \tan^2 y \quad \dots(ii)$$

33. What is $\frac{p^2}{q^2}$ equal to?

- (a) $\frac{(b-c)(b-d)}{(a-d)(a-c)}$ (b) $\frac{(a-d)(c-a)}{(b-c)(d-b)}$
(c) $\frac{(d-a)(c-a)}{(b-c)(d-b)}$ (d) $\frac{(b-c)(b-d)}{(c-a)(a-d)}$

⊙ (b) We have,

$$p \tan x = q \tan y$$

On squaring both sides, we get.

$$\frac{p^2}{q^2} = \frac{\tan^2 y}{\tan^2 x}$$

$$= \frac{(d-a)/(b-d)}{(c-b)/(a-c)}$$

$$[\because \text{from eq. (i) and (ii)}]$$

$$= \frac{(d-a)(a-c)}{(b-d)(c-b)}$$

$$= \frac{(a-d)(c-a)}{(d-b)(b-c)}$$

Directions (Q. Nos. 34-36) Read the following information and answer the three items that follow.

Let $t_n = \sin^n \theta + \cos^n \theta$

34. What is $\frac{t_3 - t_5}{t_5 - t_7}$ equal to?

- (a) $\frac{t_1}{t_3}$ (b) $\frac{t_3}{t_5}$
(c) $\frac{t_5}{t_7}$ (d) $\frac{t_1}{t_7}$

⊙ (a) We have,

$$t_n = \sin^n \theta + \cos^n \theta$$

$$(\sin^3 \theta + \cos^3 \theta)$$

$$\text{Now, } \frac{t_3 - t_5}{t_5 - t_7} = \frac{-(\sin^5 \theta + \cos^5 \theta)}{(\sin^5 \theta + \cos^5 \theta)}$$

$$-(\sin^7 \theta + \cos^7 \theta)$$

$$= \frac{(\sin^3 \theta - \sin^5 \theta) + (\cos^3 \theta - \cos^5 \theta)}{(\sin^5 \theta - \sin^7 \theta) + (\cos^5 \theta - \cos^7 \theta)}$$

$$= \frac{\sin^3 \theta(1 - \sin^2 \theta) + \cos^3 \theta(1 - \cos^2 \theta)}{\sin^5 \theta(1 - \sin^2 \theta) + \cos^5 \theta(1 - \cos^2 \theta)}$$

$$= \frac{\sin^3 \theta \cos^2 \theta + \cos^3 \theta \sin^2 \theta}{\sin^5 \theta \cos^2 \theta + \cos^5 \theta \sin^2 \theta}$$

$$= \frac{\sin^2 \theta \cos^2 \theta (\sin \theta + \cos \theta)}{\sin^2 \theta \cos^2 \theta (\sin^3 \theta + \cos^3 \theta)}$$

$$= \frac{\sin \theta + \cos \theta}{\sin^3 \theta + \cos^3 \theta} = \frac{t_1}{t_3}$$

35. What is $t_1^2 - t_2$ equal to?

- (a) $\cos 2\theta$ (b) $\sin 2\theta$
(c) $2 \cos \theta$ (d) $2 \sin \theta$

⊙ (b) $t_1^2 - t_2 = (\sin \theta + \cos \theta)^2$

$$-(\sin^2 \theta + \cos^2 \theta)$$

$$= \sin^2 \theta + \cos^2 \theta + 2 \sin \theta \cos \theta$$

$$-(\sin^2 \theta + \cos^2 \theta)$$

$$= 2 \sin \theta \cos \theta = \sin 2\theta$$

36. What is the value of t_{10} where $\theta = 45^\circ$?

- (a) 1 (b) $\frac{1}{4}$ (c) $\frac{1}{16}$ (d) $\frac{1}{32}$

⊙ (c) Now, $t_{10} = \sin^{10} \theta + \cos^{10} \theta$

$$= (\sin 45^\circ)^{10} + (\cos 45^\circ)^{10}$$

$$[\text{Put } \theta = 45^\circ]$$

$$= \left(\frac{1}{\sqrt{2}}\right)^{10} + \left(\frac{1}{\sqrt{2}}\right)^{10}$$

$$= 2 \left[\frac{1}{2^5}\right] = \frac{1}{2^4} = \frac{1}{16}$$

Directions (Q. Nos. 37-39) Read the following information and answer the three items that follow.

Let $\alpha = \beta = 15^\circ$.

37. What is the value of $\sin \alpha + \cos \beta$?

- (a) $\frac{1}{\sqrt{2}}$ (b) $\frac{1}{2\sqrt{2}}$ (c) $\frac{\sqrt{3}}{2\sqrt{2}}$ (d) $\frac{\sqrt{3}}{\sqrt{2}}$

⊙ (d) $\sin \alpha + \cos \beta$

$$= \left(\frac{1}{\sqrt{2}} \sin \alpha + \frac{1}{\sqrt{2}} \cos \beta\right) \times \sqrt{2}$$

$$= \sqrt{2} (\sin \alpha \cos 45^\circ + \sin 45^\circ \cos \beta)$$

$$= \sqrt{2} (\sin 15^\circ \cos 45^\circ + \sin 45^\circ \cos 15^\circ)$$

$$[\because \alpha = \beta = 15^\circ]$$

$$= \sqrt{2} \sin(15^\circ + 45^\circ)$$

$$= \sqrt{2} \sin 60^\circ = \sqrt{2} \times \frac{\sqrt{3}}{2} = \frac{\sqrt{3}}{\sqrt{2}}$$

38. What is the value of $\sin 7\alpha - \cos 7\beta$?

(a) $\frac{1}{\sqrt{2}}$ (b) $\frac{1}{2\sqrt{2}}$ (c) $\frac{\sqrt{3}}{2\sqrt{2}}$ (d) $\frac{\sqrt{3}}{\sqrt{2}}$

⊙ (d) $\sin 7\alpha - \cos 7\beta$

$$\begin{aligned} &= \left(\frac{1}{\sqrt{2}} \sin 7 \times 15^\circ - \frac{1}{\sqrt{2}} \cos 7 \times 15^\circ \right) \sqrt{2} \\ &= \sqrt{2} (\sin 105^\circ \cos 45^\circ - \cos 105^\circ \sin 45^\circ) \\ &= \sqrt{2} \sin (105^\circ - 45^\circ) \\ &= \sqrt{2} \sin 60^\circ \\ &= \sqrt{2} \times \frac{\sqrt{3}}{2} = \frac{\sqrt{3}}{\sqrt{2}} \end{aligned}$$

39. What is $\sin(\alpha + 1^\circ) + \cos(\beta + 1^\circ)$ equal to?

(a) $\sqrt{3} \cos 1^\circ + \sin 1^\circ$
 (b) $\sqrt{3} \cos 1^\circ - \frac{1}{2} \sin 1^\circ$
 (c) $\frac{1}{\sqrt{2}} (\sqrt{3} \cos 1^\circ + \sin 1^\circ)$
 (d) $\frac{1}{2} (\sqrt{3} \cos 1^\circ + \sin 1^\circ)$

⊙ (c) $\sin(\alpha + 1^\circ) + \cos(\beta + 1^\circ)$

$$\begin{aligned} &= \sin(\alpha + 1^\circ) + \cos(\alpha + 1^\circ) \quad [\because \alpha = \beta] \\ &= \sin \alpha \cos 1^\circ + \cos \alpha \sin 1^\circ \\ &\quad + \cos \alpha \cos 1^\circ - \sin \alpha \sin 1^\circ \\ &= \cos 1^\circ (\sin \alpha + \cos \alpha) \\ &\quad + \sin 1^\circ (\cos \alpha - \sin \alpha) \\ &= \cos 1^\circ \times \frac{\sqrt{3}}{\sqrt{2}} \\ &\quad + \sin 1^\circ \left(\frac{1}{\sqrt{2}} \cos \alpha - \frac{1}{\sqrt{2}} \sin \alpha \right) \sqrt{2} \\ &\quad \left[\because \sin \alpha + \cos \alpha = \frac{\sqrt{3}}{\sqrt{2}} \right] \\ &= \frac{\sqrt{3}}{2} \cos 1^\circ + \sqrt{2} \sin 1^\circ (\sin 45^\circ \cos \alpha \\ &\quad - \cos 45^\circ \sin \alpha) \\ &= \frac{\sqrt{3}}{2} \cos 1^\circ + \sqrt{2} \sin 1^\circ \sin (45^\circ - \alpha) \\ &= \frac{\sqrt{3}}{2} \cos 1^\circ + \sqrt{2} \sin 1^\circ \sin 30^\circ \quad [\because \alpha = 15^\circ] \\ &= \frac{\sqrt{3}}{2} \cos 1^\circ + \frac{\sqrt{2}}{2} \sin 1^\circ \\ &= \frac{\sqrt{3}}{2} \cos 1^\circ + \frac{1}{\sqrt{2}} \sin 1^\circ \\ &= \frac{1}{\sqrt{2}} (\sqrt{3} \cos 1^\circ + \sin 1^\circ) \end{aligned}$$

40. If $\sin x + \sin y = \cos y - \cos x$, where $0 < y < x < \frac{\pi}{2}$, then what is

$\tan \left(\frac{x-y}{2} \right)$ equal to?

(a) 0 (b) $\frac{1}{2}$
 (c) 1 (d) 2

⊙ (c) Given, $\sin x + \sin y = \cos y - \cos x$

$$\begin{aligned} &\Rightarrow 2 \sin \left(\frac{x+y}{2} \right) \cos \left(\frac{x-y}{2} \right) \\ &= -2 \sin \left(\frac{y+x}{2} \right) \sin \left(\frac{y-x}{2} \right) \\ &\Rightarrow \cos \left(\frac{x-y}{2} \right) = \sin \left(\frac{x-y}{2} \right) \\ &\Rightarrow \tan \left(\frac{x-y}{2} \right) = 1 \end{aligned}$$

41. If A is a matrix of order 3×5 and B is a matrix of order 5×3 , then the order of AB and BA will

respectively be

(a) 3×3 and 3×3
 (b) 3×5 and 5×3
 (c) 3×3 and 5×5
 (d) 5×3 and 3×5

⊙ (c) Given, matrix A is of order 3×5 and matrix B is of order 5×3 .

$$\begin{aligned} \therefore \text{Order of matrix } AB &= [A]_{3 \times 5} [B]_{5 \times 3} \\ &= [AB]_{3 \times 3} \\ \text{and order of matrix } BA &= [B]_{5 \times 3} [A]_{3 \times 5} \\ &= [BA]_{5 \times 5} \end{aligned}$$

42. If p^2, q^2 and r^2 (where $p, q, r > 0$) are in GP, then which of the following is/are correct?

- p, q and r in GP.
 - $\ln p, \ln q$ and $\ln r$ are in AP.
- Select the correct answer using the code given below
 (a) 1 Only (b) 2 Only
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) 1. Given, p^2, q^2 and r^2 in GP.

$$\begin{aligned} \therefore q^2 &= \sqrt{p^2 r^2} \Rightarrow q^2 = pr \quad \dots(i) \\ &\Rightarrow p, q \text{ and } r \text{ in GP, hence Statement 1 is correct.} \end{aligned}$$

$$\begin{aligned} 2. \text{ Now, } \frac{\ln p + \ln r}{2} &= \frac{\ln pr}{2} = \frac{\ln q^2}{2} \\ &= 2 \frac{\ln q}{2} = \ln q \end{aligned}$$

[From eq. (i)]

$\Rightarrow \ln p, \ln q$ and $\ln r$ are in AP, which is correct statement.
 Hence, both statements are correct.

43. If $\cot \alpha$ and $\cot \beta$ are the roots of the equation $x^2 - 3x + 2 = 0$, then what is $\cot(\alpha + \beta)$ equal to?

(a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) 2 (d) 3

⊙ (b) Given, $\cot \alpha$ and $\cot \beta$ are the roots of $x^2 - 3x + 2 = 0$.

Now, sum of roots, $\cot \alpha + \cot \beta = 3$
 and product of roots, $\cot \alpha \cot \beta = 2$

$$\begin{aligned} \text{Now, } \cot(\alpha + \beta) &= \frac{\cot \alpha \cot \beta - 1}{\cot \alpha + \cot \beta} \\ &= \frac{2 - 1}{3} = \frac{1}{3} \end{aligned}$$

44. The roots α and β of a quadratic equation, satisfy the relations $\alpha + \beta = \alpha^2 + \beta^2$ and $\alpha\beta = \alpha^2\beta^2$.

What is the number of such quadratic equations?

(a) 0 (b) 2 (c) 3 (d) 4

⊙ (d) Given, $\alpha + \beta = \alpha^2 + \beta^2$

$$\begin{aligned} \text{and } \alpha\beta &= \alpha^2\beta^2 \\ \Rightarrow \alpha\beta(1 - \alpha\beta) &= 0 \\ \Rightarrow \alpha\beta &= 0 \text{ and } \alpha\beta = 1 \\ \text{Consider } \alpha + \beta &= \alpha^2 + \beta^2 \\ &= (\alpha + \beta)^2 - 2\alpha\beta \end{aligned}$$

When $\alpha\beta = 0$,

$$\begin{aligned} \alpha + \beta &= (\alpha + \beta)^2 - 2 \times 0 \\ \Rightarrow (\alpha + \beta) &= (\alpha + \beta)^2 \\ \Rightarrow (\alpha + \beta) [1 - (\alpha + \beta)] &= 0 \\ \Rightarrow (\alpha + \beta) &= 0 \\ \text{and } \alpha + \beta &= 1 \end{aligned}$$

It implies that when $\alpha\beta = 0$, gives two quadratic equations.

When $\alpha\beta = 1$

$$\begin{aligned} \alpha + \beta &= (\alpha + \beta)^2 - 2\alpha\beta \\ \Rightarrow (\alpha + \beta) &= (\alpha + \beta)^2 - 2(1) \\ \Rightarrow (\alpha + \beta)^2 - (\alpha + \beta) - 2 &= 0 \\ \Rightarrow [(\alpha + \beta) - 2][(\alpha + \beta) + 1] &= 0 \\ \Rightarrow \alpha + \beta &= 2, -1 \end{aligned}$$

Again it implies that, when $\alpha\beta = 1$, gives two quadratic equations.

Hence, there are total four such quadratic equations formed.

45. What is the argument of the

complex number $\frac{1 - i\sqrt{3}}{1 + i\sqrt{3}}$, where

$$i = \sqrt{-1}?$$

(a) 240° (b) 210° (c) 120° (d) 60°

⊙ (a) Let $z = \frac{1 - i\sqrt{3}}{1 + i\sqrt{3}} \times \frac{1 - i\sqrt{3}}{1 - i\sqrt{3}}$

$$\begin{aligned} &= \frac{(1 - i\sqrt{3})^2}{1^2 - (i\sqrt{3})^2} \\ &= \frac{1 - 3 - 2i\sqrt{3}}{1 + 3} = \frac{-2 - 2i\sqrt{3}}{4} \\ &= \frac{-1 - i\sqrt{3}}{2} \end{aligned}$$

$$\begin{aligned} \text{Now, } \tan \theta &= \left| \frac{y}{x} \right| = \left| \frac{-\sqrt{3}/2}{-1/2} \right| \\ &= \left| \sqrt{3} \right| = 60^\circ \end{aligned}$$

Since, given complex number lies in IIIrd quadrant.

$$\therefore \arg(z) = 180^\circ + 60^\circ = 240^\circ$$

46. What is the modulus of the complex number $\frac{\cos \theta + i \sin \theta}{\cos \theta - i \sin \theta}$, where

$$i = \sqrt{-1}?$$

- (a) $\frac{1}{2}$ (b) 1 (c) $\frac{3}{2}$ (d) 2

⊙ (b) Let $z = \frac{\cos \theta + i \sin \theta}{\cos \theta - i \sin \theta}$

$$\Rightarrow |z| = \frac{|\cos \theta + i \sin \theta|}{|\cos \theta - i \sin \theta|} = \frac{\sqrt{\cos^2 \theta + \sin^2 \theta}}{\sqrt{\cos^2 \theta + \sin^2 \theta}} = 1$$

47. Consider the proper subsets of {1, 2, 3, 4}. How many of these proper subsets are superset of the set {3}?

- (a) 5 (b) 6
(c) 7 (d) 8

⊙ (c) The proper subset of {1, 2, 3, 4} are {1}, {2}, {3}, {4}, {1, 2}, {2, 3}, {3, 4}, {1, 3}, {1, 4}, {2, 4}, {1, 2, 3}, {2, 3, 4}, {1, 2, 4}, {1, 3, 4}

The superset of the set {3} in the given proper subset are {3}, {2, 3}, {3, 4}, {1, 3}, {1, 2, 3}, {2, 3, 4}, {1, 3, 4}

Hence, number of proper subset of the superset of the set {3} is 7.

48. Let p, q and r be three distinct positive real numbers. If

$$D = \begin{vmatrix} p & q & r \\ q & r & p \\ r & p & q \end{vmatrix}, \text{ then which one of}$$

- the following is correct?
(a) $D < 0$ (b) $D \leq 0$
(c) $D > 0$ (d) $D \geq 0$

⊙ (a) We have,

$$D = \begin{vmatrix} p & q & r \\ q & r & p \\ r & p & q \end{vmatrix}$$

Applying $C_1 \rightarrow C_1 + C_2 + C_3$

$$D = \begin{vmatrix} p+q+r & q & r \\ p+q+r & r & p \\ p+q+r & p & q \end{vmatrix}$$

$$= (p+q+r) \begin{vmatrix} 1 & q & r \\ 1 & r & p \\ 1 & p & q \end{vmatrix}$$

Applying $R_2 \rightarrow R_2 - R_1$ and $R_3 \rightarrow R_3 - R_1$

$$D = (p+q+r) \begin{vmatrix} 1 & q & r \\ 0 & r-q & p-r \\ 0 & p-q & q-r \end{vmatrix}$$

$$= (p+q+r) [(r-q)(q-r) - (p-r)(p-q)]$$

$$= (p+q+r) [rq - r^2 - q^2 + qr - \{p^2 - pq - rp + rq\}]$$

$$= (p+q+r) [-p^2 - q^2 - r^2 + pq + pr + rp]$$

$$= \frac{-(p+q+r)}{2} [2p^2 + 2q^2 + 2r^2 - 2pq - 2qr - 2rp]$$

$$= \frac{(p+q+r)}{2} [(p^2 + q^2 - 2pq) + (q^2 + r^2 - 2qr) + (r^2 + p^2 - 2rp)]$$

$$= -\frac{1}{2} (p+q+r) [(p-q)^2 + (q-r)^2 + (r-p)^2]$$

Since, p, q and r are distinct.
 $\therefore D < 0$

49. What is the sum of the last five coefficients in the expansion of $(1+x)^9$ when it is expanded in ascending powers of x ?

- (a) 256 (b) 512 (c) 1024 (d) 2048

⊙ (a) $(1+x)^9 = {}^9C_0x^0 + {}^9C_1x^1 + \dots + {}^9C_5x^4 + {}^9C_6x^3 + {}^9C_7x^2 + {}^9C_8x^1 + {}^9C_9$

\therefore The sum of last 5 coefficients in the expansion of $(1+x)^9$ is

$${}^9C_5 + {}^9C_6 + {}^9C_7 + {}^9C_8 + {}^9C_9$$

$$= \frac{9 \times 8 \times 7 \times 6}{4 \times 3 \times 2 \times 1} + \frac{9 \times 8 \times 7}{3 \times 2 \times 1} + \frac{9 \times 8}{2 \times 1} + 9 + 1$$

$$= 126 + 84 + 36 + 9 + 1 = 256$$

50. Consider the following in respect of a non-singular matrix of order 3.

1. $A(\text{adj } A) = (\text{adj } A)A$

2. $|\text{adj } A| = |A|$

Which of the above statements is/are correct?

- (a) 1 Only (b) 2 Only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) 1. By using the property of adjoint of square matrix.

$$A(\text{adj } A) = (\text{adj } A)A = |A|I$$

Hence, Statement 1 is correct.

2. By using the property of adjoint of square matrix, if matrix A is of order n , then

$$|\text{adj } A| = |A|^{n-1}$$

Here, order of given matrix A is 3.

$$\therefore |\text{adj } A| = |A|^{3-1} = |A|^2,$$

Which is incorrect statement.
Hence, only Statement 1 is correct.

51. The centre of the circle $(x-2a)^2 + (y-2b)^2 = 0$ is
(a) $(2a, 2c)$ (b) $(2b, 2d)$
(c) $(a+b, c+d)$ (d) $(a-b, c-d)$

⊙ (c) Given equation $(x-2a)^2 + (y-2c)^2 = 0$ is a circle, whose end points of a diameter are $A(2a, 2c)$ and $B(2b, 2d)$.

Now, centre of circle = mid point of diameter.
 $= \left(\frac{2a+2b}{2}, \frac{2c+2d}{2} \right)$
 $= (a+b, c+d)$

52. The point $(1, -1)$ is one of the vertices of a square. If $3x+2y=5$ is the equation of one diagonal of the square, then what is the equation of the other diagonal?

- (a) $3x-2y=5$ (b) $2x-3y=1$
(c) $2x-3y=5$ (d) $2x+3y=-1$

⊙ (c) We have point $(1, -1)$ is one of the vertices of a square.

Here, we see that point $(1, -1)$ does not satisfy the diagonal equation $3x+2y=5$. Therefore we consider point $(1, -1)$ of the other vertex of diagonal.

We know that, diagonal of a square are perpendicular to each other.

Let perpendicular equation of $3x+2y=5$ is $2x-3y+c=0 \dots (i)$

This equation passes through the vertex $C(1, -1)$

$$\therefore 2(1) - 3(-1) + c = 0$$

$$\Rightarrow 2 + 3 + c = 0$$

$$\Rightarrow c = -5$$

Put $c = -5$ in eq. (i), we get

$$2x - 3y - 5 = 0 \Rightarrow 2x - 3y = 5$$

53. Let $P(x, y)$ be any point on the ellipse $25x^2 + 16y^2 = 400$. If $Q(0, 3)$

and $R(0, -3)$ are two points, then

what is $(PQ + PR)$ equal to?

- (a) 12 (b) 10 (c) 8 (d) 6

⊙ (b) Given, equation can be rewritten as

$$\frac{x^2}{16} + \frac{y^2}{25} = 1$$

Here, $a^2 = 16, b^2 = 25, b > a$

$$\begin{aligned} \text{Eccentricity, } e &= \sqrt{1 - \frac{a^2}{b^2}} = \sqrt{1 - \frac{16}{25}} \\ &= \sqrt{\frac{9}{25}} = \frac{3}{5} \end{aligned}$$

$$\text{Foci} = (0, \pm be) = \left(0, \pm 5 \times \frac{3}{5}\right) = (0, \pm 3)$$

\therefore The given points $(0, 3)$ and $R(0, -3)$ are the foci of given ellipse.

$$PQ + PR = 2b = 2 \times 5 = 10$$

54. If the circumcentre of the triangle formed by the lines $x + 2 = 0$, $y + 2 = 0$ and $kx + y + 2 = 0$ is $(-1, -1)$, then what is the value of k ?

- (a) -1 (b) -2 (c) 1 (d) 2

⊙ (c) Here, we see that triangle formed by given lines is right angled triangle.

Therefore, circumcentre of right angled triangle lies on the hypotenuse of triangle.

\therefore Point $(-1, -1)$ satisfy the equation of line $kx + y + 2 = 0$

$$\Rightarrow k(-1) - 1 + 2 = 0 \Rightarrow k = 1$$

55. In the parabola, $y^2 = x$, what is the length of the chord passing through the vertex and inclined to the X-axis at an angle θ ?

- (a) $\sin \theta \cdot \sec^2 \theta$ (b) $\cos \theta \cdot \operatorname{cosec}^2 \theta$
(c) $\cot \theta \cdot \sec^2 \theta$ (d) $2 \tan \theta \cdot \operatorname{cosec}^2 \theta$

⊙ (b) We know that, any point on the parabola $y^2 = 4ax$ is $P(at^2, 2at)$

We have equation of parabola is $y^2 = x$

$$\text{Here, } a = \frac{1}{4}$$

\therefore Any point on the parabola $y^2 = x$ is

In right angled ΔOAP ,

$$\sin \theta = \frac{AP}{OP} \Rightarrow \sin \theta = \frac{\frac{1}{2}t}{OP}$$

$$\Rightarrow t = 2OP \sin \theta \quad \dots(i)$$

and $\cos \theta = \frac{OA}{OP}$

$$\Rightarrow \cos \theta = \frac{\frac{1}{4}t^2}{OP}$$

$$\Rightarrow \cos \theta = \frac{\frac{1}{4}(2 \times OP \sin \theta)^2}{OP}$$

[From Eq. (i)]

$$\Rightarrow \cos \theta = OP \sin^2 \theta$$

$$\Rightarrow OP = \cos \theta \operatorname{cosec}^2 \theta$$

56. Under which condition, are the points (a, b) , (c, d) and $(a - c, b - d)$ collinear?

- (a) $ab = cd$ (b) $ac = bd$
(c) $ad = bc$ (d) $abc = d$

⊙ (c) The condition for the points (a, b) , (c, d) and $(a - c, b - d)$ are collinear, is

$$\begin{vmatrix} a & b & 1 \\ c - a & d & 1 \\ -c & b - d & 1 \end{vmatrix} = 0$$

Apply $R_2 \rightarrow R_2 - R_1$ and $R_3 \rightarrow R_3 - R_1$

$$\begin{vmatrix} a & b & 1 \\ c - a & d - b & 0 \\ -c & -d & 0 \end{vmatrix} = 0$$

Expanding along C_3 , we get

$$1[(c - a)(-d) + c(d - b)] = 0$$

$$\Rightarrow -cd + ad + cd - cb = 0$$

$$\Rightarrow ad = cb$$

57. Let ABC be a triangle. If $D(2, 5)$ and $E(5, 9)$ are the mid-points of the sides AB and AC respectively, then what is the length of the side BC ?

- (a) 8 (b) 10 (c) 12 (d) 14

⊙ (b) Now, length of DE

$$= \sqrt{(5 - 2)^2 + (9 - 5)^2} = \sqrt{(3)^2 + (4)^2}$$

$$= \sqrt{9 + 16} = \sqrt{25} = 5 \text{ sq units.}$$

We know that, if D and E are the mid points of AB and AC , then length of DE is half of BC .

$$\therefore \text{Length of } BC = 2 \times DE$$

$$= 2 \times 5 = 10 \text{ sq units.}$$

58. If the foot of the perpendicular drawn from the point $(0, k)$ to the line $3x - 4y - 5 = 0$ is $(3, 1)$, then what is the value of k ?

- (a) 3 (b) 4 (c) 5 (d) 6

⊙ (c) Now equation of line AP , which is perpendicular to the given line $3x - 4y - 5 = 0$ is

$$4x + 3y + c = 0 \quad \dots(i)$$

Since, it passes through $(3, 1)$

$$\therefore 4 \times 3 + 3 \times 1 + c = 0$$

$$\Rightarrow c = -15$$

Put $c = -15$ in Eq. (i), we get

$$4x + 3y - 15 = 0$$

Also, this equation passes through the point $P(0, k)$.

$$\therefore 4(0) + 3(k) - 15 = 0$$

$$\Rightarrow k = \frac{15}{3} = 5$$

59. What is the obtuse angle between the lines whose slopes are $2 - \sqrt{3}$ and $2 + \sqrt{3}$?

- (a) 105° (b) 120° (c) 135° (d) 150°

⊙ (b) Given $m_1 = 2 - \sqrt{3}$ and $m_2 = 2 + \sqrt{3}$

\therefore The obtuse angle between the line having slopes m_1 and m_2 is

$$\tan \theta = \frac{m_1 - m_2}{1 + m_1 m_2}$$

$$= \frac{2 - \sqrt{3} - (2 + \sqrt{3})}{1 + (2 - \sqrt{3})(2 + \sqrt{3})}$$

$$= \frac{-2\sqrt{3}}{1 + (4 - 3)} = \frac{-2\sqrt{3}}{2}$$

$$= -\sqrt{3} = -\tan 60^\circ = \tan(180^\circ - 60^\circ)$$

$$\theta = 120^\circ$$

60. If $3x - 4y - 5 = 0$ and

$3x - 4y + 15 = 0$ are the equations of a pair of opposite sides of a square, then what is the area of the square?

- (a) 4 sq units (b) 9 sq units
(c) 16 sq units (d) 25 sq units

⊙ (c) Now, distance between two parallel

$$\text{lines} = \frac{15 + 5}{\sqrt{(3)^2 + (-4)^2}} = \frac{20}{\sqrt{9 + 16}}$$

$$[\because \text{Distance between two parallel lines} = \frac{c_2 - c_1}{\sqrt{a^2 + b^2}}]$$

It is clear that, side of square = distance between two lines.

∴ Side = 4

∴ Area of square = (Side)² = (4)² = 16 sq units.

61. What is the length of the diameter of the sphere whose centre is at (1, -2, 3) and which touches the plane 6x - 3y + 2z - 4 = 0?

- (a) 1 unit
- (b) 2 units
- (c) 3 units
- (d) 4 units

⊙ (d) Now, radius of sphere

= Length of perpendicular drawn from centre to the tangent

$$= \frac{|6(1) - 3(-2) + 2(3) - 4|}{\sqrt{(6)^2 + (-3)^2 + (2)^2}}$$

$$= \frac{|6 + 6 + 6 - 4|}{\sqrt{36 + 9 + 4}} = \frac{14}{\sqrt{49}} = \frac{14}{7} = 2$$

∴ Diameter of sphere

= 2 × radius of sphere

= 2 × 2 = 4 units

62. What is the perpendicular distance from the point (2, 3, 4) to the line

$$\frac{x-0}{1} = \frac{y-0}{0} = \frac{z-0}{0}?$$

- (a) 6 units
- (b) 5 units
- (c) 3 units
- (d) 2 units

⊙ (b) Given equation of line is

$$\frac{x-0}{1} = \frac{y-0}{0} = \frac{z-0}{0} = \lambda (\text{say})$$

Any point on the line is Q(λ, 0, 0)

Now, Dr's of PQ are (2 - λ, 3, 4)

Since, PQ is perpendicular to AB.

∴ (2 - λ)1 + 3 × 0 + 4 × 0 = 0

[∵ a₁a₂ + b₁b₂ + c₁c₂ = 0]

⇒ 2 - λ = 0

⇒ λ = 2

∴ The coordinate of Q is (2, 0, 0).

∴ The perpendicular distance PQ

$$= \sqrt{(2-2)^2 + (3-0)^2 + (4-0)^2} = \sqrt{0 + 9 + 16} = \sqrt{25} = 5 \text{ units}$$

63. If a line has direction ratios < a + b, b + c, c + a >, then what is the sum of the squares of its direction cosines?

- (a) (a + b + c)²
- (b) 2(a + b + c)
- (c) 3
- (d) 1

⊙ (d) Given, direction ratio of a given line is < a + b, b + c, c + a >

∴ Direction cosine of given line is

$$\left\langle \frac{a+b}{\sqrt{(a+b)^2 + (b+c)^2 + (c+a)^2}}, \frac{b+c}{\sqrt{(a+b)^2 + (b+c)^2 + (c+a)^2}}, \frac{c+a}{\sqrt{(a+b)^2 + (b+c)^2 + (c+a)^2}} \right\rangle$$

Now, sum of the square of direction cosine

$$= \left(\frac{a+b}{\sqrt{(a+b)^2 + (b+c)^2 + (c+a)^2}} \right)^2 + \left(\frac{b+c}{\sqrt{(a+b)^2 + (b+c)^2 + (c+a)^2}} \right)^2 + \left(\frac{c+a}{\sqrt{(a+b)^2 + (b+c)^2 + (c+a)^2}} \right)^2 = \frac{(a+b)^2 + (b+c)^2 + (c+a)^2}{(a+b)^2 + (b+c)^2 + (c+a)^2} = 1$$

64. Into how many compartments do the coordinate planes divide the space?

- (a) 2
- (b) 4
- (c) 8
- (d) 16

⊙ (c) The coordinate planes divides the spaces into 8 compartment.

65. What is the equation of the plane which cuts an intercept 5 units on the Z-axis and is parallel to XY-plane?

- (a) x + y = 5
- (b) z = 5
- (c) z = 0
- (d) x + y + z = 5

⊙ (b) Plane parallel to xy plane is z = k... (i)

Since, it intercept 5 units on Z-axis.

∴ Point (0, 0, 5) satisfy Eq. (i), we get

5 = k

Put k = 5 in Eq. (i), we get

z = 5

66. If \hat{a} is a unit vector in the xy-plane making an angle 30° with the positive X-axis, then what is \hat{a} equal to?

- (a) $\frac{\sqrt{3}\hat{i} + \hat{j}}{2}$
- (b) $\frac{\sqrt{3}\hat{i} - \hat{j}}{2}$
- (c) $\frac{\hat{i} + \sqrt{3}\hat{j}}{2}$
- (d) $\frac{\hat{i} - \sqrt{3}\hat{j}}{2}$

⊙ (a) Given \hat{a} makes an angle of 30° with X-axis. So, angle between \hat{a} and \hat{i} is 30°.

∴ $\mathbf{a} \cdot \mathbf{b} = |\mathbf{a}| |\mathbf{b}| \cos \theta$

∴ $\hat{\mathbf{a}} \cdot \hat{\mathbf{i}} = |\hat{\mathbf{a}}| |\hat{\mathbf{i}}| \cos 30^\circ$

⇒ $\hat{\mathbf{a}} \cdot \hat{\mathbf{i}} = 1 \times 1 \times \frac{\sqrt{3}}{2}$

[∵ $\hat{\mathbf{a}}$ is a unit vector $|\hat{\mathbf{a}}| = 1$]

Similarly, $\hat{\mathbf{a}}$ makes an angle of 60° with Y-axis. So, angle between $\hat{\mathbf{a}}$ and $\hat{\mathbf{j}}$ is 60°.

∴ $\hat{\mathbf{a}} \cdot \hat{\mathbf{j}} = |\hat{\mathbf{a}}| |\hat{\mathbf{j}}| \cos 60^\circ$

= 1 × 1 × $\frac{1}{2}$ = $\frac{1}{2}$

∴ $\hat{\mathbf{a}} = \frac{\sqrt{3}}{2} \hat{\mathbf{i}} + \frac{1}{2} \hat{\mathbf{j}} = \frac{\sqrt{3}\hat{i} + \hat{j}}{2}$

67. Let A be a point in space such that $|\mathbf{OA}| = 12$, where O is the origin. If OA is inclined at angles 45° and 60° with X-axis and Y-axis respectively, then what is OA equal to?

- (a) $6\hat{i} + 6\hat{j} \pm \sqrt{2}\hat{k}$
- (b) $6\hat{i} + 6\sqrt{2}\hat{j} \pm 6\hat{k}$
- (c) $6\sqrt{2}\hat{i} + 6\hat{j} \pm 6\hat{k}$
- (d) $3\sqrt{2}\hat{i} + 3\hat{j} \pm 6\hat{k}$

⊙ (c) Let $\mathbf{OA} = x\hat{i} + y\hat{j} + z\hat{k}$

Where $x = 12 \cos 45^\circ$ and $y = 12 \cos 60^\circ$

∴ $\mathbf{OA} = 12 \cos 45^\circ \hat{i} + 12 \cos 60^\circ \hat{j} + z\hat{k}$

= $12 \times \frac{1}{\sqrt{2}} \hat{i} + 12 \times \frac{1}{2} \hat{j} + z\hat{k}$

= $\frac{12}{\sqrt{2}} \hat{i} + 6\hat{j} + z\hat{k}$... (i)

⇒ $|\mathbf{OA}| = \sqrt{\frac{144}{2} + 36 + z^2}$

⇒ $12 = \sqrt{108 + z^2}$

On squaring both sides, we get

144 = 108 + z²

⇒ z² = 36 ⇒ z = ± 6

Put z = ± 6 in Eq. (i), we get

$\mathbf{OA} = 6\sqrt{2}\hat{i} + 6\hat{j} \pm 6\hat{k}$

68. Two adjacent sides of a parallelogram are $2\hat{i} - 4\hat{j} + 5\hat{k}$ and $\hat{i} - 2\hat{j} - 3\hat{k}$. What is the magnitude of dot product of vectors which represent its diagonals?
 (a) 21 (b) 25 (c) 31 (d) 36

(c) We have,

$$\mathbf{AB} = 2\hat{i} - 4\hat{j} + 5\hat{k}$$

and $\mathbf{BC} = \hat{i} - 2\hat{j} - 3\hat{k}$

Now, $\mathbf{AC} = \mathbf{AB} + \mathbf{BC}$

$$= (2\hat{i} - 4\hat{j} + 5\hat{k}) + (\hat{i} - 2\hat{j} - 3\hat{k})$$

$$= 3\hat{i} - 6\hat{j} + 2\hat{k}$$

and $\mathbf{BD} = \mathbf{AD} - \mathbf{AB} = \mathbf{BC} - \mathbf{AB}$

$$= (\hat{i} - 2\hat{j} - 3\hat{k}) - (2\hat{i} - 4\hat{j} + 5\hat{k})$$

$$= -\hat{i} + 2\hat{j} - 8\hat{k}$$

Now, dot product of diagonals,

$$\mathbf{AC} \cdot \mathbf{BD} = (3\hat{i} - 6\hat{j} + 2\hat{k}) \cdot (-\hat{i} + 2\hat{j} - 8\hat{k})$$

$$= -3 - 12 - 16 = -31$$

∴ Magnitude of dot product of diagonals,
 $= |\mathbf{AC} \cdot \mathbf{BD}| = |-31| = 31$

69. If $|\mathbf{a} \times \mathbf{b}|^2 + |\mathbf{a} \cdot \mathbf{b}|^2 = 144$ and $|\mathbf{a}| = 4$, then what is $|\mathbf{b}|$ equal to?
 (a) 3 (b) 4 (c) 6 (d) 8

(a) We have, $|\mathbf{a} \times \mathbf{b}|^2 + |\mathbf{a} \cdot \mathbf{b}|^2 = 144$

$$\Rightarrow |\mathbf{a}|^2 |\mathbf{b}|^2 \sin^2 \theta + |\mathbf{a}|^2 |\mathbf{b}|^2 \cos^2 \theta = 144$$

$$\Rightarrow |\mathbf{a}|^2 |\mathbf{b}|^2 (\sin^2 \theta + \cos^2 \theta) = 144$$

$$\Rightarrow (4)^2 \times |\mathbf{b}|^2 (1) = 144$$

$$[\because \sin^2 \theta + \cos^2 \theta = 1]$$

$$\Rightarrow |\mathbf{b}|^2 = \frac{144}{16} = 9$$

$$|\mathbf{b}| = 3$$

70. If the vectors $\mathbf{a} = 2\hat{i} - 3\hat{j} + \hat{k}$, $\mathbf{b} = \hat{i} + 2\hat{j} - 3\hat{k}$ and $\mathbf{c} = \hat{j} + p\hat{k}$ are coplanar, then what is the value of p ?
 (a) 1 (b) -1 (c) 5 (d) -5

(b) The condition of three vectors to be coplanar is $\mathbf{a} \cdot (\mathbf{b} \times \mathbf{c}) = 0$

$$\Rightarrow \begin{vmatrix} 2 & -3 & 1 \\ 1 & 2 & -3 \\ 0 & 1 & p \end{vmatrix} = 0$$

$$\Rightarrow 2(2p + 3) + 3(p + 0) + 1(1 - 0) = 0$$

$$\Rightarrow 4p + 6 + 3p + 1 = 0$$

$$\Rightarrow 7p + 7 = 0$$

$$p = -1$$

71. What is $\lim_{x \rightarrow 1} \frac{x + x^2 + x^3 - 3}{x - 1}$ equal to?
 (a) 1 (b) 2 (c) 3 (d) 6

(d) We have, $\lim_{x \rightarrow 1} \frac{x + x^2 + x^3 - 3}{x - 1}$ $\left(\frac{0}{0} \text{ form}\right)$

$$= \lim_{x \rightarrow 1} \frac{1 + 2x + 3x^2}{1}$$

[by using L' Hospital's rule]

$$= 1 + 2(1) + 3(1)^2$$

$$= 1 + 2 + 3 = 6$$

72. The radius of a circle is increasing at the rate of 0.7 cm/sec. What is the rate of increase of its circumference?
 (a) 4.4 cm/sec (b) 8.4 cm/sec
 (c) 8.8 cm/sec (d) 15.4 cm/sec

(a) We have, $\frac{dr}{dt} = 0.7 \text{ cm/sec}$

Now, circumference of circle, $C = 2\pi r$

On differentiating w.r.t. t , we get

$$\frac{dC}{dt} = 2\pi \frac{dr}{dt}$$

$$= 2 \times \frac{22}{7} \times 0.7 \text{ cm/sec}$$

$$= 4.4 \text{ cm/sec}$$

73. If $\lim_{x \rightarrow 1} \frac{x^4 - 1}{x - 1} = \lim_{x \rightarrow k} \frac{x^3 - k^3}{x^2 - k^2}$, where $k \neq 0$, then what is the value of k ?

(a) $\frac{2}{3}$ (b) $\frac{4}{3}$ (c) $\frac{8}{3}$ (d) 4

(c) $\lim_{x \rightarrow 1} \frac{x^4 - 1}{x - 1} = \lim_{x \rightarrow k} \frac{x^3 - k^3}{x^2 - k^2}$

$$\Rightarrow 4(1)^{4-1} = \lim_{x \rightarrow k} \frac{(x - k)(x^2 + k^2 + kx)}{(x - k)(x + k)}$$

$$\left[\because \lim_{x \rightarrow a} \frac{x^n - a^n}{x - a} = na^{n-1} \right]$$

$$\Rightarrow 4 = \lim_{x \rightarrow k} \frac{x^2 + k^2 + kx}{(x + k)}$$

$$\Rightarrow 4 = \frac{k^2 + k^2 + k^2}{k + k}$$

$$\Rightarrow 4 = \frac{3k^2}{2k} \Rightarrow k = \frac{4 \times 2}{3} = \frac{8}{3}$$

74. The order and degree of the differential equation

$$k \frac{dy}{dx} = \int \left[1 + \left(\frac{dy}{dx} \right)^2 \right]^{\frac{2}{3}} dx \text{ are}$$

respectively

- (a) 1 and 1 (b) 2 and 3
 (c) 2 and 4 (d) 1 and 4

(b) We have,

$$k \frac{dy}{dx} = \int \left[1 + \left(\frac{dy}{dx} \right)^2 \right]^{\frac{2}{3}} dx$$

On differentiating both sides w.r.t. x , we get

$$k \frac{d^2y}{dx^2} = \left[1 + \left(\frac{dy}{dx} \right)^2 \right]^{\frac{2}{3}}$$

On cubing both sides, we get

$$k^3 \left(\frac{d^2y}{dx^2} \right)^3 = \left[1 + \left(\frac{dy}{dx} \right)^2 \right]^2$$

Here, highest order derivative $\frac{d^2y}{dx^2}$ is 2 and whose degree is 3.

75. What is $\lim_{x \rightarrow 0} \frac{\sin x \log(1 - x)}{x^2}$ equal to?
 (a) -1 (b) Zero (c) -e (d) $-\frac{1}{e}$

(a) $\lim_{x \rightarrow 0} \frac{\sin x \log(1 - x)}{x^2}$

$$= \lim_{x \rightarrow 0} \frac{\sin x}{x} \times \lim_{x \rightarrow 0} \log \frac{1 - x}{x}$$

$$= 1 \times (-1) = -1$$

$$\left[\because \lim_{\theta \rightarrow 0} \frac{\sin \theta}{\theta} = 1 \text{ and } \lim_{x \rightarrow 0} \log \frac{(1 - x)}{x} = -1 \right]$$

76. If $f(x) = 3x^2 - 5x + p$ and $f(0)$ and $f(1)$ are opposite in sign, then which of the following is correct?

- (a) $-2 < p < 0$ (b) $-2 < p < 2$
 (c) $0 < p < 2$ (d) $3 < p < 5$

(c) We have,

$$f(x) = 3x^2 - 5x + p$$

Now, $f(0) = 3(0)^2 - 5(0) + p = p$

and $f(1) = 3(1)^2 - 5(1) + p$

$$= 3 - 5 + p = p - 2$$

Since, $f(0)$ and $f(1)$ are opposite signs.

$$\therefore f(0) f(1) < 0$$

$$\Rightarrow p \times (p - 2) < 0$$

$$0 < p < 2$$

77. If $e^{\theta\phi} = c + 4\theta\phi$, where c is an arbitrary constant and ϕ is a function of θ , then what is $\phi \frac{d\theta}{d\phi}$ equal to?

- (a) $\theta \frac{d\phi}{d\theta}$ (b) $-\theta \frac{d\phi}{d\theta}$
 (c) $4\theta \frac{d\phi}{d\theta}$ (d) $-4\theta \frac{d\phi}{d\theta}$

(b) We have,

$$e^{\theta\phi} = c + 4\theta\phi$$

On differentiating w.r.t. θ , we get

$$e^{\theta\phi} \left(\theta \frac{d\phi}{d\theta} + \phi \right) = 0 + 4 \left[\theta \frac{d\phi}{d\theta} + \phi \right]$$

$$\Rightarrow \frac{d\phi}{d\theta} (\theta e^{\theta\phi} - 4\theta) = 4\phi - \phi e^{\theta\phi}$$

$$\Rightarrow \frac{d\phi}{d\theta} = \frac{\phi(4 - e^{\theta\phi})}{-\theta(4 - e^{\theta\phi})}$$

$$\Rightarrow \phi d\theta = -\theta d\phi$$

78. If $p(x) = (4e)^{2x}$, then what is

$\int p(x) dx$ equal to?

- (a) $\frac{p(x)}{1 + 2 \ln 2} + C$ (b) $\frac{p(x)}{2(1 + 2 \ln 2)} + C$
 (c) $\frac{2p(x)}{1 + \ln 4} + C$ (d) $\frac{p(x)}{1 + \ln 2} + C$

(b) We have,

$$p(x) = (4e)^{2x}$$

$$\therefore \int p(x) dx = \int (4e)^{2x} dx$$

$$= \int_1^{4e} e^{2x} dx$$

By using integration by parts, we get

$$\int p(x) dx = 4^{2x} \int e^{2x} dx$$

$$= \int \left[\frac{d}{dx} (4^{2x}) \int e^{2x} dx \right] dx$$

$$= \frac{4^{2x} e^{2x}}{2} - \int 4^{2x} (\log 4) 2 \times \frac{e^{2x}}{2} dx$$

$$= \frac{4^{2x} \cdot e^{2x}}{2} - \log 4 \int 4^{2x} \cdot e^{2x} dx$$

$$\Rightarrow \int p(x) dx = \frac{4^{2x} e^{2x}}{2} - \log 4 \int p(x) dx$$

$$\Rightarrow (1 + \log 4) \int p(x) dx = \frac{4^{2x} \cdot e^{2x}}{2}$$

$$\Rightarrow \int p(x) dx = \frac{4^{2x} \cdot e^{2x}}{2(1 + \log(2^2))} + C$$

$$= \frac{p(x)}{2(1 + 2 \log 2)} + C$$

79. What is the value of

$$\int_0^{\frac{\pi}{4}} (\tan^3 x + \tan x) dx?$$

- (a) $\frac{1}{4}$ (b) $\frac{1}{2}$
 (c) 1 (d) 2

(b) Let $I = \int_0^{\pi/4} (\tan^3 x + \tan x) dx$

$$= \int_0^{\pi/4} \tan x \cdot (\tan^2 x + 1) dx$$

$$= \int_0^{\pi/4} \tan x \sec^2 x dx$$

[$\because \sec^2 x - \tan^2 x = 1$]

Put $\tan x = t$

$$\Rightarrow \sec^2 x dx = dt$$

\therefore Upper limit, $t = \tan \frac{\pi}{4} = 1$

Lower limit, $t = \tan 0 = 0$

$$\therefore I = \int_0^1 t dt = \left[\frac{t^2}{2} \right]_0^1$$

$$= \frac{1}{2}(1^2 - 0^2) = \frac{1}{2}$$

80. Let $y = 3x^2 + 2$. If x changes from 10 to 10.1, then what is the total change in y ?

- (a) 4.71 (b) 5.23 (c) 6.03 (d) 8.01
- (c) Change in y ,
- $$\delta y = f(10.1) - f(10)$$
- $$= 3 \times (10.1)^2 + 2 - [3(10)^2 + 2]$$
- $$= 308.03 - 302$$
- $$= 6.03$$

81. If $f(x) = \frac{\sin x}{x}$, where $x \in R$, is to

be continuous at $x = 0$, then the value of the function at $x = 0$

- (a) should be 0
 (b) should be 1
 (c) should be 2
 (d) cannot be determined
- (b) We have, $f(x) = \frac{\sin x}{x}$

Since, $f(x)$ is continuous at $x = 0$

$$\therefore f(0) = \lim_{x \rightarrow 0} f(x)$$

$$= \lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$$

82. The solution of the differential equation $dy = (1 + y^2) dx$ is

- (a) $y = \tan x + c$
 (b) $y = \tan(x + c)$
 (c) $\tan^{-1}(y + c) = x$
 (d) $\tan^{-1}(y + c) = 2x$
- (b) We have, $dy = (1 + y^2) dx$

$$\Rightarrow \frac{dy}{1 + y^2} = dx$$

On integrating both sides, we get

$$\int \frac{dy}{1 + y^2} = \int dx + c$$

$$\Rightarrow \tan^{-1} y = x + c$$

$$y = \tan(x + c)$$

83. What is $\int (e^{\log x} + \sin x) \cos x dx$ equal to?

- (a) $\sin x + x \cos x + \frac{\sin^2 x}{2} + c$
 (b) $\sin x - x \cos x + \frac{\sin^2 x}{2} + c$
 (c) $x \sin x + \cos x + \frac{\sin^2 x}{2} + c$
 (d) $x \sin x - x \cos x + \frac{\sin^2 x}{2} + c$

(c) Let $I = \int (e^{\log x} + \sin x) \cos x dx$

$$= \int x \cos x dx + \int \sin x \cos x dx$$

$$= I_1 + I_2$$

Where, $I_1 = \int x \cos x dx$
 and $I_2 = \int \sin x \cdot \cos x dx$
 Now, $I_1 = \int_1^x x \cos x dx$

By using integration by parts, we get

$$I_1 = x \int \cos x dx - \int \left[\frac{d}{dx} (x) \int \cos x dx \right] dx$$

$$= x \sin x - \int 1 \times \sin x dx$$

$$= x \sin x + \cos x$$

and $I_2 = \int \sin x \cdot \cos x dx$
 Put $\sin x = t \Rightarrow \cos x dx = dt$

$$\therefore I_2 = \int t dt = \frac{t^2}{2} = \frac{\sin^2 x}{2} + c$$

[\because put $t = \sin x$]

$$\therefore I = x \sin x + \cos x + \frac{\sin^2 x}{2} + c$$

84. What is the domain of the function $f(x) = \cos^{-1}(x - 2)$?

- (a) $[-1, 1]$ (b) $[1, 3]$ (c) $[0, 5]$ (d) $[-2, 1]$
- (b) We know domain of $\cos^{-1} x$ is $[-1, 1]$
- $$\therefore \text{Domain of } \cos^{-1}(x - 2) \text{ is}$$
- $$-1 \leq x - 2 \leq 1$$
- $$\Rightarrow -1 + 2 \leq x \leq 1 + 2$$
- $$\Rightarrow 1 \leq x \leq 3$$
- Hence, domain of the function is $[1, 3]$.

85. What is the area of the region enclosed between the curve $y^2 = 2x$ and the straight line $y = x$?

- (a) $\frac{1}{2}$ (b) 1 (c) $\frac{2}{3}$ (d) 2

(c) Given curve $y^2 = 2x$ is a parabola having vertex $(0, 0)$ and open right side. Given straight line $y = x$, which passes through origin. The point of intersection of line $y = x$ and curve is $(x)^2 = 2x$

$$\Rightarrow x(x - 2) = 0 \Rightarrow x = 0, 2$$

Put $x = 0$, then $y = 0$
 Put $x = 2$, then $y^2 = 2 \times 2$

$$y = \pm 2$$

\therefore The point of intersection of given curve is $O(0, 0)$ and $A(2, 2)$.

Now, area of shaded region OABO

$$= \int (y_2 - y_1) dx$$

$$= \int_0^2 (\sqrt{2x} - x) dx$$

$$= \left[\sqrt{2} \frac{x^{3/2}}{3/2} - \frac{x^2}{2} \right]_0^2$$

$$= \left[\frac{2\sqrt{2}}{3} x^{3/2} - \frac{x^2}{2} \right]_0^2$$

$$= \left[\frac{2\sqrt{2}}{3} 2^{3/2} - \frac{2^2}{2} - 0 - 0 \right]$$

$$= \frac{8}{3} - 2 = \frac{2}{3}$$

86. If $f(x) = 2x - x^2$, then what is the value of $f(x+2) + f(x-2)$ when $x = 0$?

- (a) -8 (b) -4
(c) 8 (d) 4

⊙ (a) We have, $f(x) = 2x - x^2$

Now, $f(x+2) + f(x-2) = [2(x+2) - (x+2)^2] + [2(x-2) - (x-2)^2]$

$$= [2x + 4 - (x^2 + 4 + 4x)] + [2x - 4 - (x^2 + 4 - 4x)]$$

$$= [-x^2 - 2x] + [-x^2 + 6x - 8]$$

$$= -2x^2 + 4x - 8$$

At $x = 0$,

$$f(x+2) + f(x-2) = -2(0)^2 + 4(0) - 8$$

$$= -0 + 0 - 8$$

$$= -8$$

87. If $x^m y^n = a^{m+n}$, then what is $\frac{dy}{dx}$ equal to?

- (a) $\frac{my}{nx}$ (b) $-\frac{my}{nx}$
(c) $\frac{mx}{ny}$ (d) $-\frac{ny}{mx}$

⊙ (b) We have, $x^m y^n = a^{m+n}$

On taking log both sides, we get

$$\log x^m + \log y^n = (m+n)\log a$$

$$m \log x + n \log y = (m+n)\log a$$

On differentiating both sides w.r.t. 'x' we get

$$\frac{m}{x} + \frac{n}{y} \frac{dy}{dx} = 0$$

$$\Rightarrow \frac{dy}{dx} = \frac{-my}{nx}$$

88. What is $\int \frac{dx}{x(x^n+1)}$ equal to?

(a) $\frac{1}{n} \ln \left(\frac{x^n}{x^n+1} \right) + c$

(b) $\ln \left(\frac{x^n+1}{x^n} \right) + c$

(c) $\ln \left(\frac{x^n}{x^n+1} \right) + c$

(d) $\frac{1}{n} \ln \left(\frac{x^n+1}{x^n} \right) + c$

⊙ (a) Let $I = \int \frac{dx}{x(x^n+1)}$

$$= \int \frac{x^{n-1} dx}{x^n(x^n+1)}$$

[Multiply numerator and denominator by x^{n-1}]

Put $x^n + 1 = t$

$$nx^{n-1} dx = dt$$

$$\therefore I = \int \frac{dt}{n(t-1)t}$$

$$= \frac{1}{n} \left[\int \frac{1}{t-1} dt - \int \frac{1}{t} dt \right]$$

$$= \frac{1}{n} [\log |t-1| - \log t] + c$$

$$= \frac{1}{n} \log \left| \frac{t-1}{t} \right|$$

$$\left[\because \log m - \log n = \log \frac{m}{n} \right]$$

$$= \frac{1}{n} \log \left(\frac{x^n+1-1}{x^n+1} \right) + c$$

[put $t = x^n + 1$]

$$= \frac{1}{n} \log \left(\frac{x^n}{x^n+1} \right) + c$$

89. What is the minimum value of $|x-1|$, where $x \in R$?

- (a) 0 (b) 1
(c) 2 (d) -1

⊙ (a) Let $y = |x-1| = \begin{cases} x-1, & x \geq 1 \\ -(x-1), & x < 1 \end{cases}$

The graph of a given function is shown above. From the graph it is clear that the minimum value of given function is 0.

90. What is the value of k such that integration of $\frac{3x^2+8-4k}{x}$ with respect to x , may be a rational function?

- (a) 0 (b) 1 (c) 2 (d) -2

⊙ (c) Now, $I = \int \frac{3x^2+8-4k}{x} dx$

$$= \int \left(3x + \frac{8}{x} - \frac{4k}{x} \right) dx$$

$$= \frac{3x^2}{2} + 8 \log|x| - 4k \log|x| + C$$

$$I = \frac{3x^2}{2} + (8-4k) \log|x| + C$$

Integration / become a rational, if

$$8 - 4k = 0$$

$$k = 2$$

91. Consider the following statements for $f(x) = e^{-|x|}$:

- The function is continuous at $x = 0$.
- The function is differentiable at $x = 0$.

Which of the above statements is/are correct?

- (a) 1 Only (b) 2 Only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) We have, $f(x) = e^{-|x|}$

$$= \begin{cases} e^{-x}, & x \geq 0 \\ e^x, & x < 0 \end{cases}$$

It is clear from the graph that $f(x)$ is continuous everywhere. But $f(x)$ is not differentiable at $x = 0$, due to sharp shape.

Hence, Statement 1 is correct but Statement 2 is incorrect.

92. What is the maximum value of $\sin x \cdot \cos x$?

- (a) 2 (b) 1 (c) $\frac{1}{2}$ (d) $2\sqrt{2}$

⊙ (c) Let $f(x) = \sin x \cos x$

$$= \frac{1}{2} \times 2 \sin x \cos x$$

[Multiply numerator and denominator by 2]

$$= \frac{1}{2} \sin 2x$$

We know that maximum value of $\sin 2x$ is 1.

$$\therefore f(x)_{\max} = \frac{1}{2} \times 1 = \frac{1}{2}$$

93. What is $\lim_{x \rightarrow 0} \frac{3^x + 3^{-x} - 2}{x}$ equal to?

- (a) 0 (b) -1
(c) 1 (d) Limit does not exist

⊙ (a) $\lim_{x \rightarrow 0} \frac{3^x + 3^{-x} - 2}{x}$ (form $\frac{0}{0}$)

$$\lim_{x \rightarrow 0} \frac{3^x \log 3 - 3^{-x} \log 3 - 0}{1}$$

[by using L' Hospital's rule]

$$= 3^0 \log 3 - 3^0 \log 3$$

$$= \log 3 - \log 3$$

$$= 0$$

94. What is the derivative of $\tan^{-1} x$ with respect to $\cot^{-1} x$?

- (a) $-\frac{1}{x^2 + 1}$ (b) 1
(c) $\frac{1}{x^2 + 1}$ (d) $-\frac{x}{x^2 + 1}$

⊙ (a) Let $f(x) = \tan^{-1} x$ and $g(x) = \cot^{-1} x$

On differentiating w.r.t 'x', we get
 $f'(x) = \frac{1}{1+x^2}$ and $g'(x) = -\frac{1}{1+x^2}$

$$\therefore \frac{\frac{d}{dx} f(x)}{\frac{d}{dx} g(x)} = \frac{\frac{1}{1+x^2}}{-\frac{1}{1+x^2}} = -1$$

95. The function $u(x, y) = c$ which satisfies the differential equation

- $x(dx - dy) + y(dy - dx) = 0$, is
 (a) $x^2 + y^2 = xy + c$
 (b) $x^2 + y^2 = 2xy + c$
 (c) $x^2 - y^2 = xy + c$
 (d) $x^2 - y^2 = 2xy + c$

⊙ (b) We have,

$$x(dx - dy) + y(dy - dx) = 0$$

$$\Rightarrow xdx + ydy - (xdy + ydx) = 0$$

$$\Rightarrow xdx + ydy - d(xy) = 0$$

On integrating both sides, we get

$$\frac{x^2}{2} + \frac{y^2}{2} - xy = \frac{c}{2}$$

$$x^2 + y^2 = 2xy + c$$

96. What is the minimum value of

$$3 \cos \left(A + \frac{\pi}{3} \right) \text{ where } A \in \mathbb{R}?$$

- (a) -3 (b) -1
(c) 0 (d) 3

⊙ (a) Let $f(x) = 3 \cos \left(A + \frac{\pi}{3} \right)$

We know that, the minimum value of

$$\cos \left(A + \frac{\pi}{3} \right) \text{ is } -1.$$

$$\therefore \text{Minimum value of } f(x) = 3 \times (-1) = -3$$

97. Consider the following statements:

- The function $f(x) = \ln x$ increases in the interval $(0, \infty)$.
- The function $f(x) = \tan x$ increases in the interval $\left(-\frac{\pi}{2}, \frac{\pi}{2} \right)$.

Which of the above statements is/are correct?

- (a) 1 Only (b) 2 Only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) 1. We have $f(x) = \ln(x)$

It is clear from the graph that $f(x)$ is increasing in the interval $(0, \infty)$.

2. We have $f(x) = \tan(x)$

It is clear from the graph that $f(x)$ is increasing in the interval $\left(-\frac{\pi}{2}, \frac{\pi}{2} \right)$.

Hence, both statements are correct.

98. Which one of the following is correct in respect of the graph of

$$y = \frac{1}{x-1}?$$

- (a) The domain is $\{x \in \mathbb{R} \mid x \neq 1\}$ and the range is the set of reals
 (b) The domain is $\{x \in \mathbb{R} \mid x \neq 1\}$, the range is $\{y \in \mathbb{R} \mid y \neq 0\}$ and the graph intersects y-axis at $(0, -1)$
 (c) The domain is the set of reals and the range is the singleton set $\{0\}$
 (d) The domain is $\{x \in \mathbb{R} \mid x \neq 1\}$ and the range is the set of points on the y-axis

⊙ (b) We have, $y = \frac{1}{x-1}$... (i)

The domain of given graph is $\{x \in \mathbb{R} : x \neq 1\}$

$$\text{Consider } y = \frac{1}{x-1}$$

$$\Rightarrow x-1 = \frac{1}{y}$$

$$\Rightarrow x = \frac{1}{y} + 1 = \frac{1+y}{y}$$

Here, we see that x is not defined for $y = 0$.

\therefore Range of given curve is $\{y \in \mathbb{R} : y \neq 0\}$

Also graph intersects Y-axis, put $x = 0$ in Eq. (i), we get

$$y = \frac{1}{0-1} = -1$$

Hence, graph intersects Y-axis at point $(0, -1)$.

99. What is the solution of the differential equation $\ln \left(\frac{dy}{dx} \right) = x$?

- (a) $y = e^x + c$ (b) $y = e^{-x} + c$
(c) $y = \ln x + c$ (d) $y = 2 \ln x + c$

⊙ (a) Given differential equation is

$$\ln \left(\frac{dy}{dx} \right) = x \Rightarrow \frac{dy}{dx} = e^x$$

$$\Rightarrow dy = e^x dx$$

On integrating both sides, we get

$$y = e^x + c$$

100. Let l be the length and b be the breadth of a rectangle such that $l + b = k$. What is the maximum area of the rectangle?

- (a) $2k^2$ (b) k^2 (c) $\frac{k^2}{2}$ (d) $\frac{k^2}{4}$

⊙ (d) We have, $l + b = k$

Now, area of rectangle $A = lb$

$$A = l(k-l)$$

On differentiating w.r.t, 'l', we get

$$\frac{dA}{dl} = (k-l) + l(0-1) = k-2l$$

For maximum, put $\frac{dA}{dl} = 0$

$$k-2l = 0, l = \frac{k}{2}$$

$$\text{Now, } \frac{d^2A}{dl^2} = -2 < 0$$

Therefore A is maximum at $l = \frac{k}{2}$

\therefore Value of maximum area,

$$A = \frac{k}{2} \left(k - \frac{k}{2} \right) = \frac{k}{2} \left(\frac{k}{2} \right) = \frac{k^2}{4}$$

101. The numbers 4 and 9 have frequencies x and $(x-1)$ respectively. If their arithmetic mean is 6, then what is the value of x ?

(a) 2 (b) 3 (c) 4 (d) 5

⊙ (b) Given, arithmetic mean = 6

$$\therefore \frac{4 \times x + 9 \times (x-1)}{x + (x-1)} = 6$$

$$\Rightarrow 4x + 9x - 9 = 6(2x - 1)$$

$$\Rightarrow 13x - 9 = 12x - 6$$

$$\Rightarrow x = 3$$

102. If three dice are rolled under the condition that no two dice show the same face, then what is the probability that one of the faces is having the number 6?

- (a) $\frac{5}{6}$ (b) $\frac{5}{9}$ (c) $\frac{1}{2}$ (d) $\frac{5}{12}$

⊙ (c) Let S = Total sample space
 $= 6^3 = 216$

E = Event of getting no two face have same number. i.e. all three faces have distinct numbers.

$\therefore n(E) = 6 \times 5 \times 4 = 120$

and F = Event of getting one of the face have 6 number.

$n(F) = (1 \times 5 \times 4) \times 3 = 60$

and $n(E \cap F) = 60$

$$\begin{aligned} \therefore P\left(\frac{F}{E}\right) &= \frac{P(F \cap E)}{P(E)} \\ &= \frac{n(F \cap E) / n(S)}{n(E) / n(S)} \\ &= \frac{60 / 216}{120 / 216} = \frac{60}{120} = \frac{1}{2} \end{aligned}$$

103. If $P(A \cup B) = \frac{5}{6}$, $P(A \cap B) = \frac{1}{3}$ and $P(\text{not } A) = \frac{1}{2}$, then which one of

the following is not correct?

(a) $P(B) = \frac{2}{3}$

(b) $P(A \cap B) = P(A)P(B)$

(c) $P(A \cup B) > P(A) + P(B)$

(d) $P(\text{not } A \text{ and not } B) = P(\text{not } A)P(\text{not } B)$

⊙ (c) We have, $P(A \cup B) = \frac{5}{6}$,

$P(A \cap B) = \frac{1}{3}$

and $P(\text{not } A) = \frac{1}{2}$

$\Rightarrow P(A) = 1 - \frac{1}{2} = \frac{1}{2}$

(a) $\therefore P(A \cup B) = P(A) + P(B) - P(A \cap B)$

$\Rightarrow \frac{5}{6} = \frac{1}{2} + P(B) - \frac{1}{3}$

$\Rightarrow P(B) = \frac{5}{6} - \frac{1}{2} + \frac{1}{3} = \frac{5 - 3 + 2}{6} = \frac{4}{6} = \frac{2}{3}$

Which is correct.

(b) $P(A) \cdot P(B) = \frac{1}{2} \times \frac{2}{3} = \frac{1}{3}$

$= P(A \cap B)$ which is

correct.

(c) Now, $P(A) + P(B) = \frac{1}{2} + \frac{2}{3} = \frac{7}{6}$

and $P(A \cup B) = \frac{5}{6}$

$\therefore P(A \cup B) < P(A) + P(B)$, which is incorrect.

Hence, option (c) is not correct.

104. The sum of deviations of n number of observations measured from 2.5 is 50. The sum of deviations of the same set of observations measured from 3.5 is -50. What is the value of n ?

- (a) 50 (b) 60 (c) 80 (d) 100

⊙ (d) We have,

$\Sigma(x_i - 2.5) = 50$

and $\Sigma(x_i - 3.5) = -50$

$\Rightarrow \Sigma x_i - (2.5)n = 50 \dots (i)$

and $\Sigma x_i - (3.5)n = -50 \dots (ii)$

On subtracting Eq. (ii) from Eq. (i), we get $n = 100$

105. A data set of n observations has mean $2M$, while another data set of $2n$ observations has mean M . What is the mean of the combined data sets?

- (a) M (b) $\frac{3M}{2}$ (c) $\frac{2M}{3}$ (d) $\frac{4M}{3}$

⊙ (d) Given, $\bar{x}_1 = 2M$

$\bar{x}_2 = M$

and $n_1 = n$ and $n_2 = 2n$

\therefore Mean of the combined data

$$\begin{aligned} &= \frac{n_1 \bar{x}_1 + n_2 \bar{x}_2}{n_1 + n_2} \\ &= \frac{n \times 2M + 2n \times M}{n + 2n} \\ &= \frac{4nM}{3n} = \frac{4M}{3} \end{aligned}$$

Directions (Q. Nos. 106-108) Read the following information and answer the three items that follow.

Marks	Number of Students	
	Physics	Mathematics
10-20	8	10
20-30	11	21
30-40	30	38
40-50	26	15
50-60	15	10
60-70	10	6

106. The difference between number of students under Physics and Mathematics is largest for the interval

- (a) 20-30 (b) 30-40
 (c) 40-50 (d) 50-60

⊙ (c)

Marks	Number of students		Difference $ P - M $
	Physics (P)	Mathematics (M)	
10-20	8	10	$ 8 - 10 = 2$
20-30	11	21	$ 11 - 21 = 10$
30-40	30	38	$ 30 - 38 = 8$
40-50	26	15	$ 26 - 15 = 11$
50-60	15	10	$ 15 - 10 = 5$
60-70	10	6	$ 10 - 6 = 4$

The largest difference between number of students under Physics and Mathematics is 11, which lies in the interval 40-50.

107. Consider the following statements:

- Modal value of the marks in Physics lies in the interval 30-40.
- Median of the marks in Physics is less than of marks in Mathematics.

Which of the above statements is/are correct?

- (a) 1 Only
 (b) 2 Only
 (c) Both 1 and 2
 (d) Neither 1 nor 2

⊙ (a)

Marks	Number of students		Cumulative Frequencies	
	Physics (P)	Mathematics (M)	Physics (cf_1)	Mathematics (cf_2)
10-20	8	10	8	10
20-30	11	21	19	31
30-40	30	38	49	69
40-50	26	15	75	84
50-60	15	10	90	94
60-70	10	6	100	100

1. The maximum frequency in Physics is 30, which lies in the interval 30-40.

Hence, modal value lies in the interval 30-40, which is correct statement.

2. Cumulative frequency of Physics is $N_1 = 100$

Now, $\frac{N_1}{2} = \frac{100}{2} = 50$

Just greater than $\frac{N_1}{2}$ is 75, which

lies in the interval 40-50.

Here, $cf_1 = 49$, $f_1 = 26$,

$h = 10$, $l = 40$

∴ Median of Physics, Md_1

$$= l + \frac{\frac{N_1}{2} - cf_1}{f_1} \times h$$

$$= 40 + \frac{50 - 49}{26} \times 10$$

$$= 40 + \frac{10}{26} = 40 + 0.38$$

$$= 40.38$$

Cumulative frequency of Mathematics is $N_2 = 100$

Now, $\frac{N_2}{2} = \frac{100}{2} = 50$

Just greater than $\frac{N_2}{2}$ is 69, which lies in the interval 30-40.

Here, $cf_2 = 31$, $f_2 = 38$, $h = 10$,
 $l = 30$

Median of Mathematics (Md_2)

$$= l + \frac{\frac{N_2}{2} - cf_2}{f_2} \times h$$

$$= 30 + \frac{50 - 31}{38} \times 10$$

$$= 30 + \frac{190}{38}$$

$$= 30 + 5 = 35$$

Here we see that median marks of Physics is greater than median marks of Mathematics. Hence, statement 2 is incorrect.

108. What is the mean of marks in Physics?

- (a) 38.4 (b) 39.4 (c) 40.9 (d) 41.6

⊙ (c)

Marks	Mid value	Number of students in Physics (f_i)	$\mu_i = \frac{x_i - 45}{10}$	$\mu_i f_i$
10-20	15	8	-3	-24
20-30	25	11	-2	-22
30-40	35	30	-1	-30
40-50	45	26	0	0
50-60	55	15	1	15
60-70	65	10	2	20
Total		$\Sigma f_i = 100$		$\Sigma f_i \mu_i = -41$

Here, $A = 45$, $h = 10$

∴ Mean = $A + \frac{\Sigma f_i \mu_i}{\Sigma f_i} \times h$

$$= 45 + \frac{(-41)}{100} \times 10$$

$$= 45 - 4.1 = 40.9$$

109. What is the standard deviation of the observations $-\sqrt{6}, -\sqrt{5}, -\sqrt{4}, -1, 1, \sqrt{4}, \sqrt{5}, \sqrt{6}$?

- (a) $\sqrt{2}$ (b) 2 (c) $2\sqrt{2}$ (d) 4

⊙ (b) Now, mean of given observations,

$$\bar{x} = \frac{-\sqrt{6} - \sqrt{5} - \sqrt{4} - 1 + 1 + \sqrt{4} + \sqrt{5} + \sqrt{6}}{8}$$

$$= 0$$

Now, standard deviation, σ

$$= \sqrt{\frac{\Sigma(x_i - \bar{x})^2}{n}}$$

$$= \sqrt{\frac{(-\sqrt{6} - 0)^2 + (-\sqrt{5} - 0)^2 + (-\sqrt{4} - 0)^2 + (-1 - 0)^2 + (1 - 0)^2 + (\sqrt{4} - 0)^2 + (\sqrt{5} - 0)^2 + (\sqrt{6} - 0)^2}{8}}$$

$$= \sqrt{\frac{6 + 5 + 4 + 1 + 1 + 4 + 5 + 6}{8}}$$

$$= \sqrt{\frac{32}{8}} = \sqrt{4} = 2$$

110. If $\Sigma x_i = 20$, $\Sigma x_i^2 = 200$ and $n = 10$ for an observed variable x , then what is the coefficient of variation?

- (a) 80 (b) 100 (c) 150 (d) 200

⊙ (d) ∴ Coefficient of variation, = $\frac{\sigma}{\bar{x}} \times 100$

Now, standard deviation,

$$\sigma = \frac{1}{n} \sqrt{n \Sigma x_i^2 - (\Sigma x_i)^2}$$

$$= \frac{1}{10} \sqrt{10 \times 200 - (20)^2}$$

$$= \frac{1}{10} \sqrt{2000 - 400}$$

$$= \frac{1}{10} \sqrt{1600}$$

$$= \frac{40}{10} = 4$$

and mean, $\bar{x} = \frac{\Sigma x_i}{n}$

$$= \frac{20}{10} = 2$$

∴ Coefficient of variation = $\frac{4}{2} \times 100 = 200$

111. What is the probability that

February of a leap year selected at random, will have five Sundays?

- (a) $\frac{1}{5}$ (b) $\frac{1}{7}$
(c) $\frac{2}{7}$ (d) 1

⊙ (b) In a leap year, February has 29 days. In out of 29 days, there are four weeks and one day extra. In out of the four weeks, there exist four Sunday. In one extra days, it may be Sunday or Monday or Tuesday or Wednesday or Thursday or Friday or Saturday.

Probability of getting five sundays in the month of February = $\frac{1}{7}$

112. The arithmetic mean of 100 observations is 40. Later, it was found that an observation '53' was wrongly read as '83'. What is the correct arithmetic mean?

- (a) 39.8 (b) 39.7 (c) 39.6 (d) 39.5

⊙ (b) Correct arithmetic mean

$$= \frac{100 \times 40 - 83 + 53}{100}$$

$$= \frac{4000 - 30}{100} = \frac{3970}{100} = 39.7$$

113. A husband and wife appear in an interview for two vacancies for the same post. The probability of the husband's selection is $\frac{1}{7}$ and that of

the wife's selection is $\frac{1}{5}$. If the

events are independent, then the probability of which one of the

following is $\frac{11}{35}$?

- (a) At least one of them will be selected
(b) Only one of them will be selected
(c) None of them will be selected
(d) Both of them will be selected

⊙ (a) Now, the probability of husband's selection,

$$P(H) = \frac{1}{7}$$

$$\Rightarrow P(\bar{H}) = 1 - \frac{1}{7} = \frac{6}{7}$$

and the probability of wife's selection,

$$P(W) = \frac{1}{5}$$

$$\Rightarrow P(\bar{W}) = 1 - \frac{1}{5} = \frac{4}{5}$$

Now, probability of none of them is selected

$$= P(\bar{H} \cap \bar{W}) = P(\bar{H}) P(\bar{W})$$

$$= \frac{6}{7} \times \frac{4}{5} = \frac{24}{35}$$

Now, probability that at least one of them is selected

$$= 1 - P(\text{None of them is selected})$$

$$= 1 - \frac{24}{35} = \frac{11}{35}$$

114. A dealer has a stock of 15 gold coins out of which 6 are counterfeits. A person randomly picks 4 of the 15 gold coins. What is the probability that all the coins picked will be counterfeits?

- (a) $\frac{1}{91}$ (b) $\frac{4}{91}$
(c) $\frac{6}{91}$ (d) $\frac{15}{91}$

⊙ (a) Total number of gold coins = 15
and number of counterfeit coins = 6
∴ Probability of getting all four coins are counterfeit = $\frac{{}^6C_4}{{}^{15}C_4}$

$$= \frac{6 \times 5}{2 \times 1} = \frac{15 \times 14 \times 13 \times 12}{4 \times 3 \times 2 \times 1} = \frac{6 \times 5 \times 4 \times 3}{15 \times 14 \times 13 \times 12} = \frac{1}{7 \times 13} = \frac{1}{91}$$

- 115.** A committee of 3 is to be formed from a group of 2 boys and 2 girls. What is the probability that the committee consists of 2 boys and 1 girl?
- (a) $\frac{2}{3}$ (b) $\frac{1}{4}$
(c) $\frac{3}{4}$ (d) $\frac{1}{2}$

⊙ (d) Total number of persons = 2 + 2 = 4
∴ Probability of getting a committee of 3 persons = $\frac{{}^2C_2 \times {}^2C_1}{{}^4C_3} = \frac{1 \times 2}{4} = \frac{1}{2}$

- 116.** In a lottery of 10 tickets numbered 1 to 10, two tickets are drawn simultaneously. What is the probability that both the tickets drawn have prime numbers?
- (a) $\frac{1}{15}$ (b) $\frac{1}{2}$ (c) $\frac{2}{15}$ (d) $\frac{1}{5}$

⊙ (c) Total number of lottery tickets = 10
The prime number from 1 to 10 are {2, 3, 5, 7}
∴ Probability of drawing two prime number tickets

$$= \frac{{}^4C_2}{{}^{10}C_2} = \frac{4 \times 3}{10 \times 9} = \frac{2}{15}$$

- 117.** Let X and Y represent prices (in ₹) of a commodity in Kolkata and Mumbai respectively. It is given that $\bar{X} = 65, \bar{Y} = 67, \sigma_x = 2.5, \sigma_y = 3.5$ and $r(X, Y) = 0.8$. What is the equation of regression of Y on X?
- (a) $Y = 0.175X - 5$
(b) $Y = 1.12X - 5.8$

(c) $Y = 1.12X - 5$
(d) $Y = 0.17X + 5.8$

⊙ (b) We have,
 $\bar{X} = 65, \bar{Y} = 67,$
 $\sigma_x = 2.5, \sigma_y = 3.5$

and $r(X, Y) = 0.8$
The equation of regression of Y on X is

$$Y - \bar{Y} = r \frac{\sigma_y}{\sigma_x} (X - \bar{X})$$

$$\Rightarrow Y - 67 = 0.8 \times \frac{3.5}{2.5} (X - 65)$$

$$\Rightarrow Y - 67 = 1.12 (X - 65)$$

$$\Rightarrow Y = 1.12X - 72.8 + 67$$

$$\Rightarrow Y = 1.12X - 5.8$$

- 118.** Consider a random variable X which follows Binomial distribution with parameters $n = 10$ and $p = \frac{1}{5}$.

Then $Y = 10 - X$ follows Binomial distribution with parameters n and p respectively given by

(a) $5, \frac{1}{5}$ (b) $5, \frac{2}{5}$
(c) $10, \frac{3}{5}$ (d) $10, \frac{4}{5}$

⊙ (d) Given, $B(X, n, p) = B(X, 10, \frac{1}{5})$
∴ $B(X, n, p) = {}^nC_x p^x (1-p)^{n-x}$

$$= {}^{10}C_x \left(\frac{1}{5}\right)^x \left(1 - \frac{1}{5}\right)^{10-x}$$

[put $p = \frac{1}{5}$]

$$= {}^{10}C_{10-x} \left(\frac{4}{5}\right)^{10-x} \left(\frac{1}{5}\right)^x$$

[∵ ${}^nC_r = {}^nC_{n-r}$]

$$= {}^{10}C_y \left(\frac{4}{5}\right)^y \left(\frac{1}{5}\right)^{10-y}$$

[∵ $Y = 10 - X$]

$$= B(Y, n, p)$$

Where, $n = 10$ and $p = \frac{4}{5}$

- 119.** If A and B are two events such that $P(A) = 0.6, P(B) = 0.5$ and $P(A \cap B) = 0.4$, then consider the following statements
- $P(\bar{A} \cup B) = 0.9$
 - $P(\bar{B} / \bar{A}) = 0.6$
- Which of the above statements is/are correct?
- (a) 1 Only (b) 2 Only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (d) We have,
 $P(A) = 0.6, P(B) = 0.5$ and $P(A \cap B) = 0.4$

1. $P(\bar{A} \cup B) = 1 - P(A) + P(A \cap B)$
 $= 1 - 0.6 + 0.4$
 $= 0.8$, which is incorrect.

2. $P(\bar{B} / \bar{A}) = \frac{P(\bar{B} \cap \bar{A})}{P(\bar{A})}$

$$= \frac{P(A \cup B)}{P(\bar{A})}$$

$$= \frac{1 - P(A \cap B)}{1 - P(A)}$$

$$= \frac{1 - [P(A) + P(B) - P(A \cap B)]}{1 - P(A)}$$

$$= \frac{1 - [0.6 + 0.5 - 0.4]}{1 - 0.6}$$

$$= \frac{1 - [0.7]}{0.4} = \frac{0.3}{0.4} = 0.75$$

Which is incorrect.
Hence, both statements are incorrect.

- 120.** Three cooks X, Y and Z bake a special kind of cake and with respective probabilities 0.02, 0.03 and 0.05, it fails to rise. In the restaurant where they work, X bakes 50%, Y bakes 30% and Z bakes 20% of cakes. What is the proportion of failures caused by X?
- (a) $\frac{9}{29}$ (b) $\frac{10}{29}$ (c) $\frac{19}{29}$ (d) $\frac{28}{29}$

⊙ (b) Let A = Bake X-type of cake
B = Bake Y-type of cake
and C = Bake Z-type of cake
Then, $P(A) = 50\% = \frac{50}{100}$

$P(B) = 30\% = \frac{30}{100}$

$P(C) = 20\% = \frac{20}{100}$

$P\left(\frac{X}{A}\right) = 0.02, P\left(\frac{X}{B}\right) = 0.03$

and $P\left(\frac{X}{C}\right) = 0.05$

By using Baye's theorem,

$$P\left(\frac{A}{X}\right) = \frac{P(A) P\left(\frac{X}{A}\right)}{P(A) P\left(\frac{X}{A}\right) + P(B) P\left(\frac{X}{B}\right) + P(C) P\left(\frac{X}{C}\right)}$$

$$= \frac{\frac{50}{100} \times 0.02}{\frac{50}{100} \times 0.02 + \frac{30}{100} \times 0.03 + \frac{20}{100} \times 0.05}$$

$$= \frac{1.00}{1.00 + 0.90 + 1.00} = \frac{1}{2.9} = \frac{10}{29}$$

PAPER II English Language and General Studies

Part A (English Language)

Directions (Q.Nos. 1-10) *Each item in this section consists of a sentence with an underlined word followed by four words. Select the option that is opposite in meaning to the underlined word and your response accordingly.*

1. He nodded absently throughout the meeting.
(a) capably (b) alertly (c) agitatedly (d) dreamily
⊗ (b) The given word means carelessly. Hence, from the given options the correct antonym is alertly which means carefully.
2. I fully believe that the cornerstone of good policy is an electorate that is educated on the national issues.
(a) cerebral (b) enlightened (c) ignorant (d) erudite
⊗ (c) The antonym of 'educated' is ignorant.
3. For important medical decisions, even finding a doctor you trust is not enough.
(a) significant (b) trivial (c) basic (d) probable
⊗ (b) The antonym of 'important' is trivial meaning 'of little value'.
4. Planets move in their orbits.
(a) push (b) rotate (c) stall (d) flow
⊗ (c) The antonym of 'move' is stall meaning 'to stop'.
5. Temperature is a measure of internal energy of an object and is frequently expressed by physicists in units of Kelvin.
(a) found (b) told (c) distributed (d) concealed
⊗ (d) The given word 'expressed' means to convey. Hence, its antonym will be concealed meaning 'to hide'.
6. People argue about why Venus is so much warmer than the Earth.
(a) friendlier (b) colder (c) wilder (d) heavier
⊗ (b) The antonym of 'warmer' is 'colder'.
7. Scientists are concerned whether the oceans and land biosphere will take up as much carbon in the future as they presently do.
(a) worried (b) indifferent (c) curious (d) puzzled
⊗ (b) The antonym of 'concerned' is indifferent meaning 'without any concern'.
8. The biggest debate among scientists today is about cloud feedback.
(a) contend (b) moot (c) wrangle (d) agreement
⊗ (d) The given word 'debate' means to argue. Hence, its antonym will be agreement meaning 'to agree to a thought'.
9. The Earth's climate sensitivity is conventionally defined as the equilibrium temperature increase caused by a doubling of carbon dioxide.
(a) imperviousness (b) willingness
(c) responsiveness (d) closeness
⊗ (a) The given word 'sensitivity' means responsiveness. Its antonym will be imperviousness meaning 'something that will not be affected or will not respond'.

10. The oceans carry a huge amount of heat from the tropics to the high latitudes.
(a) significant (b) major (c) tiny (d) dormant
⊗ (c) The antonym of 'huge' is 'tiny'.

Directions (Q.Nos. 11-20) *Each of the following items in this section consists of a sentence(s), the parts of which have been jumbled. These parts have been labelled as P, Q, R and S. Given below each sentence are four sequences namely (a), (b), (c) and (d). You are required to rearrange the jumbled part of the sentence and mark your response accordingly.*

11. several years ago, course on climate change at Texas

P Q

A & M University Professor Andrew Dessler created an introductory for freshman and sophomores

R S

(a) P R Q S (b) Q R P S (c) S Q R P (d) P Q R S

- ⊗ (a)

12. I realize that solving the climate change problem

P

than solving will be much harder

Q R

the ozone depletion problem

S

(a) P R Q S (b) Q R P S (c) S Q R P (d) P Q R S

- ⊗ (a)

13. although the temperature of this layer of the

P

when directly comparing the satellite

Q

measurements of temperature

R

atmosphere should generally track the surface temperature, we must be careful

S

(a) P R Q S (b) P S Q R (c) S Q R P (d) P Q R S

- ⊗ (b)

14. the element heats up, eventually reaching high temperatures

P

Q

glowing like a dark orange that radiates the visible range,

R

S

(a) P Q S R (b) Q P S R (c) S Q R P (d) P R S Q

- ⊗ (d)

15. two people argue about why Venus is so much warmer

P

to the Sun, so it absorbs more solar energy.

Q

The second argues that it's because Venus has a thick,

R

greenhouse-gas rich atmosphere than the Earth. The first argues that it's because Venus is closer

S

(a) P S Q R (b) Q R P S (c) S Q R P (d) P Q R S

⊗ (a)

16. are now used by more than a thousand firms

P

and are growing in popularity

Q

in the United States and Europe gain sharing-plans

R

S

(a) P R Q S (b) Q R P S (c) P R S Q (d) S P R Q

⊗ (d)

17. adversity without succumbing

P

to the clouds of doubt and jealousy

Q

between friends which is subjected

R

to both prosperity and the essay 'Of Friendship' by Francis Bacon celebrated the intimacy

S

(a) P R Q S (b) Q R P S (c) S R P Q (d) P Q R S

⊗ (c)

18. friends without which the world is

P

make friends and a person wills to want true

Q

it is miserable solitude that compels a person to

R

nothing other than a place of wilderness

S

(a) P R Q S (b) Q R P S (c) R Q P S (d) P Q R S

⊗ (c)

19. takes the longest that never started the job to finish

P

Q

R

S

(a) P R Q S (b) R Q P S (c) S Q R P (d) P Q R S

⊗ (b)

20. to what you can create control, shift

P

your energy instead of worrying about what you cannot

Q

R

S

(a) P R S Q (b) Q R S P
(c) S Q R P (d) R S Q P

⊗ (d)

Directions (Q.Nos.21-30) *Each item in this section consists of a sentence with an underlined word / words followed by your words. Select the option that is nearest in meaning to the underlined word and mark your response accordingly.*

21. She got the divorce within no time.

(a) detachment (b) breaking down
(c) annulment (d) punishment

⊗ (a,c) The given word 'divorce' means annulment or detachment.

22. He was known for his gentle disposition.

(a) harmful (b) amiable (c) cunning (d) adjusting

⊗ (b) The given word gentle means kind and friendly. Therefore, from the given options, 'amiable' meaning friendly is its near synonym.

23. The harder we kick, the better the ball bounces back.

(a) recoils (b) deflates (c) inflates (d) ascends

⊗ (a) The given phrase 'bounces back' means 'to come back to the original position'. Therefore, from the given options, 'recoil' means the same as bounces back.

24. I plan and execute.

(a) desire (b) debate (c) accomplish (d) discard

⊗ (c) The given word 'execute' means to accomplish.

25. He listened to me with equanimity.

(a) carelessly (b) excitedly
(c) patiently (d) half-heartedly

⊗ (c) The given phrase 'with equanimity' means carefully and patiently.

26. The whole thing was a futile exercise.

(a) costly (b) pointless (c) indecisive (d) successful

⊗ (b) The given word 'futile' means 'useless'. Hence, from the given options, 'pointless' is its near synonym.

27. He was too cunning for her.

(a) capable (b) fit (c) intelligent (d) dodgy

⊗ (d) The given word 'cunning' means deceitful. From the given options, 'dodgy' also means deceitful and hence is its near synonym.

28. This decision is crucial for me.

(a) momentous (b) natural (c) primitive (d) inept

⊗ (a) The given word 'crucial' means important. From the given options, 'Momentous' is its near synonym.

29. The media went into a frenzy about the case.

(a) silent (b) creative (c) berserk (d) wrong

⊗ (c) The given phrase 'into a frenzy' means 'to go crazy or mad position'. From the given options, 'berserk' means the same as the phrase.

30. He has been yearning to go home.

(a) declining (b) demanding (c) begging (d) hankering

⊗ (d) The given word 'yearning' means 'intense longing for something. Therefore, from the given options, 'hankering' means the same as the word.

Directions (Q.Nos. 31-40) *Each item in this section has a sentence with a missing preposition. Select the correct preposition from the given option and mark your response accordingly.*

31. Simulations of the 20th century by climate models that exclude the observed increase greenhouse gases fail to simulate the increase in temperature over the second half of the 20th century.

(a) of (b) in (c) by (d) to

⊗ (a) Preposition 'of' is used when we need to refer to a thing.

32. In extremely poor societies, children can be put to work a young age and are therefore a source of income.

(a) in (b) on (c) by (d) at

- ⊗ (d) Preposition 'at' is used when we use a common time phrase.
- 33.** People who are averse hard work, generally do not succeed in life.
(a) to (b) about (c) at (d) on
- ⊗ (a) Preposition 'to' is used when we indicate a receiver of an action.
- 34.** I have known her a long time.
(a) since (b) for (c) at (d) before
- ⊗ (b) Preposition 'for' is used to indicate the length of time.
- 35.** I accepted the offer certain conditions.
(a) on (b) in (c) by (d) within
- ⊗ (a) Preposition 'on' is used to indicate a state of something.
- 36.** She is a woman humble origin.
(a) off (b) of (c) from (d) within
- ⊗ (b) Preposition 'of' is used when we need to refer to a characteristic of a thing/ person.
- 37.** There is no cure the common cold.
(a) for (b) of (c) to (d) on
- ⊗ (a) Preposition 'for' is used to indicate a connection with somebody/something.
- 38.** I ran John yesterday, and it was a pleasant surprise.
(a) by (b) off (c) beside (d) into
- ⊗ (d) Preposition 'into' is used to a point wherein you hit someone or something.
- 39.** My grandmother enjoyed boating the lovely lake.
(a) in (b) on (c) beside (d) within

- ⊗ (b) Preposition 'on' is used to refer to surfaces such as land or water body.
- 40.** He visits the needy to relieve them their sufferings and poverty.
(a) from (b) off (c) of (d) on
- ⊗ (c) Preposition 'of' is used to indicate a belonging of somebody.

Directions (Q.Nos. 41-50) Each item in this section has a sentence with three underlined parts labelled as (a), (b) and (c). Read each sentence to find out whether there is any error in any underlined part and indicate your response against the corresponding letter i.e., (a) or (b) or (c). If you find no error, your response should be indicated as (d).

- 41.** This building comprises of six houses,
(a) (b)
three parking lots and one basement.
c
No error
(d)
- ⊗ (d)
- 42.** I look forward to meet you. No error
(a) (b) (c) (d)
- ⊗ (b) For the sentence to be correct 'meet' must be replaced by 'meeting'.
- 43.** I cannot cope up with this pressure.
(a) (b) (c)
No error
(d)
- ⊗ (b) 'up' must be removed from the sentence to make the sentence grammatically correct.
- 44.** I came to this place by walk. No error
(a) (b) (c) (d)

- ⊗ (c) 'by walk' must be replaced by 'on foot' to make the sentence grammatically correct.
- 45.** What is the time in you watch?
(a) (b) (c)
No error
(d)
- ⊗ (c) 'in' must be replaced by 'by' to make the sentence grammatically correct.
- 46.** The price of my dress
(a)
is higher than that of yours. No error
(b) (c) (d)
- ⊗ (d)
- 47.** My friend's daughter-in-laws
(a) (b)
have come. No error
(c) (d)
- ⊗ (d)
- 48.** I prefer seafood
(a) (b)
than Mediterranean food. No error
(c) (d)
- ⊗ (c) 'Than' must be replaced by 'to' to make the sentence grammatically correct.
- 49.** We were discussing about the issue.
(a) (b) (c)
No error
(d)
- ⊗ (b) 'About' must be removed to make the sentence grammatically correct.
- 50.** Dispose off the garbage
(a) (b)
from the shelves. No error
(c) (d)
- ⊗ (a) 'Off' must be replaced by 'of' to make the sentence grammatically correct.

Part B (General Studies)

- 51.** New Zealand is considered part of which one of the following island groups?
(a) Micronesia (b) Melanesia
(c) Polynesia
(d) Hawaii Island chain
- ⊗ (c) New Zealand is island country in the South Pacific ocean. It is considered as the South westernmost part of Polynesia. Polynesia is a sub-region of Oceania made up of more than 1000 islands scattered over the Central and southern Pacific ocean. The indigenous

people who inhabit the islands of Polynesia are termed Polynesians sharing many similar traits including language family, culture and beliefs. Melanesia islands (Literal meaning 'Islands of Black People'), a Sulo-region of Oceania extending from New Guinea islands to Arafura sea and to Tonga. Micronesia island is a Sulo region of Oceania, composed of thousands of small islands in the Western Pacific ocean.

Hawaii island chain, formerly known as 'Sandwich islands', are an archipelago of 137 islands.

- 52.** Which of the following statements with regard to Pradhan Mantri Krishi Sinchayee Yojana (PMKSY) is/are correct?
1. PMKSY was launched during 2015-16.
2. The basic aim of PMKSY is to enhance physical access of water on farm.

3. One of the main objectives of PMKSY is to achieve convergence is investments in irrigation at the field level.

Select the correct answer using the codes given below.

- (a) Only 1 (b) 1 and 2
(c) 2 and 3 (d) All of these

- ⊗ (d) Pradhan Mantri Krishi Sinchayee Yojana (PMKSY) was launched during 2015-16. It will be implemented across the country with an outlay of ₹ 50,000 crore in five years.

The basic aim of PMKSY is to enhance physical access of water on farm by providing assured irrigation, reducing wastage of water and improving water use efficiency.

To achieve its objectives of achieving convergence of investments in irrigation at the field level. It amalgamated ongoing schemes such as Accelerated Irrigation Benefit Programme (AIBP), Integrated Watershed Management Programme (IWMP) and on-farm water management.

Hence, option (d) 'All of these' is the correct answer.

53. According to Article-79 of the Constitution of India, which of the following is/are described as a part of Parliament of India?

1. The House of the People
2. The Council of States
3. The President of India

Select the correct answer using the codes given below.

- (a) Only 1 (b) 1 and 2
(c) 2 and 3 (d) All of these

- ⊗ (d) As per Article-79 of the Constitution of India, the Council of the Parliament of the Union consists of the President and two Houses known as the Council of States (Rajya Sabha) and the House of the People (Lok Sabha).

54. The Five Year Plan was first launched in

- a. China (b) USSR
(c) India (d) Bhutan

- ⊗ (b) Among the given options, Five Year Plan was first launched in erstwhile USSR (1928-1932) by Joseph Stalin (Soviet Ruler), under 'New Economic Policy'.

• The First Five Year Plan in China was started in 1953 and ended in 1957.

• The First Five Year plan in Bhutan was started in 1961 and ended in 1966, and also it was fully funded by India.

• In India, the First Five Year Plan was introduced in 1951, which was based on Harrod-Domar model and focused primarily on the development of primary sector, especially agriculture and irrigation. On, 1st January, 2015 planning commission (which was responsible for formulating five year plan) was replaced by NITI Aayog (National Institution for Transforming India). The twelfth Five Year Plan (2012-17) would be called the last five year plan of India.

55. The call for *Garibi Hatao* was incorporated in

- (a) Fourth Five Year Plan
(b) Fifth Five Year Plan
(c) Sixth Five Year Plan
(d) Seventh Five Year Plan

- ⊗ (b) *Garibi Hatao* (Remove poverty) was the theme and slogan of Indira Gandhi's 1971 election campaign. The slogan and the proposed anti-poverty programme that came with it were designed to give Gandhi an independent national support, based on rural and urban poor. It was part of the Fifth Five-Year Plan (1975-79). The Fifth Five-Year Plan laid stress on employment, poverty alleviation (*Garibi Hatao*) and justice. The plan also focused on self-reliance in agricultural production and defence. In 1978, the newly elected Morarji Desai government rejected the plan.

The objectives of Fourth Five Year Plan (1969-74) was growth with stability and progressive achievement of self-reliance.

The basic objective of Sixth Five Year Plan (1980-85) was economic liberalisation by eradicating poverty and achieving technological self-reliance.

The objectives of Seventh Five Year Plan (1985-90) includes the establishment of self-sufficient economy, opportunities for productive employment and upgradation of technology.

56. Match List I with List II and select the correct answer using the code given below the lists:

List I (Major Objective)	List II (Five Year Plan)
A. Faster and more inclusive growth	1. First
B. Faster, more inclusive and sustainable growth	2. Fifth
C. Correction of disequilibrium caused by Second World War	3. Eleventh
D. Attaining self-reliance	4. Twelfth

Codes

- | | | | | |
|-----|---|---|---|---|
| | A | B | C | D |
| (a) | 3 | 1 | 4 | 2 |
| (b) | 3 | 4 | 1 | 2 |
| (c) | 2 | 4 | 1 | 3 |
| (d) | 2 | 1 | 4 | 3 |

- ⊗ (b) The term economic planning is used to describe the long-term plans of the Government of India to develop and co-ordinate the economy with efficient utilisation of resources.

First Five Year Plan (1951 to 1956) Its objective was Rehabilitation of refugees, rapid agricultural development to achieve food self-sufficiency in the shortest possible time and control of inflation.

Fifth Five Year Plan (1956 to 1961) Its objective was removal of poverty and attainment of self-reliance.

Eleventh Five Year Plan (2007 to 2012) Its objectives were Rapid and inclusive growth; Empowerment through education and skill development; Reduction of gender inequality and Environmental sustainability.

Twelfth Five Year Plan (2012 to 2017) Its objectives were "faster, sustainable and more inclusive growth". It proposed a growth target of 8%; Raised agriculture output to 4%; Manufacturing sector growth to 10% and services to 9% respectively.

57. Which one of the following Directive Principles was inserted by the Constitution (42nd Amendment) Act, 1976?

- (a) The State shall minimise inequalities in income
(b) Equal justice and free legal aid
(c) Promotion of co-operative societies
(d) Provision for early childhood care

- ⊗ (b) To promote equal justice and to provide free legal aid to the poor (Article-39A) was inserted by the Constitution 42nd Amendment Act, 1976.

The 42nd Amendment Act of 1976 added four new Directive Principles to the original list.

Others are

- To secure opportunities for healthy development of children (Article-39).
- To take steps to secure the participation of workers in the management of industries (Article-43A).
- To protect and improve the environment and to safeguard forests and wildlife (Article-48 A).
- Article 38(2) of Directive Principles of State policies says that State shall

strive to minimise the inequaliting of income, status, facilities, opportunities etc.

- Article 43-B (inserted by 97th Amendment, 2011) deals with the promotion of co-operative societies.
- Article 45 of DPSPs says that state shall endeavour to provide early childhood care and education for all children until they complete the age of six year.
- Directive principles of State Policies (DPSPs), enshrined in Part IV (Article 36 to 51) of Constitution, with the basic idea that the 'State' should keep these principles while framing laws, policies, ordinances etc.

- 58.** A common High Court for two or more States can be established by
- (a) a law passed by the Parliament
 - (b) an order of the Supreme Court of India
 - (c) an order of the President of India
 - (d) an amendment to the Constitution of India

- ⊗ (a) A common High Court for two or more state can be established by a law passed by the Parliament. As per the Constitution of India, Articles-214-231 deals with the provisions of the High Courts in India. At present, we have 25 High Courts in the country, which includes 7 common High Courts.

These are Bombay High Court, Calcutta High Court, Madras High Court, Gauhati High Court, Kerala High Court, Punjab and Haryana High Court and Jammu and Kashmir High Court, Article-217 deals with the appointment of judges.

Article 231 of our Constitution states that Parliament by law establish common high courts for two or more states or for two or more states and a Union Territory. This provision was brought by Seventh Amendment Act, 1956.

- 59.** In the year 1928, a committee of Congress leaders drafted a Constitution for India. The Committee was headed by
- (a) Mahatma Gandhi
 - (b) TB Sapru
 - (c) Motilal Nehru
 - (d) Jawaharlal Nehru
- ⊗ (c) In the 1928, a committee of Congress leaders drafted a Constitution for India. It was headed by Motilal Nehru. It was prepared by a committee of All Parties Conference chaired by Motilal Nehru with Jawaharlal Nehru as its Secretary. There were a total of 9 members in this committee.

This committee was created when Lord Birkenhead, Secretary of State of India asked the Indian leaders to draft a Constitution for the country. The report, which demanded a Dominion Status for India was considered by the Congress. The main idea of the Nehru report was that India would be given Dominion status. The Nehru draft report also defined the citizenship and Fundamental Rights.

Tej Bahadur Sapru (TB Sapru) was an Indian freedom fighter, lawyer, politician and the leader of the liberal party in British ruled India.

- 60.** Which one of the following statements about Jaipal Singh is not correct?
- (a) He was a member of the Constituent Assembly
 - (b) He founded the Adivasi Maha Sabha
 - (c) He was the captain of the first Indian National Hockey Team
 - (d) He campaigned for a separate State of Chhattisgarh

- ⊗ (d) Jaipal Singh Munda (1903-1970) was a politician, prolific writer and sportsman. He was the member of the Constituent Assembly which debated on the new Constitution of the Indian Union and who spoke for the first time in the Assembly (on 19th December, 1946) and owned up proudly to his 'tribal heritage'. He captained the Indian field hockey team to clinch gold in the 1928 Summer Olympics in Amsterdam. Singh became President of Adivasi Mahasabha in 1939.

- 61.** What is 'Tikki Masi' in the context of Malnutrition?
- (a) A specially packaged food item
 - (b) A mascot
 - (c) Name of a scheme
 - (d) Name given to the healthcare providers

- ⊗ (b) 'Tikki Masi' is the mascot unveiled by the Odisha government and UNICEF. It aims to spread awareness about nutrition of children and women. Through state level communication and awareness generation, this mascot is expected to bring out changes in the behaviour of common people and make them aware about child and women's nutrition and development.

- 62.** Which one of the following was the theme of the World Tourism Day, 2019?
- (a) Sustainable tourism
 - (b) Tourism and the digital transformation
 - (c) Tourism : responding to the challenge of climate change

(d) Tourism and jobs : a better future for all

- ⊗ (d) The theme of World Tourism Day' 2019 was 'Tourism and Jobs: A Better Future For All'.
The World Tourism Day which observed globally on 27th September is hosted by a different country every year. India has been selected as the host country for celebration of World Tourism Day 2019 by United Nations World Tourism Organisation (UNWTO). This is for the very first time that India hosted the day in its National Capital, New Delhi.
- 'Sustainable Tourism' was the theme for World Tourism Day, 2017
 - 'Tourism and the Digital Transformation' was the theme for World Tourism Day, 2017.

- 63.** Which one of the following countries has hosted the Army Exercise TSENTR, 2019?

(a) Russia (b) China
(c) Kazakhstan (d) Kyrgyzstan

- ⊗ (a) Armies of India, Pakistan took part in the Army Exercise TSENTR, 2019 that was conducted by Russia from 9th to 23rd September, 2019. It was the first time that forces from India and Pakistan were participated in multilateral exercise together since airstrikes conducted by Indian force, deep in Pakistan's Balakot district on February 2019. Earlier armies of India and Pakistan had met last year as part of military exercise conducted by Shanghai Cooperation Organisation (SCO) also held in Russia.

- 64.** Which one of the following countries is called the 'country of winds'?

(a) India (b) China
(c) Denmark (d) Germany

- ⊗ (c) Denmark is called 'Country of Winds'. Denmark ranks first in the world to produce electricity from wind.

- 65.** Which one of the following is the oldest scientific department of Government of India?

(a) Department of Biotechnology
(b) Survey of India
(c) India Meteorological Department
(d) DRDO

- ⊗ (b) Survey of India, The National Survey and Mapping Organisation of the country under the Department of Science and Technology, is the Oldest Scientific Department of the Government of India. It was set-up in 1767 and has evolved rich traditions over the years.

The Department of Biotechnology is an Indian Government department, under the Ministry of Science and Technology responsible for administrating development and commercialisation in the field of modern biology and biotechnology in India. It was set-up in 1986.

The India Meteorological Department is an agency of the Ministry of Earth Sciences of the Government of India. It is the principal agency responsible for meteorological observations, weather forecasting and seismology. It was founded in 1875.

The Defence Research and Development Organisation is an agency under the Department of Defence Research and Development in Ministry of Defence of the Government of India, charged with the military's research and development, headquartered in Delhi. It was founded in 1958.

66. 'Naseem-Al-Bahr' is a bilateral naval exercise between India and

- (a) United Arab Emirates
(b) Iran
(c) Saudi Arabia
(d) Oman

- ⊙ (d) Naseem-Al-Bahr naval exercise is a bilateral exercise between India and Oman.

India and Oman conducted 12th edition of bilateral maritime exercise Naseem-Al-Bahr in Mormugao Port, Goa in January 2020.

Naseem-Al-Bahr (or sea breeze) is a naval exercise between the Indian Navy and the Royal Navy of Oman (RNOV), being conducted since 1993.

'AL Nagan' is a joint military exercise between Indian and Royal Army of Oman.

'Ex Eastern Bridge' is another bilateral exercise between Indian Airforce and Royal Air Force of Oman.

67. Koneru Humpy excels in which one of the following sports?

- (a) Boxing
(b) Table Tennis
(c) Chess
(d) Billiards

- ⊙ (c) Koneru Humpy is an Indian chess player who is also reigning world rapid champion. In 2002, she became the youngest woman ever to achieve the title of Grandmaster at the age of 15 years, 1 month, 27 days, beating Judit Polgar's previous record by 3 months.

68. Which one of the following was the official mascot of Khelo India Youth Games, 2020?

- (a) Vijaya (b) Yaya
(c) Rongmon (d) Ammu

- ⊙ (a) Jaya the black buck and Vijay the tiger are the mascots for Khelo India Youth Games. The third Khelo India Youth Games was held from 10th January, 2020 and 22nd January, 2020 in Guwahati (Assam) India. The event witnessed 20 national level multidisciplinary grassroots games played among the age groups of under-17 and under-21 categories. Maharashtra defended its title as it topped.

69. In January, 2020, a passenger aircraft crashed in Iran soon after taking off from Tehran's Imam Khomeini airport killing about 170 people onboard. The airplane belongs to

- (a) Qatar Airways
(b) Ukraine International Airlines
(c) Singapore Airlines
(d) Cathay Pacific

- ⊙ (b) A Ukraine International Airlines (UIA) flight 752 (PS752) crashed shortly after taking off from the Iranian capital Tehran's Imam Khomeini airport on 8th January, killing all 176 passengers and crew members on board.

This flight was shot by the Iranian Islamic Revolutionary Guards Corp. This shoot down occurred, five days after US President Donald Trump launched a drone strike that killed Iranian General Qusem Soleimani.

Qatar airways is the state owned flag carrier airline of Qatar.

Cathy Pacific airways limited is the flag carrier airline of Hongkong.

Singapore airlines is the flag carrier airline of Singapore.

70. MILAN, a multilateral naval exercise, 2020 was hosted by which one of the following cities?

- (a) Port Blair (b) Kochi
(c) Visakhapatnam (d) Panaji

- ⊙ (c) MILAN 2020-a multilateral naval exercise scheduled to be conducted by the Indian Navy from 18th to 28th March, 2020, at Visakhapatnam, has been postponed taking into consideration the safety of all participants and travel restrictions imposed by the spread of COVID-19. MILAN was first held in 1995.

Apart from the Indian Navy, the navies of Indonesia, Singapore, Sri Lanka and Thailand participated in the inaugural edition.

71. Chalk and marble are different forms of

- (a) Calcium hydrogen carbonate
(b) Calcium carbonate
(c) Calcium acetate
(d) Sodium carbonate

- ⊙ (b) Chalk and marble are different forms of calcium carbonate.

The chemical formula of calcium carbonate is CaCO_3 . In Earth it is produced by the sedimentation of shells of fossilised fishes, shells one million of years.

It is a precursor of quick lime and slaked lime.

72. The number of maximum electrons in N Shell is

- (a) 2
(b) 8
(c) 18
(d) 32

- ⊙ (d) The maximum number of electrons in N shell is 32. Total electrons in other shells are as follows

K shell	-	2	L shell	-	8
M shell	-	18	N shell	-	32

73. Vinegar is also known as

- (a) Ethanoic acid (b) Nitric acid
(c) Sulphuric acid (d) Tartaric acid

- ⊙ (a) Vinegar is also known as Ethanoic acid. It's chemical formula is CH_3COOH . It contains 5-8% acetic acid by volume.

74. A liquid is kept in a glass beaker.

Which one of the following statements is correct regarding the pressure exerted by the liquid column at the base of the beaker?

- (a) The pressure depends on the area of the base of the beaker
(b) The pressure depends on the height of liquid column
(c) The pressure does not depend on the density of the liquid
(d) The pressure neither depends on the area of the base of the beaker nor on the height of liquid column

- ⊙ (b) Statement (b) is correct regarding the pressure exerted by the liquid column at the base of the beaker the pressure depends upon the density (d), height (h) of liquid column and also on acceleration due to gravity (g).

$$p = hdg$$

75. Which of the following statements is not correct regarding the travel of sound waves?

- (a) Sound waves can travel through water
- (b) Sound waves can travel through air
- (c) Sound waves can travel through steel
- (d) Sound waves can travel through vacuum

⊗ **(d)** Sound waves need a medium to travel. In vacuum, there is no medium, hence, sound waves cannot travel through vacuum.

76. Deendayal Port is located at

- (a) Kerala
- (b) Gujarat
- (c) Maharashtra
- (d) Goa

⊗ **(b)** Deendayal Port Trust (Kandla) is a seaport in Kutch District of Gujarat. Kandla port was renamed as Deendayal Port Trust under the India Port Act of 1908. It is the largest port of India by volume of cargo handled. Kandla Port Trust is, India's busiest major port in recent years.

- Kochi Port is in Kerala.
- Mumbai port and Jawaharlal Nehru port are the two major ports of Maharashtra.
- Marmugao is the major port of Goa.
- At present there are 13 major ports in India and nearly 187 notified Minor and Intermediate ports.

77. Which one of the following cities is associated with Biosafety Protocol to the Convention on Biological Diversity (2000)?

- (a) Geneva
- (b) Nairobi
- (c) Cartagena
- (d) Rio de Janeiro

⊗ **(c)** Cartagena (Colombia) is associated with Biosafety Protocol to the Convention on Biological Diversity. The Cartagena Protocol on Biosafety to the Convention on Biological Diversity is an international agreement which aims to ensure the safe handling, transport and use of Living Modified Organisms (LMOs) resulting from modern biotechnology that may have adverse effects on biological diversity, taking also into account risks to human health. It was adopted on 29th January, 2000 and entered into force on 11th September, 2003.

- Nairobi (Kenya) is the headquarter of 'United Nations Environment Programme (UNEP) which is responsible for coordinating UN's Environmental activities.
- Geneva (Switzerland) is famous for protocol which prohibits the use of

poisonous gases and biological warfare.

- Rio de Janeiro (Brazil) is famous for United Nations Conference on Environment and Development (UNCED), also known as Earth Summit or Rio Summit in 1992.

78. Krishna Raja Sagara Dam/Reservoir is developed on

- (a) river Krishna
- (b) river Tungabhadra
- (c) river Godavari
- (d) river Kavery

⊗ **(d)** The Krishna Raja Sagar Dam was built across river Kavery for the Mysore and Mandya districts in Karnataka in 1932. The dam is named for the then ruler of the Mysore Kingdom, Krishnaraja Wodeyar IV.

- The dam is the creation one of the greatest engineers that India had produced, Sir M. Vishweshwaraiah. His birthday, 15th September is celebrated as Engineers Day.
- The reservoir is also the main source of drinking water for all of Mysore city and almost the whole of Bangalore.
- The water released from this dam is further used as an important source of water in the State of Tamil Nadu.
- Tungabhadra dam is located at Tungabhadra river, a tributary of Krishna river.
- Nagarjuna dam, Srisailem are some of the major dams of Krishna river.
- Gangapur dam, Jayakwadi dam, Ghatghor dam are some of the famous dams across Godavari river.

79. Which one of the following Indian states does not share international border with two or more countries?

- (a) Arunachal Pradesh
- (b) Assam
- (c) Mizoram
- (d) Tripura

⊗ **(d)** Tripura does not share international border with two or more countries. Tripura is bordered by the country of Bangladesh to the West, North and South; and the Indian States of Assam to the North-East; and Mizoram to the East.

Arunachal Pradesh shares international borders with Bhutan in the West, Myanmar in the East, and a disputed border with China in the North at the McMahon Line.

Assam is bordered by Bhutan (in North) and Bangladesh (in South).

Mizoram shares international border with Bangladesh and Myanmar.

80. According to Census of India, 2011, which one among the following is the least populated State in India?

- (a) Maharashtra
- (b) Madhya Pradesh
- (c) Odisha
- (d) Punjab

⊗ **(d)** Among the given options, Punjab (27,704,236) is the least populated state, according to 2011 census. It is the 16th most populated state of India.

- Maharashtra (112,372,972) is the second most populous state of India.
- Madhya Pradesh (72,597,565) is the fifth most populous state of India.
- Odisha (41,947,358) is the eleventh largest state of India in terms of population.
- Uttar Pradesh (199,581,477) is the most populated state of India whereas Sikkim (607,688) is the least populated state of India. According to census, 2011, the total population of India is 1,210,193,422.

81. The speakers of major Indian languages belong to how many language families?

- (a) Two
- (b) Three
- (c) Four
- (d) Six

⊗ **(c)** The Speakers of major Indian language belong to four language families.

Most Indians speak a language belonging to the families of the Indo-Aryan branch of Indo-European (c. 77%), the Dravidian (c. 20.61%), the Austroasiatic (Munda) (c. 1.2%) or the Sino-Tibetan (c. 0.8%).

Article-343 of the Indian Constitution stated that the official language of the Union is Hindi in Devanagari script instead of the extant English. Later, a constitutional amendment, the Official Languages Act, 1963, allowed for the continuation of English alongside Hindi in the Indian Government indefinitely until legislation decides to change it.

The Eighth Schedule of the Indian Constitution lists 22 languages.

82. Where did Gandhiji initially forge the techniques of Satyagraha?

- (a) England
- (b) South Africa
- (c) North Africa
- (d) India

⊗ **(b)** Gandhiji first conceived Satyagraha in 1906 in response to a law discriminating against Asians that was passed by the British colonial Government of the Transvaal in South Africa.

In 1917, the first Satyagraha campaign in India was mounted in the indigo-growing district of Champaran.

Satyagraha (holding onto truth or truth force), a term coined and developed by Gandhiji, is a particular form of non-violent resistance or civil resistance.

83. Who was the Viceroy of India at the time of Gandhiji's Dandi March?

- (a) Lord Irwin (b) Lord Linlithgow
(c) Lord Reading (d) Lord Willingdon

⊙ (a) Lord Irwin was the Viceroy of India at the time of Gandhiji's Dandi March. He served as Viceroy from 1926 to 1931.

In his tenure the First Round Table Conference was organised by Gandhiji started Salt March on 12th March, 1930 to break the oppressive salt taxation levied on Indian. It culminated into beginning of Civil- Disobedience movement.

Lord Linlithgow was viceroy from 1936 to 1944. Cripps Mission and launch of Quit India Movement were significant event of his tenure.

Lord Reading was viceory from 1921 to 1926. In his tenurship, Swaraj Party was formed in India.

Lord Willingdon was viceroy from 1931 to 1936. Signing of Poona Pact and communal award was significant event of his tenure.

84. Which one among the following American news magazines was highly sceptical of Gandhiji's Dandi March initially but within a week completely changed its opinion and saluted him as a Saint and Statesman?

- (a) Saturday Evening Post
(b) Readers Digest
(c) Time
(d) Life

⊙ (c) Time was the American news magazine which was highly sceptical of Gandhiji's Dandi March initially, but within a week completely changed its opinion and saluted him as a Saint and Statesman. It named him its 1930 'Man of the Year'. The wide coverage of Salt March in International media helped in unravelling the true nature of British colonialism in India. It also helped in making Mahatma Gandhi a popular world leader.

Saturday Evening Post (founded on 4th August, 1821) is an American Magazine, currently published 6 times a year.

Readers Digest (founded in 1922) is an American magazine published 10 times a year.

Life an American magazine was founded in 1883.

85. In which of the following years were passenger trains introduced in England?

- (a) 1823 (b) 1825
(c) 1848 (d) 1861

⊙ (b) In 1825, passenger trains were introduced in England. It used steam locomotive built by George Stephenson. The Liverpool and Manchester Railway, opened in 1830, was the first modern railroad. It was a public carrier of both passengers and freight.

86. The correct relation between the radius of curvature R and focal length f of a spherical mirror is

- (a) $R = f$ (b) $R = 2f$
(c) $R = 3f$ (d) $R = 4f$

⊙ (b) For a spherical mirror, radius of curvature = $2 \times$ focal length
i.e., $R = 2f$

87. A lemon kept in water in a glass tumbler appears to be larger than its actual size. It is because of

- (a) reflection of light
(b) scattering of light
(c) refraction of light
(d) polarization of light

⊙ (c) A lemon kept in water in a glass tumbler appears to be larger than its actual size due to refraction of light. Light gets refracted as it passes from water into air. In this case, the tumbler with water acts as a convex lens which is curved outwards in the middle and can focus light rays to magnify objects.

88. Light enters the eye through a thin membrane called

- (a) Retina (b) Cornea
(c) Pupil (d) Iris

⊙ (b) Light enters the eye through a thin membrane called 'cornea'. Cornea is the front part of the eye. It forms a thin membrane and lets light enter into the eye.

89. Name the scientist who first used a glass prism to obtain the spectrum of sunlight.

- (a) CV Raman (b) Lord Rayleigh
(c) Isaac Newton (d) S. Chandrasekhar

⊙ (c) Isaac Newton was the first Scientist, who used a glass prism to obtain spectrum of sunlight.

90. The cost of energy to operate an industrial refrigerator that consumes 5 kW power working 10 h per day for 30 days will be (Given that the charge per kWh of energy = ₹ 4)

- (a) ₹ 600 (b) ₹ 6000
(c) ₹ 1200 (d) ₹ 1500

⊙ (b) Given, power $P = 5$ kW
Consumption time per day, $t = 10$ h
Energy consumption per day
 $= P \times t = 5 \text{ kW} \times 10 \text{ h} = 50 \text{ kWh}$
Cost per kWh = ₹ 4
Daily cost = $50 \times 4 = ₹ 200$
Cost for 30 days = $30 \times 200 = ₹ 6000$

91. Which one of the following statements regarding magnetic field is not correct?

- (a) Magnetic field is a quantity that has direction and magnitude
(b) Magnetic field lines are closed curves
(c) Magnetic field lines are open curves
(d) No two magnetic field lines are found to cross each other

⊙ (c) Magnetic field lines are always closed curves because magnetic monopoles do not exist.

92. Which one of the following statements is not correct?

- (a) Buckminsterfullerence is an allotrope of carbon
(b) Diamond is a good conductor of electricity
(c) Graphite is a good conductor of electricity
(d) In graphite, each carbon atom is linked to three other carbon atoms

⊙ (b) Statement (b) is not correct whereas statement (a), (c) and (d) are correct. Diamond is a poor conductor of electricity because here each carbon atom is bonded of four other carbon atoms forming rigid three dimensional structure.

93. How many covalent bonds are present in a Chloropropane molecule having molecular formula, C_3H_7Cl ?

- (a) 6 (b) 8
(c) 9 (d) 10

⊙ (d) Ten covalent bonds are present in Chloropropane having molecular formula C_3H_7Cl

94. Which one of the following is the most fundamental characteristic of an element?

- (a) Melting point (b) Atomic number
(c) Colour (d) Atomic weight

➤ (b) Atomic number is the most fundamental characteristic of an element. It is defined as the number of protons found in the nucleus of every atom of that element.

95. Neutrons were discovered by

- (a) James Chadwick
(b) Ernest Rutherford
(c) JJ Thomson
(d) John Dalton

➤ (a) Neutrons were discovered by James Chadwick. Neutrons are uncharged particles found within all atomic nucleus.

96. Atomic mass of an element is equal to the sum of number of

- (a) electrons and protons only
(b) protons and neutrons only
(c) electrons and neutrons only
(d) electrons, protons and neutrons

➤ (b) Atomic mass of an element is equal to the sum of number of protons and neutrons only. e.g. carbon atom,
proton = 6 neutron = 6
Atomic mass = 6 + 6 = 12

97. Which one of the following element's isotope is used in the treatment of cancer?

- (a) Uranium (b) Cobalt
(c) Sodium (d) Iodine

➤ (b) Isotope of Cobalt (Co) is used in the treatment of cancer. Cobalt therapy is the medical use of gamma rays from the radioisotope cobalt-60 to treatment of cancer.

98. Which one of the following cell organelles may play a role in expelling excess water and wastes in case of unicellular organisms?

- (a) Lysosome
(b) Vacuole
(c) Golgi body
(d) Endoplasmic reticulum

➤ (b) In some unicellular eukaryotic organisms (e.g. *Amoeba*), cellular nitrogenous waste such as ammonia and excess water are excreted by exosmosis *via* contractile vacuole. These are special types of vacuoles, which regulates osmotic pressure of cell through osmosis and control water movement across the cell membrane. When these vacuoles merge with the cell membrane they expel wastes into the external aquatic environment.

99. Which one of the following terms describes the practice of growing two or more crops simultaneously on the same piece of land?

- (a) Crop rotation (b) Mixed cropping
(c) Intercropping (d) Mixed farming

➤ (b) Mixed cropping means the practice of growing two or more crops simultaneously on the same piece of land. In this system, pulses and some oilseeds are grown with maize, sorghum and pearl millet. It prevents complete loss of crop due to inadequate rain, pests invasion and pathogen infection on a particular crop. Crop rotation involves growing different crops on the same land in the preplanned succession.

Intercropping is the practice of growing more than one crop on the same field at the same time in different row pattern.

Mixed farming involves the growing of crops as well as the raising of the livestock. On the same piece of land.

100. Which one of the following statements is correct about effects of antibiotics on viruses?

- (a) Viruses are 'non-living' entities but it can interact with antibiotics
(b) Taking antibiotics cures viral infections
(c) Viruses do not possess metabolic pathways on which antibiotics can function, whereas bacteria have such pathways
(d) Viruses are resistant to antibiotics

➤ (c) Virus is an acellular structure which is a non-living particle outside of the body of its host. Thus, it lacks protoplasm which is the site of most of the metabolic activities, antibiotics which are effective against bacteria (living prokaryotic cell), are ineffective on viruses.

101. The Panama Canal opened in 1914, links

- (a) Red sea and Mediterranean sea
(b) Atlantic ocean and Pacific ocean
(c) Indian ocean and Pacific ocean
(d) Adriatic sea and Black sea

➤ (b) The Panama Canal opened in 1914, links Atlantic ocean and Pacific ocean. This canal (82 km), cuts across Isthmus of Panama and is a conduit for maritime trade. Construction of this canal started under French in 1881 and completed under United States in 1914.

The administrative control of this canal is under the Republic of Panama. Suez canal joins Red sea and Mediterranean sea.

Strait of Malacca joins Pacific ocean and Indian ocean.

102. The United Nations Charter was signed by 51 original members of the United Nations in 1945 at the

- (a) Hague Conference
(b) London Conference
(c) San Francisco Conference
(d) Berlin Conference

➤ (c) The United Nations Charter was signed by 51 original members of the United Nations in 1945 at the San Francisco conference. 850 delegates from 51 nations deliberated, discussed and finalised the charter which initially divided into 4 sections. It was passed unanimously on 26th June, 1945.

London conference (officially named as Declaration of St. James' palace) was signed on 12th June, 1941. This conference led to the idea of formation of United Nation.

The Hague Conference, 1954 is related to protection of cultural property in the Event of Armed Conflict.

Berlin conference of 1884-1885 regulated European Colonisation and trade in Africa.

103. Land Revenue Records maintained in India have categorised land-use into

- (a) 6 categories (b) 9 categories
(c) 15 categories (d) 21 categories

➤ (b) Land Revenue Records maintained in India have categorised land-use into 9 categories. The following are the land-use categories in India
(i) Forests
(ii) Land put to non-agricultural use
(iii) Barren and wasteland
(iv) Area under permanent pasture and grazing land
(v) Area under miscellaneous tree crops and groves
(vi) Culturable wasteland
(vii) Current fallow
(viii) Fallow other than current fallow
(ix) Net sown area

104. Dry land farming in India is largely confined to areas with rainfall less than

- (a) 100 cm (b) 85 cm (c) 80 cm (d) 75 cm

➤ (d) Dry land farming is largely confined to the areas with rainfall less than 75 cm. These regions grow hardy and drought resistant crops such as ragi, bajra, moong, gram and guar. Farmers in this areas practise various measures of soil moisture conservation and rain water harvesting.

105. For an area to be excluded from the drought-prone category, what percentage of its gross cropped area should be under irrigation?

- (a) 10% or more (b) 20% or more
(c) 25% or more (d) 30% or more

- ⊙ (d) For an area to be excluded from the drought-prone category, 30% or more of its gross cropped area should be under irrigation. The irrigation commission considers both rainfall and irrigation as factors in identifying a drought. It recommended that areas with more than 30% coverage of irrigation should be excluded from being listed as drought prone areas. According to the vulnerability profile of NDMA, around 68% of India's cultivable area is vulnerable to droughts.

106. Which one of the following is not a current of Pacific ocean?

- (a) Oyashio current (b) Alaska current
(c) Agulhas current (d) California current

- ⊙ (c) Agulhas current is not a current of Pacific ocean. It flows South along the East coast of Africa in India ocean. The source of this current is East Madagascar current and Mozambique current. It acts as an oceanic convergence zone which enhances its primary productivity as compared to surrounding waters.

Oyashio current is a cold current which circulates counter clockwise in the western North Pacific ocean.

Alaska current is current of Pacific ocean, which circulate alongside the West coast of the North American continent.

California current is cold water current of Pacific ocean which moves Southward along the Western coast of North America.

107. The duration of monsoon in India extends for an average period of

- (a) 80–140 days (b) 100–120 days
(c) 90–130 days (d) 100–140 days

- ⊙ (a) The duration of monsoon in India extends for an average period of 80-140 days. The rainfall received from the South-West monsoon is seasonal in character, which occurs between June and September.

Generally, the monsoon arrives at the southern tip of Indian Peninsula by the first week of June. Subsequently, it divided into two branches, viz the Arabian sea branch and the Bay of Bengal branch. The retreat of monsoon which is characterised by clear skies

and rise in temperature starts in early September.

108. Which one of the following is the natural vegetation of South-East China?

- (a) Subtropical broadleaf evergreen forest
(b) Tropical broadleaf evergreen forest
(c) Tropical deciduous forest
(d) Temperate evergreen forest

- ⊙ (a) The natural vegetation of South-East China is subtropical broadleaf evergreen forests. The South-East China experiences temperate monsoon type of climate which is characterised by warm moist summer and a cool and dry winter. It receives moderate rainfall between 25 inches to 60 inches, which is evenly distributed throughout the year. The well distributed rainfall all the year round make the regions look green at all times. The flora of this region includes oak, camphor, camelia and magnolia.

Tropical Deciduous forest, also known as Monsoon forests are found in the belt along the equator between Tropic of Cancer and Tropic of Capricorn. Temperate Evergreen forests are found in temperate areas with warmer summers and cool winter. There are mostly located in the coastal region with mild winter and drier climates and are dominated by large trees.

109. Which one of the following is a cold local wind?

- (a) Santa Ana (b) Chinook
(c) Mistral (d) Loo

- ⊙ (c) Mistral is a cold local wind. It blows around Alps mountain in France. It brings good health, sunshine and dryness to the adjoining regions.

Santa Ana is a hot local wind which blows in South California.

Chinook is a hot and dry local wind which blows in the Rocky Mountains of USA and Canada.

Loo is a hot and dry local wind which blows from West in summer season of Northern India.

110. What was the consequence of Permanent Settlement on rural society in Bengal?

- (a) The zamindars invested capital and enterprise to improve agriculture along lines of British yeoman farmers
(b) A group of rich peasants known as Jotedars succeeded in consolidating their position in the villages
(c) The ryots prospered as a result of fixed revenue levy imposed on them

(d) The system of Collectorate introduced by the Company for exercising supervisory control on zamindars failed to take off

- ⊙ (b) The main consequences of Permanent settlement on rural society in Bengal was the rise of group of rich peasants known as Jotedars. They succeeded in consolidating their positions in the villages. They lived in villages, advanced loans to peasants and resisted efforts by Zamindars to increase the Jama of the village. They also purchased the estates of Zamindars when they failed to pay timely revenue.

Permanent settlement was introduced by Lord Cornwallis in 1793 in Eastern parts of the country. It fixed the land revenue and recognised Zamindar as owners of land.

111. What was *Damin-i Koh* in Rajmahal area?

- (a) A large area of land demarcated and declared to be the land of the Santhals
(b) The land of the Paharias cultivated exclusively for paddy
(c) The British territory marked for their military camp
(d) The land earmarked for locating settled agriculturists

- ⊙ (a) *Damin-i Koh* in Rajmahal area was large area of land demarcated and declared to be the land of the Santhals. It was declared in 1832 to persuade Santhals to do settled agriculture in previously forested area. This region was enclosed by boundary pillars and was separated from the world of settled agriculturists of plains and Pahariyas of the hills.

112. Which one of the following statements about the Revolt of 1857 is correct?

- (a) It was a Revolt carefully organised and planned by the Rajas, Nawabs and Taluqdars
(b) Rumours and prophecies did not play any role in its outbreak and spread
(c) The rebel proclamations in 1857 repeatedly appealed to all sections of the population irrespective of their caste and creed.
(d) The British succeeded in quickly and easily controlling the rebels

- ⊙ (c) The Rebel proclamations in 1857 repeatedly appealed to all sections of the population irrespective of their caste and creed. During the course of revolt, many proclamations and notifications were issued by the rebels. Many of this proclamations were issued by Muslim

princes or in their names but they took care of Sentiments of every communities of the area. Famous proclamations were Delhi proclamation and Azamgarh proclamations.

This revolt was poorly organised and planned by the Rajas, Nawabs and Taluqdars which was greatest weakness of Revolt of 1857.

Rumours and prophecies played huge role in inciting the sentiments of masses against the Britishers.

Britishers found very difficult to suppress the revolt due to huge participation of masses alongside rebels in Awadh area.

113. Which one among the following was not a *Panch sheel* principle?

- (a) Peaceful Co-existence
- (b) Mutual respect for territorial integrity
- (c) Nuclear deterrence
- (d) Non-interference in internal affairs

⊗ (c) Nuclear deterrence was not a *Panch Sheel* principle. It is a theory which provides that a nuclear power nation however weak, it can successfully protect itself against much powerful nation state.

Panch Sheel principles were agreed between India and China under the leadership of Jawaharlal Nehru and Zhou Enlai respectively in 1954 to establish close relations between the two countries. *They are*

- Mutual respect for each other's territorial integrity and sovereignty.
- Mutual non-aggression
- Mutual non-interference in each other's internal affairs.
- Equality and mutual benefit
- Peaceful co-existence

114. Who among the following had organised, in 1904, a secret society of revolutionaries named *Abhinav Bharat*?

- (a) Khudiram Bose
- (b) Shyamji Krishna Verma
- (c) Har Dayal
- (d) VD Savarkar

⊗ (d) VD Savarkar organised in 1904, a secret society of revolutionaries named *Abhinav Bharat*. Based in Pune, it prepared youths for revolutionary activities and promoted the cause of national independence.

Khudiram Bose was revolutionary freedom fighter who attempted to assassinate a British Judge, Douglas Kingsford in Muzaffarpur.

Shyamji Krishna Verma was revolutionary freedom fighter who organised *India House* in London.

He also published a monthly magazine *Indian sociologist*.

Har Dayal was revolutionary freedom fighter who founded *Gadar Party* in 1913.

115. The principle that the framing of the new Constitution for independent India should be primarily (though not solely) the responsibility of Indians themselves, was for the first time conceded in the

- (a) Government of India Act, 1935
- (b) August Offer of Viceroy Linlithgow
- (c) Cripps Proposals
- (d) Cabinet Mission

⊗ (b) The principle that the framing of new Constitution for Independent India should be primarily (though not solely) the responsibility of Indians themselves was for the first time conceded in the August offer of Viceroy Linlithgow.

Made on 8th August, 1940, it also offered the expansion of Viceroy's executive council besides establishment of an advisory war council. However, Congress Party rejected the offer as it provided dominion status.

Government of India Act, 1935 provided for establishment of All India federation, division of subjects into three lists and provincial autonomy.

Cripps proposals were made in March, 1942 it promised dominion status, Constituent Assembly besides control of defence under the British.

Cabinet Mission, 1946 proposed a very loose confederation with centre controlling merely defence, foreign affairs and communication.

116. Which one of the following is a major environmental issue in Eastern Canada ?

- (a) Acid precipitation
- (b) Groundwater depletion
- (c) Land degradation
- (d) Desertification

⊗ (a) Acid precipitation or rain is a major environmental issue in eastern Canada. Acid rain occurs when gaseous emissions of combustion of coal and other fossil fuels like Sulphur dioxide and nitrogen oxide transform into their Secondary pollutants by combining with atmospheric moisture (H₂O). These secondary pollutants such as sulphuric

acid and nitric acid fall on land with precipitation.

The Eastern region of Canada and its neighbour USA is highly industrialised zone. This alongwith other causes such as Vehicular emissions are the main reason for Acid rain in Eastern Canada.

Groundwater depletion is the depletion of ground water level caused by sustained ground water pumping.

- Land degradation is the decline in the productive capacity of land for some time or permanently.
- Desertification is the persistent degradation of dryland ecosystems by climate variation and human activities.

117. Which one of the following mountains lies in between Caspian sea and Black sea ?

- (a) Caucasus
- (b) Carpathians
- (c) Apennine
- (d) Elburz

⊗ (a) Caucasus mountain lies in between Caspian sea and Black sea. This mountain ranges adjoins Vast Eurasian landmass stretching from Russia to Turkey. Mount Elburz the highest peak in Europe lies in this mountain range.

Carpathians is a mountain system extending South-eastwards from Southern Poland and Slovakia into Romania.

Apennine is a mountain range extending in North-South direction in Italian Peninsula.

Mount Elburz is the highest peak of Europe. It is a type of dormant volcano which lies in territory of Russia.

118. Bagalihar, Dulhasti and Salal hydro power projects have been developed on which of the following rivers?

- (a) Chenab and Jhelum
- (b) Chenab and Indus
- (c) Ravi
- (d) Chenab only

⊗ (d) Bagalihar, Dulhasti and Salal hydro power projects have been developed on Chenab.

Bagalihar hydro power project with installed capacity of 900 MW is situated in the Ramban district of UT of Jammu and Kashmir.

Dulhasti is a 390 MW hydroelectric power plant in Kishtwar district of UT of Jammu and Kashmir. It is a run off river type hydro project build on Chandra river a tributary of Chenab.

Salal hydroelectric power station is a run off the river project on Chenab rivers in the Reasi district of UT of Jammu and Kashmir.

119. Which of the following statements with regard to Biosphere Reserve is/are correct?

- The idea of Biosphere Reserve was initiated by UNESCO in 1973-74.
- There are 18 designated Biosphere Reserves in India.
- All Biosphere Reserves in India have been included in world network of Biosphere Reserves of UNESCO.

Select the correct answer using the codes given below.

- (a) Only 1 (b) Only 2
(c) 1 and 2 (d) 1, 2 and 3

- ⊙ (b) The concept of Biosphere Reserve was initiated by UNESCO in 1971, when it launched Man and Biosphere Programme (MAB). It aims to establish a Scientific basis for the improvement of relationship between people and their environments.

In India, there is 18 Biosphere reserves recognised by the government to protect man and environment. Nilgiri Biosphere Reserve in Tamil Nadu and Kerala, was the first to be included in this list.

In India, 11 out of 18 Biosphere Reserves have been included in world network of Biosphere Reserves of UNESCO.

120. Which one of the following countries does not have direct access to the sea/ocean ?

- (a) Syria (b) Jordan
(c) Azerbaijan (d) Armenia

- ⊙ (d) Armenia does not have direct access to the sea/ocean. It is landlocked country in the western Asia. It is bordered by Turkey to the West, Georgia to the North, Artsakh and Azerbaijan to the East and Iran to the South. Yerevan is the capital of Armenia.

Syria is a country in Western Asia with its capital at Damascus. It is bordered by the Mediterranean sea to the West.

Jordan is a country in Western Asia with its capital at Amman. It has 26 km coastline on the Red sea in its extreme South-West.

Azerbaijan is a country in the Caucasus region of Eurasia. It is bounded by the caspian sea to the East.

121. In an incandescent electric bulb, the filament of the bulb is made up of which metal?

- (a) Aluminium (b) Copper
(c) Tungsten (d) Silver

- ⊙ (c) In an incandescent electric bulb, the filament of the bulb is made up of tungsten because it has very high melting point (3400°C).

122. Two equal resistors R are connected in parallel, and a battery of 12 V is connected across this combination. A dc current of 100 mA flows through the circuit as shown below:

The value of R is

- (a) 120 Ω (b) 240 Ω
(c) 60 Ω (d) 100 Ω

- ⊙ (b)

In the above circuit, both resistance of RR are connected in parallel combination.

Hence, Equivalent resistance of circuit is,

$$R_{eq} = \frac{R \cdot R}{R + R}$$

$$R_{eq} = \frac{R}{2}$$

Here, $I = 100 \text{ mA} = 100 \times 10^{-3} \text{ A} = 0.1 \text{ A}$

$$V = 12 \text{ V}$$

Using ohm's law

$$V = I R_{eq}$$

$$\Rightarrow R_{eq} = \frac{V}{I}$$

$$\Rightarrow \frac{R}{2} = \frac{12}{0.1}$$

$$\Rightarrow R = 240 \Omega$$

123. Which one of the following is not the unit of energy?

- (a) Joule (b) Watt-hr
(c) Newton-metre (d) kg-metre/sec²

- ⊙ (d) Amongst the given options, kg-metre/sec² is not the unit of energy. kg-(metre)²/sec² is the unit of energy. All other options are the units of energy.

124. Which one of the following statements is not correct?

- (a) Biomass is a renewable source of energy
(b) Gobar gas is produced - when cowdung, crop residues, vegetable waste and sewage are allowed to decompose in the absence of oxygen
(c) Biogas generation reduces soil and water pollution
(d) Heating capacity of biogas is very low

- ⊙ (d) The heating capacity or calorific value of biogas is high due to which it is used for lighting.

125. In prokaryotic organisms, nuclear region is not surrounded by a membrane. This undefined nuclear region is known as

- (a) Nucleic acid (b) Nucleoid
(c) Nucleolus (d) Nucleosome

- ⊙ (b) Prokaryotic organisms such as bacteria lack true nucleus, as their nuclear region is not bound by outer nuclear membrane. It is known as Nucleoid. It has a circular DNA without histone proteins, which is the main genetic material of bacteria.

126. Which one of the following plant tissues has dead cells ?

- (a) Epidermis (b) Parenchyma
(c) Collenchyma (d) Sclerenchyma

- ⊙ (d) Sclerenchyma is a dead permanent tissue. Its cells These have heavily thickened secondary walls containing lignin. The cells are rigid, non-stretchable and lack protoplasm. They provide protection and mechanical support to plant. They are usually found in non-growing regions of plant bodies such as the bark protective layering of seeds and fruits or mature stems. Rest epithelium, paranchyma and collenchyma have living tissues.

127. Cartilage is not found in

- (a) larynx (b) nose
(c) ear (d) urinary bladder

- ⊙ (d) Cartilage is not found urinary bladder. Urinary bladder consists of epithelium on the lumen surrounded by a collagen rich connective tissue and muscle layer. Hyaline Cartilage is the type of cartilage found in areas such as nose, ears and larynx of the human body.

128. Two planets orbit the Sun in circular orbits, with their radius of orbit as $R_1 = R$ orbit as $R_2 = 4R$. Ratio of their periods (T_1 / T_2) around the Sun will be

- (a) $1/16$ (b) $1/8$ (c) $1/4$ (d) $1/2$

⊙ (b) According to Kepler's 3rd law,
 $T^2 \propto R^3 \Rightarrow T \propto R^{3/2}$

∴ As per question,

$$\frac{T_1}{T_2} = \left(\frac{R_1}{R_2}\right)^{3/2}$$

$$\Rightarrow \frac{T_1}{T_2} = \left(\frac{R}{4R}\right)^{3/2} = \left(\frac{1}{4}\right)^{3/2}$$

$$\Rightarrow \frac{T_1}{T_2} = \left(\frac{1}{64}\right)^{1/2} = \frac{1}{8}$$

129. A metallic wire having resistance of 20Ω is cut into two equal parts in length. These parts are then connected in parallel. The resistance of this parallel combination is equal to

- (a) 20Ω (b) 10Ω (c) 5Ω (d) 15Ω

⊙ (c) As, Resistance \propto length

∴ When wire of resistance 20Ω is cut into two equal parts in length, the resistance of each part will be

$$\frac{R}{2} = \frac{20}{2} = 10 \Omega$$

Equivalent resistance of parallel combination.

$$\frac{1}{R_{eq}} = \frac{1}{10} + \frac{1}{10} \Rightarrow R_{eq} = 5 \Omega$$

130. Light of uniform intensity impinges perpendicularly on a totally reflecting surface. If the area of the surface is halved, the radiation force on it will become

- (a) double (b) half
 (c) four times (d) one fourth

⊙ (b) As, Radiation force \propto Area of surface so, if area of the surface is halved, radiation force will also get halved.

131. The part of the human eye on which the image is formed is

- (a) pupil (b) cornea
 (c) retina (d) iris

⊙ (c) Retina is the light sensitive surface of eye on which the image is formed.

132. Consider the following image:

A proton enters a magnetic field at right angles to it, as shown above. The direction of force acting on the proton will be

- (a) to the right (b) to the left
 (c) out of the page (d) into the page

⊙ (c) According to Fleming's left hand rule, the direction of force on conductor is perpendicular to the direction of magnetic field and current. The direction of current is taken same as the direction of motion of positive charge (proton), therefore, the force on proton is directed out of the page.

133. Which one of the following statements about sound is not correct?

- (a) Sound travels at a speed slower than the speed of light
 (b) Sound waves are transverse waves
 (c) Sound waves are longitudinal waves
 (d) Sound travels faster in moist air than in dry air

⊙ (b) Sound waves are longitudinal waves, but they are not transverse waves. In sound waves, the individual particles of the medium move in a direction parallel to the direction of propagation of the disturbance.

134. When the short circuit condition occurs, the current in the circuit

- (a) becomes zero
 (b) remains constant
 (c) increases substantially
 (d) keeps on changing randomly

⊙ (c) In short circuit condition the resistance of the circuit is zero.

So, as per ohm's law

$$I_{short} = \frac{V}{R} = \frac{V}{0} = \infty$$

So, current increases substantially in short circuit condition.

135. Which one of the following is not a component of human male reproductive system ?

- (a) Cervix
 (b) Urethra
 (c) Seminal vesicle (d) Vas deferens

⊙ (a) Cervix is a part of female reproductive system. Rest Urethra, seminal vesicle and Vas deferens are parts of male reproductive system. It is the lower part of uterus having marrow tube-like structure forming vagina.

136. Which one of the following is not a reason of decrease in biodiversity?

- (a) Large scale deforestation
 (b) Exploitation of forest produce
 (c) Maintaining sacred groves
 (d) Encroachment in forest areas

⊙ (c) Maintaining sacred groves is not a reason of decreasing biodiversity. It is an *in-situ* conservation method which provide protection to the organisms in some area in its natural habitat. Rest three are the causes of decrease of biodiversity.

137. Which one of the following is not a cause of depletion in groundwater?

- (a) Afforestation
 (b) Loss of forests
 (c) Excessive pumping of groundwater
 (d) Construction of large scale concrete buildings

⊙ (a) Groundwater will not be depleted in case afforestation. Afforestation refers to planting of various types of trees over a particular area.

This allows rain and surface water to percolate with in the soil and prevents surface run off of water. It also helps in recharging or refilling the groundwater level. Hence, the water table rises up and clear uncontaminated water is available.

But in all other options, groundwater will be depleted without getting recharge.

138. Which one of the following types of radiations has the smallest wavelength ?

- (a) Microwaves
 (b) Infra-red
 (c) Visible light
 (d) X-rays

⊙ (d) X-rays have the smallest wavelength amongst the other three options.

The range of wavelengths for these waves are :

Microwaves : 10^{-3} to 3×10^{-1} m

Infra-red : 8×10^{-7} to 5×10^{-2} m

Visible light : 4×10^{-7} to 7×10^{-7} m

X-rays : 10^{-13} to 3×10^{-8} m

139. The instrument used for detecting the presence of electric current in a circuit is

- (a) Refractometer (b) Galvanometer
 (c) Viscometer (d) Diffractometer

⊙ (b) Galvanometer is an instrument used for detecting the electric current in a circuit. Galvanometer is used to measured small amount of current in the circuit.

140. Which one of the following is the largest composition in biogas?

- (a) Carbon dioxide
 (b) Methane
 (c) Hydrogen
 (d) Hydrogen sulphide

- ⊗ (b) Biogas is generally composed of methane (55-65%), carbon dioxide (35-45%), nitrogen (0-3%), hydrogen (0-1%) and hydrogen sulfide (0-1%). Thus, methane has the largest composition in biogas.

141. The Sun appears reddish during sunrise and sunset. The phenomenon in optics which is responsible for this appearance of the Sun is

- (a) Reflection
 (b) Total internal reflection
 (c) Scattering
 (d) Interference
- ⊗ (c) The Sun appears reddish during sunrise and sunset due to scattering of light.

142. A lens has a power of +2.0 Dioptre. Which one of the following statements about the lens is true?

- (a) The lens is concave and has a focal length of 0.5 m
 (b) The lens is convex and has a focal length of 2.0 m
 (c) The lens is convex and has a focal length of 0.5 m
 (d) The lens is concave and has a focal length of 2.0 m

- ⊗ (c) Power, $P = +2\text{ D}$

$$\text{Focal length, } f = \frac{1}{P} = \frac{1}{2} = 0.5\text{ m}$$

The converging (or convex) lens has positive focal length.

So, the lens is convex with focal length of 0.5 m.

143. At nearly 70°C, sodium bicarbonate shows the property of gradually decomposing, which makes it usable in bakery products. The product of decomposition responsible for this use of sodium bicarbonate is

- (a) Carbon dioxide
 (b) Hydrogen
 (c) Water vapour
 (d) Oxygen
- ⊗ (a) Sodium bicarbonate (NaHCO_3) at 70°C gradually decomposes to give sodium carbonate (Na_2CO_3), water (H_2O) and carbon dioxide (CO_2). Complete reaction is as follows

144. Number of molecules of water of crystallisation in copper sulphate, sodium carbonate and gypsum are

- (a) 5, 10 and 2 respectively
 (b) 10, 2 and 5 respectively
 (c) 5, 2 and 10 respectively
 (d) 2, 5 and 10 respectively
- ⊗ (a) Number of molecules of water of crystallisation of copper sulphate, sodium carbonate and Gypsum are 5, 10 and 2 respectively.

Complete chemical formula are as follows

145. Which one of the following is the correct sequence of change in colours when a turmeric stain on white clothes is scrubbed by soap and then washed with water?

- (a) Yellow-pink-blue
 (b) Yellow-reddish brown-yellow
 (c) Yellow-reddish brown-blue
 (d) Yellow-blue-pink
- ⊗ (b) When a turmeric stain appear on white clothes it becomes reddish brown when it come in contact with soap, which is basic in nature it turns yellow again when the cloth is washed with plenty of water.

146. Which one of the following statements regarding bleaching powder and DDT is correct?

- (a) Both are inorganic compounds
 (b) Both are organic compounds
 (c) Both contain chlorine
 (d) Both contain calcium
- ⊗ (c) Both bleaching powder (CaOCl_2) and Dichloro Diphenyl Trichloroethane (DDT) contain chlorine. Bleaching powder is inorganic compound, but DDT is an organic halogen compound. structures are as follows

147. Which one of the following is the best example of desiccant?

- (a) Silica gel
 (b) Polystyrene
 (c) Sodium chloride
 (d) Sodium carbonate
- ⊗ (a) Silica gel is the best example of desiccant. It is hygroscopic in nature. It absorbs water from the surrounding.

148. Which one of the following was the first mineral acid discovered?

- (a) Sulphuric acid (b) Hydrochloric acid
 (c) Nitric acid (d) Phosphoric acid
- ⊗ (a) Sulphuric acid (H_2SO_4) was the first mineral acid discovered.

149. The refractive index of fused quartz is 1.46 and that of sapphire is 1.77. If v_q is the speed of light in quartz and v_s is the speed of light in sapphire, then which one of the following relations is correct?

- (a) $v_q > v_s$ (b) $v_s > v_q$
 (c) $v_s = v_q$ (d) $v_s = \frac{v_q}{2}$

- ⊗ (a) As, Refractive index

$$= \frac{\text{Speed of light in vacuum}}{\text{Speed of light in medium}}$$

$$\text{i.e., } \mu = \frac{c}{v} \Rightarrow \mu \propto \frac{1}{v}$$

$$\text{As, } \mu_{\text{quartz}} < \mu_{\text{sapphire}} \Rightarrow v_q > v_s$$

150. In case of a concave mirror, if an object is kept between principal focus F and pole P of the mirror, then which one of the following statements about the image is not correct?

- (a) The image will be virtual
 (b) The image will be enlarged or magnified
 (c) The image will be formed at infinity
 (d) The image will be erect
- ⊗ (c) If the object is placed between F and P of concave mirror, the image is formed behind the mirror. The image formed is virtual, erect and magnified.

NDA/NA

National Defence Academy/Naval Academy

SOLVED PAPER 2019 (II)

PAPER I: Mathematics

1. If both p and q belong to the set $\{1, 2, 3, 4\}$, then how many equations of the form $px^2 + qx + 1 = 0$ will have real roots?
- (a) 12 (b) 10
(c) 7 (d) 6
- ⊗ (d) Equation $px^2 + qx + 1 = 0$, has real roots, where p and q belong to the set $\{1, 2, 3, 4\}$.
- $\therefore q^2 - 4p \geq 0$
- [\therefore for real roots of a quadratic equation $b^2 - 4ac \geq 0$]
- It is possible if value of $(p, q) = (1, 2), (1, 3), (1, 4), (2, 3), (2, 4)$ and $(3, 4)$
- Hence, the number of equations are 6.
2. What is the value of $1 - 2 + 3 - 4 + 5 - \dots + 101$?
- (a) 51 (b) 55
(c) 110 (d) 111
- ⊗ (a) Given series,
- $$\begin{aligned} &= 1 - 2 + 3 - 4 + 5 - \dots + 101 \\ &= (1 + 3 + 5 + \dots + 101) \\ &\quad - (2 + 4 + 6 + \dots + 100) \\ &= (1 + 3 + 5 + \dots 51 \text{ terms}) \\ &\quad - (2 + 4 + 6 + \dots 50 \text{ terms}) \\ &= \frac{51}{2} [2 + (51 - 1) \times 2] \\ &\quad - \frac{50}{2} [4 + (50 - 1) \times 2] \end{aligned}$$
- [\therefore both series are AP and $S_n = \frac{n}{2} [2a + (n - 1)d]$]
- $$\begin{aligned} &= \frac{51}{2} \times 102 - \frac{50}{2} \times 102 \\ &= 2601 - 2550 = 51 \end{aligned}$$
3. If A, B and C are subsets of a given set, then which one of the following relations is not correct?
- (a) $A \cup (A \cap B) = A \cup B$
(b) $A \cap (A \cup B) = A$
(c) $(A \cap B) \cup C = (A \cup C) \cap (B \cup C)$
(d) $(A \cup B) \cap C = (A \cap C) \cup (B \cap C)$
- ⊗ (a) Let U be the set and A, B and C are the subset of U .
- We know that, $A \cup (A \cap B) = A$,
So option (a) is not correct.
 $A \cap (A \cup B) = A$, so option (b) is correct.
 $(A \cap B) \cup C = (A \cup C) \cap (B \cup C)$,
so option (c) is correct.
and $(A \cup B) \cap C = (A \cap C) \cup (B \cap C)$
so option (d) is correct.
4. If the sum of first n terms of a series is $(n + 12)$, then what is its third term?
- (a) 1 (b) 2
(c) 3 (d) 4
- ⊗ (a) Sum of first n term of a series = $n + 12$
- $$\Rightarrow a_1 + a_2 + a_3 + \dots + a_n = n + 12$$
- Put $n = 1, a_1 = 1 + 12 = 13$
Put $n = 2, a_1 + a_2 = 2 + 12 \Rightarrow a_1 + a_2 = 14$
 $\Rightarrow 13 + a_2 = 14 \Rightarrow a_2 = 1$
Put $n = 3$
 $a_1 + a_2 + a_3 = 3 + 12$
 $\Rightarrow 13 + 1 + a_3 = 15$
 $\Rightarrow a_3 = 15 - 14 = 1$
5. What is the value of k for which the sum of the squares of the roots of $2x^2 - 2(k - 2)x - (k + 1) = 0$ is minimum?
- (a) $\frac{1}{3}$ (b) 1
(c) $\frac{2}{3}$ (d) 2
- ⊗ (c) Let α, β be the roots of equation.
- $$2x^2 - 2(k - 2)x - (k + 1) = 0$$
- $$\therefore \alpha + \beta = \frac{2(k - 2)}{2} = k - 2,$$
- $$\alpha\beta = \frac{-(k + 1)}{2}$$
- We know that
- $$\begin{aligned} \alpha^2 + \beta^2 &= (\alpha + \beta)^2 - 2\alpha\beta \\ &= (k - 2)^2 + 2 \times \frac{k + 1}{2} \\ &= k^2 + 4 - 4k + k + 1 \\ &= k^2 - 3k + 5 \\ &= k^2 - 3k + \frac{9}{4} - \frac{9}{4} + 5 \\ &= \left(k - \frac{3}{2}\right)^2 + \frac{11}{4} \end{aligned}$$
- $\alpha^2 + \beta^2$ is minimum, if $\left(k - \frac{3}{2}\right) = 0$
- $$\Rightarrow k = \frac{3}{2}$$
6. If the roots of the equation $a(b - c)x^2 + b(c - a)x + c(a - b) = 0$ are equal, then which one of the following is correct?
- (a) a, b and c are in AP
(b) a, b and c are in GP
(c) a, b and c are in HP
(d) a, b and c do not follow any regular pattern
- ⊗ (c) The roots of the equation $a(b - c)x^2 + b(c - a)x + c(a - b) = 0$ are equal.
- $$\therefore b^2(c - a)^2 - 4a(b - c) \cdot c(a - b) = 0$$
- [$\therefore ax^2 + bx + c = 0$ of roots are real if $b^2 - 4ac \geq 0$]
- $$\begin{aligned} \Rightarrow b^2(c^2 + a^2 - 2ca) - 4ac(ab - b^2 - ac + bc) &= 0 \end{aligned}$$

$$\begin{aligned} &\Rightarrow b^2c^2 + a^2b^2 - 2ab^2c - 4a^2bc \\ &\quad + 4ab^2c + 4a^2c^2 - 4abc^2 = 0 \\ &\Rightarrow b^2c^2 + a^2b^2 + 2ab^2c \\ &\quad - 4a^2bc - 4abc^2 + 4a^2c^2 = 0 \\ &\Rightarrow b^2(c^2 + a^2 + 2ac) - 4abc(a + c) \\ &\quad + 4a^2c^2 = 0 \\ &\Rightarrow b^2(c + a)^2 - 4abc(a + c) + (2ac)^2 = 0 \\ &\Rightarrow [b(c + a) - 2ac]^2 = 0 \\ &\Rightarrow b(c + a) - 2ac = 0 \\ &\Rightarrow b(c + a) = 2ac \Rightarrow b = \frac{2ac}{c + a} \end{aligned}$$

So, a , b and c are in HP.

7. If $|x^2 - 3x + 2| > x^2 - 3x + 2$, then which one of the following is correct?

- (a) $x \leq 1$ or $x \geq 2$ (b) $1 \leq x \leq 2$
(c) $1 < x < 2$
(d) x is any real value except 3 and 4

- ⊙ (c) $|x^2 - 3x + 2| > x^2 - 3x + 2$
 $\Rightarrow -(x^2 - 3x + 2) > x^2 - 3x + 2$
[if $x^2 - 3x + 2 < 0$, and $x^2 - 3x + 2 > 0$ not possible]
 $\Rightarrow -2(x^2 - 3x + 2) > 0$
 $\Rightarrow x^2 - 3x + 2 > 0$
 $\Rightarrow x^2 - 2x - x + 2 > 0$
 $\Rightarrow (x - 2)(x - 1) > 0$
 $\therefore 1 < x < 2$ is correct.

8. A geometric progression (GP) consists of 200 terms. If the sum of odd terms of the GP is m , and the sum of even terms of the GP is n , then what is its common ratio?

- (a) m/n (b) n/m
(c) $m + (n/m)$ (d) $n + (m/n)$

- ⊙ (b) Let $a, ar, ar^2, \dots, 200$ terms be a geometric progression.

Where, a is the first terms and r be the common ratio.

GP of odd terms $a, ar^2, ar^4, \dots, 100$ terms.

GP of even terms $ar, ar^3, ar^5, \dots, 100$ terms.

\therefore Sum of odd terms of the GP = m

$$\Rightarrow \frac{a\{r^{200} - 1\}}{r - 1} = m \quad \dots(i)$$

Sum of even terms of the GP = n

$$\Rightarrow \frac{ar\{r^{200} - 1\}}{r - 1} = n \quad \dots(ii)$$

Dividing of Eq. (i) by Eq. (ii),

$$\Rightarrow \frac{1}{r} = \frac{m}{n} \Rightarrow r = \frac{n}{m}$$

Hence, the common ratio of the GP is $\frac{n}{m}$.

9. If a set A contains 3 elements and another set B contains 6 elements, then what is the minimum number of elements that $(A \cup B)$ can have?

- (a) 3 (b) 6
(c) 8 (d) 9

- ⊙ (b) $n(A) = 3, n(B) = 6$

\therefore The minimum number of elements in

$$A \cup B = 6$$

i.e. $n(A \cup B) = 6$

(because $\max n(A \cap B) = 3$)

10. What is the number of diagonals of an octagon?

- (a) 48
(b) 40
(c) 28
(d) 20

- ⊙ (d) The number of vertices of an octagon = 8

\therefore The number of points in a plane = 8

\therefore Total number of straight line form by 8 points = 8C_2

[\therefore 1 straight line form by 2 points]

$$= \frac{8!}{2!6!} = \frac{8 \times 7}{2} = 28$$

\therefore The number of diagonals of an octagon = Total number

of straight line form by 8 points - number of sides of octagon

$$= 28 - 8 = 20$$

11. What is the value of the determinant

$$\begin{vmatrix} 1! & 2! & 3! \\ 2! & 3! & 4! \\ 3! & 4! & 5! \end{vmatrix} ?$$

- (a) 0 (b) 12
(c) 24 (d) 36

- ⊙ (c) Given determinant

$$= \begin{vmatrix} 1! & 2! & 3! \\ 2! & 3! & 4! \\ 3! & 4! & 5! \end{vmatrix} = \begin{vmatrix} 1 & 2 & 6 \\ 2 & 6 & 24 \\ 6 & 24 & 120 \end{vmatrix} = \begin{vmatrix} 1 & 0 & 0 \\ 2 & 2 & 6 \\ 6 & 12 & 48 \end{vmatrix}$$

$$[\text{by } C_2 \rightarrow C_2 - 2C_1, C_3 \rightarrow C_3 - 3C_2]$$

$$= 1(96 - 72) - 0 + 0$$

[expression w.r.t. first row]

$$= 24$$

12. What are the values of x that satisfy the equation

$$\begin{vmatrix} x & 0 & 2 \\ 2x & 2 & 1 \\ 1 & 1 & 1 \end{vmatrix} + \begin{vmatrix} 3x & 0 & 2 \\ x^2 & 2 & 1 \\ 0 & 1 & 1 \end{vmatrix} = 0 ?$$

- (a) $-2 \pm \sqrt{3}$
(b) $-1 \pm \sqrt{3}$
(c) $-1 \pm \sqrt{6}$
(d) $-2 \pm \sqrt{6}$

- ⊙ (d) Given equation,

$$\begin{vmatrix} x & 0 & 2 \\ 2x & 2 & 1 \\ 1 & 1 & 1 \end{vmatrix} + \begin{vmatrix} 3x & 0 & 2 \\ x^2 & 2 & 1 \\ 0 & 1 & 1 \end{vmatrix} = 0$$

$$\Rightarrow x(2-1) - 0 + 2(2x-2) + 3x(2-1) - 0 + 2(x^2-0) = 0$$

[expression w.r.t. first row]

$$\Rightarrow x + 4x - 4 + 3x + 2x^2 = 0$$

$$\Rightarrow 2x^2 + 8x - 4 = 0$$

$$\Rightarrow x^2 + 4x - 2 = 0$$

$$\Rightarrow x = \frac{-4 \pm \sqrt{16 - 4(1)(-2)}}{2}$$

$$= \frac{-4 \pm \sqrt{24}}{2} = \frac{-4 \pm 2\sqrt{6}}{2}$$

$$= -2 \pm \sqrt{6}$$

13. If $x + a + b + c = 0$, then what is the

value of $\begin{vmatrix} x+a & b & c \\ a & x+b & c \\ a & b & x+c \end{vmatrix} ?$

- (a) 0 (b) $(a+b+c)^2$
(c) $a^2 + b^2 + c^2$ (d) $a+b+c-2$

- ⊙ (a) Given, $x + a + b + c = 0$

$$\begin{vmatrix} x+a & b & c \\ a & x+b & c \\ a & b & x+c \end{vmatrix}$$

$$= \begin{vmatrix} x+a+b+c & b & c \\ x+a+b+c & x+b & c \\ x+a+b+c & b & x+c \end{vmatrix}$$

[by $C_1 \rightarrow C_1 + C_2 + C_3$]

$$= (x+a+b+c) \begin{vmatrix} 1 & b & c \\ 1 & x+b & c \\ 1 & b & x+c \end{vmatrix}$$

[$x+a+b+c$ common from C_1] = 0

[$\therefore x+a+b+c=0$]

14. If $A = \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$, then the expression

$A^3 - 2A^2$ is

- (a) a null matrix (b) an identity matrix
(c) equal to A (d) equal to $-A$

- ⊙ (a) $A = \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$

$$\therefore A^2 = A \cdot A = \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix} \cdot \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 1+1 & -1-1 \\ -1-1 & 1+1 \end{bmatrix} = \begin{bmatrix} 2 & -2 \\ -2 & 2 \end{bmatrix}$$

$$\text{and } A^3 = A^2 \cdot A = \begin{bmatrix} 2 & -2 \\ -2 & 2 \end{bmatrix} \cdot \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} 2+2 & -2-2 \\ -2-2 & 2+2 \end{bmatrix} = \begin{bmatrix} 4 & -4 \\ -4 & 4 \end{bmatrix}$$

Now,

$$A^3 - 2A^2 = \begin{bmatrix} 4 & -4 \\ -4 & 4 \end{bmatrix} - 2 \begin{bmatrix} 2 & -2 \\ -2 & 2 \end{bmatrix}$$

$$= \begin{bmatrix} 4 & -4 \\ -4 & 4 \end{bmatrix} + \begin{bmatrix} -4 & 4 \\ 4 & -4 \end{bmatrix}$$

$$= \begin{bmatrix} 4-4 & -4+4 \\ -4+4 & 4-4 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}$$

= a null matrix

15. Let m and n ($m < n$) be the roots of the equation $x^2 - 16x + 39 = 0$. If four terms p, q, r and s are inserted between m and n to form an AP, then what is the value of $p + q + r + s$?

- (a) 29 (b) 30
(c) 32 (d) 35

- ⊙ (c) m and n be the roots of the equation $x^2 - 16x + 39 = 0$ ($m < n$).

∴ $m + n = 16$... (i)

and $mn = 39$... (ii)

We know that, $n - m = \sqrt{(m+n)^2 - 4mn}$

$$(\because m < n)$$

$$= \sqrt{256 - 156} = \sqrt{100}$$

$$n - m = 10 \quad \dots (iii)$$

Solving the Eqs. (ii) and (iii), $n = 13, m = 3$
Four terms p, q, r and s are inserted between m and n to form an AP.

∴ AP is 3, $p, q, r, s, 13$

Here, $a = 3, l = 13, n = 6$

$$\therefore l = a + (n-1)d$$

$$13 = 3 + (6-1)d$$

$$\Rightarrow d = 2$$

$$\therefore p = a + d = 3 + 2 = 5,$$

$$q = a + 2d = 3 + 4 = 7$$

$$r = a + 3d = 3 + 6 = 9,$$

$$s = a + 4d = 3 + 8 = 11$$

Now, $p + q + r + s = 5 + 7 + 9 + 11 = 32$

16. Under which one of the following conditions will the quadratic equation

$x^2 + mx + 2 = 0$ always have real roots?

- (a) $2\sqrt{3} \leq m^2 < 8$ (b) $\sqrt{3} \leq m^2 < 4$
(c) $m^2 \geq 8$ (d) $m^2 \leq \sqrt{3}$

- ⊙ (c) The quadratic equation

$$x^2 + mx + 2 = 0,$$

have real roots.

$$\therefore m^2 - 4(1)(2) \geq 0$$

[quadratic equation $ax^2 + bx + c = 0$

have real roots if $b^2 - 4ac \geq 0$]

$$\Rightarrow m^2 - 8 \geq 0$$

$$\Rightarrow m^2 \geq 8$$

17. What is the value of $\left[\frac{i + \sqrt{3}}{2}\right]^{2019} + \left[\frac{i - \sqrt{3}}{2}\right]^{2019}$?

- (a) 1
(b) -1
(c) $2i$
(d) $-2i$

⊙ (c) $\left[\frac{i + \sqrt{3}}{2}\right]^{2019} + \left[\frac{i - \sqrt{3}}{2}\right]^{2019}$

$$= \left[\frac{\sqrt{3}}{2} + \frac{1}{2}i\right]^{2019} - \left[\frac{\sqrt{3}}{2} - \frac{1}{2}i\right]^{2019}$$

$$= \left[\cos \frac{\pi}{6} + i \sin \frac{\pi}{6}\right]^{2019} - \left[\cos \frac{\pi}{6} - i \sin \frac{\pi}{6}\right]^{2019}$$

$$= \cos \frac{2019\pi}{6} + i \sin \frac{2019\pi}{6} - \cos \frac{2019\pi}{6} + i \sin \frac{2019\pi}{6}$$

[De-moivre's theorem

$$(\cos \theta \pm i \sin \theta)^n = \cos n\theta \pm i \sin n\theta]$$

$$= 2i \sin \frac{2019\pi}{6}$$

$$= 2i \sin \left(168 \times 2\pi + \frac{3\pi}{6}\right)$$

$$= 2i \sin \frac{3\pi}{6}$$

[∵ $\sin(2n\pi + \theta) = \sin \theta$, n is an integer]

$$= 2i \sin \frac{\pi}{2} = 2i$$

18. If α and β are the roots of $x^2 + x + 1 = 0$, then what is

$$\sum_{j=0}^3 (\alpha^j + \beta^j)$$

- (a) 8 (b) 6
(c) 4 (d) 2

- ⊙ (d) α and β are the roots of the equation

$$x^2 + x + 1 = 0$$

$$\therefore \alpha + \beta = -1$$

and $\alpha\beta = 1$

$$\text{Now, } \sum_{j=0}^3 (\alpha^j + \beta^j) = (\alpha^0 + \beta^0)$$

$$+ (\alpha^1 + \beta^1) + (\alpha^2 + \beta^2) + (\alpha^3 + \beta^3)$$

$$= (1 + 1) + (-1) + \{\alpha^2 + \beta^2 + 2\alpha\beta - 2\alpha\beta\}$$

$$+ (\alpha + \beta)(\alpha^2 + \beta^2 - \alpha\beta)$$

$$= 2 - 1 + \{(\alpha + \beta)^2 - 2\alpha\beta\} + (-1)$$

$$\{(\alpha^2 + \beta^2 + 2\alpha\beta - 3\alpha\beta\}$$

$$= 1 + \{(-1)^2 - 2(1)\} - \{(\alpha + \beta)^2 - 3(1)\}$$

$$= 1 - 1 - \{(-1)^2 - 3\}$$

$$= - (1 - 3) = 2$$

19. In a school, 50% students play cricket and 40% play football. If 10% of students play both the games, then what per cent of students play neither cricket nor football?

- (a) 10% (b) 15% (c) 20% (d) 25%

- ⊙ (c) Students, who play cricket = 50%

Students, who play football = 40%

Students who play both games = 10%

Students who play only cricket

$$= 50 - 10 = 40\%$$

Students who play only football

$$= 40 - 10 = 30\%$$

∴ Total students who play any game

$$= 40 + 30 + 10 = 80\%$$

∴ Students who play neither cricket nor football = $100 - 80 = 20\%$

20. If $A = \{x : 0 \leq x \leq 2\}$ and $B = \{y : y \text{ is a prime number}\}$, then what is $A \cap B$ equal to?

- (a) ϕ (b) $\{1\}$ (c) $\{2\}$ (d) $\{1, 2\}$

- ⊙ (c) $A = \{x : 0 \leq x \leq 2\} = \{0, 1, 2\}$

and $B = \{y : y \text{ is a prime number}\}$

$$= \{2, 3, 5, 7, 11, \dots\}$$

∴ $A \cap B = \{0, 1, 2\} \cap \{2, 3, 5, 7, 11, \dots\}$

$$= \{2\}$$

21. If $x = 1 + i$, then what is the value of $x^6 + x^4 + x^2 + 1$?

- (a) $6i - 3$ (b) $-6i + 3$
(c) $-6i - 3$ (d) $6i + 3$

- ⊙ (c) Given, $x = 1 + i$

$$= \sqrt{2} \left(\frac{1}{\sqrt{2}} + \frac{i}{\sqrt{2}} \right)$$

$$= \sqrt{2} \left(\cos \frac{\pi}{4} + i \sin \frac{\pi}{4} \right)$$

Now, $x^6 + x^4 + x^2 + 1$

$$= x^4(x^2 + 1) + 1(x^2 + 1)$$

$$= (x^2 + 1)(x^4 + 1)$$

$$= \left[(\sqrt{2})^2 \left(\cos \frac{\pi}{4} + i \sin \frac{\pi}{4} \right)^2 + 1 \right]$$

$$\left[(\sqrt{2})^4 \left(\cos \frac{\pi}{4} + i \sin \frac{\pi}{4} \right)^4 + 1 \right]$$

$$= \left[2 \left(\cos \frac{2\pi}{4} + i \sin \frac{2\pi}{4} \right) + 1 \right]$$

$$\left[4 \left(\cos \frac{4\pi}{4} + i \sin \frac{4\pi}{4} \right) + 1 \right]$$

[∵ $(\cos \theta + i \sin \theta)^n = \cos n\theta + i \sin n\theta$]

$$= \left[2 \left(\cos \frac{\pi}{2} + i \sin \frac{\pi}{2} \right) + 1 \right]$$

$$[4(\cos \pi + i \sin \pi) + 1]$$

$$= [2(0 + i) + 1] [4(-1 + 0) + 1]$$

$$= (2i + 1)(-4 + 1) = -6i - 3$$

22. What is the value of

$$2 + \frac{1}{2 + \frac{1}{2 + \frac{1}{2 + \dots \infty}}}$$

- (a) $\sqrt{2} - 1$ (b) $\sqrt{2} + 1$ (c) 3 (d) 4

⊙ (b) Let, $x = 2 + \frac{1}{2 + \frac{1}{2 + \dots \infty}}$

$$\begin{aligned} \Rightarrow x &= 2 + \frac{1}{x} \Rightarrow x^2 = 2x + 1 \\ \Rightarrow x^2 - 2x - 1 &= 0 \\ \Rightarrow x &= \frac{2 \pm \sqrt{(-2)^2 - 4(1)(-1)}}{2} \\ &= \frac{2 \pm \sqrt{8}}{2} = \frac{2 \pm 2\sqrt{2}}{2} = 1 \pm \sqrt{2} \\ &= \sqrt{2} + 1 \quad (\because x > 2) \end{aligned}$$

23. If $P(n, r) = 2520$ and $C(n, r) = 21$, then what is the value of $C(n+1, r+1)$?

- (a) 7 (b) 14
(c) 28 (d) 56

⊙ (c) If $P(n, r) = 2520$ and $C(n, r) = 21$,

$$\begin{aligned} \therefore {}^n P_r &= 2520 \\ \Rightarrow \frac{n!}{(n-r)!} &= 2520 \quad \dots(i) \end{aligned}$$

$$\begin{aligned} \text{and } {}^n C_r &= 21 \\ \Rightarrow \frac{n!}{r!(n-r)!} &= 21 \quad \dots(ii) \end{aligned}$$

From Eqs. (i) and (ii), we get

$$\begin{aligned} \frac{2520}{r!} &= 21 \\ \Rightarrow r! &= \frac{2520}{21} = 120 \\ \Rightarrow r! &= 5! \\ \therefore r &= 5 \end{aligned}$$

Putting the value of r in Eq. (i),

$$\begin{aligned} \frac{n!}{(n-5)!} &= 2520 \\ \Rightarrow n(n-1)(n-2)(n-3)(n-4) &= 7 \times 6 \times 5 \times 4 \times 3 \\ \therefore n &= 7 \end{aligned}$$

$$\begin{aligned} \text{Now, } C(n+1, r+1) &= {}^{n+1} C_{r+1} \\ &= {}^{7+1} C_{5+1} = {}^8 C_6 \\ &= \frac{8!}{6!2!} = \frac{8 \times 7}{2} \\ &= 28 \end{aligned}$$

24. How many terms are there in the expansion of

$$(1 + 2x + x^2)^5 + (1 + 4y + 4y^2)^5?$$

- (a) 12 (b) 20
(c) 21 (d) 22

⊙ (d) Given expansion,
 $(1 + 2x + x^2)^5 + (1 + 4y + 4y^2)^5$
 $= [(1 + x)^2]^5 + [(1 + 2y)^2]^5$
 $= (1 + x)^{10} + (1 + 2y)^{10}$

∴ Total number of terms in given expansion.

$$= (10 + 1) + (10 + 1) = 22$$

[∴ total number of terms in expansion of $(1 + x)^n = n + 1$]

25. If the middle term in the expansion of $(x^2 + \frac{1}{x})^{2n}$ is $184756x^{10}$, then what is the value of n ?

- (a) 10 (b) 8
(c) 5 (d) 4

⊙ (a) The middle term in the expansion of $(x^2 + \frac{1}{x})^{2n}$
 $= \binom{2n}{\frac{2n}{2} + 1}$ th term [∴ $2n$ is even]
 $= (n + 1)$ th term.

According to the question,
 Value of middle term = $184756x^{10}$

$$\begin{aligned} \Rightarrow {}^{2n} C_n (x^2)^{2n-n} \left(\frac{1}{x}\right)^n &= 184756x^{10} \\ [\because T_{r+1} &= {}^n C_r x^{n-r} a^r \text{ in expansion of } (x + a)^n] \end{aligned}$$

$$\Rightarrow {}^{2n} C_n (x)^{4n-2n-n} = 184756x^{10}$$

$$\Rightarrow {}^{2n} C_n (x)^n = 184756x^{10}$$

Comparing the power of x both sides
 $n = 10$

26. If $A = \begin{pmatrix} 1 & 2 \\ 2 & 3 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 1 & 2 \\ 2 & 1 \end{pmatrix}$, then

which one of the following is correct?

- (a) Both AB and BA exist
 (b) Neither AB nor BA exists
 (c) AB exists but BA does not exist
 (d) AB does not exist but BA exists

⊙ (c) We have, $A = \begin{pmatrix} 1 & 2 \\ 2 & 3 \\ 3 & 4 \end{pmatrix}$ and $B = \begin{pmatrix} 1 & 2 \\ 2 & 1 \end{pmatrix}$

order of $A = 3 \times 2$ and order of $B = 2 \times 2$
 ∴ Number of column of $A =$ Number of row of B

∴ AB exists.
 and number of column of $B \neq$ Number of row of A
 ∴ BA does not exist.
 Hence, AB exists but BA does not exist.

27. If $n!$ has 17 zeros, then what is the value of n ?

- (a) 95 (b) 85
(c) 80 (d) No such value of n exists

⊙ (b) We know that each interval of 5! is one zero.

i.e. 5! has one zero.

10! has two zeros.

∴ 85! has 17 zeros.

Hence, the value of n is 85.

28. Let $A \cup B = \{x | (x - a)(x - b) > 0\}$, where $a < b$. What are A and B equal to?

- (a) $A = \{x | x > a\}$ and $B = \{x | x > b\}$
 (b) $A = \{x | x < a\}$ and $B = \{x | x > b\}$
 (c) $A = \{x | x < a\}$ and $B = \{x | x < b\}$
 (d) $A = \{x | x > a\}$ and $B = \{x | x < b\}$

⊙ (c) Let $A \cup B = \{x : (x - a)(x - b) > 0\}$, where $a < b$.

It is possible if $x - a < 0$ and $x - b < 0$ or $x < a$ and $x < b$

$$\therefore A = \{x : x < a\} \text{ and } B = \{x : x < b\}$$

29. If the constant term in the expansion of $(\sqrt{x} - \frac{k}{x^2})^{10}$ is 405, then what can be the values of k ?

- (a) ± 2 (b) ± 3
(c) ± 5 (d) ± 9

⊙ (b) Let $(r + 1)$ th term in the expansion of $(\sqrt{x} - \frac{k}{x^2})^{10}$ is constant.

$$\therefore T_{r+1} = {}^{10} C_r (\sqrt{x})^{10-r} \left(\frac{-k}{x^2}\right)^r$$

$$[\because T_{r+1} = {}^n C_r x^{n-r} a^r \text{ in expansion of } (x + a)^n]$$

$$\Rightarrow 405 = {}^{10} C_r (x)^{\frac{10-r}{2} - 2r} \cdot (-k)^r$$

$$\Rightarrow 405 = {}^{10} C_r (x)^{\frac{10-5r}{2}} \cdot (-k)^r \quad \dots(i)$$

For constant term

$$\frac{10-5r}{2} = 0 \Rightarrow 10 - 5r = 0$$

$$\therefore r = 2$$

Putting the value of r , in Eq. (i),

$$405 = {}^{10} C_2 \cdot (-k)^2$$

$$\Rightarrow 405 = \frac{10!}{2!8!} \times k^2$$

$$\Rightarrow 405 = \frac{10 \times 9}{2} \cdot k^2$$

$$\Rightarrow k^2 = \frac{405}{45}$$

$$\Rightarrow k^2 = 9$$

$$\Rightarrow k = \pm 3$$

30. What is $C(47, 4) + C(51, 3) + C(50, 3) + C(49, 3) + C(48, 3) + C(47, 3)$ equal to?
 (a) $C(47, 4)$ (b) $C(52, 5)$
 (c) $C(52, 4)$ (d) $C(47, 5)$
 ⊙ (c) $C(47, 4) + C(51, 3) + C(50, 3) + C(49, 3) + C(48, 3) + C(47, 3)$
 $= {}^{47}C_4 + {}^{51}C_3 + {}^{50}C_3 + {}^{49}C_3$
 $\quad\quad\quad + {}^{48}C_3 + {}^{47}C_3$
 $= {}^{51}C_3 + {}^{50}C_3 + {}^{49}C_3 + {}^{48}C_3$
 $\quad\quad\quad + {}^{47}C_3 + {}^{47}C_4$
 $= {}^{51}C_3 + {}^{50}C_3 + {}^{49}C_3 + {}^{48}C_3 + {}^{48}C_4$
 $\quad\quad\quad [\because {}^nC_r + {}^nC_{r-1} = {}^{n+1}C_r]$
 $= {}^{51}C_3 + {}^{50}C_3 + {}^{49}C_3 + {}^{49}C_4$
 $= {}^{51}C_3 + {}^{50}C_3 + {}^{50}C_4$
 $= {}^{51}C_3 + {}^{51}C_4$
 $= {}^{52}C_4 = C(52, 4)$

31. Let a, b, c be in AP and $k \neq 0$ be a real number. Which of the following are correct?
 1. ka, kb, kc are in AP
 2. $k - a, k - b, k - c$ are in AP
 3. $\frac{a}{k}, \frac{b}{k}, \frac{c}{k}$ are in AP

Select the correct answer using the code given below.
 (a) 1 and 2 only (b) 2 and 3 only
 (c) 1 and 3 only (d) 1, 2 and 3

⊙ (d) a, b, c are in AP.
 We know that equal number addition, subtraction and multiply, divide, by equal number of each term of an AP, the resultant, series be an AP.
 $\therefore ka, kb, kc$ are in AP (multiplying by k).
 $k - a, k - b, k - c$ are in AP (subtraction from k) and $\frac{a}{k}, \frac{b}{k}, \frac{c}{k}$ are in AP (divide by k)
 Hence, option (d) is correct answer.

32. How many two-digit numbers are divisible by 4?
 (a) 21 (b) 22
 (c) 24 (d) 25
 ⊙ (b) Series of two-digit number that divisible by 4 is
 12, 16, 20, , 96
 This series is an AP
 Here, $A = 12, d = 4, l = 96$
 Let total number of terms be n .
 $\therefore l = a + (n - 1)d$
 $\Rightarrow 96 = 12 + (n - 1)4$
 $\Rightarrow 84 = (n - 1)4$
 $\Rightarrow n - 1 = 21$
 $\Rightarrow n = 21 + 1 = 22$

33. Let S_n be the sum of the first n terms of an AP. If $S_{2n} = 3n + 14n^2$, then what is the common difference?
 (a) 5 (b) 6
 (c) 7 (d) 9
 ⊙ (c) $S_{2n} = 3n + 14n^2$ (S_n be the sum of first n terms of an AP)
 $\Rightarrow S_{2n} = \frac{3}{2} \cdot (2n) + \frac{7}{2} (2n)^2$
 Put $2n = n$
 we get, $S_n = \frac{3n}{2} + \frac{7n^2}{2}$
 $\therefore T_n = S_n - S_{n-1}$
 $= \frac{3n}{2} + \frac{7n^2}{2} - \frac{3(n-1)}{2} - \frac{7(n-1)^2}{2}$
 $= \frac{3n}{2} + \frac{7n^2}{2} - \frac{3n}{2} + \frac{3}{2} - \frac{7n^2 - 14n + 7}{2} + \frac{7}{2} \cdot 2n$
 $T_n = 7n - 2$
 Put $n = 1, 2, \dots$
 $T_1 = 7(1) - 2 = 5$
 $T_2 = 7(2) - 2 = 12$
 $\therefore d = T_2 - T_1 = 12 - 5 = 7$

34. If 3rd, 8th and 13th terms of a GP are p, q and r respectively, then which one of the following is correct?
 (a) $q^2 = pr$ (b) $r^2 = pq$
 (c) $pqr = 1$ (d) $2q = p + r$
 ⊙ (a) Let first term and common ratio of a GP be a and R .
 $\therefore T_3 = aR^2 = p \dots(i)$
 $T_8 = aR^7 = q \dots(ii)$
 $T_{13} = aR^{12} = r \dots(iii)$
 Multiplying of Eqs. (i) and (iii)
 $(aR^2)(aR^{12}) = pr$
 $\Rightarrow a^2R^{14} = pr$
 $\Rightarrow (aR^7)^2 = pr$
 $\Rightarrow q^2 = pr$ [from Eq. (ii)]

35. What is the solution of $x \leq 4, y \geq 0$ and $x \leq -4, y \leq 0$?
 (a) $x \geq -4, y \leq 0$ (b) $x \leq 4, y \geq 0$
 (c) $x \leq -4, y = 0$ (d) $x \geq -4, y = 0$
 ⊙ (c) Given inequalities
 $x \leq 4, y \geq 0 \dots(i)$
 and $x \leq -4, y \leq 0 \dots(ii)$
 Possible value of x and y .
 $x = \{4, 3, 2, 1, 0, -1, -2, -3, -4, -5, \dots\}$
 $y = \{0, 1, 2, 3, 4, \dots\} \dots(i)$
 and $x = \{-4, -5, -6, -7, \dots\}$,
 $y = \{0, -1, -2, -3, -4, \dots\} \dots(ii)$
 Take combine (i) and (ii),
 $x = \{-4, -5, -6, -7, \dots\}, y = 0$
 or $x \leq -4, y = 0$.

36. If $x^{\log_7 x} > 7$ where $x > 0$, then which one of the following is correct?
 (a) $x \in (0, \infty)$ (b) $x \in \left(\frac{1}{7}, 7\right)$
 (c) $x \in \left(0, \frac{1}{7}\right) \cup (7, \infty)$
 (d) $x \in \left(\frac{1}{7}, \infty\right)$
 ⊙ (b) $x^{\log_7 x} > 7$ where $x > 0$.
 Taking log on base 7 both sides
 $\log_7 x \cdot \log_7 x > \log_7 7$
 $[\because \log_a m^n = n \log_a m]$
 $\Rightarrow (\log_7 x)^2 > 1$ [$\because \log_a a = 1$]
 $\Rightarrow \log_7 x > (\pm 1)$
 $\therefore x > 7^1 \Rightarrow x > 7$
 and $x < 7^{-1} \Rightarrow x < \frac{1}{7}$
 Hence, $x \in \left(\frac{1}{7}, 7\right)$

37. How many real roots does the equation $x^2 + 3|x| + 2 = 0$ have?
 (a) Zero (b) One
 (c) Two (d) Four
 ⊙ (a) Given equation, $x^2 + 3|x| + 2 = 0$
Case I $x^2 + 3x + 2 = 0$ (when $x > 0$)
 $\Rightarrow x^2 + x + 2x + 2 = 0$
 $\Rightarrow x(x+1) + 2(x+1) = 0$
 $\Rightarrow (x+1)(x+2) = 0$
 $\therefore x = -1, -2$
 Hence, no real roots because $x > 0$.
Case II $x^2 - 3x + 2 = 0$ (when $x < 0$)
 $\Rightarrow x^2 - 2x - x + 2 = 0$
 $\Rightarrow x(x-2) - 1(x-2) = 0$
 $\Rightarrow (x-2)(x-1) = 0$
 $\therefore x = 1, 2$
 Hence, no real roots because $x < 0$.
 \therefore The number of real roots of given equation is zero.

38. Consider the following statements in respect of the quadratic equation $4(x-p)(x-q) - r^2 = 0$, where p, q and r are real numbers.
 1. The roots are real.
 2. The roots are equal, if $p = q$ and $r = 0$.
 Which of the above statements is/are correct?
 (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2
 ⊙ (c) Given quadratic equation,
 $4(x-p)(x-q) - r^2 = 0$
 $\Rightarrow 4x^2 - (4q + 4p)x + 4pq - r^2 = 0$
 Comparing it Eq. by $ax^2 + bx + c = 0$

$$\begin{aligned}
 a &= 4, b = -4(p+q), c = 4pq - r^2 \\
 b^2 - 4ac &= 16(p+q)^2 - 4 \times 4(4pq - r^2) \\
 &= 16p^2 + 16q^2 + 32pq - 64pq + 16r^2 \\
 &= 16p^2 + 16q^2 - 32pq + 16r^2 \\
 &= 16(p-q)^2 + 16r^2 \\
 \therefore b^2 - 4ac &\text{ will be positive.}
 \end{aligned}$$

So, the roots are real.

If $p = q$ and $r = 0$, then $b^2 - 4ac = 0$

So, the roots are equal.

Hence, the statements both 1 and 2 are correct.

39. Let $S = \{2, 4, 6, 8, \dots, 20\}$.

What are the maximum number of subsets of S ?

- (a) 10 (b) 20
(c) 512 (d) 1024

⊙ (d) $S = \{2, 4, 6, 8, \dots, 20\}$

Here, number of elements of set

$$S = 10 (n)$$

∴ Maximum number of subsets of set

$$S = 2^n = 2^{10} = 1024$$

40. A binary number is represented by $(cdccddccdd)_2$, where $c > d$. What is its decimal equivalent?

- (a) 1848 (b) 2048
(c) 2842 (d) 2872

⊙ (d) Binary number = $(cdccddccdd)_2$ where, $c > d$. We know that only two bit (digits) 0 and 1 be any binary number.

∴ Given binary number

$$= (101100111000)_2$$

$$\begin{aligned}
 &= (1 \times 2^{11} + 0 \times 2^{10} + 1 \times 2^9 + 1 \times 2^8 + \\
 &\quad + 0 \times 2^7 + 0 \times 2^6 + 1 \times 2^5 + 1 \times 2^4 \\
 &\quad + 1 \times 2^3 + 0 \times 2^2 + 0 \times 2^1 + 0 \times 2^0)_{10} \\
 &= (2048 + 512 + 256 + 32 + 16 + 8)_{10} \\
 &= (2872)_{10}
 \end{aligned}$$

41. If $\operatorname{cosec} \theta = \frac{29}{21}$, where $0 < \theta < 90^\circ$, then what is the value of $4 \sec \theta + 4 \tan \theta$?

- (a) 5 (b) 10 (c) 15 (d) 20

⊙ (b) Given, $\operatorname{cosec} \theta = \frac{29}{21}$

where, $0 < \theta < 90^\circ$

$$\therefore \operatorname{cosec} \theta = \frac{H}{P} = \frac{29}{21} = k \text{ (let)}$$

$$\therefore H = 29k, P = 21k$$

$$\therefore B = \sqrt{(H)^2 - (P)^2} = \sqrt{(29k)^2 - (21k)^2}$$

$$= \sqrt{841k^2 - 441k^2}$$

$$= \sqrt{400k^2} = 20k$$

$$\therefore \sec \theta = \frac{H}{B} = \frac{29k}{20k} = \frac{29}{20}$$

$$\text{and } \tan \theta = \frac{P}{B} = \frac{21k}{20k} = \frac{21}{20}$$

$$\begin{aligned}
 \text{Now, } 4 \sec \theta + 4 \tan \theta &= 4 \times \frac{29}{20} + 4 \times \frac{21}{20} \\
 &= 4 \times \frac{50}{20} = 10
 \end{aligned}$$

42. Consider the following statements

- $\cos \theta + \sec \theta$ can never be equal to 1.5.
- $\tan \theta + \cot \theta$ can never be less than 2.

Which of the above statements is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (b) We know that, $-1 \leq \cos \theta \leq 1$ and $-1 \leq \sec \theta \leq \infty$ but $\cos \theta = \sec \theta$ if $\theta = 0$ and $\theta = 180^\circ$

$$\therefore -2 \leq \cos \theta + \sec \theta \leq \infty$$

So, $\cos \theta + \sec \theta = 1.5$ is possible.

and again $0 \leq \tan \theta \leq \infty$ and

$$0 \leq \cot \theta \leq \infty, \text{ but } \tan \theta = \cot \theta$$

if $\theta = 45^\circ$

$$\therefore 2 \leq \tan \theta + \cot \theta \leq \infty$$

So, $\tan \theta + \cot \theta$ can never be less than 2.

Hence, only the Statement 2 is correct.

43. A ladder 9 m long reaches a point 9 m below the top of a vertical flagstaff. From the foot of the ladder, the elevation of the flagstaff is 60° . What is the height of the flagstaff?

- (a) 9 m (b) 10.5 m
(c) 13.5 m (d) 15 m

⊙ (*) Let AP be a ladder and QR be a vertical flagstaff. P is a point 9 m below the top on flagstaff. A is the foot of ladder and h is the height of point P from the ground.

$$\therefore AP = 9 \text{ m, } PR = 9 \text{ m, } PQ = hm$$

$$\text{In } \Delta AQP, \sin \theta = \frac{PQ}{AP}$$

$$\Rightarrow \sin 60^\circ = \frac{h}{9} \Rightarrow \frac{\sqrt{3}}{2} = \frac{h}{9}$$

$$\Rightarrow 9\sqrt{3} = 2h \Rightarrow h = \frac{9\sqrt{3}}{2}$$

$$= \frac{9 \times 1.73}{2} = \frac{15.57}{2} = 7.7 \text{ m}$$

∴ Height of flagstaff

$$= h + 9 = 7.7 + 9$$

$$= 16.7 \text{ m}$$

44. What is the length of the chord of a unit circle which subtends an angle θ at the centre?

- (a) $\sin \left(\frac{\theta}{2} \right)$ (b) $\cos \left(\frac{\theta}{2} \right)$

- (c) $2 \sin \left(\frac{\theta}{2} \right)$ (d) $2 \cos \left(\frac{\theta}{2} \right)$

⊙ (c) Given, radius of circle = 1 unit

Angle subtends at the centre of circle by chord = θ

We know that, length of chord

$$= 2r \sin \frac{\theta}{2} = 2 \times 1 \sin \frac{\theta}{2} = 2 \sin \frac{\theta}{2}$$

45. What is $\tan \left\{ 2 \tan^{-1} \left(\frac{1}{3} \right) \right\}$ equal to?

- (a) $\frac{2}{3}$ (b) $\frac{3}{4}$ (c) $\frac{3}{8}$

- (d) $\frac{1}{9}$

⊙ (b) $\tan \left\{ 2 \tan^{-1} \left(\frac{1}{3} \right) \right\}$

$$= \tan \left\{ \tan^{-1} \frac{2 \times \frac{1}{3}}{1 - \left(\frac{1}{3} \right)^2} \right\}$$

$$\left[\because 2 \tan^{-1} x = \tan^{-1} \frac{2x}{1-x^2} \right]$$

$$= \tan \tan^{-1} \left(\frac{2}{\frac{8}{9}} \right) = \frac{2 \times 9}{3 \times 8} = \frac{3}{4}$$

46. What is the scalar projection of

$$\mathbf{a} = \hat{i} - 2\hat{j} + \hat{k} \text{ on } \mathbf{b} = 4\hat{i} - 4\hat{j} + 7\hat{k} ?$$

- (a) $\frac{\sqrt{6}}{9}$ (b) $\frac{19}{9}$ (c) $\frac{9}{19}$ (d) $\frac{\sqrt{6}}{19}$

⊙ (b) $\mathbf{a} = \hat{i} - 2\hat{j} + \hat{k}, \mathbf{b} = 4\hat{i} - 4\hat{j} + 7\hat{k}$

Projection of \mathbf{a} on \mathbf{b}

$$= \frac{\mathbf{a} \cdot \mathbf{b}}{|\mathbf{b}|}$$

$$= \frac{(\hat{i} - 2\hat{j} + \hat{k}) \cdot (4\hat{i} - 4\hat{j} + 7\hat{k})}{\sqrt{16 + 16 + 49}}$$

$$= \frac{4 + 8 + 7}{\sqrt{81}} = \frac{19}{9}$$

47. If the magnitude of the sum of two non-zero vectors is equal to the magnitude of their difference, then which one of the following is correct?

- (a) The vectors are parallel
(b) The vectors are perpendicular
(c) The vectors are anti-parallel
(d) The vectors must be unit vectors

⊙ (b) Let \mathbf{a} and \mathbf{b} are the two non-zero vectors.

According to the question,

$$|\mathbf{a} + \mathbf{b}| = |\mathbf{a} - \mathbf{b}|$$

$$\Rightarrow \mathbf{a}^2 + \mathbf{b}^2 + 2\mathbf{a} \cdot \mathbf{b} = \mathbf{a}^2 + \mathbf{b}^2 - 2\mathbf{a} \cdot \mathbf{b}$$

$$\Rightarrow 4\mathbf{a} \cdot \mathbf{b} = 0 \Rightarrow \mathbf{a} \cdot \mathbf{b} = 0$$

So, \mathbf{a} and \mathbf{b} are perpendicular.

48. Consider the following equations for two vectors \mathbf{a} and \mathbf{b} .

1. $(\mathbf{a} + \mathbf{b}) \cdot (\mathbf{a} - \mathbf{b}) = |\mathbf{a}|^2 - |\mathbf{b}|^2$
2. $(|\mathbf{a} + \mathbf{b}|)(|\mathbf{a} - \mathbf{b}|) = |\mathbf{a}|^2 - |\mathbf{b}|^2$
3. $|\mathbf{a} \cdot \mathbf{b}| + |\mathbf{a} \times \mathbf{b}| = |\mathbf{a}|^2 |\mathbf{b}|^2$

Which of the above statements are correct?

- (a) 1, 2 and 3 (b) Only 1 and 2
(c) Only 1 and 3 (d) Only 2 and 3

⊗ (c) $1 : (\mathbf{a} + \mathbf{b}) \cdot (\mathbf{a} - \mathbf{b})$

$$= \mathbf{a} \cdot \mathbf{a} - \mathbf{a} \cdot \mathbf{b} + \mathbf{b} \cdot \mathbf{a} - \mathbf{b} \cdot \mathbf{b}$$

$$= |\mathbf{a}|^2 - \mathbf{a} \cdot \mathbf{b} + \mathbf{a} \cdot \mathbf{b} - |\mathbf{b}|^2$$

$$= |\mathbf{a}|^2 - |\mathbf{b}|^2 \quad [\because \mathbf{a} \cdot \mathbf{b} = \mathbf{b} \cdot \mathbf{a}]$$

$= |\mathbf{a}|^2 - |\mathbf{b}|^2$

So, Statement 1 is correct.

2. $(|\mathbf{a} + \mathbf{b}|)(|\mathbf{a} - \mathbf{b}|) = |\mathbf{a} + \mathbf{b}||\mathbf{a} - \mathbf{b}|$
 $\neq |\mathbf{a}|^2 - |\mathbf{b}|^2$

So, Statement 2 is not correct.

3. $|\mathbf{a} \cdot \mathbf{b}|^2 + |\mathbf{a} \times \mathbf{b}|^2 = ||\mathbf{a}||\mathbf{b}|\cos\theta|^2$
 $+ ||\mathbf{a}||\mathbf{b}|\sin\theta|^2$

$= |\mathbf{a}|^2 |\mathbf{b}|^2 \cos^2\theta + |\mathbf{a}|^2 |\mathbf{b}|^2 \sin^2\theta$

$= |\mathbf{a}|^2 |\mathbf{b}|^2 (\cos^2\theta + \sin^2\theta)$

$= |\mathbf{a}|^2 |\mathbf{b}|^2 \quad [\because \cos^2\theta + \sin^2\theta = 1]$

So, statement 3 is correct.

Hence, only Statements 1 and 3 are correct.

49. Consider the following statements.

1. The magnitude of $\mathbf{a} \times \mathbf{b}$ is same as the area of a triangle with sides \mathbf{a} and \mathbf{b}
2. If $\mathbf{a} \times \mathbf{b} = 0$, where $\mathbf{a} \neq 0, \mathbf{b} \neq 0$, then $\mathbf{a} = \lambda \mathbf{b}$.

Which of the above statements is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (b) 1. We know that,

Area of triangle with sides \mathbf{a} and \mathbf{b}

$$= \frac{1}{2} |\mathbf{a} \times \mathbf{b}|$$

So, statement 1 is not correct.

2. $\mathbf{a} \times \mathbf{b} = 0$, where $\mathbf{a} \neq 0, \mathbf{b} \neq 0$,

So, \mathbf{a} and \mathbf{b} are parallel.

$\Rightarrow \mathbf{a} = \lambda \mathbf{b}$

So, Statement 2 is correct.

Hence, only statement 2 is correct.

50. If \mathbf{a} and \mathbf{b} are unit vectors and θ is the angle between them, then what is $\sin^2\left(\frac{\theta}{2}\right)$ equal to?

(a) $\frac{|\mathbf{a} + \mathbf{b}|^2}{4}$ (b) $\frac{|\mathbf{a} - \mathbf{b}|^2}{4}$

(c) $\frac{|\mathbf{a} + \mathbf{b}|^2}{2}$ (d) $\frac{|\mathbf{a} - \mathbf{b}|^2}{2}$

⊗ (b) Given, $|\mathbf{a}| = 1, |\mathbf{b}| = 1$

We know that,

$|\mathbf{a} - \mathbf{b}|^2 = |\mathbf{a}|^2 + |\mathbf{b}|^2 - 2\mathbf{a} \cdot \mathbf{b}$

$\Rightarrow |\mathbf{a} - \mathbf{b}|^2 = 1 + 1 - 2|\mathbf{a}||\mathbf{b}|\cos\theta$

$\Rightarrow |\mathbf{a} - \mathbf{b}|^2 = 2 - 2\cos\theta$

$\Rightarrow |\mathbf{a} - \mathbf{b}|^2 = 2(1 - \cos\theta)$

$\Rightarrow |\mathbf{a} - \mathbf{b}|^2 = 2\left(1 - 1 + 2\sin^2\frac{\theta}{2}\right)$

$\Rightarrow |\mathbf{a} - \mathbf{b}|^2 = 2 \cdot \left(2\sin^2\frac{\theta}{2}\right)$

$\Rightarrow \sin^2\frac{\theta}{2} = \frac{|\mathbf{a} - \mathbf{b}|^2}{4}$

51. The equation $ax + by + c = 0$ represents a straight line

(a) for all real numbers, a, b and c

(b) only when $a \neq 0$

(c) only when $b \neq 0$

(d) only when at least one of a and b is non-zero.

⊗ (d) The equation $ax + by + c = 0$

represents a straight line only when at least one of a and b is non zero.

52. What is the angle between the lines $x \cos \alpha + y \sin \alpha = a$ and $x \sin \beta - y \cos \beta = a$?

- (a) $\frac{\beta - \alpha}{2}$ (b) $\frac{\pi + \beta - \alpha}{2}$
(c) $\frac{\pi + 2\beta + 2\alpha}{2}$ (d) $\frac{\pi - 2\beta + 2\alpha}{2}$

⊗ (d) The equations of given lines

$x \cos \alpha + y \sin \alpha = a \quad \dots (i)$

and $x \sin \beta - y \cos \beta = a \quad \dots (ii)$

Slope of Eq. (i), $m_1 = \frac{-\cos \alpha}{\sin \alpha} = -\cot \alpha$

$= \tan\left(\frac{\pi}{2} + \alpha\right)$

Slope of Eq. (ii), $m_2 = \frac{-\sin \beta}{-\cos \beta} = \tan \beta$

Let θ be the angle between the lines, then

$\tan \theta = \frac{m_1 - m_2}{1 + m_1 m_2}$

$= \frac{\tan\left(\frac{\pi}{2} + \alpha\right) - \tan \beta}{1 + \tan\left(\frac{\pi}{2} + \alpha\right) \tan \beta}$

$\tan \theta = \tan\left(\frac{\pi}{2} + \alpha - \beta\right)$

$\theta = \frac{\pi}{2} + \alpha - \beta = \frac{\pi + 2\alpha - 2\beta}{2}$

53. What is the distance between the points $P(m \cos 2\alpha, m \sin 2\alpha)$ and $Q(m \cos 2\beta, m \sin 2\beta)$?

- (a) $|2m \sin(\alpha - \beta)|$ (b) $|2m \cos(\alpha - \beta)|$
(c) $|m \sin(2\alpha - 2\beta)|$
(d) $|m \sin(2\alpha - 2\beta)|$

⊗ (a) Given points, $P(m \cos 2\alpha, m \sin 2\alpha)$ and $Q(m \cos 2\beta, m \sin 2\beta)$

$\therefore PQ = \sqrt{(m \cos 2\beta - m \cos 2\alpha)^2 + (m \sin 2\beta - m \sin 2\alpha)^2}$

$[\because \text{Distance between two points } (x_1, y_1) \text{ and } (x_2, y_2)$

$= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}]$

$= \sqrt{m^2 \cos^2 2\beta + m^2 \cos^2 2\alpha - 2m^2 \cos 2\beta \cos 2\alpha + m^2 \sin^2 2\beta + m^2 \sin^2 2\alpha - 2m^2 \sin 2\beta \sin 2\alpha}$

$= |m \sqrt{(\cos^2 2\beta + \sin^2 2\beta) + (\cos^2 2\alpha + \sin^2 2\alpha) - 2(\cos 2\beta \cos 2\alpha + \sin 2\beta \sin 2\alpha)}|$

$= |m \sqrt{1 + 1 - 2 \cos(2\alpha - 2\beta)}|$

$= |m \sqrt{2 [1 - \cos 2(\alpha - \beta)]}|$

$= |m \sqrt{2 \times 2 \sin^2(\alpha - \beta)}|$

$= |2m \sin(\alpha - \beta)|$

54. An equilateral triangle has one vertex at $(-1, -1)$ and another vertex at $(-\sqrt{3}, \sqrt{3})$. The third vertex may lie on

- (a) $(-\sqrt{2}, \sqrt{2})$ (b) $(\sqrt{2}, -\sqrt{2})$
(c) $(1, 1)$ (d) $(1, -1)$

⊗ (c) Consider two vertices of an equilateral triangle are $A(-1, -1)$ and $B(-\sqrt{3}, \sqrt{3})$. Let third vertex x be $C(x, y)$.

$\therefore \Delta ABC$ is equilateral

$\therefore AC = AB \sqrt{(x+1)^2 + (y+1)^2}$
 $= \sqrt{(-\sqrt{3}+1)^2 + (\sqrt{3}+1)^2}$

$\Rightarrow x^2 + 1 + 2x + y^2 + 1 + 2y$

$= 3 + 1 - 2\sqrt{3} + 3 + 1 + 2\sqrt{3}$

$\Rightarrow x^2 + y^2 + 2x + 2y + 2 = 8$

$\Rightarrow x^2 + y^2 + 2x + 2y = 6$

From option only point $(1, 1)$ is satisfying of it equation. Hence, the third vertex may lie on $(1, 1)$.

55. If the angle between the lines joining the end points of minor axis of the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ with one of the its foci is $\frac{\pi}{2}$, then what is the eccentricity of the ellipse?

- (a) $\frac{1}{2}$ (b) $\frac{1}{\sqrt{2}}$ (c) $\frac{\sqrt{3}}{2}$ (d) $\frac{1}{2\sqrt{2}}$

⊗ (b) Equation of the ellipse, $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$

End points of minor axis are $(0, b), (0, -b)$ and one foci is $(ae, 0)$

Slope of line $BS = \frac{0 - b}{ae - 0} = -\frac{b}{ae} (m_1)$

Slope of line $B'S = \frac{0 + b}{ae - 0} = \frac{b}{ae} (m_2)$

According to the question, angle between BS and B'S is $\frac{\pi}{2}$.

i.e. BS and B'S are perpendicular,

$$\therefore m_1 m_2 = -1$$

$$\frac{-b}{ae} \times \frac{b}{ae} = -1 \Rightarrow b^2 = a^2 e^2 \dots (i)$$

We know that, $e = \sqrt{1 - \frac{b^2}{a^2}}$

$$\Rightarrow a^2 e^2 = a^2 - b^2$$

$$\Rightarrow a^2 e^2 = a^2 - a^2 e^2 \text{ [from Eq. (i)]}$$

$$\Rightarrow 2a^2 e^2 = a^2 \Rightarrow e^2 = \frac{1}{2}$$

$$\Rightarrow e = \frac{1}{\sqrt{2}}$$

- 56.** A point on a line has coordinates $(p+1, p-3, \sqrt{2}p)$ where p is any real number. What are the direction cosines of the line?

$$(a) \frac{1}{2}, \frac{1}{2}, \frac{1}{\sqrt{2}} \quad (b) \frac{1}{\sqrt{2}}, \frac{1}{2}, \frac{1}{2}$$

$$(c) \frac{1}{\sqrt{2}}, \frac{1}{2}, -\frac{1}{2}$$

(d) Cannot be determined due to insufficient data

- ⊙ (d) Coordinate of a point on a line is $(p+1, p-3, \sqrt{2}p)$, p is any real number.

Equation of a line, whose direction ratios are a, b and c and passing through the point (x_1, y_1, z_1)

$$\frac{x-x_1}{a} = \frac{y-y_1}{b} = \frac{z-z_1}{c} = r$$

$\therefore (ar+x_1, br+y_1, cr+z_1)$ any point on the line.

According to the questions,

$$(ar+x_1, br+y_1, cr+z_1)$$

$$= (p+1, p-3, \sqrt{2}p)$$

$$\therefore ar = p+1-x_1 \dots (i)$$

$$br = p-3-y_1 \dots (ii)$$

$$cr = \sqrt{2}p - z_1 \dots (iii)$$

Squaring and adding of (i), (ii) and (iii)

$$(a^2 + b^2 + c^2)r^2 = (p+1-x_1)^2$$

$$+ (p-3-y_1)^2 + (\sqrt{2}p-z_1)^2$$

We can not find the values of a, b and c .

Hence, the direction cosines of the line can not be determined due to insufficient data.

- 57.** A point on the line

$$\frac{x-1}{1} = \frac{y-3}{2} = \frac{z+2}{7}$$

has coordinates

$$(a) (3, 5, 4) \quad (b) (2, 5, 5)$$

$$(c) (-1, -1, 5) \quad (d) (2, -1, 0)$$

- ⊙ (b) Equation of the line

$$\frac{x-1}{1} = \frac{y-3}{2} = \frac{z+2}{7}$$

From option, point $(2, 5, 5)$ is satisfying the given equation of line.

$$\left[\therefore \frac{2-1}{1} = \frac{5-3}{2} = \frac{5+2}{7} \Rightarrow 1 = 1 = 1 \right]$$

Hence, the coordinates of required point $(2, 5, 5)$.

- 58.** If the line $\frac{x-4}{1} = \frac{y-2}{1} = \frac{z-k}{2}$ lies

on the plane $2x - 4y + z = 7$, then what is the value of k ?

$$(a) 2 \quad (b) 3$$

$$(c) 5 \quad (d) 7$$

- ⊙ (d) Equation of line

$$= \frac{x-4}{1} = \frac{y-2}{1} = \frac{z-k}{2} = r$$

$\therefore (r+4, r+2, 2r+k)$ point lies on the line.

This line lies on the plane

$$2x - 4y + z = 7$$

Then, the point $(r+4, r+2, 2r+k)$ lies on the plane, we get

$$2(r+4) - 4(r+2) + (2r+k) = 7$$

$$\Rightarrow 2r + 8 - 4r - 8 + 2r + k = 7$$

$$\Rightarrow k = 7$$

Hence, the value of k is 7.

- 59.** A straight line passes through the point $(1, 1, 1)$ makes an angle 60° with the positive direction of Z -axis, and the cosine of the angles made by it with the positive directions of the Y -axis and the X -axis are in the ratio $\sqrt{3} : 1$. What is the acute angle between the two possible positions of the line?

$$(a) 90^\circ \quad (b) 60^\circ$$

$$(c) 45^\circ \quad (d) 30^\circ$$

- ⊙ (b) Let the straight line makes the angle with X -axis, Y -axis and Z -axis be α, β and γ .

$$\therefore \gamma = 60^\circ \text{ and } \frac{\cos \beta}{\cos \alpha} = \frac{\sqrt{3}}{1}$$

If l, m and n are the direction cosines of the lines, then

$$n = \cos \gamma = \cos 60^\circ = \frac{1}{2}$$

$$\text{and } \frac{m}{l} = \frac{\cos \beta}{\cos \alpha} = \frac{\sqrt{3}}{1}$$

$$\Rightarrow \frac{m}{l} = \frac{\sqrt{3}}{1} = k \text{ (Let)}$$

$$\therefore m = \sqrt{3}k, l = k$$

We know that, $l^2 + m^2 + n^2 = 1$

$$k^2 + 3k^2 + \frac{1}{4} = 1$$

$$\Rightarrow 4k^2 = 1 - \frac{1}{4} = \frac{3}{4}$$

$$\Rightarrow k^2 = \frac{3}{16} \Rightarrow k = \pm \frac{\sqrt{3}}{4}$$

$$\therefore l_1 = \frac{\sqrt{3}}{4}, m_1 = \frac{3}{4}, n_1 = \frac{1}{2}$$

$$\text{and } l_2 = -\frac{\sqrt{3}}{4}, m_2 = -\frac{3}{4}, n_2 = \frac{1}{2}$$

We know that,

$$\cos \theta = |l_1 l_2 + m_1 m_2 + n_1 n_2|$$

$$\Rightarrow \cos \theta = \left| -\frac{3}{16} - \frac{9}{16} + \frac{1}{4} \right|$$

$$= \left| \frac{-3-9+4}{16} \right| = \left| \frac{-8}{16} \right|$$

$$\cos \theta = \frac{1}{2} = \cos 60^\circ$$

$$\therefore \theta = 60^\circ$$

- 60.** If the points $(x, y, -3), (2, 0, -1)$ and $C(4, 2, 3)$ lie on a straight line, then what are the values of x and y respectively?

$$(a) 1, -1 \quad (b) -1, 1$$

$$(c) 0, 2 \quad (d) 3, 4$$

- ⊙ (a) Points, $A(x, y, -3), B(2, 0, -1)$ and $(4, 2, 3)$. These points lie on a straight line, then direction ratios of $AB = \lambda$ (direction ratios of BC)

$$\therefore (2-x, 0-y, -1+3)$$

$$= (4-2, 2-0, 3+1)$$

$$\Rightarrow (2-x, -y, 2) = (2, 2, 4)$$

$$\Rightarrow (2-x, -y, 2) = 2(1, 1, 2)$$

Comparing both sides,

$$2-x=1 \Rightarrow x=1$$

$$\text{and } -y=1 \Rightarrow y=-1$$

- 61.** What is the minimum value of $\frac{a^2}{\cos^2 x} + \frac{b^2}{\sin^2 x}$ where $a > 0$ and $b > 0$?

$$(a) (a+b)^2 \quad (b) (a-b)^2$$

$$(c) a^2 + b^2 \quad (d) |a^2 + b^2|$$

- ⊙ (*) Let $p = \frac{a^2}{\cos^2 x} + \frac{b^2}{\sin^2 x}$

$$= a^2 \sec^2 x + b^2 \operatorname{cosec}^2 x$$

$$- 2ab \sec x \operatorname{cosec} x$$

$$+ 2ab \sec x \operatorname{cosec} x$$

$$= (a \sec x - b \operatorname{cosec} x)^2$$

$$+ 2ab \sec x \operatorname{cosec} x$$

For minimum value of p ,

$$a \sec x - b \operatorname{cosec} x = 0$$

$$\Rightarrow a \sec x = b \operatorname{cosec} x$$

$$\Rightarrow \frac{\sec x}{\operatorname{cosec} x} = \frac{b}{a}$$

$$\Rightarrow \tan x = \frac{b}{a}$$

$$\therefore \sin x = \frac{b}{\sqrt{a^2 + b^2}}, \cos x = \frac{a}{\sqrt{a^2 + b^2}}$$

\therefore Minimum value of p

$$= \frac{a^2(a^2 + b^2)}{a^2} + \frac{b^2(a^2 + b^2)}{b^2}$$

$$= 2(a^2 + b^2)$$

62. If the angles of a triangle ABC are in AP and $b : c = \sqrt{3} : \sqrt{2}$, then what is the measure of angle A ?

- (a) 30° (b) 45°
(c) 60° (d) 75°

⊙ (d) Angles of a triangle ABC are in AP , then $2B = A + C$

We know that, $A + B + C = 180^\circ$
 $\Rightarrow 3B = 180^\circ \Rightarrow B = 60^\circ$

By sine rule, $\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$

$\Rightarrow \frac{\sin A}{a} = \frac{\sin 60^\circ}{b} = \frac{\sin C}{c}$

Take II and III, $\frac{\sin 60^\circ}{b} = \frac{\sin C}{c}$

$\Rightarrow \frac{\sin 60^\circ}{\sin C} = \frac{b}{c} \Rightarrow \frac{\sqrt{3}/2}{\sin C} = \frac{\sqrt{3}}{\sqrt{2}}$

[∵ Given, $b : c = \sqrt{3} : \sqrt{2}$]

$\Rightarrow \sin C = \frac{\sqrt{3}}{2} \times \frac{\sqrt{2}}{\sqrt{3}} = \frac{1}{\sqrt{2}}$

$\Rightarrow \sin C = \sin 45^\circ \Rightarrow C = 45^\circ$

∴ $A = 180^\circ - (B + C)$
 $= 180^\circ - (60^\circ + 45^\circ) = 75^\circ$

63. If $\tan A - \tan B = x$ and $\cot B - \cot A = y$, then what is the value of $\cot(A - B)$?

- (a) $\frac{1}{x} + \frac{1}{y}$ (b) $\frac{1}{y} - \frac{1}{x}$
(c) $\frac{xy}{x+y}$ (d) $1 + \frac{1}{xy}$

⊙ (a) Given, $\tan A - \tan B = x$... (i)

and $\cot B - \cot A = y$... (ii)

From Eq. (i), $\tan A - \tan B = x$

$\Rightarrow \frac{1}{\cot A} - \frac{1}{\cot B} = x$

$\Rightarrow \frac{\cot B - \cot A}{\cot A \cot B} = x$

$\Rightarrow \cot A \cot B = \frac{y}{x}$ [from Eq. (ii)]

Now, $\cot(A - B) = \frac{\cot A \cot B + 1}{\cot B - \cot A}$

$= \frac{\frac{y}{x} + 1}{y} = \frac{y+x}{xy} = \frac{1}{x} + \frac{1}{y}$

64. What is $\sin(\alpha + \beta) - 2 \sin \alpha \cos \beta + \sin(\alpha - \beta)$ equal to?

- (a) 0 (b) $2 \sin \alpha$
(c) $2 \sin \beta$ (d) $\sin \alpha + \sin \beta$

⊙ (a) $\sin(\alpha + \beta) - 2 \sin \alpha \cos \beta + \sin(\alpha - \beta)$
 $= \sin \alpha \cos \beta + \cos \alpha \sin \beta - 2 \sin \alpha \cos \beta + \sin \alpha \cos \beta - \cos \alpha \sin \beta = 0$

65. If $2 \tan A = 3 \tan B = 1$, then what is $\tan(A - B)$ equal to?

- (a) $\frac{1}{5}$ (b) $\frac{1}{6}$
(c) $\frac{1}{7}$ (d) $\frac{1}{9}$

⊙ (c) Given, $2 \tan A = 3 \tan B = 1$

∴ $\tan A = \frac{1}{2}, \tan B = \frac{1}{3}$

Now, $\tan(A - B)$

$= \frac{\tan A - \tan B}{1 + \tan A \tan B}$
 $= \frac{\frac{1}{2} - \frac{1}{3}}{1 + \left(\frac{1}{2}\right)\left(\frac{1}{3}\right)} = \frac{\frac{3-2}{6}}{\frac{6+1}{6}} = \frac{1}{7}$

66. What is $\cos 80^\circ + \cos 40^\circ - \cos 20^\circ$ equal to?

- (a) 2 (b) 1
(c) 0 (d) -19

⊙ (c) $\cos 80^\circ + \cos 40^\circ - \cos 20^\circ$

$= 2 \cos \frac{80^\circ + 40^\circ}{2} \cdot \cos \frac{80^\circ - 40^\circ}{2} - \cos 20^\circ$
 $= 2 \cos 60^\circ \cos 20^\circ - \cos 20^\circ$
 $= 2 \times \frac{1}{2} \cos 20^\circ - \cos 20^\circ$
 $= \cos 20^\circ - \cos 20^\circ = 0$

67. If angle C of a triangle ABC is a right angle, then what is $\tan A + \tan B$ equal to?

- (a) $\frac{a^2 - b^2}{ab}$ (b) $\frac{a^2}{bc}$
(c) $\frac{b^2}{ca}$ (d) $\frac{c^2}{ab}$

⊙ (d) In ΔABC , $\angle C = 90^\circ$

∴ $c^2 = a^2 + b^2$ [by Pythagoras theorem] ... (i)

$\tan A = \frac{a}{b}, \tan B = \frac{b}{a}$

Now, $\tan A + \tan B = \frac{a}{b} + \frac{b}{a}$
 $= \frac{a^2 + b^2}{ab} = \frac{c^2}{ab}$ [from Eq. (i)]

68. What is $\cot\left(\frac{A}{2}\right) - \tan\left(\frac{A}{2}\right)$ equal to?

- (a) $\tan A$ (b) $\cot A$
(c) $2 \tan A$ (d) $2 \cot A$

⊙ (d) $\cot \frac{A}{2} - \tan \frac{A}{2}$
 $= \frac{\cos \frac{A}{2}}{\sin \frac{A}{2}} - \frac{\sin \frac{A}{2}}{\cos \frac{A}{2}}$

$= \frac{\cos^2 \frac{A}{2} - \sin^2 \frac{A}{2}}{\sin \frac{A}{2} \cos \frac{A}{2}} = \frac{2 \cos A}{2 \sin \frac{A}{2} \cos \frac{A}{2}}$
 $= \frac{2 \cos A}{\sin A} = 2 \cot A$

69. What is $\cot A + \operatorname{cosec} A$ equal to?

- (a) $\tan\left(\frac{A}{2}\right)$ (b) $\cot\left(\frac{A}{2}\right)$
(c) $2 \tan\left(\frac{A}{2}\right)$ (d) $2 \cot\left(\frac{A}{2}\right)$

⊙ (b) $\cot A + \operatorname{cosec} A$

$= \frac{\cos A}{\sin A} + \frac{1}{\sin A} = \frac{\cos A + 1}{\sin A}$
 $= \frac{2 \cos^2 \frac{A}{2} - 1 + 1}{2 \sin \frac{A}{2} \cos \frac{A}{2}}$
 $= \frac{2 \cos^2 \frac{A}{2}}{2 \sin \frac{A}{2} \cos \frac{A}{2}} = \frac{\cos \frac{A}{2}}{\sin \frac{A}{2}} = \cot\left(\frac{A}{2}\right)$

70. What is $\tan 25^\circ \tan 15^\circ + \tan 15^\circ \tan 50^\circ + \tan 25^\circ \tan 50^\circ$ equal to?

- (a) 0 (b) 1
(c) 2 (d) 4

⊙ (b) ∵ $\tan 50^\circ = \tan(90^\circ - 40^\circ)$

$\Rightarrow \tan 50^\circ = \cot 40^\circ$

$\Rightarrow \tan 50^\circ = \frac{1}{\tan 40^\circ}$

$\Rightarrow \tan 50^\circ = \frac{1}{\tan(25^\circ + 15^\circ)}$

$\Rightarrow \tan 50^\circ = \frac{1 - \tan 25^\circ \tan 15^\circ}{\tan 25^\circ + \tan 15^\circ}$

$\Rightarrow \tan 25^\circ \tan 50^\circ + \tan 15^\circ \tan 50^\circ = 1 - \tan 25^\circ \tan 15^\circ$

$\Rightarrow \tan 25^\circ \tan 15^\circ + \tan 15^\circ \tan 50^\circ + \tan 25^\circ \tan 50^\circ = 1$

71. What is the area of the region bounded by $|x| < 5, y = 0$ and $y = 8$?

- (a) 40 sq units (b) 80 sq units
(c) 120 sq units (d) 160 sq units

⊙ (b) Given curve $y = 0$ and $y = 8$ and $|x| < 5$

Case I When $x < 0$, then area of the region bounded

$= \int_{-5}^0 0 dx - \int_{-5}^0 8 dx = 0 - 8 [x]_{-5}^0$
 $= -8 [0 + 5] = -40$
 $= 40$ sq units

[∵ area will not be negative]

Case II when $x > 0$, then

Area of the region bounded
 $= \int_0^5 0 dx - \int_0^5 8 dx = 0 - 8 [x]_0^5$
 $= -8 [5 - 0] = -40 = 40$ sq units

∴ Required area = 40 + 40 = 80 sq units

72. Consider the following statements in respect of the function $f(x) = \sin\left(\frac{1}{x}\right)$ for $x \neq 0$ and $f(0) = 0$:

1. $\lim_{x \rightarrow 0} f(x)$ exists
2. $f(x)$ is continuous at $x = 0$

Which of the above statement is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (d) Given, $f(x) = \begin{cases} \sin \frac{1}{x}, & x \neq 0 \\ 0, & x = 0 \end{cases}$

$$\begin{aligned} \text{LHL} &= \lim_{x \rightarrow 0^-} \sin\left(\frac{1}{x}\right) = \lim_{h \rightarrow 0} \sin\left(\frac{1}{0-h}\right) \\ &= \lim_{h \rightarrow 0} -\sin\left(\frac{1}{h}\right) = -\sin \infty \\ &= -(\text{a rational number}) \end{aligned}$$

[∵ $\sin \theta$ lies between -1 to 1]

$$\begin{aligned} \text{RHL} &= \lim_{x \rightarrow 0^+} \sin\left(\frac{1}{x}\right) = \lim_{h \rightarrow 0} \sin\left(\frac{1}{0+h}\right) \\ &= \lim_{h \rightarrow 0} \sin\left(\frac{1}{h}\right) = \sin \infty \\ &= \text{a rational number} \end{aligned}$$

[∵ $\sin \theta$ lies between -1 to 1]

∴ LHL \neq RHL
So, $f(x)$ does not exist.
∴ $f(x) = 0$ at $x = 0$
∴ LHL \neq RHL $\neq f(0)$
So, $f(x)$ is not continuous.
Hence, the statements neither 1 nor 2 correct.

73. What is the value of $\lim_{x \rightarrow 0} \frac{\sin x^\circ}{\tan 3x^\circ}$?

- (a) $\frac{1}{4}$ (b) $\frac{1}{3}$ (c) $\frac{1}{2}$ (d) 1

⊙ (b) $\lim_{x \rightarrow 0} \frac{\sin x^\circ}{\tan 3x^\circ} = \lim_{x \rightarrow 0} \frac{x \times \frac{\sin x}{x}}{3x \times \frac{\tan 3x}{3x}}$

$$= \frac{1}{3} \lim_{x \rightarrow 0} \frac{\left(\frac{\sin x}{x}\right)}{\left(\frac{\tan 3x}{3x}\right)} = \frac{1}{3}$$

[∵ $\lim_{\theta \rightarrow 0} \frac{\sin \theta}{\theta} = 1$ and $\lim_{\theta \rightarrow 0} \frac{\tan \theta}{\theta} = 1$]

74. What is the degree of the differential equation

$$\frac{d^3 y}{dx^3} + \left(\frac{dy}{dx}\right)^2 - x^2 \left(\frac{d^4 y}{dx^4}\right) = 0?$$

- (a) 1 (b) 2
(c) 3 (d) 4

⊙ (a) Given differential equation,

$$\frac{d^3 y}{dx^3} + \left(\frac{dy}{dx}\right)^2 - x^2 \left(\frac{d^4 y}{dx^4}\right) = 0$$

$$\Rightarrow \frac{d^4 y}{dx^4} - \frac{1}{x^2} \left(\frac{d^3 y}{dx^3}\right) - \frac{1}{x^2} \left(\frac{dy}{dx}\right)^2 = 0$$

We know that power of the highest order of differentiation is the degree of differential equation.

So, the degree of it equation is 1.

75. Which one of the following is the second degree polynomial function $f(x)$ where, $f(0) = 5$, $f(-1) = 10$ and $f(1) = 6$?

- (a) $5x^2 - 2x + 5$ (b) $3x^2 - 2x - 5$
(c) $3x^2 - 2x + 5$ (d) $3x^2 - 10x + 5$

⊙ (c) From the option (c),

$$\begin{aligned} f(x) &= 3x^2 - 2x + 5 \\ f(0) &= 3(0)^2 - 2(0) + 5 \\ &= 5 \\ f(-1) &= 3(-1)^2 - 2(-1) + 5 \\ &= 3 + 2 + 5 = 10 \\ \text{and } f(1) &= 3(1)^2 - 2(1) + 5 \\ &= 3 - 2 + 5 = 6 \end{aligned}$$

Hence, the required polynomial $f(x) = 3x^2 - 2x + 5$.

Directions (Q. Nos. 76-78) Read the following information and answer the three items that follow.

A curve $y = me^{mx}$ where $m > 0$ intersects Y-axis at a point P.

76. What is the slope of the curve at the point of intersection P?

- (a) m (b) m^2
(c) $2m$ (d) $2m^2$

77. How much angle does the tangent at P make with y-axis?

- (a) $\tan^{-1} m^2$
(b) $\cot^{-1}(1 + m^2)$
(c) $\sin^{-1} \left(\frac{1}{\sqrt{1 + m^4}}\right)$
(d) $\sec^{-1} \sqrt{1 + m^4}$

78. What is the equation of tangent to the curve at P?

- (a) $y = mx + m$ (b) $y = -mx + 2m$
(c) $y = m^2x + 2m$ (d) $y = m^2x + m$

⊙ **Solutions** (Q. Nos. 76-78)

Given curve $y = me^{mx}$ where $m > 0$

∴ Curve intersects Y-axis at a point P, then $x = 0$

∴ $y = me^0 \Rightarrow y = m$

∴ Point P (0, m)

Now, differentiation w.r.t x of given curve,

$$\frac{dy}{dx} = m \cdot e^{mx} \cdot m$$

$$\frac{dy}{dx} = m^2 e^{mx}$$

at point P(0, m), $\frac{dy}{dx} = m^2 e^0 = m^2$

⊙ **76. (b)** Slope of the curve at the point P(0, m)

$$= \left(\frac{dy}{dx}\right) \text{ at point } P(0, m) = m^2$$

⊙ **77. (c)** Let the tangent makes the angle with X-axis be θ , then

$$\tan \theta = \left(\frac{dy}{dx}\right) \text{ at } P(0, m)$$

$\Rightarrow \tan \theta = m^2 \Rightarrow \theta = \tan^{-1} m^2$

Now, the tangent will make the angle with Y-axis

$$= \frac{\pi}{2} - \theta = \frac{\pi}{2} - \tan^{-1} m^2$$

$$= \cot^{-1} m^2 \left[\because \tan^{-1} x + \cot^{-1} x = \frac{\pi}{2} \right]$$

$$= \sin^{-1} \left(\frac{1}{\sqrt{1 + m^4}} \right)$$

$$\left[\because \cot^{-1} x = \sin^{-1} \left(\frac{1}{\sqrt{1 + m^2}} \right) \right]$$

⊙ **78. (d)** Equation of tangent to curve at P is

$$y - y_1 = \left(\frac{dy}{dx}\right)_{(x_1, y_1)} (x - x_1)$$

$\Rightarrow y - m = m^2 (x - 0)$

$\Rightarrow y = m^2 x + m$

Directions (Q. Nos. 79 and 80) Read the following information and answer the two items that follow.

Let $f(x) = x^2$, $g(x) = \tan x$ and $h(x) = \log x$.

79. For $x = \frac{\sqrt{\pi}}{2}$, what is the value of $[h \circ (g \circ f)](x)$?

- (a) 0 (b) 1 (b) $\frac{\pi}{4}$ (d) $\frac{\pi}{2}$

80. What is $[f \circ (f \circ f)](2)$ equal to ?

- (a) 2 (b) 8
(c) 16 (d) 256

⊙ **Solutions** (Q. Nos. 79 and 80) Given, $f(x) = x^2$, $g(x) = \tan x$ and $h(x) = \log x$

79. (a) $(gof)(x) = g\{f(x)\} = \tan x^2$
 Now, $[ho(gof)](x) = h\{(gof)(x)\}$
 $= \log(\tan x^2)$
 for $x = \frac{\sqrt{\pi}}{2}$
 $[ho(gof)]\left(\frac{\sqrt{\pi}}{2}\right) = \log \tan\left(\frac{\pi}{4}\right)$
 $= \log 1 = 0$

80. (d) $(fof)(x) = f\{f(x)\}$
 $= (x^2)^2 = x^4$
 Now, $[fo(fof)](x) = f\{(fof)(x)\}$
 $= (x^4)^2 = x^8$
 $\therefore [fo(fof)](2) = 2^8 = 256$

81. What is $\int \frac{dx}{2x^2 - 2x + 1}$ equal to?

- (a) $\frac{\tan^{-1}(2x-1)}{2} + c$
- (b) $2 \tan^{-1}(2x-1) + c$
- (c) $\frac{\tan^{-1}(2x+1)}{2} + c$
- (d) $\tan^{-1}(2x-1) + c$

81. (d) Let $I = \int \frac{dx}{2x^2 - 2x + 1}$
 $= \frac{1}{2} \int \frac{dx}{x^2 - x + \frac{1}{2}}$
 $= \frac{1}{2} \int \frac{dx}{x^2 - x + \frac{1}{4} - \frac{1}{4} + \frac{1}{2}}$
 $= \frac{1}{2} \int \frac{dx}{\left(x - \frac{1}{2}\right)^2 + \frac{1}{4}}$
 $= \frac{1}{2} \int \frac{dx}{\left(x - \frac{1}{2}\right)^2 + \left(\frac{1}{2}\right)^2}$
 $= \frac{1}{2} \cdot 2 \tan^{-1} \left[\frac{\left(x - \frac{1}{2}\right)}{\frac{1}{2}} \right] + c$
 $\left[\because \int \frac{dx}{a^2 + x^2} = \frac{1}{a} \tan^{-1} \frac{x}{a} \right]$
 $= \tan^{-1}(2x-1) + c$

82. What is $\int \frac{dx}{x(1 + \ln x)^n}$ equal to ($n \neq 1$)?

- (a) $\frac{1}{(n-1)(1 + \ln x)^{n-1}} + c$
- (b) $\frac{1-n}{(1 + \ln x)^{1-n}} + c$
- (c) $\frac{n+1}{(1 + \ln x)^{n+1}} + c$
- (d) $-\frac{1}{(n-1)(1 + \ln x)^{n-1}} + c$

83. (d) Suppose,
 $I = \int \frac{dx}{x(1 + \ln x)^n}$ (where $n \neq 1$)
 Let $1 + \ln x = t$
 Diff. w.r.t. x , we get
 $0 + \frac{1}{x} = \frac{dt}{dx} \Rightarrow \frac{dx}{x} = dt$
 $\therefore I = \int \frac{dt}{t^n} = \frac{t^{-n+1}}{-n+1} + c$
 $= -\frac{1}{(n-1)t^{n-1}} + c$
 $= -\frac{1}{(n-1)(1 + \ln x)^{n-1}} + c$

83. Which one of the following is the differential equation that represents the family of curves $y = \frac{1}{2x^2 - C}$, where C is an arbitrary constant?

- (a) $\frac{dy}{dx} = 4xy^2$ (b) $\frac{dy}{dx} = \frac{1}{y}$
- (c) $\frac{dy}{dx} = x^2y$ (d) $\frac{dy}{dx} = -4xy^2$

83. (d) The differential equation of family of curves $y = \frac{1}{2x^2 - C}$... (i)

(where, C is any arbitrary constant)
 Differentiation w.r.t. x of Eq. (i)
 $\frac{dy}{dx} = -\frac{1}{(2x^2 - C)^2} \cdot \frac{d}{dx}(2x^2 - C)$
 $\Rightarrow \frac{dy}{dx} = -y^2 \cdot (4x - 0)$
 $\Rightarrow \frac{dy}{dx} = -4xy^2$, it is required differential equation.

Directions (Q. Nos. 84 and 85) Read the following information and answer the two items that follow.

Consider the equation $x^y = e^{x-y}$

84. What is $\frac{dy}{dx}$ at $x = 1$ equal to?
 (a) 0 (b) 1
 (c) 2 (d) 4

85. What is $\frac{d^2y}{dx^2}$ at $x = 1$ equal to?
 (a) 0 (b) 1
 (c) 2 (d) 4

Solutions (Q. Nos 84 and 85)

Given equation, $x^y = e^{x-y}$

On taking log both sides, we get

$y \log x = (x - y) \log e$
 $\Rightarrow y \log x = x - y$ [$\because \log_e e = 1$]
 $\Rightarrow (1 + \log x)y = x \Rightarrow y = \frac{x}{(1 + \log x)}$

Differentiation w.r.t. x , we get

$\frac{dy}{dx} = \frac{(1 + \log x) \cdot 1 - x \left(0 + \frac{1}{x}\right)}{(1 + \log x)^2}$

$\frac{dy}{dx} = \frac{1 + \log x - 1}{(1 + \log x)^2}$

$\frac{dy}{dx} = \frac{\log x}{(1 + \log x)^2}$

84. (a) $\therefore \frac{dy}{dx} = \frac{\log x}{(1 + \log x)^2}$

At $x = 1$, $\frac{dy}{dx} = \frac{\log 1}{(1 + \log 1)^2}$

$= \frac{0}{1} = 0$ [$\because \log 1 = 0$]

85. (b) $\therefore \frac{dy}{dx} = \frac{\log x}{(1 + \log x)^2}$

Differentiation w.r.t. x , we get

$(1 + \log x)^2 \cdot \frac{1}{x} - (\log x) \cdot 2(1 + \log x) \cdot \frac{1}{x}$

$\frac{d^2y}{dx^2} = \frac{2(1 + \log x) \left(0 + \frac{1}{x}\right)}{(1 + \log x)^4}$

$= \frac{1}{x} \frac{(1 + \log x)(1 + \log x - 2 \log x)}{(1 + \log x)^4}$

$= \frac{1}{x} \frac{(1 + \log x)(1 - \log x)}{(1 + \log x)^4}$

At $x = 1$ $\frac{d^2y}{dx^2} = \frac{1(1+0)(1-0)}{(1+0)^4} = 1$

Directions (Q.Nos. 86-88) Read the following information and answer the three items that follow.

Consider the function

$f(x) = g(x) + h(x)$

where, $g(x) = \sin\left(\frac{x}{4}\right)$

and $h(x) = \cos\left(\frac{4x}{5}\right)$

86. What is the period of the function $g(x)$?
 (a) π (b) 2π
 (c) 4π (d) 8π

87. What is the period of the function $h(x)$?
 (a) π (b) $\frac{4\pi}{5}$
 (c) $\frac{5\pi}{2}$ (d) $\frac{3\pi}{2}$

88. What is the period of the function $f(x)$?
 (a) 10π (b) 20π
 (c) 40π (d) 80π

⊙ **Solutions** (Q. Nos. 86-88)

Given, $f(x) = g(x) + h(x)$,
where, $g(x) = \sin\left(\frac{x}{4}\right)$ and

$$h(x) = \cos\left(\frac{4x}{5}\right)$$

⊙ **86. (d)** $g(x) = \sin\left(\frac{x}{4}\right)$

$$g(x + 8\pi) = \sin\left(\frac{x + 8\pi}{4}\right)$$

$$= \sin\left(2\pi + \frac{x}{4}\right)$$

$$= \sin\left(\frac{x}{4}\right) = g(x)$$

∴ Period of the function $g(x) = 8\pi$

⊙ **87. (c)** $h(x) = \cos\left(\frac{4x}{5}\right)$

$$h\left(x + \frac{5\pi}{2}\right) = \cos\left(\frac{4}{5}\left(x + \frac{5\pi}{2}\right)\right)$$

$$= \cos\left(2\pi + \frac{4x}{5}\right)$$

$$= \cos\left(\frac{4x}{5}\right) = h(x)$$

∴ Period of the function $h(x) = \frac{5\pi}{2}$

⊙ **88. (c)** $f(x) = g(x) + h(x)$

$$= \sin\left(\frac{x}{4}\right) + \cos\left(\frac{4x}{5}\right)$$

$$f(x + 40\pi) = \sin\left(\frac{x + 40\pi}{4}\right) + \cos\left(\frac{4(x + 40\pi)}{5}\right)$$

$$= \sin\left(10\pi + \frac{x}{4}\right) + \cos\left(32\pi + \frac{4x}{5}\right)$$

$$= \sin\left(5 \times 2\pi + \frac{x}{4}\right) + \cos\left(16 \times 2\pi + \frac{4x}{5}\right)$$

$$= \sin\left(\frac{x}{4}\right) + \cos\left(\frac{4x}{5}\right) = f(x)$$

∴ Period of the function $f(x) = 40\pi$

Directions (Q. Nos. 89 and 90) Read the following information and answer the two items that follow.

consider the function

$$f(x) = 3x^4 - 20x^3 - 12x^2 + 288x + 1$$

89. In which one of the following intervals is the function increasing?

- (a) (-2, 3) (b) (3, 4)
(c) (-3, -2) (d) (-4, -3)

90. In which one of the following intervals is the function decreasing?

- (a) (-2, 3) (b) (3, 4)
(c) (4, 6) (d) (6, 9)

⊙ **Solutions** (Q. Nos. 89 and 90)

Given function,

$$f(x) = 3x^4 - 20x^3 - 12x^2 + 288x + 1$$

Differentiation w.r.t. x , we get

$$f'(x) = 12x^3 - 60x^2 - 24x + 288$$

⊙ **89. (b)** $f(x)$ is increasing, if $f'(x) \geq 0$

$$12x^3 - 60x^2 - 24x + 288 \geq 0$$

$$\Rightarrow x^3 - 5x^2 - 2x + 24 \geq 0$$

$$\Rightarrow (x+2)(x^2 - 7x + 12) \geq 0$$

$$\Rightarrow (x+2)(x-3)(x-4) \geq 0$$

$$\therefore x \leq -2, x \geq 3, x \geq 4$$

Hence, $f(x)$ is increasing the interval (3, 4).

⊙ **90. (a)** $f(x)$ is decreasing, if $f'(x) \leq 0$

$$12x^3 - 60x^2 - 24x + 288 \leq 0$$

$$\Rightarrow x^3 - 5x^2 - 2x + 24 \leq 0$$

$$\Rightarrow (x+2)(x^2 - 7x + 12) \leq 0$$

$$\Rightarrow (x+2)(x-3)(x-4) \leq 0$$

$$\therefore x \geq -2, x \leq 3, x \leq 4$$

Hence $f(x)$ is decreasing the interval (-2, 3).

Directions (Q.Nos. 91-93) Read the following information and answer the two items that follow.

Let $f(x) = x^2 + 2x - 5$

and $g(x) = 5x + 30$

91. What are the roots of the equation $g[f(x)] = 0$?

- (a) 1, -1 (b) -1, -1
(c) 1, 1 (d) 0, 1

92. Consider the following statements.

- $f[g(x)]$ is a polynomial of degree 3.
- $g[g(x)]$ is a polynomial of degree 2.

Which of the above statements is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

93. If $h(x) = 5f(x) - xg(x)$, then what is the derivative of $h(x)$?

- (a) -40 (b) -20
(c) -10 (d) 0

⊙ **Solutions** (Q. Nos. 91-93) Given,

$$f(x) = x^2 + 2x - 5, g(x) = 5x + 30$$

$$\therefore g[f(x)] = 5(x^2 + 2x - 5) + 30$$

$$= 5x^2 + 10x + 5$$

$$f[g(x)] = (5x + 30)^2 + 2(5x + 30) - 5$$

$$= 25x^2 + 900 + 300x + 10x + 60 - 5$$

$$= 25x^2 + 310x + 955$$

$$\text{and } g[g(x)] = 5(5x + 30) + 30$$

$$= 25x + 180$$

⊙ **91. (b)** The equation, $g[f(x)] = 0$

$$5x^2 + 10x + 5 = 0$$

$$\Rightarrow x^2 + 2x + 1 = 0$$

$$\Rightarrow (x + 1)^2 = 0$$

$$\therefore x = -1, -1$$

Hence, the roots of this equation are -1, -1.

⊙ **92. (d)** 1. $f[g(x)] = 25x^2 + 310x + 955$

$f[g(x)]$ is a polynomial of degree 2.

So, Statement 1 is not correct.

$$2. g[g(x)] = 25x + 180$$

$g[g(x)]$ is a polynomial of degree 1.

So, Statement 2 is not correct.

Hence, the Statement neither 1 nor 2 correct.

⊙ **93. (b)** Given, $h(x) = 5f(x) - xg(x)$

$$= 5(x^2 + 2x - 5) - x(5x + 30)$$

$$= 5x^2 + 10x - 25 - 5x^2 - 30x$$

$$= -20x - 25$$

Differentiation w.r.t. x , we get

$$h'(x) = -20$$

Hence, derivative of $h(x)$ is -20.

Directions (Q.Nos. 94 and 95) Read the following information and answer the questions given below.

Consider the integrals

$$I_1 = \int_0^\pi \frac{xdx}{1 + \sin x} \text{ and}$$

$$I_2 = \int_0^\pi \frac{(\pi - x)dx}{1 - \sin(\pi + x)}$$

94. What is the value of I_1 ?

- (a) 0 (b) $\frac{\pi}{2}$ (c) π (d) 2π

95. What is the value of $I_1 + I_2$?

- (a) 2π (b) π (c) $\frac{\pi}{2}$ (d) 0

⊙ **Solutions** (Q.Nos. 94 and 95)

$$\text{Given, } I_1 = \int_0^\pi \frac{xdx}{1 + \sin x}$$

$$I_2 = \int_0^\pi \frac{(\pi - x) dx}{1 - \sin(\pi + x)}$$

$$I_1 = \int_0^\pi \frac{xdx}{1 + \sin x} \dots (i)$$

$$= \int_0^\pi \frac{(\pi - x) dx}{1 + \sin(\pi - x)}$$

$$\left[\because \int_0^a f(x) dx = \int_0^a f(a - x) dx \right]$$

$$I_1 = \int_0^\pi \frac{(\pi - x) dx}{1 + \sin x} \dots (ii)$$

Adding Eqs. (i) and (ii), we get

$$2I_1 = \int_0^\pi \frac{(x + \pi - x) dx}{1 + \sin x} = \int_0^\pi \frac{\pi dx}{1 + \sin x}$$

$$= \pi \int_0^\pi \frac{(1 - \sin x) dx}{(1 - \sin^2 x)}$$

$$= \pi \int_0^\pi \frac{(1 - \sin x) dx}{\cos^2 x}$$

$$= \pi \int_0^\pi (\sec^2 x - \sec x \tan x) dx$$

$$= \pi [\tan x - \sec x]_0^\pi$$

$$= \pi [(\tan \pi - \sec \pi) - (\tan 0 - \sec 0)]$$

$$\begin{aligned}
 &= \pi [(0 + 1) - (0 - 1)] \\
 2I_1 &= \pi (1 + 1) = 2\pi \\
 \Rightarrow I_1 &= \pi \\
 \text{Now, } I_2 &= \int_0^\pi \frac{(\pi - x) dx}{1 - \sin(\pi + x)} \\
 &= \int_0^\pi \frac{(\pi - \pi + x) dx}{1 - \sin(\pi - \pi - x)} \\
 &= \int_0^\pi \frac{(\pi - \pi + x) dx}{1 - \sin(\pi - x)} \\
 &= \int_0^\pi \frac{x dx}{1 - \sin(-x)} \\
 &= \int_0^\pi \frac{x dx}{1 + \sin x} \quad [\because \sin(-\theta) = -\sin \theta] \\
 &= I_1 = \pi
 \end{aligned}$$

94. (c) $I_1 = \int_0^\pi \frac{x dx}{1 + \sin x} = \pi$

95. (a) $I_1 + I_2 = \pi + \pi = 2\pi$

96. The differential equation which represents the family of curves given by $\tan y = C(1 - e^x)$ is

(a) $e^x \tan y dx + (1 - e^x) dy = 0$

(b) $e^x \tan y dx + (1 - e^x) \sec^2 y dy = 0$

(c) $e^x (1 - e^x) dx + \tan y dy = 0$

(d) $e^x \tan y dy + (1 - e^x) dx = 0$

97. (b) The equation of the family of curves. $\tan y = C(1 - e^x)$... (i)

Differentiation w.r.t. x, we get

$$\sec^2 y \cdot \frac{dy}{dx} = C(0 - e^x)$$

$\Rightarrow \sec^2 y \cdot \frac{dy}{dx} = -Ce^x$... (ii)

Eliminating C from Eqs. (i) and (ii), we get

$$\sec^2 y \cdot \frac{dy}{dx} = -e^x \frac{\tan y}{(1 - e^x)}$$

$\Rightarrow (1 - e^x) \sec^2 y dy = -e^x \tan y dx$

$\Rightarrow e^x \tan y dx + (1 - e^x) \sec^2 y dy = 0$

97. What is the derivative of $2^{(\sin x)^2}$ with respect to $\sin x$?

(a) $\sin x \cdot 2^{(\sin x)^2} \ln 4$

(b) $2 \sin x \cdot 2^{(\sin x)^2} \ln 4$

(c) $\ln(\sin x) \cdot 2^{(\sin x)^2}$

(d) $2 \sin x \cos x \cdot 2^{(\sin x)^2}$

98. (a) Derivative of $2^{(\sin x)^2}$ with respect to $\sin x$

$$\begin{aligned}
 &= \frac{\frac{d}{dx} 2^{(\sin x)^2}}{\frac{d}{dx}(\sin x)} = \frac{2^{(\sin x)^2} \log 2 \frac{d}{dx}(\sin x)^2}{\cos x} \\
 &= \frac{2^{(\sin x)^2} \log 2 \cdot 2 \sin x \cos x}{\cos x} \\
 &= 2 \log 2 \cdot (\sin x) \cdot 2^{(\sin x)^2} \\
 &= \sin x \cdot 2^{(\sin x)^2} \cdot \log 4
 \end{aligned}$$

98. For what value of k is the function

$$f(x) = \begin{cases} 2x + \frac{1}{4}, & x < 0 \\ k, & x = 0 \\ \left(x + \frac{1}{2}\right)^2, & x > 0 \end{cases} \text{ continuous?}$$

- (a) $\frac{1}{4}$ (b) $\frac{1}{2}$ (c) 1 (d) 2

99. (a) Given,

$$f(x) = \begin{cases} 2x + \frac{1}{4}, & x < 0 \\ k, & x = 0 \\ \left(x + \frac{1}{2}\right)^2, & x > 0 \end{cases} \text{ continuous.}$$

$$\text{LHL} = \lim_{x \rightarrow 0^-} f(x) = \lim_{h \rightarrow 0^-} \left(2x + \frac{1}{4}\right)$$

$$= \lim_{h \rightarrow 0} \left[2(0 - h) + \frac{1}{4}\right]$$

$$= \lim_{h \rightarrow 0} \left(-2h + \frac{1}{4}\right) = \frac{1}{4}$$

and $f(0) = k$

\therefore The function $f(x)$ is continuous at $x = 0$

\therefore LHL = $f(0)$ = RHL

$$\Rightarrow \text{LHL} = f(0) \Rightarrow \frac{1}{4} = k$$

Hence, $k = \frac{1}{4}$

99. What is the area of the region enclosed between the curve $y^2 = 2x$ and the straight line $y = x$?

(a) $\frac{2}{3}$ sq unit (b) $\frac{4}{3}$ sq unit

(c) $\frac{1}{3}$ sq unit (d) 1 sq unit

100. (a) Equations of curves,

$$y^2 = 2x \quad \dots (i)$$

and $y = x \quad \dots (ii)$

From Eqs. (i) and (ii),

$$y^2 = 2y \Rightarrow y(y - 2) = 0$$

$\therefore y = 0, 2$

$$\therefore \text{Required area} = \int_0^2 \left(\frac{y^2}{2} - y\right) dy$$

$$= \left[\frac{1}{2} \cdot \frac{y^3}{3} - \frac{y^2}{2}\right]_0^2$$

$$= \left[\frac{1}{6}(2)^3 - \frac{(2)^2}{2}\right] - 0$$

$$= \frac{8}{6} - \frac{4}{2} = \frac{8 - 12}{6}$$

$$= -\frac{4}{6} = -\frac{2}{3} = \frac{2}{3} \text{ sq unit}$$

(\therefore area will not be negative)

100. If $f(x) = \frac{x^3}{3} - \frac{5x^2}{2} + 6x + 7$ increases

in the interval T and decreases in the interval S, then which one of the following is correct?

(a) $T = (-\infty, 2), \cup (3, \infty)$ and $S = (2, 3)$

(b) $T = \phi$ and $S = (-\infty, \infty)$

(c) $T = (-\infty, \infty)$ and $S = \phi$

(d) $T = (2, 3)$ and $S = (-\infty, 2) \cup (3, \infty)$

101. (a) Given, $f(x) = \frac{x^3}{3} - \frac{5x^2}{2} + 6x + 7$

Differentiating w.r.t x, we get

$$f'(x) = \frac{3x^2}{3} - \frac{5}{2} \cdot 2x + 6 = x^2 - 5x + 6$$

$\therefore f(x)$ is increases in interval T,

$$\therefore f'(x) \geq 0$$

$$\Rightarrow x^2 - 5x + 6 \geq 0$$

$$\Rightarrow x^2 - 3x - 2x + 6 \geq 0$$

$$\Rightarrow (x - 3)(x - 2) \geq 0 \Rightarrow x \leq 2, x \geq 3$$

$$\therefore T = (-\infty, 2) \cup (3, \infty)$$

Again, $f(x)$ is decreases in interval S.

$$\therefore f'(x) \leq 0$$

$$\Rightarrow x^2 - 5x + 6 \leq 0$$

$$\Rightarrow x^2 - 3x - 2x + 6 \leq 0$$

$$\Rightarrow x(x - 3) - 2(x - 3) \leq 0$$

$$\Rightarrow (x - 3)(x - 2) \leq 0$$

$$\Rightarrow 2 < x < 3 \Rightarrow x \in (2, 3)$$

$$\therefore S = (2, 3)$$

101. A coin is biased so that heads comes up thrice as likely as tails. For three independent tosses of a coin, what is the probability of getting at most two tails?

(a) 0.16 (b) 0.48

(c) 0.58 (d) 0.98

102. (d) Let X be a random variable, it represents of the number tail comes of three tosses of a coin.

\therefore Possible value of X are 0, 1, 2, 3.

According to the question, the coin is biased in which the probability to comes head is thrice as likely as tails.

$$\therefore P(H) = \frac{3}{4} \text{ and } P(T) = \frac{1}{4}$$

$$P(X = 0) = P(\{HHH\}) = \left(\frac{3}{4}\right)^3 = \frac{27}{64}$$

$$P(X = 1) = P(2 \text{ heads and } 1 \text{ tail})$$

$$= P(\{HHT\}) + P(\{HTH\}) + P(\{THH\})$$

$$= \frac{3}{4} \cdot \frac{3}{4} \cdot \frac{1}{4} + \frac{3}{4} \cdot \frac{1}{4} \cdot \frac{3}{4} + \frac{1}{4} \cdot \frac{3}{4} \cdot \frac{3}{4}$$

$$= \frac{27}{64}$$

$$P(X = 2) = P(1 \text{ head and } 2 \text{ tails})$$

$$= P(\{HTT\}) + P(\{THT\}) + P(\{TTH\})$$

$$= \frac{3}{4} \cdot \frac{1}{4} \cdot \frac{1}{4} + \frac{1}{4} \cdot \frac{3}{4} \cdot \frac{1}{4} + \frac{1}{4} \cdot \frac{1}{4} \cdot \frac{3}{4}$$

$$= \frac{9}{64}$$

∴ Required probability

$$= P(X = 0) + P(X = 1) + P(X = 2)$$

$$= \frac{27}{64} + \frac{9}{64} + \frac{27}{64}$$

$$= \frac{63}{64} = 0.98$$

102. A bag contains 20 books out of which 5 are defective. If 3 of the books are selected at random and removed from the bag in succession without replacement, then what is the probability that all three books are defective?

- (a) 0.009 (b) 0.016
(c) 0.026 (d) 0.047

⊙ (a) Total books in bag = 20

Defective books = 5

∴ Undelected books = 20 - 5 = 15

∴ Probability to selected three books are defective without replacement

$$= \frac{5}{20} \times \frac{4}{19} \times \frac{3}{18}$$

$$= \frac{6}{684}$$

$$= 0.0087 = 0.009$$

103. The median of the observations 22, 24, 33, 37, $x + 1$, $x + 3$, 46, 47, 57, 58 in ascending order is 42. What are the values of 5th and 6th observations respectively?

- (a) 42, 45 (b) 41, 43
(c) 43, 46 (d) 40, 40

⊙ (b) The observations in ascending order are

22, 24, 33, 37, $x + 1$, $x + 3$, 46, 47, 57, 58

Here, $n = 10$

∴ Median

$$\text{Value of } \frac{N}{2} \text{th observations} +$$

$$\frac{\text{Values of } \left(\frac{N}{2} + 1\right) \text{th observations}}{2}$$

$$= \frac{\text{Value of 5th observations} + \text{Value of 6th observation}}{2}$$

$$\Rightarrow 42 = \frac{\text{Value of 5th observations} + \text{Value of 6th observation}}{2}$$

$$\Rightarrow 84 = x + 1 + x + 3$$

$$\Rightarrow 2x = 84 - 4$$

$$\Rightarrow x = \frac{80}{2} = 40$$

∴ 5th observation = $x + 1 = 40 + 1 = 41$ and 6th observation

$$= x + 3 = 40 + 3 = 43$$

104. Arithmetic mean of 10 observations is 60 and sum of squares of deviations from 50 is 5000. What is the standard deviation of the observations?

- (a) 20 (b) 21
(c) 22.36 (d) 24.70

⊙ (a) Arithmetic mean of 10 observations = 60

$$\therefore \Sigma x_i = 60 \times 10 = 600 \quad \left[\because \bar{x} = \frac{\Sigma x_i}{n} \right]$$

If, $A = 50$, then $\Sigma d_i^2 = 5000$

$$\therefore d_i = x_i - A$$

$$\therefore \Sigma d_i = \Sigma (x_i - A) = \Sigma x_i - A \Sigma 1$$

$$= 600 - 50 \times n \quad [\because \Sigma 1 = n]$$

$$= 600 - 50 \times 10 = 100$$

$$\text{Now, SD} = \sqrt{\frac{\Sigma d_i^2}{n} - \left(\frac{\Sigma d_i}{n}\right)^2}$$

$$= \sqrt{\frac{5000}{10} - \left(\frac{100}{10}\right)^2}$$

$$= \sqrt{500 - 100} = \sqrt{400} = 20$$

105. If p and q are the roots of the equation $x^2 - 30x + 221 = 0$, what is the value of $p^3 + q^3$?

- (a) 7010 (b) 7110
(c) 7210 (d) 7240

⊙ (b) Since, p and q are the roots of the equation

$$x^2 - 30x + 221 = 0$$

$$\therefore p + q = 30 \text{ and } pq = 221$$

$$\text{Now, } p^3 + q^3 = (p + q)(p^2 + q^2 - pq)$$

$$= 30 [p^2 + q^2 + 2pq - 3pq]$$

$$= 30 [(p + q)^2 - 3pq]$$

$$= 30 [(30)^2 - 663]$$

$$= 30 [900 - 663]$$

$$= 30 \times 237 = 7110$$

106. For the variables x and y , the two regression lines are $6x + y = 30$ and $3x + 2y = 25$. What are the values of \bar{x} , \bar{y} and r respectively?

- (a) $\frac{20}{3}, \frac{35}{9}, -0.5$ (b) $\frac{20}{3}, \frac{35}{9}, 0.5$
(c) $\frac{35}{9}, \frac{20}{3}, -0.5$ (d) $\frac{35}{9}, \frac{20}{3}, 0.5$

⊙ (c) Given lines, $6x + y = 30$... (i)

and $3x + 2y = 25$... (ii)

where, x and y are two variables.

Solving these equations,

$$x = \frac{35}{9}, \text{ and } y = \frac{20}{3}$$

These lines are regression,

$$\text{Then, } \bar{x} = \frac{35}{9}, \bar{y} = \frac{20}{3}$$

and $r = -\frac{3}{6}$ or $-\frac{1}{2}$
 $= -0.5$

107. The class marks in a frequency table are given to be 5, 10, 15, 20, 25, 30, 35, 40, 45, 50. The class limits of the first five classes are

- (a) 3-7, 7-13, 13-17, 17-23, 23-27
(b) 2.5-7.5, 7.5-12.5, 12.5-17.5, 17.5-22.5, 22.5-27.5
(c) 1.5-8.5, 8.5-11.5, 11.5-18.5, 18.5-21.5, 21.5-28.5
(d) 2-8, 8-12, 12-18, 18-22, 22-28

⊙ (b) Given, class marks in a frequency table are

5, 10, 15, 20, 25, 30, 35, 40, 45, 50.

Let L_1 and L_2 be the lower limit and upper limit of first interval.

$$\therefore \text{Class mark} = \frac{L_1 + L_2}{2} \quad 5 = \frac{L_1 + L_2}{2}$$

$$\Rightarrow L_1 + L_2 = 10 \quad \dots (i)$$

and $L_2 - L_1 = \text{Class interval}$

$$\text{or } L_2 - L_1 = 5 \quad \dots (ii)$$

Solving Eq. (i) and (ii),

$$L_2 = 7.5 \text{ and } L_1 = 2.5$$

∴ Class limit of first classes is 2.5 - 7.5

Similarly find class limit of other classes.

Hence, class limits of the first five classes are

2.5 - 7.5, 7.5 - 12.5, 12.5 - 17.5,

17.5 - 22.5, 22.5 - 27.5.

108. The mean of 5 observations is 4.4 and variance is 8.24. If three of the five observations are 1, 2 and 6, then what are the other two observations?

- (a) 9, 16 (b) 9, 4
(c) 81, 16 (d) 81, 4

⊙ (b) Let x_1, x_2, x_3, x_4 and x_5 are five observations.

$$\therefore x_1 = 1, x_2 = 2, \text{ and } x_3 = 6$$

$$\therefore \bar{x} = \frac{x_1 + x_2 + x_3 + x_4 + x_5}{5}$$

$$\Rightarrow 4.4 = \frac{x_1 + x_2 + x_3 + x_4 + x_5}{5}$$

$$\Rightarrow x_1 + x_2 + x_3 + x_4 + x_5 = 22$$

$$\Rightarrow 1 + 2 + 6 + x_4 + x_5 = 22$$

$$\Rightarrow x_4 + x_5 = 22 - 9$$

$$\Rightarrow x_4 + x_5 = 13 \quad \dots (i)$$

and variance,

$$(x_1 - \bar{x})^2 + (x_2 - \bar{x})^2 + (x_3 - \bar{x})^2 +$$

$$\sigma^2 = \frac{(x_4 - \bar{x})^2 + (x_5 - \bar{x})^2}{5}$$

$$(1 - 4.4)^2 + (2 - 4.4)^2 + (6 - 4.4)^2 +$$

$$\Rightarrow 8.24 = \frac{(x_4 - 4.4)^2 + (x_5 - 4.4)^2}{5}$$

$$\begin{aligned} \Rightarrow 824 \times 5 &= 11.56 + 5.76 + 2.56 \\ &+ (x_4 - 4.4)^2 + (13 - x_4 - 4.4)^2 \\ &\quad \text{[from Eq. (i)]} \\ \Rightarrow 4120 &= 19.88 + (x_4 - 4.4)^2 + (8.6 - x_4)^2 \\ \Rightarrow 4120 - 19.88 &= x_4^2 + 19.36 - 8.8x_4 \\ &\quad + 73.96 + x_4^2 - 17.2x_4 \\ \Rightarrow 2132 &= 2x_4^2 - 26x_4 + 93.32 \\ \Rightarrow 2x_4^2 - 26x_4 + 72 &= 0 \\ \Rightarrow x_4^2 - 13x_4 + 36 &= 0 \\ \Rightarrow x_4^2 - 9x_4 - 4x_4 + 36 &= 0 \\ \Rightarrow x_4(x_4 - 9) - 4(x_4 - 9) &= 0 \\ \Rightarrow (x_4 - 9)(x_4 - 4) &= 0 \\ \therefore x_4 &= 4, 9 \end{aligned}$$

From Eq. (i), $x_5 = 9, 4$
Hence, other two observations are 9 and 4.

109. If a coin is tossed till the first head appears, then what will be the sample space?

- (a) {H} (b) {TH}
(c) {T, HT, HHT, HHH,}
(d) {H, TH, TTH, TTT,}

⊙ (a) A coin is tossed till the first head appears, then the sample space will be = {H}

110. Consider the following discrete frequency distribution.

x	1	2	3	4	5	6	7	8
f	3	15	45	57	5	36	25	9
					0			

What is the value of median of the distribution?

- (a) 4 (b) 5 (c) 6 (d) 7

⊙ (b)

x	f	C
1	3	3
2	15	18
3	45	63
4	57	120
5	5	125
6	36	236
7	25	261
8	9	270
N = 270		

Here, $N = 270$

∴ Median

$$\text{Value of } \frac{N}{2} \text{th term} + \text{value of}$$

$$= \frac{\left(\frac{N}{2} + 1\right)\text{th term}}{2}$$

$$\text{Value of 135th term} + \text{Value of}$$

$$= \frac{136\text{th term}}{2}$$

$$= \frac{5 + 5}{2} = 5$$

111. Two dice are thrown simultaneously. What is the probability that the sum of the numbers appearing on them is a prime number?

- (a) $\frac{5}{12}$ (b) $\frac{1}{2}$
(c) $\frac{7}{12}$ (d) $\frac{2}{3}$

⊙ (a) Total number of sample space of two dice are thrown, $n(s) = 6 \times 6 = 36$

Total number of favourable outcomes the sum of numbers appearing on them is a prime number.

- (1, 1), (1, 2), (1, 4), (1, 6), (2, 1), (2, 3),
(2, 5), (3, 2), (3, 4), (4, 1), (4, 3), (5, 2),
(5, 6), (6, 1), (6, 5)

$$\therefore n(E) = 15$$

$$\begin{aligned} \therefore \text{Required probability} &= \frac{n(E)}{n(S)} \\ &= \frac{15}{36} = \frac{5}{12} \end{aligned}$$

112. If 5 of a Company's 10 delivery trucks do not meet emission standards and 3 of them are chosen for inspection, then what is the probability that none of the trucks chosen will meet emission standards?

- (a) $\frac{1}{8}$ (b) $\frac{3}{8}$
(c) $\frac{1}{12}$ (d) $\frac{1}{4}$

⊙ (c) Total trucks of a company's = 10

Number of trucks that do not meet emission standards = 5

Number of trucks that are chosen for inspection = 3

$$\therefore \text{Required probability} = \frac{{}^5C_3}{{}^{10}C_3}$$

$$\begin{aligned} &= \frac{5!}{3!2!} = \frac{5!7!}{10!2!} \\ &= \frac{3!7!}{5 \cdot 4 \cdot 3} = \frac{1}{10 \cdot 9 \cdot 8} = \frac{1}{12} \end{aligned}$$

113. There are 3 coins in a box. One is a two-headed coin; another is a fair coin; and third is biased coin that comes up heads 75% of time. When one of the three coins is selected at random and flipped, it shows heads. What is the probability that it was the two-headed coin?

- (a) $\frac{2}{9}$ (b) $\frac{1}{3}$
(c) $\frac{4}{9}$ (d) $\frac{5}{9}$

⊙ (c) Let E_1, E_2 and E_3 represent the events of two-headed coin, a fair coin and biased coin respectively.

$$\therefore P(E_1) = \frac{1}{2}, P(E_2) = \frac{1}{2}, P(E_3) = \frac{1}{4}$$

$$P\left(\frac{E}{E_1}\right) = \frac{1}{2}, P\left(\frac{E}{E_2}\right) = \frac{1}{2}, P\left(\frac{E}{E_3}\right) = \frac{1}{4}$$

Apply Baye's theorem,

$$\begin{aligned} P\left(\frac{E_1}{E}\right) &= \frac{P(E_1) \cdot P\left(\frac{E}{E_1}\right)}{P(E_1) \cdot P\left(\frac{E}{E_1}\right) + P(E_2) \cdot P\left(\frac{E}{E_2}\right) + P(E_3) \cdot P\left(\frac{E}{E_3}\right)} \\ &= \frac{\frac{1}{2} \cdot \frac{1}{2}}{\frac{1}{2} \cdot \frac{1}{2} + \frac{1}{2} \cdot \frac{1}{2} + \frac{1}{4} \cdot \frac{1}{4}} = \frac{\frac{1}{4}}{\frac{1}{2} + \frac{1}{4} + \frac{1}{16}} \\ &= \frac{\frac{1}{4}}{\frac{4 + 4 + 1}{16}} = \frac{4}{9} \end{aligned}$$

114. Consider the following statements:

- If A and B are mutually exclusive events, then it is possible that $P(A) = P(B) = 0.6$.
- If A and B are any two events such that $P(A/B) = 1$, then $P(\overline{B}/\overline{A}) = 1$.

Which of the above statement is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (b) **Statement 1** : A and B are mutually exclusive events, then $P(A \cap B) = 0$

$$\begin{aligned} \therefore P(A \cup B) &= P(A) + P(B) \\ &= 0.6 + 0.6 \\ &= 1.2, \text{ it is not possible} \end{aligned}$$

So, Statement 1 is not correct.

Statement 2 : A and B are any two events such that

$$P\left(\frac{A}{B}\right) = 1$$

$$\Rightarrow \frac{P(A \cap B)}{P(B)} = 1 \Rightarrow P(A \cap B) = P(B) \dots (i)$$

$$\therefore P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

$$P(A \cup B) = P(A) + P(B) - P(B)$$

[from Eq. (i)]

$$\Rightarrow P(A \cup B) = P(A) \dots (ii)$$

$$\text{Now, } P\left(\frac{\overline{B}}{\overline{A}}\right) = \frac{P(\overline{B} \cap \overline{A})}{P(\overline{A})} = \frac{P(\overline{A \cup B})}{P(\overline{A})}$$

$$= \frac{1 - P(A \cup B)}{1 - P(A)} = \frac{1 - P(A)}{1 - P(A)} = 1$$

So, Statement 2 is correct.

Hence, only the Statement 2 is correct.

115. If a fair die is rolled 4 times, then what is the probability that there are exactly 2 sixes?

- (a) $\frac{5}{216}$ (b) $\frac{25}{216}$
- (c) $\frac{125}{216}$ (d) $\frac{175}{216}$

⊙ (b) Let X be a random variable that represents to appearing 6 of rolled a die.

Probability of to get 6 to rolled a die,

$$p = \frac{1}{6}$$

∴ Probability of not get 6 to rolled a die,

$$q = 1 - \frac{1}{6} = 1 - \frac{1}{6} = \frac{5}{6}$$

Here, $n = 4, r = 2$

∴ Required probability = ${}^n C_r p^r q^{n-r}$

[By Bernoulli distribution]

$$\begin{aligned} &= {}^4 C_2 \left(\frac{1}{6}\right)^2 \left(\frac{5}{6}\right)^2 \\ &= \frac{4!}{2!2!} \times \frac{1}{36} \times \frac{25}{36} \\ &= \frac{4 \cdot 3}{2 \cdot 1} \times \frac{1}{36} \times \frac{25}{36} = \frac{25}{216} \end{aligned}$$

116. Mean of 100 observations is 50 and standard deviation is 10. If 5 is added to each observation, then what will be the new mean and new standard deviation respectively?

- (a) 50, 10 (b) 50, 15
- (c) 55, 10 (d) 55, 15

⊙ (c) Mean of 100 observations = 50

and standard deviation = 10

We know that, if k is added to each observation, then new mean will be more than k and standard deviation no change.

∴ After 5 added to each observation.

$$\text{mean} = 50 + 5 = 55$$

and standard deviation = 10

117. If the range of a set of observations on a variable X is known to be 25 and if $Y = 40 + 3X$, then what is the range of the set of corresponding observations on Y ?

- (a) 25 (b) 40
- (c) 75 (d) 115

⊙ (c) Range of set of observations on a variable, $X = 25$

We know that

$$\text{Range, } R_X = X_{\max} - X_{\min}$$

$$\Rightarrow 25 = X_{\max} - 0 \quad [\because X_{\min} = 0]$$

$$\Rightarrow X_{\max} = 25$$

$$\therefore Y = 40 + 3X$$

$$\begin{aligned} \therefore Y_{\min} &= 40 + 3X_{\min} \\ &= 40 + 3(0) \quad [\because X_{\min} = 0] \\ &= 40 \end{aligned}$$

$$\begin{aligned} \text{and } Y_{\max} &= 40 + 3X_{\max} \\ &= 40 + 3(25) \quad [\because X_{\max} = 25] \\ &= 40 + 75 = 115 \end{aligned}$$

$$\begin{aligned} \text{Now, } R_Y &= Y_{\max} - Y_{\min} \\ &= 115 - 40 = 75 \end{aligned}$$

118. If V is the variance and M is the mean of first 15 natural numbers, then what is $V + M^2$ equal to?

- (a) $\frac{124}{3}$ (b) $\frac{148}{3}$
- (c) $\frac{248}{3}$ (d) $\frac{124}{9}$

⊙ (c) Mean of first 15 natural numbers, M

$$\begin{aligned} &= \frac{1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9}{15} \\ &= \frac{10 + 11 + 12 + 13 + 14 + 15}{15} \end{aligned}$$

$$= \frac{15(15 + 1)}{2 \times 15}$$

$$\left[\because 1 + 2 + 3 + \dots + n = \frac{n(n + 1)}{2} \right]$$

$$= 8$$

Variance of first 15 natural numbers, V

$$\begin{aligned} &= \frac{1}{15} [(1 - 8)^2 + (2 - 8)^2 + (3 - 8)^2 \\ &\quad + (4 - 8)^2 + (5 - 8)^2 + (6 - 8)^2 \\ &\quad + (7 - 8)^2 + (8 - 8)^2 + (9 - 8)^2 \\ &\quad + (10 - 8)^2 + (11 - 8)^2 + (12 - 8)^2 \\ &\quad + (13 - 8)^2 + (14 - 8)^2 + (15 - 8)^2] \end{aligned}$$

$$\begin{aligned} &= \frac{1}{15} [(-7)^2 + (-6)^2 + (-5)^2 + (-4)^2 + (-3)^2 \\ &\quad + (-2)^2 + (-1)^2 + 0 + (1)^2 + (2)^2 + (3)^2 \\ &\quad + (4)^2 + (5)^2 + (6)^2 + (7)^2] \end{aligned}$$

$$= \frac{2}{15} [1^2 + 2^2 + 3^2 + 4^2 + 5^2 + 6^2 + 7^2]$$

$$= \frac{2}{15} \times \frac{7(7 + 1)(14 + 1)}{6}$$

$$\left[\because 1^2 + 2^2 + 3^2 + \dots + n^2 = \frac{n(n + 1)(2n + 1)}{6} \right]$$

$$= \frac{2}{15} \times \frac{7 \times 8 \times 15}{6} = \frac{56}{3}$$

$$\text{Now, } V + M^2 = \frac{56}{3} + 64$$

$$= \frac{56 + 192}{3}$$

$$= \frac{248}{3}$$

119. A car travels first 60 km at a speed of $3v$ km/h and travels next 60 km at $2v$ km/h. What is the average speed of the car?

- (a) $2.5v$ km/h
- (b) $2.4v$ km/h
- (c) $2.2v$ km/h
- (d) $2.1v$ km/h

⊙ (b) Time taken for first 60 km with speed $3v$ km/h

$$= \frac{60}{3v} = \frac{20}{v} \text{ h} \quad \left[\because \text{Time} = \frac{\text{Distance}}{\text{Speed}} \right]$$

Time taken for next 60 km with speed $2v$ km/h

$$= \frac{60}{2v} = \frac{30}{v} \text{ h}$$

$$\therefore \text{Average speed} = \frac{\text{Total distance}}{\text{Total time}}$$

$$= \frac{60 + 60}{\frac{20}{v} + \frac{30}{v}}$$

$$= \frac{120v}{50}$$

$$= 2.4v \text{ km/h}$$

120. The mean weight of 150 students in a certain class is 60 kg. The mean weight of boys is 70 kg and that of girls is 55 kg. What are the number of boys and girls respectively in the class?

- (a) 75 and 75
- (b) 50 and 100
- (c) 70 and 80
- (d) 100 and 50

⊙ (b) Let number of boys and girls be x and y respectively.

$$\therefore x + y = 150 \quad \dots (i)$$

Mean weight of 150 students = 60 kg

∴ Total weight of 150 students

$$= 60 \times 150$$

$$= 9000 \text{ kg.}$$

Mean weight of boys = 70 kg

∴ Total weight of boys = $70x$ kg

and mean weight of girls = 55 kg

∴ Total weight of girls = $55y$ kg

∴ Total weight of 150 students = 9000 kg

$$\Rightarrow 70x + 55y = 9000$$

$$\Rightarrow 14x + 11y = 1800 \quad \dots (ii)$$

Solving Eqs. (i) and (ii), we get

$$x = 50$$

$$y = 100$$

Hence, the number of boys and girls are 50 and 100 respectively.

PAPER II English Language and General Studies

Part A (English Language)

1. He is always anxious.
(a) worried (b) dispassionate
(c) sluggish (d) torpid
- ⊗ (a) 'Worried' is the correct synonym of 'anxious'. Both words mean 'feeling uneasy about something with an uncertain outcome.' Some other synonyms are - uneasy, agitated, etc.
2. The poems of Kabir are ecstatic in nature.
(a) efficacious (b) eerie
(c) rapturous (d) reverential
- ⊗ (c) 'Rapturous' is the correct synonym of 'ecstatic'. Both words mean 'feeling or expression overwhelming happiness'. Some other synonyms are - joyful, overjoyed, etc.
3. Ravi loves seclusion. Therefore, he lives in the mountain.
(a) nature (b) scripture
(c) seafaring (d) solitariness
- ⊗ (d) 'Solitariness' is the correct synonym of 'seclusion'. Both words mean 'being separate and apart from others'. Some other synonyms are - solitude, isolation, etc.
4. Hitler was a despot.
(a) conservative (b) dictator
(c) passionate (d) monstrous
- ⊗ (b) 'Dictator' is the correct synonym of 'despot'. Both words refer to 'a ruler or other person who holds absolute power.' Some other synonyms are - autocrat, authoritarian, etc.
5. The imagery used in the poem is vivid.
(a) lively (b) inert
(c) ebullient (d) caustic
- ⊗ (a) 'Lively' is the correct synonym of 'vivid'. Both words refer to 'something which is very clear and true to life.' Some other synonyms are - realistic, lifelike, etc.
6. A human being is always vulnerable to other human beings.
(a) resilient (b) elastic
(c) defenceless (d) crude
- ⊗ (c) 'Defenceless' is the correct synonym of 'vulnerable'. Both words mean 'open to attack or damage.' Some other synonyms are - unprotected, unguarded, etc.
7. His language is political and vitriolic.
(a) imaginative (b) sprightly
(c) vivacious (d) abusive
- ⊗ (d) 'Abusive' is the correct synonym of the word 'vitriolic'. Both words mean 'violent hate and anger expressed through severe criticism'. Some other synonyms are - acrimonious, bitter, etc.
8. The Managing Director of the company declared that he is broke and there is a need to seek support from the government.
(a) bankrupt (b) rich
(c) making profit (d) having liabilities
- ⊗ (a) 'Bankrupt' and 'broke' are synonyms. Both words mean 'having completely run out of money.' Some other synonyms are - insolvent, penniless, etc.
9. He loves doing nasty things.
(a) nice (b) fastidious
(c) foul (d) finicky
- ⊗ (c) 'Foul' is the correct synonym of 'nasty'. Both words mean 'something unpleasant or disagreeable'. Some other synonyms are - awful, disgusting, etc.
10. He could not muster courage to speak the truth before his friend.
(a) injure (b) spoil
(c) gather (d) maim
- ⊗ (c) 'Gather' is the correct synonym of 'muster'. Both words mean 'assemble or bring together'. Some other synonyms are - gather, assemble, etc.
11. His conversations are always absurd.
(a) farcical (b) foolish
(c) preposterous (d) rational
- ⊗ (d) The word 'absurd' means 'unreasonable or inappropriate'. Its antonym is 'Rational' which means 'in accordance with reason or logic.'
12. The politician was a dissident.
(a) Agitator (b) Rebel
(c) Conformist (d) Revolutionary
- ⊗ (c) The word 'dissident' means 'a person who opposes official policy'. Its antonym from the given option is 'conformist', which means 'someone who conforms to the accepted behaviour or established practices'.
13. He wrote an incisive article on corruption in politics.
(a) vague (b) penetrating
(c) trenchant (d) precise
- ⊗ (a) The word 'incisive' means 'something that is sharp or direct'. Its antonym is 'vague' which means 'uncertain or indistinct'.
14. Rakesh is an eccentric prodigal.
(a) extravagant (b) profligate
(c) wasteful (d) thrifty
- ⊗ (d) The word 'prodigal' means 'spending money or using resources freely and recklessly'. Its antonym is 'thrifty', which means 'using money and other resources carefully'.
15. Friendship is always reciprocal.
(a) mutual (b) one-sided
(c) shared (d) corresponding
- ⊗ (b) The word 'reciprocal' means 'mutual or complementary'. Its antonym is 'one-sided' meaning 'having or occurring on side of something only'.
16. The debate was highly stimulating.
(a) arousing (b) invigorating
(c) boring (d) stirring
- ⊗ (c) The word 'stimulating' means 'exciting or arousing'. Its antonym is 'boring' which means 'not interesting'.
17. Malaria is a widespread disease.
(a) endemic (b) pervasive
(c) common (d) rare
- ⊗ (a) The word 'widespread' means 'extensive or distributed over a large area'. Its antonym is 'endemic' which means 'native and restricted to a certain place'.
18. The bill received a vehement resistance from the opposition party in the Parliament.
(a) animated (b) apathetic
(c) fervent (d) vigorous
- ⊗ (b) The word 'vehement' means 'showing strong feelings or shown with great energy or force'. Its antonym is 'apathetic' which means 'showing no enthusiasm or concern'.
19. He has been obstinate since his childhood.
(a) stubborn (b) dogged
(c) amenable (d) rigid
- ⊗ (c) The word 'obstinate' means 'stubborn or determined'. Its antonym is 'amenable' which means 'responsive to suggestion'.

- 20.** Mahatma Gandhi was one of the most prominent leaders of his times.
 (a) renowned (b) distinguishable
 (c) eminent (d) unknown
 ⊗ (d) The word 'prominent' means 'readily noticeable.' Its antonym is 'unknown' which means 'not known or familiar'.
- 21.** He had arrived at Cairo a few months before
 (a) (b)
protests shook the Arab world. No error
 (c) (d)
 ⊗ (a) Here part (a) has an error. As sentence is in past tense, so we should use Simple Past tense 'arrived' without the use of had.
- 22.** Most of us who are older competitive runners
 (a)
are not able to race anywhere at the same speed
 (b)
as we do when we were 30. No error
 (c) (d)
 ⊗ (b) Here part (b) has an error. 'At the same speed' is incorrect. It should be 'with the same speed', to make the given sentence grammatically correct. Because 'at' is used to show only a definite speed; e.g. at 80mph etc.
- 23.** Work hard lest you do not fail. No error
 (a) (b) (c) (d)
 ⊗ (b) Here part (b) has an error. With 'lest' we should always use 'should'. Replace 'do not' with 'should' to make the given sentence grammatically correct.
- 24.** The Eastern Ghats are home of 2600 plant species
 (a)
and this habitat fragmentation can pose a serious
 (b) (c)
threat to endemic plants. No error
 (d)
 ⊗ (a) Here part (a) has an error. 'Home of' is incorrect expression. It should be replaced with 'home to' as it refers to the place where you live or from where you belonged.
- 25.** Turbidity current is a fast-moving current
 (a)
that sweeps down submarine canyons,
 (b)
carrying sand and mud into the deep sea. No error
 (c) (d)
 ⊗ (c) Here part (c) has an error. Replace 'carrying sand' with 'that carries sand' as the reference is to a particular thing (Turbidity current).
- 26.** Every one of the boys love to ride. No error
 (a) (b) (c) (d)
 ⊗ (c) Here part (c) has an error. With 'everyone' singular verb should be used. So, use 'loves' in place of 'love' to make the given sentence grammatically correct.
- 27.** Neither praise nor blame seem to affect him.
 (a) (b) (c)
 No error
 (d)
 ⊗ (b) Here part (b) has an error of use of verb. 'Seem' should be replaced with 'seems' as the sentence is in Simple Present tense.
- 28.** Many a man has succumbed to this temptation. No error
 (a) (b) (c) (d)
 ⊗ (d) The given sentence has no error.
- 29.** A time slot of fifteen minutes are allowed
 (a) (b)
to each speaker. No error
 (c) (d)
 ⊗ (b) Here part (b) has an error. As 'time slot' given in part (a) is singular noun, so the verb used with it, should also be singular. Hence, 'is allowed' should be used in place of 'are allowed' to make the given sentence grammatically correct.
- 30.** He asked whether either of the brothers
 (a) (b)
were at home. No error
 (c) (d)
 ⊗ (c) Here part (c) has an error. 'Were at home' is incorrect. It should be replaced with 'was at home', as either is always followed by the singular verb.
- 31.** Be over the hill
 (a) To be on a mountain top
 (b) To travel in the jungle
 (c) To be too old to do things
 (d) To do something in the most complete way
 ⊗ (c) Idiom 'Be over the hill' means 'to be too old to do things'. Hence, option (c) is a suitable choice.
- 32.** Bite your tongue
 (a) To stop yourself from saying something because it would be better not to
 (b) To bite off your tongue while eating
 (c) To feel sorry
 (d) To ask someone something that you want
 ⊗ (a) Idiom 'Bite your tongue' means 'to stop yourself from saying something because it would be better not to'. So option (a) is a suitable choice.
- 33.** Turn a blind eye
 (a) To run away
 (b) To begin to be have in a more positive manner
 (c) To change a situation
 (d) To choose to ignore behaviour that you know is wrong
 ⊗ (d) The given idiom 'Turn a blind eye' means 'to ignore something that you know is wrong'. So, option (d) is the correct choice.
- 34.** Yellow journalism
 (a) Paid storytelling
 (b) Government reports published on yellow coloured papers
 (c) Writings in newspapers that try to influence people's opinion by using strong language and false information
 (d) Journalism which agrees completely with the policies of the government and capitalists
 ⊗ (c) Idiom 'Yellow Journalism' means 'writing in newspapers that try to influence people's opinion by using strong language and false information'. So, option (c) is a suitable choice.
- 35.** To be in seventh heaven
 (a) To fly in the ail
 (b) To be extremely happy
 (c) To be completely alone
 (d) To visit a place which is in the lit of the seven wonders of the world.

- ⊗ (b) Idiom 'To be in seventh heaven' means 'to be extremely happy'. So, option (b) is the correct choice.

36. closely monitor the situation by the disturbing

allegations ^P we are deeply concerned ^Q
^R
and will continue to
^S

- (a) R Q S P (b) S P Q R
 (c) S P R Q (d) P R S Q

- ⊗ (a) RQSP is the correct sequence.

37. relieve nausea, pain and stress aromatherapy may

also help ^P using lavender oil on their skin ^Q
^Q ^R
but patients are cautioned against
^S

- (a) R Q P S (b) S Q P R
 (c) Q P S R (d) R P S Q

- ⊗ (c) QPSR is the correct sequence.

38. without any mandate of law the plea filed

^P
through the advocate online is illegal and submitted
^Q ^R
that the sale of drugs and prescription medicines
^S

- (a) R Q S P (b) Q S R P
 (c) Q R S P (d) P R S Q

- ⊗ (b) Q S R P is the correct sequence.

39. humans and machines have co-existed dating back

^P
to the invention of the potter's wheel in ancient
^Q ^R
Mesopotamia at the physical level for millennia.
^S

- (a) R S P Q (b) Q S P R
 (c) Q R P S (d) P S Q R

- ⊗ (d) P S Q R is the correct sequence.

40. a sell-off as US Treasury yields

^P
surged to multi-year highs on robust economic data
^Q ^R
global markets also witnessed
^S

- (a) R S Q P (b) P Q S R
 (c) Q R P S (d) S P Q R

- ⊗ (d) SPQR is the correct sequence.

particulars, one by one; but the general counsels and the plots and marshalling of affairs, come best from those that are learned.

To spend too much time in studies is sloth; to use them too much for ornament, is affectation; to make judgement wholly by their rules, is the humor of a scholar. They perfect nature and are perfected by experience: for natural abilities are like natural plants, that need pruning, by study; and studies themselves do give forth directions too much at large, except they be bounded in by experience.

Crafty men condemn studies, simple men admire them and wise men use them; for they teach not their own use; but that is a wisdom without them and above them, won by observation. Read not to contradict and confute; nor to believe and take for granted; nor to find talk and discourse; but to weigh and consider.

41. According to the author, why should one study?

- (a) To gather information about the world
 (b) To pass the time in a creative way
 (c) For pleasure, enhance capability and holistic growth
 (d) To become only worldly wise

- ⊗ (c) As stated in the passage, studies should be done for pleasure, enhancing capability and for holistic growth of a mind.

42. Why does the author not recommend too much of studies?

- (a) Because it reflects idleness
 (b) Because it requires too much money
 (c) Because it is dangerous for the health of the mind
 (d) Because it makes men crafty

- ⊗ (a) The author does not recommend too much of studies as it can make a person lazy or idle.

43. According to the author, how can the studies be perfected?

- (a) By reflection (b) By application
 (c) By conversation (d) By experience

- ⊗ (d) According to the author, studies can be perfected via experience.

44. What kind of human beings denounce studies?

- (a) Innocent (b) Cunning
 (c) Stupid (d) Wise

- ⊗ (b) Crafty or Cunning human beings denounce studies.

45. According to the author, one should read to

- (a) only argue (b) only believe
 (c) evaluate and understand (d) preach and believe

- ⊗ (c) As stated in the passage, a person should read to 'evaluate and understand'.

46. The Election Commission on Saturday that the Assembly elections in the five States will be held from November 12th to December 7th.

- (a) pronounced (b) announced
 (c) promulgated (d) issued

- ⊗ (b) 'Announced' is the appropriate word to fill the given blank. Announce means 'make a formal public statement about a fact, occurrence or intention'.

47. The victims were fruit vendors and they were going in an auto when they ... an accident on the way.

- (a) met with (b) ran into (c) experienced (d) heard

- ⊗ (a) According to the given sentence, 'Met with' is the correct alternative to fill the blank as it means 'to experience something, such as an accident'.

Passage 1

Studies serve for delight, for ornament and for ability. Their chief use for delight, is in privateness and retiring; for ornament, is in discourse; and for ability, is in the judgement and disposition of business. For expert men can execute and perhaps judge of

48. Scores of villagers are a sit-in protest against the construction of a new underpass.
 (a) performing (b) sitting
 (c) staging (d) standing
- ⊗ (c) 'Staging' is the appropriate word for the given blank. Staging means 'the method of presenting a play or other dramatic performance.'
49. It is common for patients to stop medicine as soon as they start feeling better.
 (a) earing (b) gulping
 (c) swallowing (d) taking
- ⊗ (d) According to the given sentence, option (d) 'taking' is the correct alternative to fill the blank as 'taking medicine' refers to swallow medicine. Other words are irrelevant.
50. A four-year-old girl got a new lease of life after doctors at a hospital a cancerous tumour from one of her kidneys.
 (a) rejuvenated (b) removed
 (c) displaced (d) replaced
- ⊗ (b) Here, 'removed' is the correct alternative to fill the given blank as 'removed' means 'take something off or away'. Other words do not fit in the blank.

Part B (General Studies)

51. A thin disc and a thin ring, both have mass M and radius R . Both rotate about axes through their centre of mass and are perpendicular to their surfaces at the same angular velocity. Which one of the following statements is correct?
 (a) The ring has higher kinetic energy.
 (b) The disc has higher kinetic energy.
 (c) The ring and the disc both have the same kinetic energy.
 (d) Kinetic energies of both the bodies are zero, since they are not in linear motion.
- ⊗ (a) Given, a thin disc and a thin ring have equal mass and radius.
 Angular velocity of thin disc
 = Angular velocity of thin ring
 $\omega_{\text{ring}} = \omega_{\text{disc}}$
 \therefore Kinetic energy of ring
 = Kinetic energy of disc
 $\frac{1}{2} I_{\text{ring}} \omega_{\text{ring}}^2 = \frac{1}{2} I_{\text{disc}} \omega_{\text{disc}}^2$
 $\frac{1}{2} (MR^2) \omega_{\text{ring}}^2 = \frac{1}{2} \left(\frac{MR^2}{2} \right) \omega_{\text{disc}}^2$
 $(\because I_{\text{ring}} = MR^2 \text{ or } I_{\text{disc}} = \frac{1}{2} MR^2)$
 $\omega_{\text{ring}}^2 = \frac{\omega_{\text{disc}}^2}{2}, 2\omega_{\text{ring}}^2 = \omega_{\text{disc}}^2$
 Hence, $KE_{\text{ring}} > KE_{\text{disc}}$
 So, the ring has higher kinetic energy.
52. Let there be an object having some chemicals in it. It starts moving with a uniform velocity v and a chemical reaction starts happening. In this case, which of the following statement(s) is/are correct?
 1. Chemical reactions happening in the system cannot change the velocity (v) of the centre of mass of the object.
 2. Chemical reactions happening in the system cannot change kinetic energy of the particles inside with respect to the centre of mass of object.
- Select the correct answer using the code given below:
 (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2
- ⊗ (a) A chemical reaction is an internal process, so there is no change in momentum and mass (since, mass is conserved in a chemical reaction). But in a chemical reaction, the kinetic energy of the particle is changes with respect to centre of mass of whole body. Hence, statement 1 is correct are stakines 2 is incorrect.
53. In which of the following phenomena do heat waves travel along a straight line with the speed of light?
 (a) Thermal conduction
 (b) Thermal convection
 (c) Thermal radiation
 (d) Both (a) and (c)
- ⊗ (c) Thermal radiations are heat waves (infrared waves) which are electromagnetic waves. Electromagnetic waves travel in straight line with the speed of light. It depends on the temperature of the body and nature of radiating surface of the body. Hence, option (c) is correct.
54. Which one of the following statements regarding Ohm's law is not correct?
 (a) Ohm's law is an assumption that current through a conductor is always directly proportional to the potential difference applied to it.
 (b) A conducting device obeys Ohm's law when the resistance of a device is independent of magnitude and polarity of applied potential difference.
 (c) A conducting material obeys Ohm's law when the resistance of material is independent of the magnitude and direction of applied electric field.
 (d) All homogeneous materials obey Ohm's law irrespective of whether the field is within range or strong.
- ⊗ (d) Statement (d) is not correct, because in strong electric field, heating effect will dominant and here is deviations of curve, i.e. it does not obey Ohm's law.
55. When a ball bounces off the ground, which of the following changes suddenly? (Assume no loss of energy to the floor)
 (a) Its speed
 (b) Its momentum
 (c) Its kinetic energy
 (d) Its potential energy
- ⊗ (b) When a ball bounces off the ground, there will be sudden change in the momentum of the ball.
- It includes the mass and the velocity of the object.
 - It shows the sudden change of the velocity of the object according to its mass.
 - If the mass is large, the change will be greater and if it is small, then the velocity will be lesser.
56. Which one of the following compounds does not exhibit a different oxidation number of the same element?
 (a) Pb_3O_4 (b) Fe_3O_4
 (c) Fe_2O_3 (d) Mn_3O_4
- ⊗ (c) Among the given species/compounds, only Fe_2O_3 does not exhibit different oxidation number of Fe, in this species can be calculated as :
 Let x be the O.N. of Fe.
 $\therefore 2x + 3(-2) = 0, x = + 3$
 Hence, Fe is in only + 3 oxidation state in Fe_2O_3 , whereas in rest of the species, the same metal exhibits different oxidation states.
57. Which one of the following statements about glass is not correct?
 (a) Glass is often said to be a supercooled liquid.
 (b) Glass has no definite melting point.
 (c) Soda glass is harder than pyrex glass.
 (d) Boron is present in pyrex glass.

- ⊗ (c) Pyrex glass is harder than soda lime glass. This is because, pyrex glass, (a particular blend of borosilicate glass) has a higher proportion of silicone dioxide than soda lime glass. Due to which, pyrex glass does not expand on heating, while soda lime glass is not likely to be directly and strongly heated. Thus, the high heating tolerance of pyrex glass makes it harder than soda lime glass. Hence, option (c) is incorrect. Rest of the given statements are correct.

58. Which one of the following statements is correct?

- (a) Both boiling and evaporation are surface phenomena.
 (b) Boiling is a surface phenomenon, but evaporation is a bulk phenomenon.
 (c) Both boiling and evaporation are bulk phenomena.
 (d) Boiling is a bulk phenomenon, but evaporation is a surface phenomenon.

- ⊗ (d) Boiling is a bulk phenomenon, but evaporation is a surface phenomenon is the correct statement. This is because, during evaporation, the high energy molecules from the liquid go into the gaseous phase only through the surface. While, in boiling, the vaporisation occurs throughout the bulk of the liquid and the vapours expand freely into the surrounding.

59. Which one of the following statements about diamond and graphite is not correct?

- (a) Diamond has a tetrahedral structure, whereas graphite has a hexagonal planar structure.
 (b) Both physical and chemical properties of diamond and graphite are different.
 (c) Graphite is soft, but diamond is hard.
 (d) Graphite is a good conductor of electricity, while diamond is not.

- ⊗ (b) Statement given in option (b) is incorrect. The correct statement is, the physical properties of both diamond and graphite are same. But, as the both diamond and graphite are allotropes of same element (carbon). Thus, they both exhibits similar chemical properties.

So, option (b) is the correct answer.

60. The raw materials used for the manufacture of Portland cement are

- (a) lime, silica and sulphur dioxide
 (b) lime, silica and carbon dioxide
 (c) lime, silica and alumina
 (d) lime, silica and boric acid

- ⊗ (c) The raw materials used for the manufacture of Portland cement are lime, clay (provides alumina and silica) and gypsum.

Thus, the correct option is (c).

61. Which one of the following statements about water is not true?

- (a) Hydrogen bonds are present in liquid water.
 (b) Water has a high boiling point.
 (c) Water has a high heat of fusion.
 (d) Water is a non-polar molecule.

- ⊗ (d) The option (d) contains incorrect statement. Water is a polar molecule in which central oxygen atom is sp^3 -hybridised.

Out of four sp^3 -hybrid orbit, two for σ bond with H-atom and rest two are occupied by lone pair of electrons.

Thus, due to V-shaped structure of H_2O is a polar molecule ($\mu = 1.84$).

62. A sample of 'soft soap' contains

- (a) caesium (b) potassium
 (c) calcium (d) magnesium

- ⊗ (b) Soaps are the sodium or potassium salts of long chain fatty acid ($RCOONa$). e.g. stearic acid ($C_{17}H_{35}COOH$), oleic acid ($C_{17}H_{33}COOH$) and palmitic acid ($C_{15}H_{31}COOH$). Therefore, a sample of soft soap contains sodium or potassium. Thus, the option (b) is correct.

63. If an object moves at a non-zero constant acceleration for a certain interval of time, then the distance it covers in that time

- (a) depends on its initial velocity
 (b) is independent of its initial velocity
 (c) increases linearly with time
 (d) depends on its initial displacement

- ⊗ (a) If object moving with non-zero constant acceleration, then the displacement covered by it, is given by equation

$$s = ut + \frac{1}{2}at^2$$

where, s = displacement, u = initial velocity, a = acceleration and t = time.

Hence, from above equation, displacement is dependent to initial velocity. Distance covered is a non-linear curve of time.

64. A solid disc and a solid sphere have the same mass and same radius. Which one has the higher moment of inertia about its centre of mass?

- (a) The disc
 (b) The sphere
 (c) Both have the same moment of inertia
 (d) The information provided is not sufficient to answer the question

- ⊗ (a) As we know, moment of the inertia

$$I_{\text{disc}} = \frac{1}{2}MR^2 \text{ and } I_{\text{sphere}} = \frac{2}{5}MR^2$$

∴ Given, $M_{\text{disc}} = M_{\text{sphere}}$ and

$$R_{\text{disc}} = R_{\text{sphere}}$$

$$\text{So, } \frac{I_{\text{disc}}}{I_{\text{sphere}}} = \frac{\frac{1}{2}MR^2}{\frac{2}{5}MR^2} = \frac{5}{4} \quad \dots (i)$$

Hence, from Eq. (i), we get

$$I_{\text{disc}} > I_{\text{sphere}}$$

So, the disc has higher moment of inertia.

65. Two substances of densities ρ_1 and ρ_2 are mixed in equal volume and their relative density is 4. When they are mixed in equal masses, relative density is 3. The values of ρ_1 and ρ_2 respectively, are

- (a) 6, 2 (b) 3, 5 (c) 12, 4 (d) 9, 3

- ⊗ (a) When substances are mixed in equal volume.

Then, relative density,

$$4 = \frac{V\rho_1 + V\rho_2}{V + V}$$

[∵ volume(V) x density (ρ) = mass (M)]

$$\Rightarrow \rho_1 + \rho_2 = 8 \quad \dots (i)$$

Similarly, when substances are mixed in equal mass.

Relative density,

$$3 = \frac{\frac{M}{\rho_1} + \frac{M}{\rho_2}}{\frac{M}{\rho_1} + \frac{M}{\rho_2}} = \frac{2\rho_1\rho_2}{\rho_1 + \rho_2} \quad \dots (ii)$$

Hence, from Eqs. (i) and (ii), we get

$$\rho_1 = 6 \text{ and } \rho_2 = 2$$

66. A car starts from Bengaluru, goes 50 km in a straight line towards South, immediately turns around and returns to Bengaluru. The time taken for this round trip is 2h. The magnitude of the average velocity of the car for this round trip

- (a) is zero (b) is 50 km/h
 (c) is 25 km/h

(d) cannot be calculated without knowing acceleration

- ⊗ (a) According to question, a round trip is mentioned by a car. But as we know, for round trip the displacement is zero. So,

$$v_{\text{av}} = \frac{\text{displacement}}{\text{time}} = \frac{0}{2} = 0 \text{ ms}^{-1}$$

Hence, option (a) is correct.

67. "The sum of emf's and potential differences around a closed loop equals zero" is a consequence of

- (a) Ohm's law
 (b) conservation of charge
 (c) conservation of momentum
 (d) conservation of energy

- ⊗ (d) It is Kirchhoff's second law also known as loop's law.

$$\text{i.e. } \sum \mathcal{E} = iR$$

It is based on conservation of energy, since work done in a closed path is zero.

68. A student measures certain lengths using a meter scale having least count equal to 1 mm.

Which one of the following measurement is more precise?

- (a) 0.50 mm
(b) 29.07 mm
(c) 0.925 mm
(d) 910 mm

- ⊗ (c) Using instrument of higher precision improving experimental techniques, etc., we can reduce the least count error.

Here, option (c) 0.925 mm is more precise than other.

69. If the work done on the system or by the system is zero, then which one of the following statement for a gas kept at a certain temperature is correct?

- (a) Change in internal energy of the system is equal to flow of the heat in or out of the system.
(b) Change in internal energy of the system is less than heat transferred.
(c) Change in internal energy of the system is more than the heat flow.
(d) Cannot be determined.

- ⊗ (a) For first law of thermodynamics,

$$\Delta Q = \Delta U + \Delta W$$

where, ΔQ = heat,

ΔU = change in internal energy

and ΔW = work done.

Since, $\Delta W = 0$

So, $\Delta Q = \Delta U$

Hence, there is change in internal energy of the system is equal to flow of heat in or out of the system, option (a) is correct.

70. Consider the following part of an electric circuit.

The total electrical resistance in the given part of the electric circuit is

- (a) $\frac{15}{8} \Omega$ (b) $\frac{15}{7} \Omega$
(c) 15Ω (d) $\frac{17}{3} \Omega$

- ⊗ (b) There are three resistances (2Ω , 4Ω and 8Ω) are in parallel.

$$\text{So, } \frac{1}{R_1} = \frac{1}{2} + \frac{1}{4} + \frac{1}{8} \Rightarrow R_1 = \frac{8}{7} \Omega$$

Now, R_1 is in series with 1Ω resistance.

$$\text{So, } R_{\text{eq}} = 1 \Omega + R_1 = 1 + \frac{8}{7} = \frac{15}{7} \Omega$$

Hence, option (b) is correct.

71. Which one of the following statements regarding lenses is not correct?

- (a) A convex lens produces both real and virtual images.
(b) A concave lens produces both real and virtual images.
(c) A convex lens can produce images equal, greater and smaller than the size of the object.
(d) A concave lens always produces images smaller than the size of the object.

- ⊗ (b) A concave lens always forms virtual image, whereas convex lens forms both real and virtual images.

Hence, option (b) is incorrect.

72. 10 g of ice at -10°C is mixed with 10 g of water at 0°C . The amount of heat required to raise the temperature of mixture to 10°C is

- (a) 400 cal (b) 550 cal
(c) 1050 cal (d) 1200 cal

- ⊗ (c) Heat require by 10 g of water at -10°C to 0°C is

$$H_1 = ms\Delta\theta$$

$$= 10 \times (0.50) (0 - (-10)) = 50 \text{ cal}$$

Now, latent heat of melting of 10 g of ice

$$H_2 = mL = 10 \times 80 = 800 \text{ cal}$$

Now, there is 20 g of water at 0°C , so heat required to reach the temperature of $+10^\circ\text{C}$.

$$H_3 = ms\Delta\theta = 20 \times 1 \times (10 - 0) = 200 \text{ cal}$$

Total heat required,

$$H = H_1 + H_2 + H_3 \\ = 50 + 800 + 200 = 1050 \text{ cal}$$

73. Which one of the following does not represent the salt, calcium carbonate?

- (a) Lime water (b) Limestone
(c) Chalk (d) Marble

- ⊗ (a) Calcium carbonate is also known as limestone and has a molecular formula is CaCO_3 . It is found in nature in the form of chalk, marble etc. Thus, limestone, chalk and marble represents calcium carbonate. Whereas, lime water is the aqueous solution of Ca(OH)_2 .

Thus, the correct option is (a).

74. Soaps clean surfaces on the principle of based on

- (a) viscosity (b) floatation
(c) elasticity (d) surface tension

(d) Soaps clean surfaces on the principle of based on surface tension. Soap is a surface active agent or surfactant. It helps to reduce the surface tension of water and thereby speed up the cleaning process of soaps.

75. Which one of the following substances is not a mixture?

- (a) Tin (b) Sea water
(c) Soil (d) Air

- ⊗ (a) A mixture is a type of matter which has variable composition throughout.

Among the given options, only Sn(tin) is not a mixture, while rest are the examples of mixture. Sn is an element which contains only one kind of particles or atoms.

76. Which one of the following is termed as 'dry ice'?

- (a) Ice present in ice-cream
(b) Solid water at Antarctica
(c) Solid state of carbon dioxide
(d) Solid water of ionosphere

- ⊗ (c) When liquefied CO_2 is allowed to expand rapidly, it gets converted in the form of solid CO_2 which is also called dry ice. Thus, dry ice is solid state of the carbon dioxide.

77. Net movement of water from a dilute to a concentrated solution through a selectively permeable membrane is called

- (a) Diffusion (b) Dispersion
(c) Osmosis (d) Absorption

- ⊗ (c) The net movement of water from a dilute to concentrated solution through a selectively permeable membrane is called osmosis. This term is used specifically to refers to the diffusions of water across semi or selectively permeable membrane.

Water moves from a region of higher concentration to a region of lower concentration until an equilibrium is reached.

78. Blood is a type of

- (a) epithelial tissue
(b) muscular tissue
(c) nervous tissue
(d) connective tissue

- ⊗ (d) Blood is a type of connective tissue, which forms 30-32% of total extracellular fluid. The connective tissues have a special function of linking and supporting other tissues/organs of the body.

Blood is a fluid, which helps in the transportation of various substances in the body. It is red because it contains a red pigment called haemoglobin in its red blood cells.

79. Mitochondria are able to produce their own

- (a) nucleus
(b) proteins
(c) chloroplasts
(d) digestive enzymes

- ⊗ (b) Mitochondria are able to produce their own protein. It acts as the cell's power producer and also called as powerhouse of the cell.

It possesses single circular DNA molecules, a few RNA molecules, ribosomes and the components required for the synthesis of proteins. It provides energy for energy requiring processes of the cell like muscle contraction, nerve impulse, conduction, etc. It may store and release calcium when required.

- 80.** Which one of the following statements is correct?

- (a) Xylem consists of tracheids, vessels, xylem parenchyma and xylem fibres
- (b) Flexibility in plants is due to sclerenchyma
- (c) Parenchyma have no intercellular spaces
- (d) Xylem consists of sieve plate, sieve tube and companion cells

- ⊗ (a) The statement given in option (a) is correct. Rest of the statements are incorrect and can be corrected as

- (b) Flexibility in plants is due to the permanent tissue collenchyma. Sclerenchyma provides mechanical support to organs.
- (c) Parenchyma cells are thin walled with small intercellular spaces.
- (d) Phloem consists of sieve plates, sieve tube and companion cells.

- 81.** Who among the following popularised the use of embryological characters in taxonomy?

- (a) Carl Linnaeus
 - (b) Panchanan Maheshwari
 - (c) Birbal Sahni
 - (d) Bentham and Hooker
- (b) Panchanan Maheshwari popularised the use of embryological characters in taxonomy. He is also known as 'The Father of Indian Plant Embryology'.

- 82.** Water is heated with a coil of resistance R connected to domestic supply. The rise of temperature of water will depend on

1. supply voltage
 2. current passing through the coil
 3. time for which voltage is supplied
- Select the correct answer using the codes given below.

- (a) 1, 2 and 3
- (b) 1 and 2
- (c) Only 1
- (d) 2 and 3

- ⊗ (a) Heat generated by a resistance coil is given by

$$H = I^2 R t$$

From Ohm's law, $I = \frac{V}{R}$

So, $H = I \left(\frac{V}{R} \right) R t = I V t$

Hence, option (a) is correct.

- 83.** A pendulum clock is lifted to a height where the gravitational acceleration has a certain value of g . Another pendulum clock of same length, but of double the mass of the bob is lifted to another height where the gravitational acceleration is $\frac{g}{2}$.

The time period of the second pendulum would be (in terms of period T of the first pendulum)

- (a) $\sqrt{2} T$
- (b) $\frac{1}{\sqrt{2}} T$
- (c) $2\sqrt{2} T$
- (d) T

- ⊗ (a) Time period of a pendulum, $T = 2\pi \sqrt{\frac{l}{g}}$... (i)

When acceleration due to gravity changed to $\frac{g}{2}$, then time period,

$$T' = 2\pi \sqrt{\frac{l}{g/2}} = \sqrt{2} \left(2\pi \sqrt{\frac{l}{g}} \right)$$

[from Eq. (i)]

⇒ $T' = \sqrt{2} T$
Hence, option (a) is correct.

- 84.** The loudness of sound depends upon the

- (a) velocity of sound waves in the medium
- (b) amplitude of the sound waves
- (c) frequency of the sound waves
- (d) frequency and velocity of the sound waves

- ⊗ (b) Loudness of sound wave is depend on its amplitude, while sharpness of sound wave is depend on its frequency. Hence, option (b) is correct.

- 85.** Two bodies of mass M each are placed R distance apart. In another system, two bodies of mass $2M$ each are placed $\frac{R}{2}$ distance apart. If F be

the gravitational force between the bodies in the first system, then the gravitational force between the bodies in the second system will be

- (a) $16 F$
- (b) $1 F$
- (c) $4 F$
- (d) None of these

- ⊗ (a) **Situation I,**
Force between the masses $F = \frac{GMM}{R^2} = \frac{GM^2}{R^2}$... (i)

Situation II,
Force between the masses

$$F' = \frac{G(2M)(2M)}{\left(\frac{R}{2}\right)^2} = \frac{16GM^2}{R^2} \dots (ii)$$

From Eqs. (i) and (ii), we get

$$F' = 16F$$

Hence, option (a) is correct.

- 86.** Light rays move in straight lines. But through an optical fibre, they can move in any type of zig-zag path because

- (a) the holes through the fibres are extremely fine
- (b) light rays are absorbed at the entry end and relieved at the exit end of the fibre
- (c) scattering of light occurs inside the fibre
- (d) successive total internal reflections occur as a ray moves through the fibre

- ⊗ (d) The working of optical fibre is based on the total internal reflection. Its inner part is core of higher refractive index surrounded by another layer of glass of lower refractive index. It is surrounded by plastic jacket.

When light enters from the one end of the core and moves towards cladding, then total internal reflection takes place again and again and light propagate through it. Optical fibres are used in decorative table lamps.

- 87.** Which one of the following statements regarding cathode rays is not correct?

- (a) Cathode ray particles are electrons.
- (b) Cathode ray particles start from anode and move towards cathode.
- (c) In the absence of electrical and magnetic fields, cathode rays travel in straight lines.
- (d) Television picture tubes are cathode ray tubes.

- ⊗ (b) Cathode rays start from cathode and move towards anode, because they are made of negatively charged electrons. Hence, option (b) is incorrect statement.

- 88.** A very large volume of hydrogen can be accommodated by making

- (a) non-metallic hydrides
- (b) hydrogen peroxide
- (c) non-stoichiometric hydrides
- (d) alkali metal hydrides

- ⊗ (c) A very large volume of hydrogen can be accommodated by making non-stoichiometric hydrides. Such hydrides are formed by some of the metals (e.g. Pd, Pt). This property of hydrogen has high potential for hydrogen storage.

89. Which one of the following is not a monoatomic element?

- (a) Copper (b) Helium
(c) Iodine (d) Barium

⊙ (c) Among the given species, only iodine is not a monoatomic element. It exists in the form of I_2 (diatomic), while rest occur as monoatomic element.

90. Which one of the following represents the correct order of electron releasing tendency of metals?

- (a) $Zn > Cu > Ag$ (b) $Ag > Cu > Zn$
(c) $Cu > Zn > Ag$ (d) $Cu > Ag > Zn$

⊙ (a) The correct order of electron releasing tendency of given metals is

$$Zn > Cu > Ag.$$

This can be explained on the basis of standard reduction potentials of given elements. More negative be the E_{red}° value, greater is the tendency of element to release electron.

Zn has highly negative E_{red}° value, while Cu has least negative E_{red}° value.

Thus, the correct order is

$$Zn > Cu > Ag$$

91. Which one of the following is the major constituent of biogas?

- (a) Carbon dioxide (b) Nitrous oxide
(c) Methane (d) Oxygen

⊙ (c) Biogas usually contains 45-70% methane and 30-45% carbon dioxide. It also contains small amounts of nitrogen, hydrogen sulphide, halogenated compound and organic silicon compounds. Thus, among the given options, methane is the major constituent of biogas.

92. Thyroid gland produces a hormone called 'thyroxine' which

- (a) controls blood glucose levels
(b) controls ovulation
(c) controls metabolic rate
(d) maintains pregnancy

⊙ (c) Thyroid gland produces a hormone called thyroxine, which controls the metabolic rate of the body. It acts to increase the basal metabolic rate and affects protein, fat and carbohydrate metabolism affecting how human cells use energetic compounds.

93. Which one of the following is a bacterium that causes disease in the human body?

- (a) *Varicella zoster*
(b) *Trypanosoma gambiense*
(c) *Salmonella typhi*
(d) *Plasmodium falciparum*

⊙ (c) *Salmonella typhi* is a bacterium which causes typhoid fever in the human body. This fever is contracted by the ingestion of contaminated food and water. *Varicella zoster* is a virus causing chickenpox. *Trypanosoma gambiense* and *Plasmodium falciparum* are protozoans which cause sleeping- sickness and malaria, respectively in the human body.

94. Which one of the following statements regarding viruses is not true?

- (a) Viruses need living cells to reproduce
(b) All viruses are parasites
(c) Viruses can synthesise their food through photosynthesis
(d) Viruses are similar to chemical substances outside the host

⊙ (c) The statement given in option (c) is not true and can be corrected as Viruses do not perform photosynthesis to synthesise their food. They are inert, crystalline structure outside the living cell.

Once they infect a cell, they takeover the machinery of the host cell to replicate themselves, killing the host.

Rest of the statements are correct.

95. Which one of the following diseases may be caused by the deficiency of vitamin-C?

- (a) Rickets (b) Rabies
(c) Hepatitis (d) Scurvy

⊙ (d) The deficiency of vitamin-C (ascorbic acid) causes scurvy. This condition is characterised by general weakness, anaemia, gingivitis and skin haemorrhage.

96. Compared to audible sound waves, ultrasound waves have

- (a) higher speed (b) higher frequency
(c) Both (a) and (b) (d) long wavelength

⊙ (b) Ultrasound waves have higher frequency than audible sound waves.

The audible range of sound for human beings is from 20 to 20,000 Hz. Children under the age of 5 and some animals such as dogs can hear upto 25,000 Hz. As people grow older, their ears become less sensitive to higher frequency.

Ultrasonic sound of frequency higher than 20,000 Hz, which cannot be heard by human beings.

97. A rigid body of mass 2 kg is dropped from a stationary balloon kept at a height of 50 m from the ground. The speed of the body when it just touches the ground and the total energy when it is dropped from the balloon are respectively.

(Take, acceleration due to gravity, $g = 9.8 \text{ m/s}^2$)

- (a) 980 ms^{-1} and 980 J
(b) $\sqrt{980} \text{ ms}^{-1}$ and $\sqrt{980} \text{ J}$
(c) 980 ms^{-1} and $\sqrt{980} \text{ J}$
(d) $\sqrt{980} \text{ ms}^{-1}$ and 980 J

⊙ (d) Given, $M = 2 \text{ kg}$ and height = 50 m

Speed of body at the ground,

$$v^2 - u^2 = 2gH$$

$$v = \sqrt{2gH} \quad [u = 0]$$

$$= \sqrt{2 \times 9.8 \times 50}$$

$$\Rightarrow v = \sqrt{980} \text{ ms}^{-1}$$

Hence, the total energy = kinetic energy

$$\Rightarrow TE = \frac{1}{2} Mv^2$$

$$= \frac{1}{2} \times 2 \times (\sqrt{980})^2 = 980 \text{ J}$$

Hence, option (d) is correct.

98. The temperature of a place on one sunny day is 113 in Fahrenheit scale. The Kelvin scale reading of this temperature will be

- (a) 318 K (b) 45 K
(c) 62.8 K (d) 335.8 K

⊙ (a) Given, temperature,

$$T_f = 113 \text{ F}$$

$$\text{As, we know } T_k = 273 + \frac{10}{18}(T_f - 32)$$

$$\Rightarrow T_k = 273 + \frac{10}{18}(113 - 32)$$

$$\Rightarrow T_k = 318 \text{ K}$$

99. Radiations coming from the sun are mostly in the form of

- (a) light only
(b) light and long wavelength infrared
(c) light and short wavelength infrared
(d) Both short and long wavelength infrared

⊙ (b) The mode of transfer of heat from one body to another without any actual movement the particles involved and without heating the intervening medium, is called radiation. For radiation, there is no need of any medium because it is of electromagnetic nature.

So, radiation coming from the sun are mostly in form of light and long wavelength infrared.

100. Which of the following are the characteristics of electromagnetic waves?

1. They are elastic waves.
2. They can also move in vacuum.
3. They have electric and magnetic components which are mutually perpendicular.

4. They move with a speed equal to 3 lakh meters per second.

Select the correct answer using the codes given below.

- (a) 1, 2, 3 and 4 (b) 1, 2 and 4
(c) 2 and 3 (d) 3 and 4

- ⊙ (c) Electromagnetic waves or EM waves are waves that are created as a result of vibrations between an electric field and a magnetic field. They are formed when an electric field comes in contact with a magnetic field. The electric field and magnetic field of an electromagnetic wave are perpendicular (at right angles) to each other. They are also perpendicular to the direction of the EM wave.

These waves travel with a constant velocity of $3.0 \times 10^8 \text{ m/s}$ in vacuum. They are deflected neither by the electric field nor by the magnetic field.

Hence-statement 2 and 3 are correct.

101. In the Manusmriti which form of marriage results from the 'Voluntary union of a maiden and her lover'?

- (a) Eighth form (b) Fifth form
(c) Seventh form (d) Sixth form

- ⊙ (b) In the Manusmriti, fifth (Gandharva form of marriage) results from the 'Voluntary union of a maiden and her love'. In Gandharva Marriage, a groom and his bride could get married without their parents knowledge or sanction. Hence, option (d) is the correct answer.

102. Which one of the following is a Rabi crop in the Northern States of India?

- (a) Rice (b) Bajra
(c) Barley (d) Ragi

- ⊙ (c) Rabi crops are winter crops which are sown in October-November and harvested in March. The Rabi crops in Northern states of India includes Barley, wheat, oats, gram, linseed and mustard.

103. The rivers of North-West Europe are good examples of

- (a) parallel pattern of drainage
(b) radial pattern of drainage
(c) barbed pattern of drainage
(d) trellis pattern of drainage.

- ⊙ (c) The rivers of North-West Europe are good examples of barbed drainage pattern. **Barbed drainage pattern** is a rare kind of drainage pattern which is formed when the tributaries flow in opposite direction to their master streams.

A **parallel pattern of drainage** system is a pattern of river caused by steep slopes with some relief. Because of the steep slopes, the streams are swift and

straight, with very few tributaries and all flow in the same direction.

Radial drainage patterns form when streams and rivers flow off a central peak or dome like a volcano.

In a **trellis pattern**, the river forms a net like system and the tributaries flow roughly parallel to each other.

104. Which one of the following ocean currents is a cold current?

- (a) South Atlantic Drift
(b) Mozambique Current
(c) East Australian Current
(d) Caribbean Current

- ⊙ (a) **South Atlantic Drift/Current** is an eastward flowing cold ocean current, fed by the Brazil Current. It is continuous with the northern edge of the Antarctic Circumpolar Current.

The **Mozambique current** is a warm ocean current flowing along the east coast of Africa in Indian ocean. It flows between Mozambique and Madagascar islands.

The **East Australian Current** (EAC) is a warm ocean current that flows along the eastern coast of Australia.

The **Caribbean Current** is a warm ocean current that flows northwestward through the Caribbean sea along the coast of South America and into the Gulf of Mexico.

105. Paradip Port is located on the delta of river

- (a) Rihand (b) Ganga
(c) Mahanadi (d) Bitarani

- ⊙ (c) It is a natural, deep-water port on the East coast of India in Jagatsinghpur district of Odisha. Paradip Port is situated at confluence of the Mahanadi river and the Bay of Bengal.

106. Which one of the following hypothesis/theory explains the origin of the Universe?

- (a) Nebular Hypothesis
(b) Binary Theory
(c) Big Bang Theory
(d) Planetesimal Hypothesis

- ⊙ (a) Nebular Hypothesis was given by Immanuel Kant explain about the origin of Universe. According to this theory, planets were formed out of a cloud (nebula) of hydrogen, helium & dust surrounding the sun. Binary theory explain about the existence of companion star of the sun.

According to **Big Bang theory**, all matter or substance forming this universe existed at one place as a tiny ball. This tiny ball had infinite density and temperature. At the Big Bang Theory the tiny ball exploded and started a process

of expansion of the universe which continues to a day.

According to Planetesimal Hypothesis, when a planetary system was forming, there was a proto planetary disc with materials form the nebula from which the system came.

107. Which among the following struggles, based on Gandhi's philosophy of Satyagraha, involved the industrial working class?

- (a) Champaran (b) Kheda
(c) Ahmedabad (d) Bardoli

- ⊙ (c) Ahmedabad Mill Strike, 1918 was based on Gandhi's philosophy of Satyagraha, that involved the industrial working class. The industrial dispute for wage hike was between the owners and workers of a cotton mill in Ahmedabad. The result of peaceful strike led by Gandhiji was successful and workers got a 35% wage increase.

108. Consider the following statements related to the Virashaiva tradition of Karnataka.

1. The Virashaiva Movement was led by a Brahmana named Basavanna, a minister in the court of the Kalachuri ruler in the twelfth century.
2. The Virashaivas encouraged practices, approved by the Dharmashastras, like post-puberty marriage and remarriage of widows.

Which of the statement(s) given above is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

- ⊙ (a) The twelfth century witnessed the emergence of a new movement called Virashaiva Movement in Karnataka. The movement was led by a Brahmana named Basavanna (1106-68) who was initially a Jain and a minister in the court of a Kalachuri ruler (Chalukya, king of Gujarat). His followers were known as Virashaivas (heroes of Shiva) or Lingayats (wearers of the linga). The Chalukyas were contested for the suzerainty by the kalachuris of Southern India in that period. Hence, statement (1) is correct.

Also, the Dharmashastras did not permit widow remarriages and post-puberty marriages. But the Virashaivas undertook them as a sign of refusal of the sacred Brahmanical scriptures. Hence, statement (2) is in correct.

109. Consider the following statements related to Wellesley's administration.

1. In the six years of Wellesley's administration, the army accounted for 42.5% of the Company's total expenditure.
2. Wellesley's administrative measures were restricted to the affairs to the Company and had nothing to do with the commercial and military affairs of the Indian ruling families.

Which of the statement(s) given above is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2
- ⊗ (c) During Lord Wellesley's tenure, army was an expensive machinery of the British East India Company. He had waged war on many Princely States and native rulers like Mysore, Marathas, Nizams etc. Hence, to sustain such a larger army, he spent huge amounts (42.5% of the company's total expenditure) on army. He also devised the infamous Subsidiary Alliance System which required to maintain British army in native ruler's courts. Hence, statement (1) is correct.

Wellesley was an excellent administrator. He used his Subsidiary Alliance System to interfere with the commercial and military affairs to Indian rulers by making them mandatorily consult him on important decisions.

Hence, statements (2) is also correct.

110. Consider the following statements concerning the Russian Revolution.

1. The Bolsheviks believed that in a repressive society like Tsarist Russia, the party should be disciplined and should control the number of its members.
2. The Mensheviks believed that the party should be opened to all (as in Germany).

Selects the correct answer using the codes given below.

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2
- ⊗ (c) The Bolsheviks and Mensheviks were the two factions of Russian Social Democratic Labour Party formed under leaderships of Vladimir Lenin and Julius Martov respectively.

Bolsheviks believed in limiting the membership of party to a core professional member body as it was easier to manage them which was

necessary in a repressive society like Tsarist Russia.

Hence, statement (1) is correct.

On the other hand Mensheviks believed in power of masses and advocated liberal thoughts like entry of common masses in the party. Hence, statement (2) is also correct.

111. Which of the following was/were among the decisions taken by the First Continental Congress held in Philadelphia in September, 1774?

1. It rejected a plan for a colonial union under the British authority.
2. It drew up a statement of grievances.
3. It agreed upon a scheme to stop trade between the Colonies and England.

Which of the statement(s) given above is/are correct?

- (a) 1 and 3 (b) Only 2
(c) 1 and 2 (d) 1, 2 and 3
- ⊗ (d) The First Continental Congress held in Philadelphia in September, 1774 is a major landmark in the history of USA. It was attended by representatives of 12 out of 13 British Colonies in USA, at the Carpenter's Hall. It was held in response to British impasses over the historic Boston Tea Party of December, 1773. The major outcomes of this Congress were
- Rejection of Union of colonies under British Crown.
 - Scheme for boycott of trade between the colonies and the Britishers.
 - Mechanism of grievance discussion.
- Hence, all the statements are correct.

112. Which one of the following land territories of Indonesia is not touched by the Equator?

- (a) Sumatra (b) Sulawesi
(c) Java (d) Kalimantan
- ⊗ (c) Java island is located to the South of equator at around 5°S latitude in a West to East orientation, so Java is not touched by the equator. However, equator passes through the Sumatra, Sulawesi and Kalimantan portion of Borneo island in Indonesia.

113. Which one of the following sedimentary rocks is organically formed?

- (a) Shale (b) Chert
(c) Halite (d) Chalk
- ⊗ (d) Organically formed sedimentary rocks are formed from the remains of living organisms such as corals & shell fish (calcareous rock); or from vegetative

remains like forests & swamps (carbonaceous rocks). Some examples of organically formed sedimentary rocks are chalk, limestone, peat, lignite & coal. Shale is a mechanically formed sedimentary rock. Halite & chert are chemically formed sedimentary rocks.

114. According to the Koppen climatic classification, the letter code Cfa denotes.

- (a) Tropical wet climate
(b) Humid subtropical climate
(c) Tundra Climate
(d) Tropical wet and dry climate
- ⊗ (b) Koeppen's climate classification is based on annual & monthly average temperatures and precipitation. According to this classification Cfa denotes Humid subtropical climate.

This type of climate is characterised by warm summer and absence of dry season. Tropical wet climate is denoted by Af; Tundra climate is denoted by ET and Tropical wet & dry climate is denoted by Aw.

115. In which one of the following folds in the axial plane found to be virtually horizontal?

- (a) Isoclinal (b) Anticlinal
(c) Recumbent (d) Monoclinial
- ⊗ (c) In recumbent fold, aecial plane found to be horizontal. The axial plane of a fold is the plane or surface that divides the fold as symmetrically as possible.

In Isoclinal fold, the axial surface and limbs slope in the same direction and at approximately the same angle.

An Anticlinal fold is an arch like fold which is convex upward.

Monoclinial fold is a step-like fold consisting of a zone of steeper dip within or otherwise horizontal topography.

116. How many Ramsar convention sites have been enlisted from India so far?

- (a) 12 (b) 16 (c) 27 (d) 62
- ⊗ (c) Has 27 Ramsar sites like Dal lake, Pong Dam, Harike Wetland, Chilika lake etc.

Ramsar Convention on Wetlands is an international treaty on conservation and sustainable use of Wetlands. It was signed in Ramsar, a city in Iran in 1971.

India Chilika lake was first to be designated as a Ramsar site in India.

117. The Munda language group belongs to which family?

- (a) Austric (b) Dravidian
(c) Sino-Tibetan (d) Indo-European

- ⊗ (a) Munda language belongs to the **Austroasiatic or Austric** group of language. It is a group of language with more than 9 million user from central and eastern India.

Dravidian languages are Tamil, Telugu, Kannada and Malayalam. **Sino-Tibetan languages** includes Chinese and the Tibeto-Burman languages. **Indo-European languages** are dialects in Asia and Europe.

- 118.** Which one of the following statements about the Suez Canal is not correct?

- (a) The Suez Canal was constructed in 1869.
 (b) It links the Mediterranean Sea and the Red Sea.
 (c) It has a six lock system and ships cross the different levels through these locks.
 (d) It has given Europe a new gateway to the Indian Ocean.

- ⊗ (c) Option, (c) is not the correct statement about the Suez Canal because. It has no lock system as the water level in Mediterranean Sea and Red Sea through Gulf of Suez is nearly same. The Suez Canal in Egypt connects the Red Sea with Mediterranean Sea. It was constructed between 1859 to 1869 and officially opened in 1869.

It gives Europe a new gateway to the Indian Ocean allowing huge trade and cargo movement between the Europe and Asian Countries.

- 119.** Which among the following statements is not correct about the Reign of Terror?

- (a) The Jacobins dashed out the Girondists with the help of Sans-Culottes.
 (b) The Jacobins were in league with the French clergy.
 (c) The arrest for anti-revolutionary activities was by law restricted to the political class.
 (d) The Reign of Terror came to an end with the execution of Robespierre by guillotine in July, 1794.

- ⊗ (c) Reign of Terror was the period in French revolution in 1793 to 1794, marked by widespread violence and executions by the Jacobins, in association with the Sans-Culottes. The Jacobins were in league with the French clergy.

Jacobins dashed out Girondists with help of Sans-Culottes and were actively conspiring against Aristocracy. The laws for arresting were not limited to political class instead it was vaguely defined and

anyone could be arrested. Hence, option (c) is not correct about the Reign of Terror. The reign came to an end on 27th July, 1794 with the execution of Robespierre by guillotine.

Hence, option (c) is incorrect.

- 120.** Who among the following was the first Indian to qualify for the Indian Civil Service?

- (a) Satyendranath Tagore
 (b) Surendranath Banerjee
 (c) RC Dutt
 (d) Subhas Chandra Bose

- ⊗ (a) Satyendranath Tagore was the first Indian to join the Indian Civil Service. He was selected in 1863 and posted in Bombay Presidency as a Civil Servant.

- 121.** Which among the following was/were among the factors for England to experience the Industrial Revolution first?

1. The scientific inventions had paved the way for Industrial Revolution.
2. It had favourable social and political structures in place.
3. Navigable rivers had made inland transport easier.
4. It had seen the ascendancy of capitalist practices.

Select the correct answer using the codes given below.

- (a) 1 and 3 (b) 1, 3 and 4
 (c) Only 4 (d) All of these

- ⊗ (d) Industrial Revolution was the technological implementation in mass production during the second half of 18th century in England. It was a period of transition with new machines technologies and steam power driving the production capacity. The causes/factors for England to experience the Industrial Revolution first were

1. Scientific innovations.
2. Favourable Social and Political Structure
3. Navigable rivers
4. Higher Capital in hands for setting up enterprise.

Hence, all the statements are correct.

- 122.** Article-46 of the Constitution of India refers to the promotion of educational and economic interests of

- (a) religious minorities
 (b) Scheduled Castes, Scheduled Tribes and other weaker sections
 (c) displaced persons from large irrigation projects
 (d) the economically deprived

- ⊗ (b) Article 46 in part IV of the Constitution of India is related to the promotion of educational and economic interests of the Scheduled Castes, Scheduled Tribes and other weaker sections. Article 46 also provides that the state shall protect the weaker sections of the society from social injustice and all forms of exploitation.

- 123.** Who was the Education Minister in the first Cabinet of Independent India?

- (a) Sarvepalli Radhakrishnan
 (b) Sardar Vallabhbhai Patel
 (c) Maulana Abul Kalam Azad
 (d) Acharya Narendra Dev

- ⊗ (c) Maulana Abul Kalam Azad was the Education Minister in the first Cabinet of Independent India.

National Education Day is celebrated on 11th November every year to commemorate the birth anniversary of Maulana Abul Kalam Azad.

- 124.** Who among the following died in exile?

- (a) Rani Laxmibai
 (b) Bahadur Shah Zafar
 (c) Tantia Tope
 (d) Nana Saheb

- ⊗ (b) Bahadur Shah Zafar → Died in Rangoon while in exile in 1862.

Rani Laxmibai → Died on the battlefield in Gwalior on 18th June, 1858.

Tantia Tope → Executed by Britishers in 1859 at Shivpuri.

Nana Saheb → Escaped to Nepal and is thought to have died in 1859.

- 125.** The normal lapse rate of temperature of Earth's atmosphere drops to 0°C at the

- (a) upper part of ionosphere
 (b) upper boundary of the tropopause
 (c) lower part of mesosphere
 (d) upper boundary of stratopause

(b) The normal lapse rate of temperature of Earth's atmosphere drops to 0°C at the upper boundary of the tropopause. The lapse rate is the rate at which temperature in Earth's atmosphere changes with altitude.

- 126.** The headquarters of National Research Laboratory for Conservation of Cultural Property (NRLC) is located at

- (a) New Delhi (b) Lucknow
 (c) Kolkata (d) Bhopal

(b) The National Research Laboratory for Conservation of Cultural Property (NRLC) is a scientific institution of the Ministry of Culture, Government of India. It is responsible for the Conservation of Cultural Heritage. The NRLC was established in 1976 with its headquarters located at Lucknow.

- 127.** Loktak lake is situated in the State of
 (a) Sikkim (b) Manipur
 (c) Odisha (d) Mizoram
- ⊗ (b) Loktak Lake is located at Moirang in Manipur, India. It is the largest fresh water lake of North-East India & is famous for phumdis (floating vegetative mass). Keibul Lamjao National Park, one of the phumdis of the Lake, is the only floating national park in the world. It is also the last natural habitat of endangered Sangai deer.
- 128.** Stalactite, stalagmite and pillars are the depositional landforms of
 (a) running water (b) wind
 (c) glacier
 (d) underground water
- ⊗ (d) Stalactite, stalagmite and pillars are the depositional landforms of underground water. Stalactite and stalagmite are formed when the calcium carbonate dissolved in groundwater.
- 129.** A deep valley characterised by steep step like slope is known as
 (a) U-shaped valley (b) Blind valley
 (c) Gorge (d) Canyon
- ⊗ (d) Canyon is a deep valley characterised by steep step like slopes. A **U-shaped** valley is a glaciated landform having a characteristic U-shape with steep straight sides & a flat or rounded bottom. A **blind valley** is a deep, narrow & flat bottomed valley with an abrupt ending. A **Gorge** is a deep, narrow valley with steep sides.
- 130.** Which one of the following is a major plate?
 (a) Pacific Plate (b) Cocos Plate
 (c) Arabian Plate (d) Philippine Plate
- ⊗ (a) Among the given options, Pacific plate is a major plate. The outer shell of Earth, Lithosphere is broken into tectonic plates. There are seven major tectonic plates which include Pacific Plate, North American Plate, Eurasian Plate, African Plate, Antarctic Plate, Indo-Australian Plate and South American Plate. There are about 20 minor plates including Cocos Plate, Nazca plate Arabian Plate Philippine plate and Caroline Plate etc.
- 131.** Lithosphere consists of
 (a) upper and lower mantle
 (b) crust and core
 (c) crust and uppermost solid mantle
 (d) mantle and core
- (c) Lithosphere is the solid outer part of the Earth. It consists of the crust and solid outermost layer of the upper mantle. Hence option (c) is correct answer.
- 132.** The principal component(s) of Nehru-Mahalanobis strategy of economic development was/were
 1. Restructuring economic dependency on metropolitan capitalism into independent economic development.
 2. Transition from semi-feudal agricultural to capitalist farming.
 Select the correct answer using the codes given below.
 (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2
- ⊗ (c) The Nehru-Mahalanobis strategy was developed by PC Mahalanobis, under the guidance of Jawaharlal Nehru in 1953. *The Principal components of this development strategy were*
 (i) Restructuring economic dependency on metropolitan capitalism into independent economic development.
 (ii) State capitalist and capitalist developments in the urban sector and
 (iii) Transition from semi-feudal agricultural to capitalist farming.
 Hence, Statements 1 and 2 both are correct.
- 133.** The provisions of the Fifth Schedule of the Constitution of India shall not apply to the administration and control of the Scheduled Areas and Scheduled Tribes in
 1. Chhattisgarh, Jharkhand and Odisha
 2. Assam and Tripura
 3. Meghalaya and Mizoram
 Select the correct answer using the codes given below.
 (a) Only 1 (b) 1 and 2
 (c) 2 and 3 (d) 1, 2 and 3
- ⊗ (c) The provisions of the Fifth Schedule of the Constitution of India apply to the administration and control of the Scheduled Areas and Scheduled Tribes in 10 states namely: Andhra Pradesh, Chhattisgarh, Gujarat, Himachal Pradesh, Jharkhand, Madhya Pradesh, Maharashtra, Odisha, Rajasthan and Telangana.
- 134.** Consider the following statements related to Dayanand's idea of social reform
 1. Dayanand's reform envisaged a social order, where different castes performed functions suitable to their status determined by merit.
 2. Dayanand's 'robust Vedic counterpart' challenged the masculine West that had enslaved the Aryavarta.
 Which of the statement(s) given above is/are correct?
 (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2
- ⊗ (c) Both the statements are correct as Dayanand was critical of the ancient caste system. He criticised it to its length and breadth. He envisioned a homogenous society where the profession/function performed by the person was determinant of their merit. Also, Dayanand's 'robust Vedic counterpart' challenged the masculine West that had enslaved the Aryavarta.
- 135.** Consider the following statements concerning the American War of Independence.
 1. The Americans raised the slogan, 'No taxation without representation'.
 2. The American merchants resorted to the boycott of the British products.
 Select the correct answer using the codes given below.
 (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2
- ⊗ (c) During the American War of Independence, in 1774, the first Continental Congress was held in Philadelphia which actively advocated three agendas—
 1. Rejection of Union of Colonies under British authority.
 2. Scheme of boycott of trade with England and Britain.
 3. No taxation without representation and redressal of grievances.
 So, both statements are correct. Hence, option (c) is correct.
- 136.** The first Utkrisht Double Decker Air-Conditioned Yatri (UDAY) Express train runs between
 (a) Delhi and Kalka
 (b) Bengaluru and Coimbatore
 (c) Chennai and Visakhapatnam
 (d) Chennai and Bengaluru
- ⊗ (b) The first Utkrisht Double Decker Air-Conditioned Yatri (UDAY) Express was a specially designed trains which started service between Coimbatore and Bengaluru in June, 2018. Second, such service was launched in September, 2019 that runs between Visakhapatnam and Vijayawada.
- 137.** Who among the following were selected for the Rajiv Gandhi Khel Ratna Award, 2019?
 (a) Vijay Kumar and Yogeshwar Dutt
 (b) Sakshi Malik and Jitu Rai
 (c) Virat Kohli and Mirabai Chanu
 (d) Bajrang Punia and Deepa Malik
- ⊗ (d) Rajiv Gandhi Khel Ratna Award is the highest sporting honour of India. It is annually awarded to players by the Ministry of Youth Affairs and Sports. Bajrang Punia (Wrestling) and Deepa Malik (Parathlete) were awarded with this award in 2019.

- 138.** Betel leaf of which one of the following states has been accorded a GI tag recently?
 (a) Andhra Pradesh (b) Madhya Pradesh
 (c) Kerala (d) Mizoram
- ⊗ (c) The Tirur Vettala (Betel leaf) from Kerala has got its GI tag. The leaf given its unique component i.e., Eugenol in leaves along with high protein and chlorophyll content has several medicinal properties. Apart from this Arnamula Kannadi, Payyannur Pavithra Ring, Navara Rice, Alleppey Coir also gets GI tag in Kerala.
- 139.** SAMARTH is a flagship skill development scheme of which one of the following Ministries?
 (a) Ministry of Textiles
 (b) Ministry of Agriculture and Farmers Welfare
 (c) Ministry of Skill Development and Entrepreneurship
 (d) Ministry of Human Resources Development
- ⊗ (a) SAMARTH is a flagship skill development scheme of Ministry of Textiles, Government of India. The objective of the scheme is to provide skill development to the youth for gainful and sustainable employment in the textile sector.
- 140.** CORAS is a separate Commando Unit of
 (a) National Security Guard
 (b) Central Industrial Security Force
 (c) Railway Protection Force
 (d) Central Reserve Police Force
- (c) The Ministry of Railways had launched the Commando for Railway Security (CORAS) of Indian railways in August, 2019. CORAS is a separate Commando Unit of Railway Protection Force and are raised keeping in mind the threat from disruptive forces. The first deployment of the unit will be in the naxalism affected Chhattisgarh state.
- 141.** Which one of the following statements is not true about Ijarah system?
 (a) It was a system of revenue farming.
 (b) It encouraged the role of middlemen.
 (c) Under this system, land revenue was fixed for the peasant.
 (d) The Ijarahdar paid a fixed amount to the state treasury.
- ⊗ (c) The Ijarah system was developed during sultanate period and gained prominence in Mughals after Akbar. It was a system of revenue farming. In this system, the revenue was collected by a middlemen called Ijarahdars who had to pay a certain sum to ruler and keep rest with him. This led to ruthless extraction of revenue from poor peasants. The revenue was not fixed and varied upon the production. Hence, statement (c) is incorrect.
- 142.** During the Swadeshi movement, a National College was started in Calcutta under the principalship of
 (a) Rabindranath Tagore
 (b) Aurobindo Ghosh
 (c) Rajani Kant Sen
 (d) Syed Abu Mohammad
- ⊗ (b) Aurobindo Ghosh founded the Bengal National College at Calcutta on 15th August, 1906 and became its first Principal. But following his trial in the cases like Bande Mataram (Sedition case), 1907 and Alipore Bomb Conspiracy Case, 1908, he resigned from the post.
- 143.** The ruins of Vijayanagar (Hampi) were brought to public light in the year 1800 by the following British surveyor and engineer
 (a) James Prinsep (b) Colin Mackenzie
 (c) James Rennell (d) Charles Metcalfe
- ⊗ (b) Colin Mackenzie an engineer and antiquarian in East Indian Company found the ruins of Vijayanagar (Hampi) in 1800. He prepared the first survey map of Hampi. James Prinsep, deciphered Kharoshti and Brahmi scripts. James Rennell, produce first accurate maps of Bengal and the outlines of India. Charles Metcalfe, appointed as acting Governor-General of India in 1835.
- 144.** Which country among the following was not a part of the Third Coalition against Napoleon?
 (a) Russia (b) Prussia
 (c) Sweden (d) France
- ⊗ (d) The third coalition was an alliance of Russia, Britain, Prussia, Austria and Sweden against the Napoleon I of France. Hence, France was a party to war, but not a coalition member.
- 145.** Which one of the following pairs of travellers and their nationality is not correctly matched?
 (a) Ibn Battuta-Moroccan
 (b) Duarte Barbosa-Portuguese
 (c) Jean Baptiste Tavernier-Dutch
 (d) Niccolao Manucci-Venetian
- ⊗ (c) Option (c) is not correctly matched because Jean Baptiste Tavernier was a French gem merchant and traveller. He made 6 voyages to Persia and India in his lifetime from 1630 to 1668 and has left valuable accounts of Mughal empire, Nizams of Hyderabad, etc.
- 146.** World Humanitarian Day is celebrated on
 (a) 26th June (b) 17th July
 (c) 19th August (d) 27th September
- ⊗ (c) World Humanitarian Day is an international day celebrated on 19th August every year to recognise the humanitarian personnel and those who laid down their lives for the causes of humanity. It was designated by the United Nation General Assembly for the first time in 2009 on 19th August.
- 147.** Which one of the following is the name given to the lander of Chandrayaan-2?
 (a) Vigyan (b) Anusandhan
 (c) Pragyan (d) Vikram
- ⊗ (d) Chandrayaan-2 was the second lunar exploration mission of Indian Space Research Organisation (ISRO). It consisted of a lunar orbiter, lander named 'Vikram' and lunar rover called 'Pragyan'. The Mission's Lander was named after Vikram Sarabhai, who is widely regarded as the founder of Indian Space Programme.
- 148.** Along with Pranab Mukherjee, how many more persons were conferred the Bharat Ratna Award in the year 2019?
 (a) One (b) Two
 (c) Three (d) Four
- ⊗ (b) In the year 2019, along with Pranab Mukherjee, two personalities were awarded Bharat Ratna, the highest civilian award of India. The awardees were:
 1. Pranab Mukherjee → Former President of India.
 2. Nanaji Deshmukh → Social Activist from Maharashtra.
 3. Bhupen Hazarika → Assamese Composer, Musician and Lyricist.
- 149.** Aishwarya Pissay excels in which one of the following sports?
 (a) Badminton (b) Boxing
 (c) Motorsports (d) Chess
- ⊗ (c) Aishwarya Pissay is an Indian circuit and off road motor cycle racer. She became the first ever Indian athlete to win a world title in motorsports.
- 150.** Which one of the following films was adjudged as the Best Feature Film in the 66th National Film Awards?
 (a) Bulbul can Sing (b) Hellaro
 (c) Badhaai Ho (d) Uri
- ⊗ (b) The movie 'Hellaro' won the National Film ward for the Best Feature Film in the 66th National Film Awards. 'Hellaro' is a Gujarati language period drama, co-written and directed by Abhishek Shah.

NDA/NA

National Defence Academy/Naval Academy

SOLVED PAPER 2019 (I)

PAPER I : Mathematics

1. What is the n th term of the sequence 25, -125, 625, -3125, ...?

- (a) $(-5)^{2n-1}$ (b) $(-1)^{2n} 5^{n+1}$
 (c) $(-1)^{2n-1} 5^{n+1}$ (d) $(-1)^{n-1} 5^{n+1}$

⊙ (d) Given, sequence 25, -125, 625, -3125

$$\text{Here, } \frac{T_2}{T_1} = \frac{T_3}{T_2} = \dots$$

So, this sequence in GP whose common ratio is -5.

$$\text{then } a = 25, r = -5$$

$$\therefore n\text{th term of sequence} = ar^{n-1} = 25(-5)^{n-1}$$

$$= (-1)^{n-1} 5^2 \times 5^{n-1} = (-1)^{n-1} 5^{n+1}$$

2. Suppose $X = \{1, 2, 3, 4\}$ and R is a relation on X . If $R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (2, 3), (3, 2)\}$, then which one of the following is correct?

- (a) R is reflexive and symmetric, but not transitive
 (b) R is symmetric and transitive, but not reflexive
 (c) R is reflexive and transitive, but not symmetric
 (d) R is neither reflexive nor transitive, but symmetric

⊙ (d) We have, $X = \{1, 2, 3, 4\}$

$$R = \{(1, 1), (2, 2), (3, 3), (1, 2), (2, 1), (2, 3), (3, 2)\}$$

Since, $(4, 4) \notin R$,

Hence, R is not reflexive.

Since, $(1, 2) \in R, (2, 3) \in R$ but

$(1, 3) \notin R, R$ is not transitive.

$$(1, 2), (2, 3) \in R$$

$$\text{and also } (2, 1), (3, 2) \in R$$

$\therefore R$ is symmetric.

Hence, R is neither reflexive nor transitive but symmetric.

3. A relation R is defined on the set N of natural numbers as $xRy \Rightarrow x^2 - 4xy + 3y^2 = 0$. Then, which one of the following is correct?

- (a) R is reflexive and symmetric, but not transitive
 (b) R is reflexive and transitive, but not symmetric
 (c) R is reflexive, symmetric and transitive
 (d) R is reflexive, but neither symmetric nor transitive

⊙ (d) Given, $xRy \Rightarrow x^2 - 4xy + 3y^2 = 0$

For reflexive

$$xRx \Rightarrow x^2 - 4x^2 + 3x^2 = 0$$

So, $(x, x) \in R, \forall x \in N$

Hence, R is reflexive.

For symmetric

$$xRy \Rightarrow x^2 - 4xy + 3y^2 = 0$$

$$\therefore yRx \Rightarrow y^2 - 4xy + 3x^2 = 0$$

It is not clear, that $y^2 - 4xy + 3x^2$ is equal to zero or not.

i.e. $(x, y) \in R$ but $(y, x) \notin R, \forall x, y \in N$

Hence, R is not symmetric.

For transitive

$$xRy \Rightarrow x^2 - 4xy + 3y^2 = 0$$

$$yRz \Rightarrow y^2 - 4yz + 3z^2 = 0 \text{ (let)}$$

$$xRz \Rightarrow x^2 - 4xz + 3z^2 = 0$$

It is not clear, that $x^2 - 4xz + 3z^2$ is equal to zero or not.

So, $(x, y) \in R, (y, z) \in R$

$$\Rightarrow (x, z) \notin R, \forall x, y, z \in N$$

Hence, R is not transitive.

4. If $A = \{x \in Z : x^3 - 1 = 0\}$ and $B = \{x \in Z : x^2 + x + 1 = 0\}$, where, Z is set of complex numbers, then what is $A \cap B$ equal to?

(a) Null set

(b) $\left\{ \frac{-1 + \sqrt{3}i}{2}, \frac{-1 - \sqrt{3}i}{2} \right\}$

(c) $\left\{ \frac{-1 + \sqrt{3}i}{4}, \frac{-1 - \sqrt{3}i}{4} \right\}$

(d) $\left\{ \frac{1 + \sqrt{3}i}{2}, \frac{1 - \sqrt{3}i}{2} \right\}$

⊙ (b) We have, $A = \{x \in Z : x^3 - 1 = 0\}$

and $B = \{x \in Z : x^2 + x + 1 = 0\}$

$$A = \left\{ 1, \frac{-1 + \sqrt{3}i}{2}, \frac{-1 - \sqrt{3}i}{2} \right\}$$

$$B = \left\{ \frac{-1 + \sqrt{3}i}{2}, \frac{-1 - \sqrt{3}i}{2} \right\}$$

$$A \cap B = \left\{ \frac{-1 + \sqrt{3}i}{2}, \frac{-1 - \sqrt{3}i}{2} \right\}$$

5. Consider the following statements for the two non-empty sets A and B .

$$1. (A \cap B) \cup (A \cap \bar{B}) \cup (\bar{A} \cap B)$$

$$= A \cup B$$

$$2. (A \cup (\bar{A} \cap \bar{B})) = A \cup \bar{B}$$

Which of the above statements is/are correct?

- (a) Only 1 (b) Only 2
 (c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (a) We have,

$$1. (A \cap B) \cup (A \cap \bar{B}) \cup (\bar{A} \cap B) = A \cup B$$

$$\text{LHS} \equiv (A \cap B) \cup (A \cap \bar{B}) \cup (\bar{A} \cap B)$$

$$= \{A \cap (B \cup \bar{B})\} \cup (\bar{A} \cap B)$$

[by distributive property]

$$\begin{aligned}
 &= (A \cap U) \cup (\bar{A} \cap B) \\
 &\quad [\because B \cup \bar{B} = U] \\
 &= A \cup (\bar{A} \cap B) \\
 &= (A \cup \bar{A}) \cap (A \cup B) \\
 &= U \cap (A \cup B) = A \cup B = \text{RHS}
 \end{aligned}$$

Hence, 1 is correct.

2. $A \cup (\bar{A} \cap \bar{B}) = A \cup \bar{B}$
 LHS $\equiv A \cup (\bar{A} \cap \bar{B})$
 $= (A \cup \bar{A}) \cap (A \cup \bar{B})$
 $= U \cap (A \cup \bar{B})$
 $= A \cup \bar{B} \neq A \cup B$

Hence, 2 is false.

\therefore Only 1 is correct.

6. Let X be a non-empty set and let A, B, C be subsets of X . Consider the following statements.

1. $A \subset C \Rightarrow (A \cap B) \subset (C \cap B)$,
 $(A \cup B) \subset (C \cup B)$
2. $(A \cap B) \subset (C \cap B)$ for all sets $B \Rightarrow A \subset C$
3. $(A \cup B) \subset (C \cup B)$ for all sets $B \Rightarrow A \subset C$

Which of the above statements are correct?

- (a) Only 1 and 2 (b) Only 2 and 3
 (c) Only 1 and 3 (d) 1, 2 and 3

(d) Let $X = \{1, 2, 3, 4\}$

$A = \{1, 2\}, B = \{2, 3, 4\}, C = \{1, 2, 3\}$
 $A \subset C$
 $A \cap B = \{2\}, C \cap B = \{2, 3\}$

Clearly, $(A \cap B) \subset (C \cap B)$

$A \cup B = \{1, 2, 3, 4\}, (C \cup B) = \{1, 2, 3, 4\}$
 $(A \cup B) \subset (C \cup B)$

Hence, Statement 1 is correct.

2. $(A \cap B) \subset (C \cap B)$ for all sets $B \Rightarrow A \subset C$

Hence, Statement 2 is also correct.

3. $(A \cup B) \subset (C \cup B)$ for all sets $B \Rightarrow A \subset C$

Hence, Statement 3 is also correct.

7.

If $B = \begin{bmatrix} 3 & 2 & 0 \\ 2 & 4 & 0 \\ 1 & 1 & 0 \end{bmatrix}$, then what is adjoint

of B equal to?

(a) $\begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ -2 & -1 & 8 \end{bmatrix}$ (b) $\begin{bmatrix} 0 & 0 & -2 \\ 0 & 0 & -1 \\ 0 & 0 & 8 \end{bmatrix}$

(c) $\begin{bmatrix} 0 & 0 & 2 \\ 0 & 0 & 1 \\ 0 & 0 & 0 \end{bmatrix}$ (d) It does not exist

(a) We have, $B = \begin{bmatrix} 3 & 2 & 0 \\ 2 & 4 & 0 \\ 1 & 1 & 0 \end{bmatrix}$

Co-factor of B ,

$B_{11} = 0, B_{12} = 0, B_{13} = -2$
 $B_{21} = 0, B_{22} = 0, B_{23} = -1$

$B_{31} = 0, B_{32} = 0, B_{33} = 8$

adj $B = \begin{bmatrix} B_{11} & B_{12} & B_{13} \\ B_{21} & B_{22} & B_{23} \\ B_{31} & B_{32} & B_{33} \end{bmatrix}'$

$= \begin{bmatrix} 0 & 0 & -2 \\ 0 & 0 & -1 \\ 0 & 0 & 8 \end{bmatrix}' = \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ -2 & -1 & 8 \end{bmatrix}$

8. What are the roots of the equation $|x^2 - x - 6| = x + 2$?

- (a) -2, 1, 4 (b) 0, 2, 4
 (c) 0, 1, 4 (d) -2, 2, 4

(d) We have,

$|x^2 - x - 6| = x + 2$
 $\Rightarrow |(x - 3)(x - 2)| = x + 2$

Case I $x < 2$

$x^2 - x - 6 = x + 2$
 $x^2 - 2x - 8 = 0$

$[x^2 - 4x + 2x - 8 = 0]$
 $[x(x - 4) + 2(x - 4) = 0]$

$(x - 4)(x + 2) = 0$
 $x = -2$ but $x \neq -4$ [$\because x < 2$]

Case II $2 \leq x < 3$

$x^2 - x - 6 = -(x + 2)$
 $x^2 - x - 6 + x + 2 = 0$
 $x^2 - 4 = 0$

$x = \pm 2$
 $x = 2$ but $x \neq -2$ [$\because x \in (2, 3]$]

Case III $x \geq 3$

$x^2 - x - 6 = x + 2$
 $x^2 - 2x - 8 = 0$
 $(x + 2)(x - 4) = 0$

$x = 4$ but $x \neq -2$ [$\because x \geq 3$]

\therefore

$x = -2, 2, 4$

9.

If $A = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$, then the matrix A is

a/an

- (a) singular matrix
 (b) involutory matrix
 (c) nilpotent matrix
 (d) idempotent matrix

(b) We have, $A = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$

$|A| = -1$

Since, $|A| \neq 0$

Hence, A is not singular.

$A^2 = A \cdot A = \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \cdot \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}$

$= \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$

$A^2 = I$

Hence, A is involutory matrix.

10.

If $\begin{bmatrix} x & -3i & 1 \\ y & 1 & i \\ 0 & 2i & -i \end{bmatrix} = 6 + 11i$, then what

are the values of x and y respectively?

- (a) -3, 4 (b) 3, 4
 (c) 3, -4 (d) -3, -4

(a) We have, $\begin{bmatrix} x & -3i & 1 \\ y & 1 & i \\ 0 & 2i & -i \end{bmatrix} = 6 + 11i$

$\Rightarrow x(-i + 2) - y(-3 - 2i) = 6 + 11i$
 $\Rightarrow 2x + 3y + (-x + 2y)i = 6 + 11i$

On equating real and imaginary parts, on both sides,

we get $2x + 3y = 6$... (i)

and $-x + 2y = 11$... (ii)

On solving Eqs. (i) and (ii), we get

$x = -3$ and $y = 4$

11. The common roots of the equations

$z^3 + 2z^2 + 2z + 1 = 0$

and $z^{2017} + z^{2018} + 1 = 0$ are

- (a) -1, ω (b) 1, ω^2
 (c) -1, ω^2 (d) ω, ω^2

(d) We have, $z^3 + 2z^2 + 2z + 1 = 0$

$(z + 1)(z^2 + z + 1) = 0$

$\Rightarrow z + 1 = 0$ or $z^2 + z + 1 = 0$

$z = -1$

or $z = \frac{-1 \pm \sqrt{1 - 4}}{2}$

$= \frac{-1 + i\sqrt{3}}{2}, \frac{-1 - i\sqrt{3}}{2} = \omega, \omega^2$

Now, $z^{2017} + z^{2018} + 1 = 0$

Put $z = -1$,

LHS $= (-1)^{2017} + (-1)^{2018} + 1$

$= -1 + 1 + 1$

$= 1 \neq 0$ (RHS)

$\therefore z = -1$ is not a root of equation.

Put $z = \omega$,

LHS $= (\omega)^{2017} + (\omega)^{2018} + 1$

$= (\omega^3)^{672} \cdot \omega + (\omega^3)^{672} \cdot \omega^2 + 1$

$= \omega + \omega^2 + 1$ [$\because \omega^3 = 1$]

$[\because 1 + \omega + \omega^2 = 0]$

$= 0 = \text{RHS}$

$\therefore z = \omega$ is a root of equation.

put $z = \omega^2$,

LHS $= (\omega^2)^{2017} + (\omega^2)^{2018} + 1$

$= \omega^{4034} + \omega^{4036} + 1$

$= (\omega^3)^{1344} \cdot \omega^2 + (\omega^3)^{1345} \cdot \omega + 1$

$= \omega^2 + \omega + 1 = 0 = \text{RHS}$

$\therefore z = \omega^2$ is a root of equation.

Hence, ω, ω^2 are the common roots of these equations.

12. If $C(20, n + 2) = C(20, n - 2)$, then what is n equal to

- (a) 8 (b) 10
(c) 12 (d) 16

⊙ (b) We have, $C(20, n + 2) = C(20, n - 2)$
 $\Rightarrow {}^{20}C_{n+2} = {}^{20}C_{n-2}$
 $\Rightarrow n + 2 + n - 2 = 20$
 $[\because {}^nC_x = {}^nC_y \Rightarrow x + y = n]$
 $\therefore n = 10$

13. There are 10 points in a plane. No three of these points are in a straight line. What is the total number of straight lines which can be formed by joining the points?

- (a) 90 (b) 45
(c) 40 (d) 30

⊙ (b) Given, 10 points in a plane where no three of these points are in straight line. Total number of straight line formed from 10 points is
 ${}^{10}C_2 = \frac{10!}{2!8!} = \frac{10 \times 9}{2} = 45$

14. The equation $px^2 + qx + r = 0$ (where p, q, r , all are positive) has distinct real roots a and b . Which one of the following is correct?

- (a) $a > 0, b > 0$
(b) $a < 0, b < 0$
(c) $a > 0, b < 0$
(d) $a < 0, b > 0$

⊙ (b) Given, $px^2 + qx + r = 0$, where $p, q, r > 0$ and a and b are distinct roots.
 $\therefore a + b = \frac{-q}{p}$ and $ab = r$

Now, $r > 0$
 $\therefore ab > 0$
 $\Rightarrow a > 0, b > 0$... (i)
 or $a < 0, b < 0$... (ii)

Now, $\frac{-q}{p} < 0$ $q, p > 0$
 $\therefore a + b < 0$
 $a < 0, b < 0$... (iii)

From Eqs. (i), (ii) and (iii), we get
 $\therefore a < 0$ and $b < 0$

15. If $A = \{\lambda, \{\lambda, \mu\}\}$, then the power set of A is

- (a) $\{\phi, \{\phi\}, \{\lambda\}, \{\lambda, \mu\}\}$
(b) $\{\phi, \{\lambda\}, \{\lambda, \mu\}, \{\lambda, \{\lambda, \mu\}\}\}$
(c) $\{\phi, \{\lambda\}, \{\lambda, \mu\}, \{\lambda, \{\lambda, \mu\}\}\}$
(d) $\{\{\lambda\}, \{\lambda, \mu\}, \{\lambda, \{\lambda, \mu\}\}\}$

⊙ (b) We have, $A = \{\lambda, \{\lambda, \mu\}\}$
 $P(A) = \{\phi, \{\lambda\}, \{\{\lambda, \mu\}\}, \{\lambda, \{\lambda, \mu\}\}\}$

Directions (Q. Nos. 16 and 17) Read the information carefully and answer the given questions.

In a school, all the students play atleast one of three indoor games— chess, carrom and table tennis. 60 play chess, 50 play table tennis, 48 play carrom, 12 play chess and carrom, 15 play carrom and table tennis, 20 play table tennis and chess.

16. What can be the minimum number of students in the school?

- (a) 123 (b) 111 (c) 95 (d) 63

⊙ (b) Let

A = Student play chess

B = Student play table tennis

C = Student play carrom

Given, $n(A) = 60, n(B) = 50, n(C) = 48$

$n(A \cap B) = 20, n(B \cap C) = 15$

$n(A \cap C) = 12$

For minimum number of students in school

$n(A \cap B \cap C)$ must be zero.

$\therefore n(A \cup B \cup C) = n(A) + n(B) + n(C)$
 $- n(A \cap B) - n(B \cap C)$
 $- n(A \cap C) + n(A \cap B \cap C)$
 $= 60 + 50 + 48 - 20 - 15 - 12 + 0 = 111$

17. What can be the maximum number of students in the school?

- (a) 111 (b) 123
(c) 125 (d) 135

⊙ (b) For maximum number of students in school $n(A \cap B \cap C)$ must be 12.

$\therefore n(A \cup B \cup C)$
 $= 60 + 50 + 48 - 20 - 15 - 12 + 12$
 $= 123$

18. If A is an identity matrix of order 3, then its inverse (A^{-1})

- (a) is equal to null matrix
(b) is equal to A
(c) is equal to $3A$ (d) does not exist

⊙ (b) Given, $A = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$

$\therefore A^{-1} = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} = A$

19. A is a square matrix of order 3 such that its determinant is 4. What is the determinant of its transpose?

- (a) 64 (b) 36
(c) 32 (d) 4

⊙ (d) Given, $|A| = 4$

$\therefore |A'| = 4$ [$\because |A| = |A'|$]

20. From 6 programmers and 4 typists, an office wants to recruit 5 people. What is the number of ways this can be done so as to recruit atleast one typist?

- (a) 209 (b) 210
(c) 246 (d) 242

⊙ (c) We have,

6 programmers and 4 typists

Number of ways of 5 recruit people such that atleast one typist

$$= {}^4C_1 {}^6C_4 + {}^4C_2 {}^6C_3 + {}^4C_3 {}^6C_2 + {}^4C_4 {}^6C_1$$

$$= 4 \times 15 + 6 \times 20 + 4 \times 15 + 1 \times 6$$

$$= 60 + 120 + 60 + 6 = 246$$

21. What is the number of terms in the expansion of $[(2x - 3y)^2(2x + 3y)^2]^2$?

- (a) 4 (b) 5
(c) 8 (d) 16

⊙ (b) Given, $[(2x - 3y)^2(2x + 3y)^2]^2$

$$= [4x^2 - 9y^2]^4$$

\therefore Total number of terms = $4 + 1 = 5$

22. In the expansion of $(1 + ax)^n$, the first three terms are respectively 1, $12x$ and $64x^2$. What is n equal to?

- (a) 6 (b) 9
(c) 10 (d) 12

⊙ (b) Given, first three terms of expansion $(1 + ax)^n$ is 1, $12x$, $64x^2$,

Now,

$$(1 + ax)^n = 1 + nax + \frac{n(n-1)}{2} a^2x^2 + \dots$$

On equating first three terms, we get

$$na = 12 \text{ and } \frac{n(n-1)}{2} a^2 = 64$$

On putting the value of a in

$$\frac{n(n-1)}{2} a^2 = 64, \text{ we get}$$

$$\frac{n(n-1)}{2} \left(\frac{12}{n}\right)^2 = 64$$

$$\Rightarrow \frac{144(n-1)}{2n} = 64$$

$$\therefore n = 9$$

23. The numbers 1, 5 and 25 can be three terms (not necessarily consecutive) of

- (a) only one AP
(b) more than one but finite numbers of APs
(c) infinite number of APs
(d) finite number of GPs

⊙ (d) We have, 1, 5, 25 be three terms.

Clearly, 1, 5, 25 are finite number of GPs.

24. The sum of $(p+q)$ th and $(p-q)$ th terms of an AP is equal to

- (a) $(2p)$ th term (b) $(2q)$ th term
(c) twice the p th term
(d) twice the q th term

- ⊙ (c) Let a is first term and d is common difference of AP.

$$a_{p+q} = a + (p+q-1)d$$

$$\text{and } a_{p-q} = a + (p-q-1)d$$

Sum of $(p+q)$ th and $(p-q)$ th terms

$$= a_{p+q} + a_{p-q} = 2a + (2p-2)d$$

$$= 2(a + (p-1)d) = 2a_p$$

$$= \text{twice of } p \text{ th term}$$

25. If A is a square matrix of order $n > 1$, then which one of the following is correct?

- (a) $\det(-A) = \det A$
(b) $\det(-A) = (-1)^n \det A$
(c) $\det(-A) = -\det A$
(d) $\det(-A) = n \det A$

- ⊙ Sol. (b) We know that if A is a square matrix of order $n > 1$, then $\det(-A) = (-1)^n \det A$

For example If $A = \begin{bmatrix} 2 & 3 \\ 4 & 5 \end{bmatrix}$

then $-A = \begin{bmatrix} -2 & -3 \\ -4 & -5 \end{bmatrix}$

$$\therefore \det A = \begin{vmatrix} 2 & 3 \\ 4 & 5 \end{vmatrix} = 10 - 12 = -2 \quad \dots(i)$$

$$\text{and } \det(-A) = \begin{vmatrix} -2 & -3 \\ -4 & -5 \end{vmatrix} = 10 - 12 = -2$$

$$= (-1)^2(-2) \quad [\because \text{here } n = 2]$$

$$= (-1)^2 \det A \quad [\text{from Eq. (i)}]$$

$$\text{if } A = \begin{bmatrix} 1 & 2 & 3 \\ 3 & 1 & 0 \\ 4 & 3 & -2 \end{bmatrix}$$

$$\text{Then, } -A = \begin{bmatrix} -1 & -2 & -3 \\ -3 & -1 & 0 \\ -4 & -3 & 2 \end{bmatrix}$$

$$\therefore \det A = \begin{vmatrix} 1 & 2 & 3 \\ 3 & 1 & 0 \\ 4 & 3 & -2 \end{vmatrix}$$

$$= 1(-2-0) - 2(-6-0) + 3(9-4)$$

$$= -2 + 12 + 15 = 25$$

$$\text{and } \det(-A) = \begin{vmatrix} -1 & -2 & -3 \\ -3 & -1 & 0 \\ -4 & -3 & 2 \end{vmatrix}$$

$$= -1(-2-0) + 2(-6-0) - 3(9-4)$$

$$= 2 - 12 - 15 = -25$$

$$= (-1)^3 25 \quad [\text{here } n = 3]$$

$$= (-1)^3 \det A \quad [\text{from Eq. (i)}]$$

26. What is the least value of $25 \operatorname{cosec}^2 x + 36 \sec^2 x$?

- (a) 1
(b) 11
(c) 120
(d) 121

⊙ (d) Given, $25 \operatorname{cosec}^2 x + 36 \sec^2 x$

$$= 25(1 + \cot^2 x) + 36(1 + \tan^2 x)$$

$$= 25 + 25 \cot^2 x + 36 + 36 \tan^2 x$$

$$= 25 + 36 + 25 \cot^2 x + 36 \tan^2 x$$

$$= 61 + (5 \cot x - 6 \tan x)^2 + 2 \times 5 \times 6$$

$$\geq 61 + 60 = 121 \quad [\because \text{minimum value of } (5 \cot x - 6 \tan x)^2 = 0]$$

\therefore Minimum value of $25 \operatorname{cosec}^2 x + 36 \sec^2 x = 121$

Directions (Q. Nos. 27 and 28) Read the information carefully and answer the given questions.

Let A and B be 3×3 matrices with $\det A = 4$ and $\det B = 3$.

27. What is $\det(2AB)$ equal to?

- (a) 96
(b) 72
(c) 48
(d) 36

- ⊙ (a) A and B be (3×3) matrices with $\det A = 4$ and $\det B = 3$

We know that,

$$\det(KAB) = K^n \det(A) \times \det(B)$$

where, n is the order of A and B , K is a real number.

$$\therefore \det(2AB) = (2)^3 \det A \times \det B$$

$$[\because n = 3 \text{ and } k = 2]$$

$$= 8 \times 4 \times 3$$

$$= 96$$

28. What is $\det(3AB^{-1})$ equal to?

- (a) 12 (b) 18
(c) 36 (d) 48

- ⊙ (c) A and B be (3×3) matrices with $\det A = 4$ and $\det B = 3$

We know that,

$$\det(KAB^{-1}) = K^n \det(A) \times \frac{1}{\det(B)}$$

where n is the order of A and B , K is a real number]

$$\therefore \det(3AB^{-1}) = (3)^3 \det(A) \times \frac{1}{\det B}$$

$$= 27 \times 4 \times \frac{1}{3}$$

$$= 36$$

Directions (Q. Nos. 29 and 30) Read the information carefully and answer the given questions.

A complex number is given by

$$z = \frac{1+2i}{1-(1-i)^2}$$

29. What is the modulus of z ?

- (a) 4 (b) 2 (c) 1 (d) $\frac{1}{2}$

⊙ (c) We have, $z = \frac{1+2i}{1-(1-i)^2}$

$$z = \frac{1+2i}{1-(1-1-2i)}$$

$$= \frac{1+2i}{1+2i} = 1$$

$$\therefore |z| = 1$$

30. What is the principal argument of z ?

- (a) 0 (b) $\frac{\pi}{4}$ (c) $\frac{\pi}{2}$ (d) π

⊙ (a) $\arg(z) = \tan^{-1} \left(\frac{\operatorname{Im}(z)}{\operatorname{Re}(z)} \right)$

$$= \tan^{-1} \left(\frac{0}{1} \right) = \tan^{-1} 0 = 0$$

31. What is the value of

$$\frac{\sin 34^\circ \cos 236^\circ - \sin 56^\circ \sin 124^\circ}{\cos 28^\circ \cos 88^\circ + \cos 178^\circ \sin 208^\circ} ?$$

- (a) -2 (b) -1 (c) 2 (d) 1

⊙ (a) We have,

$$\frac{\sin 34^\circ \cos 236^\circ - \sin 56^\circ \sin 124^\circ}{\cos 28^\circ \cos 88^\circ + \cos 178^\circ \sin 208^\circ}$$

$$= \frac{\sin 34^\circ \cos (180^\circ + 56^\circ) - \sin 56^\circ \sin (90^\circ + 34^\circ)}{\cos 28^\circ \cos 88^\circ + \cos (90^\circ + 88^\circ) \sin (180^\circ + 28^\circ)}$$

$$= \frac{-\sin 34^\circ \cos 56^\circ - \sin 56^\circ \cos 34^\circ}{\cos 28^\circ \cos 88^\circ + \sin 88^\circ \sin 28^\circ}$$

$$= \frac{-\sin (56^\circ + 34^\circ)}{\cos (88^\circ - 28^\circ)} = \frac{-\sin 90^\circ}{\cos 60^\circ}$$

$$= \frac{-1}{\frac{1}{2}} = -2$$

32. $\tan 54^\circ$ can be expressed as

- (a) $\frac{\sin 9^\circ + \cos 9^\circ}{\sin 9^\circ - \cos 9^\circ}$ (b) $\frac{\sin 9^\circ - \cos 9^\circ}{\sin 9^\circ + \cos 9^\circ}$
(c) $\frac{\cos 9^\circ + \sin 9^\circ}{\cos 9^\circ - \sin 9^\circ}$ (d) $\frac{\sin 36^\circ}{\cos 36^\circ}$

⊙ (c) We have, $\tan 54^\circ = \tan (45^\circ + 9^\circ)$

$$= \frac{\tan 45^\circ + \tan 9^\circ}{1 - \tan 45^\circ \tan 9^\circ} = \frac{1 + \tan 9^\circ}{1 - \tan 9^\circ}$$

$$= \frac{\cos 9^\circ + \sin 9^\circ}{\cos 9^\circ - \sin 9^\circ}$$

Directions (Q. Nos. 33-35) Read the given information carefully and answer the given questions.

If $p = X \cos \theta - Y \sin \theta$,
 $q = X \sin \theta + Y \cos \theta$ and
 $p^2 + 4pq + q^2 = AX^2 + BY^2$,
 $0 \leq \theta \leq \frac{\pi}{2}$.

33. What is the value of θ ?

- (a) $\frac{\pi}{2}$ (b) $\frac{\pi}{3}$
 (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{6}$

⊙ (c) We have,

$$\begin{aligned} p &= X \cos \theta - Y \sin \theta && \dots(i) \\ q &= X \sin \theta + Y \cos \theta && \dots(ii) \\ \text{and } p^2 + 4pq + q^2 &= AX^2 + BY^2 && \dots(iii) \end{aligned}$$

From Eqs. (i) and (ii), we get
 $p^2 + q^2 = (X \cos \theta - Y \sin \theta)^2 + (X \sin \theta + Y \cos \theta)^2$
 $\Rightarrow p^2 + q^2 = X^2 + Y^2$
 and $pq = (X \cos \theta - Y \sin \theta)(X \sin \theta + Y \cos \theta)$
 $\Rightarrow pq = (X^2 - Y^2) \sin \theta \cos \theta + XY \cos 2\theta$
 $\therefore p^2 + 4pq + q^2 = X^2 + Y^2 + 2(X^2 - Y^2) \sin \theta \cos \theta + 4XY \cos 2\theta$
 Given, $p^2 + 4pq + q^2 = AX^2 + BY^2$
 $\therefore X^2 + Y^2 + 2(X^2 - Y^2) \sin \theta \cos \theta + 4XY \cos 2\theta = AX^2 + 2BY^2$
 Coefficient of $XY = 0$
 $\therefore \cos 2\theta = 0$
 $\Rightarrow 2\theta = \frac{\pi}{2}$
 $\therefore \theta = \frac{\pi}{4}$

34. What is the value of A ?

- (a) 4
 (b) 3
 (c) 2
 (d) 1

⊙ (b) $X^2 + Y^2 + 2(X^2 - Y^2) \sin \frac{\pi}{2} = AX^2 + BY^2$
 $\Rightarrow X^2 + Y^2 + 2X^2 - 2Y^2 = AX^2 + BY^2$
 $\Rightarrow 3X^2 - Y^2 = AX^2 + BY^2$
 $\therefore A = 3, B = -1$

35. What is the value of B ?

- (a) -1 (b) 0
 (c) 1 (d) 2

⊙ (a) $B = -1$

Directions (Q. Nos. 36 and 37) Read the given information carefully and answer the given questions.

It is given that $\cos(\theta - \alpha) = a$,
 $\cos(\theta - \beta) = b$.

36. What is $\cos(\alpha - \beta)$ equal to?

- (a) $ab + \sqrt{1-a^2}\sqrt{1-b^2}$
 (b) $ab - \sqrt{1-a^2}\sqrt{1-b^2}$
 (c) $a\sqrt{1-a^2} - b\sqrt{1-a^2}$
 (d) $a\sqrt{1-b^2} + b\sqrt{1-a^2}$

⊙ (a) Given $\cos(\theta - \alpha) = a$

$$\begin{aligned} \cos(\theta - \beta) &= b \\ \cos(\alpha - \beta) &= \cos\{(\theta - \beta) - (\theta - \alpha)\} \\ &= \cos(\theta - \beta) \cos(\theta - \alpha) + \sin(\theta - \beta) \sin(\theta - \alpha) \\ &= ab + \sqrt{1-a^2}\sqrt{1-b^2} \end{aligned}$$

37. What is $\sin^2(\alpha - \beta) + 2ab \cos(\alpha - \beta)$ equal to?

- (a) $a^2 + b^2$ (b) $a^2 - b^2$
 (c) $b^2 - a^2$ (d) $-(a^2 + b^2)$

⊙ (a) $\sin^2(\alpha - \beta) + 2ab \cos(\alpha - \beta)$
 $= 1 - \cos^2(\alpha - \beta) + 2ab \cos(\alpha - \beta)$
 $= 1 - (ab + \sqrt{1-a^2}\sqrt{1-b^2})^2 + 2ab$
 $= 1 - [a^2b^2 + (1-a^2)(1-b^2) + 2ab\sqrt{1-a^2}\sqrt{1-b^2}] + 2a^2b^2 + 2ab$
 $= 1 - a^2b^2 - 1 + a^2 + b^2 - a^2b^2 - 2ab\sqrt{1-a^2}\sqrt{1-b^2} + 2a^2b^2 + 2ab$
 $= a^2 + b^2$

38. If $\sin \alpha + \cos \alpha = p$, then what is $\cos^2(2\alpha)$ equal to?

- (a) p^2 (b) $p^2 - 1$
 (c) $p^2(2 - p^2)$ (d) $p^2 + 1$

⊙ (c) We have, $\sin \alpha + \cos \alpha = p$
 $\sin^2 \alpha + \cos^2 \alpha + 2 \sin \alpha \cos \alpha = p^2$
 $\Rightarrow 1 + \sin 2\alpha = p^2$
 $\Rightarrow \sin 2\alpha = p^2 - 1$
 $\Rightarrow \sin^2 2\alpha = (p^2 - 1)^2$
 $\Rightarrow 1 - \cos^2 2\alpha = p^4 - 2p^2 + 1$
 $\Rightarrow \cos^2 2\alpha = 2p^2 - p^4$
 $\therefore \cos^2 2\alpha = p^2(2 - p^2)$

39. What is the value of $\sin^{-1} \frac{4}{5} + \sec^{-1} \frac{5}{4} - \frac{\pi}{2}$?

- (a) $\frac{\pi}{4}$ (b) $\frac{\pi}{2}$
 (c) π (d) 0

⊙ (d) We have,

$$\begin{aligned} \sin^{-1} \frac{4}{5} + \sec^{-1} \frac{5}{4} - \frac{\pi}{2} &= \sin^{-1} \frac{4}{5} + \cos^{-1} \frac{4}{5} - \frac{\pi}{2} \\ &= \sin^{-1} \frac{4}{5} + \cos^{-1} \frac{4}{5} - \frac{\pi}{2} \\ &= \frac{\pi}{2} - \frac{\pi}{2} = 0 \end{aligned}$$

$\left[\because \sec^{-1} x = \cos^{-1} \left(\frac{1}{x} \right) \right]$
 $\left[\because \sin^{-1} x + \cos^{-1} x = \frac{\pi}{2} \right]$

40.

If $\sin^{-1} \frac{2p}{1+p^2} - \cos^{-1} \frac{1-q^2}{1+q^2} = \tan^{-1} \frac{2x}{1-x^2}$, then what is x equal to?

- (a) $\frac{p+q}{1+pq}$ (b) $\frac{p-q}{1+pq}$
 (c) $\frac{pq}{1+pq}$ (d) $\frac{p+q}{1-pq}$

⊙ (b) Given,

$$\begin{aligned} \sin^{-1} \frac{2p}{1+p^2} - \cos^{-1} \frac{1-q^2}{1+q^2} &= \tan^{-1} \frac{2x}{1-x^2} \\ \Rightarrow 2 \tan^{-1} p - 2 \tan^{-1} q &= 2 \tan^{-1} x \\ \Rightarrow \tan^{-1} \left(\frac{p-q}{1+pq} \right) &= \tan^{-1} x \\ \therefore x &= \frac{p-q}{1+pq} \end{aligned}$$

41. If $\tan \theta = \frac{1}{2}$ and $\tan \phi = \frac{1}{3}$, then what is the value of $(\theta + \phi)$?

- (a) 0 (b) $\frac{\pi}{6}$
 (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{2}$

⊙ (c) Given, $\tan \theta = \frac{1}{2}$, $\tan \phi = \frac{1}{3}$
 $\tan(\theta + \phi) = \frac{\tan \theta + \tan \phi}{1 - \tan \theta \tan \phi}$
 $\Rightarrow \tan(\theta + \phi) = \frac{\frac{1}{2} + \frac{1}{3}}{1 - \frac{1}{2} \times \frac{1}{3}}$
 $\Rightarrow \tan(\theta + \phi) = \frac{3+2}{6-1} = \frac{5}{5} = 1$
 $\Rightarrow \tan(\theta + \phi) = 1$
 $\Rightarrow \theta + \phi = \tan^{-1} 1 = \frac{\pi}{4}$

42. If $\cos A = \frac{3}{4}$, then what is the value of $\sin\left(\frac{A}{2}\right)\sin\left(\frac{3A}{2}\right)$?

(a) $\frac{5}{8}$ (b) $\frac{5}{16}$ (c) $\frac{5}{24}$ (d) $\frac{7}{32}$

- ⊙ (b) Given, $\cos A = \frac{3}{4}$

$$\begin{aligned} \text{Now, } \sin \frac{A}{2} \sin \frac{3A}{2} &= \frac{1}{2} \left(2 \sin \frac{A}{2} \sin \frac{3A}{2} \right) \\ &= \frac{1}{2} \left[\cos \left(\frac{A}{2} - \frac{3A}{2} \right) - \cos \left(\frac{A}{2} + \frac{3A}{2} \right) \right] \\ &= \frac{1}{2} [\cos A - \cos 2A] \\ &= \frac{1}{2} (\cos A - 2 \cos^2 A + 1) \\ &= \frac{1}{2} \left[\frac{3}{4} - 2 \times \frac{9}{16} + 1 \right] \\ &= \frac{1}{2} \left[\frac{3}{4} - \frac{9}{8} + 1 \right] = \frac{1}{2} \left[\frac{6 - 9 + 8}{8} \right] = \frac{5}{16} \end{aligned}$$

43. What is the value of $\tan 75^\circ + \cot 75^\circ$?

(a) 2 (b) 4
(c) $2\sqrt{3}$ (d) $4\sqrt{3}$

- ⊙ (b) We have, $\tan 75^\circ + \cot 75^\circ$
 $= \tan(90^\circ - 15^\circ) + \cot(90^\circ - 15^\circ)$
 $= \cot 15^\circ + \tan 15^\circ$
 $= \frac{\cos 15^\circ}{\sin 15^\circ} + \frac{\sin 15^\circ}{\cos 15^\circ}$
 $= \frac{\cos^2 15^\circ + \sin^2 15^\circ}{\sin 15^\circ \cos 15^\circ}$
 $= \frac{1}{\sin 15^\circ \cos 15^\circ}$
 $= \frac{2}{2 \sin 15^\circ \cos 15^\circ}$
 $= \frac{2}{\sin 30^\circ} = \frac{2}{\frac{1}{2}} = 4$

44. What is the value of $\cos 46^\circ \cos 47^\circ \cos 48^\circ \cos 49^\circ \cos 50^\circ \dots \cos 135^\circ$?

(a) -1 (b) 0
(c) 1 (d) Greater than 1

- ⊙ (b) We have,
 $\cos 46^\circ \cos 47^\circ \cos 48^\circ$
 $\cos 49^\circ \cos 50^\circ \dots \cos 90^\circ \dots \cos 135^\circ$
 $= 0$ [$\because \cos 90^\circ = 0$]

45. If $\sin 2\theta = \cos 3\theta$, where $0 < \theta < \frac{\pi}{2}$, then what is $\sin \theta$ equal to?

(a) $\frac{\sqrt{5}+1}{4}$ (b) $\frac{\sqrt{5}-1}{4}$
(c) $\frac{\sqrt{5}+1}{16}$ (d) $\frac{\sqrt{5}-1}{16}$

- ⊙ (b) Given, $\sin 2\theta = \cos 3\theta$
 $\Rightarrow 2 \sin \theta \cos \theta = 4 \cos^3 \theta - 3 \cos \theta$
 $\Rightarrow 2 \sin \theta = 4 \cos^2 \theta - 3$
 $\Rightarrow 2 \sin \theta = 4(1 - \sin^2 \theta) - 3$ [$\because \cos \theta \neq 0$]
 $\Rightarrow 4 \sin^2 \theta + 2 \sin \theta - 1 = 0$
 $\Rightarrow \sin \theta = \frac{-2 \pm \sqrt{4 + 16}}{2 \times 4}$
 $\Rightarrow \sin \theta = \frac{-2 \pm 2\sqrt{5}}{2 \times 4} = \frac{-1 \pm \sqrt{5}}{4}$
 $\therefore \sin \theta = \frac{\sqrt{5} - 1}{4}$ [$\because \theta \in \left[0, \frac{\pi}{2}\right]$]

46. If the roots of the equation $x^2 + px + q = 0$ are $\tan 19^\circ$ and $\tan 26^\circ$, then which one of the following is correct?

(a) $q - p = 1$ (b) $p - q = 1$
(c) $p + q = 2$ (d) $p + q = 3$

- ⊙ (a) Given, $\tan 19^\circ$ and $\tan 26^\circ$ are roots of $x^2 + px + q = 0$.

$$\begin{aligned} \therefore \tan 19^\circ + \tan 26^\circ &= -p \\ \tan 19^\circ \cdot \tan 26^\circ &= q \\ \tan(19^\circ + 26^\circ) &= \frac{\tan 19^\circ + \tan 26^\circ}{1 - \tan 19^\circ \tan 26^\circ} \\ \Rightarrow \tan 45^\circ &= \frac{-p}{1 - q} \Rightarrow 1 = \frac{-p}{1 - q} \\ \Rightarrow 1 - q &= -p \\ \therefore q - p &= 1 \end{aligned}$$

47. What is the fourth term of an AP of n terms whose sum is $n(n+1)$?

(a) 6 (b) 8
(c) 12 (d) 20

- ⊙ (b) Given,
Sum of n terms of an AP
i.e. $S_n = n(n+1)$
 $a_4 = S_4 - S_3$ [$\because a_n = S_n - S_{n-1}$]
 $a_4 = 4(4+1) - 3(3+1)$
 $a_4 = 20 - 12 = 8$
 \therefore Fourth term of an AP = 8

48. What is $-\sec^2 \alpha \sec^2 \beta$ equal to?

(a) 0 (b) 1
(c) 2 (d) 4

- ⊙ (a) We have,
 $(1 + \tan \alpha \tan \beta)^2 + (\tan \alpha - \tan \beta)^2$
 $- \sec^2 \alpha \sec^2 \beta$
 $= 1 + \tan^2 \alpha \tan^2 \beta + 2 \tan \alpha \tan \beta$
 $+ \tan^2 \alpha + \tan^2 \beta$
 $- 2 \tan \alpha \tan \beta - \sec^2 \alpha \sec^2 \beta$
 $= 1 + \tan^2 \alpha \tan^2 \beta + \tan^2 \alpha + \tan^2 \beta$
 $- \sec^2 \alpha \sec^2 \beta$
 $= (1 + \tan^2 \alpha)(1 + \tan^2 \beta) - \sec^2 \alpha \sec^2 \beta$
 $= \sec^2 \alpha \sec^2 \beta - \sec^2 \alpha \sec^2 \beta = 0$

49. If $p = \operatorname{cosec} \theta - \cot \theta$ and $q = (\operatorname{cosec} \theta + \cot \theta)^{-1}$, then which one of the following is correct?

(a) $pq = 1$ (b) $p = q$
(c) $p + q = 1$ (d) $p + q = 0$

- ⊙ (b) Given, $p = \operatorname{cosec} \theta - \cot \theta$
 $q = (\operatorname{cosec} \theta + \cot \theta)^{-1}$

$$\begin{aligned} \Rightarrow q &= \left(\frac{1}{\operatorname{cosec} \theta + \cot \theta} \right) \left(\frac{\operatorname{cosec} \theta - \cot \theta}{\operatorname{cosec} \theta - \cot \theta} \right) \\ \Rightarrow q &= \operatorname{cosec} \theta - \cot \theta \\ \therefore q &= p \end{aligned}$$

50. If the angles of a triangle ABC are in the ratio $1 : 2 : 3$, then the corresponding sides are in the ratio

(a) $1 : 2 : 3$ (b) $3 : 2 : 1$
(c) $1 : \sqrt{3} : 2$ (d) $1 : \sqrt{3} : \sqrt{2}$

- ⊙ (c) We have, angle of triangle ABC are in the ratio $1 : 2 : 3$

$$\begin{aligned} \therefore x + 2x + 3x &= 180^\circ \\ \Rightarrow x &= 30^\circ \end{aligned}$$

\therefore Angles of triangle are $30^\circ, 60^\circ, 90^\circ$.

We know that, sine rule

$$\begin{aligned} \frac{a}{\sin A} &= \frac{b}{\sin B} = \frac{c}{\sin C} \\ \frac{a}{\sin 30^\circ} &= \frac{b}{\sin 60^\circ} = \frac{c}{\sin 90^\circ} \\ \Rightarrow \frac{a}{\frac{1}{2}} &= \frac{b}{\frac{\sqrt{3}}{2}} = \frac{c}{1} \end{aligned}$$

$$\therefore a : b : c = 1 : \sqrt{3} : 2$$

51. Consider the following statements

1. For an equation of a line,

$x \cos \theta + y \sin \theta = p$, in normal form, the length of the perpendicular from the point (α, β) to the line is $|\alpha \cos \theta + \beta \sin \theta + p|$.

The length of the perpendicular from the point (α, β) to the line

$$\frac{x}{a} + \frac{y}{b} = 1 \text{ is } \left| \frac{a\alpha + b\beta - ab}{\sqrt{a^2 + b^2}} \right|.$$

Which of the above statements is/are correct?

(a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

- ⊙ (d) 1. Equation of line $x \cos \theta + y \sin \theta = p$

Perpendicular distance from (α, β) to the given line is

$$\begin{aligned} \left| \frac{\alpha \cos \theta + \beta \sin \theta - p}{\sqrt{\cos^2 \theta + \sin^2 \theta}} \right| \\ = (\alpha \cos \theta + \beta \sin \theta - p) \end{aligned}$$

Hence, statement 1 is incorrect.

2. Length of the perpendicular from the point (α, β) to the line $\frac{x}{a} + \frac{y}{b} = 1$ is

$$\left| \frac{\frac{\alpha}{a} + \frac{\beta}{b} - 1}{\sqrt{\frac{1}{a^2} + \frac{1}{b^2}}} \right| = \left| \frac{\alpha b + a\beta - ab}{\sqrt{a^2 + b^2}} \right|$$

Hence, statement 2 is incorrect.
 \therefore Neither 1 nor 2.

52. A circle is drawn on the chord of a circle $x^2 + y^2 = a^2$ as diameter. The chord lies on the line $x + y = a$. What is the equation of the circle?

- (a) $x^2 + y^2 - ax - ay + a^2 = 0$
- (b) $x^2 + y^2 - ax - ay = 0$
- (c) $x^2 + y^2 + ax + ay = 0$
- (d) $x^2 + y^2 + ax + ay - 2a^2 = 0$

(b) Given, equation of circle is $x^2 + y^2 = a^2$.
 $x + y = a$ is chord of a circle.

\therefore End points of diameter of required circle is $(a, 0)$ and $(0, a)$.
 \therefore Equation of circle is $x(x - a) + y(y - a) = 0$
 $\Rightarrow x^2 + y^2 - ax - ay = 0$

53. The sum of the focal distances of a point on an ellipse is constant and equal to

- (a) length of minor axis
- (b) length of major axis
- (c) length of latusrectum
- (d) sum of the lengths of semi major and semi minor axes

(b) The sum of the focal distance of a point on an ellipse is constant and equal to the length of major axis.

We know that, $PS + PS' = 2a$

54. The equation $2x^2 - 3y^2 - 6 = 0$ represents

- (a) a circle
- (b) a parabola
- (c) an ellipse
- (d) a hyperbola

(d) Given, $2x^2 - 3y^2 - 6 = 0$

$$\Rightarrow 2x^2 - 3y^2 = 6$$

$$\Rightarrow \frac{x^2}{3} - \frac{y^2}{2} = 1$$

Which represents the equation of a hyperbola.

55. The two parabolas $y^2 = 4ax$ and $x^2 = 4ay$ intersect

- (a) at two points on the line $y = x$
- (b) only at the origin
- (c) at three points one of which lies on $y + x = 0$
- (d) only at $(4a, 4a)$

(a) Given, $y^2 = 4ax$
 and $x^2 = 4ay$

The graph of given curve is clearly from graph the given curve is intersect at two points on the line $y = x$

56. The points $(1, 3)$ and $(5, 1)$ are two opposite vertices of a rectangle. The other two vertices lie on the line $y = 2x + c$. What is the value of c ?

- (a) 2
- (b) -2
- (c) 4
- (d) -4

(d) The points $(1, 3)$ and $(5, 1)$ are two opposite vertex of rectangle. The other two vertices lie on the line $y = 2x + c$.

\therefore The mid point of vertices lie on the line i.e. $\left(\frac{1+5}{2}, \frac{3+1}{2}\right) \equiv (3, 2)$ lie on the line

$$y = 2x + c$$

$$\therefore 2 = 2(3) + c$$

$$\Rightarrow c = -4$$

57. If the lines $3y + 4x = 1$, $y = x + 5$ and $5y + bx = 3$ are concurrent, then what is the value of b ?

- (a) 1
- (b) 3
- (c) 6
- (d) $\frac{1}{2}$

(c) The lines $3y + 4x = 1$, $y = x + 5$ and $5y + bx = 3$ are concurrent.

$$\therefore \begin{vmatrix} 3 & 4 & -1 \\ 1 & -1 & -5 \\ 5 & b & -3 \end{vmatrix} = 0$$

$$\Rightarrow 3(3 + 5b) - 4(-3 + 25) - 1(b + 5) = 0$$

$$\Rightarrow 9 + 15b + 12 - 100 - b - 5 = 0$$

$$\Rightarrow 14b = 84$$

$$\therefore b = 6$$

58. What is the equation of the straight line which is perpendicular to $y = x$ and passes through $(3, 2)$?

- (a) $x - y = 5$
- (b) $x + y = 5$
- (c) $x + y = 1$
- (d) $x - y = 1$

(b) Equation of line perpendicular to $y = x$ is $x + y = \lambda$.

Since, this line is passes through $(3, 2)$

$$\therefore 3 + 2 = \lambda \Rightarrow \lambda = 5$$

Hence, equation of required line is $x + y = 5$.

59. The straight lines $x + y - 4 = 0$, $3x + y - 4 = 0$ and $x + 3y - 4 = 0$ form a triangle, which is

- (a) isosceles
- (b) right angled
- (c) equilateral
- (d) scalene

(a) Given, equation of line

$$x + y = 4 \quad \dots(i)$$

$$3x + y = 4 \quad \dots(ii)$$

$$x + 3y = 4 \quad \dots(iii)$$

$$A(0, 4)$$

On solving Eqs. (i) and (ii), we get

$$x = 0, y = 4, A = (0, 4)$$

On solving Eqs. (i) and (iii), we get

$$x = 4, y = 0, B = (4, 0)$$

On solving Eqs. (ii) and (iii), we get

$$x = 1, y = 1, C = (1, 1)$$

Clearly, $AC = BC$

\therefore Triangle is an isosceles.

60. The circle $x^2 + y^2 + 4x - 7y + 12 = 0$, cuts an intercept on Y-axis equal to

- (a) 1
- (b) 3
- (c) 4
- (d) 7

- ⊙ (a) Given, $x^2 + y^2 + 4x - 7y + 12 = 0$
 For intercept on Y-axis put $x = 0$, we get
 $y^2 - 7y + 12 = 0$
 $(y - 4)(y - 3) = 0$
 $y = 3, y = 4$
 Length of intercept on Y-axis
 $= |y_2 - y_1| = |3 - 4| = 1$

61. The centroid of the triangle with vertices $A(2, -3, 3)$, $B(5, -3, -4)$ and $C(2, -3, -2)$ is the point

- (a) $(-3, 3, -1)$
 (b) $(3, -3, -1)$
 (c) $(3, 1, -3)$
 (d) $(-3, -1, -3)$
- ⊙ (b) Given vertices of triangle ABC are $A(2, -3, 3)$, $B(5, -3, -4)$ and $C(2, -3, -2)$
 \therefore Centroid of $\triangle ABC$
 $= \left(\frac{2+5+2}{3}, \frac{-3-3-3}{3}, \frac{3-4-2}{3} \right)$
 $= \left(\frac{9}{3}, \frac{-9}{3}, \frac{-3}{3} \right) = (3, -3, -1)$

62. What is the radius of the sphere $x^2 + y^2 + z^2 - 6x + 8y - 10z + 1 = 0$?

- (a) 5 (b) 2
 (c) 7 (d) 3
- ⊙ (c) Given, equation of sphere
 $x^2 + y^2 + z^2 - 6x + 8y - 10z + 1 = 0$
 On comparing with
 $x^2 + y^2 + z^2 + 2ux + 2vy + 2wz + d = 0$, we get
 $2u = -6, 2v = 8, 2w = -10, d = 1$
 $\Rightarrow u = -3, v = 4, w = -5, d = 1$
 \therefore Radius of sphere $= \sqrt{u^2 + v^2 + w^2 - d}$
 $= \sqrt{(-3)^2 + (4)^2 + (-5)^2 - 1}$
 $= \sqrt{9 + 16 + 25 - 1} = \sqrt{49} = 7$

63. The equation of the plane passing through the intersection of the planes $2x + y + 2z = 9$, $4x - 5y - 4z = 1$ and the point $(3, 2, 1)$ is

- (a) $10x - 2y + 2z = 28$
 (b) $10x + 2y + 2z = 28$
 (c) $10x + 2y - 2z = 28$
 (d) $10x - 2y - 2z = 24$
- ⊙ (a) Equation of the plane passing through the intersection of plane $2x + y + 2z = 9$, $4x - 5y - 4z = 1$ is
 $(2x + y + 2z - 9) + \lambda(4x - 5y - 4z - 1) = 0 \dots(i)$
 Since, plane (i) passes through the point $(3, 2, 1)$
 $\therefore (2 \times 3 + 2 + 2 \times 1 - 9) + \lambda(4 \times 3 - 5 \times 2 - 4 \times 1 - 1) = 0$

$$\Rightarrow 1 + \lambda(-3) = 0$$

$$\Rightarrow \lambda = \frac{1}{3}$$

On putting $\lambda = \frac{1}{3}$ in Eq. (i), we get

$$(2x + y + 2z - 9) + \frac{1}{3}(4x - 5y - 4z - 1) = 0$$

$$\Rightarrow 6x + 3y + 6z - 27 + 4x - 5y - 4z - 1 = 0$$

$$\Rightarrow 10x - 2y + 2z - 28 = 0$$

$$\therefore 10x - 2y + 2z = 28$$

64. The distance between the parallel planes $4x - 2y + 4z + 9 = 0$ and $8x - 4y + 8z + 21 = 0$

- (a) $\frac{1}{4}$ (b) $\frac{1}{2}$
 (c) $\frac{3}{2}$ (d) $\frac{7}{4}$
- ⊙ (a) Given equation of planes
 $4x - 2y + 4z + 9 = 0 \dots(i)$
 and $8x - 4y + 8z + 21 = 0$
 $\Rightarrow 4x - 2y + 4z + \frac{21}{2} = 0 \dots(ii)$

Distance between parallel planes (i) and (ii)

$$= \frac{\left| \frac{21}{2} - 9 \right|}{\sqrt{(4)^2 + (-2)^2 + (4)^2}}$$

$$= \frac{\frac{3}{2}}{\sqrt{16 + 4 + 16}} = \frac{\frac{3}{2}}{6} = \frac{1}{4}$$

65. What are the direction cosines of Z-axis?

- (a) $\langle 1, 1, 1 \rangle$ (b) $\langle 1, 0, 0 \rangle$
 (c) $\langle 0, 1, 0 \rangle$ (d) $\langle 0, 0, 1 \rangle$
- ⊙ (d) Direction cosines of Z-axis are $\langle \cos 90^\circ, \cos 90^\circ, \cos 0^\circ \rangle = \langle 0, 0, 1 \rangle$

66. If $\mathbf{a} = \hat{i} - 2\hat{j} + 5\hat{k}$ and $\mathbf{b} = 2\hat{i} + \hat{j} - 3\hat{k}$, then what is $(\mathbf{b} - \mathbf{a}) \cdot (3\mathbf{a} + \mathbf{b})$ equal to?

- (a) 106 (b) -106
 (c) 53 (d) -53
- ⊙ (b) We have, $\mathbf{a} = \hat{i} - 2\hat{j} + 5\hat{k}$
 $\mathbf{b} = 2\hat{i} + \hat{j} - 3\hat{k}$
 $\therefore \mathbf{b} - \mathbf{a} = (2\hat{i} + \hat{j} - 3\hat{k}) - (\hat{i} - 2\hat{j} + 5\hat{k})$
 $= \hat{i} + 3\hat{j} - 8\hat{k}$
 and $3\mathbf{a} + \mathbf{b} = 3(\hat{i} - 2\hat{j} + 5\hat{k}) + (2\hat{i} + \hat{j} - 3\hat{k})$
 $= 5\hat{i} - 5\hat{j} + 12\hat{k}$
 $\therefore (\mathbf{b} - \mathbf{a}) \cdot (3\mathbf{a} + \mathbf{b})$
 $= (\hat{i} + 3\hat{j} - 8\hat{k}) \cdot (5\hat{i} - 5\hat{j} + 12\hat{k})$
 $= 5 - 15 - 96 = -106$

67. If the position vectors of points A and B are $3\hat{i} - 2\hat{j} + \hat{k}$ and $2\hat{i} + 4\hat{j} - 3\hat{k}$ respectively, then what is the length of \overline{AB} ?

- (a) $\sqrt{14}$ (b) $\sqrt{29}$
 (c) $\sqrt{43}$ (d) $\sqrt{53}$

- ⊙ (d) We have, $\mathbf{OA} = 3\hat{i} - 2\hat{j} + \hat{k}$
 $\mathbf{OB} = 2\hat{i} + 4\hat{j} - 3\hat{k}$
 $\therefore |\overline{AB}| = |\mathbf{OB} - \mathbf{OA}|$
 $= |(2\hat{i} + 4\hat{j} - 3\hat{k}) - (3\hat{i} - 2\hat{j} + \hat{k})|$
 $= |(-\hat{i} + 6\hat{j} - 4\hat{k})|$
 $= \sqrt{(-1)^2 + (6)^2 + (-4)^2}$
 $= \sqrt{1 + 36 + 16} = \sqrt{53}$

68. If in a right angled triangle ABC , hypotenuse $AC = p$, then what is $\overline{AB} \cdot \overline{AC} + \overline{BC} \cdot \overline{BA} + \overline{CA} \cdot \overline{CB}$ equal to?

- (a) p^2 (b) $2p^2$
 (c) $\frac{p^2}{2}$ (d) p

- ⊙ (a) In right angled $\triangle ABC$, we have $\angle ABC = 90^\circ$

Let $\angle BAC = \theta$

Then, $\angle ACB = (90^\circ - \theta)$

$$\therefore \overline{AB} \cdot \overline{AC} + \overline{BC} \cdot \overline{BA} + \overline{CA} \cdot \overline{CB}$$

$$= |\overline{AB}| |\overline{AC}| \cos \theta + |\overline{BC}| |\overline{BA}| \cos 90^\circ + |\overline{CA}| |\overline{CB}| \cos (90^\circ - \theta)$$

$$= |\overline{AB}| |\overline{AB}| + 0 + |\overline{CB}| |\overline{CB}|$$

$$= |\overline{AB}|^2 + |\overline{CB}|^2$$

$$= |\overline{AC}|^2 = p^2$$

69. The sine of the angle between vectors

$$\mathbf{a} = 2\hat{i} - 6\hat{j} - 3\hat{k} \text{ and } \mathbf{b} = 4\hat{i} + 3\hat{j} - \hat{k} \text{ is}$$

(a) $\frac{1}{\sqrt{26}}$ (b) $\frac{5}{\sqrt{26}}$
 (c) $\frac{5}{26}$ (d) $\frac{1}{26}$

- ⊙ (b) Let θ be the angle between vectors \mathbf{a} and \mathbf{b}

$$\therefore \cos \theta = \frac{\mathbf{a} \cdot \mathbf{b}}{|\mathbf{a}| |\mathbf{b}|}$$

Since,

$$\mathbf{a} \cdot \mathbf{b} = (2\hat{i} - 6\hat{j} - 3\hat{k}) \cdot (4\hat{i} + 3\hat{j} - \hat{k})$$

$$= 8 - 18 + 3 = -7$$

$$|\mathbf{a}| = \sqrt{2^2 + (-6)^2 + (-3)^2}$$

$$= \sqrt{49} = 7$$

$$|\mathbf{b}| = \sqrt{4^2 + 3^2 + (-1)^2} = \sqrt{26}$$

$$\therefore \cos \theta = \frac{-7}{7 \times \sqrt{26}} = -\frac{1}{\sqrt{26}}$$

$$\therefore \sin \theta = \sqrt{1 - \cos^2 \theta} = \frac{5}{\sqrt{26}}$$

70. What is the value of λ for which the vectors $3\hat{i} + 4\hat{j} - \hat{k}$ and $-2\hat{i} + \lambda\hat{j} + 10\hat{k}$ are perpendicular?

- (a) 1 (b) 2
(c) 3 (d) 4

⊙ (d) Since, given vectors are perpendicular.

$$\therefore (3\hat{i} + 4\hat{j} - \hat{k}) \cdot (-2\hat{i} + \lambda\hat{j} + 10\hat{k}) = 0$$

$$\Rightarrow -6 + 4\lambda - 10 = 0$$

$$\Rightarrow 4\lambda - 16 = 0$$

$$\therefore \lambda = 4$$

71. What is the derivative of $\sec^2(\tan^{-1} x)$ with respect to x ?

- (a) $2x$ (b) $x^2 + 1$
(c) $x + 1$ (d) x^2

⊙ (a) Let $y = \sec^2(\tan^{-1} x)$

On differentiating both sides w.r.t x , we get

$$\frac{dy}{dx} = \frac{d}{dx} \sec^2(\tan^{-1} x)$$

$$= 2 \sec(\tan^{-1} x) \cdot \sec(\tan^{-1} x)$$

$$\tan(\tan^{-1} x) \frac{d}{dx}(\tan^{-1} x)$$

$$= 2 \sec^2(\tan^{-1} x) \cdot x \cdot \frac{1}{1+x^2}$$

$$= 2(1 + \tan^2(\tan^{-1} x)) \cdot \frac{x}{1+x^2}$$

$$= 2(1 + x^2) \cdot \frac{x}{1+x^2} = 2x$$

72. If $f(x) = \log_{10}(1+x)$, then what is $4f(4) + 5f(1) - \log_{10} 2$ equal to?

- (a) 0
(b) 1
(c) 2
(d) 4

⊙ (d) We have, $f(x) = \log_{10}(1+x)$

$$\therefore 4f(4) = 4 \log_{10}(1+4) = 4 \log_{10} 5$$

$$5f(1) = 5 \log_{10}(1+1) = 5 \log_{10} 2$$

$$\therefore 4f(4) + 5f(1) - \log_{10} 2$$

$$= 4 \log_{10} 5 + 5 \log_{10} 2 - \log_{10} 2$$

$$= 4 \log_{10} 5 + 4 \log_{10} 2$$

$$= 4(\log_{10} 5 \times \log_{10} 2)$$

$$= 4 \log_{10}(5 \times 2)$$

$$= 4 \log_{10} 10 = 4 \times 1 = 4$$

73. A function f defined by

$$f(x) = \ln(\sqrt{x^2 + 1} - x)$$

- (a) an even function
(b) an odd function
(c) both even and odd function
(d) neither even nor odd function

⊙ (b) We have, $f(x) = \log(\sqrt{x^2 + 1} - x)$

$$\therefore f(-x) = \log(\sqrt{x^2 + 1} + x)$$

$$= \log \left(\frac{(\sqrt{x^2 + 1} + x)(\sqrt{x^2 + 1} - x)}{\sqrt{x^2 + 1} - x} \right)$$

$$= \log \left(\frac{x^2 + 1 - x^2}{\sqrt{x^2 + 1} - x} \right)$$

$$= \log \left(\frac{1}{\sqrt{x^2 + 1} - x} \right)$$

$$= -\log(\sqrt{x^2 + 1} - x)$$

$$= -f(x)$$

74. The domain of the function f defined by

$$f(x) = \log_x 10$$

- (a) $x > 10$
(b) $x > 0$ excluding $x = 10$
(c) $x \geq 10$
(d) $x > 0$ excluding $x = 1$

⊙ (d) We have, $f(x) = \log_x 10$

$$= \frac{\log 10}{\log x} = \frac{1}{\log x}$$

$\therefore f(x)$ is define when $x > 0$ and $x \neq 1$.

75. $\lim_{x \rightarrow 0} \frac{1 - \cos^3 4x}{x^2}$ is equal to

- (a) 0 (b) 12
(c) 24 (d) 36

⊙ (c) $\lim_{x \rightarrow 0} \frac{1 - \cos^3 4x}{x^2} \left[\frac{0}{0} \text{ form} \right]$

On apply L' Hospital rule we get

$$\lim_{x \rightarrow 0} \frac{-3 \cos^2(4x) (-\sin 4x) (4)}{2x}$$

$$= \lim_{x \rightarrow 0} \frac{12 \cos^2 4x \sin 4x}{2x} \left[\frac{0}{0} \text{ form} \right]$$

Again, apply's L' Hospital rule, we get

$$\lim_{x \rightarrow 0} \frac{12 [2 \cos(4x) (-\sin 4x) (4)]}{2}$$

$$\lim_{x \rightarrow 0} \frac{\sin 4x + \cos^2 4x (\cos 4x) (4)}{2}$$

$$= \lim_{x \rightarrow 0} \frac{12 [-8 \cos 4x \sin^2 4x] + 4 \cos^3 4x}{2}$$

$$= \lim_{x \rightarrow 0} \frac{6(-8 \times 0 + 4)}{2}$$

$$= 24$$

76. For $r > 0$, $f(r)$ is the ratio of perimeter to area of a circle of radius r . Then, $f(1) + f(2)$ is equal to

- (a) 1 (b) 2
(c) 3 (d) 4

⊙ (c) We have,

$$f(r) = \frac{\text{Perimeter of a circle with radius } r}{\text{Area of a circle with radius } r}$$

$$\Rightarrow f(r) = \frac{2\pi r}{\pi r^2} = \frac{2}{r}$$

$$\therefore f(1) = \frac{2}{1} = 2 \Rightarrow f(2) = \frac{2}{2} = 1$$

$$\therefore f(1) + f(2) = 2 + 1 = 3$$

77. If $f(x) = 3^{1+x}$, then $f(x) f(y) f(z)$ is equal to

- (a) $f(x+y+z)$ (b) $f(x+y+z+1)$
(c) $f(x+y+z+2)$ (d) $f(x+y+z+3)$

⊙ (c) We have, $f(x) = 3^{1+x}$

$$\text{Similarly, } f(y) = 3^{1+y}$$

$$\text{and } f(z) = 3^{1+z}$$

$$\therefore f(x) f(y) f(z) = 3^{1+x+1+y+1+z}$$

$$= 3^{1+2+x+y+z}$$

$$= f(2+x+y+z)$$

78. The number of real roots for the equation $x^2 + 9|x| + 20 = 0$ is

- (a) zero
(b) one
(c) two
(d) three

⊙ (a) Given, $x^2 + 9|x| + 20 = 0$

$$\Rightarrow x^2 + 9x + 20 = 0$$

$$\text{or } x^2 - 9x + 20 = 0$$

$$\Rightarrow x^2 + 4x + 5x + 20 = 0$$

$$\text{or } x^2 - 4x - 5x + 20 = 0$$

$$\Rightarrow x(x+4) + 5(x+4) = 0$$

$$\text{or } x(x-4) - 5(x-4) = 0$$

$$\Rightarrow (x+4)(x+5) = 0$$

$$\text{or } (x-4)(x-5) = 0$$

$$\Rightarrow x = -4, -5, \text{ or } 4, 5$$

But these values of x does not satisfy the given equation.

Hence, number of real roots of the given equation is zero.

79. If $f(x) = \sin(\cos x)$, then $f'(x)$ is equal to

- (a) $\cos(\cos x)$
(b) $\sin(-\sin x)$
(c) $(\sin x)\cos(\cos x)$
(d) $(-\sin x)\cos(\cos x)$

⊙ (d) Given, $f(x) = \sin(\cos x)$

$$\Rightarrow f'(x) = \cos(\cos x) (-\sin x)$$

80. The domain of the function

$$f(x) = \sqrt{(2-x)(x-3)}$$
 is

- (a) $(0, \infty)$ (b) $[0, \infty)$
 (c) $[2, 3]$ (d) $(2, 3)$

⊙ (c) We have, $f(x) = \sqrt{(2-x)(x-3)}$

$$f(x) \text{ will be define if } (2-x)(x-3) \geq 0$$

$$\Rightarrow (x-2)(x-3) \leq 0$$

$$\therefore 2 \leq x \leq 3$$

81. The solution of the differential equation

$$\frac{dy}{dx} = \cos(y-x) + 1$$
 is

- (a) $e^x [\sec(y-x) - \tan(y-x)] = c$
 (b) $e^x [\sec(y-x) + \tan(y-x)] = c$
 (c) $e^x \sec(y-x) \tan(y-x) = c$
 (d) $e^x = c \sec(y-x) \tan(y-x)$

⊙ (a) Given, $\frac{dy}{dx} = \cos(y-x) + 1$... (i)

Let $y-x = t$

$$\Rightarrow \frac{dy}{dx} - 1 = \frac{dt}{dx} \Rightarrow \frac{dy}{dx} = 1 + \frac{dt}{dx}$$

From Eq. (i), $1 + \frac{dt}{dx} = \cos t + 1$

$$\Rightarrow \frac{dt}{dx} = \cos t$$

$$\Rightarrow \sec t \, dt = dx$$

On integrating both sides, we get

$$\int \sec t \, dt = \int dx$$

$$\log(\sec t + \tan t) = x + a$$

$$\Rightarrow \sec t + \tan t = e^{x+a}$$

$$\Rightarrow \sec t + \tan t = e^x \cdot e^a$$

$$\Rightarrow \frac{e^x}{\sec t + \tan t} = e^{-a}$$

$$\Rightarrow \frac{e^x (\sec t - \tan t)}{(\sec t + \tan t)(\sec t - \tan t)} = e^{-a}$$

$$\Rightarrow \frac{e^x (\sec t - \tan t)}{\sec^2 t - \tan^2 t} = e^{-a}$$

$$\Rightarrow e^x (\sec t - \tan t) = e^{-a}$$

$$\Rightarrow e^x [\sec(y-x) - \tan(y-x)] = e^{-a}$$

$$\therefore e^x [\sec(y-x) - \tan(y-x)] = c, \text{ [where, } c = e^{-a}]$$

82. $\int_0^{\frac{\pi}{2}} |\sin x - \cos x| dx$ is equal to

- (a) 0 (b) $2(\sqrt{2}-1)$
 (c) $2\sqrt{2}$ (d) $2(\sqrt{2}+1)$

⊙ (b) $\int_0^{\frac{\pi}{2}} |\sin x - \cos x| dx$

$$= \int_0^{\frac{\pi}{4}} (\cos x - \sin x) dx$$

$$+ \int_{\frac{\pi}{4}}^{\frac{\pi}{2}} (\sin x - \cos x) dx$$

$$\begin{aligned} &= [\sin x + \cos x]_0^{\frac{\pi}{4}} + [-\cos x - \sin x]_0^{\frac{\pi}{4}} \\ &= \left[\left(\frac{1}{\sqrt{2}} + \frac{1}{\sqrt{2}} \right) - (0+1) \right] \\ &\quad + \left[(-0-1) - \left(-\frac{1}{\sqrt{2}} - \frac{1}{\sqrt{2}} \right) \right] \\ &= \frac{2}{\sqrt{2}} - 1 - 1 + \frac{2}{\sqrt{2}} = \frac{4}{\sqrt{2}} - 2 \\ &= 2\sqrt{2} - 2 = 2(\sqrt{2} - 1) \end{aligned}$$

83. If $y = a \cos 2x + b \sin 2x$, then

- (a) $\frac{d^2y}{dx^2} + y = 0$ (b) $\frac{d^2y}{dx^2} + 2y = 0$
 (c) $\frac{d^2y}{dx^2} - 4y = 0$ (d) $\frac{d^2y}{dx^2} + 4y = 0$

⊙ (d) Given, $y = a \cos 2x + b \sin 2x$... (i)

$$\Rightarrow \frac{dy}{dx} = -2a \sin 2x + 2b \cos 2x$$

$$\Rightarrow \frac{d^2y}{dx^2} = -4a \cos 2x - 4b \sin 2x$$

$$\Rightarrow \frac{d^2y}{dx^2} = -4(a \cos 2x + b \sin 2x)$$

$$\Rightarrow \frac{d^2y}{dx^2} = -4y \text{ [using Eq. (i)]}$$

$$\therefore \frac{d^2y}{dx^2} + 4y = 0$$

84. A given quantity of metal is to be cast into a half cylinder

(i.e. with a rectangular base and semicircular ends). If the total surface area is to be minimum, then the ratio of the height of the half cylinder to the diameter of the semicircular ends is

- (a) $\pi : (\pi + 2)$ (b) $(\pi + 2) : \pi$
 (c) 1 : 1 (d) None of these

⊙ (a) Let r be the radius and h be the height of the half cylinder,

$$\text{Then, surface area, } S = \pi rh + \pi r^2 + 2rh$$

$$\therefore \frac{dS}{dr} = \pi h + 2\pi r + 2h$$

On putting $\frac{dS}{dr} = 0$

$$\Rightarrow 2r = -\frac{(\pi h + 2h)}{\pi}$$

$$\begin{aligned} &\Rightarrow 2r = \frac{-h(\pi + 2)}{\pi} \\ &\Rightarrow \frac{2r}{h} = \frac{-(\pi + 2)}{\pi} \Rightarrow \frac{h}{2r} = \frac{-\pi}{\pi + 2} \end{aligned}$$

Neglecting - sign as r and h can not be negative.

$$\therefore \frac{h}{2r} = \frac{\pi}{\pi + 2}$$

85. $\int_0^{\frac{\pi}{2}} e^{\sin x} \cos x dx$ is equal to

- (a) $e + 1$ (b) $e - 1$
 (c) $e + 2$ (d) e

⊙ (b) Let $I = \int_0^{\frac{\pi}{2}} e^{\sin x} \cos x dx$

Let $\sin x = t$

$$\Rightarrow \cos x dx = dt$$

When $x = \frac{\pi}{2}, t = 1$

$$x = 0, t = 0$$

$$\therefore I = \int_0^1 e^t dt = [e^t]_0^1 = e^1 - e^0 = e - 1$$

86. If $f(x) = \frac{x-2}{x+2}, x \neq -2$, then what is

$f^{-1}(x)$ equal to ?

- (a) $\frac{4(x+2)}{x-2}$ (b) $\frac{x+2}{4(x-2)}$
 (c) $\frac{x+2}{x-2}$ (d) $\frac{2(1+x)}{1-x}$

⊙ (d) Given, $f(x) = \frac{x-2}{x+2} \Rightarrow y = \frac{x-2}{x+2}$

$$\Rightarrow x - 2 = xy + 2y$$

$$\Rightarrow x - xy = 2y + 2$$

$$\Rightarrow x(1-y) = 2y + 2$$

$$\Rightarrow x = \frac{2(y+1)}{1-y}$$

$$\Rightarrow f^{-1}(y) = \frac{2(y+1)}{1-y}$$

$$\therefore f^{-1}(x) = \frac{2(x+1)}{1-x}$$

87. What is $\int \ln(x^2) dx$ equal to?

(a) $2x \ln(x) - 2x + C$

(b) $\frac{2}{x} + C$

(c) $2x \ln(x) + C$

(d) $\frac{2 \ln(x)}{x} - 2x + C$

⊙ (a) Let $I = \int \ln(x^2) dx = \int 2 \ln x dx$

$$= \ln x \int 2 dx$$

$$- \int \left(\frac{d}{dx} (\ln x) \right) \int (2 dx) dx$$

$$= \ln x \cdot 2x - \int \frac{1}{x} \cdot 2x dx$$

$$= 2x \ln x - 2x + C$$

88. The minimum distance from the point (4, 2) to $y^2 = 8x$ is equal to

- (a) $\sqrt{2}$ (b) $2\sqrt{2}$
 (c) 2 (d) $3\sqrt{2}$

⊙ (b) Let (x, y) be any point on the curve $y^2 = 8x$.

Then, the distance between (x, y) and (4, 2) is

$$D^2 = (x - 4)^2 + (y - 2)^2$$

$$\Rightarrow D^2 = \left(\frac{y^2}{8} - 4\right)^2 + (y - 2)^2 \quad \dots(i)$$

$$[\because y^2 = 8x]$$

$$\Rightarrow \frac{dD^2}{dy} = 2\left(\frac{y^2}{8} - 4\right)\left(\frac{2y}{8}\right) + 2(y - 2)$$

$$= 2\left(\frac{2y^3}{64} - 4 \times \frac{2y}{8}\right) + 2(y - 2)$$

$$= \frac{y^3}{16} - 2y + 2y - 4 = \frac{y^3}{16} - 4$$

$$\Rightarrow \frac{d^2D^2}{d^2y} = \frac{3y^2}{16}$$

On putting $\frac{dD^2}{dy} = 0 \Rightarrow \frac{y^3}{16} - 4 = 0$

$$\Rightarrow y^3 = 64 \Rightarrow y = 4$$

At $y = 4, \frac{d^2D^2}{d^2y} > 0$

So, it is point of minima.

$$\therefore \text{Minimum } D = \sqrt{(2 - 4)^2 + (4 - 2)^2}$$

$$= \sqrt{4 + 4} = \sqrt{8} = 2\sqrt{2}$$

89. The differential equation of the system of circles touching the Y-axis at the origin is

- (a) $x^2 + y^2 - 2xy \frac{dy}{dx} = 0$
 (b) $x^2 + y^2 + 2xy \frac{dy}{dx} = 0$
 (c) $x^2 - y^2 + 2xy \frac{dy}{dx} = 0$
 (d) $x^2 - y^2 - 2xy \frac{dy}{dx} = 0$

⊙ (c) The system of circles touching the Y-axis at the origin is

$$(x - a)^2 + y^2 = a^2$$

$$\Rightarrow x^2 + a^2 - 2ax + y^2 = a^2$$

$$\Rightarrow x^2 - 2ax + y^2 = 0 \quad \dots(i)$$

On differentiating Eq. (i) w.r.t. x, we get

$$2x - 2a + 2yy' = 0$$

$$\Rightarrow x + yy' = a$$

Put value of a in Eq. (i), we get

$$x^2 - 2(x + yy')x + y^2 = 0$$

$$\Rightarrow x^2 - 2x^2 - 2xyy' + y^2 = 0$$

$$\Rightarrow -x^2 - 2xyy' + y^2 = 0$$

$$\therefore x^2 - y^2 + 2xy \frac{dy}{dx} = 0$$

90. Consider the following in respect of the differential equation :

$$\frac{d^2y}{dx^2} + 2\left(\frac{dy}{dx}\right)^2 + 9x = x$$

- The degree of the differential equation is 1.
- The order of the differential equation is 2.

Which of the above statements is/are correct ?

- (a) Only 1
 (b) Only 2
 (c) Both 1 and 2
 (d) Neither 1 nor 2
- ⊙ (c) The order of highest order derivative occurring in the differential equation is 2 and its degree is 1.

91. What is the general solution of the differential equation $\frac{dy}{dx} + \frac{x}{y} = 0$?

- (a) $x^2 + y^2 = C$ (b) $x^2 - y^2 = C$
 (c) $x^2 + y^2 = Cxy$ (d) $x + y = C$

⊙ (a) Given differential equation,

$$\frac{dy}{dx} + \frac{x}{y} = 0$$

$$\Rightarrow \frac{dy}{dx} = -\frac{x}{y}$$

$$\Rightarrow ydy = -x dx$$

Integrating both sides, we get

$$\frac{y^2}{2} = -\frac{x^2}{2} + C_1$$

$$\therefore x^2 + y^2 = C \quad [\text{where, } C = 2C_1]$$

92. The value of k which makes $f(x) = \begin{cases} \sin x, & x \neq 0 \\ k, & x = 0 \end{cases}$ continuous at $x = 0$, is

- (a) 2 (b) 1
 (c) -1 (d) 0

⊙ (d) Given, f(x) is continuous at $x = 0$.

$$\therefore \lim_{x \rightarrow 0} f(x) = f(0)$$

$$\Rightarrow \lim_{x \rightarrow 0} \sin x = k$$

$$\therefore k = 0$$

93. What is the minimum value of $a^2x + b^2y$ where $xy = c^2$?

- (a) abc (b) 2abc
 (c) 3abc (d) 4abc

⊙ (b) Let $z = a^2x + b^2y \quad \dots(i)$

Since, $xy = c^2$

$$\Rightarrow y = \frac{c^2}{x}$$

On putting $y = \frac{c^2}{x}$ in Eq. (i), we get

$$\Rightarrow z = a^2x + b^2\left(\frac{c^2}{x}\right) \quad \dots(ii)$$

On differentiability Eq. (ii) both sides, we get

$$\frac{dz}{dx} = a^2 - \frac{b^2c^2}{x^2} \quad \dots(iii)$$

$$\Rightarrow \frac{d^2z}{dx^2} = \frac{2b^2c^2}{x^3} \quad \dots(iv)$$

For maxima and minima, we put $\frac{dz}{dx} = 0$

$$\therefore a^2 - \frac{b^2c^2}{x^2} = 0$$

$$\Rightarrow \frac{b^2c^2}{x^2} = a^2$$

$$\Rightarrow x = \pm \frac{bc}{a}$$

At $x = \frac{bc}{a}, \frac{d^2z}{dx^2} = \frac{2a^3}{bc} > 0$

\Rightarrow Gives minimum value

At $x = -\frac{bc}{a}, \frac{d^2z}{dx^2} = -\frac{2a^3}{bc} < 0$

Gives maximum value

\therefore Minimum value of z at $x = \frac{bc}{a}$ is

$$abc + abc = 2abc.$$

94. What is $\int e^{x \ln(a)} dx$ equal to?

- (a) $\frac{a^x}{\ln(a)} + C$ (b) $\frac{e^x}{\ln(a)} + C$
 (c) $\frac{e^x}{\ln(ae)} + C$ (d) $\frac{ae^x}{\ln(a)} + C$

⊙ (a) Let $I = \int e^{x \ln a} dx = \int e^{\ln a^x} dx$

$$= \int a^x dx = \frac{a^x}{\ln a} + C$$

95. What is the area of one of the loops between the curve $y = c \sin x$ and X-axis ?

- (a) c (b) 2c
 (c) 3c (d) 4c

⊙ (d) \therefore Required area = $2 \int_0^\pi c \sin x dx$

$$= 2c \int_0^\pi \sin x dx = 2c[-\cos x]_0^\pi$$

$$= 2c [-(\cos \pi - \cos 0)]$$

$$= 2c (2) = 4c \text{ sq units}$$

96. If $\sin \theta + \cos \theta = \sqrt{2} \cos \theta$, then what is $(\cos \theta - \sin \theta)$ equal to ?

- (a) $-\sqrt{2} \cos \theta$ (b) $-\sqrt{2} \sin \theta$
 (c) $\sqrt{2} \sin \theta$ (d) $2 \sin \theta$

- ⊙ (c) Given, $\sin \theta + \cos \theta = \sqrt{2} \cos \theta$
 $\Rightarrow \sin \theta = (\sqrt{2} - 1) \cos \theta$... (i)
 Now, $\cos \theta - \sin \theta$
 $= \cos \theta - (\sqrt{2} - 1) \cos \theta$ [from Eq. (i)]
 $= \cos \theta [1 - (\sqrt{2} - 1)] = \cos \theta [2 - \sqrt{2}]$
 $= \cos \theta \cdot \sqrt{2} (\sqrt{2} - 1)$
 $= \sqrt{2} \sin \theta$ [using Eq. (i)]

97. In a circle of diameter 44 cm, the length of a chord is 22 cm. What is the length of minor arc of the chord?

- (a) $\frac{484}{21}$ cm (b) $\frac{242}{21}$ cm
 (c) $\frac{121}{21}$ cm (d) $\frac{44}{7}$ cm

- ⊙ (a) Given, diameter of a circle be 44 cm.

$\Rightarrow 2r = 44$
 $\Rightarrow r = 22$
 $\Rightarrow \Delta OAB$ is an equilateral triangle.
 $\Rightarrow \angle AOB = 60^\circ$
 \therefore Length of minor arc
 $= \left(\frac{60^\circ}{360^\circ}\right) \times 2\pi \times 22$
 $= \frac{1}{6} \times 2 \times \frac{22}{7} \times 22$
 $= \frac{484}{21}$ cm

98. If $\sin \theta = -\frac{1}{2}$ and $\tan \theta = \frac{1}{\sqrt{3}}$, then in which quadrant does θ lie?

- (a) First
 (b) Second
 (c) Third
 (d) Fourth

(c) We know that, if θ lies in third quadrant then, $\sin \theta < 0$ and $\tan \theta > 0$.

99. How many three digit even numbers can be formed using the digits 1, 2, 3, 4 and 5 when repetition of digits is not allowed?

- (a) 36 (b) 30
 (c) 24 (d) 12

- ⊙ (c) Here, unit digit can be filled by 2 or 4. so number of ways is 2. Since repetition is not allowed therefore hundred place and ten place can be fill in ${}^4C_2 \times 2$ ways
 \therefore Total number of three digits even number = $4 \times 3 \times 2 = 24$

100. The angle of elevation of a tower of height h from a point A due South of it is x and from a point B due East of A is y . If $AB = z$, then which one of the following is correct ?

- (a) $h^2(\cot^2 y - \cot^2 x) = z^2$
 (b) $z^2(\cot^2 y - \cot^2 x) = h^2$
 (c) $h^2(\tan^2 y - \tan^2 x) = z^2$
 (d) $z^2(\tan^2 y - \tan^2 x) = h^2$

Here, OP be the tower,

$OA = h \cot x$
 $OB = h \cot y$

In right-angled ΔOAB ,

$h^2 \cot^2 y = z^2 + h^2 \cot^2 x$

$\therefore z^2 = h^2(\cot^2 y - \cot^2 x)$

101. From a deck of cards, cards are taken out with replacement. What is the probability that the fourteenth card taken out is an ace?

- (a) $\frac{1}{51}$ (b) $\frac{4}{51}$ (c) $\frac{1}{52}$ (d) $\frac{1}{13}$

- ⊙ (d) Total number of possible outcomes = 52

And number of favourable outcomes = 4

\therefore Required probability = $\frac{4}{52} = \frac{1}{13}$

102. If A and B are two events such that

$P(A) = 0.5$, $P(B) = 0.6$ and
 $P(A \cap B) = 0.4$, then what is
 $P(A \cup B)$ equal to ?

- (a) 0.9 (b) 0.7
 (c) 0.5 (d) 0.3

- ⊙ (d) $P(\overline{A \cup B}) = 1 - P(A \cup B)$

We have,

$P(A \cup B) = P(A) + P(B) - P(A \cap B)$
 $= 0.5 + 0.6 - 0.4$
 $= 1.1 - 0.4$
 $= 0.7$

$\therefore P(\overline{A \cup B}) = 1 - 0.7 = 0.3$

103. A problem is given to three students A, B and C whose probabilities of solving the

problem are $\frac{1}{2}$, $\frac{3}{4}$ and $\frac{1}{4}$ respectively.

What is the probability that the problem will be solved if they all solve the problem independently ?

- (a) $\frac{29}{32}$ (b) $\frac{27}{32}$
 (c) $\frac{25}{32}$ (d) $\frac{23}{32}$

- ⊙ (a) We have, $P(A) = \frac{1}{2}$, $P(\overline{A}) = \frac{1}{2}$

$P(B) = \frac{3}{4}$, $P(\overline{B}) = \frac{1}{4}$

and $P(C) = \frac{1}{4}$, $P(\overline{C}) = \frac{3}{4}$

\therefore Required probability

$= 1 - P(\overline{A})P(\overline{B})P(\overline{C})$

$= 1 - \frac{1}{2} \times \frac{1}{4} \times \frac{3}{4} = \frac{29}{32}$

104. A pair of fair dice is rolled. What is the probability that the second dice lands on a higher value than does the first?

- (a) $\frac{1}{4}$ (b) $\frac{1}{6}$
 (c) $\frac{5}{12}$ (d) $\frac{5}{18}$

- ⊙ (c) Total number of possible outcomes = 36

Favourable outcomes

$= (1, 2), (1, 3), (1, 4), (1, 5), (1, 6),$

$(2, 3), (2, 4), (2, 5), (2, 6), (3, 4),$
 $(3, 5), (3, 6), (4, 5), (4, 6), (5, 6)$

\therefore Total number of favourable outcomes = 15

\therefore Required probability = $\frac{15}{36} = \frac{5}{12}$

105. A fair coin is tossed and an unbiased dice is rolled together. What is the probability of getting a 2 or 4 or 6 along with head?

- (a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) $\frac{1}{4}$ (d) $\frac{1}{6}$

- ⊙ (c) Total number of possible outcomes = $2 \times 6 = 12$

And favourable outcomes

$= (H, 2), (H, 4), (H, 6)$

\therefore Total number of possible outcomes = 3

\therefore Required probability = $\frac{3}{12} = \frac{1}{4}$

106. If A, B and C are three events, then what is the probability that atleast two of these events occur together ?

- (a) $P(A \cap B) + P(B \cap C) + P(C \cap A)$
- (b) $P(A \cap B) + P(B \cap C) + P(C \cap A) - P(A \cap B \cap C)$
- (c) $P(A \cap B) + P(B \cap C) + P(C \cap A) - 2P(A \cap B \cap C)$
- (d) $P(A \cap B) + P(B \cap C) + P(C \cap A) - 3P(A \cap B \cap C)$

⊗ (c) If A, B and C are three events, then atleast two events occur i.e.
 $(A \cap B \cap C') \cup (A \cap B' \cap C) \cup (A' \cap B \cap C) \cup (A \cap B \cap C)$
 \therefore Required probability
 $= P(A \cap B) + P(B \cap C) + P(C \cap A) - 2P(A \cap B \cap C)$

107. If two variables X and Y are independent, then what is the correlation coefficient between them?

- (a) 1 (b) -1
- (c) 0 (d) None of these

⊗ (c) Correlation coefficient between two independent variables is zero.

108. Two independent events A and B are such that $P(A \cup B) = \frac{2}{3}$ and

$P(A \cap B) = \frac{1}{6}$. If $P(B) < P(A)$, then

what is $P(B)$ equal to ?

- (a) $\frac{1}{4}$ (b) $\frac{1}{3}$
- (c) $\frac{1}{2}$ (d) $\frac{1}{6}$

⊗ (b) Given, $P(A \cup B) = \frac{2}{3}$
 and $P(A \cap B) = \frac{1}{6}$
 $\Rightarrow P(A \cup B) = P(A) + P(B) - P(A \cap B)$
 $\Rightarrow \frac{2}{3} = P(A) + P(B) - \frac{1}{6}$
 $\Rightarrow P(A) + P(B) = \frac{2}{3} + \frac{1}{6}$
 $\Rightarrow P(A) + P(B) = \frac{5}{6}$... (i)
 And also, $P(A \cap B) = \frac{1}{6}$
 $\Rightarrow P(A)P(B) = \frac{1}{6}$... (ii)
 From Eqs. (i) and (ii), we get
 $P(A)$ or $P(B) = \frac{1}{2}$ or $\frac{1}{3}$
 Also, given $P(B) < P(A)$
 $\therefore P(B) = \frac{1}{3}$

109. The mean of 100 observations is 50 and the standard deviation is 10. If 5 is subtracted from each observation and then it is divided by 4, then what will be the new mean and the new standard deviation respectively ?

- (a) 45, 5
- (b) 11.25, 1.25
- (c) 11.25, 2.5
- (d) 12.5, 2.5

⊗ (c) Given, mean $(\bar{x}) = 50$
 The new mean = $\frac{50 - 5}{4} = \frac{45}{4} = 11.25$
 And standard deviation $(\sigma) = 10$
 \therefore The new standard deviation = $\frac{10}{4} = 2.5$

Since, addition and subtraction does not effect standard deviation.

110. If two fair dice are rolled, then what is the conditional probability that the first dice lands on 6, given that the sum of numbers on the dice is 8?

- (a) $\frac{1}{3}$
- (b) $\frac{1}{4}$
- (c) $\frac{1}{5}$
- (d) $\frac{1}{6}$

⊗ (c) Let $E_1 =$ Event of first dice on 6
 $E_2 =$ Event of the sum of numbers on dices 8
 \therefore Total number of sample space of two dices are rolled, $n(s) = 36$
 Possible outcomes of E_1 (6, 2)
 Possible outcomes of E_2 (2, 6) (3, 5) (4, 4) (5, 3) (6, 2)
 $\therefore P(E_1 \cap E_2) = \frac{1}{36}$
 and $P(E_2) = \frac{5}{36}$
 \therefore Required probability = $P\left(\frac{E_1}{E_2}\right) = \frac{P(E_1 \cap E_2)}{P(E_2)}$
 when $P(E_2 \neq 0)$
 $= \frac{1}{5/36} = \frac{1}{5}$

111. Two symmetric dice flipped with each dice having two sides painted red, two painted black, one painted yellow and the other painted white. What is the probability that both land on the same colour ?

- (a) $\frac{3}{18}$ (b) $\frac{2}{9}$
- (c) $\frac{5}{18}$ (d) $\frac{1}{3}$

⊗ (c) P (two sides painted red) = $\frac{2}{6} \times \frac{2}{6}$
 P (two sides painted black) = $\frac{2}{6} \times \frac{2}{6}$
 P (one side painted yellow) = $\frac{1}{6} \times \frac{1}{6}$
 and P (other side painted white) = $\frac{1}{6} \times \frac{1}{6}$
 \therefore Required probability that both land on the same colour
 $= \frac{2}{6} \times \frac{2}{6} + \frac{2}{6} \times \frac{2}{6} + \frac{1}{6} \times \frac{1}{6} + \frac{1}{6} \times \frac{1}{6}$
 $= \frac{4 + 4 + 1 + 1}{36}$
 $= \frac{10}{36} = \frac{5}{18}$

112. There are n socks in a drawer, of which 3 socks are red. If 2 of the socks are chosen randomly and the probability that both selected socks are red is $\frac{1}{2}$, then what is the value

of n ?

- (a) 3
- (b) 4
- (c) 5
- (d) 6

⊗ (b) Total number of socks = n
 P (first socks is red) = $\frac{3}{n}$
 P (second socks is red) = $\frac{2}{n-1}$
 According to the question,
 $\frac{3}{n} \times \frac{2}{n-1} = \frac{1}{2}$
 $\Rightarrow n^2 - n = 12$
 $\Rightarrow n^2 - n - 12 = 0$
 $\Rightarrow n^2 - 4n + 3n - 12 = 0$
 $\Rightarrow n(n-4) + 3(n-4) = 0$
 $\Rightarrow (n-4)(n+3) = 0$
 $\therefore n = 4, -3$

113. Two cards are chosen at random from a deck of 52 playing cards. What is the probability that both of them have the same value ?

- (a) $\frac{1}{17}$ (b) $\frac{3}{17}$
 (c) $\frac{5}{17}$ (d) $\frac{7}{17}$

⊙ (a) ∴ Required probability = $\frac{{}^4C_2 \times 13}{{}^{52}C_2}$
 $= \frac{4 \times 3 \times 13}{52 \times 51}$
 $= \frac{1}{17}$

114. In eight throws of a die, 5 or 6 is considered a success. The mean and standard deviation of total number of successes is respectively given by

- (a) $\frac{8}{3}, \frac{16}{9}$ (b) $\frac{8}{3}, \frac{4}{3}$
 (c) $\frac{4}{3}, \frac{4}{3}$ (d) $\frac{4}{3}, \frac{16}{9}$

⊙ (b) We have, p (success) = $\frac{1}{6} + \frac{1}{6} = \frac{1}{3}$
 ∴ $q = 1 - p = \frac{2}{3}$

Given, $n = 8$

∴ Mean = $np = 8 \times \frac{1}{3} = \frac{8}{3}$

Standard deviation = \sqrt{npq}
 $= \sqrt{8 \times \frac{1}{3} \times \frac{2}{3}}$
 $= \sqrt{\frac{16}{9}} = \frac{4}{3}$

115. A and B are two events such that \bar{A} and \bar{B} are mutually exclusive. If $P(A) = 0.5$ and $P(B) = 0.6$, then what is the value of $P(A/B)$?

- (a) $\frac{1}{5}$ (b) $\frac{1}{6}$
 (c) $\frac{2}{5}$ (d) $\frac{1}{3}$

⊙ (b) Given, $P(\bar{A} \cap \bar{B}) = 0$
 $\Rightarrow P(\overline{A \cup B}) = 0$
 $\Rightarrow 1 - P(A \cup B) = 0$
 $\Rightarrow P(A \cup B) = 1$

We know that,

$P(A \cup B) = P(A) + P(B) - P(A \cap B)$

$\Rightarrow 1 = 0.5 + 0.6 - P(A \cap B)$

$\Rightarrow P(A \cap B) = 0.1$

∴ $P\left(\frac{A}{B}\right) = \frac{P(A \cap B)}{P(B)}$
 $= \frac{0.1}{0.6} = \frac{1}{6}$

116. Consider the following statements

- The algebraic sum of deviations of a set of values from their arithmetic mean is always zero.
- Arithmetic mean > Median > Mode for a symmetric distribution.

Which of the above statements is/are correct?

- (a) Only 1
 (b) Only 2
 (c) Both 1 and 2
 (d) Neither 1 nor 2

⊙ (a) We know that, the algebraic sum of deviations of a set of values from their arithmetic mean is always zero.

117. Let the correlation coefficient between X and Y be 0.6. Random variables Z and W are defined as $Z = X + 5$ and $W = \frac{Y}{3}$. What is the correlation coefficient between Z and W ?

- (a) 0.1 (b) 0.2
 (c) 0.36 (d) 0.6

⊙ (d) Since, the correlation coefficient is independent of change of origin and scale. It is given that correlation coefficient between X and Y be 0.6. So, correlation coefficient between Z and W be 0.6.

118. If all the natural numbers between 1 and 20 are multiplied by 3, then what is the variance of the resulting series?

- (a) 99.75 (b) 199.75
 (c) 299.25 (d) 399.25

⊙ (c) Variance of first n natural number
 $= \frac{n^2 - 1}{12} = \frac{20^2 - 1}{12}$
 $= \frac{399}{12} = 33.25$

If all the natural number between 1 and 20 multiplied by 3, then

∴ Required variance = 9×33.25
 $= 299.25$

119. What is the probability that an interior point in a circle is closer to the centre than to the circumference?

- (a) $\frac{1}{4}$ (b) $\frac{1}{2}$
 (c) $\frac{3}{4}$

(d) It cannot be determined

⊙ (a) Let radius of circle be r , then the points closer to centre if circumference will lie within radius of $\frac{r}{2}$.

So, the favourable outcome would be the points inside the area of circle with radius $\frac{r}{2}$ whereas the total possible outcomes could be all the points inside the area of circle with radius r .

∴ Required probability = $\frac{\pi \left(\frac{r}{2}\right)^2}{\pi r^2} = \frac{1}{4}$

120. If A and B are two events, then what is the probability of occurrence of either event A or event B ?

- (a) $P(A) + P(B)$ (b) $P(A \cup B)$
 (c) $P(A \cap B)$ (d) $P(A)P(B)$

⊙ (b) If A and B are two events, then the probability of occurrence of either event A or event B is $P(A \cup B)$.

PAPER II English Language and General Studies

Part A (English Language)

1. Opening his letters, (a)/ reading them carefully and sending for his clerk, (b)/ he dictated answers with them. (c)/ No error (d)
- ⊗ (c) Here, the use of preposition 'with' is incorrect here. Replace it with 'to', to make the given sentence grammatically correct. 'Dictated to' refers 'to say something aloud so that somebody else can write or type it.'
2. He was my school-friend, (a)/ but becoming a great man, (b)/ he has grown proud enough to forget his old friends. (c)/ No error (d)
- ⊗ (b) Here 'but becoming' is incorrect in part (b). It should be replaced with 'but after becoming' as preposition 'after' indicates 'at a later time' which makes the given sentence grammatically correct.
3. Rabindranath Tagore, (a)/ a Nobel laureate and the author of the National Anthem, (b)/ found Shantiniketan. (c)/ No error (d)
- ⊗ (c) As the given sentence is in Simple Past Tense, verb 'found' should be replaced with its past form 'founded' to make the given sentence grammatically correct.
4. The art of printing was introduced into England (a)/ during the reign of Edward IV (b)/ by William Caxton, a native of Kent. (c)/ No error (d)
- ⊗ (a) Here part (a) has an error. Use of preposition 'into' is incorrect. Replace it with preposition 'in' as it is used to indicate a location or place while preposition 'into' is used to indicate movement toward the inside of a place.
5. From thirty years (a)/ he devoted himself to public affairs (b)/without taking a holiday. (c)/ No error (d)
- ⊗ (a) Here, use 'for' in place of 'from' to start the sentence. Use of preposition 'for' shows time period, which is grammatically correct.
6. If Ramesh will be promoted (a)/ he will get (b)/ a higher salary. (c) No error (d)
- ⊗ (a) Here use of 'is promoted' in place of 'will be promoted' make the sentence grammatically correct. In conditional sentences, condition is expressed by 'If' clause and Simple Present tense is used to show a future result of that activity.
7. My brother goes (a)/ to the office (b)/ five day week. (c) No error (d)
- ⊗ (c) Here, the use of 'Five days a week' is more appropriate in place of 'five day week' to make the given sentence grammatically correct. Five is plural, so days should be used and 'a' is used for denoting one week.
8. If you lend Mohan a pen (a)/ he will lend it to someone else (b)/ and never you will get it back. (c)/ No error (d)
- ⊗ (c) Here, part (c) of the given sentence has an error. 'And never you will get it back' is incorrect because adverb should be followed by helping verb. So, the correct phrase will be - 'and you will never get it back'.
9. One of most widely spread (a)/ bad habits (b)/ is the use of tobacco. (c) No error (d)
- ⊗ (a) Here part (a) has an error. Article 'the' should be used before superlative degree (most). 'One of the most' is the correct phrase to make the given sentence grammatically correct.
10. A great part (a)/ of Arabia (b)/ is desert. (c) No error (d)
- ⊗ (d) There is no error. The sentence is grammatically correct.
11. Some people complain when they encounter a small misfortune in the course of their thoroughly happy life.
- (a) run into (b) run away
(c) run down (d) run with
- ⊗ (a) 'Run into' means the same as 'encounter'. Both words mean 'meet someone unexpectedly'. Some other synonyms are-'collide with' or 'bump into.'
12. This world is full of miseries.
- (a) indifferent love
(b) perfect happiness
(c) great suffering
(d) moderate sympathies
- ⊗ (c) 'Great suffering' is a perfect synonym of word 'miseries'. 'Miseries' means 'a state or feeling of great physical or mental distress'. Some other synonyms are-unhappiness, distress, etc.
13. A glance at a beautiful object gives us delight.
- (a) wisdom (b) happiness
(c) purity (d) peace
- ⊗ (b) 'Happiness' is the appropriate synonym of word 'delight'. Both words mean 'a feeling of great pleasure and satisfaction.' Some other synonyms are-pleasure, joy, etc.
14. It is terrible for people to die of starvation.
- (a) starch (b) staple
(c) plenty (d) hunger
- ⊗ (d) 'Hunger' is the correct synonym of word 'starvation'. 'Starvation' means 'the state of having no food for a long period, often causing death'. Some other synonyms are-lack of food, famine, deprivation, etc.
15. The university has constituted a grievance redressal committee to look into the matter.
- (a) depression (b) complaint
(c) abrasion (d) gratefulness
- ⊗ (b) 'Complaint' means the same as the word 'grievance'. 'Grievance' means 'an official statement of a complaint over something believed to be wrong or unfair'. Some other synonyms are - grudge, grumble, etc.
16. Rakesh delivered a slanderous speech.
- (a) abusive (b) praiseworthy
(c) moderate (d) inspiring
- ⊗ (a) 'Abusive' is similar in meaning to the word 'slanderous'. 'Slanderous' means 'a false spoken statement about someone that damages their reputation'. Some other synonyms of 'slanderous' are - malicious, damaging, derogatory, etc.
17. Suddenly, the sky was darkened by a gigantic bird.
- (a) winged (b) small
(c) tiny (d) enormous
- ⊗ (d) 'Enormous' means the same as 'gigantic'. The word 'gigantic' means 'something of very great size or extent'. Some other synonyms of the word are - huge, vast, expansive, etc.
18. To abolish poverty would be to destroy the soil upon which mankind produces the virtues conducive to higher civilisation.
- (a) detest (b) eradicate
(c) nurture (d) assimilate

- ⊗ (b) 'Eradicate' is similar word in meaning to the word 'abolish'. Both words mean 'to remove forever'.
Some other synonyms are – eliminate, wipe out, terminate, get rid of, etc.
- 19.** The Arabs who are not in the cities live in the desert throughout the year, shifting from one oasis to another.
(a) sandbank (b) mound
(c) dune (d) spring
- ⊗ (d) 'Spring' is the most suitable synonym from the given options. 'Oasis' means 'a fertile spot in a desert where water is found'.
Some other synonyms can be – watering hole, watering place, etc.
- 20.** The various facets of life can be found reflected in large city.
(a) several (b) similar
(c) valuable (d) singular
- ⊗ (a) 'Various' means 'several or different'. So, 'several' is a perfect synonym of word 'various'.
Some other synonyms are – varied, varying, etc.
- 21.** Ramesh is a very dubious character.
(a) shady (b) suspicious
(c) trustworthy (d) doubtful
- ⊗ (c) 'The word 'dubious' means 'of doubtful character'. Hence, its antonym is 'trustworthy' which means 'reliable or dependable'.
- 22.** Do not indulge in unmindful activities, please.
(a) vigilant (b) careless
(c) stupid (d) fatuous
- ⊗ (a) The word 'unmindful' means 'paying no heed or being careless'. Its antonym is 'vigilant', which means 'watchful or observant, alert' etc.
- 23.** He is suffering from a curable disease.
(a) remediable (b) treatable
(c) terminal (d) operable
- ⊗ (c) The word 'curable' means 'treatable or remediable'. Its antonym is 'terminal' which means 'incapable of being treated or untreatable'.
- 24.** He was born on a very auspicious day.
(a) propitious (b) fortunate
(c) ominous (d) opportune
- ⊗ (c) 'Auspicious' means 'favourable or conducive to success'. Its antonym is 'ominous' which means 'something sinister or inauspicious or doomy, unfavourable'.
- 25.** He had deeper hostility towards Mohan.
(a) animosity (b) belligerence
(c) malice (d) friendship
- ⊗ (d) 'The word 'hostility' means 'malice or unfriendliness or opposition'. Its antonym is 'friendship' which means 'close association or bond'.
- 26.** His life is rather monotonous.
(a) exciting (b) dreary
(c) tedious (d) uneventful
- ⊗ (a) The word 'monotonous' means 'boring or unexciting'. Its antonym is 'exciting' which means 'thrilling or stimulating'.
- 27.** Macbeth is a morally repulsive character.
(a) abominable (b) attractive
(c) obnoxious (d) ugly
- ⊗ (b) The word 'repulsive' means 'arousing intense distaste'. Its antonym is 'attractive' which means 'pleasing or agreeable'.
- 28.** The serene beauty of Kashmir had a soothing effect on his mind.
(a) placid (b) pleasing
(c) tranquil (d) turbulent
- ⊗ (d) 'The word 'serene' means 'peaceful or calm'. Its antonym is 'turbulent' which means 'unstable, chaotic or stormy'.
- 29.** Life is transient in nature.
(a) brief (b) momentary
(c) eternal (d) short-lived
- ⊗ (c) The word 'transient' means 'temporary or short lived'. Its antonym is 'eternal', which means 'everlasting or immortal, perpetual'.
- 30.** Sohan is a vain person.
(a) modest (b) arrogant
(c) conceited (d) proud
- ⊗ (a) The word 'vain' means 'proud or arrogant'. Its antonym is 'modest' which means 'humble or unpretentious'.
- 31.** A dark horse
(a) A black coloured horse
(b) A person who wins a race or competition although no one expected him to
(c) A person who keeps secrets
(d) An ignorant person
- ⊗ (b) Idiom 'a dark horse' means 'an unknown and unexpected winner of a race or contest'. Hence, option (b) expresses the correct meaning of given idiom.
- 32.** A show-stopper
(a) Someone who stops the show
(b) Someone who organises the show
(c) A performance that is extremely good
(d) A fashionable person
- ⊗ (c) Idiom 'A show-stopper' means 'a performance in a show that is extremely good'. So, option (c) expresses the correct meaning of the given idiom.
- 33.** A jack of all trades
(a) Someone who has many skills
(b) A confident and not very serious young man
(c) Someone who has hit the jackpot
(d) a great businessman
- ⊗ (a) Idiom 'A jack of all trades' means 'someone who has many skills'. So, option (a) is a suitable choice.
- 34.** Fight tooth and nail
(a) To quarrel with someone
(b) To attack someone with a lot of force
(c) To try hard to prevent something from happening
(d) To try very hard to achieve something
- ⊗ (d) Idiom 'Fight with tooth and nail' means 'to try very hard to achieve something'. So, option (d) is a suitable choice.
- 35.** Fair and square
(a) in an honest way
(b) in a critical way
(c) neither very good nor very bad
(d) in a foolish way
- ⊗ (a) Idiom 'Fair and square' means 'in a honest way and according to the rules'. So, option (a) expresses the correct meaning of the given idiom.
- 36.** S1 : We do not know what to do with our knowledge.
S6 : In the course of time they may rule over us altogether.
P : For example, we are unable to manage our machines.
Q : We already find it difficult to do without machines.
R : Machines should be fed properly and waited upon attentively; otherwise they refuse to work or cause destruction.
S : Science has given us superhuman powers, which we do not use properly.
The proper sequence should be
(a) S P R Q (b) P S Q R
(c) Q R P S (d) S R P Q
- ⊗ (a) SPRQ is the correct sequence of the given sentences to form a meaningful passage.
- 37.** S1 : The British rule in India has brought about moral, material, cultural and spiritual ruination of this great country.
S6 : We are not to kill anybody but it is our *dharma* to see that the curse of this government is blotted out.

P : I regard this rule as a curse.
 Q : Sedition has become my religion.
 R : Ours is a non-violent battle.
 S : I am out to destroy this system of government.

The proper sequence should be

- (a) S P R Q (b) P S Q R
 (c) Q R P S (d) S R P Q

(b) PSQR is the correct sequence of the given sentences to form a meaningful passage.

38. the urban local body elections (P)/unidentified gunmen (Q)/and injured another during (R)/ shot dead two workers (S)

- (a) Q S R P (b) P Q S R
 (c) S P R Q (d) R P S Q

⊗ (a) QSRP is the correct sequence.

39. both intense political and (P)/ this state has a history of (Q)/of syncretic accomplishments (R)/ religious contestation and (S)

- (a) S Q P R (b) P Q S R
 (c) S Q R P (d) Q P S R

⊗ (d) QPSR is the correct sequence.

40. the father also (P)/in his quest for justice (Q)/ by the system (R)/ feels let down (S)

- (a) S Q P R (b) P S R Q
 (c) S Q R P (d) P Q R S

⊗ (b) PSRQ is the correct sequence.

Passage 2

I do not wish to suggest that because we were one nation, we had no differences, but it is submitted that our leading men travelled throughout India either on foot or in bullockcarts. They learned one another languages and there was no aloofness amongst them. What do you think could have been the intention of those farseeing ancestors of ours who established Setubandha (Rameshwar) in the South, Jagannath in the East and Haridwar in the North as places of pilgrimage? You will admit they were no fools. They knew that worship of God could have been performed just as well at home. They taught us that those whose hearts were aglow with righteousness had the Ganges in their own homes. But they saw that India was one undivided land so made by nature. They, therefore, argued that it must be one nation.

Arguing thus, they established holy places in various parts of India and fired the

people with an idea of nationality in a manner unknown in other parts of the world. And we Indians are one as no two Englishmen are. Only you and I and others who consider ourselves civilised and superior persons imagine that we are many nations. It was after the advent of railways that we began to believe in distinctions and you are at liberty now to say that it is through the railways that we are beginning to abolish those distinctions.

An opium-eater may argue the advantage of opium-eating from the fact that he began to understand the evil of the opium habit after having eaten it. I would ask you to consider well what I had said on the railways.

41. According to the author, India

- (a) has never been one nation
 (b) has been an aggregate of several nations
 (c) has always been one nation along with differences
 (d) became a nation after the British came

⊗ (c) The author has stated in the passage that India has always been one nation along with diversities or differences.

42. Why did the great sages of India establish pilgrimages in the different corners of the country?

- (a) Because they wanted to push people to travel to different places.
 (b) Because they could observe the underlying unity of the country as made by nature.
 (c) Because they themselves had travelled to these places.
 (d) Because they wanted people to be religious everywhere.

⊗ (b) The great sages of India established pilgrimages in the different corners of the country because they could observe the underlying unity of the country as made by nature. For them, India was one undivided nation.

43. In the passage, the author's attitude towards the railways is

- (a) critical (b) sympathetic
 (c) indifferent (d) apathetic

⊗ (a) The author's attitude towards the railways is critical. According to the author, due to railways people have been able to see the diversities of nature, people, food, etc. But railways have also helped to unite people of different states.

44. What does the author mean when he says that "Whose hearts were aglow with righteousness had the Ganges in their own homes"?

- (a) One need not visit the Ganges to take holy bath
 (b) The Ganges had been polluted, so one should bath at home
 (c) One should take a holy dip in the Ganges to purify one's heart
 (d) The purity of heart is superior to observance of any ritual

⊗ (d) According to the author, if one's heart is pure, there is no need to observe any rituals like going on pilgrimages or visiting different temples and other prayer structures. God resides in a pure heart.

45. The passage is written in a

- (a) dialogic style (b) prescriptive style
 (c) descriptive style (d) analytical style

⊗ (c) The passage is written in a descriptive style. In descriptive writing style, the author specifies an event, an object or a thing.

46. forest prevent erosion.

- (a) Lean (b) Dense (c) Sparse (d) Tidy

⊗ (b) 'Dense' is the appropriate word for the blank as it means 'containing a lot of things (trees) close together.' Other words do not fit in the blank.

47. Three people were arrested and an illegal arms unit was by the police in a raid.

- (a) revealed (b) searched
 (c) discovered (d) busted

⊗ (d) 'Busted' is the appropriate word for the blank. It means 'raid or search by the police where illegal activity is suspected.' Other words do not fit in the blank to make the sentence meaningful.

48. A woman got into the car and

- (a) drove off (b) broke down
 (c) rode in (d) drove in

⊗ (a) 'Drove off' is the correct phrase to make the sentence meaningful. It means 'force someone to go away and to stop attacking or threatening you.'

49. The lecture was not very interesting. Infact I in the middle of it.

- (a) showed off (b) put off
 (c) dozed off (d) plugged off

⊗ (c) 'Dozed off' is correct phrasal verb to be filled in the blank. It means 'to fall into a light sleep unintentionally.'

50. The cops murder by kin.

- (a) suspect (b) afford
 (c) manage (d) administer

⊗ (a) 'Suspect' is the appropriate word for the blank to make the sentence meaningful. Suspect means 'to have doubts or mistrust.' Other words are not relevant here.

Part B (General Studies)

- 51.** Which one of the following cell organelles does not possess nucleic acid?
 (a) Nucleolus (b) Chloroplast
 (c) Ribosome (d) Plasma membrane
- ⊗ (d) The cell organelle given in option (d), i.e. plasma membrane does not contain nucleic acids. It is made up of lipids and proteins. Chloroplast contains deoxyribonucleic acid whereas ribosomes are made up of ribonucleic acids and proteins. Nucleolus is made up of proteins and ribonucleic acids (RNA) and the site for the synthesis of ribosomal RNA.
- 52.** Which one of the following cell organelles does not possess its own genetic material encoding proteins?
 (a) Ribosome (b) Nucleus
 (c) Mitochondria (d) Chloroplast
- ⊗ (a) Ribosome is the cell organelles, which does not possess its own genetic material (DNA) encoding proteins. Nucleus, mitochondria and chloroplast contain DNA which code for proteins needed by these cell organelles.
- 53.** Which one of the following is not a component of conducting tissue in plants?
 (a) Fibres (b) Tracheids
 (c) Pericycle (d) Sieve tubes
- ⊗ (c) Pericycle is not the component of conducting tissue. It is a part of the innermost layer of cortex. Xylem and phloem both contain fibres. Tracheids are the part of xylem whereas sieve tubes are found in phloem.
- 54.** Which one of the following organisms has vascular tissues?
 (a) *Cladophora* (b) *Penicillium*
 (c) *Marsilea* (d) *Anabaena*
- ⊗ (c) *Marsilea* is pteridophytic plant, which has primitive vascular tissues. *Cladophora* is an algae, *Penicillium* is a fungi. *Anabaena* is Blue-Green Algae (BGA).
- 55.** Which one of the following organisms represents the primary consumer category in an ecosystem?
 (a) Caterpillar (b) Crabapple tree
 (c) Frog (d) Sparrowhawk
- ⊗ (a) Caterpillar is primary consumer in an ecosystem. It is because it feeds on leaves and is a herbivore. Crabapple tree is a producer. Frog is a secondary consumer. Sparrowhawk is a top consumer.
- 56.** Spring tides refer to
 (a) greatest difference in the sea level at high and low tides
 (b) lowest difference in the sea level at high and low tides
 (c) no difference in the sea level at high and low tides
 (d) counteraction of gravitational pull of the Sun to that of Moon
- ⊗ (a) The periodic rise & fall of sea level, once or twice a day, is called a Tide. When the Sun, the Moon and the Earth are in a straight line, the height of tides will be higher than normal. These are called spring tides, which occur on new Moon or full Moon day. At these times, high tides are very high & low tides are very low. Thus, spring tides refer to the greatest difference in the sea level at high and low tides.
- 57.** Which one of the following energy is stored in the links between the atoms?
 (a) Nuclear energy (b) Chemical energy
 (c) Potential energy (d) Thermal energy
- ⊗ (b) **Chemical energy** is stored in the bonds of atoms and molecules. **Nuclear energy** is stored in the nucleus of an atom. **Potential energy** is the energy of position or gravitational potential energy. **Thermal energy** or heat is the vibration or movement of atoms and molecules in substances.
- 58.** The light energy escaping from the sun can be spread by
 (a) a shower of rain drops
 (b) a plane mirror
 (c) a convex lens
 (d) a combination of a convex lens and a concave lens
- ⊗ (a) The light energy escaping from the sun can be spread by a shower of rain drops. The sunlight shines on a water droplet. As the light passes into the droplet, the light bends or refracts, a little because light travels slower in water than in air (because water is denser). Then, the light bounces off the back of water droplet and goes back the way it came, bending again as it speeds up when it exits the water droplet. Hence, the light energy escaping from the sun can be spread. A disperse the light into VIBGYOR and spread it.
- 59.** The correct sequence of energy transfer that occurs when an apple falls to the ground is
 (a) gravitational potential energy → heat energy to air → kinetic energy → heat energy to ground and apple → sound energy
 (b) gravitational potential energy → sound energy → kinetic energy → heat energy to air → heat energy to ground and apple
 (c) gravitational potential energy → kinetic energy → heat energy to air → heat energy to ground and apple → sound energy
 (d) gravitational potential energy → kinetic energy → sound energy → heat energy to air → heat energy to ground and apple
- ⊗ (c) When apple is on highest position, then it has only gravitational potential energy. When, it falls to the ground the first its gravitational potential energy starts converting into kinetic energy. Due to air friction some kinetic energy losses and converts into heat energy to air. When apple falls on the ground, then its remaining energy converts into heat energy to ground and sound energy. Hence, option (c) is correct.
- 60.** Which one of the following mineral is used as a fuel in nuclear power stations?
 (a) Bauxite (b) Quartz
 (c) Feldspar (d) Pitchblende
- (d) Uraninite, formerly known as pitchblende is a radioactive uranium rich mineral which is used as a fuel in nuclear power stations. It is an ore with a chemical composition that is largely UO_2 , but due to oxidation the mineral typically contains variable proportions of U_3O_8 .
- 61.** Which one of the following is not a synthetic detergent?
 (a) $CH_3(CH_2)_{10}CH_2OSO_3^-Na^+$
 (b) $[CH_3(CH_2)_{15}-N-(CH_3)_3]^+Br^-$
 (c) $CH_3(CH_2)_{16}COO^-Na^+$
 (d) $CH_3(CH_2)_{16}COO(CH_2CH_2O)_n \cdot CH_2CH_2OH$
- ⊗ (d) Synthetic detergents are chemically alkyl sulphate or sulphonate or ammonium salt of long chain fatty acids. Thus, $CH_3(CH_2)_{16}COO(CH_2CH_2O)_n \cdot CH_2CH_2OH$, option (d) is not a synthetic detergent, while the remaining options contain synthetic detergents.
- 62.** Which one of the following is an example of a clean fuel?
 (a) Coke (b) Propane
 (c) Petrol (d) Wax

- ⊗ (b) Clean fuels are fuels that have a lower carbon intensity than the standard for the fuel it replaces. Examples of clean fuels include ethanol, biodiesel, natural gas, biogas, propane and hydrogen.

63. Which one of the following metals does not react with cold water?

- (a) Calcium (Ca) (b) Potassium (K)
(c) Magnesium (Mg) (d) Sodium (Na)

- ⊗ (c) Magnesium (Mg) does not react with cold water, but reacts with hot water,

On the other hand, calcium (Ca), potassium (K) and sodium (Na) are react with cold water.

Thus, option (c) is correct.

64. In which of the following pairs are the isoelectronic ions?

- (a) Mg^{2+} , Ar (b) Na^+ , O^{2-}
(c) Al^{3+} , Cl^- (d) K^+ , Ne

- ⊗ (b) According to question,

Ion	Atomic Number	Number of Electrons
Mg^{2+}	12	$12 - 2 = 10$
Ar	18	18
Na^+	11	$11 - 1 = 10$
O^{2-}	8	$8 + 2 = 10$
Al^{3+}	13	$13 - 3 = 10$
Cl^-	17	$17 + 1 = 18$
K^+	19	$19 - 1 = 18$
Ne	10	10

The species containing same number of electrons are isoelectronic. Thus, Na^+ and O^{2-} are isoelectronic species. Hence, option (b) is correct.

65. Which one of the following is used as a binder in paints?

- (a) Titanium dioxide (b) Novolac
(c) Phthalocyanine (d) Silicones

- ⊗ (d) Binder refers to the substances that hold the particles of pigment together in paints.

Silicones are used as a binder in paints. They are synthetic organo-silicon polymers containing repeated R_2SiO units.

66. Which one of the following is NOT true in reference to Air mass?

- (a) Air mass forms either in tropical or in polar region
(b) Air mass develops on continents as well as over ocean
(c) Air mass develops in a cyclonic condition
(d) Air mass changes the weather condition

- ⊗ (c) "Air mass develops in a cyclonic condition" this option are not true in reference of air mass. Air mass is a

volume of air defined by its temperature and water vapour content. Air masses cover many hundreds or thousands of miles, and adapt to the characteristic of the surface below them. They are classified according to latitude and their continental or maritime source regions. When air masses reaches a new region, it might clash with another air mass that has a different temperature and humidity. There are four type of air masses-Polar, tropical, continental and maritime.

67. National Water Academy, a centre of excellence in training and capacity building in water resource, is located at

- (a) New Delhi (b) Kolkata
(c) Pune (d) Chennai

- ⊗ (c) National Water Academy (NWA), a centre of excellence in training and capacity building in water resource, is located in Pune (Maharashtra). It was set-up under Central Water Commission by the Ministry of Water Resources in 1988.

The NWA is envisaged to function as 'Centre of Excellence' for in-service training of water resources engineering personnel.

It is addressing the wider training needs of water resources engineers of State and Central Agencies in the field of planning, design, evaluation, construction, operation and monitoring of water resources projects.

68. 'Campos' and 'Llanos', Tropical Savanna grasslands are generally found in

- (a) Australia (b) Central Africa
(c) South America (d) East Asia

- ⊗ (c) 'Campos' and 'Llanos' are the tropical savanna grasslands found in South America. Campos is located in Brazilian Highlands and Llanos in Orinoco basin. Tropical Grasslands are located near the Equator, between the tropic of Cancer and the tropic of Capricorn. They are also known as 'Savannas'. It is a transitional zone found between the equatorial rainforests and the hot deserts. They includes savannas of Africa and Campos and Llanos of South America.

69. 'Viticulture' is a common feature of which one of the following Australian cities?

- (a) Adelaide (b) Darwin
(c) Hobart (d) Brisbane

- ⊗ (a) Viticulture is a common feature of Adelaide, which is the capital of South Australia. Viticulture is the cultivation and harvesting of grapes. The Adelaide Hills

wine region is a famous economic region of country for production of wine from grapes.

70. 'Shamal' warm and dry wind is a Local wind found in

- (a) East Asia
(b) West Coast of Africa
(c) Sahara of Africa
(d) Mesopotamia

- ⊗ (d) 'Shamal local' winds are found in Mesopotamia. Mesopotamia is a region covering Iraq, Iran and the Arabian Peninsula. Shamal is a hot, dusty and dry wind which blows from the North or North-West in Mesopotamia. Other important warm local winds are Chinook in North America, Foehn in the Alps, Khamsin in Egypt, Sirocco in North Africa and Harmattan in West Africa.

71. 'Inversion of Rainfall' is associated with

- (a) Orographic rainfall
(b) Convectional rainfall
(c) Cyclonic rainfall (Tropical)
(d) Cyclonic rainfall (Temperate)

- ⊗ (a) 'Inversion of Rainfall' is associated with orographic rainfall. The orographic rainfall occurs due to the ascent of air forced by a mountain barrier. The mountain barrier should be across the wind direction, so that the moist air is forced in obstruction to move upward and get cooled. The amount of the rainfall increases with increasing height of the barrier, but this is up to certain limit. After that there is a marked decrease due to lesser moisture content of the air and this phenomenon is called 'Inversion of Rainfall'.

72. Who was the author of the book 'History of British India'?

- (a) Charles Grant (b) John Stuart Mill
(c) James Mill (d) William Jones

- ⊗ (c) James Mill (1773-1836) was the author of the book 'History of British India'. This book is a history of company rule in India. Hence, option (c) is correct

73. The Azamgarh Proclamation of 25th August, 1857 stressed on which one of the following issues?

- (a) Hindu-Muslim divide
(b) Support to the English government
(c) The return of the Badshahi
(d) The imposition of heavy Jumas (revenue demand)

- ⊗ (a) The Azamgarh Proclamation of 25th August, 1857 stressed on Hindu-Muslim divide. It was published in Delhi Gazette in the midst of the Sepoy Mutiny (1857). The author was most probably Firoz Shah (grandson of Bahadur Shah Zafar), who

fought against the British in Lucknow and Awadh (Oudh). The original document was published in Urdu.

74. Which Viceroy had made the observation, 'It's a beautiful world if it wasn't for Gandhi ...'?

- (a) Lord Irwin (b) Lord Wavell
(c) Lord Mountbatten (d) Lord Willingdon

⊙ (d) Lord Willingdon was 22nd Viceroy of India from 1931 to 1936. He mentioned Mahatma Gandhi in a letter written in 1933 by saying, "It's a beautiful world if it was not for Gandhi who is really a perfect nuisance." Hence option (d) is correct. The important events of his period include Second and Third Round Table Conferences, relaunching of Civil Disobedience Movement, Communal Award by Ramsay MacDonald (1932), Poona Pact (1932), the Government of India Act, 1935 and Separation of Burma from India.

75. Which Indian businessman favoured 'healthy capitalism' in helping Gandhiji to work towards a 'common object'?

- (a) Ghanshyam Das Birla
(b) Ambalal Sarabhai
(c) Sir Biren Mukherjee
(d) TT Krishnamachari

⊙ (a) Ghanshyam Das Birla, an Indian businessman favoured 'healthy capitalism' in helping Gandhiji to work towards a 'common object.' Birla was a close associate and a steady supporter of Mahatma Gandhi, whom he met for the first time in 1916. Gandhiji stayed at Birla's home in New Delhi during the last four months of his life. In 1957, GD Birla was awarded India's second highest civilian honour, the Padma Vibhushan by the Government of India.

76. The art piece 'In Memoriam' was a creation of which one of the following European painters?

- (a) Thomas Jones Barker
(b) Joseph Noel Paton
(c) Thomas Daniell
(d) Charles D'Oyly

⊙ (b) The art piece 'In Memoriam' was a creation of the European painter, Joseph Noel Paton. He was a Scottish artist, illustrator and sculptor. In 1844, Paton's first painting, **Ruth Gleaning**, was exhibited at the Royal Scottish Academy.

77. Which one of the following can charge an insulator?

- (a) Current electricity
(b) Static electricity
(c) Magnetic field
(d) Gravitational field

⊙ (b) Static electricity can charge an insulator. Charging of insulator by induction process, static charge is required.

A static electric charge can be created whenever two surfaces contact and separate at least one of the surfaces has a high resistance to electric current.

78. At 20°C, the speed of sound in water is approximately

- (a) 330 m/s (b) 800 m/s
(c) 1500 m/s (d) 5000 m/s

(c) The speed of sound in water at 20°C is approximately 1500 m/s.

79. Which one of the following could be the melting point of iron?

- (a) 25°C (b) 37°C
(c) 500°C (d) 1500°C

(d) Iron (Fe) is a chemical element with atomic number 26. It is a metal that belongs to the first transition series and group 8 of the periodic table. Its melting point is 1538°C (~1500°C) or 1811 K.

80. Let us consider a copper wire having radius r and length l . Let its resistance be R . If the radius of another copper wire is $2r$ and the length is $l/2$, then the resistance of this wire will be

- (a) R (b) $2R$
(c) $R/4$ (d) $R/8$

⊙ (d) Given, length of copper wire = l and radius of copper wire = r

∴ Resistance,

$$R = \rho \frac{l}{A} = \rho \cdot \frac{l}{\pi r^2} \quad (\because A = \pi r^2) \dots (i)$$

For second wire,

length, $l_1 = \frac{l}{2}$ and radius, $r_1 = 2r$

Resistance of wire,

$$\begin{aligned} R_1 &= \rho \cdot \frac{l_1}{\pi r_1^2} = \rho \cdot \frac{l/2}{\pi (2r)^2} \\ &= \rho \cdot \frac{l}{2 \times \pi \cdot 4r^2} = \frac{1}{8} \cdot \rho \cdot \frac{l}{\pi r^2} \\ &= \frac{1}{8} \cdot R \quad [\text{from Eq. (i)}] \\ &= \frac{R}{8} \end{aligned}$$

81. Basic scientific principle behind a nuclear reactor is

- (a) nuclear fusion
(b) controlled nuclear fusion
(c) uncontrolled nuclear fission
(d) controlled nuclear fission

(d) Basic scientific principle behind a nuclear reactor is controlled nuclear fission, in which a heavy atomic nucleus splits into two smaller nuclei and a large amount of energy is released in this process.

82. Which one of the following statements is not correct for the given reaction?

- (a) Iron is the reducing agent
(b) The solution turns green in colour after the reaction
(c) Copper is a more reactive metal than iron
(d) The reaction is an example of a redox reaction

⊙ (c) A more reactive metal displaces a less reactive metal from its solution.

In the above given reaction, iron (Fe) displaces copper (Cu) from its solution (CuSO_4), thus copper is less reactive than iron. Therefore, option (c) is incorrect, while the remaining options are correct.

83. Which one of the following is an organic acid?

- (a) Hydrochloric acid (b) Nitric acid
(c) Acetic acid (d) Sulphuric acid

⊙ (c) An organic acid is an organic compound with acidic properties. The most common organic acids are the carboxylic acids. Among the given options, acetic acid (CH_3COOH) is an organic acid. The remaining options contains inorganic acids.

84. Dinitrogen (N_2) and dioxygen (O_2) are the main constituents of air, but they do not react with each other to form oxides of nitrogen because,

- (a) the reaction requires initiation by a catalyst
(b) oxides of nitrogen are unstable
(c) the reaction is endothermic and requires very high temperature
(d) the stoichiometry of N_2 and O_2 in air is not ideal for the reaction to take place

⊙ (c) The reaction of dinitrogen (N_2) and dioxygen (O_2) is endothermic and requires very high temperature.

It is because, the nitrogen-nitrogen triple bond ($\text{N} \equiv \text{N}$) is very strong.

The energy cost to break that bond as well as the $\text{O} = \text{O}$ is not compensated by the formation of nitrogen-oxygen ($\text{N} = \text{O}$) double bond.

Thus, they do not react with each other.

85. Who among the following has explained the phenomenon of photoelectric effect?

- (a) Max Planck (b) Albert Einstein
(c) Neils Bohr
(d) Ernest Rutherford

- ⊗ (b) The experiment of photoelectric effect is performed by Heinrich Hertz, but the phenomenon was explained by Albert Einstein. It is the phenomenon of ejection of electrons from the structure of a metal when light of suitable frequency strikes it.

86. The equivalent weight of oxalic acid in $C_2H_2O_4 \cdot 2H_2O$ is

- (a) 45 (b) 63
(c) 90 (d) 126

- ⊗ (b) Equivalent weight of an acid

$$= \frac{\text{Molecular weight}}{\text{Basicity}}$$

Molecular weight of $C_2H_2O_4 \cdot 2H_2O$
 $= 2 \times 12 + 2 \times 16 + 4 \times 16 + 2 \times 18 = 126$
 \therefore Equivalent weight of $C_2H_2O_4 \cdot 2H_2O$
 $= \frac{126}{2} = 63$

87. Which one of the following is not a west flowing river?

- (a) Periyar (b) Bharathapuzha
(c) Pamba (d) Tamraparni

- ⊗ (d) Tamraparni is not a West flowing river while others are west flowing rivers. Tamraparni river originates from Pothigai hills of Western Ghats (Tamil Nadu). It flows through Tamil Nadu and falls into Gulf of Mannar. It has been historically known as 'Podhigai'. It is mentioned in the ancient Sangam and Tamil texts.

88. Which one of the following rivers was earlier known as 'Vitasta'?

- (a) Tista (b) Jhelum
(c) Tungabhadra (d) Bharathapuzha

- ⊗ (b) 'Jhelum river' was earlier known as 'Vitasta', while Tista was known as 'Trisrota', Tungabhadra as 'Pampa' and Bharathapuzha as 'Pratichi'. Jhelum river rises from northern slopes of Pir Panjal ranges at Verinag Spring. It flows through Srinagar and Wular lake before entering Pakistan. It is a tributary of the Indus river.

89. River Sharda drains in the Northern Plains of Uttar Pradesh. Before entering in the Plains, Sharda is known as

- (a) Saraswati (b) Bhagirathi
(c) Kali (d) Pindar

- ⊗ (c) The Sharda river originates from the greater Himalayas at Kalapaani in the Pithoragarh district of Uttarakhand. The river is named after the Goddess Kali whose temple is situated in Kalapaani. It drains the Northern plains of Uttar Pradesh and Uttarakhand. It is known as 'River Sharda', when it reaches the plains of Uttarakhand and Uttar Pradesh. It forms India's continuous border between India and Nepal.

90. 'Mission Indradhanush' is related to

- (a) Bullet train project
(b) Agriculture development
(c) Women empowerment
(d) Full immunisation

- ⊗ (d) 'Mission Indradhanush' is related to full immunisation. This health mission was launched by the Ministry of Health and Family Welfare on 25th December, 2014.

The scheme seeks to drive towards 90% full immunisation coverage of India and sustain same by year 2020. Vaccination is being provided against eight vaccine preventable diseases, i.e.

Diphtheria, Pertussis, Tetanus, Polio, Measles, Tuberculosis, Hepatitis B, Meningitis, Rotavirus, Diarrhea and Japanese Encephalitis.

91. Which of the following is/are environmental effects of Rotation of the Earth?

1. Daily or diurnal rhythm in day-light and air temperature
2. Flow path of both air and water are turned consistently in a sideward direction.
3. The movement of the tides

Select the correct answer using the codes given below:

- (a) 1 and 2 (b) 1 and 3
(c) 1, 2 and 3 (d) Only 3

- ⊗ (c) Statement 1, 2 and 3 all are correct. The rotation of the earth causes day and night. This results in the diurnal changes in day-light and air temperature. So, statement 1 is correct.

Earth's rotation results in the Coriolis effect. This deflects winds and streams of water to the right in Northern Hemisphere and to the left in Southern Hemisphere. So, statement 2 is correct.

Tides are caused by the gravitational attractive forces of the moon and the sun as well as the centrifugal force due to the Earth's rotation. So, statement 3 is also correct.

92. Who among the following historians have described the Quit India Movement as a 'spontaneous revolution'?

- (a) Gordon Johnson
(b) David Arnold
(c) FG Hutchins
(d) Peter Robb

- ⊗ (c) FG Hutchins described the Quit India Movement as a 'spontaneous revolution'. Quit India Movement, 1942 was an important event of the Indian freedom struggle.

Directions (Q. Nos. 93-95) The following questions items consist of two statements, statement I and statement II. Examine these two statements carefully and select the correct answer using the codes given below.

Codes

- (a) Both the statements are individually true and statement II is the correct explanation of statement I.
(b) Both the statements are individually true and statement II is not the correct explanation of statement I.
(c) Statement I is true, but statement II is false.
(d) Statement I is false, but statement II is true.

93. Statement I Abul Fazl shaped, represented and articulated the ideas associated with the reign of Akbar.

Statement II The qualities of Abul Fazl impressed Akbar who found the former suitable as an adviser and spokesperson for his policies.

- ⊗ (a) Abul Fazl shaped, represented and articulated the ideas associated with the reign of Akbar because the qualities of Abul Fazl impressed Akbar, who found the former suitable as an adviser and spokesperson for his policies. So, Both the given statements are individually true and statement II is the correct explanation of statement I.

94. Statement I The Kisan Manifesto adopted by the All India Kisan Sabha in August, 1936 contained radical demands.

Statement II The All India Kisan Sabha was a part of the Congress and maintained close relationship with the Provincial Congress Committees.

- ⊗ (d) The kisan manifesto released in August 1936, demanded abolition of the zamindari system and cancellation of rural debts.

All India Kisan Sabha was separate entity. It was founded at Lucknow in 1936 with Swami Sahajanand as its first President and NG Ranga as its General Secretary. So, statement I is false, but statement II is true. Hence, option (d) is correct.

95. Statement I The British ruled India through a modern bureaucracy headed by the Indian Civil Service, whose members were recruited through merit based on open competition.

Statement II The Indian Civil Service was based on the whole hearted participation of Indians.

- ⊗ (c) The British ruled India through a modern bureaucracy headed by the Indian Civil Service, whose members were recruited through merit based on open competition. Hence, statement (1) is correct.

The Indian Civil Services was not based on the whole hearted participation of Indians. Hence, statement (2) is not correct. So, the statement I is true. But, the statement II is not true. Thus, option(c) is correct here.

- 96.** Two metallic wires A and B are made using copper. The radius of wire A is r while its length is l . A DC voltage V is applied across the wire A, causing power dissipation P . The radius of wire B is $2r$ and its length is $2l$ and the same DC voltage V is applied across it causing power dissipation P_1 . Which one of the following is the correct relationship between P and P_1 ?

- (a) $P = 2P_1$ (b) $P = P_1/2$
(c) $P = 4P_1$ (d) $P = P_1$

- ⊗ (b) For metallic wire A,

$$\text{resistance, } R_A = \rho \cdot \frac{l}{\pi r^2}$$

Therefore, power dissipation in wire A, when a DC voltage V is applied,

$$P = \frac{V^2}{R_A} = \frac{V^2}{\rho \cdot \frac{l}{\pi r^2}} = \frac{V^2 \cdot \pi r^2}{\rho l}$$

$$P = \frac{\pi r^2 V^2}{\rho l} \quad \dots(i)$$

For metallic wire B,

$$l_B = 2l, r_B = 2r, \text{ then resistance of wire B, } R_B = \rho \cdot \frac{l_B}{\pi r_B^2} = \rho \cdot \frac{2l}{\pi(2r)^2} = \rho \cdot \frac{2l}{4\pi r^2}$$

∴ Power dissipation in wire B,

$$P_1 = \frac{V^2}{R_B} = \frac{V^2}{\frac{\rho \cdot 2l}{4\pi r^2}} = \frac{2\pi r^2 V^2}{\rho l} = 2P$$

[from Eq. (i)]

$$\therefore P = \frac{P_1}{2}$$

- 97.** Consider the following statements about a solenoid.
- The magnetic field strength in a solenoid depends upon the number of turns per unit length in the solenoid.
 - The magnetic field strength in a solenoid depends upon the current flowing in the wire of the solenoid.

- The magnetic field strength in a solenoid depends upon the diameter of the solenoid.

Which of the statements given above are correct?

- (a) 1, 2 and 3 (b) 1 and 3
(c) 2 and 3 (d) 1 and 2

- ⊗ (d) Magnetic field strength in a solenoid is given by

$$B = \mu_0 n i$$

where, μ_0 = permeability of free space,

n = number of turns per unit length

and i = current flowing through solenoid.

So, it is clear that magnetic field strength B in a solenoid depends on n and i only, it does not depend on diameter of solenoid. Therefore, statements 1 and 2 are correct.

- 98.** Light year is a unit of measurement of

- (a) very large distances
(b) time interval in years
(c) amount of light received on earth in a year
(d) mass of atoms

- ⊗ (a) Light year is a unit of measurement of very large distances. It is a distance travelled by light in vacuum in one year.

$$1 \text{ light year} = 9.46 \times 10^{15} \text{ m}$$

- 99.** The focal length of the objective lens of a telescope is 50 cm. If the magnification of the telescope is 25, then the focal length of the eyepiece is

- (a) 12.5 cm (b) 5 cm
(c) 2 cm (d) 10 cm

- ⊗ (c) Given, focal length of objective lens, $f_o = 50$ cm and magnification of telescope $m = 25$

If f_e be the focal length of eyepiece, then

$$m = -\frac{f_o}{f_e}$$

$$\Rightarrow 25 = -\frac{50}{f_e}$$

$$\Rightarrow f_e = -\frac{50}{25} = -2 \text{ cm}$$

$$|f_e| = 2 \text{ cm}$$

- 100.** Which one of the following force is non-central and non-conservative?

- (a) Frictional force
(b) Electric force
(c) Gravitational force
(d) Mechanical force

- ⊗ (a) A force on body which does not always act towards a fixed point, is called non-central force.

The forces that do not store energy are called non-conservative forces.

Work done by non-conservative forces depends on the path of the body moving from one point to another point.

Therefore, frictional force is a non-central and non-conservative force.

- 101.** On exposure to moist air, copper gains a green coat on its surface due to formation of which one of the following compounds?

- (a) Copper carbonate
(b) Copper oxide
(c) Copper sulphate
(d) Copper nitrate

- ⊗ (a) On exposure to moist air, copper gains a green coat on its surface due to formation of copper carbonate.

- 102.** Which one of the following will not produce carbon dioxide on reacting with an aqueous solution of hydrochloric acid?

- (a) Limestone (b) Quicklime
(c) Chalk (d) Marble

- ⊗ (b) Calcium carbonate occurs in nature in several forms like limestone, chalk, marble, etc. It reacts with aqueous solution of hydrochloric acid (HCl) to liberate carbon dioxide.

Quicklime on reaction with HCl does not liberate CO_2 .

- 103.** Which one of the following substances is not a mixture?

- (a) Ice (b) Ice-cream
(c) Air (d) Honey

- ⊗ (a) Mixtures are obtained by mixing two or more substances in any proportions. Thus, among the given options, ice is not a mixture as it contains only water (liquid). The other substances, i.e., ice-cream, air and honey are mixtures.

- 104.** Which one of the following is an example of Salt-Crystal growth?

- (a) Chemical weathering
(b) Physical weathering
(c) Biological weathering
(d) Bio-chemical weathering

- ⊗ (b) Physical weathering is an example of Salt-Crystal growth. Physical weathering is a term used in science that refers to the geological process of rocks breaking apart without changing their chemical composition. Over time, movements of the earth and environment can break apart rock formation, causing physical weathering. It can also refer to other things in the environment, breaking down, like soil and mineral, pressure, warm temperature, water and ice can cause physical weathering.

105. Which one of the following is the correct sequence of proved coal reserves in the Indian States in decreasing order?

- (a) Jharkhand, Chhattisgarh, Odisha, West Bengal
- (b) Jharkhand, Odisha, Chhattisgarh, West Bengal
- (c) Odisha, West Bengal, Jharkhand, Chhattisgarh
- (d) Odisha, Chhattisgarh, West Bengal, Jharkhand

⊗ (b) Coal is the main source of energy in India as it fulfils about 67% of the total commercial energy consumed in the country.

The decreasing order of proved coal reserve is given below

State	Proved Coal Reserve (million tonnes)
Jharkhand	45563
Odisha	37391
Chhattisgarh	20428
West Bengal	14156

Hence option (b) is correct answer.

106. Consider the following statements relating to Richter scale

1. It was devised in 1935 by Charles F Richter.
 2. It describes the quantity of energy released by a single earthquake.
 3. Richter scale has no upper limit.
- Which of the statement(s) given above is/are correct?

- (a) Only 1
- (b) 1 and 2
- (c) 2 and 3
- (d) All of these

⊗ (b) Richter scale is a scale of number used to indicate the magnitude of earthquakes. Charles Francis Richter developed the Richter scale in 1935. This scale describes the quantity of energy released by earthquake. Numbers for the Richter scale range from 0 to 9. So, here statements (1) and (2) are correct.

107. Which one of the following ocean currents is not a cold ocean current?

- (a) Canary current
- (b) California current
- (c) Kuroshio current
- (d) Oyashio current

⊗ (c) Ocean current is a continuous movement of ocean water from one place to another. It is created by wind, water temperature, salt content and gravitational force of Moon. It is of two types; cold and warm ocean currents.

Examples of warm ocean current are Kuroshio, Alaskan, El Nino, East Australian, Florida, Gulf stream, Brazilian and Agulhas ocean currents. Examples of cold ocean current are Humboldt or Peruvian, Kuril or Oyashio, California, Antarctica, Okhotsk, Labrador, Canary

and Falkland ocean currents. Hence, option (c) is correct.

108. What is the time gap in occurrence of two successive tides at a given place on the ocean surface?

- (a) 12 hr
- (b) 12 hr 26 min
- (c) 24 hr
- (d) 24 hr 52 min

(b) A lunar day has a length of 24 hours and 52 minutes. Earth rotates through two tidal 'bulges' every lunar day. So, coastal areas experience two high and two low tides in every 24 hours and 52 minutes. There are two high tides occur in the interval of 12 hours and 26 minutes. Hence option (b) is correct answer.

109. Tooth enamel is made up of which one of the following calcium compounds?

- (a) Calcium carbonate
- (b) Calcium sulphate
- (c) Calcium hydroxide
- (d) Calcium phosphate

(d) Enamel is the hardest substance in the human body. It contains the highest percentage of minerals, 96% with water and organic material composing the rest. The primary mineral present in enamel is hydroxyapatite which is a crystalline calcium phosphate.

110. Suppose there are two planets, 1 and 2, having the same density, but their radii are R_1 and R_2 respectively, where $R_1 > R_2$. The accelerations due to gravity on the surface of these planets are related as

- (a) $g_1 > g_2$
- (b) $g_1 < g_2$
- (c) $g_1 = g_2$
- (d) Cannot say anything

⊗ (a) Acceleration due to gravity on the surface of first planet,

$$g_1 = \frac{GM_1}{R_1^2} \quad \dots(i)$$

where, M_1 is the mass of first planet.

$$\text{But, } M_1 = \frac{4}{3} \pi R_1^3 \cdot \rho_1 \quad (\because \text{mass} = \text{volume} \times \text{density})$$

where, ρ_1 = density of the first planet.

$$g_1 = \frac{G \cdot \frac{4}{3} \pi R_1^3 \cdot \rho_1}{R_1^2} \quad [\text{from Eq. (i)}]$$

$$g_1 = \frac{4}{3} G \pi \rho_1 R_1 \quad \dots(ii)$$

Similarly, acceleration due to gravity on the surface of second planet,

$$g_2 = \frac{4}{3} G \pi \rho_2 R_2 \quad \dots(iii)$$

∴ From Eqs. (ii) and (iii), we get

$$\frac{g_1}{g_2} = \frac{\rho_1 R_1}{\rho_2 R_2} = \frac{R_1}{R_2} \quad (\because \rho_1 = \rho_2)$$

Since, $R_1 > R_2$, hence $g_1 > g_2$.

111. The sun is seen little before it rises and for a short while after it sets. This is because of

- (a) total internal reflection
- (b) atmospheric refraction
- (c) apparent shift in the direction of sun
- (d) dispersion

⊗ (b) The sun is seen little before it rises and for short while after it sets due to atmospheric refraction.

When light enters from vacuum to earth's atmosphere, it basically enters from rarer to denser medium and bends towards horizon.

During sunrise, when the sun is just below the horizon, our atmosphere causes the light rays to bend and we see the sun early.

Similarly, at sunset, the apparent position of the sun is visible to us and not the actual position due to the same bending of light rays effect.

112. The figure shown below gives the time (t) versus position (x) graph of three objects A, B and C. Which one of the following is the correct relation between their speeds v_A , v_B and v_C , respectively at any instant ($t > 0$)?

- (a) $v_A < v_B < v_C$
- (b) $v_A > v_B > v_C$
- (c) $v_A = v_B = v_C \neq 0$
- (d) $v_A = v_B = v_C = 0$

⊗ (b) From figure,

Velocity of object A,

$$v_A = \frac{OA_1}{AA_1} = \cot \theta_A$$

Velocity of object B,

$$v_B = \frac{OB_1}{BB_1} = \cot \theta_B$$

Velocity of object C, $v_C = \frac{OC_1}{CC_1} = \cot \theta_C$

Since, $\theta_C > \theta_B > \theta_A$
 $\Rightarrow \cot \theta_A > \cot \theta_B > \cot \theta_C$
 $\Rightarrow v_A > v_B > v_C$

113. 1 dyne (a unit of force in CGS system) equals to

- (a) 10^3 g-cm/s^2 (b) 10^{-3} g-cm/s^2
(c) 10^5 kg-cm/s^2 (d) 10^{-5} kg-m/s^2

⊙ (d) $1 \text{ dyne} = 1 \text{ g-cm/s}^2$

$$= \frac{1 \text{ g} \cdot 1 \text{ cm}}{1 \text{ s}^2} = \frac{10^{-3} \text{ kg} \cdot 10^{-2} \text{ m}}{1 \text{ s}^2}$$

$$= 10^{-5} \text{ kg-m/s}^2$$

114. In the given velocity (v) versus time (t) graph, accelerated and decelerated motions are respectively represented by line segments

- (a) CD and BC (b) BC and AB
(c) CD and AB (d) AB and CD

⊙ (c) The slope of velocity-time graph gives acceleration produced in the moving body.

From graph, slope of line segment $AB = \tan \theta_2$

which is negative because

$$90^\circ < \theta_2 < 180^\circ.$$

Therefore, line segment AB represents decelerated motion.

Slope of line segment $CD = \tan \theta_1$,

which is positive because

$$0^\circ < \theta_1 < 90^\circ.$$

Therefore, line segment CD represents accelerated motion.

115. Which one of the following statement regarding a thermo flask is not correct?

- (a) The walls of flask are separated by vacuum and made of glass which is a poor conductor of heat.
(b) The glass walls themselves have shiny surfaces.
(c) The surface of inner wall radiates good amount of heat and the surface of outer wall absorbs some of the heat that is radiated from the inner wall.
(d) The cork supports are poor conductors of heat.

⊙ (c) The thermo flask has the silver coating on the inner surface which prevents heat transfer by radiation. The vacuum between its double wall prevents heat moving by convection. The thinness of

the glass walls stops heat entering or leaving the flask by conduction.

Hence, option (c) is not a correct statement regarding a thermo flask.

116. Black hole is a

- (a) huge black star which has zero acceleration due to gravity on its surface
(b) star which has moderate acceleration due to gravity on its surface
(c) star which has collapsed into itself and has large acceleration due to gravity on its surface
(d) star which has collapsed into itself and has zero acceleration due to gravity on its surface

⊙ (c) A black hole is a star which has collapsed into itself and has large acceleration due to gravity on its surface.

A black hole forms when the center of a very massive star collapses in upon itself. The region in space of a black-hole, the pulling force of gravity is, so strong that light is not able to escape.

117. The formula for conversion between Fahrenheit and Celsius is ${}^\circ\text{F} = X + (1.8 \times {}^\circ\text{C})$.

- (a) 32 (b) 22
(c) 98 (d) 42

⊙ (a) The formula for conversion between Fahrenheit and Celsius is

$$\frac{{}^\circ\text{C}}{5} = \frac{{}^\circ\text{F} - 32}{9}$$

$$\Rightarrow \frac{9}{5} {}^\circ\text{C} = {}^\circ\text{F} - 32$$

$$\Rightarrow 1.8 {}^\circ\text{C} = {}^\circ\text{F} - 32$$

$$\Rightarrow {}^\circ\text{F} = 32 + 1.8 {}^\circ\text{C}$$

Comparing with given relation of

$${}^\circ\text{F} = X + (1.8 \times {}^\circ\text{C})$$

We get, $X = 32$

118. When a beam of white light passes through a glass prism, the colour of light beam that deviates the least is

- (a) blue (b) red (c) green (d) violet
⊙ (b) The wavelength of red colour of light is maximum, therefore when a beam of white light passes through a glass prism, then the light of red colour deviates the least.

119. LIGO stands for

- (a) Laser Interferometer Gravitational wave Observatory
(b) Light Interferometer Gravitational wave Observatory
(c) Light Induced Gravity Observatory
(d) Laser Induced Gaseous Optics

⊙ (a) LIGO stands for Laser Interferometer Gravitational wave Observatory. It is a large scale physics experiment and observatory to detect cosmic gravitational waves and to develop gravitational waves observations as an astronomical tool.

120. A fuse wire must be

- (a) conducting and of low melting point
(b) conducting and of high melting point
(c) insulator and of high melting point
(d) insulator and of low melting point

⊙ (a) Fuse wire should have high resistance and low melting point. It is because when high current pass through the circuit, at first, it will resist the high current.

A fuse wire protects our electric appliances from damaging due to sudden increase in electric current.

121. Kamarajar Port was commissioned in 2001 to handle thermal coal requirements. It is situated along the coast of which Indian State?

- (a) Andhra Pradesh (b) Odisha
(c) Tamil Nadu (d) Karnataka

(c) Kamarajar (Ennore) Port is situated along the coast of Tamil Nadu. It is the 12th major port of India. This port was commissioned in 2001 to handle thermal coal requirement.

122. Which one of the following Union Territories of India is the smallest in terms of geographical area?

- (a) Daman and Diu
(b) Chandigarh
(c) Dadra and Nagar Haveli
(d) Lakshadweep

(d) Lakshadweep is the smallest Union Territories of India in terms of geographical area. According to Census 2011, Lakshadweep has an area of 32 km^2 . It is an archipelago consisting of 36 islands and having the capital at Kavaratti. Among others, UTs Daman and Diu has an area of 112 km^2 whereas Chandigarh and Dadra and Nagar Haveli has an area of 114 km^2 and 491 km^2 respectively.

123. Which one of the following can be said to be essentially related to 'Polar Front Theory'?

- (a) Anticyclone
(b) Tropical Cyclone
(c) Temperate Cyclone
(d) Inter Tropical Convergence

⊙ (c) The 'Polar Front Theory' of cyclogenesis was developed to explain the formation of mid-latitudes cyclone or Temperate cyclone. According to this theory, the warm-humid air masses from the tropics meet the dry-cold air masses from poles, and thus a polar front is formed. The cold air mass pushes the warm air mass upwards, forming a low pressure cyclonic system. A mid-latitude cyclone is a large-scale low pressure system that is developed. Hence, option (b) is correct.

124. Brahmaputra and Indus rivers are antecedent rivers. Which one of the following may be the true definition of an antecedent drainage?

- (a) Which follows the initial slope of the Himalaya
- (b) Which existed before the Himalayan range came into existence
- (c) Which followed the dip or rock beds of the Himalaya
- (d) Which followed the strikes of rock beds of the Himalaya

(b) An antecedent drainage is one whose path of flow neither in a valley was established before the mountainous structure was uplifted. Antecedent drainage existed before the Himalayan range came into existence. The rivers that existed before the upheaval of the Himalayas and cut their courses southward by making gorges in the mountains are known as the antecedent rivers. The Indus, Sutlej, Ganga, Kali, Arun, Tista and Brahmaputra are some of the important antecedent rivers originated from beyond the Greater Himalayas.

125. The Karachi Resolution of Congress in 1931 advocated which one of the following issues?

- (a) State shall not own or control key industries and services.
- (b) State shall handover the key industries and services to the Indian business groups.
- (c) State should allow the Indian business group to invest 50% of the capital.
- (d) State shall own or control key industries and services.

(d) The Karachi Resolution of Congress in 1931 advocated that, 'State shall own or control key industries and services'.

The Karachi Resolution was passed by the INC at its Karachi Session in 1931.

The session was conducted in the shadow of three major events—

First, Mahatma Gandhi had just been released from prison following his Salt Satyagraha.

Second, the Gandhi-Irwin pact had just been concluded which had brought the Civil Disobedience Movement to an end.

And third, the British Government had, a week before the session, executed Bhagat Singh and two of his associates in connection with the kakori Conspiracy Case.

126. The treaty of Schonbrunn (1809) was signed after which one of the following battles?

- (a) Battle of Austerlitz
- (b) Battle of Tilsit
- (c) Battle of Wagram
- (d) Battle of Lisbon

(c) The treaty of Schonbrunn (1809) or treaty of Vienna was signed after the **Battle of Wagram**. This treaty was signed between Austria and France.

Battle of Austerlitz (2nd Dec-1805), the first engagement of the war of the third coalition and one of Napoleon's greatest victories.

Battle of Tilsit fought between French and Russia on 14th June, 1807.

The battle of Lisbon (1st July to 25th Oct, 1147) was the military action that brought the city of Lisbon under definitive Portuguese control and expelled its Moorish overlords.

127. Which of the following statements about the New Model Unions is/are correct?

- 1. The New Model Unions were formed in the 1850s.
- 2. The New Model Unions were formed in the 1880s.
- 3. The New Model Unions comprised a Labour Party idea.
- 4. The New Model Unions excluded women in the 1920s.

Select the correct answer using the codes given below.

- (a) Only 1
- (b) Only 2
- (c) 3 and 4
- (d) Only 3

(a) New Model Union or New Model Trade Union (NMTU) were a variety of Trade Union prominent in the United Kingdom. These were formed in the 1850s. These were generally tended to be restricted to individual trades. These unions were not comprised by a Labour Party idea and it also did not exclude women. So, here is only statement (1) is correct. Hence, option (a) is correct.

128. The Truman Doctrine of 1947 was announced to achieve which one of the following?

- (a) Containment of the USSR
- (b) Increasing agricultural production in the USA
- (c) Offering friendship to Europe
- (d) Strengthening the UNO

(a) The Truman Doctrine of 1947 was announced to achieve containment of the USSR. It was announced by Harry S Truman on 12th March, 1947 and further developed on 12th March, 1948.

129. Which of the following statements is/are correct?

- 1. In 1948, Burma was admitted to the United Nations and immediately supported the USA in the Cold War.
- 2. In 1948, Burma joined the United Nations, but refused to denounce China as the aggressor in the Korean War.

Select the correct answer using the codes, given below.

- (a) Only 1
- (b) Only 2
- (c) Both 1 and 2
- (d) Neither 1 nor 2

(b) On 4th Jan, 1948 Burma became an independent republic, under the terms of the Burma Independence Act, 1947. The new country was named the Union of Burma. Apart from this, in 1948, Burma joined the United Nations but refused to denounce China as the aggressor in the Korean war. Hence option (b) is correct answer.

130. Who among the following presented 'The April Thesis' to the Russian people in 1917?

- (a) Stalin
- (b) Trotsky
- (c) Bukharin
- (d) Lenin

(d) Vladimir Lenin presented 'The April Thesis' to the Russian people in 1917. It was the series of ten directives issued by Lenin. It was aimed at fellow Bolsheviks in Russia and returning to Russia from exile. The April Thesis influenced the October Revolution.

131. An Election Commissioner can be removed from office on the recommendation of

- (a) the Chief Justice of India
- (b) the Chief Election Commissioner
- (c) the President of India
- (d) the Parliament

(b) An Election Commissioner can be removed from office on the recommendation of the Chief Election Commissioner (CEC) by the President of India. Article-324 (5) of the Constitution safeguards the CEC from arbitrary removal. CEC can be removed only by the President, just like Judge of the Supreme Court.

132. Which one of the following statements regarding the Rajya Sabha is not correct?

- (a) Its members are elected by the elected members of the Legislative Assembly of a State.
- (b) The election follows the system of proportional representation by means of a single transferable vote.
- (c) 1/3rd of its members retire after every two years.
- (d) It is a permanent body, but can be dissolved earlier by the President.

(d) Option (d) is incorrect because Rajya Sabha (Article-80) is a permanent body and not the subject of dissolution. Its maximum strength is 250. Its members are elected by the elected member of the Legislative Assembly of the State.

The election of Rajya Sabha members follows the system of proportional representation by means of a single transferable vote. One-third (1/3rd) of its members retire after every two years.

133. Fundamental Rights guaranteed under which one of the following Articles of the Constitution of India is available only to the citizens of India?

- (a) Article-19 (b) Article-20
(c) Article-21 (d) Article-22

- ⊗ (a) Under **Article-19** of the Constitution of India, Fundamental Rights are guaranteed only to the citizens of India. There are five fundamental articles which are only to Indian citizens i.e. Articles-15, 16, 19, 29, 30. This article guarantees the six rights. *These are*
1. Right to freedom of speech and expression
 2. Right to assemble peacefully and without arms.
 3. Right to form associations or unions or co-operations.
 4. Right to move freely throughout the territory of India.
 5. Right to reside and settle in any part of the territory of India.
 6. Right to practice any profession or to carry on any occupation, trade or business.

While **Article 20** deals with the protection of certain rights in case of conviction for offences. **Article 21** deals with the protection of life and personal liberty, and **Article 22** grants protection to persons who are arrested or detained.

134. The treaty of Yandabo was signed in

- (a) 1826 (b) 1825
(c) 1824 (d) 1823

- ⊗ (a) The treaty of Yandabo was signed on 24th February, 1826 between the Britishers and Burmese. It brought peace between East India Company and the king of Ava that ended the first Anglo-Burmese war. This treaty started the British Rule in Assam.

135. In the Manusmriti which form of marriage results from the "Voluntary union of a maiden and her lover"?

- (a) Eighth form
(b) Fifth form
(c) Seventh form
(d) Sixth form

- ⊗ (b) "Voluntary union of maiden and her lover" are the fifth form (Gandharava Marriage) of marriage result in the Manusmriti. In this marriage a groom and his bride will wed without their parents knowledge.

However, it is not correctly considered as type of marriage because it does not have the consent of the parents. According to Manusmriti there are eight types of Hindu marriages. These are - Brahma, Daiva, Arsha, Prajapatya, Gandharva, Asura, Rakshasa and Paischaca.

136. Consider the following description of the Samadhi of a former Prime Minister of India.

Central Samadhi Platform comprises nine square black polished granite solid stone blocks, capped with a 'Diya' in the centre. The number nine holds significance and represents the Navarasas, Navaratras and Navagrahas. Then placement of the Nine-Square Samadhi is in a circular lotus shaped pattern. The Nine-Square platform is accessed in four cardinal directions by pathways made in white composite tiles so that the floor does not get heated.

Identify the Samadhi.

- (a) Shakti Sthal (b) Shantivan
(c) Sadaiv Atal (d) Veer Bhumi

- ⊗ (c) The Samadhi, which is mentioned in above question, is **Sadaiv Atal**. It is the crematorium (Samadhi) of former Prime Minister of India, Atal Bihari Vajpayee (1924-2018). He served three terms as the Prime Minister of India. He was the first Indian Prime Minister who was not a member of the Indian National Congress party to have served a full five year term in office.

Shakti Sthal is a memorial of former Prime Minister Indira Gandhi.

Shantivan is the Samadhi or Cremation spot of Prime Minister Jawaharlal Nehru and the **Veer Bhumi** is a memorial dedicated to the former Prime Minister Rajiv Gandhi.

137. IMBEX is a joint exercise conducted regularly between Armies of India and

- (a) Malaysia (b) Maldives
(c) Mauritius (d) Myanmar

- ⊗ (d) India-Myanmar Bilateral Army Exercise (IMBEX) is a joint exercise conducted regularly between Armies of India and Myanmar. The first edition of this exercise was held in 2017 and 2nd edition was conducted on 14th January 2019 in Haryana.

This joint exercise is also the first of its kind military training exercise on United Nations Peacekeeping Operations between India and Myanmar.

138. Who among the following was awarded The Hindu Prize in Fiction category for the year 2018?

- (a) Neelum Saran Gour
(b) N. Kalyan Raman
(c) Manoranjan Byapari
(d) Arunav Sinha

- ⊗ (a) Neelum Saran Gour was awarded The Hindu Prize in Fiction category for the year 2018. Neelum Gour got this award for her novel 'Requiem in Raga Janki'. She is the author of five novels, four collection of short stories and one work of literary non-fiction. She has also edited a pictorial volume on the history and culture of Allahabad.

139. Who among the following was appointed as Head of the seven Members committee to look into revenue shortfall being faced by the States after the GST rollout in India and suggest steps for augmenting collections?

- (a) Himanta Biswa Sharma
(b) Thomas Isaac
(c) Sushil Modi
(d) Capt. Abhimanyu

- ⊗ (c) Sushil Modi was appointed as Head of the seven members committee to look into revenue shortfall being faced by the States after the GST rollout in India and suggest steps for augmenting collections by the States, since July, 2017.

As per the term of reference of the Group of Ministers, the Modi led committee will undertake data analysis using econometric and statistical tools and suggest suitable measures for course correction for revenue augmentation.

140. The 15th Pravasi Bharatiya Divas, 2019 was held in

- (a) New Delhi (b) Gandhi Nagar
(c) Prayagraj (d) Varanasi

- ⊗ (d) The 15th Pravasi Bharatiya Divas, 2019 was held in Varanasi (Uttar Pradesh) from 21st to 23rd January, 2019. It was inaugurated by the Prime Minister Narendra Modi and Prime Minister of Mauritius, Pravind Jugnauth.

The theme of this Pravasi Bharatiya Divas was 'Role of Indian Diaspora in building a new India'. On 9th January, 2020, 16th Pravasi Bharatiya Divas was celebrated.

141. Which one of the following cities was named by UNESCO as World Capital of Architecture for 2020?

- (a) Tokyo
(b) Johannesburg
(c) Rio-de-Janerio
(d) New Delhi

- ⊗ (c) Rio-de-Janerio (Brazil) was named by UNESCO as World Capital of Architecture for 2020. Rio-de-Janerio will be hosting the World Congress of the International Union of Architects in July, 2020.
- 142.** Who among the following was named ICC's emerging player of the year 2018?
 (a) Rishabh Pant (b) Josh Hazlewood
 (c) Hasan Ali
 (d) Mustafizur Rahman
- ⊗ (a) India's fast-rising wicket keeper batsman Rishabh Pant was on Tuesday named the International Cricket Councils emerging player of the year in the world body's annual awards. The 21 year old Pant was picked by the ICC's voting academy for a stellar show in his break through test you in 2018.
- 143.** India's first private sector Howitzer gun-making unit is located at
 (a) Jamshedpur (b) Kolkata
 (c) Hazira (d) Gwalior
- ⊗ (c) India's first private sector Howitzer gun-making unit is located at Hazira in Surat (Gujarat). It was inaugurated by the Prime Minister Narendra Modi on 19th January, 2019 as India's first Armoured System Complex (ASC). It is built by a private company-Larsen and Toubro (L & T).
- 144.** Which of the following pairs of old names and new names of islands in India is/are correctly matched?
 1. Ross Island-Shaheed Dweep
 2. Neil Island-Netaji Subhas Chandra Bose Dweep
 3. Havelock Island-Swaraj Dweep
 Select the correct answer using the codes given below.
 (a) 1, 2 and 3 (b) 2 and 3
 (c) 1 and 2 (d) Only 3
- ⊗ (d) Ross, Neil and Havelock Islands have been renamed on 75th anniversary of freedom fighter Subhash Chandra Bose. The new names of these islands are as follows:
 Ross Island — Netaji Subhash Chandra Bose Dweep
 Neil island — Shaheed Dweep
 Havelock Island — Swaraj Dweep
 Hence option (d) is correct.
- 145.** Who among the following was posthumously conferred with the Ashoka Chakra, India's highest peacetime gallantry award, in 2019?
 (a) Jyoti Prakash Nirala
 (b) Nazir Ahmad Wani
 (c) Hangpan Dada
 (d) Mohan Nath Goswami
- ⊗ (b) Lance Naik Nazir Ahmad Wani was posthumously conferred with the Ashoka Chakra, India's Highest Peacetime Gallantry Award, in 2019. He is the first recipient of the Ashoka Chakra award from Kashmir region of the Indian State Jammu and Kashmir. He was from Jammu and Kashmir Light Infantry of the Indian Army.
- 146.** As per the code of the nomenclature, which one of the following is the correct way of writing a biological name?
 (a) *Amoeba Proteus*
 (b) *Amoeba proteus*
 (c) *amoeba proteus*
 (d) *Amoeba Proteus*
- ⊗ (b) Name written in option (b), i.e. *Amoeba proteus* is the correct way of writing biological name of *Amoeba*. The first name represents genus and its first letter is capital. The second name represents species and its first letter is small. Both names are underlined separately when hand written and written in Italics when typed.
- 147.** Which one of the following statements regarding electrocardiogram is correct?
 (a) Electrocardiogram is graphical representation of electrical activity of cornea
 (b) Electrocardiogram is graphical representation of activity of kidney
 (c) Electrocardiogram is graphical representation of activity of brain
 (d) Electrocardiogram is graphical representation of electrical activity of heart
- ⊗ (d) Statement (d) is correct regarding electrocardiography. Electrocardiogram is graphical representation of electrical activity of heart. Electrodes are placed on patient's limbs and on the surface of the chest and connected to a machine called electrocardiograph. It detects any abnormality in the functioning of the heart.
- 148.** Which one of the following statements regarding penicillin is correct?
 (a) Penicillin resistant bacteria can store this antibiotic in vacuole
 (b) Penicillin resistant bacteria can degrade this antibiotic by an enzyme called β -lactamase
 (c) Penicillin resistant bacteria can degrade this antibiotic by an enzyme called lactic acid dehydrogenase
 (d) Penicillin is not absorbed by bacteria, so most bacteria are resistant
- ⊗ (b) Statement (b) regarding penicillin is correct. The bacteria which produce enzyme β -lactamase can degrade penicillin. Most of the bacteria are sensitive for penicillin as it interferes cell wall synthesis.
- 149.** Which one of the following organelles of mammalian cell is rich in hydrolytic enzymes?
 (a) Mitochondria (b) Ribosomes
 (c) Lysosome (d) Nucleus
- ⊗ (c) Cell organelle lysosome is rich in hydrolytic enzymes. These enzymes degrade the cell debris and recycle its components within the cells. Mitochondria is powerhouse of the cell. Ribosomes are called protein factory. Nucleus is referred as head of the cell which controls all cellular activities.
- 150.** Which one of the following statements regarding cholera is correct?
 (a) Cholera is a disease that causes loss of memory
 (b) Cholera is a disease of muscles due to consumption of alcohol
 (c) Cholera is a disease due to the consumption of contaminated food or water
 (d) Cholera is a genetic disease
- ⊗ (c) Statement (c) regarding cholera is correct. It is a waterborne disease and also spread through contaminated food. It is caused by bacterium *Vibrio cholerae*. Cholera does not cause loss of memory. The consumption of alcohol does not cause cholera and it does not affect the functioning of muscles. This is also not a hereditary disease. Hence, statement (c) is correct, rest of the statements are incorrect.

National Defence Academy/Naval Academy

SOLVED PAPER 2018 (II)

PAPER I : Mathematics

1. What is the value of $\log_7 \log_7$

$\sqrt{7\sqrt{7\sqrt{7}}}$ equal to ?

- (a) $3 \log_2 7$ (b) $1 - 3 \log_2 7$
(c) $1 - 3 \log_7 2$ (d) $\frac{7}{8}$

⊙ (c) We have,

$$\sqrt{7\sqrt{7\sqrt{7}}} = 7^{\frac{1}{2}} \cdot 7^{\frac{1}{4}} \cdot 7^{\frac{1}{8}} = 7^{\frac{7}{8}}$$

Now, $\log_7 \log_7 \sqrt{7\sqrt{7\sqrt{7}}}$

$$= \log_7 \log_7 (7)^{\frac{7}{8}}$$

$$= \log_7 \left(\frac{7}{8} \right)$$

$$= \log_7 7 - \log_7 8$$

$$[\because \log \frac{m}{n} = \log m - \log n]$$

$$= \log_7 7 - \log_7 2^3 = 1 - 3 \log_7 2$$

$$[\because \log_b a^n = n \log_b a]$$

2. If an infinite GP has the first term x and the sum 5, then which one of the following is correct?

- (a) $x < -10$
(b) $-10 < x < 0$
(c) $0 < x < 10$
(d) $x > 10$

⊙ (c) Given that first term of an infinity GP is x and sum = 5

$$\therefore \frac{x}{1-r} = 5$$

$$[\because \text{sum of infinity GP} = \frac{a}{1-r}]$$

$$\Rightarrow \frac{x}{5} = 1 - r$$

$$\Rightarrow r = 1 - \frac{x}{5}$$

Where, $|r| < 1$

$$\Rightarrow -1 < -\frac{x}{5} < 1$$

$$\Rightarrow -2 < -\frac{x}{5} < 0$$

$$\Rightarrow -10 < -x < 0$$

$$\Rightarrow 10 > x > 0$$

3. Consider the following expressions

1. $x + x^2 - \frac{1}{x}$

2. $\sqrt{ax^2 + bx + x - c + \frac{d}{x} - \frac{e}{x^2}}$

3. $3x^2 - 5x + ab$

4. $\frac{2}{x^2 - ax + b^3}$

5. $\frac{1}{x} - \frac{2}{x+5}$

Which of the above are rational expressions?

- (a) 1, 4 and 5 (b) 1, 3, 4 and 5
(c) 2, 4 and 5 (d) 1 and 2

⊙ (a) We know that, rational expressions are those expression which can be write in the form of $\frac{p(x)}{q(x)}$, $q(x) \neq 0$

So, 1, 4, 5 are rational expressions

4. A square matrix A is called orthogonal if

- (a) $A = A^2$ (b) $A' = A^{-1}$
(c) $A = A^{-1}$ (d) $A = A'$

where A' is the transpose of A

⊙ (b) A square matrix is called an orthogonal matrix if $AA' = I$ multiply, by A^{-1}

$$\therefore A^{-1}(AA') = A^{-1}I \Rightarrow IA' = A^{-1}$$

$$\Rightarrow A' = A^{-1}$$

5. If A , B and C are subsets of a universal set, then which one of the following is not correct?

- (a) $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$
(b) $A' \cup (A \cap B) = (B' \cap A') \cup A$
(c) $A' \cup (B \cup C) = (C' \cap B)' \cap A'$
(d) $(A \cap B) \cup C = (A \cup C) \cap (B \cup C)$

where A' is the complement of A

⊙ (c) Let A, B and C are subsets of a universal set.

$$\text{Let } A = \{1\}, B = \{2\}, C = \{3\} \\ \cup = \{1, 2, 3\}, A' = \{2, 3\}, B' = \{1, 3\}, \\ C' = \{1, 2\}$$

by checking options, we get

$$\text{LHS} = A' \cup (B \cup C)$$

$$= \{2, 3\} \cup \{2, 3\}$$

$$= \{2, 3\}$$

$$\text{RHS} = (C' \cap B)' \cap A'$$

$$= (\{1, 2\} \cap \{1, 3\})' \cap \{2, 3\}$$

$$= (\{2\})' \cap \{2, 3\}$$

$$= \{1, 3\} \cap \{2, 3\}$$

$$= \{3\}$$

$$\text{LHS} \neq \text{RHS}$$

So, option (c) is wrong

6. Let x be the number of integers lying between 2999 and 8001 which have at least two digits equal. Then x is equal to

- (a) 2480 (b) 2481
(c) 2482 (d) 2483

⊙ (b) We have, x be the number lying between 2999 and 8001

if repetition allowed

$$\text{total numbers} = 5 \times 10 \times 10 \times 10 = 5000$$

if repetition not allowed

$$\therefore \text{total numbers} = 5 \times 9 \times 8 \times 7 = 2520$$

So, $x =$ atleast two digit repeated
 $= 5000 - 2520 + 1$
 $= 2481$
 $[\because \text{add } 1 \text{ because of number } 8000]$

7. The sum of the series $3 - 1 + \frac{1}{3} - \frac{1}{9} + \dots$ is equal to

- (a) $\frac{20}{9}$
- (b) $\frac{9}{20}$
- (c) $\frac{9}{4}$
- (d) $\frac{4}{9}$

(*) (c) Given series

$3 - 1 + \frac{1}{3} - \frac{1}{9} + \dots$ are in GP

$$\therefore r = \frac{-1}{3}$$

$$S_n = \frac{3}{1 - \left(-\frac{1}{3}\right)} \left[\because S_n = \frac{a}{1-r} \right]$$

$$= \frac{3}{\frac{4}{3}} = \frac{9}{4}$$

Directions (Q. Nos. 8 and 9)

Consider the information given below and answer the two items that follow. A survey was conducted among 300 students. It was found that 125 students like to play cricket, 145 students like to play football and 90 students like to play tennis. 32 students like to play exactly two games out of the three games.

8. How many students like to play all the three games ?

- (a) 14
- (b) 21
- (c) 28
- (d) 35

(*) (a) Let,

A be the set of students like to play cricket
 B be the set of students like to play football.

C be the set of students like to play tennis.

We have,

$$n(A \cup B \cup C) = 300$$

$$n(A) = 125$$

$$n(B) = 145$$

$$n(C) = 90$$

$$n(A \cup B \cup C) = n(A) + n(B) + n(C) - [n(A \cap B) + n(B \cap C) + n(C \cap A)] + n(A \cap B \cap C)$$

$$\Rightarrow 300 = 125 + 145 + 90$$

$$- [n(A \cap B) + n(B \cap C) + n(C \cap A)] + n(A \cap B \cap C)$$

$$\Rightarrow n(A \cap B) + n(B \cap C) + n(C \cap A) = 60 + n(A \cap B \cap C) \dots(i)$$

Again,

$$n(A \cap B) + n(B \cap C) + n(C \cap A) - 3n(A \cap B \cap C) = 32$$

$$\Rightarrow n(A \cap B) + n(B \cap C) + n(C \cap A) = 32 + 3n(A \cap B \cap C) \dots(ii)$$

From Eqs. (i) and (ii), we get

$$60 + n(A \cap B \cap C) = 32 + 3n(A \cap B \cap C)$$

$$\Rightarrow 2n(A \cap B \cap C) = 28$$

$$\Rightarrow n(A \cap B \cap C) = 14$$

9. How many students like to play exactly one game?

- (a) 196
- (b) 228
- (c) 254
- (d) 268

(*) (c) Number of students like to play exactly one

$$\text{game} = n(A) + n(B) + n(C) - 2[n(A \cap B) + n(B \cap C) + n(C \cap A)] + 3n(A \cap B \cap C)$$

$$= 125 + 145 + 90 - 2[32 + 3 \times 14] + 3 \times 14$$

$$= 360 - 106$$

$$= 254$$

10. If α and β ($\neq 0$) are the roots of the quadratic equation $x^2 + \alpha x - \beta = 0$, then the quadratic expression $-x^2 + \alpha x + \beta$, where $x \in R$ has

- (a) Least value $-\frac{1}{4}$
- (b) Least value $-\frac{9}{4}$
- (c) Greatest value $\frac{1}{4}$
- (d) Greatest value $\frac{9}{4}$

(*) (d) α and β are the roots of quadratic equation.

$$x^2 + \alpha x - \beta = 0$$

$$\text{So, } (\alpha\beta = -\beta) \Rightarrow \alpha\beta + \beta = 0$$

$$\Rightarrow \beta(\alpha + 1) = 0$$

$$\alpha = -1 \quad [\because \beta \neq 0]$$

$$\alpha + \beta = -\alpha$$

$$\Rightarrow 2\alpha + \beta = 0$$

$$\Rightarrow \beta = 2$$

$$\therefore -x^2 + \alpha x + \beta \quad [\because \alpha = -1, \beta = 2]$$

$$= -x^2 - x + 2$$

$$\text{Greatest value} = 2 - \left[\frac{(-1)^2}{4(-1)} \right]$$

$$[\because \text{Greatest value} = c - \left(\frac{b^2}{4a} \right)]$$

$$= 2 - \left(\frac{1}{-4} \right)$$

$$= 2 + \frac{1}{4}$$

$$= \frac{9}{4}$$

11. What is the coefficient of the middle term in the binomial expansion of $(2+3x)^4$?

- (a) 6
- (b) 12
- (c) 108
- (d) 216

(*) (d) We have, $(2+3x)^4$

Here, $n = 4$, so middle term is

$$\left(\frac{4}{2} + 1 \right)^{\text{th}} = 3^{\text{rd}} \text{ term}$$

$$T_3 = {}^4C_2 \times 2^2 \times (3x)^2$$

$$[T_{r+1} = {}^nC_r a^r b^{n-r}]$$

$$= \frac{4 \times 3}{2 \times 1} \times 4 \times 9x^2$$

$$T_3 = 216x^2$$

Hence, coefficient of middle term is 216.

12. For a square matrix A, which of the following properties hold?

1. $(A^{-1})^{-1} = A$
2. $\det(A^{-1}) = \frac{1}{\det A}$
3. $(\lambda A)^{-1} = \lambda A^{-1}$, where λ is a scalar

Select the correct answer using the code given below.

- (a) 1 and 2
- (b) 2 and 3
- (c) 1 and 3
- (d) 1, 2 and 3

(*) (d) For a square matrix A

Statement 1

$$(A^{-1})^{-1} = A$$

Statement 1 is true

Statement 2

$$\det(A^{-1}) = \frac{1}{\det A}$$

Statement 2 is correct

Statement 3

$$(\lambda A)^{-1} = \lambda A^{-1}, \text{ where } \lambda \text{ is a scalar.}$$

So, Statement 3 is correct.

13. Which one of the following factors does the expansion of the determinant

$$\begin{vmatrix} x & y & 3 \\ x^2 & 5y^3 & 9 \\ x^3 & 10y^5 & 27 \end{vmatrix} \text{ contain ?}$$

- (a) $x - 3$
- (b) $x - y$
- (c) $y - 3$
- (d) $x - 3y$

(*) (a) We have,

$$\begin{vmatrix} x & y & 3 \\ x^2 & 5y^3 & 9 \\ x^3 & 10y^5 & 27 \end{vmatrix}$$

$$[C_1 \rightarrow C_1 - C_3 \text{ से.}]$$

$$= \begin{vmatrix} x-3 & y & 3 \\ x^2-9 & 5y^3 & 9 \\ x^3-27 & 10y^5 & 27 \end{vmatrix}$$

$$= (x-3) \begin{vmatrix} 1 & y & 3 \\ x+3 & 5y^3 & 9 \\ x^2+9+3x & 10y^5 & 27 \end{vmatrix}$$

14. What is the adjoint of the matrix

$$\begin{pmatrix} \cos(-\theta) & -\sin(-\theta) \\ -\sin(-\theta) & \cos(-\theta) \end{pmatrix}?$$

- (a) $\begin{pmatrix} \cos \theta & -\sin \theta \\ -\sin \theta & \cos \theta \end{pmatrix}$
- (b) $\begin{pmatrix} \cos \theta & \sin \theta \\ \sin \theta & \cos \theta \end{pmatrix}$
- (c) $\begin{pmatrix} \cos \theta & \sin \theta \\ -\sin \theta & \cos \theta \end{pmatrix}$
- (d) $\begin{pmatrix} \cos \theta & -\sin \theta \\ \sin \theta & \cos \theta \end{pmatrix}$

⊙ (a) We have,

$$A = \begin{bmatrix} \cos(-\theta) & -\sin(-\theta) \\ -\sin(-\theta) & \cos(-\theta) \end{bmatrix}$$

$$A = \begin{bmatrix} \cos \theta & \sin \theta \\ \sin \theta & \cos \theta \end{bmatrix}$$

Now, $C_{11} = \cos \theta$

$C_{12} = -\sin \theta$

$C_{21} = -\sin \theta$

$C_{22} = \cos \theta$

$$\text{adj } A = \begin{bmatrix} \cos \theta & -\sin \theta \\ -\sin \theta & \cos \theta \end{bmatrix}^T$$

$$= \begin{bmatrix} \cos \theta & -\sin \theta \\ -\sin \theta & \cos \theta \end{bmatrix}$$

15. What is the value of

$$\left(\frac{-1+i\sqrt{3}}{2}\right)^{3a} + \left(\frac{-1-i\sqrt{3}}{2}\right)^{3n}$$

where $i = \sqrt{-1}$?

- (a) 3
- (b) 2
- (c) 1
- (d) 0

⊙ (b) We have,

$$\left(\frac{-1+i\sqrt{3}}{2}\right)^{3n} + \left(\frac{-1-i\sqrt{3}}{2}\right)^{3n}$$

$$= (\omega)^{3n} + (\omega^2)^{3n}$$

$$\left[\because \omega = \frac{-1+i\sqrt{3}}{2}, \omega^2 = \frac{-1-i\sqrt{3}}{2} \right]$$

$$= (\omega^3)^n + (\omega^3)^n$$

$$(1)^n + (1)^n$$

$$= 1 + 1 = 2$$

$$[\because \omega^3 = 1]$$

16. There are 17 cricket players, out of which 5 players can bowl. In how many ways can a team of 11 players be selected so as to include 3 bowlers?

- (a) $C(17, 11)$
- (b) $C(12, 8)$
- (c) $C(17, 5) \times C(5, 3)$
- (d) $C(5, 3) \times C(12, 8)$

⊙ (d) There are 17 cricket players, out of which 5 players can bowl.

$$\text{required number of ways} = {}^{12}C_8 \times {}^5C_3$$

$$= C(12, 8) \times C(5, 3)$$

17. What is the value of

$$\log_9 27 + \log_8 32?$$

- (a) $\frac{7}{2}$
- (b) $\frac{19}{6}$
- (c) 4
- (d) 7

⊙ (b) We have,

$$\log_9 27 + \log_8 32$$

$$= \log_{3^2} 3^3 + \log_2 2^5$$

$$= \frac{3}{2} \log_3 3 + \frac{5}{3} \log_2 2$$

$$\left[\because \log_{a^m} b^n = \frac{n}{m} \log_a b \right]$$

$$= \frac{3}{2} + \frac{5}{3} = \frac{19}{6}$$

18. If A and B are two invertible square matrices of same order, then what is $(AB)^{-1}$ equal to?

- (a) $B^{-1}A^{-1}$
- (b) $A^{-1}B^{-1}$
- (c) $B^{-1}A$
- (d) $A^{-1}B$

⊙ (a) If A and B are two invertible square matrices of same order, then

$$(AB)^{-1} = B^{-1}A^{-1}$$

19. If $a + b + c = 0$, then one of the solutions of

$$\begin{vmatrix} a-x & c & b \\ c & b-x & a \\ b & a & c-x \end{vmatrix} = 0 \text{ is}$$

- (a) $x = a$
- (b) $x = \sqrt{\frac{3(a^2 + b^2 + c^2)}{2}}$
- (c) $x = \sqrt{\frac{2(a^2 + b^2 + c^2)}{3}}$
- (d) $x = 0$

⊙ (d) We have,

$$\begin{vmatrix} a-x & c & b \\ c & b-x & a \\ b & a & c-x \end{vmatrix} = 0$$

$$R_1 \rightarrow R_1 + R_2 + R_3$$

$$\Rightarrow \begin{vmatrix} a+b+c-x & a+b+c-x & a+b+c-x \\ c & b-x & a \\ b & a & c-x \end{vmatrix} = 0$$

$$\Rightarrow \begin{vmatrix} -x & -x & -x \\ c & b-x & a \\ b & a & c-x \end{vmatrix} = 0$$

$$\Rightarrow (-x) \begin{vmatrix} 1 & 1 & 1 \\ c & b-x & a \\ b & a & c-x \end{vmatrix} = 0$$

$$\Rightarrow x = 0$$

Hence, $x = 0$ is a solution

20. What should be the value of x , so that the matrix $\begin{pmatrix} 2 & 4 \\ -8 & x \end{pmatrix}$ does not

have an inverse?

- (a) 16
- (b) -16
- (c) 8
- (d) -8

⊙ (b) Let, $A = \begin{bmatrix} 2 & 4 \\ -8 & x \end{bmatrix}$

Matrix does not have any solution if

$$|A| = 0$$

$$2x + 32 = 0$$

$$2x = -32$$

$$x = -\frac{32}{2}$$

$$x = -16$$

21. The system of equations

$$2x + y - 3z = 5$$

$$3x - 2y + 2z = 5$$

$$\text{and } 5x - 3y - z = 16$$

- (a) is inconsistent
- (b) is consistent, with a unique solution
- (c) is consistent, with infinitely many solutions
- (d) has its solution lying along X-axis in three-dimensional space

⊙ (b) The system of equations

$$2x + y - 3z = 5$$

$$3x - 2y + 2z = 5$$

$$\text{and } 5x - 3y - z = 0$$

$$A = \begin{bmatrix} 2 & 1 & -3 \\ 3 & -2 & 2 \\ 5 & -3 & -1 \end{bmatrix}$$

$$|A| = 2[-2(-1) - 2(-3)] - 1[3(-1) - 2(5)]$$

$$+ (-3)[3(-3) - (-2)(5)]$$

$$= 2(8) - 1(-13) - 3(1)$$

$$= 16 + 13 - 3 = 26 \neq 0$$

So, System is consistent with unique solution.

22. Which one of the following is correct in respect of the cube roots of unity?

- (a) They are collinear
- (b) They lie on a circle of radius $\sqrt{3}$
- (c) They form an equilateral triangle
- (d) None of the above

⊙ (c) We know that, cube roots of unity is

$$1, \omega, \omega^2, \text{ where } \omega = \frac{-1+i\sqrt{3}}{2} \text{ and}$$

$$\omega^2 = \frac{-1-i\sqrt{3}}{2}$$

They form an equilateral triangle.

23. If u, v and w (all positive) are the $p^{\text{th}}, q^{\text{th}}$ and r^{th} terms of a GP, then the determinant of the matrix

$$\begin{vmatrix} \ln u & p & 1 \\ \ln v & q & 1 \\ \ln w & r & 1 \end{vmatrix}$$

- (a) 0
- (b) 1
- (c) $(p-q)(q-r)(r-p)$
- (d) $\ln u \times \ln v \times \ln w$

(c) Given that u, v and w are the $p^{\text{th}}, q^{\text{th}}$ and r^{th} term of GP

$$\therefore u = aR^{p-1}, v = aR^{q-1} \quad [\because a_n = aR^{n-1}]$$

and $w = aR^{r-1}$

We have,
$$\begin{vmatrix} \ln u & p & 1 \\ \ln v & q & 1 \\ \ln w & r & 1 \end{vmatrix}$$

$$= \begin{vmatrix} \ln a R^{p-1} & p & 1 \\ \ln a R^{q-1} & q & 1 \\ \ln a R^{r-1} & r & 1 \end{vmatrix}$$

$$= \begin{vmatrix} \ln a + p - 1 \ln R & p & 1 \\ \ln a + q - 1 \ln R & q & 1 \\ \ln a + r - 1 \ln R & r & 1 \end{vmatrix}$$

$$= \begin{vmatrix} \ln a & p & 1 \\ \ln a & q & 1 \\ \ln a & r & 1 \end{vmatrix} + \begin{vmatrix} (p-1) \ln R & p & 1 \\ (q-1) \ln R & q & 1 \\ (r-1) \ln R & r & 1 \end{vmatrix}$$

$$= \ln a \begin{vmatrix} 1 & p & 1 \\ 1 & q & 1 \\ 1 & r & 1 \end{vmatrix} + \ln R \begin{vmatrix} p-1 & p & 1 \\ q-1 & q & 1 \\ r-1 & r & 1 \end{vmatrix}$$

$$C_2 \rightarrow C_2 - C_3$$

$$= 0 + \ln R \begin{vmatrix} p-1 & p-1 & 1 \\ q-1 & q-1 & 1 \\ r-1 & r-1 & 1 \end{vmatrix}$$

$$= 0$$

24. Let the coefficient of the middle term of the binomial expansion of $(1+x)^{2n}$ be α and those of two middle terms of the binomial expansion of $(1+x)^{2n-1}$ be β and γ . Which one of the following relations is correct?

- (a) $\alpha > \beta + \gamma$
- (b) $\alpha < \beta + \gamma$
- (c) $\alpha = \beta + \gamma$
- (d) $\alpha = \beta\gamma$

(c) We have, $(1+x)^{2n}$

$$\text{Middle term} = \binom{2n}{\frac{2n}{2}} x^n$$

$$= (n+1)^{\text{th}} \text{ term}$$

$$\text{Coefficient of } (n+1)^{\text{th}} \text{ term} = {}^{2n}C_n$$

$$\alpha = {}^{2n}C_n$$

Again, we have binomial expansion of $(1+x)^{2n-1}$ coefficient of middle terms are,

$$\therefore \beta = {}^{2n-1}C_n$$

$$\text{and } \gamma = {}^{2n-1}C_{n-1}$$

$$\text{Now, } \beta + \gamma = {}^{2n-1}C_n + {}^{2n-1}C_{n-1}$$

$$[\because {}^nC_r + {}^nC_{r-1} = {}^{n+1}C_r]$$

$$= {}^{2n}C_n$$

25. Let $A = \{x \in \mathbf{R} : -1 \leq x \leq 1\}$,

$B = \{y \in \mathbf{R} : -1 \leq y \leq 1\}$ and S be the subset of $A \times B$, defined by

$$S = \{(x, y) \in A \times B : x^2 + y^2 = 1\}$$

Which one of the following is correct?

- (a) S is a one-one function from A into B
- (b) S is a many-one function from A into B
- (c) S is a bijective mapping from A into B
- (d) S is not a function

(d) Given that,

$$A = \{x \in \mathbf{R} : -1 \leq x \leq 1\},$$

$$B = \{y \in \mathbf{R} : -1 \leq y \leq 1\}$$

$$\text{and } S = \{(x, y) \in A \times B : x^2 + y^2 = 1\}$$

By vertical line test, when we draw a vertical line, then line cuts the circle in two points. Hence, S is not a function.

26. Let T_r be the r^{th} term of an AP for $r = 1, 2, 3, \dots$. If for some distinct positive integers m and n we have $T_m = 1/n$ and $T_n = 1/m$, then what is T_{mn} equal to?

- (a) $(mn)^{-1}$
- (b) $m^{-1} + n^{-1}$
- (c) 1
- (d) 0

(c) Let first term of an AP is a and common difference is d

Given that,

$$T_m = \frac{1}{n}$$

$$a + (m-1)d = \frac{1}{n} \quad \dots(i)$$

and

$$T_n = \frac{1}{m}$$

$$a + (n-1)d = \frac{1}{m} \quad \dots(ii)$$

Subtracting Eq. (ii) from Eq. (i), we get

$$(m-1)d - (n-1)d = \frac{1}{n} - \frac{1}{m}$$

$$\Rightarrow (m-n)d = \frac{m-n}{mn}$$

$$\Rightarrow d = \frac{1}{mn}$$

Put in Eq. (i),

$$a + (m-1)\frac{1}{mn} = \frac{1}{n}$$

$$\Rightarrow a + \frac{1}{n} - \frac{1}{mn} = \frac{1}{n}$$

$$\Rightarrow a = \frac{1}{mn}$$

$$\text{Now, } T_{mn} = a + (mn-1)d$$

$$= \frac{1}{mn} + (mn-1)\frac{1}{mn}$$

$$= \frac{1}{mn} + 1 - \frac{1}{mn}$$

$$T_{mn} = 1$$

27. Suppose $f(x)$ is such a quadratic expression that it is positive for all real x .

If $g(x) = f(x) + f'(x) + f''(x)$, then for any real x

- (a) $g(x) < 0$
- (b) $g(x) > 0$
- (c) $g(x) = 0$
- (d) $g(x) \geq 0$

(b) Given that $f(x)$ is a quadratic expression

$$\text{Let } f(x) = ax^2 + bx + c, a > 0$$

$$\therefore b^2 - 4ac < 0 \quad [\because f(x) > 0]$$

$$\Rightarrow b^2 < 4ac$$

$$\text{Now, } f'(x) = 2ax + b$$

$$\text{and } f''(x) = 2a$$

We have,

$$g(x) = f(x) + f'(x) + f''(x)$$

$$= ax^2 + bx + c + 2ax + b + 2a$$

$$= ax^2 + (b+2a)x + 2a + b + c$$

$$\text{Now, } (b+2a)^2 - 4a(2a+b+c)$$

$$= b^2 + 4ab + 4a^2 - 8a^2 - 4ab - 4ac$$

$$= b^2 - 4ac - 8a^2 < 0$$

$$[\because b^2 - 4ac < 0]$$

$$\Rightarrow g(x) > 0$$

28. Consider the following in respect of matrices A, B and C of same order.

1. $(A + B + C)' = A' + B' + C'$
2. $(AB)' = A' B'$
3. $(ABC)' = C' B' A'$

Where A' is the transpose of the matrix A . Which of the above are correct?

- (a) 1 and 2 (b) 2 and 3
 (c) 1 and 3 (d) 1, 2 and 3

⊙ (c) Given that A, B and C are matrices of same order

Statement 1

$$(A' + B' + C)' = A' + B' + C'$$

$$[\because (A + B)' = A' + B']$$

So, Statement 1 is correct

Statement 2

We know that,

$$(AB)' = B' A'$$

Hence, Statement 2 is incorrect

Statement 3

$$(ABC)' = C' B' A' [\because (AB)' = B' A']$$

Hence, Statement 3 is correct.

29. The sum of the binary numbers $(11011)_2$, $(10110110)_2$ and $(10011x0y)_2$ is the binary numbers $(101101101)_2$. What are the values of x and y ?

- (a) $x = 1, y = 1$ (b) $x = 1, y = 0$
 (c) $x = 0, y = 1$ (d) $x = 0, y = 0$

⊙ (b) Sum of the binary number $(11011)_2, (10110110)_2$ and $(10011x0y)_2$ is $(101101101)_2$

$$\begin{array}{r} \text{So, } (101101101) \\ - 10110110 \\ \hline 10110111 \\ - 11011 \\ \hline 10011100 \end{array}$$

Compare with $(10011x0y)_2$
 We get, $x = 1$ and $y = 0$

30. Let matrix B be the adjoint of a square matrix A, I be the identity matrix of same order as A . If $k(k \neq 0)$ is the determinant of the matrix A , then what is AB equal to?

- (a) I (b) kI (c) k^2I (d) $(1/k)I$

⊙ (b) Given,

$$B = \text{adj}A, I = \text{identity Matrix}$$

$$(A) = k$$

$$\therefore AB = A(\text{adj}A) = (A)I = kI$$

31. If $(0.2)^x = 2$ and $\log_{10} 2 = 0.3010$, then what is the value of x to the nearest tenth?

- (a) -10.0 (b) -0.5
 (c) -0.4 (d) -0.2

⊙ (c) We have,

$$(0.2)^x = 2$$

taking \log_{10} both side

$$x \log_{10} 0.2 = \log_{10} 2$$

$$\Rightarrow x \log_{10} \left(\frac{2}{10} \right) = \log_{10} 2$$

$$\Rightarrow x [\log_{10} 2 - \log_{10} 10] = \log_{10} 2$$

$$\Rightarrow x [0.3010 - 1] = 0.3010 \quad [\because \log_a a = 1]$$

$$\Rightarrow x = - \frac{0.3010}{0.6990} \approx - 0.43$$

32. The total number of 5-digit numbers that can be composed of distinct digits from 0 to 9 is

- (a) 45360 (b) 30240
 (c) 27216 (d) 15120

⊙ (c) 5-digit number that can be composed by distinct digits from 0 to 9 is given as

$$\text{required number} = 9 \times 9 \times 8 \times 7 \times 6 = 27216$$

33. What is the determinant of the matrix

$$\begin{vmatrix} x & y & y+z \\ z & x & z+x \\ y & z & x+y \end{vmatrix} ?$$

- (a) $(x - y)(y - z)(z - x)$
 (b) $(x - y)(y - z)$
 (c) $(y - z)(z - x)$
 (d) $(z - x)^2(x + y + z)$

⊙ (d) We have,

$$\begin{vmatrix} x & y & y+z \\ z & x & z+x \\ y & z & x+y \end{vmatrix}$$

$$\begin{aligned} R_1 &\rightarrow R_1 + R_2 + R_3 \\ \begin{vmatrix} x+y+z & x+y+z & 2(x+y+z) \\ z & x & z+x \\ y & z & x+y \end{vmatrix} \\ &= (x+y+z) \begin{vmatrix} 1 & 1 & 2 \\ z & x & z+x \\ y & z & x+y \end{vmatrix} \end{aligned}$$

$$\begin{aligned} C_2 &\rightarrow C_2 - C_1 \text{ and } C_3 \rightarrow C_3 - 2C_1 \\ &= (x+y+z) \begin{vmatrix} 1 & 0 & 0 \\ z & x-z & x-z \\ y & z-y & x-y \end{vmatrix} \\ &= (x+y+z) [1(x-z)(x-y) - (x-z)(z-y)] \\ &= (x+y+z) [(x-z)(x-y-z+y)] \\ &= (x+y+z)(x-z)(x-z) \\ &= (x+y+z)(z-x)^2 \end{aligned}$$

34. If A, B and C are the angles of a triangle and

$$\begin{vmatrix} 1 & 1 & 1 \\ I + \sin A & 1 + \sin B & 1 + \sin C \\ \sin A + \sin^2 A & \sin B + \sin^2 B & \sin C + \sin^2 C \end{vmatrix} = 0,$$

then which one of the following is correct?

- (a) The triangle ABC is isosceles
 (b) The triangle ABC is equilateral
 (c) The triangle ABC is scalene
 (d) No conclusion can be drawn with regard to the nature of the triangle

⊙ (a) We have,

$$\begin{vmatrix} 1 & 1 & 1 \\ 1 + \sin A & 1 + \sin B & 1 + \sin C \\ \sin A + \sin^2 A & \sin B + \sin^2 B & \sin C + \sin^2 C \end{vmatrix} = 0$$

$$R_1 \rightarrow R_1 - R_2, R_3 \rightarrow R_3 - R_2$$

$$\begin{vmatrix} -\sin A & -\sin B & -\sin C \\ 1 + \sin A & 1 + \sin B & 1 + \sin C \\ \sin^2 A - 1 & \sin^2 B - 1 & \sin^2 C - 1 \end{vmatrix} = 0$$

$$R_2 \rightarrow R_2 + R_1$$

$$\begin{vmatrix} -\sin A & -\sin B & -\sin C \\ 1 & 1 & 1 \\ -\cos^2 A & -\cos^2 B & -\cos^2 C \end{vmatrix} = 0$$

$$R_3 \rightarrow R_3 + R_2$$

$$\Rightarrow \begin{vmatrix} \sin A & \sin B & \sin C \\ 1 & 1 & 1 \\ 1 - \cos^2 A & 1 - \cos^2 B & 1 - \cos^2 C \end{vmatrix} = 0$$

$$\Rightarrow \begin{vmatrix} \sin A & \sin B & \sin C \\ 1 & 1 & 1 \\ \sin^2 A & \sin^2 B & \sin^2 C \end{vmatrix} = 0$$

$$[C_1 \rightarrow C_1 - C_2, C_2 \rightarrow C_2 - C_3]$$

$$\Rightarrow \begin{vmatrix} \sin A - \sin B & \sin B - \sin C & \sin C \\ 0 & 0 & 1 \\ \sin^2 A - \sin^2 B & \sin^2 B - \sin^2 C & \sin^2 C \end{vmatrix} = 0$$

$$\Rightarrow (\sin A - \sin B)(\sin B - \sin C)$$

$$\begin{vmatrix} 1 & 1 & \sin C \\ 0 & 0 & 0 \\ \sin A + \sin C & \sin B + \sin C & \sin^2 C \end{vmatrix}$$

$$\therefore \sin A - \sin B = 0$$

$$\text{or } \sin B - \sin C = 0$$

$$\Rightarrow \sin A = \sin B$$

$$\text{and } \sin B = \sin C$$

$$\Rightarrow A = B$$

$$\text{and } B = C$$

So, ABC is an isosceles triangle

- ⊙ (b) height of building be h and let height of hill is H

In $\triangle ACD$

$$\begin{aligned} \tan 60^\circ &= \frac{H}{x} \\ \Rightarrow \sqrt{3} &= \frac{H}{x} \\ \Rightarrow x &= \frac{H}{\sqrt{3}} \quad \dots(i) \end{aligned}$$

In $\triangle BDE$

$$\begin{aligned} \tan 30^\circ &= \frac{H-h}{x} \\ \Rightarrow \frac{1}{\sqrt{3}} &= \frac{H-h}{x} \\ \Rightarrow x &= \sqrt{3}(H-h) \\ \Rightarrow \frac{H}{\sqrt{3}} &= \sqrt{3}(H-h) \\ \Rightarrow H &= 3(H-h) \\ \Rightarrow H &= 3H - 3h \\ \Rightarrow 2H &= 3h \\ \Rightarrow H &= \frac{3}{2}h \end{aligned}$$

- 42.** What is/are the solution (s) of the trigonometric equation $\operatorname{cosec} x + \cot x = \sqrt{3}$ where $0 < x < 2\pi$?
- (a) $\frac{5\pi}{3}$ only (b) $\frac{\pi}{3}$ only
 (c) π only (d) $\pi, \frac{\pi}{3}, \frac{5\pi}{3}$

- ⊙ (b) We have,
 $\operatorname{cosec} x + \cot x = \sqrt{3} \quad \dots(i)$

Now,

$$\Rightarrow \frac{(\operatorname{cosec} x + \cot x)(\operatorname{cosec} x - \cot x)}{\operatorname{cosec} x - \cot x} = \sqrt{3}$$

$$\Rightarrow \frac{\operatorname{cosec}^2 x - \cot^2 x}{\operatorname{cosec} x - \cot x} = \sqrt{3}$$

$$\Rightarrow \frac{1}{\operatorname{cosec} x - \cot x} = \sqrt{3}$$

$$\Rightarrow \operatorname{cosec} x - \cot x = \frac{1}{\sqrt{3}} \quad \dots(ii)$$

Adding Eqs. (i) and (ii), we get

$$\begin{aligned} 2 \operatorname{cosec} x &= \sqrt{3} + \frac{1}{\sqrt{3}} \\ \Rightarrow 2 \operatorname{cosec} x &= \frac{4}{\sqrt{3}} \\ \Rightarrow \operatorname{cosec} x &= \frac{2}{\sqrt{3}} \end{aligned}$$

$$\begin{aligned} \Rightarrow \sin x &= \frac{\sqrt{3}}{2} \\ \therefore x &= \frac{\pi}{3}, \frac{2\pi}{3} \end{aligned}$$

- 43.** If $\theta = \frac{\pi}{8}$, then what is the value of

$$(2 \cos \theta + 1)^{10} (2 \cos 2\theta - 1)^{10} (2 \cos \theta - 1)^{10}$$

$$(2 \cos 4\theta - 1)^{10} ?$$

(a) 0 (b) 1
 (c) 2 (d) 4

- ⊙ (b) If $\theta = \frac{\pi}{8}$, then

$$\begin{aligned} &(2 \cos \theta + 1)^{10} (2 \cos 2\theta - 1)^{10} \\ &(2 \cos \theta - 1)^{10} (2 \cos 4\theta - 1)^{10} \\ \Rightarrow &(2 \cos \theta + 1)^{10} (2 \cos \theta - 1)^{10} \\ &(2 \cos 2\theta - 1)^{10} (2 \cos 4\theta - 1)^{10} \\ \Rightarrow &(4 \cos^2 \theta - 1)^{10} (2 \cos 2\theta - 1)^{10} \\ &(2 \cos 4\theta - 1)^{10} \\ \Rightarrow &[2(2 \cos^2 \theta - 1)]^{10} (2 \cos 2\theta - 1)^{10} \\ &(2 \cos 4\theta - 1)^{10} \\ \Rightarrow &[2(1 + \cos 2\theta) - 1]^{10} (2 \cos 2\theta - 1)^{10} \\ &(2 \cos 4\theta - 1)^{10} \\ \Rightarrow &(2 \cos 2\theta + 1)^{10} (2 \cos 2\theta - 1)^{10} \\ &(2 \cos 4\theta - 1)^{10} \\ \Rightarrow &\left[2 \cos \frac{\pi}{4} + 1\right]^{10} \left(2 \cos \frac{\pi}{4} - 1\right)^{10} \\ &\left(2 \cos \frac{\pi}{2} - 1\right)^{10} \quad \left[\because \theta = \frac{\pi}{8}\right] \end{aligned}$$

$$\begin{aligned} \Rightarrow &\left[2 \times \frac{1}{\sqrt{2}} + 1\right]^{10} \left(2 \cdot \frac{1}{\sqrt{2}} - 1\right)^{10} (0 - 1)^{10} \\ \Rightarrow &(\sqrt{2} + 1)^{10} (\sqrt{2} - 1)^{10} \times 1 \\ \Rightarrow &((\sqrt{2})^2 - (1)^2)^{10} \times 1 \\ \Rightarrow &(2 - 1)^{10} \\ \Rightarrow &1 \end{aligned}$$

- 44.** If $\cos \alpha$ and $\cos \beta$ ($0 < \alpha < \beta < \pi$) are the roots of the quadratic equation $4x^2 - 3 = 0$, then what is the value of $\sec \alpha \times \sec \beta$?

(a) $-\frac{4}{3}$ (b) $\frac{4}{3}$
 (c) $\frac{3}{4}$ (d) $-\frac{3}{4}$

- ⊙ (a) Given,

$$\begin{aligned} 4x^2 - 3 &= 0 \\ \Rightarrow 4x^2 &= 3 \\ \Rightarrow x^2 &= \frac{3}{4} \\ \Rightarrow x &= \pm \frac{\sqrt{3}}{2} \end{aligned}$$

So, $\cos \alpha = \frac{\sqrt{3}}{2}$
 and $\cos \beta = \frac{-\sqrt{3}}{2}$

Now, $\sec \alpha \cdot \sec \beta = \frac{2}{\sqrt{3}} \times \left(\frac{-2}{\sqrt{3}}\right) = \frac{-4}{3}$

- 45.** Consider the following values of x :

1. 8 2. -4
 3. $\frac{1}{6}$ 4. $-\frac{1}{4}$

Which of the above values of x is/are the solution (s) of the equation

$$\tan^{-1}(2x) + \tan^{-1}(3x) = \frac{\pi}{4}$$

- (a) 3 only (b) 2 and 3
 (c) 1 and 4 (d) 4 only

- ⊙ (a) We have,

$$\begin{aligned} \tan^{-1}(2x) + \tan^{-1}(3x) &= \frac{\pi}{4} \\ \tan^{-1}\left(\frac{2x + 3x}{1 - 2x \cdot 3x}\right) &= \frac{\pi}{4} \\ [\because \tan^{-1} a + \tan^{-1} b &= \tan^{-1}\left(\frac{a+b}{1-ab}\right), \\ &ab \leq 1 \end{aligned}$$

and $\tan^{-1} a + \tan^{-1} b = \pi + \tan^{-1}$

$$\begin{aligned} &\left(\frac{a+b}{1-ab}\right), ab > 1 \\ \Rightarrow &\frac{5x}{1-6x^2} = \tan \frac{\pi}{4} \\ \Rightarrow &\frac{5x}{1-6x^2} = 1 \\ \Rightarrow &1 - 6x^2 = 5x \\ \Rightarrow &6x^2 + 5x - 1 = 0 \\ \Rightarrow &6x^2 + 6x - x - 1 = 0 \\ \Rightarrow &(6x - 1)(x + 1) = 0 \\ \Rightarrow &x = -1, \frac{1}{6} \end{aligned}$$

$x = -1$ is not possible

So, $x = \frac{1}{6}$

- 46.** If the second term of a GP is 2 and the sum of its infinite terms is 8, then the GP is

(a) $8, 2, \frac{1}{2}, \frac{1}{8}, \dots$
 (b) $10, 2, \frac{2}{5}, \frac{2}{25}, \dots$
 (c) $4, 2, 1, \frac{1}{2}, \frac{1}{2^2}, \dots$
 (d) $6, 3, \frac{3}{2}, \frac{3}{4}, \dots$

- ⊙ (c) Let first term of a GP is a and common ratio is r

$\therefore a_2 = 2$

$$\begin{aligned} \Rightarrow ar &= 2 \quad \dots(i) \\ \text{and } S_n &= 8 \\ \Rightarrow \frac{a}{1-r} &= 8 \end{aligned}$$

From Eq. (i)

$$\begin{aligned} \Rightarrow \frac{2}{r(1-r)} &= 8 \\ \Rightarrow 8r - 8r^2 &= 2 \\ \Rightarrow 4r^2 - 4r + 1 &= 0 \\ \Rightarrow 4r^2 - 2r - 2r + 1 &= 0 \\ \Rightarrow 2r(2r-1) - 1(2r-1) &= 0 \\ \Rightarrow (2r-1)(2r-1) &= 0 \\ \Rightarrow r &= \frac{1}{2} \end{aligned}$$

∴ Put in Eq. (i)

$$\begin{aligned} a \left(\frac{1}{2} \right) &= 2 \\ \Rightarrow a &= 4 \\ \therefore \text{GP is } 4, 2, 1, \frac{1}{2}, \dots \end{aligned}$$

47. If a, b, c are in AP or GP or HP, then

$\frac{a-b}{b-c}$ is equal to

- (a) $\frac{b}{a}$ or 1 or $\frac{b}{c}$ (b) $\frac{c}{a}$ or $\frac{c}{b}$ or 1
 (c) 1 or $\frac{a}{b}$ or $\frac{a}{c}$ (d) 1 or $\frac{a}{b}$ or $\frac{c}{a}$

⊙ (c) a, b, c are in AP, then

$$\begin{aligned} \therefore a - b &= b - c \\ \Rightarrow \frac{a-b}{b-c} &= 1 \end{aligned}$$

If a, b, c are in GP, then

$$\therefore \frac{a}{b} = \frac{b}{c} = \frac{a-b}{b-c}$$

If a, b, c are in HP, then

$$\begin{aligned} \therefore b &= \frac{2ac}{a+c} \\ \Rightarrow ab + bc &= 2ac \\ \Rightarrow ab - ac &= ac - bc \\ \Rightarrow a(b-c) &= c(a-b) \\ \Rightarrow \frac{a-b}{b-c} &= \frac{a}{c} \end{aligned}$$

48. What is the sum of all three digit numbers that can be formed using all the digits 3, 4 and 5, when repetition of digits is not allowed?

- (a) 2664 (b) 3382
 (c) 4044 (d) 4444

⊙ (a) Three digit number. that can be formed using 3, 4 and 5 when repetition not allowed are 543, 534, 453, 435, 354, 345

Sum
 $= 543 + 534 + 453 + 435 + 354 + 345$
 $= 2664$

49. The ratio of roots of the equations $ax^2 + bx + c = 0$ and $px^2 + qx + r = 0$ are equal. If D_1 and D_2 are respective discriminants, then what is $\frac{D_1}{D_2}$ equal

- to ?
 (a) $\frac{a^2}{p^2}$ (b) $\frac{b^2}{q^2}$
 (c) $\frac{c^2}{r^2}$ (d) None of these

⊙ (b) Let α, β are the roots of quadratic equation.

$$\begin{aligned} ax^2 + bx + c &= 0 \\ \text{So, } \alpha + \beta &= -\frac{b}{a} \text{ and } \alpha\beta = \frac{c}{a} \end{aligned}$$

and let γ, δ are the roots of quadratic equation

$$\begin{aligned} px^2 + qx + r &= 0 \\ \gamma + \delta &= -\frac{q}{p} \end{aligned}$$

and $\gamma\delta = \frac{r}{p}$

According to the question,

$$\begin{aligned} \frac{\alpha}{\beta} &= \frac{\gamma}{\delta} \\ \text{according to componendo and dividendo} \\ \frac{\alpha + \beta}{\alpha - \beta} &= \frac{\gamma + \delta}{\gamma - \delta} \end{aligned}$$

$$\begin{aligned} \Rightarrow \frac{\alpha + \beta}{\sqrt{(\alpha + \beta)^2 - 4\alpha\beta}} &= \frac{\gamma + \delta}{\sqrt{(\gamma + \delta)^2 - 4\gamma\delta}} \\ \Rightarrow \frac{-\frac{b}{a}}{\sqrt{\left(-\frac{b}{a}\right)^2 - 4\left(\frac{c}{a}\right)}} &= \frac{-\frac{q}{p}}{\sqrt{\left(-\frac{q}{p}\right)^2 - 4\left(\frac{r}{p}\right)}} \end{aligned}$$

$$\Rightarrow \frac{\frac{b}{a}}{\sqrt{b^2 - 4ac}} = \frac{\frac{q}{p}}{\sqrt{q^2 - 4pr}}$$

$$\Rightarrow \frac{b}{\sqrt{b^2 - 4ac}} = \frac{q}{\sqrt{q^2 - 4pr}}$$

$$\Rightarrow \frac{b}{\sqrt{D_1}} = \frac{q}{\sqrt{D_2}}$$

$$\Rightarrow \frac{\sqrt{D_1}}{\sqrt{D_2}} = \frac{b}{q}$$

$$\Rightarrow \frac{D_1}{D_2} = \frac{b^2}{q^2}$$

50. If $A = \sin^2 \theta + \cos^4 \theta$, then for all real θ , which one of the following is correct?

- (a) $1 \leq A \leq 2$ (b) $\frac{3}{4} \leq A \leq 1$
 (c) $\frac{13}{16} \leq A \leq 1$ (d) $\frac{3}{4} \leq A \leq \frac{13}{16}$

⊙ (b) We have

$$\begin{aligned} A &= \sin^2 \theta + \cos^4 \theta \\ &= \sin^2 \theta + (1 - \sin^2 \theta)^2 \end{aligned}$$

Let $\sin^2 \theta = x$

$$\begin{aligned} &= x^2 - x + 1, 0 \leq x \leq 1 \\ &= x^2 - x + 1 \end{aligned}$$

$$\Rightarrow \left(x - \frac{1}{2}\right)^2 + \frac{3}{4}$$

Now, $A(0) = A(1) = 1$

So, $\frac{3}{4} \leq A \leq 1$

51. The equation of a circle whose end points of a diameter are (x_1, y_1) and (x_2, y_2) is

- (a) $(x - x_1)(x - x_2) + (y - y_1)(y - y_2) = x^2 + y^2$
 (b) $(x - x_1)^2 + (y - y_1)^2 = x_2 y_2$
 (c) $x^2 + y^2 + 2x_1 x_2 + 2y_1 y_2 = 0$
 (d) $(x - x_1)(x - x_2) + (y - y_1)(y - y_2) = 0$

⊙ (d) Equation of circle if end points of diameter are (x_1, y_1) and (x_2, y_2) are

$$(x - x_1)(x - x_2) + (y - y_1)(y - y_2) = 0$$

52. The second degree equation

$$x^2 + 4y^2 - 2x - 4y + 2 = 0$$

represents

- (a) A point
 (b) An ellipse of semi-major axis 1
 (c) An ellipse with eccentricity $\frac{\sqrt{3}}{2}$
 (d) None of the above

⊙ (d) Given that,

$$x^2 + 4y^2 - 2x - 4y + 2 = 0$$

Compare with

$$ax^2 + by^2 + 2hxy + 2gx + 2fy + c = 0$$

Then,

$$a = 1, b = 4, h = 0, g = -1, f = -2$$

and $c = 2$

$$\Delta = abc + 2fgh - af^2 - bg^2 - ch^2$$

$$= 1 \times 4 \times 2 + 2 \times (-2) \times (-1) \times 0$$

$$- 1 \times (-2)^2 - 4 \times (-1)^2 - 2(0)$$

$$= 8 + 0 - 4 - 4 = 0$$

$$= 8 - 8$$

$$= 0$$

Equation, represent a pair of straight line.

53. The angle between the two lines $lx + my + n = 0$ and $l'x + m'y + n' = 0$ is given by $\tan^{-1}\theta$. What is θ equal to?

- (a) $\left| \frac{lm' - l'm}{ll' - mm'} \right|$ (b) $\left| \frac{lm' + l'm}{ll' + mm'} \right|$
 (c) $\left| \frac{lm' - l'm}{ll' + mm'} \right|$ (d) $\left| \frac{lm' + l'm}{ll' - mm'} \right|$

⊙ (c) Given straight lines,
 $lx + my + n = 0$ (i)

$$m_1 = -\frac{l}{m}$$

and $l'x + m'y + n' = 0$

$$m_2 = -\frac{l'}{m'}$$

angle between both lines is θ

$$\therefore \tan \theta = \left| 1 + \frac{-\frac{l}{m} - \frac{l'}{m'}}{\frac{ll'}{mm'}} \right|$$

$$\left[\because \tan \theta = \left| \frac{m_1 - m_2}{1 + m_1 m_2} \right| \right]$$

$$= \left| \frac{-\frac{lm' - l'm}{mm'}}{\frac{mm' + ll'}{mm'}} \right| = \left| \frac{lm' - l'm}{ll' + mm'} \right|$$

54. Consider the following statements

- The distance between the lines $y = mx + c_1$ and $y = mx + c_2$ is $\frac{|c_1 - c_2|}{\sqrt{1 + m^2}}$
- The distance between the lines $ax + by + c_1 = 0$ and $ax + by + c_2 = 0$ is $\frac{|c_1 - c_2|}{\sqrt{a^2 + b^2}}$.
- The distance between the lines $x = c_1$ and $x = c_2$ is $|c_1 - c_2|$.

Which of the above statements are correct?

- (a) 1 and 2 (b) 2 and 3
 (c) 1 and 3 (d) 1, 2 and 3

⊙ (b) Statement 1 Given lines,

$$y = mx + c_1$$

and $y = mx + c_2$

both lines are parallel

$$PQ = \frac{|c_1 - c_2|}{\sqrt{1 + m^2}}$$

So, Statement 1 is correct

Statement 2 for $ax + by + c_1 = 0$ and $ax + by + c_2 = 0$ both lines are parallel so,

$$\therefore D = \left| \frac{c_1 - c_2}{\sqrt{a^2 + b^2}} \right|$$

Statement 3 $x = c_1$

$$x = c_2$$

$$D = |c_1 - c_2|$$

Statement 3 is correct

55. What is the equation of straight line passing through the point of intersection of the lines $\frac{x}{2} + \frac{y}{3} = 1$

and $\frac{x}{3} + \frac{y}{2} = 1$ and parallel to the line

$$4x + 5y - 6 = 0 ?$$

- (a) $20x + 25y - 54 = 0$
 (b) $25x + 20y - 54 = 0$
 (c) $4x + 5y - 54 = 0$
 (d) $4x + 5y - 45 = 0$

⊙ (a) Given lines,

$$\frac{x}{2} + \frac{y}{3} = 1$$

$$\text{and } \frac{x}{3} + \frac{y}{2} = 1$$

Equation of line passing through the point of intersection are $l_1 + \lambda l_2 = 0$

$$(3x + 2y - 6) + \lambda (2x + 3y - 6) = 0 \dots(i)$$

Slope of line

$$\therefore \frac{-(3 + 2\lambda)}{2 + 3\lambda} = -\frac{4}{5}$$

$$\Rightarrow +15 + 10\lambda = 8 + 12\lambda$$

$$\Rightarrow 7 = 2\lambda$$

$$\Rightarrow \lambda = \frac{7}{2}$$

$$(3x + 2y - 6) + \frac{7}{2}(2x + 3y - 6) = 0$$

$$\Rightarrow 2(3x + 2y - 6) + 7x + 10.5y - 21 = 0$$

$$\Rightarrow 6x + 4y - 12 + 7x + 10.5y - 21 = 0$$

$$\Rightarrow 20x + 25y - 54 = 0$$

56. What is the distance of the point (2, 3, 4) from the plane

$$3x - 6y + 2z + 11 = 0 ?$$

- (a) 1 unit (b) 2 units
 (c) 3 units (d) 4 units

⊙ (a) Distance of point (x_1, y_1, z_1) from plane $ax + by + cz + d = 0$ is

$$d = \left| \frac{ax_1 + by_1 + cz_1 + d}{\sqrt{a^2 + b^2 + c^2}} \right|$$

P (2, 3, 4)

$$PM = \left| \frac{3(2) - 6(3) + 2(4) + 11}{\sqrt{(3)^2 + (-6)^2 + (2)^2}} \right|$$

$$= \left| \frac{6 - 18 + 8 + 11}{\sqrt{9 + 36 + 4}} \right| = \left| \frac{7}{\sqrt{49}} \right|$$

$$PM = 1 \text{ unit}$$

57. Coordinates of the points O, P, Q and R respectively: (0, 0, 0), (4, 6, 2m), (2, 0, 2n) and (2, 4, 6) L, M, N and K OR, OP, PQ and QR respectively such that LMNK is a parallelogram whose two adjacent sides LK and LM are each of length $\sqrt{2}$?

- (a) 6, 2
 (b) 1, 3
 (c) 3, 1
 (d) None of the above

⊙ (c) LMNK is a parallelogram we know that, if we join mid-point of any quadrilateral we get a parallelogram

So, M, N, K, L are mid-points of OP, PQ, QR and RO respectively

\therefore Coordinate of M

$$= \left(\frac{0 + 4}{2}, \frac{0 + 6}{2}, \frac{0 + 2m}{2} \right)$$

$$= (2, 3, m)$$

$[\because$ Coordinate of mid-point

$$= \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)]$$

Coordinate of L = (1, 2, 3)

Coordinate of K = (2, 2, 3 + n)

Now, $LM = \sqrt{2}$

$$\Rightarrow \sqrt{(2-1)^2 + (3-2)^2 + (m-3)^2} = \sqrt{2}$$

$$\Rightarrow \sqrt{1+1+(m-3)^2} = \sqrt{2}$$

Squaring both side,

$$\Rightarrow 2 + (m-3)^2 = 2$$

$$\Rightarrow (m-3)^2 = 0$$

$$\Rightarrow m = 3$$

Again, $LK = \sqrt{2}$

$$\Rightarrow \sqrt{(2-1)^2 + (2-2)^2 + (3+n-3)^2} = \sqrt{2}$$

$$\Rightarrow \sqrt{1+0+n^2} = \sqrt{2}$$

Squaring both side,

$$\Rightarrow 1 + n^2 = 2$$

$$\Rightarrow n^2 = 1$$

$$\Rightarrow n = 1$$

58. The line $\frac{x-1}{2} = \frac{y-2}{2} = \frac{z-3}{4}$ is

given by

(a) $x + y + z = 6, x + 2y - 3z = -4$

(b) $x + 2y - 2z = -1, 4x + 4y - 5z - 3 = 0$

(c) $3x + 2y - 3z = 0, 3x - 6y + 3z = -2$

(d) $3x + 2y - 3z = -2, 3x - 6y + 3z = 0$

⊗ (d) Given lines,

$$\frac{x-1}{2} = \frac{y-2}{3} = \frac{z-3}{4} = \lambda \text{ (let)}$$

$$\therefore \frac{x-1}{2} = \lambda$$

$$\Rightarrow x = 2\lambda + 1$$

$$\frac{y-2}{3} = \lambda$$

$$\Rightarrow y = 3\lambda + 2$$

and $\frac{z-3}{4} = \lambda$

$$\Rightarrow z = 4\lambda + 3$$

by checking options if $3x + 2y - 3z$, then

$$3(2\lambda + 1) + 2(3\lambda + 2) - 3(4\lambda + 3)$$

$$= 6\lambda + 3 + 6\lambda + 4 - 12\lambda - 9$$

$$= -2$$

$$3(2\lambda + 1) - 6(3\lambda + 2) + 3(4\lambda + 3)$$

$$\Rightarrow 6\lambda + 3 - 18\lambda - 12 + 12\lambda + 9 = 0$$

So, option (d) is correct

59. Consider the following statements

1. The angle between the planes $2x - y + z = 1$ and $x + y + 2z = 3$ is $\frac{\pi}{3}$

2. The distance between the planes $6x - 3y + 6z + 2 = 0$ and

$$2x - y + 2z + 4 = 0 \text{ is } \frac{10}{9}$$

Which of the above statement is/are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (c) **Statements 1** Given,

$$2x - y + z = 1 \text{ and } x + y + 2z = 3$$

Here, $a_1 = 1, b_1 = -1, c_1 = 1$

and $a_2 = 1, b_2 = 1, c_2 = 2$

$$\cos \theta = \frac{a_1 a_2 + b_1 b_2 + c_1 c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}}$$

$$= \frac{2 \times 1 + (-1 \times 1) + 1 \times 2}{\sqrt{2^2 + (-1)^2 + (1)^2} \sqrt{1^2 + 1^2 + 2^2}}$$

$$= \frac{4-1}{\sqrt{4+1+1} \sqrt{4+1+1}} = \frac{3}{\sqrt{6} \sqrt{6}} = \frac{3}{6}$$

$$= \frac{1}{2}$$

$$\therefore \theta = \frac{\pi}{3}$$

So, Statement 1 is correct.

Statement 2 Distance between two planes

$$ax + by + cz + d_1 = 0$$

$$ax + by + cz + d_2 = 0$$

$$\text{distance } S = \left| \frac{d_1 - d_2}{\sqrt{a^2 + b^2 + c^2}} \right|$$

$$d_1 = \frac{2}{3}, d_2 = 4$$

$$\text{distance} = \left| \frac{4 - \frac{2}{3}}{\sqrt{2^2 + 1^2 + 2^2}} \right| = \left| \frac{\frac{10}{3}}{\sqrt{9}} \right|$$

$$= \frac{10}{3 \times 3} = \frac{10}{9}$$

60. Consider the following statements :

Statement I : If the line segment joining the points $P(m, n)$ and $Q(r, s)$ subtends an angle α at the origin,

$$\text{then } \cos \alpha = \frac{ms - nr}{\sqrt{(m^2 + n^2)(r^2 + s^2)}}$$

Statement II. In any triangle ABC , it is true that $a^2 = b^2 + c^2 - 2bc \cos A$.

Which one of the following is correct in respect of the above two statements?

- (a) Both Statement I and Statement II are true and Statement II is the correct explanation of statement I.
(b) Both Statement I and Statement II are true, but Statement II is not the correct explanation of Statement I
(c) Statement I is true, but Statement II is false
(d) Statement I is false, but Statement II is true

⊗ (d) **Statement I** If the line segment joining the point $P(m, n)$ and $Q(r, s)$ subtends angle α at origin, then

$$\cos \alpha = \frac{mr + ns}{\sqrt{m^2 + n^2} \sqrt{r^2 + s^2}}$$

So, Statement I is not correct

Statement II

In any triangle ABC

$$a^2 = b^2 + c^2 - 2bc \cos A$$

Statement II is correct

61. What is the area of the triangle with vertices

$$\left(x_1, \frac{1}{x_1} \right), \left(x_2, \frac{1}{x_2} \right), \left(x_3, \frac{1}{x_3} \right) ?$$

(a) $|(x_1 - x_2)(x_2 - x_3)(x_3 - x_1)|$

(b) 0

(c) $\left| \frac{(x_1 - x_2)(x_2 - x_3)(x_3 - x_1)}{x_1 x_2 x_3} \right|$

(d) $\left| \frac{(x_1 - x_2)(x_2 - x_3)(x_3 - x_1)}{2x_1 x_2 x_3} \right|$

⊗ (d) **Area of ΔABC**

$$A \left(x_1, \frac{1}{x_1} \right), B \left(x_2, \frac{1}{x_2} \right), C \left(x_3, \frac{1}{x_3} \right)$$

$$A = \frac{1}{2} \begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix}$$

$$= \frac{1}{2} \begin{vmatrix} x_1 & \frac{1}{x_1} & 1 \\ x_2 & \frac{1}{x_2} & 1 \\ x_3 & \frac{1}{x_3} & 1 \end{vmatrix}$$

$$= \frac{1}{2} \begin{vmatrix} x_1 & \frac{1}{x_1} & 1 \\ x_2 & \frac{1}{x_2} & 1 \\ x_3 & \frac{1}{x_3} & 1 \end{vmatrix}$$

$$\Rightarrow \frac{1}{2x_1 x_2 x_3} \begin{vmatrix} x_1^2 & 1 & x_1 \\ x_2^2 & 1 & x_2 \\ x_3^2 & 1 & x_3 \end{vmatrix}$$

$$= \left| \frac{(x_1 - x_2)(x_2 - x_3)(x_3 - x_1)}{2x_1 x_2 x_3} \right|$$

62 If Y-axis touches the circle

$$x^2 + y^2 + gx + fy + \frac{c}{4} = 0, \text{ then the}$$

normal at this point intersects the circle at the point.

(a) $\left(-\frac{g}{2}, \frac{f}{2} \right)$ (b) $(-g, -\frac{f}{2})$

(c) $\left(-\frac{g}{2}, f \right)$ (d) $(-g, -f)$

(b)

The equation of circle is

$$x^2 + y^2 + gx + fy + \frac{c}{4} = 0$$

$$\therefore \text{centre} = \left(-\frac{g}{2}, -\frac{f}{2}\right) \text{ and}$$

$$\text{radius} = \sqrt{\frac{g^2}{4} + \frac{f^2}{4} - \frac{c}{4}}$$

Since, circle touches Y-axis, then

$$AC = \text{radius}$$

$$\Rightarrow \left|\frac{g}{2}\right| = \sqrt{\frac{g^2}{4} + \frac{f^2}{4} - \frac{c}{4}}$$

$$\Rightarrow \frac{f^2}{4} = \frac{c}{4}$$

\therefore circle touches Y-axis at

$$y^2 + fy + \frac{f^2}{4} = 0$$

$$\Rightarrow \left(y + \frac{f}{2}\right)^2 = 0$$

$$\Rightarrow y = -\frac{f}{2}$$

$$\therefore A\left(0, -\frac{f}{2}\right)$$

\therefore Normal at A will pass through centre C and intersect circle again at B.

$$\therefore \text{Coordinates of B are } \left(-g, -\frac{f}{2}\right)$$

63. Let $|\vec{a}| \neq 0, |\vec{b}| \neq 0. (\vec{a} + \vec{b}) \cdot (\vec{a} + \vec{b})$

$= |\vec{a}|^2 + |\vec{b}|^2$ holds if and only if

- (a) \vec{a} and \vec{b} are perpendicular
- (b) \vec{a} and \vec{b} are parallel
- (c) \vec{a} and \vec{b} are inclined at an angle of 45°
- (d) \vec{a} and \vec{b} are anti-parallel

(c) (a) Given,

$$|\vec{a}| \neq 0, |\vec{b}| \neq 0$$

$$(\vec{a} + \vec{b}) \cdot (\vec{a} + \vec{b}) = |\vec{a}|^2 + |\vec{b}|^2 + 2\vec{a} \cdot \vec{b}$$

$$\vec{a} \cdot \vec{b} = \vec{b} \cdot \vec{a}$$

$$\vec{a} \cdot \vec{b} = 0$$

$$\Rightarrow \vec{a} \perp \vec{b}$$

64. If $\vec{r} = x\hat{i} + y\hat{j} + z\hat{k}$, then what is $\vec{r} \cdot (\hat{i} + \hat{j} + \hat{k})$ equal to ?

- (a) x
- (b) $x + y$
- (c) $-(x + y + z)$
- (d) $(x + y + z)$

(c) (d) $\vec{r} = x\hat{i} + y\hat{j} + z\hat{k}$

$$\begin{aligned} \text{Now, } \vec{r} \cdot (\hat{i} + \hat{j} + \hat{k}) &= \hat{i} \cdot \hat{i} = 1 \\ &= (x\hat{i} + y\hat{j} + z\hat{k}) \cdot (\hat{i} + \hat{j} + \hat{k}) \\ &= (x + y + z) \end{aligned}$$

65. A unit vector perpendicular to each of the vectors $2\hat{i} - \hat{j} + \hat{k}$ and $3\hat{i} - 4\hat{j} - \hat{k}$ is

- (a) $\frac{1}{\sqrt{3}}\hat{i} + \frac{1}{\sqrt{3}}\hat{j} - \frac{1}{\sqrt{3}}\hat{k}$
- (b) $\frac{1}{\sqrt{2}}\hat{i} + \frac{1}{2}\hat{j} + \frac{1}{2}\hat{k}$
- (c) $\frac{1}{\sqrt{3}}\hat{i} - \frac{1}{\sqrt{3}}\hat{j} - \frac{1}{\sqrt{3}}\hat{k}$
- (d) $\frac{1}{\sqrt{3}}\hat{i} + \frac{1}{\sqrt{3}}\hat{j} + \frac{1}{\sqrt{3}}\hat{k}$

(c) (a) We know that,

$$\vec{n} = \frac{\vec{a} \times \vec{b}}{|\vec{a} \times \vec{b}|}$$

$$\vec{a} \times \vec{b} = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 2 & -1 & 1 \\ 3 & -4 & -1 \end{vmatrix}$$

$$\vec{a} \times \vec{b} = 5\hat{i} + 5\hat{j} - 5\hat{k}$$

$$|\vec{a} \times \vec{b}| = 5\sqrt{3}$$

$$\therefore \vec{n} = \frac{5(\hat{i} + \hat{j} - \hat{k})}{5\sqrt{3}} = \frac{\hat{i} + \hat{j} - \hat{k}}{\sqrt{3}}$$

66. If $|\vec{a}| = 3, |\vec{b}| = 4$ and $|\vec{a} - \vec{b}| = 5$, then what is the value of $|\vec{a} + \vec{b}|$?

- (a) 8
- (b) 6
- (c) $5\sqrt{2}$
- (d) 5

(c) (d) Given that,

$$|\vec{a}| = 3$$

$$|\vec{b}| = 4$$

$$\text{and } |\vec{a} - \vec{b}| = 5$$

$$\therefore \vec{a} \cdot \vec{b} = 0$$

$$|\vec{a} + \vec{b}|^2 = |\vec{a}|^2 + |\vec{b}|^2 + 0 = 25$$

$$|\vec{a} + \vec{b}| = 5$$

67. Let \vec{a}, \vec{b} and \vec{c} be three mutually perpendicular vectors each of unit magnitude. If

$$\vec{A} = \vec{a} + \vec{b} + \vec{c}, \vec{B} = \vec{a} - \vec{b} + \vec{c} \text{ and}$$

$$\vec{C} = \vec{a} - \vec{b} - \vec{c}, \text{ then which one of the following is correct?}$$

- (a) $|\vec{A}| > |\vec{B}| > |\vec{C}|$
- (b) $|\vec{A}| = |\vec{B}| \neq |\vec{C}|$
- (c) $|\vec{A}| = |\vec{B}| = |\vec{C}|$
- (d) $|\vec{A}| \neq |\vec{B}| \neq |\vec{C}|$

(c) (c) Given that,

$$\vec{A} = \vec{a} + \vec{b} + \vec{c}$$

$$\vec{B} = \vec{a} - \vec{b} + \vec{c}$$

$$\vec{C} = \vec{a} - \vec{b} - \vec{c}$$

$$|\vec{a}| = |\vec{b}| = |\vec{c}| = 1$$

$$|\vec{a} \cdot \vec{b}| = |\vec{b} \cdot \vec{c}| = |\vec{c} \cdot \vec{a}| = 0$$

$$\text{Now, } |\vec{A}| = \sqrt{a^2 + b^2 + c^2}$$

$$= \sqrt{1+1+1} = \sqrt{3}$$

$$|\vec{B}| = \sqrt{a^2 + b^2 + c^2} = \sqrt{1+1+1} = \sqrt{3}$$

$$|\vec{C}| = \sqrt{a^2 + b^2 + c^2} = \sqrt{1+1+1} = \sqrt{3}$$

$$\Rightarrow |\vec{A}| = |\vec{B}| = |\vec{C}|$$

68. What is $(\vec{a} - \vec{b}) \times (\vec{a} + \vec{b})$ equal to?

- (a) $\vec{0}$
- (b) $\vec{a} \times \vec{b}$
- (c) $2(\vec{a} \times \vec{b})$
- (d) $|\vec{a}|^2 - |\vec{b}|^2$

(c) (c) We have,

$$(\vec{a} - \vec{b}) \times (\vec{a} + \vec{b})$$

$$= \vec{a} \times \vec{a} + \vec{a} \times \vec{b} - \vec{b} \times \vec{a} - \vec{b} \times \vec{b}$$

$$= \vec{a} \times \vec{b} - \vec{b} \times \vec{a}$$

$$[\because \vec{a} \times \vec{a} = 0, \vec{b} \times \vec{b} = 0]$$

$$= \vec{a} \times \vec{b} + \vec{a} \times \vec{b} [\because \vec{a} \times \vec{b} = -\vec{b} \times \vec{a}]$$

$$= 2(\vec{a} \times \vec{b})$$

69. A spacecraft located at $\hat{i} + 2\hat{j} + 3\hat{k}$ is subjected to a force $\lambda\hat{k}$ by firing a rocket. The spacecraft is subjected to a moment of magnitude

- (a) λ
- (b) $\sqrt{3}\lambda$
- (c) $\sqrt{5}\lambda$
- (d) None of these

(c) (c) We have,

$$\vec{r} = \hat{i} + 2\hat{j} + 3\hat{k}$$

$$\text{and } \vec{F} = \lambda\hat{k}$$

We know that,

$$\text{Moment} = \vec{r} \times \vec{F}$$

$$= (\hat{i} + 2\hat{j} + 3\hat{k}) \times (\lambda\hat{k})$$

$$= -\lambda\hat{j} + 2\lambda\hat{i} \begin{matrix} \therefore \hat{i} \times \hat{k} = -\hat{j} \\ \hat{j} \times \hat{k} = \hat{i} \\ \hat{k} \times \hat{k} = 0 \end{matrix}$$

$$\text{Magnitude of moment} = \sqrt{(-\lambda)^2 + (2\lambda)^2}$$

$$= \sqrt{\lambda^2 + 4\lambda^2} = \sqrt{5\lambda^2} = \sqrt{5}\lambda$$

70. In a triangle ABC, if taken in order, consider the following statements

- 1. $\vec{AB} + \vec{BC} + \vec{CA} = \vec{0}$
- 2. $\vec{AB} + \vec{BC} - \vec{CA} = \vec{0}$
- 3. $\vec{AB} - \vec{BC} + \vec{CA} = \vec{0}$
- 4. $\vec{BA} - \vec{BC} + \vec{CA} = \vec{0}$

How many of the above statement are correct?

- (a) One
- (b) Two
- (c) Three
- (d) Four

- ⊙ (a) We know that,
In a triangle ABC
 $\vec{AB} + \vec{BC} + \vec{CA} = \vec{O}$ [\because by triangle law]

So, only first statement is correct.

- 71.** Let the slope of the curve $y = \cos^{-1}(\sin x)$ be $\tan \theta$. Then the value of θ in the interval $(0, \pi)$ is
(a) $\frac{\pi}{6}$ (b) $\frac{3\pi}{4}$ (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{2}$

- ⊙ (b) We have,
 $y = \cos^{-1}(\sin x)$
differentiation w.r.t. x , we get
 $\frac{dy}{dx} = \frac{-1}{\sqrt{1 - \sin^2 x}} \cos x$
 $= \frac{-\cos x}{\cos x}$ [$\because \sin^2 x + \cos^2 x = 1$]

$\frac{dy}{dx} = -1$
Slope of the curve = $\tan \theta$
 $\therefore \tan \theta = -1$
 $\Rightarrow \tan \theta = -\tan \frac{\pi}{4}$
 $\Rightarrow \tan \theta = \tan \left(\pi - \frac{\pi}{4} \right)$
 $\Rightarrow \theta = \frac{3\pi}{4}$ [$\because \theta \in (0, \pi)$]

- 72.** If $f(x) = \frac{\sqrt{x-1}}{x-4}$, defines a function on R , then what is its domain?
(a) $(-\infty, 4) \cup (4, \infty)$
(b) $[4, \infty)$
(c) $(1, 4) \cup (4, \infty)$
(d) $[1, 4) \cup (4, \infty)$

- ⊙ (d) We have,
 $f(x) = \frac{\sqrt{x-1}}{x-4}$
 $\therefore x-1 \geq 0$
and $x-4 \neq 0$
 $\Rightarrow x \geq 1$
 $x \neq 4$
So, $x \in [1, 4) \cup (4, \infty)$
Domain = $[1, 4) \cup (4, \infty)$

- 73.** Consider the function

$$f(x) = \begin{cases} \frac{\sin 2x}{5x}, & \text{if } x \neq 0 \\ \frac{2}{15}, & \text{if } x = 0 \end{cases}$$

Which one of the following is correct in respect of the function?

- (a) It is not continuous at $x = 0$
(b) It is continuous at every x
(c) It is not continuous at $x = \pi$
(d) It is continuous at $x = 0$

- ⊙ (a) We have,
 $f(x) = \begin{cases} \frac{\sin 2x}{5x}, & x \neq 0 \\ \frac{2}{15}, & x = 0 \end{cases}$

at $x = 0$
 $\lim_{x \rightarrow 0} f(x) = \lim_{x \rightarrow 0} \frac{\sin 2x \times 2}{5x \times 2} = \frac{2}{5}$

$f(0) = \frac{2}{15}$
 $\therefore \lim_{x \rightarrow 0} f(x) \neq f(0)$

at $x = 0$ function is discontinuous.

- 74.** For the function $f(x) = |x-3|$, which one of the following is not correct?

- (a) The function is not continuous at $x = -3$
(b) The function is continuous at $x = 3$
(c) The function is differentiable at $x = 0$
(d) The function is differentiable at $x = -3$

- ⊙ (a) We have,
 $f(x) = |x-3|$

We know that, modulus function is continuous in R .

So, option (a) is incorrect.

- 75.** If the function $f(x) = \frac{2x - \sin^{-1} x}{2x + \tan^{-1} x}$ is continuous at each point in its domain, then what is the value of $f(0)$?

- (a) $-\frac{1}{3}$ (b) $\frac{1}{3}$ (c) $\frac{2}{3}$ (d) 2

- ⊙ (b) We have,

$$f(x) = \frac{2x - \sin^{-1} x}{2x + \tan^{-1} x}$$

Function is continuous at each point

$\therefore f(0) = \lim_{x \rightarrow 0} f(x)$

Now, $\lim_{x \rightarrow 0} f(x) = \lim_{x \rightarrow 0} \frac{2x - \sin^{-1} x}{2x + \tan^{-1} x}$

$$= \lim_{x \rightarrow 0} \frac{2 - \frac{1}{\sqrt{1-x^2}}}{2 + \frac{1}{1+x^2}}$$

$$= \frac{2-1}{2+1} = \frac{1}{3}$$

$\therefore f(0) = \frac{1}{3}$

- 76.** If $f(x) = \sqrt{25-x^2}$, then what is

$\lim_{x \rightarrow 1} \frac{f(x) - f(1)}{x-1}$ equal to?

- (a) $-\frac{1}{\sqrt{24}}$ (b) $\frac{1}{\sqrt{24}}$
(c) $-\frac{1}{4\sqrt{3}}$ (d) $\frac{1}{\sqrt{4\sqrt{3}}}$

- ⊙ (a) We have,

$$f(x) = \sqrt{25-x^2}$$

Now, $\lim_{x \rightarrow 1} \frac{f(x) - f(1)}{x-1}$
 $= \lim_{x \rightarrow 1} \frac{\sqrt{25-x^2} - \sqrt{24}}{x-1}$

$$= \lim_{x \rightarrow 1} \frac{-2x}{2\sqrt{25-x^2}} = 0$$

[by L-Hospital]

$$= -\frac{1}{\sqrt{24}}$$

- 77.** If $y = \tan^{-1} \left(\frac{5-2\tan\sqrt{x}}{2+5\tan\sqrt{x}} \right)$, then

what is $\frac{dy}{dx}$ equal to?

- (a) $-\frac{1}{2\sqrt{x}}$ (b) 1
(c) -1 (d) $\frac{1}{2\sqrt{x}}$

- ⊙ (a) We have,

$$y = \tan^{-1} \left(\frac{5-2\tan\sqrt{x}}{2+5\tan\sqrt{x}} \right)$$

$$y = \tan^{-1} \left(\frac{5 - \tan\sqrt{x}}{1 + \frac{5}{2}\tan\sqrt{x}} \right)$$

Let, $\frac{5}{2} = \tan A$

$$= \tan^{-1} \left(\frac{\tan A - \tan\sqrt{x}}{1 + \tan A \tan\sqrt{x}} \right)$$

$$= \tan^{-1} [\tan(A - \sqrt{x})] = A - \sqrt{x}$$

$$y = \tan^{-1} \frac{5}{2} - \sqrt{x}$$

differentiation w.r.t x , we get

$$\frac{dy}{dx} = -\frac{1}{2\sqrt{x}}$$

- 78.** Which one of the following is correct in respect of the function

$$f(x) = x \sin x + \cos x + \frac{1}{2} \cos^2 x ?$$

- (a) It is increasing in the interval $\left(0, \frac{\pi}{2}\right)$
(b) It remains constant in the interval $\left(0, \frac{\pi}{2}\right)$
(c) It is decreasing in the interval $\left(0, \frac{\pi}{2}\right)$
(d) It is decreasing in the interval $\left(\frac{\pi}{4}, \frac{\pi}{2}\right)$

⊙ (a) We have,

$$f(x) = x \sin x + \cos x + \frac{1}{2} \cos^2 x$$

$$f'(x) = x(\cos x) + \sin x - \sin x + \frac{1}{2} \cdot 2 \cos x (-\sin x)$$

$$f'(x) = x \cos x - \sin x \cos x$$

By checking options, we put

$$x = \frac{\pi}{4}$$

$$f'(x) = \frac{\pi}{4} \cos \frac{\pi}{4} - \sin \frac{\pi}{4} \cos \frac{\pi}{4}$$

$$= \frac{\pi}{4} \cdot \frac{1}{\sqrt{2}} - \frac{1}{\sqrt{2}} \times \frac{1}{\sqrt{2}}$$

$$= \frac{\pi}{4\sqrt{2}} - \frac{1}{2} > 0$$

So, $f(x)$ is increasing in the interval $\left(0, \frac{\pi}{2}\right)$

79. What is $\lim_{\theta \rightarrow 0} \frac{\sqrt{1 - \cos \theta}}{\theta}$ equal to?

- (a) $\sqrt{2}$ (b) $2\sqrt{2}$
 (c) $\frac{1}{\sqrt{2}}$ (d) $-\frac{1}{2\sqrt{2}}$

⊙ (c) We have,

$$\lim_{\theta \rightarrow 0} \frac{\sqrt{1 - \cos \theta}}{\theta}$$

$$= \lim_{\theta \rightarrow 0} \frac{\sqrt{1 - \left(1 - 2 \sin^2 \frac{\theta}{2}\right)}}{\theta}$$

$$= \lim_{\theta \rightarrow 0} \frac{\sqrt{2 \sin^2 \frac{\theta}{2}}}{\theta}$$

$$= \lim_{\theta \rightarrow 0} \frac{\sqrt{2} \sin \frac{\theta}{2}}{\frac{\theta}{2} \times 2}$$

$$= \frac{1}{\sqrt{2}}$$

80. A function $f : A \rightarrow \mathbf{R}$ is defined by the equation $f(x) = x^2 - 4x + 5$, where $A = (1, 4)$. What is the range of the function?

- (a) (2, 5) (b) (1, 5)
 (c) [1, 5] (d) [1, 5]

⊙ (c) We have,

A function $f : A \rightarrow \mathbf{R}$ is defined by

$$f(x) = x^2 - 4x + 5,$$

Where, $A = (1, 4)$

Let, $y = x^2 - 4x + 5$

$$\frac{dy}{dx} = 2x - 4$$

Now, $\frac{dy}{dx} = 0$

$$\Rightarrow 2x - 4 = 0$$

$$\Rightarrow x = 2$$

At $x = 2, y = 1$

At $x = 1, y = (1)^2 - 4(1) + 5 = 2$

At $x = 4, y = (4)^2 - 4(4) + 5 = 5$

So, $y \in [1, 5)$

Range = [1, 5)

81. What is $\int_a^b [x] dx + \int_a^b [-x] dx$ equal to, where $[\cdot]$ is the greatest integer function?

- (a) $b - a$ (b) $a - b$
 (c) 0 (d) $2(b - a)$

⊙ (b) We have,

$$\int_a^b [x] dx + \int_a^b [-x] dx$$

$$= \int_a^b ([x] + [-x]) dx$$

$$[\because [x] + [-x] = -1, \text{ if } x \notin \mathbf{Z}]$$

$$= \int_a^b (-1) dx$$

$$= -(x)_a^b = -(b - a) = a - b$$

82. What is $\int_2^8 |x - 5| dx$ equal to?

- (a) 2 (b) 3 (c) 4 (d) 9

⊙ (d) We have,

$$\int_2^8 |x - 5| dx$$

$$= \int_2^5 |x - 5| dx + \int_5^8 |x - 5| dx$$

$$[\because \int_a^b f(x) dx = \int_a^c f(x) dx + \int_c^b f(x) dx]$$

$$= -\int_2^5 (x - 5) dx + \int_5^8 (x - 5) dx$$

$$= -\left[\frac{x^2}{2} - 5x\right]_2^5 + \left[\frac{x^2}{2} - 5x\right]_5^8$$

$$= -\left[\left(\frac{25}{2} - 25\right) - (2 - 10)\right] + \left[(32 - 40) - \left(\frac{25}{2} - 25\right)\right]$$

$$= \frac{25}{2} - 8 - 8 + \frac{25}{2} = 9$$

83. What is $\int \sin^3 x \cos x dx$ equal to ?

- (a) $\cos^4 x + C$
 (b) $\sin^4 x + C$
 (c) $\frac{(1 - \sin^2 x)^2}{4} + C$
 (d) $\frac{(1 - \cos^2 x)^2}{4} + C$

Where C is the constant of integration.

⊙ (d) We have,

$$\int \sin^3 x \cos x dx$$

Let, $\sin x = t$

$$\cos x dx = dt$$

$$= \int t^3 dt$$

$$= \frac{t^4}{4} + C$$

$$= \frac{\sin^4 x}{4} + C$$

$$= \frac{(\sin^2 x)^2}{4} + C$$

$$= \frac{(1 - \cos^2 x)^2}{4} + C$$

$$[\because \sin^2 x + \cos^2 x = 1]$$

84. What is $\int e^{\ln(\tan x)} dx$ equal to

- (a) $\ln |\tan x| + C$
 (b) $\ln |\sec x| + C$
 (c) $\tan x + C$
 (d) $e^{\tan x} + C$

Where C is the constant of integration.

⊙ (b) We have,

$$\int e^{\ln(\tan x)} dx \quad [\because e^{\ln(x)} = x]$$

$$= \int \tan x dx$$

$$= \log |\sec x| + C$$

85. What is $\int_{-1}^1 \left\{ \frac{d}{dx} \left(\tan^{-1} \frac{1}{x} \right) \right\} dx$ equal

to ?

- (a) 0 (b) $-\frac{\pi}{4}$
 (c) $-\frac{\pi}{2}$ (d) $\frac{\pi}{2}$

⊙ (d) We have,

$$\int_{-1}^1 \left[\frac{d}{dx} \left(\tan^{-1} \frac{1}{x} \right) \right] dx$$

$$= \left[\tan^{-1} \left(\frac{1}{x} \right) \right]_{-1}^1$$

$$= \tan^{-1}(1) - \tan^{-1}(-1)$$

$$= \frac{\pi}{4} + \frac{\pi}{4}$$

$$= \frac{\pi}{2}$$

86. In which one of the following intervals is the function $f(x) = x^2 - 5x + 6$ decreasing?

- (a) $(-\infty, 2]$ (b) $[3, \infty)$
 (c) $(-\infty, \infty)$ (d) $(2, 3)$

⊙ (a) We have,

$$f(x) = x^2 - 5x + 6$$

$$f'(x) = 2x - 5$$

For decreasing
 $f'(x) < 0$
 $2x - 5 < 0$
 $x < \frac{5}{2}$
 $x < 2.5$
 $x \in (-\infty, 2.5)$

87. The differential equation of the family of curves $y = p \cos(ax) + q \sin(ax)$, where p, q are arbitrary constants, is

- (a) $\frac{d^2y}{dx^2} - a^2y = 0$
- (b) $\frac{d^2y}{dx^2} - ay = 0$
- (c) $\frac{d^2y}{dx^2} + ay = 0$
- (d) $\frac{d^2y}{dx^2} + a^2y = 0$

⊙ (d) We have,

$y = p \cos(ax) + q \sin(ax)$
 differentiation. w. r. t. x , we get
 $\frac{dy}{dx} = -pa \sin ax + qa \cos ax$

Again, differentiation. w. r. t. x , we get
 $\frac{d^2y}{dx^2} = -pa^2 \cos ax - qa^2 \sin ax$
 $\Rightarrow \frac{d^2y}{dx^2} = -a^2(p \cos ax + q \sin ax)$
 $\Rightarrow \frac{d^2y}{dx^2} = -a^2y$
 $\Rightarrow \frac{d^2y}{dx^2} + a^2y = 0$

88. The equation of the curve passing through the point $(-1, -2)$, which satisfies $\frac{dy}{dx} = -x^2 - \frac{1}{x^3}$, is

- (a) $17x^2y - 6x^2 + 3x^5 - 2 = 0$
- (b) $6x^2y + 17x^2 + 2x^5 - 3 = 0$
- (c) $6xy - 2x^2 + 17x^5 + 3 = 0$
- (d) $17x^2y + 6xy - 3x^5 + 5 = 0$

⊙ (b) We have,

$\frac{dy}{dx} = -x^2 - \frac{1}{x^3}$
 $\Rightarrow dy = \left(-x^2 - \frac{1}{x^3}\right) dx$
 Integrating both sides
 $\int dy = \int \left(-x^2 - \frac{1}{x^3}\right) dx$
 $\Rightarrow y = -\frac{x^3}{3} - \left(\frac{x^{-2}}{-2}\right) + C$
 $\Rightarrow y = -\frac{x^3}{3} + \frac{1}{2x^2} + C \dots(i)$
 given curve is passing through $(-1, -2)$

$$\begin{aligned} -2 &= \frac{1}{3} + \frac{1}{2} + C \\ \Rightarrow -2 &= \frac{5}{6} + C \\ \Rightarrow C &= -2 - \frac{5}{6} \\ \Rightarrow C &= \frac{-17}{6} \end{aligned}$$

Put in Eq. (i)

$$\begin{aligned} y &= \frac{-x^3}{3} + \frac{1}{2x^2} - \frac{17}{6} \\ \Rightarrow y &= \frac{-2x^5 + 3 - 17x^2}{6x^2} \\ \Rightarrow 6x^2y &= -2x^5 + 3 - 17x^2 \\ \Rightarrow 6x^2y + 2x^5 + 17x^2 - 3 &= 0 \end{aligned}$$

89. What is the order of the differential equation whose solution is $y = a \cos x + b \sin x + ce^{-x} + d$, where a, b, c and d are arbitrary constants?

- (a) 1
- (b) 2
- (c) 3
- (d) 4

⊙ (d) We have,

$y = a \cos x + b \sin x + ce^{-x} + d$,
 a, b, c and d are arbitrary constants.
 We know that,
 order = number of arbitrary constant
 So, order = 4

90. What is the solution of the differential equation

$\ln\left(\frac{dy}{dx}\right) = ax + by$?

- (a) $ae^{ax} + be^{by} = C$
- (b) $\frac{1}{a}e^{ax} + \frac{1}{b}e^{by} = C$
- (c) $ae^{ax} + be^{-by} = C$
- (d) $\frac{1}{a}e^{ax} + \frac{1}{b}e^{-by} = C$

⊙ (d) We have,

$$\begin{aligned} \ln\left(\frac{dy}{dx}\right) &= ax + by \\ \frac{dy}{dx} &= e^{ax + by} \\ \frac{dy}{dx} &= e^{ax} \cdot e^{by} \\ \frac{dy}{e^{by}} &= e^{ax} dx \end{aligned}$$

Integrating both sides

$$\begin{aligned} \int e^{-by} dy &= \int e^{ax} dx \\ \Rightarrow \frac{e^{-by}}{-b} &= \frac{e^{ax}}{a} + C \\ \Rightarrow \frac{e^{ax}}{a} + \frac{e^{-by}}{b} + C &= 0 \end{aligned}$$

91. If $u = e^{ax} \sin bx$ and $v = e^{ax} \cos bx$, then what is $u \frac{du}{dx} + v \frac{dv}{dx}$ equal to?

- (a) ae^{2ax}
- (b) $(a^2 + b^2)e^{ax}$
- (c) $ab e^{2ax}$
- (d) $(a + b) e^{ax}$

⊙ (a) We have,

$u = e^{ax} \sin bx$
 differentiation. w. r. t. x , we get
 $\frac{du}{dx} = e^{ax} (b \cos bx) + \sin bx (ae^{ax})$
 $\frac{dv}{dx} = e^{ax} (b \cos bx + a \sin bx) \dots(i)$
 Now, $v = e^{ax} \cos bx$
 differentiation. w. r. t. x , we get
 $\frac{dv}{dx} = e^{ax} (-b \sin bx) + \cos bx (ae^{ax})$
 $= e^{ax} (-b \sin bx + a \cos bx)$

Now we have,
 $u \frac{du}{dx} + v \frac{dv}{dx}$
 $= e^{ax} \sin bx [e^{ax} (b \cos bx + a \sin bx)]$
 $+ e^{ax} \cos bx [e^{ax} (-b \sin bx + a \cos bx)]$
 $= e^{2ax} [b \sin bx \cos bx + a \sin^2 bx] + e^{2ax}$
 $(-b \cos bx \sin bx + a \cos^2 bx)$
 $= e^{2ax} [a \sin^2 bx + a \cos^2 bx]$
 $= ae^{2ax}$

92. If $y = \sin(\ln x)$, then which one of the following is correct?

- (a) $\frac{d^2y}{dx^2} + y = 0$
- (b) $\frac{d^2y}{dn^2} = 0$
- (c) $x^2 \frac{d^2y}{dx^2} + x \frac{dy}{dx} + y = 0$
- (d) $x \frac{d^2y}{dx^2} - x \frac{dy}{dx} + y = 0$

Where C is the constant of integration

⊙ (c) We have,

$y = \sin(\log_e x)$
 differentiation. w. r. t. x , we get
 $\frac{dy}{dx} = \frac{\cos(\log_e x)}{x}$
 $x \frac{dy}{dx} = \cos(\log_e x)$
 Again, differentiation. w. r. t. x , we get
 $x \frac{d^2y}{dx^2} + \frac{dy}{dx} = \frac{-\sin(\log_e x)}{x}$
 $\Rightarrow x^2 \frac{d^2y}{dx^2} + x \frac{dy}{dx} = -\sin(\log_e x)$
 $\Rightarrow x^2 \frac{d^2y}{dx^2} + x \frac{dy}{dx} = -y$
 $\Rightarrow x^2 \frac{d^2y}{dx^2} + x \frac{dy}{dx} + y = 0$

93. A flower-bed in the form of a sector has been fenced by a wire of 40 m length. If the flower-bed has the greatest possible area, then what is the radius of the sector?

- (a) 25 m
- (b) 20 m
- (c) 10 m
- (d) 5 m

⊙ (c) Let radius of sector be r and angle subtended at centre be θ .

$$\begin{aligned} \therefore r + r + r\theta &= 40 \\ \Rightarrow 2r + r\theta &= 40 \\ \Rightarrow \theta &= \frac{40 - 2r}{r} \end{aligned}$$

$$\text{Area of the sector} = \frac{1}{2} r^2 \theta$$

$$A = \frac{1}{2} r^2 \left(\frac{40 - 2r}{r} \right)$$

$$A = \frac{1}{2} r (40 - 2r)$$

$$A = \frac{1}{2} (40r - 2r^2)$$

differentiating w. r. t. r ,

$$\frac{dA}{dr} = \frac{1}{2} (40 - 4r)$$

$$\text{Now, } \frac{dA}{dr} = 0$$

$$\Rightarrow 40 - 4r = 0$$

$$\Rightarrow r = 10\text{m}$$

94. What is the minimum value of

$$\left[x(x-1) + 1 \right]^{\frac{1}{3}}, \text{ where } 0 \leq x \leq 1?$$

- (a) $\left(\frac{3}{4}\right)^{\frac{1}{3}}$
- (b) 1
- (c) $\frac{1}{2}$
- (d) $\left(\frac{3}{8}\right)^{\frac{1}{3}}$

⊙ (a) We have,

$$y = (x^2 - x + 1)^{\frac{1}{3}}$$

$$y = \left(x^2 - x + \frac{1}{4} - \frac{1}{4} + 1 \right)^{\frac{1}{3}}$$

$$\text{at } x = \frac{1}{2}, y \text{ is minimum } y = \left(\frac{3}{4} \right)^{\frac{1}{3}}$$

95. If $y = |\sin x|^{x^2}$, then what is the value of $\frac{dy}{dx}$ at $x = -\frac{\pi}{6}$?

- (a) $\frac{2^{-\frac{\pi}{6}} (6 \ln 2 - \sqrt{3}\pi)}{6}$
- (b) $\frac{\frac{\pi}{6} (6 \ln 2 + \sqrt{3}\pi)}{6}$

$$(c) \frac{2^{-\frac{\pi}{6}} (6 \ln 2 + \sqrt{3}\pi)}{6}$$

$$(d) \frac{2^{-\frac{\pi}{6}} (6 \ln 2 - \sqrt{3}\pi)}{6}$$

⊙ (a) We have,

$$y = |\sin x|^{x^2}$$

$$\therefore x = -\frac{\pi}{6}$$

$$\sin x < 0, x < 0$$

$$y = (-\sin x)^{-x^2}$$

$$\therefore y = f(x)^{g(x)}, \text{ So}$$

$$\frac{dy}{dx} = f(x)^{g(x)} \left[\frac{g(x)}{f(x)} f'(x) + \log |f(x)| \cdot g'(x) \right]$$

$$\frac{dy}{dx} = (-\sin x)^{-x^2}$$

$$\left[\frac{(-x)}{(-\sin x)} \cdot (-\cos x) + \log |(-\sin x)| \cdot (-2x) \right]$$

$$\frac{dy}{dx} \Big|_{x = -\pi/6} = \left[-\sin \left(-\frac{\pi}{6} \right) \right]^{\frac{\pi}{6}}$$

$$\left\{ \frac{\pi/6}{-\sin(-\pi/6)} - \cos \left(-\frac{\pi}{6} \right) \right\} - \log |-\sin \left(-\frac{\pi}{6} \right)|$$

$$= \left(\sin \frac{\pi}{6} \right)^{\frac{\pi}{6}} \left[\frac{-\frac{\pi}{6}}{\frac{1}{2}} \left(\frac{\sqrt{3}}{2} \right) - \log \left(\frac{1}{2} \right) \right]$$

$$= \left(\frac{1}{2} \right)^{\frac{\pi}{6}} \left[\frac{-\sqrt{3}\pi}{6} - \log \frac{1}{2} \right]$$

$$= 2^{-\pi/6} \left[\log 2 - \frac{\sqrt{3}\pi}{6} \right]$$

$$= 2^{-\frac{\pi}{6}} \left[\frac{6 \log 2 - \sqrt{3}\pi}{6} \right]$$

96. What is $\frac{d\sqrt{1 - \sin 2x}}{dx}$ equal to,

$$\text{where } \frac{\pi}{4} < x < \frac{\pi}{2}?$$

- (a) $\cos x + \sin x$
- (b) $-(\cos x + \sin x)$
- (c) $\pm (\cos x + \sin x)$
- (d) None of the above

⊙ (a) We have,

$$\frac{d}{dx} \sqrt{1 - \sin 2x}, \frac{\pi}{4} < x < \frac{\pi}{2}$$

$$= \frac{d}{dx} \sqrt{\cos^2 x + \sin^2 x - 2 \sin x \cos x}$$

$$\left[\because \sin^2 x + \cos^2 x = 1 \right. \\ \left. \text{and } \sin 2x = 2 \sin x \cos x \right]$$

$$= \frac{d}{dx} |\cos x - \sin x|$$

$$= \frac{d}{dx} (\sin x - \cos x)$$

$$\left[\because \frac{\pi}{4} < x < \frac{\pi}{2} \therefore \sin x > \cos x \right]$$

$$= \cos x - (-\sin x)$$

$$= \cos x + \sin x$$

97. What is $\int \frac{dx}{a^2 \sin^2 x + b^2 \cos^2 x}$

equal to?

$$(a) C + \frac{1}{ab} \tan^{-1} \left(\frac{a \tan x}{b} \right)$$

$$(b) C - \frac{1}{ab} \tan^{-1} \left(\frac{a \tan x}{b} \right)$$

$$(c) C + \frac{1}{ab} \tan^{-1} \left(\frac{b \tan x}{a} \right)$$

(d) None of the above

Where C is the constant of integration.

⊙ (a) We have,

$$\int \frac{dx}{a^2 \sin^2 x + b^2 \cos^2 x}$$

Divide numerator and denominator by $\cos^2 x$

$$I = \int \frac{\sec^2 x dx}{a^2 \tan^2 x + b^2}$$

$$\text{Let } a \tan x = t$$

$$a \sec^2 x dx = dt$$

$$\sec^2 x dx = \frac{dt}{a}$$

$$I = \frac{1}{a} \int \frac{dt}{t^2 + b^2}$$

$$= \frac{1}{a} \times \frac{1}{b} \tan^{-1} \left(\frac{t}{b} \right) + C$$

$$\left[\because \int \frac{1}{x^2 + a^2} dx = \frac{1}{a} \tan^{-1} \frac{x}{a} + C \right]$$

$$= \frac{1}{ab} \tan^{-1} \left(\frac{a \tan x}{b} \right) + C$$

98. Let $f(x+y) = f(x) f(y)$ and

$$f(x) = 1 + xg(x) \phi(x), \text{ where}$$

$$\lim_{x \rightarrow 0} g(x) = a \text{ and } \lim_{x \rightarrow 0} \phi(x) = b.$$

Then, what is $f'(x)$ equal to?

- (a) $1 + abf(x)$
- (b) $1 + ab$
- (c) ab
- (d) $abf(x)$

⊙ (d) Let, $f(x+y) = f(x) f(y)$

$$\text{and } f(x) = 1 + xg(x) \cdot \phi(x)$$

$$\text{Thus, } f(y) = 1 + yg(y) \phi(y)$$

$$\text{Where } \lim_{x \rightarrow 0} g(x) = a \text{ and } \lim_{x \rightarrow 0} \phi(x) = b$$

using first principal

$$f'(x) = \lim_{y \rightarrow 0} \frac{f(x+y) - f(x)}{y}$$

$$= \lim_{y \rightarrow 0} \frac{f(x) \cdot f(y) - f(x)}{y}$$

$$= \lim_{y \rightarrow 0} \frac{f(x)[f(y) - 1]}{y}$$

$$\begin{aligned} \lim_{y \rightarrow 0} f(x) \left[\frac{1 + yg(y)\phi(y) - 1}{y} \right] \\ = f(x) \lim_{y \rightarrow 0} g(y) \lim_{y \rightarrow 0} \phi(y) \\ = f(x) \cdot a \cdot b \\ = ab f(x) \end{aligned}$$

99. What is the solution of the differential

equation $\frac{dx}{dy} = \frac{x + y + 1}{x + y - 1}$?

- (a) $y - x + 4 \ln(x + y) = C$
- (b) $y + x + 2 \ln(x + y) = C$
- (c) $y - x + \ln(x + y) = C$
- (d) $y + x + 2 \ln(x + y) = C$

Where C is an arbitrary constant.

⊙ (c) We have, $\frac{dx}{dy} = \frac{x + y + 1}{x + y - 1}$

Let $x + y = u$
 $\frac{dx}{dy} + 1 = \frac{du}{dy}$
 $\Rightarrow \frac{dx}{dy} = \frac{du}{dy} - 1$
 $\Rightarrow \frac{du}{dy} - 1 = \frac{u + 1}{u - 1}$
 $\Rightarrow \frac{du}{dy} = \frac{u + 1}{u - 1} + 1$
 $\Rightarrow \frac{du}{dy} = \frac{u + 1 + u - 1}{u - 1}$
 $\Rightarrow \frac{du}{dy} = \frac{2u}{u - 1}$
 $\Rightarrow \left(\frac{u - 1}{u}\right) du = 2 dy$

Integrating both sides,

$$\int \left(1 - \frac{1}{u}\right) du = \int 2 dy$$

$$\Rightarrow u - \log u = 2y + C$$

[∵ $u = x + y$]

$$\Rightarrow x + y - \log(x + y) = 2y + C$$

$$\Rightarrow x - \log(x + y) = y + C$$

$$\Rightarrow y - x + \log(x + y) = C$$

100. What is $\lim_{x \rightarrow \frac{\pi}{6}} \frac{2 \sin^2 x + \sin x - 1}{2 \sin^2 x - 3 \sin x + 1}$

equal to?

- (a) $-\frac{1}{2}$
- (b) $-\frac{1}{3}$
- (c) -2
- (d) -3

⊙ (d) We have,

$$\begin{aligned} \lim_{x \rightarrow \frac{\pi}{6}} \frac{2 \sin^2 x + \sin x - 1}{2 \sin^2 x - 3 \sin x + 1} \\ = \lim_{x \rightarrow \frac{\pi}{6}} \frac{2 \sin^2 x + 2 \sin x - \sin x - 1}{2 \sin^2 x - 2 \sin x - \sin x + 1} \\ = \lim_{x \rightarrow \frac{\pi}{6}} \frac{2 \sin x (\sin x + 1) - (\sin x + 1)}{2 \sin x (\sin x - 1) - 1 (\sin x - 1)} \end{aligned}$$

$$\begin{aligned} &= \lim_{x \rightarrow \frac{\pi}{6}} \frac{(\sin x + 1)(2 \sin x - 1)}{(\sin x - 1)(2 \sin x - 1)} \\ &= \lim_{x \rightarrow \frac{\pi}{6}} \frac{\sin x + 1}{\sin x - 1} \\ &= \frac{\frac{1}{2} + 1}{\frac{1}{2} - 1} = \frac{\frac{3}{2}}{-\frac{1}{2}} \\ &= -3 \end{aligned}$$

101. If two dice are thrown and atleast one of the dice shows 5, then the probability that the sum is 10 or more is

- (a) $\frac{1}{6}$
- (b) $\frac{4}{11}$
- (c) $\frac{3}{11}$
- (d) $\frac{2}{11}$

⊙ (c) Let A be event of dice shows 5 and B be the event that the sum is 10 or more

Here, $n(S) = 36$
 $n(A) = \{ (1, 5), (2, 5), (3, 5), (4, 5), (5, 5), (6, 5), (5, 1), (5, 2), (5, 3), (5, 4), (5, 6) \}$
 $n(B) = \{ (5, 5), (6, 4), (4, 6), (6, 5), (5, 6), (6, 6) \}$
 $n(A \cap B) = \{ (5, 5), (6, 5), (5, 6) \}$

$$P\left(\frac{B}{A}\right) = \frac{36}{11}$$

$$\left[\because P\left(\frac{B}{A}\right) = \frac{P(B \cap A)}{P(A)} \right]$$

$$= \frac{3}{11}$$

102. The correlation coefficient computed from a set of 30 observations is 0.8. Then the percentage of variation not explained by linear regression is

- (a) 80%
- (b) 20%
- (c) 64%
- (d) 36%

⊙ (b) Given that,

correlation coefficient = 0.8 = 80%, if the relation is 80% explained, then 20% of variation will not explained by near regression.

103. The average age of a combined group of men and women is 25 yr. If the average age of the group of men is 26 yr and that of the group of women is 21 yr, then the percentage of men and women in the group is respectively

- (a) 20, 80
- (b) 40, 60
- (c) 60, 40
- (d) 80, 20

⊙ (d) In group of men, let number of men = a

$$\bar{X}_1 = 26 \text{ yr and } n_1 = a \text{ (let)}$$

and in group of women, number of women = b (let)

$$\bar{X}_2 = 21 \text{ yr}$$

and combined mean $\bar{X} = 25$

$$\text{Now, } \bar{X} = \frac{n_1 \bar{X}_1 + n_2 \bar{X}_2}{n_1 + n_2}$$

$$\Rightarrow 25 = \frac{26a + 21b}{a + b}$$

$$\Rightarrow 25a + 25b = 26a + 21b$$

$$\Rightarrow 4b = a$$

$$\Rightarrow \frac{a}{b} = \frac{4}{1}$$

By checking options (d) is correct.

104. If $\sin \beta$ is the harmonic mean of $\sin \alpha$ and $\cos \alpha$ and $\sin \theta$ is the arithmetic mean of $\sin \alpha$ and $\cos \alpha$, then which of the following is/are correct?

1. $\sqrt{2} \sin\left(\alpha + \frac{\pi}{4}\right) \sin \beta = \sin 2\alpha$

2. $\sqrt{2} \sin \theta = \cos\left(\alpha - \frac{\pi}{4}\right)$

Select the correct answer using the code given below.

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (c) Given that,

$\sin \beta$ is HM of $\sin \alpha$ and $\cos \alpha$

$$\text{So, } \sin \beta = \frac{2 \sin \alpha \cos \alpha}{\sin \alpha + \cos \alpha}$$

$$\Rightarrow \sin \beta (\sin \alpha + \cos \alpha) = \sin 2\alpha$$

$$\Rightarrow \sin \beta \times \sqrt{2} \left(\frac{1}{\sqrt{2}} \sin \alpha + \frac{1}{\sqrt{2}} \cos \alpha \right)$$

$$= \sin 2\alpha$$

$$\Rightarrow \sin \beta \times \sqrt{2} \left(\cos \frac{\pi}{4} \sin \alpha + \sin \frac{\pi}{4} \cos \alpha \right)$$

$$= \sin 2\alpha$$

$$\Rightarrow \sqrt{2} \sin \beta \left[\sin\left(\alpha + \frac{\pi}{4}\right) \right] = \sin 2\alpha$$

$$\Rightarrow \sqrt{2} \sin\left(\alpha + \frac{\pi}{4}\right) \sin \beta = \sin 2\alpha$$

Statement I is true.

Now, $\sin \theta$ is AM of $\sin \alpha$ and $\cos \alpha$

$$\sin \theta = \frac{\sin \alpha + \cos \alpha}{2}$$

$$\Rightarrow 2 \sin \theta = \sin \alpha + \cos \alpha$$

$$\Rightarrow 2 \sin \theta = \sqrt{2} \left(\frac{1}{\sqrt{2}} \sin \alpha + \frac{1}{\sqrt{2}} \cos \alpha \right)$$

$$\Rightarrow$$

$$2 \sin \theta = \sqrt{2} \left(\sin \frac{\pi}{4} \sin \alpha + \cos \frac{\pi}{4} \cos \alpha \right)$$

$$\Rightarrow \sqrt{2} \sin \theta = \cos\left(\alpha - \frac{\pi}{4}\right)$$

Hence, Statement II is also correct.

- 105.** Let A, B and C be three mutually exclusive and exhaustive events associated with a random experiment. If $P(B) = 1.5 P(A)$ and $P(C) = 0.5 P(B)$, then $P(A)$ is equal to
- (a) $\frac{3}{4}$ (b) $\frac{4}{13}$
 (c) $\frac{2}{3}$ (d) $\frac{1}{2}$

⊙ (b) We have,
 $P(B) = 1.5 P(A) = \frac{3}{2} P(A)$
 and $P(C) = 0.5 P(B) = \frac{1}{2} P(B)$
 $= \frac{1}{2} \times \frac{3}{2} P(A)$
 $= \frac{3}{4} P(A)$

Now, A, B and C are mutually exclusive and exhaustive events

So,
 $P(A) + P(B) + P(C) = 1$
 $\Rightarrow P(A) + \frac{3}{2} P(A) + \frac{3}{4} P(A) = 1$
 $\Rightarrow P(A) \left[1 + \frac{3}{2} + \frac{3}{4} \right] = 1$
 $\Rightarrow P(A) \left(\frac{13}{4} \right) = 1$
 $\Rightarrow P(A) = \frac{4}{13}$

- 106.** In a bolt factory, machines X, Y, Z manufacture bolts that are respectively 25%, 35% and 40% of the factory's total output. The machines X, Y, Z respectively produce 2%, 4% and 5% defective bolts. A bolt is drawn at random from the product and is found to be defective. What is the probability that it was manufactured by machine X ?
- (a) $\frac{5}{39}$ (b) $\frac{14}{39}$
 (c) $\frac{20}{39}$ (d) $\frac{34}{39}$

⊙ (a) Let
 A : bolt manufactured from machine
 B : bolt manufactured from machine
 C : bolt manufactured from machine
 and E : bolt is defective

$\therefore P(A) = 25\% = \frac{25}{100}$
 $P(B) = 35\% = \frac{35}{100}$
 $P(C) = 40\% = \frac{40}{100}$
 and $P\left(\frac{E}{A}\right) = 2\% = \frac{2}{100}$

$$P\left(\frac{E}{B}\right) = 4\% = \frac{4}{100}$$

$$P\left(\frac{E}{C}\right) = 5\% = \frac{5}{100}$$

Probability of defective bulb that was manufactured by machine X ,

$$P\left(\frac{A}{E}\right) = \frac{P(A) \cdot P\left(\frac{E}{A}\right)}{P(A) \cdot P\left(\frac{E}{A}\right) + P(B) \cdot P\left(\frac{E}{B}\right) + P(C) \cdot P\left(\frac{E}{C}\right)}$$

$$= \frac{\frac{25}{100} \times \frac{2}{100}}{\frac{25}{100} \times \frac{2}{100} + \frac{35}{100} \times \frac{4}{100} + \frac{40}{100} \times \frac{5}{100}}$$

$$= \frac{25 \times 2}{25 \times 2 + 35 \times 4 + 40 \times 5}$$

$$= \frac{50}{50 + 140 + 200}$$

$$= \frac{50}{390} = \frac{5}{39}$$

- 107.** 8 coins are tossed simultaneously. The probability of getting atleast 6 heads is
- (a) $\frac{7}{64}$ (b) $\frac{57}{64}$
 (c) $\frac{37}{256}$ (d) $\frac{229}{256}$

⊙ (c) We have,
 8 coins are tossed simultaneously i.e $n = 8$ probability of getting head $p = \frac{1}{2}$,
 so $q = 1 - p = \frac{1}{2}$. Probability of getting atleast 6 heads.
 $= {}^8C_6 \left(\frac{1}{2}\right)^6 \left(\frac{1}{2}\right)^2 + {}^8C_7 \left(\frac{1}{2}\right)^7 \left(\frac{1}{2}\right)^1 + {}^8C_8 \left(\frac{1}{2}\right)^8$
 $= \left(\frac{1}{2}\right)^8 ({}^8C_6 + {}^8C_7 + {}^8C_8)$
 $= \left(\frac{1}{2}\right)^8 (28 + 8 + 1) = \frac{37}{256}$

- 108.** Three groups of children contain 3 girls and 1 boy; 2 girls and 2 boys; 1 girl and 3 boys. One child is selected at random from each group. The probability that the three selected consist of 1 girl and 2 boys is
- (a) $\frac{13}{32}$ (b) $\frac{9}{32}$
 (c) $\frac{3}{32}$ (d) $\frac{1}{32}$

- ⊙ (a) In first group, 3 girls and 1 boy
 $P(G) = \frac{3}{4}$ and $P(B) = \frac{1}{4}$

In second group, 2 girls and 2 boys
 $P(G) = \frac{2}{4} = \frac{1}{2}$
 and $P(B) = \frac{2}{4} = \frac{1}{2}$

One child is selected at random from each group and consists of 1 girl and 2 boys are GBB or BGB or BBG.

So, required probability
 $= \frac{3}{4} \times \frac{1}{2} \times \frac{3}{4} + \frac{1}{4} \times \frac{3}{4} \times \frac{3}{4}$
 $+ \frac{1}{4} \times \frac{1}{2} \times \frac{1}{4}$
 $= \frac{9}{32} + \frac{3}{32} + \frac{1}{32} = \frac{13}{32}$

- 109.** Consider the following statements :
- If 10 is added to each entry on a list, then the average increases by 10.
 - If 10 is added to each entry on a list, then the standard deviation increases by 10.
 - If each entry on a list is doubled then the average doubles.
- Which of the above statements are correct?
 (a) 1, 2 and 3 (b) 1 and 2
 (c) 1 and 3 (d) 2 and 3

- ⊙ (c) **Statement 1** The average is affected by the change of the origin.
 So, if 10 is added to each entry on list then average increase by 10. Statement 1 is correct.

Statement 2 Standard deviation is independent on change in origin. Statement 2 is incorrect.

Statement 3 The average is affected by change in scale in same ratio as each entry is changes.
 So, Statement 3 is correct.

- 110.** The variance of 25 observations is 4. If 2 is added to each observation, then the new variance of the resulting observations is
- (a) 2 (b) 4
 (c) 6 (d) 8

- ⊙ (b) We know that,
 Variance is independent on change in origin.
 So, if 2 is added to each observation, then variance is remain same
 Hence, variance = 4

111. If $x_i > 0, y_i > 0 (i = 1, 2, 3, \dots, n)$ are the values of two variables X and Y with geometric means P and Q respectively, then the geometric mean of $\frac{X}{Y}$ is

- (a) $\frac{P}{Q}$
- (b) $\text{antilog}\left(\frac{P}{Q}\right)$
- (c) $n(\log P - \log Q)$
- (d) $n(\log P + \log Q)$

⊙ (a) We have, $x_i > 0, y_i > 0,$
($i = 1, 2, 3, \dots, n$)

$$P = (x_1 \times x_2 \times x_3 \times \dots \times x_n)^{\frac{1}{n}}$$

and $Q = (y_1 \times y_2 \times y_3 \times \dots \times y_n)^{\frac{1}{n}}$

Now, geometric mean of $\frac{X}{Y}$

$$= \left(\frac{x_1}{y_1} \times \frac{x_2}{y_2} \times \dots \times \frac{x_n}{y_n} \right)^{\frac{1}{n}}$$

$$= \frac{P}{Q}$$

112. If probability of simultaneous occurrence of two events A and B is p and the probability that exactly one of A, B occurs is q , then which of the following is/are correct?

- 1. $P(\bar{A}) + P(\bar{B}) = 2 - 2p - q$
- 2. $P(\bar{A} \cap \bar{B}) = 1 - p - q$

Select the correct answer using the code given below.

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊙ (c) Given that,

$$P(A \cap B) = p$$

and $P(A) + P(B) - 2P(A \cap B) = q$

Now, **Statement 1**

Given,

$$P(A) + P(B) - 2P(A \cap B) = q$$

$$\Rightarrow 1 - P(\bar{A}) + 1 - P(\bar{B}) - 2p = q$$

$$\Rightarrow P(\bar{A}) + P(\bar{B}) = 2 - 2p - q$$

Statement 1 is correct

For **Statement 2**

$$P(\bar{A} \cap \bar{B}) = 1 - P(A \cup B)$$

$$= 1 - [P(A) + P(B) - P(A \cap B)]$$

$$= 1 - [P(A) + P(B) - 2P(A \cap B) + P(A \cap B)]$$

$$= 1 - [q + p]$$

$$= 1 - q - p$$

Statement 2 is also correct.

113. If the regression coefficient of Y on X is -6 and the correlation coefficient between X and Y is $-\frac{1}{2}$, then the regression coefficient of X on Y would be

- (a) $\frac{1}{24}$
- (b) $-\frac{1}{24}$
- (c) $-\frac{1}{6}$
- (d) $\frac{1}{6}$

⊙ (b) Given that,

$$b_{yx} = -6$$

and $r_{xy} = -\frac{1}{2}$

We know that,

$$r_{xy} = \sqrt{b_{yx} \times b_{xy}}$$

$$\Rightarrow -\frac{1}{2} = \sqrt{-6 \times b_{xy}}$$

Squaring both sides,

$$\Rightarrow \frac{1}{4} = -6 \times b_{xy}$$

$$\Rightarrow b_{xy} = -\frac{1}{24}$$

114. The set of bivariate observations $(x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$ are such that all the values are distinct and all the observations fall on a straight line with non-zero slope. Then the possible values of the correlation coefficient between x and y are

- (a) 0 and 1
- (b) 0 and -1
- (c) 0, 1 and -1
- (d) -1 and 1

⊙ (d) Given that,

All the observations fall on a straight line with non-zero, slope then if slope is positive then $r = 1$

and if slope is negative then $r = -1$

So, values of the correlation coefficient between x and y are -1 and 1 .

115. Two integers x and y are chosen with replacement from the set $[0, 1, 2, \dots, 10]$. The probability that $|x - y| > 5$ is

- (a) $\frac{6}{11}$
- (b) $\frac{35}{121}$
- (c) $\frac{30}{121}$
- (d) $\frac{25}{121}$

⊙ (c) Given that,

$$S = \{0, 1, 2, \dots, 10\}$$

$$n(S) = 11 \times 11 = 121$$

Now, $x - y > 5$

Now, E is the set of element such that $|x - y| > 5$

$$E = \{(6, 0), (0, 6), (7, 1), (1, 7), (8, 2), (2, 8), (9, 3), (3, 9), (10, 4), (4, 10), (7, 0), (0, 7), (8, 1), (1, 8), (9, 2), (2, 9), (10, 3), (3, 10), (8, 0), (0, 8), (9, 1),$$

$$(1, 9), (10, 2), (2, 10), (9, 0), (0, 9), (10, 1), (1, 10), (10, 0), (0, 10)\}$$

$$n(E) = 30$$

$$\text{So, required probability} = \frac{30}{121}$$

116. An analysis of monthly wages paid to the workers in two firms A and B belonging to the same industry gives the following result

	Firm A	Firm B
Number of workers	500	600
Average monthly wage	₹ 1860	₹ 1750
Variance of distribution of wages	81	100

The average of monthly wage and variance of distribution of wages of all the workers in the firms A and B taken together are

- (a) ₹ 1860, 100
- (b) ₹ 1750, 100
- (c) ₹ 1800, 81
- (d) None of the above

⊙ (d) For firm A

$$n_1 = 500, \bar{X}_1 = 1860$$

and variance = $\sigma_1^2 = 81$

$$\text{So, S.D.} = \sigma_1 = 9$$

For firm B

$$n_2 = 600, \bar{X}_2 = 1750$$

and variance $\sigma_2^2 = 100$

$$\text{So, S.D.} = \sigma = 10$$

$$\text{Now, combined mean } \bar{X} = \frac{n_1 \bar{X}_1 + n_2 \bar{X}_2}{n_1 + n_2}$$

$$= \frac{500 \times 1860 + 600 \times 1750}{500 + 600}$$

$$\bar{X} = 1800$$

Combined variance

$$= \frac{n_1(\sigma_1^2 + d_1^2) + n_2(\sigma_2^2 + d_2^2)}{n_1 + n_2}$$

$$= \frac{500[81 + (-60)^2] + 600[100 + (50)^2]}{500 + 600}$$

$$\because d_1 = \bar{X} - X_1 = 1800 - 1860 = -60$$

$$\text{and } d_2 = 1800 - 1750 = 50$$

$$= \frac{500(81 + 3600) + 600(100 + 2500)}{1100}$$

$$= \frac{500(3681) + 600(2600)}{1100}$$

$$= 3091.36$$

117. Three dice having digits 1, 2, 3, 4, 5 and 6 on their faces are marked I, II, and III and rolled. Let x , y and z represent the number on die-I, die-II and die-III, respectively. What is the number of possible outcomes such that $x > y > z$?

- (a) 14 (b) 16
(c) 18 (d) 20

⊗ (d) Three dice having digit 1, 2, 3, 4, 5 and 6 and given that $x > y > z$.

So, possibilities are

Case I If $x = 6$

$$x > y > z$$

Possible ways

$$= \{ (6, 5, 1), (6, 5, 2), (6, 5, 3), (6, 5, 4), (6, 4, 1), (6, 4, 2), (6, 4, 3), (6, 3, 2), (6, 3, 1), (6, 2, 1) \}$$

So, possible ways = 10

Case II If $x = 5$

Then, possible ways

$$= \{ (5, 4, 3), (5, 4, 2), (5, 4, 1), (5, 3, 2), (5, 3, 1), (5, 2, 1) \}$$

So, possible ways = 6

Case III If $x = 4$

Then, possible ways

$$= \{ (4, 3, 2), (4, 3, 1), (4, 2, 1) \}$$

So, possible ways = 3

Case IV If $x = 3$

Then, possible ways = 1 (3, 2, 1)

So, required possible outcomes

$$= 10 + 6 + 3 + 1 = 20$$

118. Which one of the following can be obtained from an ogive?

- (a) Mean
(b) Median
(c) Geometric Mean
(d) Mode

⊗ (b) We know that, median is always calculated from less than or more than type ogive curve where both curve cuts each other that point median.

119. In any discrete series (when all values are not same), if x represents mean deviation about mean and y represents standard deviation, then

which one of the following is correct?

- (a) $y \geq x$ (b) $y \leq x$
(c) $x = y$ (d) $x < y$

⊗ (d) We know that,

$$MD = \frac{4}{5} S.D.$$

$$\Rightarrow 5MD = 4S.D.$$

$$\Rightarrow 5x = 4y$$

$$[\because MD = x \text{ and } SD = y]$$

$$\therefore x < y$$

120. In which one of the following cases would you expect to get a negative correlation?

- (a) The ages of husbands and wives
(b) Shoe size and intelligence
(c) Insurance companies profits and the number of claims they have to pay
(d) Amount of rainfall and yield of crop

⊗ (c) In negative correlation, if x increases then y is decreases by checking options Insurance companies profits and the number of claims they have to pay are negatively correlated.

PAPER II English Language and General Studies

Part A (English Language)

Directions (Q.Nos. 1-5) *Each item in this section has a sentence with three underlined parts labelled (a), (b) and (c). Read each sentence to find out whether there is any error in any underlined parts. If you find no error, your response should be indicated as (d).*

1. He appears to be a honest man.

- (a) (b) (c)

No error

(c)

⊗ (c) Before honest article 'an' should be used as 'h' is mute here and the word gives us vowel sound.

2. One of the members expressed doubt if

- (a) (b)

the Minister was an atheist.

(c)

No error

(d)

⊗ (b) In place of 'if' we should use 'that' as it is a noun clause.

3. This view has been taken

(a)

by one of the ablest persons

(b)

who has written on this subject.

(c)

No error

(c)

⊗ (c) Use of verb 'has' should be replaced by plural 'have' as to agree with the subject 'persons'.

4. Slow and steady owns the race,

- (a) (b)

as the wise would say. No error

(c)

(d)

⊗ (b) Part (b) has error as owns will be replaced by wins. If is a popular proesh.

5. We often hear people say

(a)

that most human beings have not evovled

(b)

or grow up enough to stick to truth
or non-violence. No error

(c)

(d)

⊗ (c) Part (c) has error of correct use of verb. As noun clause is in present perfect tense, use of 'grow up' is incorrect. Will be used Past participle of 'grow' ie 'grown up'.

Directions (Q.Nos. 6-10) *Each item in this section consists of a sentence with an underlined word followed by four words or groups of words. Select the word or group of words that is nearest in meaning to the underlined word.*

6. The Industrial Revolution saw a massive rise in the population of Europe.

- (a) enormous (b) erroneous
(c) hazardous (d) perilous

⊗ (a) 'enormous' is nearest in meaning to the word 'massive' which means large and heavy.

7. I had some deepest convictions reflected in my work.

- (a) ideas and opinions
(b) firm beliefs
(c) prejudices
(d) biases

- ⊗ (b) 'firm beliefs' is nearest meaning to the word 'conviction' as both words mean a firmly held belief or opinion. Other options are not suitable here.
- 8.** This boy is very timid.
(a) courageous (b) shy
(c) clever (d) dull
- ⊗ (b) 'shy' is nearest in meaning to the word 'timid' which means showing lack of courage or confidence.
- 9.** My friend is as stubborn as a mule.
(a) observant (b) obnoxious
(c) obstinate (d) corpulent
- ⊗ (c) 'obstinate' is nearest in meaning to the word 'stubborn' which means a person who is determined not to change one's attitude or who is headstrong or uncompromising.
- 10.** His behaviour was deliberately provocative.
(a) exciting desire (b) infuriating
(c) pitiable (d) creating frustration
- ⊗ (b) 'infuriating' is nearest in meaning to the word 'provocative' which means causing anger.

Directions (Q.Nos 11-15) Each item in this section consists of a sentence with an underlined word followed by four words or groups of words. Select the word or group of words that is opposite in meaning to the underlined word.

- 11.** Too many cooks spoil the broth.
(a) tarnish (b) wreck
(c) embellish (d) upset
- ⊗ (c) The word spoil means to diminish or destroy. 'Embellish' means to improve or enhance. So, it is correct antonym of 'spoil'.
- 12.** He is biased against the students from cities.
(a) open (b) prejudiced
(c) liked (d) impartial
- ⊗ (d) The word 'biased' means inclined to favour one over another. The word 'impartial' means treating everyone equally.
- 13.** It is easy to be an orthodox.
(a) idolatrous (b) intelligent
(c) malignant (d) heterodox
- ⊗ (d) 'Orthodox' means following or conforming to the traditions whereas its antonym is 'heterodox' which means a person who does not conform to accepted standards or traditions.
- 14.** Permit me to present you with a book.
(a) allow (b) enclose
(c) prohibit (d) persuade

- ⊗ (c) 'permit' means to allow whereas prohibit means to disallow or deny. So, it is the antonym of permit.

- 15.** None but the brave deserves the fair.
(a) ugly (b) coward
(c) jealous (d) weak
- ⊗ (b) 'coward' is correct antonym of the word 'brave'. 'Brave' means courageous or ready to face danger whereas 'coward' means a person who lacks courage and turns away from danger.

Directions (Q.Nos. 16-25) In this section, you have two short passages. After each passage, you will find some items based on the passage. First, read a passage and answer the items based on it. You are required to select your answers based on the contents of the passage and opinion of the author only.

Passage-1

"Now, ladies and gentlemen," said the conjuror, "having shown you that the cloth is absolutely empty. I will proceed to take from it a bowl of goldfish. Presto!"

All around the hall people were saying, "Oh, how wonderful! How does he do it?"

But the Quick Man on the front seat said in a big whisper to the people near him, "He-had-it-up-his-sleeve."

Then the people nodded brightly at the Quick Man and said, "Oh, of course"; and everybody whispered round the hall, "He-had-it-up-his-sleeve."

"My next trick," said the conjuror, "is the famous Hindostanee rings. You will notice that the rings are apparently separate; at a blow they all join (clang, clang, clang)—Presto!"

There was a general buzz of stupefaction till the Quick Man was heard to whisper, "He-must-have-had-another-lot-up-his-sleeve".

Again everybody nodded and whispered, "The-rings-were-up-his-sleeve."

The brow of the conjuror was clouded with a gathering frown.

"I will now," he continued, "show you a most amusing trick by which I am enabled to take any number of eggs from a hat. Will some gentleman kindly lend me his hat?" Ah, thank you—Presto!"

He extracted seventeen eggs and for thirty-five seconds the audience began to think that he was wonderful. Then the Quick Man whispered along the front bench,

"He-has-a-hen-up-his-sleeve," and all the people whispered it on. "He-has-a-lot-of-hens-up-his-sleeve".

The egg trick was ruined.

It went on like that all through. It transpired from the whispers of the Quick Man that the conjuror must have concealed up his sleeve, in addition to the rings, hens and fish, several packs of cards, a loaf of bread, a doll's Cradle, a live guinea pig, a fifty-cent piece and a rocking chair.

- 16.** "The brow of the conjuror was clouded with a gathering frown." The sentence means that the conjuror
(a) was very pleased (b) was very sad
(c) was rather angry (d) was very afraid
- ⊗ (c) 'was rather angry' is correct option. All tricks of conjuror were ruined due to the Quick man's remarks.
- 17.** "The egg trick was ruined". This means that
(a) eggs were all broken
(b) people were unconvinced
(c) conjuror was disappointed
(d) the trick could not be performed
- ⊗ (b) The egg trick was ruined means that people were unconvinced.
- 18.** According to the Quick Man, the conjuror
(a) had everything bought for production
(b) produced things with the magic he knew
(c) had things in the large sleeves of his coat
(d) created an illusion of things with his magic
- ⊗ (c) According to the Quick man, the conjuror had things in large sleeves of his coat.
- 19.** The author believes that the Quick Man was really
(a) foolish (b) clever
(c) wrong (d) right
- ⊗ (a) 'foolish' as last sentence of the author shows that the Quick Man was not intelligent to presume that the conjuror must be having a live hen up his sleeve who on demand will give 17 eggs.
- 20.** The conjuror extracted seventeen eggs from the hat of
(a) the Quick Man
(b) his own
(c) one gentleman from the audience
(d) None of the above
- ⊗ (c) The conjuror extracted seventeen eggs from the hat of one gentleman from the audience.

Passage-2

Magda Good morning, Smiles. Mrs. It's wet, isn't it?

Mrs. Smiles Yes, it is, isn't it? How are you today? All right? You haven't been studying too hard, have you? You look a bit pale.

Magda I don't, do I? Well, I haven't been out much lately. I don't like this weather a bit. Why, we haven't had a dry day for weeks, have we?

Mrs. Smiles No, I don't think we have. Let's see, you'll be going back home next month, won't you?

Magda Oh no, I'm not going back yet. My sister's coming over first.

Mrs. Smiles Oh, is she? You're looking forward to that, I expect. How long is it since you saw her?

Magda Nearly a year now. Yes, I am looking forward to it very much.

Mrs. Smiles She's coming over here to study?

Magda Yes, that's right, I shan't go back home until she's settled down. I don't think I ought to, ought I?

Mrs. Smiles Well, no, she's younger than you are, is she?

Magda Yes, she's only eighteen.

21. Magda had not been out much lately because

- (a) she had not been keeping well
- (b) she was busy with her studies
- (c) the weather had been unpleasant
- (d) her sister had come over to stay

⊗ (c) As stated in the passage Magda had not been out much lately because it has been raining continuously. It also implies that 'the weather has been unpleasant'.

22. Magda was not going back home yet because

- (a) it had been raining heavily
- (b) her sister was coming over
- (c) her studies were not completed
- (d) she was not feeling well

⊗ (b) 'her sister was coming over' so Magda was not planning to go back home.

23. Mrs. Smiles says, "You're looking forward to that". This means, Magda was her sister's arrival.

- (a) expecting with pleasure
- (b) preparing hard for
- (c) thinking greatly about
- (d) watching with joy

⊗ (a) Magda was expecting with pleasure her sister's arrival

24. Magda's sister was coming to

- (a) visit her sister
- (b) help Mrs. Smiles
- (c) settle down in England

(d) pursue her studies

⊗ (d) Magda's sister was coming to pursue her studies.

25. Mrs. Smiles and Magda are

- (a) classmates
- (b) school friends
- (c) neighbours
- (d) sisters-in-law

⊗ (c) From the conversation shown in the passage between Mrs. Smiles and Magda, it appears that both are neighbours.

Directions (Q.Nos. 26-35) Each of the following sentences in this section has a blank space and four words or groups of words given after the sentence. Select whichever word or group of words you consider most appropriate for the blank space.

26. We fail to understand your reasons for the college without completing the degree.

- (a) attending
- (b) joining
- (c) leaving
- (d) refusing

⊗ (c)

27. She her energy and started shouting only when she heard the noise of bulldozers and cranes.

- (a) checked
- (b) conserved
- (c) maintained
- (d) controlled

⊗ (b)

28. The British all over Africa and Asia collapsed in the first half of the twentieth century.

- (a) hegemony
- (b) domicile
- (c) residence
- (d) inheritance

⊗ (a)

29. The football match has to be because of the weather.

- (a) called off
- (b) continued
- (c) put off
- (d) turned off

⊗ (a)

30. If I were rich, a lot.

- (a) I'll travel
- (b) I can travel
- (c) I would travel
- (d) I travelled

⊗ (c)

31. They apologised me for what happened.

- (a) to
- (b) at
- (c) for
- (d) with

⊗ (a)

32. If you are tired of swimming, just for a while.

- (a) struggle
- (b) stroke
- (c) float
- (d) streak

⊗ (c) 'float' is appropriate word here as floating in the water will not tire anyone.

33. He had spoken for two minutes when there was a commotion in the crowd.

- (a) even
- (b) hardly
- (c) often
- (d) little

⊗ (b) 'hardly' is correct here. The word means 'not' much, or 'scarcely'.

34. I would not commit myself that course of action.

- (a) of
- (b) to
- (c) by
- (d) with

⊗ (b)

35. The soldiers waiting to go into battle for the first time were full of

- (a) apprehension
- (b) consideration
- (c) anticipation
- (d) frivolity

⊗ (a)

Directions (Q.Nos. 36-40) Given below are some idioms/phrases followed by four alternative meanings to each. Choose the response (a), (b), (c) or (d) which is the most appropriate meaning.

36. A red-letter day

- (a) a trivial day
- (b) a very important or significant day
- (c) a day of bloodshed and violence
- (d) a mourning day

⊗ (b)

37. The gift of the gab

- (a) ability to speak easily and confidently
- (b) ability to spoil something
- (c) ability to sell things
- (d) gift from a sacred institution

⊗ (a)

38. Walk a tightrope

- (a) to be forced to leave your job
- (b) to be ready to fail
- (c) to act very carefully
- (d) to invite danger

⊗ (c)

39. To be in a fix

- (a) to receive strong criticism
- (b) to support oneself
- (c) to fix problems
- (d) to be in a difficult situation

⊗ (d)

40. To fish in troubled waters

- (a) to borrow money
- (b) to steal belongings of
- (c) to get benefit in bad situation
- (d) to extend a helping hand

⊗ (c)

Directions (Q.Nos. 41-45) *Each of the following items in this section consists of a sentence the parts of which have been jumbled. These parts have been labelled P, Q, R and S. Given below each sentence are four sequences namely (a), (b), (c) and (d). You are required to rearrange the jumbled parts of the sentence.*

- 41.** Domestic fires in Indian villages
P. as the heat is dispersed
Q. in unhealthy smoke accumulates in unventilated houses
R. are wasteful
S. lit in Chulhas

The correct sequence should be

- (a) PQSR (b) PQRS
(c) SPQR (d) SRPQ

⊙ (d)

- 42.** Bold rocks near at hand
P. makes a fine forest for the imagination
Q. than distant Alps
R. are more inspiring
S. and the thick fern upon a health

The correct sequence should be

- (a) QRSP (b) RSQP
(c) RQSP (d) SRQP

⊙ (c)

- 43.** Newton discovered that
P. due to the gravitational pull
Q. of the earth

- R. the apple falls
S. on the ground

The correct sequence should be

- (a) QPRS (b) RSPQ
(c) QSPR (d) SQRP

⊙ (b)

- 44.** The knocking
P. were still in the house
Q. for some time
R. although the echoes of it
S. ceased

The correct sequence should be

- (a) SRPQ (b) SQRP
(c) PQSR (d) RSPQ

⊙ (b)

- 45.** The history of mankind is
P. and steady progress
Q. continuous change
R. the history of
S. from barbarism to refinement

The correct sequence should be

- (a) PQRS (b) RQPS
(c) QSPR (d) SQRP

⊙ (b)

Directions (Q.Nos. 46-50) *In the following passage there are some blank spaces with four words or groups of words given. Select whichever word or group of words you consider most appropriate for the blank space.*

The honeybee is a very unusual kind of insect. **46.** other insects which live

- (a) Unlike
(b) Similar to
(c) With
(d) Like

⊙ (a)

alone, the honeybee lives as a/an **47.** of a community. These bees live

- (a) group (b) individual
(c) member (d) troop

⊙ (c)

together in what is known as a bee **48.** The head of the bees is called the

- (a) house. (b) home.
(c) army, (d) colony

⊙ (d)

queen bee. She is the **49.** than the rest of the bees. Her main task

- (a) heaviest (b) heavier
(c) largest (d) larger

⊙ (d)

is to **50.** eggs.

- (a) lay (b) hatch
(c) make (d) bear

⊙ (a)

- 51. Statement I** The pitch of sound wave depends upon its frequency.
Statement II The loudness of the sound wave depends upon its amplitude.

⊙ (b) Pitch of sound wave depends upon its frequency because pitch of a sound is actually its property due, to which we can differentiate between a shrill and grave sound. The amplitude of a sound wave determines its loudness or volume.

- 52. Statement I** Sound wave cannot propagate in vacuum.

Statement II Sound waves are elastic waves and require a medium to propagate.

⊙ (a) Sound waves are elastic waves because their propagation depends on the material media, which possess elasticity and inertia. So it cannot propagate in vacuum.

- 53. Statement I** The Government of India Act, 1935 introduced Dyarchy at the centre.

Statement II The provincial autonomy was granted to the Provinces.

⊙ (b) Government of India Act of 1935 marked a milestone towards a completely responsible government in India. It was a lengthy and detailed document having 321 Sections and 10 Schedules.

The Act provided for the adoption of dyarchy at the Centre. Consequently, the federal subjects were divided into reserved subjects and transferred subjects. And abolished dyarchy in the provinces and introduced 'provincial autonomy' in its place.

- 54. Statement I** Mughal Painting reached its climax during the reign of Jahangir.

Statement II Aurangzeb's Court was adorned by some of the best known artists of the Mughal School of Paintings.

⊙ (c) During the reign of Jahangir (1605–1627) the Mughal painting reached its zenith. He favoured paintings of events from his own life rather than illustrated fiction. He encouraged portraiture and scientific studies of birds, flowers and animals, which were collected in albums. Mansur and Manohar were among his famous painters.

But during the reign of Aurangzeb (1659–1707) the Mughal painting started to decline, although his ornate Pearl Mosque (1662) at Delhi is worthy of mention. Many artists then joined Rajput courts, where their influence on Hindu painting is clearly evident.

- 55. Statement I** Phytoplanktons produce most of the organic carbon in the ocean.

Statement II Algae are produced in the cold water biome.

⊙ (d) Algae are a diverse group of aquatic organisms that have the ability to conduct photosynthesis, for example, seaweeds

Part B (General Studies)

(such as kelp or phytoplankton), pond scum or the algal blooms in lakes. They are produced in the cold water biome.

Phytoplanktons are similar to terrestrial plants. They contain chlorophyll and require sunlight in order to live and grow. They produce oxygen as a byproduct of photosynthesis.

56. Statement I Geostrophic wind blows above a height of 600 m, parallel to the isobars.

Statement II Geostrophic wind is the horizontal wind velocity, in which the Coriolis force balances the horizontal pressure force.

- ⊙ (c) An air parcel initially at rest, but it moves from high pressure to low pressure because of the Pressure Gradient Force (PGF).

However, as that air parcel begins to move, it is deflected by the Coriolis force to the right in the Northern hemisphere (to the left on the Southern hemisphere).

As the wind gains speed, the deflection increases until the Coriolis force equals the pressure gradient force. At this point, the wind will be blowing parallel to the isobars.

When this happens, the wind is referred to as geostrophic wind. It blows above the height of 600 m at the upper atmosphere.

57. Which one of the following groups of cellular organelles contains DNA?

- (a) Mitochondria, nucleus, chloroplast
(b) Mitochondria, Golgi bodies, nucleus
(c) Mitochondria, plasma membrane, nucleus
(d) Chloroplast, nucleus, ribosomes

- ⊙ (a) The Mitochondria, nucleus and chloroplast contain DNA. Mitochondria and chloroplasts are known as semiautonomous cell organelles because they can replicate themselves.

58. One of the additional function of Smooth Endoplasmic Reticulum (SER) is

- (a) protein synthesis
(b) lipid synthesis
(c) storage of biomolecules
(d) detoxification of toxic substances

- ⊙ (d) Detoxification of toxic substances is the additional function of Smooth Endoplasmic Reticulum (SER).

59. Damage to the apical meristem of a growing young plant will affect the

- (a) length of the plant
(b) colour of the flower
(c) colour of the leaves
(d) taste of the fruits

- ⊙ (a) Damage to the apical meristem of a growing young plant will affect the length of the plant. It is responsible for apical growth.

60. Which of the following kingdom(s) has/have only unicellular organisms?

- (a) Monera (b) Protista
(c) Monera and Protista
(d) Protista and Fungi

- ⊙ (c)

61. Which one of the following is a waterborne disease?

- (a) Jaundice (b) Tuberculosis
(c) Rabies (d) Arthritis

- ⊙ (a) Jaundice is caused by microbial infection present in water and food items.

62. The atomic number of an element is 8. How many electrons will it gain to form a compound with sodium?

- (a) One (b) Two (c) Three (d) Four

- ⊙ (b) The atomic number of an element = 8

Electronic configuration = $2^2 6^2$

∴ Valency = 8 - 6 = 2

Sodium (Atomic number 11) has electronic configuration = $2^2 8^1$

∴ Valency = 1

Thus, the given element will gain 2 electrons from two sodium atoms to complete its octet.

Formula of the compound

63. A sample of oxygen contains two isotopes of oxygen with masses 16 μ and 18 μ respectively. The proportion of these isotopes in the sample is 3 : 1. What will be the average atomic mass of oxygen in this sample?

- (a) 17.5 μ (b) 17 μ
(c) 16 μ (d) 16.5 μ

- ⊙ (d) Average atomic mass of an element

$$= \left[\frac{\text{Atomic mass of isotope I} \times \% \text{age of isotope I}}{100} \right] + \left[\frac{\text{Atomic mass of isotope II} \times \% \text{age of isotope II}}{100} \right]$$

As it is given that the proportion of two isotopes of oxygen with masses 16 μ and 18 μ is 3 : 1 respectively. So, they have percentage composition 75% and 25% respectively.

∴ Average atomic mass of oxygen in the sample

$$= \left[16 \times \frac{75}{100} \right] + \left[18 \times \frac{25}{100} \right] = 16.5 \mu$$

64. Which one of the following is a heterogeneous mixture?

- (a) Hydrochloric acid
(b) Vinegar
(c) Milk
(d) Soda water

- ⊙ (c) A mixture that does not have uniform composition is called heterogeneous mixture.

Out of the given compounds, milk is a heterogeneous mixture of fats, carbohydrates, proteins etc. dispersed in water.

65. What is the formula mass of anhydrous sodium carbonate? (Given that the atomic masses of sodium, carbon and oxygen are 23 μ, 12 μ and 16 μ respectively)

- (a) 286 μ (b) 106 μ
(c) 83 μ (d) 53 μ

- ⊙ (b) Chemical formula of (anhydrous) sodium carbonate = Na_2CO_3

$$\begin{aligned} \therefore \text{Formula unit mass of Na}_2\text{CO}_3 &= (2 \times 23 + 12 + 16 \times 3) \mu \\ &= 106 \mu \end{aligned}$$

66. Which one of the following is called 'syngas'?

- (a) C (s) + H_2O (g) (b) CO (g) + H_2O (g)
(c) CO (g) + H_2 (g) (d) NO_2 (g) + H_2 (g)

- ⊙ (c) Syngas or synthesis gas is mixture of Carbon monoxide (CO) gas and Hydrogen (H_2) gas. It may also consist of Carbon Dioxide (CO_2) gas. It is used as a fuel gas in various industries.

67. The frequency of ultrasound waves is

- (a) less than 20 Hz
(b) between 20 Hz and 2 kHz
(c) between 2 kHz and 20 kHz
(d) greater than 20 kHz

- ⊙ (d) Ultrasonic waves range above 20 kHz which is above the audible range of human ears.

68. The magnetic field strength of a current carrying wire at a particular distance from the axis of the wire

- (a) depends upon the current in the wire
(b) depends upon the radius of the wire
(c) depends upon the temperature of the surroundings
(d) None of the above

- ⊙ (a) The magnetic field strength of a current carrying wire at a particular distance from the axis of the wire is given by the Biot-Savart's law.

$$\text{Magnetic field, } dB \propto \frac{idl \sin \theta}{r^2}$$

Where i = current in wire.

r = distance of the point from the wire.

$$dB \propto i$$

Hence option (a) is correct.

- 69.** A stainless steel chamber contains Ar gas at a temperature T and pressure P . The total number of Ar atoms in the chamber is n . Now Ar gas in the chamber is replaced by CO_2 gas and the total number of CO_2 molecules in the chamber is $n/2$ at the same temperature T . The pressure in the chamber now is P' . Which one of the following relations holds true? (Both the gases behave as ideal gases)

- (a) $P' = P$ (b) $P' = 2P$
(c) $P' = P/2$ (d) $P' = P/4$

⊗ (c) For Ar gas $PV = nRT$
$$P = \frac{nRT}{V} \quad \dots(i)$$

For CO_2 gas, $n' = \frac{n}{2}$, $P' = P'$

$$P'V = n'RT$$

$$P' = \frac{nRT}{2V}$$

From Eqn. (i), we get $P' = \frac{P}{2}$

- 70.** Which one of the following is the correct relation between \AA and nm?

- (a) $1 \text{ nm} = 10^{-1} \text{ \AA}$ (b) $1 \text{ nm} = 10 \text{ \AA}$
(c) $1 \text{ nm} = 1 \text{ \AA}$ (d) $1 \text{ nm} = 10^{-2} \text{ \AA}$

⊗ (b) $1 \text{ \AA} = 0.1 \text{ nm}$
 $\Rightarrow 10 \text{ \AA} = 1 \text{ nm}$

- 71.** The full form of LED is

- (a) Light Emitting Diode
(b) Light Emitting Device
(c) Light Enhancing Device
(d) Light Enhancing Diode

⊗ (a) The full form of LED is Light Emitting Diode. It is a heavily doped $p-n$ junction diode which converts electrical energy into light energy.

- 72.** If a free electron moves through a potential difference of 1 kV, then the energy gained by the electron is given by

- (a) $1.6 \times 10^{-19} \text{ J}$ (b) $1.6 \times 10^{-16} \text{ J}$
(c) $1 \times 10^{-19} \text{ J}$ (d) $1 \times 10^{-16} \text{ J}$

⊗ (b) Given, Potential difference,
 $V = 1 \text{ kV} = 1 \times 10^3 \text{ V}$

We know that,

$$\text{Energy gained by electron} = e \cdot V$$

$$= 1.6 \times 10^{-19} \times 10^3 = 1.6 \times 10^{-16} \text{ J}$$

- 73.** Consider the following places of India :

1. Itanagar 2. Imphal
3. Agartala 4. Aizawl

Which one of the following is the correct chronological order of the above places in terms of sunrise time?

- (a) 3 - 2 - 1 - 4 (b) 2 - 1 - 4 - 3
(c) 1 - 4 - 3 - 2 (d) 4 - 3 - 2 - 1

- ⊗ (b) The correct sequence in order of Sunrise timing in the following places are as:

At Imphal, the capital city of Manipur, the sunrise time is 4:59 AM.

At Itanagar, the capital city of Arunachal Pradesh, the sunrise time is 5:00 AM.

At Aizawl, the capital city of Mizoram, the sunrise time is 5:05 AM.

At Agartala, the capital city of Tripura, the sunrise time is 5:10 AM.

- 74.** Which one of the following is known as uplands of delta region?

- (a) Bef (b) Bils
(c) Peh (d) Chars

- ⊗ (d) The Deltaic plain is the extension of the Khadar land. It covers large area in the lower reaches of the Ganga River. In the delta region, the upland is called Chars, while the marshy area is known as Bils.

- 75.** Consider the following Wildlife Sanctuaries of India :

1. Shikari Devi 2. Bhadra
3. Simlipal 4. Pachmarhi

Which one of the following is the correct order of the above Wildlife Sanctuaries in terms of their location from South to North?

- (a) 1-2-3-4 (b) 2-4-3-1
(c) 2-3-4-1 (d) 3-1-2-4

- ⊗ (c) The correct order of the given wildlife sanctuaries in terms of their location from South to North is

Bhadra Wildlife Sanctuary is located at Chikkamagaluru town in Karnataka. It was established in the year 1951. It is a protected area and a tiger reserve as part of Project Tiger.

Simlipal Wildlife Sanctuary, also known as Mayurbhanj Elephant Reserve, is a national park and a tiger reserve. It was established in the year 1980. It is located in the Mayurbhanj district of Odisha.

Pachmarhi Wildlife Sanctuary is also a biosphere reserve in the Satpura Range of Madhya Pradesh. It was established in the year 1999.

Shikari Devi Wildlife Sanctuary is located near the Shikari Devi Temple in Mandi district of Himachal Pradesh. It was established in the year 1974.

- 76.** Which one of the following statements about temperature is correct?

- (a) Temperature decreases with height in the stratosphere.
(b) Temperature is constant at different heights in the stratosphere.
(c) Temperature increases with height in the troposphere at an average rate of 6.5°C per km.
(d) Temperature decreases with height in the troposphere at an average rate of 6.4°C per km.

- ⊗ (d) The temperature of the troposphere is highest near the surface of the Earth and decreases with height or altitude. On average, the temperature gradient of the troposphere declines by 6.5°C per kilometre on going above. However, in the stratosphere, temperature increases with altitude. The reason is that the direct heat source for the stratosphere is the Sun.

- 77.** Which one of the following is known as a zone of sharp salinity change in the vertical section of ocean?

- (a) Thermocline (b) Halocline
(c) Photic zone (d) Pycnocline

- ⊗ (b) A halocline is a strong, vertical salinity gradient within a body of water. It is known as the zone of sharp salinity change in the vertical section of ocean. As salinity (in concert with temperature) affects the density of seawater, it can play an important role in its vertical stratification.

- 78.** Permanent hardness of water cannot be removed by which one of the following methods?

- (a) Treatment with washing soda
(b) Calgon's method
(c) Boiling
(d) Ion exchange method

- ⊗ (c) Permanent hardness of water is due to the presence of chlorides and sulphates of calcium and magnesium ions. These compounds do not decompose on heating. These are removed by ion exchange resin treatment or by Calgon's method or by using a water softener like washing soda, calcium hydroxide, etc.

- 79.** Which one of the following reactions will give NO (Nitric Oxide) gas as one of the products?

- (a) $3\text{Cu} + 8\text{HNO}_3$ (dilute) \rightarrow
(b) $\text{Cu} + 4\text{HNO}_3$ (conc) \rightarrow
(c) $4\text{Zn} + 10\text{HNO}_3$ (dilute) \rightarrow
(d) $\text{Zn} + 4\text{HNO}_3$ (conc) \rightarrow

Thus, in option (a) contains the reaction having NO gas as one of the products.

80. Which one of the following is a tribasic acid?

- (a) Hydrochloric acid
- (b) Nitric acid
- (c) Sulphuric acid
- (d) Phosphoric acid

(d) H_3PO_4 , Phosphoric acid can be written as $O=P(OH)_3$. It has three acidic hydrogens (attached to oxygen) and is therefore tribasic acid. On the other hand hydrochloric acid, nitric acid are monobasic while sulphuric acid is dibasic.

81. Which one of the following statements is not correct?

- (a) All carbons in diamond are linked by carbon-carbon single bond.
- (b) Graphite is layered structure in which layers are held together by weak van der Waal's forces.
- (c) Graphite layers are formed by hexagonal rings of carbon atoms.
- (d) Graphite layers are held together by carbon-carbon single bond.

(d) Graphite layers are held together by van der Waals forces and not by carbon-carbon single bond.

82. Which one of the following is called Dry Ice?

- (a) Solid carbon dioxide
- (b) Liquid carbon dioxide
- (c) Liquid nitrogen
- (d) Liquid ammonia

(a) Solid carbon dioxide is called Dry Ice or Cardice. It is used as a refrigerant for ice-cream and frozen food.

83. The acidic, semidigested food coming out of the stomach is neutralised by

- (a) pancreatic juice
- (b) duodenal secretion
- (c) large intestine secretion
- (d) bile juice

(d) The acidic, semidigested food coming out of the stomach is neutralised by sodium bicarbonate present in the bile juice secreted by liver. Here it makes the medium of food alkaline.

84. The oxygenated blood from the lungs is received by the

- (a) left auricle
- (b) left ventricle
- (c) right auricle
- (d) right ventricle

(a) The oxygenated blood from the lungs is received by left auricle through pulmonary vein from here it goes to left ventricle and then it is pumped into other body parts.

85. The oxygen evolved during photosynthesis comes from splitting of

- (a) water
- (b) carbon dioxide
- (c) oxygen
- (d) light

(a) Photosynthesis is the process that plants undergo in order to transform solar energy into chemical energy which is stored in the bonds of sugar molecules. During the process, released oxygen comes from the splitting of water in the presence of light-dependent reaction. The products of the light-dependent reactions are ATP and NADPH oxygen production is simply a byproduct of the splitting of water by sunlight.

The overall process of photosynthesis is typically represented by the following equation

86. Which one of the following depicts the correct circuit of a reflex arc?

- (a) Effector → sensory neuron → spinal cord → motor neuron → receptor
- (b) Receptor → sensory neuron → spinal cord → neuron → effector
- (c) Receptor → sensory neuron → brain → motor neuron → effector
- (d) Sensory neuron → receptor → brain → effector → motor neuron

(b) The correct reflex arch is depicted by option (b). It is receptor → sensory neuron → spinal cord → neuron → effector.

87. If one set of chromosomes for a given plant is represented as N ; in case of double fertilisation, the zygote and the endosperm nucleus of a diploid plant would have how many sets of chromosomes respectively?

- (a) N and $2N$
- (b) $2N$ and $2N$
- (c) N and $3N$
- (d) $2N$ and $3N$

(d) The zygote will have $2N$ chromosomes while endosperm nucleus will have $3N$ set of chromosomes after double fertilisation in plant.

88. Consider the following circuit :

Which one of the following is the value of the resistance between points A and B in the circuit given above?

- (a) $\frac{2}{5}R$
- (b) $\frac{3}{5}R$
- (c) $\frac{3}{2}R$
- (d) $4R$

(b)

In the above circuit R_1 and R_2 are connected in the parallel combination. Hence, equivalent resistance,

$$\frac{1}{R'} = \frac{1}{R} + \frac{1}{R} \Rightarrow R' = \frac{R}{2}$$

Now, circuit becomes

In the circuit R' and R are connected in series combination, Hence

$$R'' = R/2 + R = \frac{R+2R}{2}$$

$$R'' = \frac{3R}{2}$$

Now R'' and R_4 are connected in parallel combination. Hence, equalient resistance between A and B.

$$\frac{1}{R_{AB}} = \frac{1}{\frac{3R}{2}} + \frac{1}{R}$$

$$\frac{1}{R_{AB}} = \frac{2}{3R} + \frac{1}{R} \Rightarrow \frac{1}{R_{AB}} = \frac{2+3}{3R}$$

$$\frac{1}{R_{AB}} = \frac{5}{3R} \Rightarrow R_{AB} = \frac{3}{5}R$$

89. The absolute zero temperature is 0 Kelvin. In $^{\circ}C$ unit, which one of the following is the absolute zero temperature?

- (a) $0^{\circ}C$
- (b) $-100^{\circ}C$
- (c) $-273.15^{\circ}C$
- (d) $-173.15^{\circ}C$

(c) The absolute zero temperature is $0^{\circ}K$. So, the relation between Celsius and Kelvin scale is $\frac{C}{100} = \frac{K-273.15}{100}$ where, $K = 0, C = -273.15$

90. Consider the following statements about visible light, UV light and X-rays:

1. The wavelength of visible light is more than that of X-rays.
2. The energy of X-ray photons is higher than that of UV light photons.
3. The energy of UV light photons is less than that of visible light photons.

Which of the statement(s) given above is/are correct?

- (a) 1, 2 and 3
- (b) 1 and 2
- (c) 2 and 3
- (d) Only 1

(b) (1) The frequency of X-ray is greater than visible light. So, the wavelength of visible light is more than that of X-rays.

(2) We know that, $E = hv$

Energy (E) \propto v (frequency)

X-ray have higher frequency so it has higher energy than that of UV light photons.

91. The time period of oscillation of a simple pendulum having length L and mass of the bob m is given as T . If the length of the pendulum is increased to $4L$ and the mass of the bob is increased to $2m$, then which one of the following is the new time period of oscillation?

- (a) T (b) $2T$ (c) $4T$ (d) $\frac{T}{2}$

⊙ (b) Time period of simple pendulum,

$$T = 2\pi\sqrt{\frac{L}{g}} \quad \dots(i)$$

According to the question,

$$L' = 4L$$

New time period of simple pendulum,

$$T' = 2\pi\sqrt{\frac{4L}{g}} = 2 \times \left[2\pi\sqrt{\frac{L}{g}} \right]$$

From equation (i), we get
 $T' = 2T$

92. The connecting cable of electrical appliances like electric iron, water heater or room heater contains three insulated copper wires of three different colours—red, green and black. Which one of the following is the correct colour code?

- (a) Red—live wire, Green—neutral wire, Black—ground wire
(b) Red—neutral wire, Green—ground wire, Black—live wire
(c) Red—live wire, Green—ground wire, Black—neutral wire
(d) Red—ground wire, Green—live wire, Black—neutral wire

⊙ (c) Red-Live wire (brings the current)

Green – Ground wire

Black – Neutral wire

93. The graphs between current (I) and voltage (V) for three linear resistors 1, 2 and 3 are given below :

If R_1, R_2 and R_3 are the resistances of these resistors, then which one of the following is correct?

- (a) $R_1 > R_2 > R_3$ (b) $R_1 < R_3 < R_2$
(c) $R_3 < R_1 < R_2$ (d) $R_3 > R_2 > R_1$

⊙ (b) We know that,

$$\text{Slope of graph} \times \frac{1}{\text{Resistance}}$$

In the graph,

$$\text{slope of 1} > \text{slope of 3} > \text{slope of 2}$$

$$R_1 < R_3 < R_2$$

94. Consider the following statements about a microscope and a telescope :

- Both the eyepiece and the objective of a microscope are convex lenses.
- The focal length of the objective of a telescope is larger than the focal length of its eyepiece.
- The magnification of a telescope increases with the increase in focal length of its objective.
- The magnification of a microscope increases with the increase in focal length of its objective.

Which of the statements given above are correct?

- (a) 1 and 3 (b) 1 and 4
(c) 2, 3 and 4 (d) 1, 2 and 3

⊙ (d)

- Microscope consists of two convex lenses coaxially separated by some distance. The lens nearer to the object is called the objective. The lens through which the final image is viewed is called the eyepiece.
- The focal length of the objective of a telescope is larger than the focal length of eyepiece because objective has much larger aperture than the eyepiece.
- Magnification of telescope is directly proportional to the focal length of objective (f_o). Hence, the focal length of telescope increases with the increase in focal length of its objective. Hence, statements (1), (2) and (3) are correct.

95. A planet has a mass M_1 and radius R_1 . The value of acceleration due to gravity on its surface is g_1 . There is another planet 2, whose mass and radius both are two times that of the first planet. Which one of the following is the acceleration due to gravity on the surface of planet 2?

- (a) g_1 (b) $2g_1$
(c) $g_1/2$ (d) $g_1/4$

⊙ (c) Acceleration due to gravity at planet is given by

$$g_1 = \frac{GM_1}{R_1^2} \quad \dots(i)$$

For the second planet (2)

$$M_2 = 2M_1, R_2 = 2R_1$$

Now, acceleration due to gravity,

$$g_2 = \frac{G(2M_1)}{(2R_1)^2}$$

$$g_2 = \frac{1}{2} \times \frac{GM_1}{R_1^2}$$

From Eqn. (i), we get $g_2 = \frac{g_1}{2}$

96. Match List I with List II and select the correct answer using the codes given below the Lists :

List I (River Basin)	List II (Town)
A. Bhagirathi	1. Lansdowne
B. Alaknanda	2. Narendra Nagar
C. Nayar	3. Uttarkashi
D. Ganga	4. Pauri

Code

- A B C D
(a) 3 1 4 2
(b) 3 4 1 2
(c) 2 4 1 3
(d) 2 1 4 3

⊙ (b) Uttarkashi lies in Bhagirathi basin. Pauri lies in Alaknanda basin. Lansdowne lies in Nayar basin. Narendra Nagar lies in Ganga basin.

97. Match List I with List II and select the correct answer using the codes given below the Lists :

List I (Local Wind)	List II (Place)
A. Yamo	1. Sudan
B. Black Roller	2. France
C. Bise	3. Japan
D. Haboob	4. North America

Code

- A B C D A B C D
(a) 1 4 2 3 (b) 1 2 4 3
(c) 3 4 2 1 (d) 3 2 4 1

⊙ (c) Yamo is warm and dry wind that blows down the steep valleys in Japan.

Black roller is a very strong and dust-laden wind blowing from the South-West or North-West in the Great Plains of North America.

Bise is a cold, dry wind in Switzerland and France.

A haboob is a type of intense dust storm that blows in Sudan.

98. 'Majuli', the river island, is located in which one of the following rivers?

- (a) Jamuna
(b) Padma
(c) Ganga
(d) Brahmaputra

⊙ (d) Majuli is a river island, located in Assam. It is formed by river Brahmaputra. In 2016, Majuli became the first island to be made a district in India. It is often claimed to be the world's largest river island.

99. Which one of the following Indian States has recorded negative growth of population as per Census 2011?

- (a) Manipur (b) Mizoram
(c) Tripura (d) Nagaland

➤ (d) As per Census 2011, Nagaland is the only state of the country which has negative growth rate of -0.58%. Growth rate of Indian population was 17.69% between 2001 and 2011.

100. Which one of the following types of cloud is characterised by continuous precipitation?

- (a) Cirrocumulus (b) Cumulus
(c) Nimbostratus
(d) Cumulonimbus

➤ (c) Clouds are visible accumulations of tiny water droplets or ice crystals in the Earth's atmosphere. Nimbostratus clouds bring continuous precipitation that can last for many hours. These low-level clouds are full of moisture.

101. Match List I with List II and select the correct answer using the code given below the Lists :

List I (Major Port)	List II (Location)
A. Kolkata	1. Land-locked area
B. Mormugao	2. In the delta region
C. Visakhapatnam	3. On the riverside
D. Paradip	4. On the entrance of the estuary

Code

- | | | | | | | | | | |
|-----|---|---|---|---|-----|---|---|---|---|
| A | B | C | D | A | B | C | D | | |
| (a) | 3 | 1 | 4 | 2 | (b) | 3 | 4 | 1 | 2 |
| (c) | 2 | 4 | 1 | 3 | (d) | 2 | 1 | 4 | 3 |

➤ (b) The Port of Kolkata is a riverine port in the city of Kolkata. It is the oldest operating port and was constructed by the British East India Company.

Mormugao is main port of Goa. It is a natural port and on the entrance of the estuary. Visakhapatnam Port is the deepest land-locked and protected port of India. It is located in Andhra Pradesh. It is India's second largest port by volume of cargo handled.

Paradip Port is a natural, deep-water, and deltaic port of India in Odisha. It is situated at confluence of the Mahanadi River and the Bay of Bengal.

102. Which one of the following is not an agent of metamorphism?

- (a) Heat (b) Compression
(c) Decomposition (d) Solution

➤ (c) The literary meaning of metamorphism is to change form. The agents of metamorphism include heat, pressure

(stress, compression), and chemically active like fluids, solution, etc.

During metamorphism, rocks are often subjected to all three metamorphic agents simultaneously. However, the degree of metamorphism and the contribution of each agent vary greatly from one environment to another.

103. The solution of which one of the following will have pH less than 7?

- (a) NaOH (b) KCl
(c) FeCl₃ (d) NaCl

➤ (c) FeCl₃ is a salt of strong acid (HCl) and weak base Fe(OH)₃. As a result FeCl₃ is an acidic salt and hence in solution form its pH lies below 7.

104. Which one of the following is an oxidation-reduction reaction?

- (a) NaOH + HCl → NaCl + H₂O
(b) CaO + H₂O → Ca(OH)₂
(c) 2Mg + O₂ → 2MgO
(d) Na₂SO₄ + BaCl₂ → BaSO₄ + 2NaCl

➤ (c) (a) NaOH + HCl → NaCl + H₂O

(No change in oxidation states)

(b) CaO + H₂O → Ca(OH)₂

(No change in oxidation states)

(d) Na₂SO₄ + BaCl₂ → BaSO₄ + 2NaCl

(No change in oxidation states)

∴ It is clear from the above equations, that in option (c), the reaction involves both oxidation and reduction. Thus, it is a redox reaction.

105. Which one of the following is not used as fertilizer?

- (a) Ammonium nitrate
(b) Ammonium sulphide
(c) Ammonium phosphate
(d) Ammonium sulphate

➤ (b) Ammonium sulphide is not used as fertilizer. Rest of the given compounds are used as fertilizers to compensate the deficiency of nitrogen, phosphorus and sulphur in the soil.

106. Which one of the following is the chemical formula of gypsum?

- (a) CaSO₄·2H₂O (b) Ca₂SiO₄
(c) 2CaSO₄·H₂O (d) CaSO₄

➤ (a) Gypsum has the chemical formula CaSO₄·2H₂O. It can be prepared by mixing plaster of paris with water.

107. Which one of the following statements about the law of conservation of mass is correct?

- (a) A given compound always contains exactly same proportion of elements.
(b) When gases combine in a reaction, they do so in a simple ratio by volume, provided all gases are at room temperature.
(c) Matter can neither be created nor destroyed.
(d) Equal volumes of all gases at same temperature and pressure contain equal number of molecules.

➤ (c) Law of conservation of mass states that matter can neither be created nor be destroyed.

108. The wavelength of X-rays is of the order of

- (a) 1 Å (b) 1 μm (c) 1 mm d. 1 cm

➤ (a) X-Ray is an electromagnetic wave which is discovered by German professor Rontgen. The wavelength of X-rays is of the order of 1Å. It is used in surgery to detect the fracture, diseased organs, stones in the body.

109. Consider the following velocity and time graph

Which one of the following is the value of average acceleration from 8sec to 12sec?

- (a) 8 m/sec² (b) 12 m/sec²
(c) 2 m/sec² (d) -1 m/sec²

➤ (d)

Average acceleration from 8 sec to 12 sec, is given by

$$a_{\text{avg}} = \frac{\text{Velocity at B} - \text{Velocity at A}}{\text{Time Interval}}$$

$$= \frac{4 - 8}{(12 - 8)} = \frac{-4}{4} = -1 \text{ m/sec}^2$$

110. If the focal length of a convex lens is 50 cm, which one of the following is its power?

- (a) +2 dioptre (b) +0.02 dioptre
(c) -0.5 dioptre (d) +0.5 dioptre

- ⊙ (a) Given, Focal length of lens, $f = 50$ cm, $= 0.5$ m.
We know that,
Power of lens, $P = \frac{1}{\text{Focal length (m)}}$
 $= \frac{1}{0.5} = 2$ dioptre

111. A ball is released from rest and rolls down an inclined plane, as shown in the following figure, requiring 4 sec to cover a distance of 100 cm along the plane :

Which one of the following is the correct value of angle θ that the plane makes with the horizontal?

($g = 1000 \text{ cm/sec}^2$)

- (a) $\theta = \sin^{-1} (1/9.8)$ (b) $\theta = \sin^{-1} (1/20)$
(c) $\theta = \sin^{-1} (1/80)$ (d) $\theta = \sin^{-1} (1/100)$

- ⊙ (c) Given,
Initial velocity of ball, $u = 0$
distance, $s = 100$ cm, time $t = 4$ sec
We know that

$$S = ut + \frac{1}{2}at^2$$

$$100 = 0 + \frac{1}{2} \times a \times (4)^2$$

$$a = \frac{100 \times 2}{4 \times 4} = \frac{25}{2} \text{ cm/sec}^2$$

Now, $a = g \sin \theta$
 $\sin \theta = \frac{a}{g} = \frac{25/2}{1000}$
 $\Rightarrow \theta = \sin^{-1} \left(\frac{1}{80} \right)$

112. The coefficient of areal expansion of a material is $1.6 \times 10^{-5} \text{ K}^{-1}$. Which one of the following gives the value of coefficient of volume expansion of this material?

- (a) $0.8 \times 10^{-5} \text{ K}^{-1}$ (b) $2.4 \times 10^{-5} \text{ K}^{-1}$
(c) $3.2 \times 10^{-5} \text{ K}^{-1}$ (d) $4.8 \times 10^{-5} \text{ K}^{-1}$

- ⊙ (b) We know that,
 $\frac{\text{Area expansion coefficient } (\beta)}{\text{Volumetric expansion coefficient } (X)}$
 $= \frac{2}{3}$

$$X = \frac{3}{2} X\beta \quad \text{Where } \beta = 1.6 \times 10^{-5} \text{ K}^{-1}$$

$$X = \frac{3}{2} \times 1.6 \times 10^{-5} \text{ K}^{-1}$$

$$X = 2.4 \times 10^{-5} \text{ K}^{-1}$$

113. The refractive indices of two media are denoted by n_1 and n_2 and the velocities of light in these two media are respectively v_1 and v_2 . If n_2/n_1 is

1.5, which one of the following statements is correct?

- (a) v_1 is 1.5 times v_2 (b) v_2 is 1.5 times v_1
(c) v_1 is equal to v_2 (d) v_1 is 3 times v_2

- ⊙ (a) We know that,
Refractive index = $\frac{\text{Velocity in vacuum (C)}}{\text{Velocity in medium (V)}}$

$$\text{In first medium } n_1 = \frac{C}{v_1} \quad \dots\dots (i)$$

$$\text{Similarly } n_2 = \frac{C}{v_2} \quad \dots\dots (ii)$$

From equation (i) and (ii)

$$\frac{n_2}{n_1} = \frac{v_1}{v_2}$$

$$1.5 = \frac{v_1}{v_2}$$

$$\Rightarrow v_1 = 1.5v_2$$

So, option (a) is correct.

114. Which one of the following greenhouse gases is in largest concentration in the atmosphere?

- (a) Chlorofluorocarbon
(b) Nitrous oxide
(c) Carbon dioxide
(d) Methane

- ⊙ (c) A greenhouse gas is a gas that absorbs and emits radiant energy within the thermal infrared range. In order, the most abundant greenhouse gases atmosphere are water vapour, carbon dioxide, methane, nitrous oxide, ozone, chlorofluorocarbons and hydro fluorocarbons.

115. Match List-I with List-II and select the correct answer using the codes given below the Lists :

List I (Koppen's Climatic Type)	List II (Letter Code)
A. Tropical wet	1. Af
B. Mid-latitude desert	2. Cs
C. Mediterranean	3. Df
D. Humid Continental	4. BWk

Code

(a) 1 4 2 3	(b) 1 2 4 3
(c) 3 2 4 1	(d) 3 4 2 1

⊙ (a)

Type	Type	Characteristics
Tropical Wet	Af	No dry season
Mid-latitude arid or dry	BWk	Mid-latitude Desert
Mediterranean	Cs	Dry hot summer
Humid-continental	Df	No dry season, severe winter

116. Match List I with List II and select the correct answer using the codes given below the Lists :

List I (Railway Zone)	List II (Headquarters)
A. West Central	1. Jabalpur
B. South-East Central	2. Gorakhpur
C. East-Central	3. Bilaspur
D. North-Eastern	4. Hajipur

Code

A B C D	A B C D
(a) 2 3 4 1	(b) 1 4 3 2
(c) 2 4 3 1	(d) 1 3 4 2

- ⊙ (d) Indian Railways is divided into 17 zones, which are further sub-divided into divisions. Each zonal railway is made up of a certain number of divisions, each having a divisional headquarter. There are a total of sixty-eight divisions.

Railway Zone	Headquarters
West Central	Jabalpur
South-East Central	Bilaspur
East-Central	Hajipur
North-Eastern	Gokakhpur

117. Which one of the following is the correct descending order of Indian States in terms of sex ratio as per Census 2011?

- (a) Mizoram — Manipur — Tripura — Meghalaya
(b) Tripura — Manipur — Meghalaya — Mizoram
(c) Meghalaya — Manipur — Mizoram — Tripura
(d) Manipur — Meghalaya — Tripura — Mizoram

- ⊙ (c) Sex ratio is used to describe the number of females per 1000 of males. In India, it is especially significant because the ratio is heavily skewed towards men. In the Population Census of 2011, it was revealed that the population ratio of India 2011 is 943 females per 1000 of males.

As per final data (given by Union Minister of Health and Family Welfare) the correct data is

State	Sex Ratio (2011)
Meghalaya	989
Manipur	987
Mizoram	976
Tripura	960

But according to the provisional data of Census 2011, the correct descending order is Meghalaya (989)-Manipur (987)-Mizoram (976)-Tripura (960).

Hence, option (c) is correct.

118. Steppe (temperate continental) climate is not experienced in which one of the following places?

- (a) Pretoria (b) Saskatchewan
(c) Perth (d) Buenos Aires

⊗ (a) Pretoria is a city in the Northern part of Gauteng province in South Africa. Pretoria has a humid sub-tropical climate with long hot rainy summers and short cool to cold, dry winters.

The mid latitude steppe climate spread over temperate grasslands is located in the interiors of the continents, which come in the westerly wind belt, but because of their more interior locations they do not get sufficient rainfall and hence the grasslands are practically treeless.

119. Which one of the following is not a process of chemical weathering?

- (a) Solution (b) Carbonation
(c) Oxidation (d) Exfoliation

⊗ (d) Chemical weathering is caused by rainwater reacting with the mineral grains in rock to form new minerals and soluble salts. These reactions occur particularly when the water is slightly acidic. Different types of chemical weathering are solution, oxidation and carbonation. These chemical processes occur more rapidly at higher temperature.

Weathering is the breakdown of rocks at the Earth's surface, by the action of rainwater, extremes of temperature and biological activity. It does not involve the removal of rock material.

120. Which one of the following statements is correct for a plane mirror?

- (a) Its focal length is zero.
(b) The size of the image of an object placed in front of the mirror is slightly less than that of the object.
(c) The image is virtual, erect and laterally inverted.
(d) Its focal length is 200 cm.

⊗ (c) In a plane mirror, image formed is virtual, erect at the same distance behind the mirror as the object is in front of mirror the focal length of plane mirror is infinite and power is zero.

121. An object is placed in front of a convex mirror. Which one of the following statements is correct?

- (a) It will never form an inverted image.
(b) The image moves towards the focus when the object moves towards the mirror.
(c) Depending on the position of the object with respect to the mirror, the image can be inverted and real.

(d) The size of the image becomes larger than that of the object when the object is placed at a distance equal to half the focal length.

⊗ (a) The convex mirror will never form an inverted image.

122. A circular coil of radius R having N number of turns carries a steady current I . The magnetic induction at the centre of the coil is 0.1 tesla. If the number of turns is doubled and the radius is halved, which one of the following will be the correct value for the magnetic induction at the centre of the coil?

- (a) 0.05 tesla (b) 0.2 tesla
(c) 0.4 tesla (d) 0.8 tesla

⊗ (c) Magnetic field at the centers of coil.

$$B = \frac{\mu_0 NI}{2r}$$

$$\Rightarrow 0.1 = \frac{\mu_0 NI}{2r} \dots (i)$$

According to the question,

$$B^1 = \frac{\mu_0 (2N)(I)}{2 \times \frac{r}{2}}$$

$$\Rightarrow B^1 = 4 \left(\frac{\mu_0 NI}{2r} \right)$$

From Eqs. (i), we get

$$B^1 = 4 \times 0.1 \Rightarrow B^1 = 0.4 \text{ tesla}$$

123. Which one among the following is not a Fundamental Right under the Constitution of India?

- (a) Right to equality
(b) Right to freedom
(c) Right to citizenship
(d) Right against exploitation

⊗ (c) Fundamental Rights are the basic rights of the common people and inalienable rights of the people who enjoy it under the charter of rights contained in Part III (Article-12 to 35) of Constitution of India. Right to citizenship is not is fundamental right.

All the Fundamental Rights have been classified under the following six categories

Right to be Equality (Article 14-18)

Right to Freedom (Article 19-22)

Right against Exploitation (23-24)

Right to Freedom of Religion (Article 25-28)

Cultural and Educational Rights (Article 29-30)

Right to Constitutional Remedies (Art.32)

The Right to Property is no longer a Fundamental Right.

124. Which one of the following crops was introduced by the Portuguese in India?

- (a) Opium (b) Coffee
(c) Betel leaf (d) Chili

⊗ (d) Chili is reported to be an inhabitant of South America and is widely scattered in all tropical and sub-tropical countries including India. It was first introduced in India by the Portuguese towards the end of the 15th Century.

125. Consider the following statements about merchant guilds of South India :

1. Ayyavole merchant guild was originally established in Aihole.
2. Manigramam merchant guild was sub-ordinated to the Anjuvannam merchant guild in the 13th century.

Which of the statement(s) given above is/are correct?

- (a) Only 1 (b) Only 2
(c) Both 1 and 2 (d) Neither 1 nor 2

⊗ (a) Southern Indian trade guilds were formed by merchants in order to organise and expand their trading activities. The two most important merchant guilds of South India were known as the Ayyavole and the Manigramam. Ayyavole were a merchant guild from Aihole that provided trade links between trading communities in Tamil Nadu, Karnataka and Andhra Pradesh. Manigramam guild flourished in Tamil Nadu in the Pallava and Chola periods and was active in South-East Asia. The Manigramam merchants enjoyed a special position as compared to the other merchants.

Anjuvannam was another body of merchants in South India, which almost certainly represented an association of foreign merchants who traded across the Arabian sea. It interacted both with local merchants as well as the Ayyavole and Manigramam organisations.

126. Which one of the following pairs is correctly matched?

Bhakti Saint	Philosophy
(a) Shankara	: Avadhuta
(b) Ramananda	: Kevaladvaita
(c) Ramanuja	: Vishishtadvaita
(d) Chaintanya	: Advaita

⊗ (c) Kevaladvaita is another name for the philosophy of advaita which was expounded by Adi Shankara. The meaning of Advaita is non-dualism or belief in one reality.

Philosophy of Vishishtadvaita was pioneered by Ramanujacharya during the 11th century. It literally means the Unique Advaita, i.e., Advaita with some amendments.

Avadhuta is a Sanskrit term used to refer to a person who has reached a stage in their spiritual development in which they are beyond worldly concerns.

127. When did the Stamp Act Congress consisting of delegates from 9 of the 13 colonies of America meet in New York City?

- (a) 1763 (b) 1764 (c) 1765 (d) 1766

- ⊗ (c) The Stamp Act Congress, or First Congress of the American Colonies, was a meeting held between October 7 and 25, 1765, in New York City. It consists of representatives from some of the British colonies in North America. At this meet, the delegates discussed and united against the stamp act, which required the use of specially stamped paper for legal documents, playing cards, calendars, newspapers and dice for virtually all business in the colonies.

128. Who among the following travellers was from Italy and visited Vijayanagar Kingdom in the fifteenth century?

- (a) Nikitin (b) Fa-Hien
(c) Bernier (d) Nicolo Conti

- ⊗ (d) *Important Foreign Travellers Who Visited India*

Nicolo Conti (AD 1420-1421), an Italian traveller, visited Vijayanagar empire during the reign of Devaraya-I (theTuluva dynasty ruler).

Nikitin (AD 1470-1474) was a Russian merchant, who describes the condition of the Bahmani kingdom under Muhammad III (1463-82).

Fa-Hien was a Chinese pilgrim who visited India during the reign of Chandra Gupta II. His primary aim was to visit the Buddhist religious places and to take with him the copies of the Buddhist religious texts.

François Bernier (September 25, 1620-September 22, 1688) was a French physician and traveller. He was briefly personal physician to Mughal prince Dara Shikoh (son of the Mughal emperor Shah Jahan), and was attached to the court of the emperor Aurangzeb.

129. Where did the French East India Company first establish its factory in India?

- (a) Calicut (b) Surat
(c) Pondicherry (d) Masulipatnam

- ⊗ (b) Among the Dutch, Danish, Portuguese and French, the French East India Company was the last to be formed. It was founded by Jean-Baptiste Colbert in 1664. Under Francis Caron, the company established first factory at Surat in 1667 and second factory was established at Masulipattanam a year later. In 1741, Joseph François Dupleix began to cherish the ambition of a French Empire in India. But the problem began to emerge when the conflict of the British and French started. The hopes of the French company were finally ruined with the arrival of Robert Clive(a British General) in India in 1744.

130. The Central Vigilance Commission was established on the recommendation of which one of the following Committees?

- (a) Santhanam Committee
(b) Dinesh Goswami Committee
(c) Tarkunde Committee
(d) Narasimham Committee

- ⊗ (a) The Central Vigilance Commission was set up by the government in February, 1964 on the recommendations of the Committee on Prevention of Corruption, headed by K. Santhanam, to advise and guide Central government agencies in the field of vigilance. CVC is conceived to be the apex vigilance institution, free of control from any executive authority, monitoring all vigilance activity under the Central Government and advising various authorities in Central Government organizations in planning, executing, reviewing and reforming their vigilance work. It consists of A Central Vigilance Commissioner as a chairperson; and not more than two Vigilance Commissioners as its members.

131. Match List I with List II and select the correct answer using the codes given below the Lists :

List I (Author)	List II (Book)
A. Bal Gangadhar Tilak	1. <i>The Arctic Home in the Vedas</i>
B. Dadabhai Naoroji	2. <i>Hind Swaraj</i>
C. Mahatma Gandhi	3. <i>The Discovery of India</i>
D. Jawaharlal Nehru	4. <i>Poverty and Un-British Rule in India</i>

Code

- A B C D A B C D
(a) 3 4 2 1 (b) 3 2 4 1
(c) 1 4 2 3 (d) 1 2 4 3

- ⊗ (c) *The Arctic Home in the Vedas* is a history book on the origin of Aryanic People by Bal Gangadhar Tilak. It propounded the theory that the North Pole was the original home of Aryans during the pre-glacial period which they had to leave due to the ice deluge around 8000 BC.

Hind Swaraj or Indian Home Rule is a book written by Mohandas K. Gandhi in 1909. In it he expresses his views on Swaraj, modern civilisation, mechanisation etc.

The Discovery of India was written by India's first Prime Minister Pt. Jawaharlal Nehru during his imprisonment in 1942-46 at Ahmednagar fort in Maharashtra, India. It is an honour paid to the rich cultural heritage of India, its history and its philosophy .

Poverty and Un-British Rule in India was authored by Dadabhai Naoroji. It brought attention to the draining of India's wealth into Britain.

132. Which one of the following is the Official Mascot of the FIFA World Cup 2018?

- (a) Fuleco (b) Zakumi
(c) Pille (d) Zabivaka

- ⊗ (d) The official mascot for the FIFA World Cup 2018 tournament was Zabivaka—an anthropomorphic wolf dressed in the colours of the Russian national team.

The 2018 FIFA World Cup was the 21st FIFA World Cup, an international football tournament contested by the men's national teams of the member associations of FIFA once every four years.

133. The Headquarters of the proposed National Sports University (as per the National Sports University Ordinance, 2018) will be set-up in

- (a) Chhattisgarh (b) Manipur
(c) Kerala (d) West Bengal

- ⊗ (b) National Sports University is a sports university proposed to be set-up in Manipur in India and three outlying campuses, one each at Lucknow, Mohali and Gwalior. It was proposed to be set-up by the National Sports University Ordinance, 2018 (the Ordinance) was designed on the lines of the National Sports University Bill, 2017.

134. Sentosa island, is located in

- (a) Singapore (b) China
(c) Australia (d) Sri Lanka

- ⊗ (a) Sentosa, previously called Pulau Blakang Mati, is a resort island in Singapore. It was once a British military base and a Japanese prisoner of war camp. The island was renamed Sentosa and turned into a tourist destination in 1972.

The island hosted the 2018 North Korea-United States summit between the United States President Donald Trump and Kim Jong-un of North Korea on June 12, 2018, at the Capella Hotel. Sentosa island was gazetted as a 'special event area' by the Singapore government.

135. India, in June, 2018, asserted that any mega connectivity project must respect sovereignty and territorial integrity of the countries. The project referred to above is

- (a) North-South Corridor Project
(b) Belt and Road Initiative
(c) Chabahar Port
(d) Panama Canal Expansion

- ⊗ (b) The One Belt One Road (OBOR) initiative is a Chinese effort which focusses on improving connectivity and cooperation among Asian countries, Africa, China and

Europe. The emphasis is on enhancing land as well as maritime routes through 'Silk Road Economic Belt' and 'Maritime Silk Road' initiatives respectively. With the exception of Bhutan, which has no diplomatic ties with China, almost every other South Asian country has signed into OBOR. But India has not signed it. The main reason behind India's opposition towards the policy is the China-Pakistan Economic Corridor (CPEC), which is a part of OBOR. Keeping this in mind, India in 2018 asserted that to be a part of any mega project, it is necessary that the project must respect sovereignty and territorial integrity of the countries.

136. Who among the following is not a member of G-7?

- (a) France
- (b) Germany
- (c) Russia
- (d) Japan

⊗ (c) The Group of Seven (G-7) is a group of seven largest advanced economies in the world, consisting of Canada, France, Germany, Italy, Japan, the United Kingdom, and the United States. The 44th edition of G-7 summit 2018 was hosted by Canadian Prime Minister Justin Trudeau in Quebec (Canada) on June 8–9. The summit was dubbed the G-6+1 by the French Government and political commentators because of the United States withdrawal from the Iran Deal along with the Paris Agreement, rampant American protectionism and controversies with French President Emmanuel Macron and Canadian Prime Minister Justin Trudeau. The 45th G-7 summit 2019 will be held in France.

137. Who among the following leaders started the Indian Home Rule League?

- (a) Gopal Krishna Gokhale
- (b) Mahatma Gandhi
- (c) Bal Gangadhar Tilak
- (d) JB Kripalani

⊗ (c) Between the years 1916 and 1918, the Indian independence movement witnessed the growth and spread of the home rule movement started by leaders like Bal Gangadhar Tilak and Annie Besant. The aim of the home rule movement was the attainment of home rule or a dominion status for India under the British Empire. This movement was carried out through the two home rule leagues – Indian Home Rule League and Home Rule League. While Tilak launched the Indian Home Rule League in April 1916 at Belgaum, Annie Besant launched the Home Rule League in September, 1916 at Madras. The two leagues worked closely with one another. However, they did not merge to avoid friction between both the leaders

138. Every Judge of the Supreme Court of India is appointed by

- (a) the Supreme Court Collegium
- (b) the Cabinet
- (c) the President of India
- (d) the Lok Sabha

⊗ (c) Article-124 provides for the establishment and Constitution of Supreme Court of India, which is the Apex Court of India. The sanctioned strength of the judges is 31, consisting of the Chief Justice and 30 other judges. Every Judge of the Supreme Court shall be appointed by the President by warrant under his hand and seal after consultation with such of the Judges of the Supreme Court and of the High Courts in the States as the President may deem necessary for the purpose and shall hold office until he attains the age of 65 years.

139. The Nehru-Mahalanobis Strategy of Development was implemented for the first time by which one of the following Five-Year Plans?

- (a) First Five-Year Plan
- (b) Second Five-Year Plan
- (c) Third Five-Year Plan
- (d) Seventh Five-Year Plan

⊗ (b) At the time of the formulation of the Second Five Year Plan, Prof.PC Mahalanobis (adviser to Late Prime Minister Jawaharlal Nehru), therefore it is called as Nehru-Mahalanobis strategy. It prepared a growth model with which he showed that to achieve a rapid long-term rate of growth it would be essential to devote a major part of the investment outlay to building of basic heavy industries.

140. Which one of the following is not a part of the Directive Principles of State Policy as enshrined in the Constitution of India?

- (a) Equal justice and free legal aid
- (b) Protection of monuments and places and objects of national importance
- (c) Protection of personal law
- (d) Separation of Judiciary from Executive

⊗ (c) Part-IV of Indian Constitution deals with Directive Principles of our State Policy (DPSP). Basic aim of DPSPs is to set-up social and economic goals before the law makers. *Some of the (other than given option DPSP's) important DPSPs are*

- Uniform Civil Code for the citizens.
- Provide free and compulsory education for children below 14 years.
- To promote international peace and amity.

- Protection and improvement of environment and safeguarding of forests and wildlife.
- Organisation of Village Panchayats and to promote cottage industry.
- To bring about the prohibition of intoxicating drinks and drugs that are injurious to health.
- Equal pay for equal work.
- Participation of workers in the management of the industries.

141. The word 'socialist' was inserted into the Preamble to the Constitution of India through which one of the following Amendment Acts?

- (a) 41st Amendment Act
- (b) 42nd Amendment Act
- (c) 43rd Amendment Act
- (d) 44th Amendment Act

⊗ (b) The preamble to the constitution of India is a brief introductory statement that sets out the guiding purpose, principles and philosophy of the Constitution. Preamble gives idea about the source of the Constitution, nature of Indian State (democratic, sovereign, socialist, secular, republic) a statement of its objectives and the date of its adoption. The 42nd Amendment Act amended the Preamble and changed the description of India from 'sovereign democratic republic' to a 'sovereign, socialist secular democratic republic', and also changed the words 'unity of the nation' to 'unity and integrity of the nation'.

142. The palace of English East India Company settlement in Madras was known as

- (a) Fort William
- (b) Fort St. George
- (c) Elphinstone Circle
- (d) Marble Palace

⊗ (b) The English East India Company was originally known as 'The Company of Merchants of London trading into the East Indies.' It was founded by a Royal Charter, signed by Queen Elizabeth-I, on 31st December, 1600. Sir Thomas Smith was the Company's first Governor.

Soon, English open their trading centres at several parts of India. In 1613, Mughal emperor Jahangir issued a farman (permission letter) to English to establish their trade centre in India, hence British established their 1st trading factory at Surat in 1613. In 1639 AD, the East India Company obtained the lease of the city of Madras from the local king where it built Fort St. George to protect its factory.

- 143.** Which one of the following Indian States (other than Himalayan or North-Eastern States) ranked first in the Composite Water Management Index as per the report issued by the NITI Aayog in June, 2018?
 (a) Madhya Pradesh (b) Karnataka
 (c) Gujarat (d) Maharashtra
- ⊗ **(c)** The NITI (National Institution for Transforming India) Aayog launched Composite Water Management Index to assess and improve performance in efficient management of water resources. It aims to inspire States/UTs towards efficient and optimal utilisation of water and recycling thereof with sense of urgency. The index comprises of nine parameters and 28 indicators. The states were divided into two categories namely North-Eastern and Himalayan states and other States, to take into account different hydrological conditions across these groups. The ranking of States/UTs is given below : Gujarat topped the list followed by Madhya Pradesh, Andhra Pradesh, Karnataka and Maharashtra in category of General States or Other States. Tripura has topped the list followed by Himachal Pradesh, Sikkim and Assam in category of North-Eastern and Himalayan states.
- 144.** Who among the following is the ex-officio Chairman of the North-Eastern Council?
 (a) The President of India
 (b) The Prime Minister of India
 (c) The Union Home Minister
 (d) The Union Minister of State (Independent Charge), Ministry of Development of North-Eastern Region
- ⊗ **(c)** The North-Eastern Council is the nodal agency for the economic and social development of the North-Eastern Region which consists of the eight states of Arunachal Pradesh, Assam, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim and Tripura. It was constituted in 1971 by an Act of Parliament. The Union Home Minister acts as ex-officio Chairman of North-Eastern Council (NEC). The Secretariat (Headquarters) of the Council is located at Shillong, Meghalaya. The President of India nominates the Chairman of the Council.
- 145.** Which one of the following is the theme of the World Blood Donor Day 2018?
 (a) Blood connects us all
 (b) Be there for someone else. Give blood. Share life
 (c) Give blood. Give now. Give often
 (d) Thank you for saving my life
- ⊗ **(a)** The host country for World Blood Donor Day 2018 events was Greece with the theme 'Blood Connects us All'. The global event was held in Athens on 14th June, 2018. Every year, on 14 June, countries around the world celebrate World Blood Donor Day. The event serves to thank voluntary, unpaid blood donors for their life-saving gifts of blood and to raise awareness of the need for regular blood donations to ensure the quality, safety and availability of blood and blood products for patients in need.
- 146.** 'Seva Bhoj Yojana', a scheme of the government of India that seeks to reimburse Central share of CGST and IGST on Food/Prasad/Langar/Bhandara offered by religious institutions, is introduced recently by which one of the following Ministries?
 (a) The Ministry of Culture
 (b) The Ministry of Home Affairs
 (c) The Ministry of Consumer Affairs, Food and Public Distribution
 (d) The Ministry of Social Justice and Empowerment
- ⊗ **(a)** The Ministry of Culture, government of India has introduced a new scheme namely 'Seva Bhoj Yojana' to provide financial assistance on purchase of specific food items by Charitable Religious Institutions (CRIs) for free distribution among people. Under this scheme, Centre's share of Central Goods and Services Tax (CGST) charged on the raw food materials purchased by the religious institutions will be refunded.
- 147.** Dr. Bindeshwar Pathak, who was awarded Nikkei Asia Prize 2018 for Culture and Community, is the founder of
 (a) Bachpan Bachao Andolan
 (b) PRS Legislative Research
 (c) Sulabh Sanitation and Social Reform Movement
 (d) Smile Foundation
- ⊗ **(c)** Bindeshwar Pathak, a noted social reformer and founder of Sulabh International, was honoured with Japan's prestigious 'Nikkei Asia Prize for Culture and Community' for his significant work in tackling poor hygiene and discrimination. Launched in 1996, the award honours people in Asia who have made significant contributions in one of the three areas—regional growth; science, technology and innovation; and culture and community. Former Prime Minister Manmohan Singh and Infosys Chairman Narayan Murthy are among the few Indians who have won the prize in the past.
- 148.** Article-352 of the Constitution of India contains provisions related to
 (a) financial emergency
 (b) failure of constitutional machinery in States
 (c) suspension of the enforcement of rights conferred in Part III of the Constitution
 (d) general emergency
- ⊗ **(d)** The part 18 of Indian Constitution deals with the emergency provisions. It contains three types of emergency namely:
National Emergency : Article 352
 This Article says that if the president is satisfied that a grave emergency exists whereby the security of India or any part of the territory of India is threatened by war or external aggression or armed rebellion, he may proclaim an emergency.
- 149.** The Theosophical Society was led by
 (a) AO Hume (b) Arthur Griffith
 (c) Annie Besant (d) Lord Dufferin
- ⊗ **(c)** The Theosophical Society was founded by Madame Blavatsky and Col. Olcott in 1875 in New York. It was only in 1879, that this ideology gained its roots in India. It was crystallised in the Madras Presidency with its headquarters in Adayar. The movement was popularised by Annie Besant in India. It was based on the principles of Universal brotherhood and the study of comparative religion and philosophy. The chief aim of the Theosophical Society in India was to establish the lost glory and honour of Hindu religion. Mrs. Annie Besant became its President and worked for the upliftment of Indian mass.
- 150.** Which one of the following statements about Bipin Chandra Pal is correct?
 (a) He was a member of the moderate group of Congress.
 (b) He was a member of the extremist group of Congress.
 (c) He was the Minister of Defence in the first government of independent India.
 (d) He was the Chief Minister of West Bengal.
- ⊗ **(b)** In the beginning of the 20th century, a new class of national leaders emerged in India which was different from the moderate group. They were known as extremists, who took a more aggressive stance against the British Empire and did not believe in the soft, persuasive approach of the moderate leaders. Important extremist leaders were Lala Lajpat Rai, Bal Gangadhar Tilak, Bipin Chandra Pal (Lal-Bal-Pal) leading the extremist cause in Punjab, Bombay and Bengal respectively. Their goal was 'swaraj' and did not stick to constitutional methods of protest and demand rather they resorted to boycotts, strikes, etc.

SOLVED PAPER 2018 (I)

PAPER I : Mathematics

1. If $n \in N$, then

$121^n - 25^n + 190^n - (-4)^n$ is divisible by which one of the following?

(a) 1904 (b) 2000 (c) 2002 (d) 2006

⊙ (b) We have,

$$121^n - 25^n + 190^n - (-4)^n$$

On putting $n = 1$, we get

$$\begin{aligned} (121)^1 - (25)^1 + (190)^1 - (-4)^1 \\ = 121 - 25 + 190 + 4 \\ = 2000 \end{aligned}$$

Which is divisible by 2000.

2. If $n = (2017)!$, then what is

$$\frac{1}{\log_2 n} + \frac{1}{\log_3 n} + \frac{1}{\log_4 n}$$

+ ... + $\frac{1}{\log_{2017} n}$ equal to ?

(a) 0 (b) 1 (c) $\frac{n}{2}$ (d) n

⊙ (b) We have,

$$\begin{aligned} \frac{1}{\log_2 n} + \frac{1}{\log_3 n} + \frac{1}{\log_4 n} + \dots + \frac{1}{\log_{2017} n} \\ = \log_n 2 + \log_n 3 + \log_n 4 + \dots + \log_n 2017 \end{aligned}$$

$$\left[\because \log_b a = \frac{1}{\log_a b} \right]$$

$$= \log_n (2 \cdot 3 \cdot 4 \cdot \dots \cdot 2017)$$

$$[\because \log a + \log b = \log ab]$$

$$= \log_n (1 \cdot 2 \cdot 3 \cdot 4 \cdot \dots \cdot 2017)$$

$$= \log_n (2017)!$$

$$[\because n(n-1)(n-2) \dots 3 \cdot 2 \cdot 1 = n!]$$

$$= \log_{(2017)} (2017)! \quad [\because n = 2017!]$$

$$= 1 \quad [\because \log_a a = 1]$$

3. In the expansion of $(1+x)^{43}$, if the coefficients of $(2r+1)$ th and $(r+2)$ th terms are equal, then what is the values of r ($r \neq 1$)?

(a) 5 (b) 14 (c) 21 (d) 22

⊙ (b) We have, $(1+x)^{43}$

$$\therefore \text{General term, } T_{r+1} = {}^{43}C_r x^r$$

$$\text{Now, } T_{2r+1} = {}^{43}C_{2r} x^{2r}$$

$$\text{and } T_{r+2} = {}^{43}C_{r+1} x^{r+1}$$

Now, according to the question

Coefficients of $(2r+1)$ th and $(r+2)$ th terms are equal

$$\therefore {}^{43}C_{2r} = {}^{43}C_{r+1}$$

$$\Rightarrow 2r + r + 1 = 43$$

$$[\because {}^nC_x = {}^nC_y \Rightarrow x + y = n]$$

$$\Rightarrow 3r = 42$$

$$\Rightarrow r = 14$$

4. What is the principal argument of

$(-1-i)$, where $i = \sqrt{-1}$?

(a) $\frac{\pi}{4}$ (b) $-\frac{\pi}{4}$

(c) $-\frac{3\pi}{4}$ (d) $\frac{3\pi}{4}$

⊙ (c) Let $z = -1 - i$

$$\text{Now, } \tan \alpha = \frac{|b|}{|a|} = \frac{|-1|}{|-1|}$$

$$[\because a = -1, b = -1]$$

$$\therefore \alpha = \tan^{-1}(1) = \frac{\pi}{4}$$

Since a, b both are negative,

$$\begin{aligned} \therefore \arg(z) &= \alpha - \pi \\ &= \frac{\pi}{4} - \pi = \frac{-3\pi}{4} \end{aligned}$$

5. Let α and β be real number and z be a complex number. If $z^2 + \alpha z + \beta = 0$ has two distinct non-real roots with $\text{Re}(z) = 1$, then it is necessary that

(a) $\beta \in (-1, 0)$ (b) $|\beta| = 1$
(c) $\beta \in (1, \infty)$ (d) $\beta \in (0, 1)$

⊙ (c) Let $z = x + iy$

Now, we have

$$z^2 + \alpha z + \beta = 0$$

$$\Rightarrow (x + iy)^2 + \alpha(x + iy) + \beta = 0$$

$$\Rightarrow x^2 - y^2 + 2ixy + \alpha x + i\alpha y + \beta = 0$$

$$[\because i^2 = -1]$$

$$\Rightarrow (x^2 - y^2 + \alpha x + \beta) + (2xy + \alpha y)i = 0$$

On comparing,

$$x^2 - y^2 + \alpha x + \beta = 0 \text{ and } 2xy + \alpha y = 0$$

$$\Rightarrow x^2 - y^2 + \alpha x + \beta = 0 \text{ and } (2x + \alpha)y = 0$$

$$\Rightarrow x^2 - y^2 + \alpha x + \beta = 0 \text{ and } 2x + \alpha = 0$$

$$[\because y \neq 0]$$

$$\Rightarrow x^2 - y^2 + \alpha x + \beta = 0 \text{ and } \alpha = -2x$$

$$\Rightarrow x^2 - y^2 + \alpha x + \beta = 0 \text{ and } \alpha = -2$$

$$[\because \text{Re}(z) = 1 = x]$$

$$\Rightarrow 1 - y^2 - 2 + \beta = 0 \quad [\because x = 1, \alpha = -2]$$

$$\Rightarrow \beta = y^2 + 1$$

$$\Rightarrow \beta \in (1, \infty)$$

$$[\because y^2 \geq 0 \Rightarrow y^2 + 1 \geq 1]$$

6. Let A and B be subsets of X and $C = (A \cap B') \cup (A' \cap B)$, where A' and B' are complements of A and B respectively in X . What is C equal to?

(a) $(A \cup B') - (A \cap B')$

(b) $(A' \cup B) - (A' \cap B)$

(c) $(A \cup B) - (A \cap B)$

(d) $(A' \cup B') - (A' \cap B')$

⊙ (c) We have, $C = (A \cap B') \cup (A' \cap B)$
 $= (A - B) \cup (B - A)$
 $[\because X \cap Y' = x - y]$
 $= (A \cup B) - (A \cap B)$
 $[\text{from venn diagram}]$

7. How many numbers between 100 and 1000 can be formed with the digits 5, 6, 7, 8, 9, if the repetition of digits is not allowed?

- (a) 3^5 (b) 5^3
 (c) 120 (d) 60

⊙ (d) Number lying between 100 and 1000 are of three digit. Since the numbers are to be formed with 5, 6, 7, 8, 9 and repetition is not allowed, so total number of numbers
 $= 5 \times 4 \times 3 = 60$

8. The number of non-zero integral solution of the equation $|1 - 2i|^x = 5^x$ is

- (a) Zero (no solution)
 (b) One
 (c) Two
 (d) Three

⊙ (a) We have,
 $|1 - 2i|^x = 5^x$
 $\Rightarrow (\sqrt{(1)^2 + (-2)^2})^x = 5^x$
 $[\because |a + ib| = \sqrt{a^2 + b^2}]$
 $\Rightarrow (\sqrt{1 + 4})^x = 5^x$
 $\Rightarrow (\sqrt{5})^x = 5^x$
 $\Rightarrow 5^{x/2} = 5^x$
 $\Rightarrow \frac{x}{2} = x$
 $[\because a^m = a^n \Rightarrow m = n]$
 $\Rightarrow x - \frac{x}{2} = 0$
 $\Rightarrow \frac{x}{2} = 0$
 $\Rightarrow x = 0$
 But x is non-zero integral.
 \therefore Given equation has no solution.

9. If the ratio of AM of GM of two positive numbers a and b is 5 : 3, then a : b is equal to

- (a) 3 : 5 (b) 2 : 9
 (c) 9 : 1 (d) 5 : 3

⊙ (c) Let a and b be two numbers.

According to the question,
 $\frac{a+b}{\sqrt{ab}} = \frac{5}{3}$
 $[\because A : G = 5 : 3, A = \frac{a+b}{2}, G = \sqrt{ab}]$
 $\Rightarrow \frac{a+b}{\sqrt{ab}} = \frac{10}{3}$
 $\Rightarrow \frac{(a+b)^2}{ab} = \left(\frac{10}{3}\right)^2$
 $\Rightarrow \frac{a^2 + b^2 + 2ab}{ab} = \frac{100}{9}$
 $\Rightarrow \frac{a}{b} + \frac{b}{a} + 2 = \frac{100}{9}$
 $\Rightarrow t + \frac{1}{t} + 2 = \frac{100}{9} \quad [\because \frac{a}{b} = t]$
 $\Rightarrow \frac{t^2 + 1 + 2t}{t} = \frac{100}{9}$
 $\Rightarrow 9t^2 - 82t + 9 = 0$
 $\Rightarrow (t - 9)(9t - 1) = 0$
 $\Rightarrow t = 9, \frac{1}{9}$
 $\therefore \frac{a}{b} = 9 \text{ or } \frac{a}{b} = \frac{1}{9} \quad [\because t = \frac{a}{b}]$
 $\Rightarrow a : b = 9 : 1 \text{ or } 1 : 9$

10. If the coefficients of a^m and a^n is the expansion of $(1 + a)^{m+n}$ are α and β , then which one of the following is correct?

- (a) $\alpha = 2\beta$ (b) $\alpha = \beta$
 (c) $2\alpha = \beta$ (d) $\alpha = (m + n)\beta$

⊙ (b) We have
 $(1 + a)^{m+n}$
 $\therefore T_{r+1} = {}^{m+n}C_r a^r$
 \therefore Coefficient of $a^m = {}^{m+n}C_m \quad [\because r = m]$
 and coefficient of $a^n = {}^{m+n}C_n \quad [\because r = n]$
 $\therefore \alpha = {}^{m+n}C_m$
 and $\beta = {}^{m+n}C_n$
 $= {}^{m+n}C_{m+n-n} \quad [\because {}^nC_r = {}^nC_{n-r}]$
 $= {}^{m+n}C_m = \alpha$
 $\therefore \alpha = \beta$

11. If $x + \log_{15}(1 + 3^x) = x \log_{15} 5 + \log_{15} 12$, where x is an integer, then what is x equal to?

- (a) -3 (b) 2 (c) 1 (d) 3

⊙ (c) We have,
 $x + \log_{15}(1 + 3^x) = x \log_{15} 5 + \log_{15} 12$
 $\Rightarrow \log_{15} 15^x + \log_{15}(1 + 3^x)$
 $= \log_{15} 5^x + \log_{15} 12$
 $[\because \log_a a = 1 \text{ and } \log_b a^m = m \log_b a]$
 $\Rightarrow \log_{15}[15^x (1 + 3^x)] = \log_{15}(5^x \times 12)$
 $[\because \log a + \log b = \log ab]$

$\Rightarrow 15^x (1 + 3^x) = 12 \cdot 5^x$
 $\Rightarrow 3^x (1 + 3^x) = 12$
 $\Rightarrow y(1 + y) = 12 \quad [\text{where } y = 3^x]$
 $\Rightarrow y^2 + y - 12 = 0$
 $\Rightarrow (y + 4)(y - 3) = 0$
 $\Rightarrow y = -4, 3$
 $\Rightarrow 3^x = -4, 3$
 $\Rightarrow 3^x = 3 \quad [\because 3^x \neq -4]$
 $\Rightarrow x = 1$

12. How many four-digit numbers divisible by 10 can be formed using 1, 5, 0, 6, 7 without repetition of digits?

- (a) 24 (b) 36
 (c) 44 (d) 64

⊙ (a) We have to form four digit numbers which are divisible by 10 and using 1, 5, 0, 6, 7. Since numbers must be divisible by 10, so unit place must be zero.
 \therefore Total number of such numbers = Permutations of three digits using 1, 5, 6, 7
 $= {}^4P_3 = \frac{4!}{(4-3)!} = 4! = 24$

Directions (Q. Nos. 13-14) Consider the information given below and answer the two items that follow

In a class, 54 students are good in Hindi only, 63 students are good in Mathematics only and 41 students are good in English only. There are 18 students who are good in both Hindi and Mathematics. 10 students are good in all three subjects.

13. What is the number of students who are good in either Hindi or Mathematics but not English?

- (a) 99 (b) 107
 (c) 125 (d) 130

14. What is the number of students who are good in Hindi and Mathematics but not in English?

- (a) 18 (b) 12 (c) 10 (d) 8

Solution (Q. Nos. 13-14)

⊙ (c) From given Venn-diagram
 $n(H \cup M \cup E') = 54 + 8 + 63 = 125$

⊙ (d) From given Venn-diagram
 $n(H \cap M \cap E') = 18 - 10 = 8$

15. If α and β are different complex numbers with $|\alpha| = 1$, then what is

$$\left| \frac{\alpha - \beta}{1 - \alpha\beta} \right| \text{ equal to ?}$$

- (a) $|\beta|$ (b) 2 (c) 1 (d) 0

⊙ (c) We have,

$$\left| \frac{\alpha - \beta}{1 - \alpha\beta} \right| = \left| \frac{\alpha - \beta}{\alpha\bar{\alpha} - \alpha\beta} \right|$$

$$[\because |\alpha| = 1 \Rightarrow |\alpha|^2 = 1 \Rightarrow \alpha \cdot \bar{\alpha} = 1]$$

$$= \left| \frac{\alpha - \beta}{\alpha(\bar{\alpha} - \beta)} \right|$$

$$= \frac{1}{|\alpha|} \left| \frac{\alpha - \beta}{\bar{\alpha} - \beta} \right|$$

$$= \frac{|\alpha - \beta|}{|\alpha| |\alpha - \beta|}$$

$$= \frac{|\alpha - \beta|}{|\alpha| |\alpha - \beta|} \quad [\because |\bar{z}| = |z|]$$

$$= \frac{1}{|\alpha|} = 1$$

$$[\because |\alpha| = 1]$$

16. The equation $|1 - x| + x^2 = 5$ has

- (a) a rational root and an irrational root
 (b) two rational roots
 (c) two irrational roots
 (d) no real roots

⊙ (a) We have,

$$|1 - x| + x^2 = 5$$

Case I When $x < 1$

$$1 - x + x^2 = 5$$

$$[\because x < 1 \Rightarrow |1 - x| = 1 - x]$$

$$\Rightarrow x^2 - x - 4 = 0$$

$$\Rightarrow x = \frac{1 \pm \sqrt{1 - 4(1)(-4)}}{2}$$

$$= \frac{1 \pm \sqrt{17}}{2}$$

$$\Rightarrow x = \frac{1 - \sqrt{17}}{2} \quad [\because x < 1]$$

Case II When $x \geq 1$

$$-(1 - x) + x^2 = 5$$

$$[\because x \geq 1 \Rightarrow |1 - x| = -(1 - x)]$$

$$\Rightarrow -1 + x + x^2 = 5$$

$$\Rightarrow x^2 + x - 6 = 0$$

$$\Rightarrow (x + 3)(x - 2) = 0$$

$$\Rightarrow x = -3, 2$$

$$\Rightarrow x = 2 \quad [\because x \geq 1]$$

\therefore Given equation has a rational root and an irrational root.

17. The binary number expression of the decimal number 31 is

- (a) 1111 (b) 10111
 (c) 11011 (d) 11111

⊙ (d)

2	31
2	15 1
2	7 1
2	3 1
2	1 1
	0 1

$$\therefore (31)_{10} = (11111)_2$$

18. What is $i^{1000} + i^{1001} + i^{1002} + i^{1003}$

equal to (where $i = \sqrt{-1}$) ?

- (a) 0 (b) i (c) $-i$ (d) 1

⊙ (a) We have,

$$i^{1000} + i^{1001} + i^{1002} + i^{1003}$$

$$= i^{1000}[1 + i + i^2 + i^3]$$

$$= i^{1000}[1 + i - 1 - i]$$

$$[\because i^2 = -1, i^3 = -i]$$

$$= 0$$

19. What is

$$\frac{1}{\log_2 N} + \frac{1}{\log_3 N} + \frac{1}{\log_4 N} + \dots$$

$$+ \frac{1}{\log_{100} N} \text{ equal to } (N \neq 1) ?$$

- (a) $\frac{1}{\log_{100!} N}$ (b) $\frac{1}{\log_{99!} N}$
 (c) $\frac{99}{\log_{100!} N}$ (d) $\frac{99}{\log_{99!} N}$

⊙ (a) We have,

$$\frac{1}{\log_2 N} + \frac{1}{\log_3 N} + \frac{1}{\log_4 N} + \dots + \frac{1}{\log_{100} N}$$

$$= \log_N 2 + \log_N 3 + \log_N 4 + \dots + \log_N 100$$

$$= \log_N 2 \cdot 3 \cdot 4 \dots 100$$

$$[\because \log_a a = \frac{1}{\log_a b}]$$

$$= \log_N 1 \cdot 2 \cdot 3 \cdot 4 \dots 100$$

$$= \log_N (100!) \quad [\because n! = n(n-1)(n-2) \dots 2 \cdot 1]$$

$$= \frac{1}{\log_{(100)!} N}$$

20. The modulus-amplitude form of

$$\sqrt{3} + i, \text{ where } i = \sqrt{-1} \text{ is}$$

- (a) $2 \left(\cos \frac{\pi}{3} + i \sin \frac{\pi}{3} \right)$
 (b) $2 \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right)$
 (c) $4 \left(\cos \frac{\pi}{3} + i \sin \frac{\pi}{3} \right)$
 (d) $4 \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right)$

⊙ (b) Let $z = \sqrt{3} + i$

$$\therefore |z| = \sqrt{(\sqrt{3})^2 + (1)^2}$$

$$[\because z = a + ib \Rightarrow |z| = \sqrt{a^2 + b^2}]$$

$$= \sqrt{3 + 1} = \sqrt{4} = 2$$

$$\text{Now, amp}(z) = \tan^{-1} \left(\frac{b}{a} \right)$$

$$= \tan^{-1} \left(\frac{1}{\sqrt{3}} \right) = \frac{\pi}{6}$$

$$[\because \tan \frac{\pi}{6} = \frac{1}{\sqrt{3}}]$$

$$\therefore z = r(\cos \theta + i \sin \theta)$$

$$= 2 \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right)$$

$$[\because r = |z| = 2 \text{ and } \theta = \text{amp}(z) = \frac{\pi}{6}]$$

21. What is the number of non-zero terms in the expansion of $(1 + 2\sqrt{3}x)^{11} + (1 - 2\sqrt{3}x)^{11}$ (after simplification)?

- (a) 4 (b) 5
 (c) 6 (d) 11

⊙ (c) In $(a + b)^n + (a - b)^n$, number of terms

$$= \begin{cases} \frac{n+2}{2}, & \text{if } n \text{ is even} \\ \frac{n+1}{2}, & \text{if } n \text{ is odd} \end{cases}$$

\therefore Number of terms in

$$(1 + 2\sqrt{3}x)^{11} + (1 - 2\sqrt{3}x)^{11}$$

$$= \frac{11+1}{2} \quad [\because n = 11, \text{ is odd}]$$

$$= \frac{12}{2} = 6$$

22. What is the greatest integer among the following, by which the number $5^5 + 7^5$ is divisible?

- (a) 6 (b) 8 (c) 11 (d) 12

⊙ (d) We know that when m is odd then

$$(x^m + y^m) \text{ is divisible by } (x + y).$$

$$\therefore 5^5 + 7^5 \text{ is divisible by } 5 + 7 = 12 \text{ as } m = 5 \text{ is odd.}$$

23. If $x = 1 - y + y^2 - y^3 \dots$ up to infinite terms, where $|y| < 1$, then which one of the following is correct?

- (a) $x = \frac{1}{1+y}$ (b) $x = \frac{1}{1-y}$
 (c) $x = \frac{y}{1+y}$ (d) $x = \frac{y}{1-y}$

⊙ (a) We have,

$$x = 1 - y + y^2 - y^3 + \dots \infty, |y| < 1$$

$$= \frac{1}{1 - (-y)}$$

$$[\because a + ar + ar^2 + \dots \infty = \frac{a}{1-r}, r < 1]$$

$$= \frac{1}{1+y}$$

24. What is the inverse of the matrix

$$A = \begin{pmatrix} \cos\theta & \sin\theta & 0 \\ -\sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{pmatrix}?$$

(a) $\begin{pmatrix} \cos\theta & -\sin\theta & 0 \\ \sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{pmatrix}$

(b) $\begin{pmatrix} \cos\theta & 0 & -\sin\theta \\ 0 & 1 & 0 \\ \sin\theta & 0 & \cos\theta \end{pmatrix}$

(c) $\begin{pmatrix} 1 & 0 & 0 \\ 0 & \cos\theta & -\sin\theta \\ 0 & \sin\theta & \cos\theta \end{pmatrix}$

(d) $\begin{pmatrix} \cos\theta & \sin\theta & 0 \\ -\sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{pmatrix}$

⊙ (a) We have,

$$A = \begin{bmatrix} \cos\theta & \sin\theta & 0 \\ -\sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$|A| = 1[\cos^2\theta - (-\sin^2\theta)] = 1 \neq 0$$

$$C_{11} = \begin{vmatrix} \cos\theta & 0 \\ 0 & 1 \end{vmatrix} = \cos\theta$$

$$C_{12} = -\begin{vmatrix} -\sin\theta & 0 \\ 0 & 1 \end{vmatrix} = \sin\theta$$

$$C_{13} = \begin{vmatrix} -\sin\theta & \cos\theta \\ 0 & 0 \end{vmatrix} = 0$$

$$C_{21} = -\begin{vmatrix} \sin\theta & 0 \\ 0 & 1 \end{vmatrix} = -\sin\theta$$

$$C_{22} = \begin{vmatrix} \cos\theta & 0 \\ 0 & 1 \end{vmatrix} = \cos\theta$$

$$C_{23} = -\begin{vmatrix} \cos\theta & \sin\theta \\ 0 & 0 \end{vmatrix} = 0$$

$$C_{31} = \begin{vmatrix} \sin\theta & 0 \\ \cos\theta & 0 \end{vmatrix} = 0$$

$$C_{32} = -\begin{vmatrix} \cos\theta & 0 \\ -\sin\theta & 0 \end{vmatrix} = 0$$

$$C_{33} = \begin{vmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{vmatrix} = \cos^2\theta + \sin^2\theta = 1$$

$$\therefore \text{adj}A = \begin{bmatrix} \cos\theta & \sin\theta & 0 \\ -\sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{bmatrix}^T$$

$$= \begin{bmatrix} \cos\theta & -\sin\theta & 0 \\ \sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$\therefore A^{-1} = \frac{1}{|A|} \text{adj}A$$

$$A^{-1} = \frac{1}{1} \begin{bmatrix} \cos\theta & -\sin\theta & 0 \\ \sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

$$= \begin{bmatrix} \cos\theta & -\sin\theta & 0 \\ \sin\theta & \cos\theta & 0 \\ 0 & 0 & 1 \end{bmatrix}$$

25. If A is a 2×3 matrix and AB is a 2×5 matrix, then B must be a

- (a) 3×5 matrix (b) 5×3 matrix
(c) 3×2 matrix (d) 5×2 matrix

⊙ (a) Let order of B is $m \times n$.

Now, according to the question

$$A_{2 \times 3} \times B_{m \times n} = (AB)_{2 \times 5}$$

$$\therefore m = 3 \text{ and } n = 5$$

$$\therefore \text{Order of } B \text{ is } 3 \times 5.$$

26. If $A = \begin{pmatrix} 1 & 2 \\ 2 & 3 \end{pmatrix}$ and $A^2 - kA - I_2 = O$,

where I_2 is the 2×2 identity matrix, then what is the value of k ?

- (a) 4 (b) -4
(c) 8 (d) -8

⊙ (a) We have,

$$A = \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix}$$

$$\begin{aligned} \therefore A^2 &= A \cdot A = \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} \begin{bmatrix} 1 & 2 \\ 2 & 3 \end{bmatrix} \\ &= \begin{bmatrix} 1 \cdot 1 + 2 \cdot 2 & 1 \cdot 2 + 2 \cdot 3 \\ 2 \cdot 1 + 3 \cdot 2 & 2 \cdot 2 + 3 \cdot 3 \end{bmatrix} \\ &= \begin{bmatrix} 5 & 8 \\ 8 & 13 \end{bmatrix} \end{aligned}$$

Now, it is given that,

$$A^2 - kA - I_2 = O$$

$$\Rightarrow \begin{bmatrix} 5 & 8 \\ 8 & 13 \end{bmatrix} - \begin{bmatrix} k & 2k \\ 2k & 3k \end{bmatrix} - \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = O$$

$$\Rightarrow \begin{bmatrix} 4 & 8 \\ 8 & 12 \end{bmatrix} = \begin{bmatrix} k & 2k \\ 2k & 3k \end{bmatrix}$$

$$\Rightarrow k = 4$$

27. What is the number of triangles that can be formed by choosing the vertices from a set of 12 points in a plane, seven of which lie on the same straight line?

- (a) 185 (b) 175
(c) 115 (d) 105

⊙ (a) Required number of triangle

$$= {}^{12}C_3 - {}^7C_3$$

$$= \frac{12 \times 11 \times 10}{3 \times 2 \times 1} - \frac{7 \times 6 \times 5}{3 \times 2 \times 1}$$

$$= 220 - 35 = 185$$

28. What is

$C(n, r) + 2C(n, r - 1) + C(n, r - 2)$ equal to?

- (a) $C(n + 1, r)$
(b) $C(n - 1, r + 1)$
(c) $C(n, r + 1)$
(d) $C(n + 2, r)$

⊙ (d) We have,

$$C(n, r) + 2C(n, r - 1) + C(n, r - 2)$$

$$= {}^nC_r + 2 \cdot {}^nC_{r-1} + {}^nC_{r-2}$$

$$= ({}^nC_r + {}^nC_{r-1}) + ({}^nC_{r-1} + {}^nC_{r-2})$$

$$= {}^{n+1}C_r + {}^{n+1}C_{r-1}$$

$$[\because {}^nC_r + {}^nC_{r-1} = {}^{n+1}C_r]$$

$$= {}^{n+1+1}C_r$$

$$= {}^{n+2}C_r$$

$$= C(n + 2, r)$$

29. Let $|x|$ denote the greatest integer function. What is the number of solutions of the equation $x^2 - 4x + [x] = 0$ in the interval $[0, 2]$?

- (a) Zero (no solution) (b) One
(c) Two (d) Three

⊙ (b) We have,

$$x^2 - 4x + [x] = 0$$

Case I $x \in [0, 1]$

$$\therefore x^2 - 4x + 0 = 0$$

$$[\because x \in [0, 1] \Rightarrow [x] = 0]$$

$$\Rightarrow x^2 - 4x = 0$$

$$\Rightarrow x(x - 4) = 0$$

$$\Rightarrow x = 0, 4$$

$$\Rightarrow x = 0$$

$$[\because x \in [0, 1]]$$

Case II $x \in [1, 2]$

$$\therefore x^2 - 4x + 1 = 0$$

$$[\because x \in [1, 2] \Rightarrow [x] = 1]$$

$$\Rightarrow x = \frac{4 \pm \sqrt{16 - 4}}{2}$$

$$\Rightarrow x = \frac{4 \pm 2\sqrt{3}}{2}$$

$$\Rightarrow x = 2 \pm \sqrt{3}$$

$$\Rightarrow x = 0.268, 3.732$$

No solution

$$[\because x \in [1, 2]]$$

\therefore Given equation has only one solution i.e. $x = 0$.

30. A survey of 850 students in a University yields that 680 students like music and 215 like dance. What is the least number of students who like both music and dance?

- (a) 40 (b) 45
(c) 50 (d) 55

⊙ (b) Let A be the set of students who like music and B be the set of students whose like dance.

$$\therefore n(A) = 680, n(B) = 215 \text{ and } n(U) = 850$$

We know that,

$$n(A \cap B) = n(A) + n(B) - n(A \cup B)$$

\Rightarrow

$$n(A \cap B)_{\min} = n(A) + n(B) - n(A \cup B)_{\max}$$

$$\Rightarrow n(A \cap B)_{\min} = 680 + 215 - 850$$

$$[\because n(A \cup B)_{\max} = n(\cup)]$$

$$= 45$$

- 31.** What is the sum of all two-digit numbers, which when divided by 3 leave 2 as the remainder ?
- (a) 1565 (b) 1585
(c) 1635 (d) 1655

⊙ (c) Required numbers are 11, 14, 17, ... 98 which is an AP.

We know that,

$$a_n = a + (n - 1)d$$

$$98 = 11 + (n - 1)(3)$$

$$\Rightarrow 98 = 11 + 3n - 3$$

$$\Rightarrow 98 = 3n + 8$$

$$\Rightarrow 90 = 3n$$

$$\Rightarrow n = 30$$

$$\therefore \text{Sum} = 11 + 14 + 17 + \dots + 98$$

$$= \frac{30}{2} [11 + 98] \left[\because S_n = \frac{n}{2}(a + l) \right]$$

$$= 15 \times 109$$

$$= 1635$$

- 32.** If $0 > a < 1$, the value of $\log_{10} a$ is negative. This is justified by
- (a) Negative power of 10 is less than 1
(b) Negative power of 10 is between 0 and 1
(c) Negative power of 10 is positive
(d) Negative power of 10 is negative

⊙ (b) Let $\log_{10} a = x$
 $\Rightarrow a = 10^x$

It is given that

$$0 < a < 1$$

$$\Rightarrow 0 < 10^x < 1$$

$\Rightarrow x$ must be negative

\therefore If $0 < a < 1$, the value of $\log_{10} a$ is negative implies that negative power of 10 is between 0 and 1.

- 33.** The third term of a GP is 3. What is the product of the first five terms?
- (a) 216
(b) 226
(c) 243
(d) Cannot be determined due to insufficient data

⊙ (c) Let a and r be the first term and common ratio of the GP.

$$\therefore a_3 = 3$$

$$\Rightarrow ar^2 = 3 \quad [\because a_n = ar^{n-1}] \dots (i)$$

$$\text{Required product} = a_1 \cdot a_2 \cdot a_3 \cdot a_4 \cdot a_5$$

$$= (a)(ar)(ar^2)(ar^3)(ar^4)$$

$$= a^5 r^{10} = (ar^2)^5$$

$$= (3)^5 \quad [\text{from Eq. (i)}]$$

$$= 243$$

- 34.** If $x, \frac{3}{2}, z$ are in AP; $x, 3, z$ are in GP;

then which one of the following will be in HP?

- (a) $x, 6, z$ (b) $x, 4, z$
(c) $x, 2, z$ (d) $x, 1, z$

⊙ (a) We have,

$$x, \frac{3}{2}, z \text{ are in AP.}$$

$$\Rightarrow \frac{x+z}{2} = \frac{3}{2}$$

$$\Rightarrow x + z = 3 \quad \dots (i)$$

Also, $x, 3, z$ are in GP

$$\Rightarrow xz = 3^2$$

$$\Rightarrow xz = 9 \quad \dots (ii)$$

Now, from Eqs. (i) and (ii), we have

$$\frac{2xz}{x+y} = \frac{2 \times 9}{3}$$

$$\Rightarrow \frac{2xz}{x+z} = 6$$

$\Rightarrow x, 6, z$ are in HP.

- 35.** What is the value of the sum

$$\sum_{n=2}^{11} (i^n + i^{n+1}), \text{ where } i = \sqrt{-1} ?$$

- (a) i (b) $2i$ (c) $-2i$ (d) $1+i$

⊙ (c) We have,

$$\sum_{n=2}^{11} (i^n + i^{n+1}) = \sum_{n=2}^{11} i^n (1+i)$$

$$= (1+i) \sum_{n=2}^{11} i^n$$

$$= (1+i) [i^2 + i^3 + i^4 + \dots + i^{11}]$$

$$= (1+i) i^2 \left[\frac{i^{10} - 1}{i - 1} \right]$$

$$\left[\because a + ar + ar^2 + \dots + ar^{n-1} = a \left[\frac{r^n - 1}{r - 1} \right] \right]$$

$$= \frac{(1+i)i^2(i^{2 \times 4 + 2} - 1)}{(i - 1)}$$

$$= \frac{-(1+i)(i^2 - 1)}{(i - 1)} \quad [\because i^2 = -1]$$

$$= \frac{-(1+i)(-1-1)}{(i - 1)} = \frac{2(1+i)}{(i - 1)}$$

$$= \frac{2(1+i)}{(i - 1)} \times \frac{i + 1}{i + 1}$$

$$= \frac{2(i + 1 + i^2 + i)}{i^2 - 1}$$

$$= \frac{2(i + 1 - 1 + i)}{-1 - 1}$$

$$= -2i$$

- 36.** If $\sin x = \frac{1}{\sqrt{5}}$, $\sin y = \frac{1}{\sqrt{10}}$, where

$0 < x < \frac{\pi}{2}$, $0 < y < \frac{\pi}{2}$, then what is $(x + y)$ equal to ?

- (a) π (b) $\frac{\pi}{2}$ (c) $\frac{\pi}{4}$ (d) 0

⊙ (c) We have, $\sin x = \frac{1}{\sqrt{5}}$ and $\sin y = \frac{1}{\sqrt{10}}$

$$\Rightarrow x = \sin^{-1} \frac{1}{\sqrt{5}} \text{ and } y = \sin^{-1} \frac{1}{\sqrt{10}}$$

$$\text{Now, } x + y = \sin^{-1} \frac{1}{\sqrt{5}} + \sin^{-1} \frac{1}{\sqrt{10}}$$

$$= \sin^{-1} \left[\frac{1}{\sqrt{5}} \sqrt{1 - \left(\frac{1}{\sqrt{10}} \right)^2} + \frac{1}{\sqrt{10}} \sqrt{1 - \left(\frac{1}{\sqrt{5}} \right)^2} \right]$$

$$[\because \sin^{-1} x + \sin^{-1} y = \sin^{-1} [x\sqrt{1-y^2} + y\sqrt{1-x^2}]]$$

$$= \sin^{-1} \left[\frac{1}{\sqrt{5}} \sqrt{1 - \frac{1}{10}} + \frac{1}{\sqrt{10}} \sqrt{1 - \frac{1}{5}} \right]$$

$$= \sin^{-1} \left[\frac{1}{\sqrt{5}} \times \frac{3}{\sqrt{10}} + \frac{1}{\sqrt{10}} \times \frac{2}{\sqrt{5}} \right]$$

$$= \sin^{-1} \left[\frac{5}{\sqrt{5} \times \sqrt{10}} \right]$$

$$= \sin^{-1} \left(\frac{1}{\sqrt{2}} \right)$$

$$= \frac{\pi}{4} \quad \left[\because \sin \frac{\pi}{4} = \frac{1}{\sqrt{2}} \right]$$

- 37.** What is $\frac{\sin 5x - \sin 3x}{\cos 5x + \cos 3x}$ equal to ?

- (a) $\sin x$ (b) $\cos x$
(c) $\tan x$ (d) $\cot x$

⊙ (c) Given, $\frac{\sin 5x - \sin 3x}{\cos 5x + \cos 3x}$

$$= \frac{2 \cos \frac{5x + 3x}{2} \cdot \sin \frac{5x - 3x}{2}}{2 \cos \frac{5x + 3x}{2} \cdot \cos \frac{5x - 3x}{2}}$$

$$[\because \sin C - \sin D = 2 \cos \left(\frac{C+D}{2} \right) \cdot \sin \left(\frac{C-D}{2} \right) \text{ and}]$$

$$\cos C + \cos D = 2 \cos \left(\frac{C+D}{2} \right) \cos \left(\frac{C-D}{2} \right)]$$

$$= \frac{2 \cos 4x \sin x}{2 \cos 4x \cos x} = \frac{\sin x}{\cos x} = \tan x$$

- 38.** What is $\sin 105^\circ + \cos 105^\circ$ equal to ?

- (a) $\sin 50^\circ$ (b) $\cos 50^\circ$
(c) $\frac{1}{\sqrt{2}}$ (d) 0

⊙ (c) We have, $\sin 105^\circ + \cos 105^\circ$

$$= \sin(90^\circ + 15^\circ) + \cos 105^\circ$$

$$= \cos 15^\circ + \cos 105^\circ$$

$$[\because \sin(90 + \theta) = \cos \theta]$$

$$= 2 \cos \left(\frac{105^\circ + 15^\circ}{2} \right) \cos \left(\frac{105^\circ - 15^\circ}{2} \right)$$

$$\left[\because \cos C + \cos D = 2 \cos \left(\frac{C+D}{2} \right) \cos \left(\frac{C-D}{2} \right) \right]$$

$$= 2 \cos 60^\circ \cos 45^\circ = 2 \times \frac{1}{2} \times \frac{1}{\sqrt{2}}$$

$$\left[\because \cos 60^\circ = \frac{1}{2}, \cos 45^\circ = \frac{1}{\sqrt{2}} \right]$$

$$= \frac{1}{\sqrt{2}}$$

39. In a ΔABC , if $a = 2, b = 3$

and $\sin A = \frac{2}{3}$, then what is $\angle B$ equal to ?

- (a) $\frac{\pi}{4}$ (b) $\frac{\pi}{2}$ (c) $\frac{\pi}{3}$ (d) $\frac{\pi}{6}$

⊙ (b) We have, $a = 2, b = 3$ and $\sin A = \frac{2}{3}$

Now, from sine formula

$$\frac{\sin A}{a} = \frac{\sin B}{b}$$

$$\Rightarrow \frac{\frac{2}{3}}{2} = \frac{\sin B}{3}$$

$$\Rightarrow \sin B = 1$$

$$\Rightarrow B = \frac{\pi}{2} \quad \left[\because \sin \frac{\pi}{2} = 1 \right]$$

40. What is the principal value of $\sin^{-1} \left(\sin \frac{2\pi}{3} \right)$?

- (a) $\frac{\pi}{4}$ (b) $\frac{\pi}{2}$ (c) $\frac{\pi}{3}$ (d) $\frac{2\pi}{3}$

⊙ (c) We have, $\sin^{-1} \left(\sin \frac{2\pi}{3} \right)$

$$= \sin^{-1} \left(\sin \left(\pi - \frac{\pi}{3} \right) \right)$$

$$= \sin^{-1} \sin \frac{\pi}{3} \quad [\because \sin(\pi - \theta) = \sin \theta]$$

$$= \frac{\pi}{3}$$

$$\left[\because \sin^{-1} \sin \theta = \theta, \text{ if } \theta \in \left(-\frac{\pi}{2}, \frac{\pi}{2} \right) \right]$$

41. If $x, x - y$ and $x + y$ are the angles of a triangle (not an equilateral triangle) such that $\tan(x - y), \tan x$ and $\tan(x + y)$ are in GP, then what is x equal to ?

- (a) $\frac{\pi}{4}$ (b) $\frac{\pi}{3}$
(c) $\frac{\pi}{6}$ (d) $\frac{\pi}{2}$

⊙ (b) We have,

$x, x - y, x + y$ are the angles of a triangle. Since, sum of angles of a triangle = π

$$\therefore x + x - y + x + y = \pi$$

$$\Rightarrow 3x = \pi$$

$$\Rightarrow x = \frac{\pi}{3}$$

42. ABC is a triangle inscribed in a circle with centre O . Let $\alpha = \angle BAC$, where $45^\circ < \alpha < 90^\circ$. Let $\beta = \angle BOC$. Which one of the following is correct?

- (a) $\cos \beta = \frac{1 - \tan^2 \alpha}{1 + \tan^2 \alpha}$
(b) $\cos \beta = \frac{1 + \tan^2 \alpha}{1 - \tan^2 \alpha}$
(c) $\cos \beta = \frac{2 \tan \alpha}{1 + \tan^2 \alpha}$
(d) $\sin \beta = 2 \sin^2 \alpha$

⊙ (a) We know that angle subtended by a chord at centre is always double the angle subtended by it at any other part of the circle.

$$\therefore \beta = 2\alpha$$

$$\Rightarrow \cos \beta = \cos 2\alpha$$

$$\Rightarrow \cos \beta = \frac{1 - \tan^2 \alpha}{1 + \tan^2 \alpha} \quad \left[\because \cos 2\theta = \frac{1 - \tan^2 \theta}{1 + \tan^2 \theta} \right]$$

43. If a flag-staff of 6 m height placed on the top of a tower throws a shadow of $2\sqrt{3}$ m along the ground, then what is the angle that the sun makes with the ground ?

- (a) 60° (b) 45°
(c) 30° (d) 15°

⊙ (a) Let OB and BD be the tower and flag-staff respectively. OA and AC be the shadow of tower and flag-staff respectively.

Again let α be the angle that sun makes with the ground.

$$\therefore \angle OAB = \angle OCD = \alpha$$

Now, in ΔOAB

$$\tan \alpha = \frac{x}{y} \quad \dots (i)$$

and in ΔOCD

$$\tan \alpha = \frac{x + 6}{y + 2\sqrt{3}} \quad \dots (ii)$$

From Eqs. (i) and (ii), we get

$$\frac{x}{y} = \frac{x + 6}{y + 2\sqrt{3}}$$

$$\Rightarrow xy + 2\sqrt{3}x = xy + 6x$$

$$\Rightarrow \frac{x}{y} = \sqrt{3}$$

$$\Rightarrow \tan \alpha = \sqrt{3} \quad [\text{from Eq. (i)}]$$

$$\Rightarrow \alpha = 60^\circ$$

44. What is $\tan^{-1} \left(\frac{1}{4} \right) + \tan^{-1} \left(\frac{3}{5} \right)$

equal to ?

- (a) 0 (b) $\frac{\pi}{4}$
(c) $\frac{\pi}{3}$ (d) $\frac{\pi}{2}$

⊙ (b) We have

$$\tan^{-1} \left(\frac{1}{4} \right) + \tan^{-1} \left(\frac{3}{5} \right)$$

$$= \tan^{-1} \left[\frac{\frac{1}{4} + \frac{3}{5}}{1 - \frac{1}{4} \times \frac{3}{5}} \right]$$

$$[\because \tan^{-1} x + \tan^{-1} y = \tan^{-1} \frac{x + y}{1 - xy}, \quad xy < 1]$$

$$= \tan^{-1} \left[\frac{\frac{5 + 12}{20}}{\frac{20 - 3}{20}} \right]$$

$$= \tan^{-1} \left(\frac{17}{17} \right) = \tan^{-1} 1$$

$$= \frac{\pi}{4} \quad \left[\because \tan^{-1} 1 = \frac{\pi}{4} \right]$$

45. A spherical balloon of radius r subtends an angle α at the eye of an observer, while the angle of elevation of its centre is β . What is the height of the centre of the balloon (neglecting the height of the observer)?

- (a) $\frac{r \sin \beta}{\sin \left(\frac{\alpha}{2} \right)}$ (b) $\frac{r \sin \beta}{\sin \left(\frac{\alpha}{4} \right)}$
(c) $\frac{r \sin \left(\frac{\beta}{2} \right)}{\sin \alpha}$ (d) $\frac{r \sin \alpha}{\sin \left(\frac{\beta}{2} \right)}$

⊙ (a) Let O be the centre of the balloon, P be the eye of the observer and $\angle APB$ be the angle subtended by the balloon at the eye of the observer. $\angle APB = \alpha$

$\therefore \angle APO = \angle BPO = \frac{\alpha}{2}$

In $\triangle OAP$

$$\sin \frac{\alpha}{2} = \frac{OA}{OP}$$

$$\Rightarrow \sin \frac{\alpha}{2} = \frac{r}{OP} \Rightarrow OP = r \operatorname{cosec} \frac{\alpha}{2} \dots (i)$$

In $\triangle OPL$,

$$\sin \beta = \frac{OL}{OP}$$

$$\Rightarrow OL = OP \sin \beta$$

$$\Rightarrow OL = r \operatorname{cosec} \frac{\alpha}{2} \cdot \sin \beta$$

[from Eqs. (i)]

$$\therefore OL = \frac{r \sin \beta}{\sin \left(\frac{\alpha}{2} \right)}$$

46. If $\frac{\sin(x+y)}{\sin(x-y)} = \frac{a+b}{a-b}$, then what is

$\frac{\tan x}{\tan y}$ equal to ?

- (a) $\frac{a}{b}$ (b) $\frac{b}{a}$
 (c) $\frac{a+b}{a-b}$ (d) $\frac{a-b}{a+b}$

(a) We have,
 $\frac{\sin(x+y)}{\sin(x-y)} = \frac{a+b}{a-b}$

On using componendo and dividendo rule, we get

$$\frac{\sin(x+y) + \sin(x-y)}{\sin(x+y) - \sin(x-y)} = \frac{a+b+a-b}{a+b-a+b}$$

$$\Rightarrow \frac{2 \sin \left(\frac{x+y+x-y}{2} \right) \cos \left(\frac{x+y-x+y}{2} \right)}{2 \cos \left(\frac{x+y+x-y}{2} \right) \sin \left(\frac{x+y-x+y}{2} \right)}$$

$$= \frac{2a}{2b}$$

$$\Rightarrow \frac{\sin x \cos y}{\cos x \sin y} = \frac{a}{b}$$

$$\Rightarrow \frac{\tan x}{\tan y} = \frac{a}{b}$$

47. If $\sin \alpha + \sin \beta = 0 = \cos \alpha + \cos \beta$, where $0 < \beta < \alpha < 2\pi$, then which one of the following is correct?

- (a) $\alpha = \pi - \beta$ (b) $\alpha = \pi + \beta$
 (c) $\alpha = 2\pi - \beta$ (d) $2\alpha = \pi + 2\beta$

(b) We have,
 $\sin \alpha + \sin \beta = 0 = \cos \alpha + \cos \beta$
 $\therefore (\sin \alpha + \sin \beta)^2 + (\cos \alpha + \cos \beta)^2 = 0$
 $\Rightarrow \sin^2 \alpha + \sin^2 \beta + 2 \sin \alpha \sin \beta + \cos^2 \alpha$
 $\quad + \cos^2 \beta + 2 \cos \alpha \cos \beta = 0$
 $\Rightarrow (\sin^2 \alpha + \cos^2 \alpha) + (\sin^2 \beta + \cos^2 \beta)$
 $\quad + 2(\cos \alpha \cos \beta + \sin \alpha \sin \beta) = 0$
 $\Rightarrow 1 + 1 + 2 \cos(\alpha - \beta) = 0$
 $\Rightarrow 2 \cos(\alpha - \beta) = -2$
 $\Rightarrow \cos(\alpha - \beta) = -1$
 $\Rightarrow \alpha - \beta = \pi$
 $\Rightarrow \alpha = \beta + \pi$

48. Suppose $\cos A$ is given. If only one value of $\cos \left(\frac{A}{2} \right)$ is possible, then A must be

- (a) An odd multiple of 90°
 (b) A multiple of 90°
 (c) An odd multiple of 180°
 (d) A multiple of 180°

(c) We know that,
 $\cos A = 2 \cos^2 \frac{A}{2} - 1$

Since, $\cos A$ is given and $\cos \frac{A}{2}$ has only one solution. So, A must be odd multiple of 180° .

49. If $\cos \alpha + \cos \beta + \cos \gamma = 0$, where $0 < \alpha \leq \frac{\pi}{2}, 0 < \beta \leq \frac{\pi}{2}, 0 < \gamma \leq \frac{\pi}{2}$, then

what is the value of $\sin \alpha + \sin \beta + \sin \gamma$?

- (a) 0 (b) 3
 (c) $\frac{5\sqrt{2}}{2}$ (d) $\frac{3\sqrt{2}}{2}$

(b) We have,
 $\cos \alpha + \cos \beta + \cos \gamma = 0$,
 $0 < \alpha \leq \frac{\pi}{2}, 0 < \beta \leq \frac{\pi}{2}, 0 < \gamma \leq \frac{\pi}{2}$

$$\cos \alpha + \cos \beta + \cos \gamma = 0$$

$$\Rightarrow \alpha = \beta = \gamma = \frac{\pi}{2}$$

$$\therefore \sin \alpha + \sin \beta + \sin \gamma = \sin \frac{\pi}{2} + \sin \frac{\pi}{2} + \sin \frac{\pi}{2}$$

$$\left[\because \text{if } \theta \in \left[0, \frac{\pi}{2} \right] \cos \frac{\pi}{2} = 0 \right]$$

$$= 1 + 1 + 1 = 3$$

50. The maximum value of $\sin \left(x + \frac{\pi}{5} \right) + \cos \left(x + \frac{\pi}{5} \right)$, where

$x \in \left(0, \frac{\pi}{2} \right)$, is attained at

- (a) $\frac{\pi}{20}$ (b) $\frac{\pi}{15}$ (c) $\frac{\pi}{10}$ (d) $\frac{\pi}{2}$

(a) Let $f(x) = \sin \left(x + \frac{\pi}{5} \right) + \cos \left(x + \frac{\pi}{5} \right)$

$$= \sqrt{2} \left[\frac{1}{\sqrt{2}} \sin \left(x + \frac{\pi}{5} \right) + \frac{1}{\sqrt{2}} \cos \left(x + \frac{\pi}{5} \right) \right]$$

$$= \sqrt{2} \left[\sin \left(x + \frac{\pi}{5} \right) \cos \frac{\pi}{4} + \cos \left(x + \frac{\pi}{5} \right) \sin \frac{\pi}{4} \right]$$

$$= \sqrt{2} \left[\sin \left(x + \frac{\pi}{5} + \frac{\pi}{4} \right) \right]$$

$$= \sqrt{2} \sin \left(x + \frac{\pi}{5} + \frac{\pi}{4} \right)$$

$f(x)$ attains maximum value, when

$$x + \frac{\pi}{5} + \frac{\pi}{4} = \frac{\pi}{2}$$

$$\Rightarrow x = \frac{\pi}{20}$$

51. What is the distance between the points which divide the line segment joining $(4, 3)$ and $(5, 7)$ internally and externally in the ratio $2 : 3$?

- (a) $\frac{12\sqrt{17}}{5}$ (b) $\frac{13\sqrt{17}}{5}$
 (c) $\frac{\sqrt{17}}{5}$ (d) $\frac{6\sqrt{17}}{5}$

(a) Let P and Q be the points which divide $A(4, 3)$ and $B(5, 7)$ internally and externally in the ratio $2 : 3$ respectively.

$$\therefore P = \left(\frac{2 \times 5 + 3 \times 4}{2 + 3}, \frac{2 \times 7 + 3 \times 3}{2 + 3} \right)$$

$$\text{and } Q = \left(\frac{2 \times 5 - 3 \times 4}{2 + 3}, \frac{2 \times 7 - 3 \times 3}{2 - 3} \right)$$

$$= (2, -5)$$

$$\therefore \text{Required distance} = PQ$$

$$= \sqrt{\left(2 - \frac{22}{5} \right)^2 + \left(-5 - \frac{23}{5} \right)^2} = \frac{12}{5} \sqrt{17}$$

52. What is the angle between the straight lines $(m^2 - mn)y = (mn + n^2)x + n^3$ and $(mn + m^2)y = (mn - n^2)x + m^3$, where $m > n$?

- (a) $\tan^{-1} \left(\frac{2mn}{m^2 + n^2} \right)$ (b) $\tan^{-1} \left(\frac{4m^2n^2}{m^2 - n^2} \right)$
 (c) $\tan^{-1} \left(\frac{4m^2n^2}{m^4 + n^4} \right)$ (d) 45°

- ⊙ (c) Given equations of lines are
 $(m^2 - mn)y = (mn + n^2)x + n^3$
 and $(mn + m^2)y = (mn - n^2)x + m^3$
 Given equation of lines can be written as
 $y = \frac{mn + n^2}{m^2 - mn}x + \frac{n^3}{m^2 - mn}$
 and $y = \frac{mn - n^2}{mn + m^2}x + \frac{m^3}{mn + m^2}$

Let m_1 and m_2 be the slopes of given lines.

$$\therefore m_1 = \frac{mn + n^2}{m^2 - mn}$$

$$\text{and } m_2 = \frac{mn - n^2}{mn + m^2}$$

If θ is the angle between these lines, then

$$\tan \theta = \frac{m_1 - m_2}{1 + m_1 m_2}$$

$$= \frac{\frac{mn + n^2}{m^2 - mn} - \frac{mn - n^2}{mn + m^2}}{1 + \frac{mn + n^2}{m^2 - mn} \cdot \frac{mn - n^2}{mn + m^2}}$$

$$= \frac{(mn + n^2)(mn + m^2) - (mn - n^2)(m^2 - mn)}{(m^2 - mn)(mn + m^2) + (mn + n^2)(mn - n^2)}$$

$$= \frac{m^2 n^2 + m^3 n + mn^3 + m^2 n^2 - m^3 n + m^2 n^2}{m^3 n + m^4 - m^2 n^2 - m^3 n^2 - m^2 n^2 - mn^3}$$

$$= \frac{4m^2 n^2}{m^4 - n^4}$$

$$\therefore \theta = \tan^{-1} \left(\frac{4m^2 n^2}{m^4 - n^4} \right)$$

53. What is the equation of the straight line cutting-off an intercept 2 from the negative direction of Y-axis and inclined at 30° with the positive direction of X-axis?

- (a) $x - 2\sqrt{3}y - 3\sqrt{2} = 0$
 (b) $x + 2\sqrt{3}y - 3\sqrt{2} = 0$
 (c) $x + \sqrt{3}y - 2\sqrt{3} = 0$
 (d) $x - \sqrt{3}y - 2\sqrt{3} = 0$

- ⊙ (d) From the given figure, it is clear that

Slope of line = $\tan 30^\circ = \frac{1}{\sqrt{3}}$ and line passes through the point $(0, -2)$.

∴ Equation of line is

$$y - (-2) = \frac{1}{\sqrt{3}}(x - 0)$$

$$\Rightarrow y + 2 = \frac{1}{\sqrt{3}}x$$

$$\Rightarrow \sqrt{3}y + 2\sqrt{3} = x$$

$$\Rightarrow x - \sqrt{3}y - 2\sqrt{3} = 0$$

54. What is the equation of the line passing through the point of intersection of the lines $x + 2y - 3 = 0$ and $2x - y + 5 = 0$ and parallel to the line $y - x + 10 = 0$?

- (a) $7x - 7y + 18 = 0$
 (b) $5x - 7y + 18 = 0$
 (c) $5x - 5y + 18 = 0$
 (d) $x - y + 5 = 0$

- ⊙ (c) Equation of line passing through intersection point of lines $x + 2y - 3 = 0$ and $2x - y + 5 = 0$ is

$$x + 2y - 3 + \lambda(2x - y + 5) = 0 \dots (i)$$

$$\Rightarrow (1 + 2\lambda)x + (2 - \lambda)y + 5\lambda - 3 = 0$$

$$\therefore \text{Slope of above line} = -\frac{(1 + 2\lambda)}{(2 - \lambda)}$$

Since line is parallel to $y - x + 10 = 0$

$$= -\frac{(1 + 2\lambda)}{(2 - \lambda)} = -\frac{(-1)}{1}$$

$$\Rightarrow -(1 + 2\lambda) = 2 - \lambda$$

$$\Rightarrow -1 - 2\lambda = 2 - \lambda$$

$$\Rightarrow -\lambda = 3$$

$$\Rightarrow \lambda = -3$$

Putting $\lambda = -3$ in Eq. (i), we get

$$x + 2y - 3 - 3(2x - y + 5) = 0$$

$$\Rightarrow 5x - 5y + 18 = 0$$

Which is equation of required line.

55. Consider the following statements

- I. The length p of the perpendicular from the origin to the line $ax + by = c$ satisfies the relation

$$p^2 = \frac{c^2}{a^2 + b^2}$$

- II. The length p of the perpendicular from the origin to the line

$$\frac{x}{a} + \frac{y}{b} = 1$$
 satisfied the relation

$$\frac{1}{p^2} = \frac{1}{a^2} + \frac{1}{b^2}$$

- III. The length p of the perpendicular from the origin to the line $y = mx + c$ satisfies the relation

$$\frac{1}{p^2} = \frac{1 + m^2 + c^2}{c^2}$$

Which of the above is/are correct?

- (a) I, II and III (b) I only
 (c) I and II (d) II only

- ⊙ (c) We know that x_1 distance of a point (x_1, y_1) from the line $Ax + By + C = 0$ is given as

$$\text{Distance} = \left| \frac{Ax_1 + By_1 + C}{\sqrt{A^2 + B^2}} \right|$$

Statement I

$$\therefore p = \left| \frac{a \cdot 0 + b \cdot 0 - c}{\sqrt{a^2 + b^2}} \right|$$

$$\Rightarrow p = \frac{c}{\sqrt{a^2 + b^2}}$$

$$\Rightarrow p^2 = \frac{c^2}{a^2 + b^2}$$

It is true.

Statement II

$$\therefore p = \left| \frac{\frac{0}{a} + \frac{0}{b} - 1}{\sqrt{\left(\frac{1}{a}\right)^2 + \left(\frac{1}{b}\right)^2}} \right|$$

$$\Rightarrow p = \frac{1}{\sqrt{\frac{1}{a^2} + \frac{1}{b^2}}}$$

$$\Rightarrow \frac{1}{p^2} = \frac{1}{a^2} + \frac{1}{b^2}$$

It is true.

Statement III

$$\therefore p = \left| \frac{0 - m \times 0 - c}{\sqrt{(-m)^2 + (1)^2}} \right|$$

$$\Rightarrow p = \frac{c}{\sqrt{m^2 + 1}}$$

$$\Rightarrow \frac{1}{p^2} = \frac{1 + m^2}{c^2}$$

It is false.

56. What is the equation of the ellipse whose vertices are $(\pm 5, 0)$ and foci are at $(\pm 4, 0)$?

- (a) $\frac{x^2}{25} + \frac{y^2}{9} = 1$
- (b) $\frac{x^2}{16} + \frac{y^2}{9} = 1$
- (c) $\frac{x^2}{25} + \frac{y^2}{16} = 1$
- (d) $\frac{x^2}{9} + \frac{y^2}{25} = 1$

⊙ (a) We have,
 Vertices = $(\pm 5, 0)$ and Foci = $(\pm 4, 0)$
 $\therefore a = 5$ and $ae = 4$
 $[\because \text{vertex} = (\pm a, 0) \text{ and focus } (\pm ae, 0)]$
 $\Rightarrow e = \frac{4}{5}$

Now, $e = \sqrt{1 - \frac{b^2}{a^2}}$
 $\Rightarrow \left(\frac{4}{5}\right)^2 = 1 - \frac{b^2}{(5)^2}$ [$\because a = 5$]

$\Rightarrow \frac{16}{25} = 1 - \frac{b^2}{25}$
 $\Rightarrow 16 = 25 - b^2$
 $\Rightarrow b^2 = 9$
 $\Rightarrow b = 3$

\therefore Equation of ellipse is
 $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$
 $\Rightarrow \frac{x^2}{25} + \frac{y^2}{9} = 1$

57. What is the equation of the straight line passing through the point $(2, 3)$ and making an intercept on the positive Y-axis equal to twice its intercept on the positive X-axis?

- (a) $2x + y = 5$
- (b) $2x + y = 7$
- (c) $x + 2y = 7$
- (d) $2x - y = 1$

⊙ (b) Let the equation of line be

$$\frac{x^2}{a} + \frac{y}{b} = 1$$

It is given that, $b = 2a$ and line passes through the point $(2, 3)$.

$\therefore \frac{2}{a} + \frac{3}{2a} = 1$

$\Rightarrow \frac{4 + 3}{2a} = 1$

$\Rightarrow 7 = 2a$

$\Rightarrow a = \frac{7}{2}$

$\Rightarrow b = 2a = 2 \times \frac{7}{2} = 7$

\therefore Equation of line is $\frac{x}{7/2} + \frac{y}{7} = 1$

$\Rightarrow 2x + y = 7$

58. Let the coordinates of the points A, B, C be $(1, 8, 4), (0, -11, 4)$ and $(2, -3, 1)$ respectively. What are the coordinates of the point D which is the foot of the perpendicular from A on BC ?

- (a) $(3, 4, -2)$
- (b) $(4, -2, 5)$
- (c) $(4, 5, -2)$
- (d) $(2, 4, 5)$

⊙ (c) We have,
 $A(1, 8, 4), B(0, -11, 4)$ and $C(2, -3, 1)$
 \therefore Equation of BC is

$$\frac{x-0}{2-0} = \frac{y+11}{-3+11} = \frac{z-4}{1-4}$$

$$\Rightarrow \frac{x}{2} = \frac{y+11}{8} = \frac{z-4}{-3} = \lambda \quad [\text{say}]$$

$\Rightarrow x = 2\lambda, y = 8\lambda - 11, z = -3\lambda + 4$

Now, DR's of
 $AD = \langle 2\lambda - 1, 8\lambda - 11 - 8, -3\lambda + 4 - 4 \rangle$
 $= \langle 2\lambda - 1, 8\lambda - 19, -3\lambda \rangle$

Since, $AD \perp BC$
 $\therefore 2(2\lambda - 1) + 8(8\lambda - 19) - 3(-3\lambda) = 0$
 $\Rightarrow 4\lambda - 2 + 64\lambda - 152 + 9\lambda = 0$
 $\Rightarrow 77\lambda = 154$
 $\Rightarrow \lambda = 2$

\therefore Coordinates of
 $D = (2 \times 2, 8 \times 2 - 11, -3 \times 2 + 4)$
 $= (4, 5, -2)$

59. What is the equation of the plane passing through the points $(-2, 6, -6), (-3, 10, -9)$ and $(-5, 0, -6)$?

- (a) $2x - y - 2z = 2$
- (b) $2x + y + 3z = 3$
- (c) $x + y + z = 6$
- (d) $x - y - z = 3$

⊙ (a) Equation of the plane passing through three points $(x_1, y_1, z_1), (x_2, y_2, z_2)$ and (x_3, y_3, z_3) is

$$\begin{vmatrix} x - x_1 & y - y_1 & z - z_1 \\ x_2 - x_1 & y_2 - y_1 & z_2 - z_1 \\ x_3 - x_1 & y_3 - y_1 & z_3 - z_1 \end{vmatrix} = 0$$

Equation of plane is

$$\begin{vmatrix} x - (-2) & y - 6 & z - (-6) \\ -3 - (-2) & 10 - 6 & -9 - (-6) \\ -5 - (-2) & 0 - 6 & -6 - (-6) \end{vmatrix} = 0$$

$$\Rightarrow \begin{vmatrix} x + 2 & y - 6 & z + 6 \\ -1 & 4 & -3 \\ -3 & -6 & 0 \end{vmatrix} = 0$$

$\Rightarrow (x + 2)[4 \times 0 - (-6)(-3)] - (y - 6)[(-1)(0) - (-3)(-3)] + (z + 6)[(-1)(-6) - (-3)(4)] = 0$

$$\Rightarrow (x + 2)(-18) - (y - 6)(-9) + (z + 6)(18) = 0$$

$$\Rightarrow 2(x + 2) - (y - 6) - 2(z + 6) = 0$$

$$\Rightarrow 2x - y - 2z - 2 = 0$$

$$\Rightarrow 2x - y - 2z = 2$$

60. A sphere of constant radius r through the origin intersects the coordinate axes in A, B and C . What is the locus of the centroid of the ΔABC ?

- (a) $x^2 + y^2 + z^2 = r^2$
- (b) $x^2 + y^2 + z^2 = 4r^2$
- (c) $9(x^2 + y^2 + z^2) = 4r^2$
- (d) $3(x^2 + y^2 + z^2) = 2r^2$

⊙ (c) Let $A(a, 0, 0), B(0, b, 0)$ and $C(0, 0, c)$
 \therefore Equation of sphere passing through A, B, C and origin is

$$x^2 + y^2 + z^2 - ax - by - cz = 0$$

\therefore Radius = $r = \sqrt{\frac{a^2}{4} + \frac{b^2}{4} + \frac{c^2}{4}}$
 $\Rightarrow 4r^2 = a^2 + b^2 + c^2$... (i)

Let (α, β, γ) be the centroid of triangle.
 $\therefore \alpha = \frac{a + 0 + 0}{3}, \beta = \frac{0 + b + 0}{3}, \gamma = \frac{0 + 0 + c}{3}$
 $\Rightarrow a = 3\alpha, b = 3\beta, c = 3\gamma$... (ii)

From Eqs. (i) and (ii), we have
 $(3\alpha)^2 + (3\beta)^2 + (3\gamma)^2 = 4r^2$
 $\Rightarrow 9(\alpha^2 + \beta^2 + \gamma^2) = 4r^2$
 \therefore Locus of the centroid of ΔABC is
 $9(x^2 + y^2 + z^2) = 4r^2z$

61. The coordinates of the vertices P, Q and R of a triangle PQR are $(1, -1, 1), (3, -2, 2)$ and $(0, 2, 6)$ respectively. If $\angle RQP = 9$, then what is $\angle PRQ$ equal to?

- (a) $30^\circ + \theta$
- (b) $45^\circ - \theta$
- (c) $60^\circ - \theta$
- (d) $90^\circ - \theta$

⊙ (d)

DR's of
 $PQ = \langle 3 - 1, -2 - (-1), 2 - 1 \rangle$
 $= \langle 2, -1, 1 \rangle$

and DR's of
 $PR = \langle 0 - 1, 2 - (-1), 6 - 1 \rangle$
 $= \langle -1, 3, 5 \rangle$

Now, $a_1 a_2 + b_1 b_2 + c_1 c_2 = 2 \times (-1) + (-1) \times 3 + 1 \times 5 = 0$

$$= -2 - 3 + 5 = 0$$

∴ $PQ \perp PR$

$$\Rightarrow \angle QPR = 90^\circ$$

Now, by angle sum property

$$\angle PQR + \angle QPR + \angle PRQ = 180^\circ$$

$$\Rightarrow \theta + 90^\circ + \angle PRQ = 180^\circ$$

$$\Rightarrow \angle PRQ = 90^\circ - \theta$$

- 62.** The perpendiculars that fall from any point of the straight line $2x + 11y = 5$ upon the two straight lines $24x + 7y = 20$ and $4x - 3y = 2$ are

- (a) 12 and 4 respectively
- (b) 11 and 5 respectively
- (c) Equal to each other
- (d) Not equal to each other

⊙ (c) Let $(-3, 1)$ be a point on $2x + 11y = 5$

Now, perpendicular from $(-3, 1)$ on $24x + 7y = 20$

$$\begin{aligned} &= \left| \frac{24(-3) + 7(1) - 20}{\sqrt{(24)^2 + (7)^2}} \right| \\ &= \left| \frac{-72 + 7 - 20}{\sqrt{576 + 49}} \right| \\ &= \left| \frac{-85}{25} \right| = \frac{17}{5} \end{aligned}$$

Again, perpendicular from $(-3, 1)$ on $4x - 3y = 2$

$$\begin{aligned} &= \left| \frac{4(-3) - 3(1) - 2}{\sqrt{4^2 + (-3)^2}} \right| \\ &= \left| \frac{-12 - 3 - 2}{\sqrt{16 + 9}} \right| = \frac{17}{5} \end{aligned}$$

∴ Both perpendicular are equal to each other.

- 63.** The equation of the line, when the portion of it intercepted between the axes is divided by the point $(2, 3)$ in the ratio of $3 : 2$, is

- (a) Either $x + y = 4$ or $9x + y = 12$
- (b) Either $x + y = 5$ or $4x + 9y = 30$
- (c) Either $x + y = 4$ or $x + 9y = 12$
- (d) Either $x + y = 5$ or $9x + 4y = 30$

⊙ (d) Case I

From above figure,

$$\frac{2a + 3 \times 0}{2 + 3} = 2 \text{ and } \frac{2 \times 0 + 3b}{2 + 3} = 3$$

$$\Rightarrow 2a = 10 \text{ and } 3b = 15$$

$$\Rightarrow a = 5 \text{ and } b = 5$$

$$\therefore \text{Equation of line is } \frac{x}{5} + \frac{y}{5} = 1$$

$$\Rightarrow x + y = 5$$

Case II

From above figure,

$$\frac{3a + 2 \times 0}{3 + 2} = 2 \text{ and } \frac{3 \times 0 + 2b}{3 + 2} = 3$$

$$\Rightarrow 3a = 10 \text{ and } 2b = 15$$

$$\Rightarrow a = \frac{10}{3} \text{ and } b = \frac{15}{2}$$

∴ Equation of line is

$$\frac{x}{10/3} + \frac{y}{15/2} = 1$$

$$\Rightarrow 9x + 4y = 30$$

- 64.** What is the distance between the straight lines $3x + 4y = 9$ and $6x + 8y = 15$?

- (a) $\frac{3}{2}$
- (b) $\frac{3}{10}$
- (c) 6
- (d) 5

⊙ (b) Given equation of straight lines are

$$3x + 4y = 9 \quad \dots (i)$$

$$\text{and } 6x + 8y = 15$$

$$\Rightarrow 3x + 4y = \frac{15}{2} \quad \dots (ii)$$

$$\therefore \text{Required distance} = \frac{\left| 9 - \frac{15}{2} \right|}{\sqrt{3^2 + 4^2}}$$

[∵ distance between two lines $ax + by = c_1$ and $ax + by = c_2$ is given

$$\text{by } \left| \frac{c_2 - c_1}{\sqrt{a^2 + b^2}} \right|]$$

$$= \frac{3}{5} = \frac{3}{10}$$

- 65.** What is the equation of the sphere whose centre is at $(-2, 3, 4)$ and radius is 6 units?

- (a) $x^2 + y^2 + z^2 + 4x - 6y - 8z = 7$
- (b) $x^2 + y^2 + z^2 + 6x - 4y - 8z = 7$
- (c) $x^2 + y^2 + z^2 + 4x - 6y - 8z = 4$
- (d) $x^2 + y^2 + z^2 + 4x + 6y + 8z = 4$

⊙ (a) Given, centre = $(-2, 3, 4)$ and radius = 6 units

Equation of the sphere having centre at (α, β, γ) and radius r is $(x - \alpha)^2 + (y - \beta)^2 + (z - \gamma)^2 = r^2$

So, equation of sphere

$$\Rightarrow \{x - (-2)\}^2 + (y - 3)^2 + (z - 4)^2 = 6^2$$

$$\begin{aligned} &\Rightarrow (x + 2)^2 + (y - 3)^2 + (z - 4)^2 = 36 \\ &\Rightarrow x^2 + 4x + 4 + y^2 + 9 - 6y + z^2 \\ &\quad + 16 - 8z = 36 \\ &\Rightarrow x^2 + y^2 + z^2 + 4x - 6y - 8z + 29 - 36 = 0 \\ &\Rightarrow x^2 + y^2 + z^2 + 4x - 6y - 8z = 7 \end{aligned}$$

- 66.** If \vec{a} and \vec{b} are vectors such that $|\vec{a}| = 2$, $|\vec{b}| = 7$ and $\vec{a} \times \vec{b} = 3\hat{i} + 2\hat{j} + 6\hat{k}$, then what is the acute angle between \vec{a} and \vec{b} ?
- (a) 30°
 - (b) 45°
 - (c) 60°
 - (d) 90°

⊙ (a) Given, $|\vec{a}| = 2$

$$|\vec{b}| = 7$$

$$\text{and } \vec{a} \times \vec{b} = 3\hat{i} + 2\hat{j} + 6\hat{k}$$

$$\therefore |\vec{a} \times \vec{b}| = |\vec{a}| |\vec{b}| \sin \theta$$

$$\begin{aligned} \Rightarrow \sin \theta &= \frac{|\vec{a} \times \vec{b}|}{|\vec{a}| |\vec{b}|} \\ &= \frac{|3\hat{i} + 2\hat{j} + 6\hat{k}|}{2 \times 7} \\ &= \frac{\sqrt{3^2 + 2^2 + 6^2}}{14} = \frac{\sqrt{49}}{14} \end{aligned}$$

$$\Rightarrow \sin \theta = \frac{7}{14} = \frac{1}{2}$$

$$\Rightarrow \sin \theta = \sin 30^\circ$$

$$\Rightarrow \theta = 30^\circ$$

- 67.** Let \vec{p} and \vec{q} be the position vectors of the points P and Q respectively with respect to origin O . The points R and S divide PQ internally and externally respectively in the ratio $2 : 3$. If

\vec{OR} and \vec{OS} are perpendicular, then which one of the following is correct?

- (a) $9p^2 = 4q^2$
- (b) $4p^2 = 9q^2$
- (c) $9p = 4q$
- (d) $4p = 9q$

⊙ (a) The points R and S divide PQ internally and externally respectively in the ratio $2 : 3$. The position vectors of R and S are

$$\frac{3\vec{p} + 2\vec{q}}{5} \text{ and } 3\vec{p} - 2\vec{q} \text{ respectively.}$$

$$\vec{OR} = \frac{3\vec{p} + 2\vec{q}}{5}$$

$$\vec{OS} = 3\vec{p} - 2\vec{q}$$

Now, $\vec{OR} \perp \vec{OS}$

$$\Rightarrow \vec{OR} \cdot \vec{OS} = 0$$

$$\Rightarrow \left(\frac{3\vec{p} + 2\vec{q}}{5} \right) \cdot (3\vec{p} - 2\vec{q}) = 0$$

$$\Rightarrow (3\vec{p} + 2\vec{q}) \cdot (3\vec{p} - 2\vec{q}) = 0$$

$$\begin{aligned} &\Rightarrow 9\vec{p}\cdot\vec{p}-6\vec{p}\cdot\vec{q}+6\vec{q}\cdot\vec{p}-4\vec{q}\cdot\vec{q}=0 \\ &\Rightarrow 9|\vec{p}|^2-4|\vec{q}|^2=0 \\ &\quad [:\vec{a}\cdot\vec{a}=|\vec{a}|^2 \text{ and } \vec{a}\cdot\vec{b}=\vec{b}\cdot\vec{a}] \\ &\Rightarrow 9|\vec{p}|^2=4|\vec{q}|^2 \\ &\Rightarrow 9p^2=4q^2 \end{aligned}$$

68. What is the moment about the point $\hat{i} + 2\hat{j} - \hat{k}$ of a force represented by $3\hat{i} + \hat{k}$ acting through the point $2\hat{i} - \hat{j} + 3\hat{k}$?

- (a) $-3\hat{i} + 11\hat{j} + 9\hat{k}$ (b) $3\hat{i} + 2\hat{j} + 9\hat{k}$
(c) $3\hat{i} + 4\hat{j} + 9\hat{k}$ (d) $\hat{i} + \hat{j} + \hat{k}$

(a) Given that,

$$\begin{aligned} \vec{r} &= (2\hat{i} - \hat{j} + 3\hat{k}) - (\hat{i} + 2\hat{j} - \hat{k}) \\ &= \hat{i} - 3\hat{j} + 4\hat{k} \end{aligned}$$

and $\vec{F} = 3\hat{i} + \hat{k}$

∴ Moment $\vec{\tau} = \vec{r} \times \vec{F}$

$$= (\hat{i} - 3\hat{j} + 4\hat{k}) \times (3\hat{i} + \hat{k})$$

$$= \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 1 & -3 & 4 \\ 3 & 0 & 1 \end{vmatrix}$$

$$= \hat{i}(-3-0) - \hat{j}(1-12) + \hat{k}(0+9)$$

$$= -3\hat{i} + 11\hat{j} + 9\hat{k}$$

69. If $\vec{a} + 2\vec{b} + 3\vec{c} = \vec{0}$ and

$$\vec{a} \times \vec{b} + \vec{b} \times \vec{c} + \vec{c} \times \vec{a} = \lambda (\vec{b} \times \vec{c}),$$

then what is the value of λ ?

- (a) 2 (b) 3
(c) 4 (d) 6

(d) Given that,

$$\vec{a} + 2\vec{b} + 3\vec{c} = 0$$

$$\Rightarrow \vec{a} + 2\vec{b} = -3\vec{c}$$

$$\Rightarrow (\vec{a} + 2\vec{b}) \times \vec{b} = -3\vec{c} \times \vec{b}$$

$$\Rightarrow \vec{a} \times \vec{b} + 2\vec{b} \times \vec{b} = 3(\vec{b} \times \vec{c})$$

$$[:\vec{c} \times \vec{b} = -\vec{b} \times \vec{c}]$$

$$\Rightarrow \vec{a} \times \vec{b} = 3(\vec{b} \times \vec{c}) \quad [\vec{b} \times \vec{b} = 0] \dots (i)$$

Again $3\vec{c} + \vec{a} = -2\vec{b}$

$$\Rightarrow (3\vec{c} + \vec{a}) \times \vec{a} = -2\vec{b} \times \vec{a}$$

$$\Rightarrow 3\vec{c} \times \vec{a} + \vec{a} \times \vec{a} = 2(\vec{a} \times \vec{b})$$

$$\Rightarrow 3(\vec{c} \times \vec{a}) = 2(\vec{a} \times \vec{b})$$

$$\Rightarrow 3(\vec{c} \times \vec{a}) = 6(\vec{b} \times \vec{c})$$

$$[\text{from Eq. (i)}]$$

$$\Rightarrow \vec{c} \times \vec{a} = 2(\vec{b} \times \vec{c}) \dots (ii)$$

Now, $\vec{a} \times \vec{b} + \vec{b} \times \vec{c} + \vec{c} \times \vec{a} = \lambda(\vec{b} \times \vec{c})$
 $= 3(\vec{b} \times \vec{c}) + (\vec{b} \times \vec{c}) + 2(\vec{b} \times \vec{c})$
 $= 6(\vec{b} \times \vec{c})$ [from Eqs. (i) and (ii)]

on comparing, we get $\lambda = 6$

70. If the vectors \vec{K} and \vec{A} are parallel to each other, then what is $k\vec{K} \times \vec{A}$ equal to ?

- (a) $k^2\vec{A}$ (b) $\vec{0}$ (c) $-k^2\vec{A}$ (d) \vec{A}

(b) Since, $\vec{a} \times \vec{b} = 0$, if \vec{a} and \vec{b} are parallel. So, $k\vec{K} \times \vec{A} = 0$ if \vec{K} and \vec{A} are parallel to each other.

71. When one of the following is correct in respect of the function $f : \mathbf{R} \rightarrow \mathbf{R}^+$ defined as $f(x) = |x + 1|$?

- (a) $f(x^2) = [f(x)]^2$
(b) $f(|x|) = |f(x)|$
(c) $f(x + y) = f(x) + f(y)$
(d) None of the above

(d) Given, $f(x) = |x + 1|$

By checking the options, we get

(a) $f(x^2) = |x^2 + 1|$
 $\{f(x)\}^2 = (x + 1)^2$

Which implies that $f(x^2) \neq \{f(x)\}^2$

(b) $f(|x|) = ||x| + 1|$
 $|f(x)| = ||x + 1| = |x + 1|$

which implies that $f(|x|) \neq |f(x)|$

(c) $f(x + y) = |x + y + 1|$
 $f(x) + f(y) = |x + 1| + |y + 1|$
 which implies that $f(x + y) \neq f(x) + f(y)$
 So, option (d) is correct.

72. Suppose $f : \mathbf{R} \rightarrow \mathbf{R}$ is defined by

$$f(x) = \frac{x^2}{1 + x^2}. \text{ What is the range of the function?}$$

- (a) $[0, 1)$ (b) $[0, 1]$ (c) $(0, 1]$ (d) $(0, 1)$

(a) Let $f(x) = y$

Then, $y \geq 0$ and $f(x) = y$

$$\therefore \frac{x^2}{x^2 + 1} = y$$

$$\Rightarrow \frac{x^2 + 1}{x^2} = \frac{1}{y} \text{ for } y > 0$$

$$\Rightarrow \frac{1}{x^2} = \frac{1-y}{y}$$

$$\Rightarrow x = \sqrt{\frac{y}{1-y}}$$

Now, $\sqrt{\frac{y}{1-y}}$ is real $\Rightarrow \frac{y}{1-y} \geq 0$

$$\Rightarrow 0 \leq y < 1$$

So, Range of $f(x)$ is $[0, 1)$.

73. If $f(x) = |x| + |x - 1|$, then which one of the following is correct?

- (a) $f(x)$ is continuous at $x = 0$ at $x = 1$
(b) $f(x)$ is continuous at $x = 0$ but not at $x = 1$
(c) $f(x)$ is continuous at $x = 1$ but not at $x = 0$
(d) $f(x)$ is neither continuous at $x = 0$ nor at $x = 1$

(a) We have,

$$f(x) = |x| + |x - 1| = \begin{cases} -2x + 1, & x < 0 \\ x - x + 1, & 0 \leq x < 1 \\ x + x - 1, & x \geq 1 \end{cases}$$

$$\Rightarrow f(x) = \begin{cases} -2x + 1, & x < 0 \\ 1, & 0 \leq x < 1 \\ 2x - 1, & x \geq 1 \end{cases}$$

Clearly, $\lim_{x \rightarrow 0^-} f(x) = 1 = \lim_{x \rightarrow 0^+} f(x)$
 and $\lim_{x \rightarrow 1^-} f(x) = 1 = \lim_{x \rightarrow 1^+} f(x)$.

So, $f(x)$ is continuous at $x = 0, 1$.

74. Consider the function

$$f(x) = \begin{cases} x^2 \ln |x| & x \neq 0 \\ 0 & x = 0 \end{cases} \text{ What is}$$

$f'(0)$ equal to ?

- (a) 0 (b) 1
(c) -1 (d) It does not exist

(a) Given function is

$$f(x) = \begin{cases} x^2 \ln |x|, & x \neq 0 \\ 0, & x = 0 \end{cases}$$

$$\therefore f'(0) = \lim_{h \rightarrow 0} \frac{f(h) - f(0)}{h}$$

$$= \lim_{h \rightarrow 0} \frac{h^2 \log h}{h}$$

$$= \lim_{h \rightarrow 0} h \log h = 0$$

75. What is the area of the region bounded by the parabolas $y^2 = 6(x - 1)$ and $y^2 = 3x$?

- (a) $\frac{\sqrt{6}}{3}$ (b) $\frac{2\sqrt{6}}{3}$ (c) $\frac{4\sqrt{6}}{3}$ (d) $\frac{5\sqrt{6}}{3}$

(c) Given,

$$y^2 = 6(x - 1) \dots (i)$$

$$\text{and } y^2 = 3x \dots (ii)$$

on solving Eqs. (i) and (ii), we get $x = 2$ and $y = \pm \sqrt{6}$

$$\begin{aligned} \therefore \text{Required area} &= \int_{-\sqrt{6}}^{\sqrt{6}} \left(1 + \frac{y^2}{6} - \frac{y^2}{3}\right) dy \\ &= 2 \int_0^{\sqrt{6}} \left(1 - \frac{y^2}{6}\right) dy \\ &= 2 \left[y - \frac{y^3}{18} \right]_0^{\sqrt{6}} \\ &= 2 \times \left[\frac{18y - y^3}{18} \right]_0^{\sqrt{6}} \\ &= 2 \times \left[\frac{18\sqrt{6} - 6\sqrt{6}}{18} \right] \\ &= \frac{12\sqrt{6}}{9} = \frac{4\sqrt{6}}{3} \end{aligned}$$

Directions (Q. Nos. 76-78) Consider the following information for the next three items that follow Three sides of a trapezium are each equal to 6 cm. Let $\alpha \in \left(0, \frac{\pi}{2}\right)$ be the angle between a pair of adjacent sides.

76. If the area of the trapezium is the maximum possible, then what is α equal to ?

- (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{4}$ (c) $\frac{\pi}{3}$ (d) $\frac{2\pi}{5}$

⊙ (c)

$$\begin{aligned} \therefore \text{Area} = A &= \frac{1}{2} (6 + 6 + 2x) \sqrt{36 - x^2} \\ &= (6 + x) \sqrt{36 - x^2} \\ \therefore \frac{d(A)}{dx} &= \frac{d}{dx} [(6 + x) \sqrt{36 - x^2}] \\ &= (6 + x) \left[\frac{-2x}{2\sqrt{36 - x^2}} \right] + \sqrt{36 - x^2} \\ &= \sqrt{36 - x^2} - \frac{x(6 + x)}{\sqrt{36 - x^2}} \\ &= \frac{36 - 6x - 2x^2}{\sqrt{36 - x^2}} \end{aligned}$$

For maximum area,

$$\begin{aligned} \frac{dA}{dx} &= 0 \\ \Rightarrow 36 - 6x - 2x^2 &= 0 \\ \Rightarrow 2x^2 + 6x - 36 &= 0 \\ \Rightarrow x^2 + 3x - 18 &= 0 \\ \Rightarrow x^2 + 6x - 3x - 18 &= 0 \\ \Rightarrow x(x + 6) - 3(x + 6) &= 0 \end{aligned}$$

$$\begin{aligned} \Rightarrow (x + 6)(x - 3) &= 0 \\ \Rightarrow x &= 3, -6 \end{aligned}$$

Again, on differentiating it

$$\frac{d^2A}{dx^2} = \frac{(-6 - 4x)\sqrt{36 - x^2} - (36 - 6x - 2x^2)(-2x)}{2\sqrt{36 - x^2}^3}$$

$$\text{At } x = 3, \frac{d^2A}{dx^2} = -6 - 12 = -18$$

$$\therefore \frac{d^2A}{dx^2} < 0$$

So, at $x = 3$ is maximum.

$$\text{Now, } \cos \alpha = \frac{x}{6} = \frac{3}{6} = \frac{1}{2}$$

$$\Rightarrow \cos \alpha = \cos \frac{\pi}{3} \Rightarrow \alpha = \frac{\pi}{3}$$

77. If the area of the trapezium is maximum, what is the length of the fourth side?

- (a) 8 cm (b) 9 cm
(c) 10 cm (d) 12 cm

⊙ (d) So, fourth side = $x + 6 + x$

$$= 3 + 6 + 3 = 12$$

78. What is the maximum area of the trapezium?

- (a) $36\sqrt{3}$ cm² (b) $30\sqrt{3}$ cm²
(c) $27\sqrt{3}$ cm² (d) $24\sqrt{3}$ cm²

$$\begin{aligned} \text{⊙ (c) Maximum area} &= (6 + x) \sqrt{36 - x^2} \\ &= (6 + 3) \sqrt{36 - 9} \\ &= 9 \times \sqrt{27} = 9 \times \sqrt{27} \\ &= 9 \times 3\sqrt{3} = 27\sqrt{3} \text{ cm}^2 \end{aligned}$$

79. What is $\int_0^{\pi} e^x \sin x \, dx$ equal to ?

- (a) $\frac{e^{\pi} + 1}{2}$ (b) $\frac{e^{\pi} - 1}{2}$
(c) $e^{\pi} + 1$ (d) $\frac{e^{\pi} + 1}{4}$

⊙ (a) Let $I = \int_0^{\pi} e^x \sin x \, dx$

$$= [\sin x \cdot e^x]_0^{\pi} - \int_0^{\pi} \left[\frac{d}{dx} \{\sin x\} \cdot e^x \right] dx$$

$$= [\sin x \cdot e^x]_0^{\pi} - \int_0^{\pi} \cos x \cdot e^x dx$$

$$= 0 - \left\{ [\cos x \cdot e^x]_0^{\pi} + \int_0^{\pi} \sin x \cdot e^x dx \right\}$$

$$\Rightarrow I = -[-e^{\pi} - 1] - I$$

$$\Rightarrow I + I = e^{\pi} + 1$$

$$\Rightarrow 2I = e^{\pi} + 1$$

$$\Rightarrow I = \frac{e^{\pi} + 1}{2}$$

80. If $f(x) = \frac{x - 9}{x^2 - 2x - 3}$, $x \neq 3$ is

continuous at $x = 3$, then which one of the following is correct?

- (a) $f(3) = 0$ (b) $f(3) = 1.5$
(c) $f(3) = 3$ (d) $f(3) = -1.5$

⊙ (b) Since, $f(x)$ is continuous at $x = 3$

$$\text{Therefore, } f(3) = \lim_{x \rightarrow 3} \frac{x^2 - 9}{x^2 - 2x - 3}$$

Applying L' Hospital rule

$$\begin{aligned} f(3) &= \lim_{x \rightarrow 3} \frac{\frac{d}{dx}(x^2 - 9)}{\frac{d}{dx}(x^2 - 2x - 3)} \\ &= \lim_{x \rightarrow 3} \frac{2x}{2x - 2} \\ &= \frac{2 \cdot 3}{2 \cdot 3 - 2} = \frac{6}{4} = 1.5 \end{aligned}$$

81. What is $\int_1^e x \ln x \, dx$ equal to ?

- (a) $\frac{e + 1}{4}$ (b) $\frac{e^2 + 1}{4}$
(c) $\frac{e - 1}{4}$ (d) $\frac{e^2 - 1}{4}$

⊙ (b) Let $I = \int_1^e x \log x \, dx$

$$\begin{aligned} &= [\log x \cdot \int x dx]_1^e - \int_1^e \left[\frac{d}{dx} \{\log x\} \cdot \int x dx \right] dx \\ &= \left[\log x \cdot \frac{x^2}{2} \right]_1^e - \int_1^e \frac{1}{x} \cdot \frac{x^2}{2} dx \\ &= \frac{e^2}{2} - \frac{1}{2} \times \frac{1}{2} [x^2]_1^e \\ &= \frac{e^2}{2} - \frac{[e^2 - 1]}{4} \\ &= \frac{2e^2 - e^2 + 1}{4} = \frac{e^2 + 1}{4} \end{aligned}$$

82. What is $\int_0^{\sqrt{2}} [x^2] \, dx$ equal to (where $[.]$ is the greatest integer function) ?

- (a) $\sqrt{2} - 1$ (b) $1 - \sqrt{2}$
(c) $2(\sqrt{2} - 1)$ (d) $\sqrt{3} - 1$

⊙ (a) Let $I = \int_0^{\sqrt{2}} [x^2] dx$

$$= \int_0^1 [x^2] dx + \int_1^{\sqrt{2}} [x^2] dx$$

$$= \int_0^1 0 dx + \int_1^{\sqrt{2}} 1 dx$$

$$\left[\because [x] = \begin{cases} 0 & 0 \leq x < 1 \\ 1 & 1 \leq x < \sqrt{2} \end{cases} \right]$$

$$= 0 + [x]^{\sqrt{2}} = \sqrt{2} - 1$$

83. What is the maximum value of $16\sin\theta - 12\sin^2\theta$?

- (a) $\frac{3}{4}$ (b) $\frac{4}{3}$ (c) $\frac{16}{3}$ (d) 4

⊙ (c) Let $f(x) = 16\sin\theta - 12\sin^2\theta$

$$= -12 \left[\sin^2\theta - \frac{16}{12}\sin\theta \right]$$

$$= -12 \left[\sin^2\theta - \frac{4}{3}\sin\theta \right]$$

$$= -12 \left[\left(\sin\theta - \frac{2}{3} \right)^2 - \frac{4}{9} \right]$$

$$= -12 \left(\sin\theta - \frac{2}{3} \right)^2 + \frac{16}{3}$$

∴ $f(x) \leq \frac{16}{3}$

∴ Maximum value of $f(x) = \frac{16}{3}$

84. If $f : \mathbf{R} \rightarrow S$ defined by $f(x) = 4\sin x - 3\cos x + 1$ is onto, then what is S equal to?

- (a) $[-5, 5]$ (b) $(-5, 5)$
 (c) $(-4, 6)$ (d) $[-4, 6]$

⊙ (d) We have

$$f(x) = 4\sin x - 3\cos x + 1$$

We know that,

$$-\sqrt{4^2 + (-3)^2} \leq 4\sin x - 3\cos x \leq \sqrt{4^2 + (-3)^2}$$

$$[\because -\sqrt{a^2 + b^2} \leq a\sin x + b\cos x \leq \sqrt{a^2 + b^2}]$$

$$\Rightarrow -5 \leq 4\sin x - 3\cos x \leq 5$$

$$\Rightarrow -5 + 1 \leq 4\sin x - 3\cos x + 1 \leq 5 + 1$$

$$\Rightarrow -4 \leq f(x) \leq 6$$

∴ $f(x) \in [-4, 6]$

since, $f(x)$ is onto.

∴ $S = \text{Range of } f = [-4, 6]$

85. For f to be a function, what is the domain of f , if $f(x) = \frac{1}{\sqrt{|x| - x}}$?

- (a) $(-\infty, 0)$ (b) $(0, \infty)$
 (c) $(-\infty, \infty)$ (d) $(-\infty, 0)$

⊙ (a) We have,

$$f(x) = \frac{1}{\sqrt{|x| - x}}$$

$f(x)$ is defined, if

$$|x| - x > 0$$

$$\Rightarrow |x| > x$$

Case I $x > 0$

$$\therefore x > x [\because |x| = x, x > 0]$$

which is not possible

Case II $x < 0$

$$\therefore -x > x [\because |x| = -x, x < 0]$$

$$\Rightarrow 0 > 2x$$

$$\Rightarrow x < 0$$

Which is possible
 ∴ Domain of $f(x) = (-\infty, 0)$

86. What is the solution of the differential equation $x dy - y dx = 0$?

- (a) $xy = c$
 (b) $y = cx$
 (c) $x + y = c$
 (d) $x - y = c$

⊙ (b) Given differentiation equation

$$x dy - y dx = 0$$

$$\Rightarrow x dy = y dx$$

Variable separate on both sides

$$\Rightarrow \frac{dy}{y} = \frac{dx}{x}$$

On integration both sides, we get

$$\Rightarrow \int \frac{dy}{y} = \int \frac{dx}{x}$$

$$\Rightarrow \log y = \log x + \log c$$

[where $\log c$ is integrating constant]

$$\Rightarrow y = xc$$

$$\Rightarrow y = cx$$

87. What is the derivative of the function

$$f(x) = e^{\tan x} + \ln(\sec x) - e^{\ln x} \text{ at } x = \frac{\pi}{4}$$

(a) $\frac{e}{2}$ (b) e (c) $2e$ (d) $4e$

⊙ (c) We have,

$$F(x) = e^{\tan x} + \log(\sec x) - e^{\log x}$$

$$f(x) = e^{\tan x} + \log(\sec x) - x$$

[∵ $a \log_a b = b$]

On differentiating with respect to x both the sides, we get

$$f'(x) = e^{\tan x} \cdot \sec^2 x + \frac{1}{\sec x} \cdot \sec x \tan x - 1$$

$$= \sec^2 x e^{\tan x} + \tan x - 1$$

$$\therefore [f'(x)]_{x=\frac{\pi}{4}} = e^{\tan \frac{\pi}{4}} \cdot \sec^2 \frac{\pi}{4} + \tan \frac{\pi}{4} - 1$$

$$= e^1 (\sqrt{2})^2 + 1 - 1$$

$$= e \cdot 2 + 1 - 1 = 2e$$

88. Which one of the following differential equations has a periodic solution?

- (a) $\frac{d^2x}{dt^2} + \mu x = 0$ (b) $\frac{d^2x}{dt^2} - \mu x = 0$
 (c) $x \frac{dx}{dt} + \mu t = 0$ (d) $\frac{dx}{dt} + \mu xt = 0$

⊙ (a) $\frac{d^2x}{dt^2} + \mu x = 0$ is the differential equation of simple harmonic motion, which has a periodic solution.

89. What is the period of the the function $f(x) = \sin x$?

- (a) $\frac{\pi}{4}$ (b) $\frac{\pi}{2}$
 (c) π (d) 2π

⊙ (d) We have,
 $f(x) = \sin x$

$$f(x + 2\pi) = \sin(x + 2\pi)$$

$$= \sin x$$

$$= f(x)$$

∴ Period of $f(x)$ is 2π .

90. What is $\int \frac{dx}{2^x - 1}$ equal to?

- (a) $\ln(2^x - 1) + C$
 (b) $\frac{\ln(1 - 2^{-x})}{\ln 2} + C$
 (c) $\frac{\ln(2^{-x} - 1)}{2 \ln 2} + C$
 (d) $\frac{\ln(1 + 2^{-x})}{\ln 2} + C$

⊙ (b) Let $I = \int \frac{dx}{2^x - 1}$

$$= \int \frac{2^{-x}}{1 - 2^{-x}} dx$$

$$= \frac{1}{\log 2} \int \frac{2^{-x} \log 2}{1 - 2^{-x}} dx$$

Put $1 - 2^{-x} = t$

$$\Rightarrow 2^{-x} \log 2 dx = dt$$

∴ $I = \frac{1}{\log 2} \int \frac{dt}{t}$

$$= \frac{1}{\log 2} \cdot \log t + C$$

$$= \frac{\log(1 - 2^{-x})}{\log 2} + C$$

91. The order and degree of the differential equation $y^2 = 4a(x - a)$, where 'a' is an arbitrary constant, are respectively

- (a) 1, 2 (b) 2, 1
 (c) 2, 2 (d) 1, 1

⊙ (a) We have,

$$y^2 = 4a(x - a) \dots (i)$$

$$\Rightarrow y^2 = 4ax - 4a^2$$

On differentiating both sides, we get

$$2y \frac{dy}{dx} = 4a$$

$$\Rightarrow a = \frac{1}{2} y \frac{dy}{dx} \dots (ii)$$

On putting the values of a from Eq. (ii) in Eq. (i), we get

$$y^2 = 4 \times \frac{1}{2} y \frac{dy}{dx} \left(x - \frac{1}{2} y \frac{dy}{dx} \right)$$

$$\Rightarrow y^2 = 2xy \frac{dy}{dx} - y^2 \left(\frac{dy}{dx} \right)^2$$

\therefore Order = 1 and degree = 2

92. What is the value of

$$\int_{-\pi/4}^{\pi/4} (\sin x - \tan x) dx$$

(a) $-\frac{1}{\sqrt{2}} + \ln\left(\frac{1}{\sqrt{2}}\right)$ (b) $\frac{1}{\sqrt{2}}$
 (c) 0 (d) $\sqrt{2}$

⊙ (c) Let $I = \int_{-\pi/4}^{\pi/4} (\sin x - \tan x) dx$

Let $f(x) = \sin x - \tan x$
 $\therefore f(-x) = \sin(-x) - \tan(-x)$
 $= -\sin x + \tan x$
 $[\because \sin(-\theta) = -\sin\theta, \tan(-\theta) = -\tan\theta]$
 $= -(\sin x - \tan x)$
 $= -f(x)$
 $\therefore f(x)$ is odd function.
 $\therefore I = \int_{-\pi/4}^{\pi/4} (\sin x - \tan x) dx = 0$

93. If $\int_a^b x^3 dx = 0$ and $\int_a^b x^2 dx = \frac{2}{3}$, then what are the values of a and b respectively?

(a) $-1, 1$ (b) $1, 1$
 (c) $0, 0$ (d) $2, -2$

⊙ (a) We have,

$$\int_a^b x^3 dx = 0$$

$$\Rightarrow \left[\frac{x^4}{4} \right]_a^b = 0$$

$$\Rightarrow \frac{b^4 - a^4}{4} = 0$$

$$\Rightarrow b^4 = a^4$$

$$\Rightarrow b = \pm a \quad \dots (i)$$

But $\int_a^b x^3 dx = 0$ and x^3 is an odd function.
 $\therefore a = -b \quad \dots (ii)$

Again, $\int_a^b x^2 dx = \frac{2}{3}$

$$\Rightarrow \left[\frac{x^3}{3} \right]_a^b = \frac{2}{3}$$

$$\Rightarrow \frac{b^3 - a^3}{3} = \frac{2}{3}$$

$$\Rightarrow b^3 - a^3 = 2$$

$$\Rightarrow b^3 - (-b)^3 = 2 \quad [\because \text{from Eq. (ii)}]$$

$$\Rightarrow 2b^3 = 2$$

$$\Rightarrow b^3 = 1$$

$$\Rightarrow b = 1$$

$$\Rightarrow a = -1 \quad [\text{from Eq. (ii)}]$$

94. What is $\int_0^1 x(1-x)^9 dx$ equal to ?

(a) $\frac{1}{110}$ (b) $\frac{1}{132}$
 (c) $\frac{1}{148}$ (d) $\frac{1}{240}$

⊙ (a) Let $I = \int_0^1 x(1-x)^9 dx$

$$= \int_0^1 (1-x) x^9 dx$$

$$\left[\because \int_0^a f(x) dx = \int_0^a f(a-x) dx \right]$$

$$= \int_0^1 (x^9 - x^{10}) dx = \left[\frac{x^{10}}{10} - \frac{x^{11}}{11} \right]_0^1$$

$$= \left(\frac{1}{10} - \frac{1}{11} \right) = \frac{1}{110}$$

95. What is $\lim_{x \rightarrow 0} \frac{\tan x}{\sin 2x}$ equal to

(a) $\frac{1}{2}$
 (b) 1
 (c) 2
 (d) Limit does not exist

⊙ (a) We have,

$$\lim_{x \rightarrow 0} \frac{\tan x}{\sin 2x}$$

By using L' Hospital rule, we have

$$= \lim_{x \rightarrow 0} \frac{\sec^2 x}{2 \cos 2x}$$

$$= \lim_{x \rightarrow 0} \frac{1}{2 \cos 2x \cdot \cos^2 x}$$

$$= \frac{1}{2 \cos 0^\circ \cos^2 0^\circ} = \frac{1}{2 \times 1 \times 1}$$

$$= \frac{1}{2}$$

96. What is $\lim_{x \rightarrow 0} \frac{\sqrt{2x+3h} - \sqrt{2x}}{2h}$ equal to ?

(a) $\frac{1}{2\sqrt{2x}}$ (b) $\frac{1}{\sqrt{2x}}$
 (c) $\frac{3}{2\sqrt{2x}}$ (d) $\frac{3}{4\sqrt{2x}}$

⊙ (d) $\lim_{x \rightarrow 0} \frac{\sqrt{2x+3h} - \sqrt{2x}}{2h}$

By using, L' Hospital rule, we get

$$= \lim_{h \rightarrow 0} \frac{1}{2\sqrt{2x+3h}} \cdot 3 - 0$$

$$= \frac{3 - 0}{2} = \frac{3}{2}$$

$$= \lim_{h \rightarrow 0} \frac{3}{4\sqrt{2x+3h}}$$

$$= \frac{3}{4} \cdot \frac{1}{\sqrt{2x+0}} = \frac{3}{4\sqrt{2x}}$$

97. If $f(x)$ is an even function, where $f(x) \neq 0$, then which one of the following is correct?

- (a) $f'(x)$ is an even function
 (b) $f'(x)$ is an odd function
 (c) $f'(x)$ may be an even or odd function depending on the type of function
 (d) $f'(x)$ is a constant function
- ⊙ (b) We have, $f(x)$ is an even function.
 $\therefore f(-x) = f(x)$
 On differentiating both the sides, we have
 $-f'(-x) = f'(x)$
 $\Rightarrow f'(-x) = -f'(x)$
 $\therefore f'(x)$ is an odd function.

98. If $y = e^{x^2} \sin 2x$, then what is $\frac{dy}{dx}$ at $x = \pi$ equal to ?

- (a) $(1 + \pi)e^{\pi^2}$ (b) $2\pi e^{\pi^2}$
 (c) $2e^{\pi^2}$ (d) e^{π^2}
- ⊙ (c) We have, $y = e^{x^2} \sin 2x$
- On differentiating both the sides, we get
- $$\frac{dy}{dx} = 2 \cos 2x e^{x^2} + 2x e^{x^2} \sin 2x$$
- $$\therefore \left(\frac{dy}{dx} \right)_{x=\pi} = 2 \cos 2\pi e^{\pi^2} + 2\pi e^{\pi^2} \sin 2\pi$$
- $$= 2(1)e^{\pi^2} + 2\pi e^{\pi^2}(0)$$
- $$= 2e^{\pi^2}$$

99. What is the solution of $(1+2x)dy - (1-2y)dx = 0$?

- (a) $x - y - 2xy = c$
 (b) $y - x - 2xy = c$
 (c) $y + x - 2xy = c$
 (d) $x + y + 2xy = c$
- ⊙ (a) We have,
- $$(1+2x)dy - (1-2y)dx = 0$$
- $$\Rightarrow (1+2x)dy = (1-2y)dx$$
- $$\Rightarrow \frac{dy}{1-2y} = \frac{dx}{1+2x}$$
- On integrating both the sides, we get
- $$\int \frac{dy}{1-2y} = \int \frac{dx}{1+2x}$$
- $$\Rightarrow -\frac{1}{2} \log(1-2y) = \frac{1}{2} \log(1+2x) + C'$$
- $$\Rightarrow -\log(1-2y) = \log(1+2x) + 2C'$$
- $$\Rightarrow \log(1+2x) + \log(1-2y) = -2C'$$
- $$\Rightarrow \log(1+2x)(1-2y) = -2C'$$
- $$\Rightarrow (1+2x)(1-2y) = e^{-2C'}$$
- $$\Rightarrow 1 - 2y + 2x - 4xy = e^{-2C'}$$
- $$\Rightarrow 2x - 2y - 4xy = e^{-2C'} - 1$$

$$\Rightarrow x - y - 2xy = \frac{1}{2}(e^{-2C} - 1)$$

$$\Rightarrow x - y - 2xy = C$$

[where $C = \frac{1}{2}(e^{-2C} - 1)$]

100. What are the order and degree, respectively, of the differential equation

$$\left(\frac{d^3y}{dx^3}\right)^2 = y^4 + \left(\frac{dy}{dx}\right)^5$$

- (a) 4, 5 (b) 2, 3
(c) 3, 2 (d) 5, 4

⊙ (c) Given differential equation is

$$\left(\frac{d^3y}{dx^3}\right)^2 = y^4 + \left(\frac{dy}{dx}\right)^5$$

Here, highest order derivative is $\frac{d^3y}{dx^3}$.

So, order = 3, and degree = 2

101. In a Binomial distribution, the mean is three times its variance. What is the probability of exactly 3 successes out of 5 trials?

- (a) $\frac{80}{243}$ (b) $\frac{40}{243}$
(c) $\frac{20}{243}$ (d) $\frac{10}{243}$

⊙ (a) According to the question,

Mean = 3 (Variance)

$$\Rightarrow np = 3npq$$

[where n = number, of trials]

$$\Rightarrow q = \frac{1}{3}$$

$$\therefore p + q = 1$$

$$\Rightarrow p + \frac{1}{3} = 1$$

$$\Rightarrow p = \frac{2}{3}$$

$$\therefore P(X = 3) = {}^5C_3 \left(\frac{2}{3}\right)^3 \times \left(\frac{1}{3}\right)^2$$

$$= \frac{5!}{3!2!} \times \left(\frac{2}{3}\right)^3 \times \left(\frac{1}{3}\right)^2 = \frac{80}{243}$$

102. Consider the following statements

I. $P(\bar{A} \cup B) = P(\bar{A})$

$$= P(B) - P(\bar{A} \cap B)$$

II. $P(A \cap \bar{B}) = P(B) - P(A \cap B)$

III. $P(A \cap B) = P(B)P(A|B)$

Which of the above statements are correct?

- (a) I and II (b) I and III
(c) II and III (d) I, II and III

⊙ (b) Here,

Statement I

$$P(\bar{A} \cup B) = P(\bar{A}) + P(B) - P(\bar{A} \cap B)$$

is correct.

Statement II

$$P(A \cap \bar{B}) = P(B) - P(A \cap B)$$

$$P(A \cap \bar{B}) = P(A) - P(A \cap B).$$

Statement III

$$P(A \cap B) = P(B) \times P\left(\frac{A}{B}\right)$$

is correct. [by conditional theorem]

Hence, Statements I and III are correct.

103. If the correlation coefficient between x and y is 0.6, covariance is 27 and variance of y is 25, then what is the variance of x ?

- (a) $\frac{9}{5}$ (b) $\frac{81}{25}$
(c) 9 (d) 81

⊙ (d) Given, $\sigma^2(y) = 25 \Rightarrow \sigma(y) = 5$

$$\text{Correlation coefficient} = \frac{C \cdot V}{\sigma_x \cdot \sigma_y}$$

$$0.6 = \frac{27}{\sigma_x \times \sqrt{25}}$$

$$\Rightarrow \sigma_x = \frac{27}{0.6 \times 5} = \frac{27}{3} = 9$$

$$\therefore \text{Variance of } x = \sigma^2(x) = (9)^2 = 81$$

104. The probabilities that a student will solve Question A and Questions B are 0.4 and 0.5 respectively. What is the probability that he solves atleast one of the two questions?

- (a) 0.6 (b) 0.7
(c) 0.8 (d) 0.9

⊙ (b) Given that,

$$P(A) = 0.4$$

$$\text{and } P(B) = 0.5$$

$$\therefore P(A \cup B) = 1 - P(A' \cap B')$$

$$= 1 - [(1 - 0.4) \times (1 - 0.5)]$$

$$= 1 - (0.6)(0.5)$$

$$= 1 - (0.3) = 0.7$$

105. Let \bar{x} be the mean of $x_1, x_2, x_3, \dots, x_n$.

If $x_i = a + cy_i$ for some constants a and c , then what will be the mean of $y_1, y_2, y_3, \dots, y_n$?

(a) $a + c\bar{x}$ (b) $a - \frac{1}{c}\bar{x}$

(c) $\frac{1}{c}\bar{x} - a$ (d) $\frac{\bar{x} - a}{c}$

⊙ (d) Given that,

Mean of $x_1, x_2, x_3, \dots, x_n$ i.e. $x = \bar{x}$

Now, we have

$$x_i = a + cy_i$$

$$\Rightarrow y_i = \frac{1}{c}(x - a)$$

$$\Rightarrow \bar{y} = \frac{1}{c}(\bar{x} - a)$$

106. Consider the following statements

I. If the correlation coefficient

$r_{xy} = 0$, then the two lines of regression are parallel to each other.

II. If the correlation coefficient $r_{xy} = 1$, then the two lines of regression are perpendicular to each other.

Which of the above statements is/are correct?

- (a) I only
(b) II only
(c) Both I and II
(d) Neither I nor II

⊙ (d) According to correlation condition,

If correlation coefficient $r_{xy} = 0$, then lines of regression are perpendicular

And if $r_{xy} = 1$, then lines of regression are parallel.

So, both statements are wrong.

107. If $4x - 5y + 33 = 0$ and $20x - 9y = 107$ are two lines of regression, then what are the values of \bar{x} and \bar{y} respectively?

- (a) 12 and 18 (b) 18 and 12
(c) 13 and 17 (d) 17 and 13

⊙ (c) Given lines of regression are

$$4x - 5y + 33 = 0 \quad \dots (i)$$

$$\text{and } 20x + 9y - 107 = 0 \quad \dots (ii)$$

on multiplying Eq. (i) by 5 and subtract Eq. (ii) from it, we get

$$20x - 25y + 165 = 0$$

$$20x - 9y - 107 = 0$$

$$= \quad + \quad +$$

$$- 16y = - 272$$

$$y = 17$$

on putting the value of y in Eq. (i), we get

$$4x - 85 + 33 = 0$$

$$\Rightarrow 4x = 52 \Rightarrow x = 13$$

The mean of two regression lines are the solution set at given regression lines,

Here, $\bar{X} = 13$ and $\bar{Y} = 17$

108. Consider the following statements

I. Mean is independent of change in scale and change in origin.

II. Variance is independent of change in scale but not in origin.

Which of the above statements is/are correct?

- (a) I only (b) II only
(c) Both I and II (d) Neither I nor II

⊙ (d) Since, mean changes with changes in origin. So, Statement I is wrong.

And variance is independent to the choice of origin. So, Statement II is also wrong.

Hence, both statements are wrong.

- 109.** Consider the following statements
 I. The sum of deviations from mean is always zero.
 II. The sum of absolute deviations is minimum when taken around median.
 Which of the above statements is/are correct.
 (a) I only (b) II only
 (c) Both I and II (d) Neither I nor II
 (c) By the property of deviation both statement are correct.

- 110.** What is the median of the numbers 4.6, 0, 9.3, -4.8, 7.6 2.3, 12.7, 3.5, 8.2, 6.1, 3.9, 5.2 ?
 (a) 3.8 (b) 4.9
 (c) 5.7 (d) 6.0
 (b) On arranging the given number is ascending order, we have
 - 4.8, 0, 2.3, 3.5, 3.9, 4.6, 5.2, 6.1, 7.6, 8.2, 9.3, 12.7

Here, $n = 12$

So, median

$$\begin{aligned} & \text{Value of } \left(\frac{12}{2}\right)\text{th number} \\ & + \text{Value of } \left(\frac{12}{2} + 1\right)\text{th number} \\ & = \frac{\text{Value of 6th number} + \text{Value 7th number}}{2} \\ & = \frac{4.6 + 5.2}{2} \\ & = 4.9 \end{aligned}$$

- 111.** In a test in Mathematics, 20% of the students obtained "first class". If the data are represented by a pie chart, what is the central angle corresponding to "first class"?
 (a) 20° (b) 36°
 (c) 72° (d) 144°

- (c) Pie chart contains total angle equal to 360°.

So, central angle corresponding to "First class"

$$\begin{aligned} & = 20\% \text{ of } 360^\circ \\ & = \frac{20}{100} \times 360^\circ \\ & = 72^\circ \end{aligned}$$

- 112.** The mean and standard deviation of a set of values are 5 and 2 respectively. If 5 is added to each value, then what is the coefficient of variation for the new set of values?
 (a) 10 (b) 20
 (c) 40 (d) 70

- (b) Given, mean = 5
 and standard deviation (σ) = 2
 Since, 5 is added to each value.

$$\begin{aligned} \text{So, new mean} & = 5 + 5 \\ & = 10 \end{aligned}$$

But standard deviation will remain same.

$$\begin{aligned} \text{Hence, coefficient of variation} & = \frac{\sigma}{\text{mean}} \times 100 \\ & = \frac{2}{10} \times 100 = 20 \end{aligned}$$

- 113.** A train covers the first 5 km of its journey at a speed of 30 km/h and the next 15 km at a speed of 45 km/h. What is the average speed of the train?

- (a) 35 km/h (b) 37.5 km/h
 (c) 39.5 km/h (d) 40 km/h

(d) Average speed = $\frac{\text{Total distance}}{\text{Total time}}$

$$\begin{aligned} & = \frac{5 + 15}{\frac{5}{30} + \frac{15}{45}} = \frac{20}{\frac{1}{6} + \frac{1}{3}} \\ & = \frac{20}{\frac{1+2}{6}} \\ & = \frac{20 \times 6}{3} = 40 \text{ km/h} \end{aligned}$$

- 114.** Two fair dice are rolled. What is the probability of getting a sum of 7?

- (a) $\frac{1}{36}$ (b) $\frac{1}{6}$
 (c) $\frac{7}{12}$ (d) $\frac{5}{12}$

- (b) Here, $n(S) = 36$

and E be the event of getting a sum of 7 on two fair dice.

$$= \{(1, 6), (2, 5), (3, 4), (4, 3), (5, 2), (6, 1)\}$$

$$\therefore n(E) = 6$$

$$\text{So, required probability} = \frac{n(E)}{n(S)} = \frac{6}{36} = \frac{1}{6}$$

- 115.** If A and B are two events such that $2P(A) = 3P(B)$, where

$0 < P(A) < P(B) < 1$, then which one of the following is correct?

- (a) $P(A|B) < P(B|A) < P(A \cap B)$
 (b) $P(A \cap B) < P(B|A) < P(A|B)$
 (c) $P(B|A) < P(A|B) < P(A \cap B)$
 (d) $P(A \cap B) < P(A|B) < P(B|A)$

- (b) Given that, $2P(A) = 3P(B)$

$$\begin{aligned} \Rightarrow 2 \frac{P(A)}{P(A \cap B)} & = \frac{3P(B)}{P(A \cap B)} \\ & \text{[dividing both sides by } P(A \cup B)\text{]} \\ \Rightarrow \frac{1}{2} \times \frac{P(A \cap B)}{P(A)} & = \frac{1}{3} \times \frac{P(A \cap B)}{P(B)} \\ \Rightarrow \frac{1}{2} \times P\left(\frac{B}{A}\right) & = \frac{1}{3} P\left(\frac{A}{B}\right) \\ \Rightarrow P\left(\frac{B}{A}\right) & < P\left(\frac{A}{B}\right) \end{aligned}$$

- 116.** A box has ten chits numbered 0, 1, 2, 3, ..., 9. First, one chit is drawn at random and kept aside. From the remaining, a second chit is drawn at random. What is the probability that the second chit drawn is "9" ?

- (a) $\frac{1}{10}$ (b) $\frac{1}{9}$
 (c) $\frac{1}{90}$ (d) None of these

- (a) Let E_1 be the event at drawing a chit which is not 9 and E_2 be the event of drawing second chit bearing number 9.

$$\therefore P(E_1) = \frac{{}^9C_1}{{}^{10}C_1} = \frac{9}{10}$$

$$\text{and } P(E_2) = \frac{{}^1C_1}{{}^9C_1} = \frac{1}{9}$$

$$\therefore \text{Required probability} = P(E_1) \cdot P(E_2) = \frac{9}{10} \times \frac{1}{9} = \frac{1}{10}$$

- 117.** One bag contains 3 white and 2 black balls, another bag contains 5 white and 3 black balls. If a bag is chosen at random and a ball is drawn from it, what is the change that it is white?

- (a) $\frac{3}{8}$ (b) $\frac{49}{80}$ (c) $\frac{8}{13}$ (d) $\frac{1}{2}$

- (b) Let E_1 be the event of selecting the first bag and E_2 be the event of selecting the second bag. Let A be the event of drawing white ball.

So, by theorem at total probability.

$$\begin{aligned} P(A) & = P(E_1) \times P\left(\frac{A}{E_1}\right) + P(E_2) \times P\left(\frac{A}{E_2}\right) \\ & = \frac{1}{2} \times \frac{{}^3C_1}{{}^5C_1} + \frac{1}{2} \times \frac{{}^5C_1}{{}^8C_1} \\ & = \frac{1}{2} \left[\frac{3}{5} + \frac{5}{8} \right] = \frac{1}{2} \times \frac{24 + 25}{40} \\ & = \frac{1}{2} \times \frac{49}{40} = \frac{49}{80} \end{aligned}$$

- 118.** Consider the following in respect of two events A and B

I. $P(A \text{ occurs but not } B) = P(A) - P(B)$ if $B \subset A$

II. $P(A \text{ alone or } B \text{ alone occurs}) = P(A) + P(B) - P(A \cap B)$

III. $P(A \cup B) = P(A) + P(B)$ if A and B are mutually exclusive

Which of the above is/are correct?

- (a) I only (b) I and III
 (c) II and III (d) I and II

- (b) If $B \subset A$, then $P(A - B)$

$$= P(A) - P(A \cap B) = P(A) - P(B)$$

$$[\because B \subset A \Rightarrow A \cap B = B]$$

So, Statement I is correct.

$P(A \text{ alone or } B \text{ alone})$
 $= P(A) - P(A \cap B) + P(B) - P(A \cap B)$
 $= P(A) + P(B) - 2P(A \cap B)$
 So, Statement II is wrong.
 If A and B are mutually exclusive,
 then $P(A \cap B) = 0$
 $\Rightarrow P(A \cup B) = P(A) + P(B)$
 So, Statement III is correct.
 Here, Statement I and III are correct.

119. A committee of three has to be chosen from a group of 4 men and 5 women. If the selection is made at random, what is the probability that exactly two members are men?

- (a) $\frac{5}{14}$ (b) $\frac{1}{21}$
 (c) $\frac{3}{14}$ (d) $\frac{8}{21}$

⊗ (a) Total number of selecting three members = 9C_3

Favourable numbers of selecting two members as men
 $= {}^4C_2 \times {}^5C_1$

So, required probability = $\frac{{}^4C_2 \times {}^5C_1}{{}^9C_3}$

$$= \frac{\frac{4 \times 3}{2 \times 1} \times \frac{5}{1}}{\frac{9 \times 8 \times 7}{3 \times 2 \times 1}}$$

$$= \frac{2 \times 3 \times 5}{3 \times 4 \times 7} = \frac{5}{14}$$

120. The standard deviation σ of the first N natural numbers can be obtained using which one of the following formulae?

- (a) $\sigma = \frac{N^2 - 1}{12}$
 (b) $\sigma = \sqrt{\frac{N^2 - 1}{12}}$

(c) $\sigma = \sqrt{\frac{N - 1}{12}}$

(d) $\sigma = \sqrt{\frac{N^2 - 1}{6N}}$

⊗ (b) $\therefore \sigma^2 = \frac{1}{N} \sum X_i^2 - (\bar{X})^2$
 $= \frac{1}{N} (1^2 + 2^2 + \dots + N^2)$
 $- \left[\frac{1}{N} (1 + 2 + 3 + \dots + N) \right]^2$
 $= \frac{1}{N} \times \frac{N(N+1)(2N+1)}{6} - \left[\frac{(N+1)}{2} \right]^2$
 $= \frac{N^2 - 1}{12}$
 $\sigma = \sqrt{\frac{N^2 - 1}{12}}$

PAPER II English Language and General Studies

Part A (English Language)

Directions (Q. Nos. 1-10) *Each item in this section consists of a sentence with an underlined word/words followed by four words. Select the option that is nearest in meaning to the underlined word/words and mark your response in your answer sheet accordingly.*

- 1.** I do not want you to lead a life of sycophancy as you did during the foreign rule.
 (a) admiration (b) love
 (c) appreciation (d) flattery
 ⊗ (d) A sycophant is one who praises people in authority in a way that is not sincere, usually in order to get some advantage of them. So, 'flattery' is the nearest in meaning to sycophancy.
- 2.** In India, it has become easy to attack cultural artefacts these days.
 (a) beckon (b) assault
 (c) belch (d) appreciate
 ⊗ (b) assault is the correct synonym of attack. Other synonyms are beat, strike at, knock down, etc.
- 3.** A local court granted bail to the criminal on Thursday.
 (a) confessed (b) donated
 (c) allowed (d) yielded
 ⊗ (c) is the correct answer as allowed is the synonym of granted.

- 4.** The judge told that he would analyse the evidence and then deliver the verdict.
 (a) liberate (b) surrender
 (c) transfer (d) pronounce
 ⊗ (d) pronounce is the correct synonym of deliver.
 Some other synonyms are accepted, acknowledged, assumed, etc.
- 5.** The growth and development of the peasant movement was indissolubly linked with the national struggle for freedom.
 (a) firmly (b) vaguely
 (c) individually (d) steadily
 ⊗ (a) In the given sentence, indissolubly means incapable of being broken. So, 'firmly' is the nearest in meaning to it.
- 6.** Weather conditions have been improving over the past few days.
 (a) mending (b) amending
 (c) becoming better (d) advancing
 ⊗ (c) becoming better is the perfect synonym of improving. Some other synonyms are correcting, elaborating, fixing, etc.
- 7.** The confusion on the interlocutor's face was gratifying.
 (a) government officer (b) party worker
 (c) dialogist (d) revolutionary

- ⊗ (c) dialogist is the correct answer. An interlocutor is the person who engages himself in dialogues. Some other synonyms are interviewer, speaker, etc.
- 8.** He spends his money lavishly.
 (a) hesitatingly
 (b) generously
 (c) foolishly
 (d) carefully
 ⊗ (b) generously is the correct answer. Other options do not match here. Lavishly may also mean to spend money extravagantly.
- 9.** The government's new policies will come into force from the next fiscal year.
 (a) calendar (b) academic
 (c) financial (d) leap
 ⊗ Fiscal means relating to money and finances. So, option (c) financial is nearest in meaning to it.
- 10.** Abundant food was available for the soldiers in the mess.
 (a) little
 (b) plentiful
 (c) delicious
 (d) wholesome
 ⊗ (b) plentiful is the correct answer for the word abundant which means in large quantity. Some other synonyms are plenty, profuse, bounteous, etc.

Directions (Q. Nos. 11-20) *Each item in this section consists of a sentence with an underlined word/words followed by four words. Select the option that is **opposite in meaning** to the underlined word/words and mark your response in your Answer Sheet accordingly.*

11. The country's economy must be geared to wartime requirements.
 (a) subordinated to
 (b) related to
 (c) adjusted to
 (d) unlinked to
- ⊗ (d) unlinked to is correct antonym of word geared which means to adjust or adapt.
12. Why does fire attract insects?
 (a) discharge (b) destroy
 (c) repel (d) remove
- ⊗ (c) repel is opposite in meaning to attract as it means to force something or someone to move away or stop attacking you.
13. The party was excellent, and I would like to thank all the people concerned.
 (a) cared (b) attentive
 (c) dependable (d) uninvolved
- ⊗ (d) uninvolved is correct antonym of concerned which means interested or involved.
14. He is very serious by temperament.
 (a) grave (b) trivial
 (c) sober (d) stupid
- ⊗ (b) trivial is the only correct antonym from the given options. Grave and sober are synonyms of serious. Stupid does not match. Trivial means of small value or unserious matter.
15. There are a few miscellaneous items to discuss in this meeting.
 (a) pure (b) mixed
 (c) homogenous (d) discordant
- ⊗ (c) homogenous is correct antonym of miscellaneous. Miscellaneous means of mixed type whereas homogenous means of the same kind.
16. Due to the postal strike, the outgoing mail got delayed.
 (a) urgent (b) incoming
 (c) ordinary (d) speedy
- ⊗ (b) incoming is the correct antonym of outgoing. In and out are perfect antonyms.
17. He had a fine ear for music.
 (a) small (b) close
 (c) coarse (d) smooth

⊗ (c) coarse, from the given options is correct. Other antonyms could be unsatisfactory, ill, etc.

18. There is no likeness between him and his brother.

- (a) unlikeliness (b) unlikelihood
 (c) dissimilarity (d) disaffinity

⊗ (c) dissimilarity is the correct antonym as likeness means resemblance and dissimilarity means when there is nothing similar or resembling with the other.

19. Cultural diversity in the working place is good for business.

- (a) uniformity (b) conformity
 (c) identity (d) similarity

⊗ (a) diversity means the condition of having or being composed of different types of people or things. So, its opposite will be uniformity.

20. The company was liquidated within five years.

- (a) bankrupt (b) closed down
 (c) flourishing (d) privatised

⊗ (c) liquidate means to cause a business to close, so that its assets can be sold to pay its debts. So, its opposite would be 'flourishing'.

Directions (Q. Nos. 21-25) *Each item in this section has a sentence with three underlined parts labelled (a), (b) and (c). Read each sentence to find out whether there is any error in any underlined part and indicate your response in the Answer Sheet against the corresponding letter i.e., (a) or (b) or (c). If you find no error, your response should be indicated as (d).*

21. The politician lost face in his constituency (a)/when he broke the pre-election promises (b)/he made to his people. (c)/No error. (d)

⊗ (c) has error. As sentence is in simple past tense, here we must use past perfect tense 'he had made to the people' should be used here.

22. At the request of the Defence Attorney, (a)/the jury were called (b)/and their individual verdicts were recorded. (c)/No error. (d)

⊗ (b) has error of correct use of verb with jury which is taken as singular noun, verb 'was' will be used here.

23. Frank Lloyd Wright has been acclaimed (a)/by colleagues (b)/as the greater of all modern architects. (c)/ No error. (d)

⊗ (c) has error of correct degree of adjective. Here, we will use superlative degree of greater i.e. 'greatest' as we are comparing one with many people.

24. In my younger days (a)/I could run four miles (b)/at a stretch. (c)/No error. (d)

⊗ (a) has error of correct syntax 'When I was young' is better construction.

25. The owner (a)/as well as his servants (b)/is honest. (c)/No error. (d)

⊗ (d) The sentence is correct.

Directions (Q. Nos. 26-30) *Given below are some idioms/phrases followed by four alternative meanings to each. Choose the response (a), (b), (c) or (d) which is the most appropriate expression.*

26. Cry over spilt milk

- (a) Complaining about a loss in the past
 (b) Too much inquisitive about something
 (c) When something is done badly to save money
 (d) Dealing with a problem only in an emergency situation

⊗ (a) Complaining about a loss in the past is the correct meaning of the idiom 'Cry over spilt milk.'

27. Cut the mustard

- (a) Prepare spices out of mustard seeds
 (b) To come up to expectations
 (c) Making absurd expectations
 (d) Very enthusiastic

⊗ (b) To come up to the expectations is the correct meaning of the idiom 'cut the mustard'.

28. Devil's advocate

- (a) A dangerous person
 (b) To present a counter argument
 (c) Very argumentative person
 (d) Creating an unpleasant situation

⊗ (c) A devil's advocate is a person who expresses an unpopular opinion in order to provoke debate. So, out of the given options 'very argumentative person' best expresses its meaning.

29. Don't count your chickens before the eggs have hatched

- (a) If you are not good at something, better to avoid that
 (b) Don't make plans for something that might not happen
 (c) Not to come up to expectations
 (d) Don't put all your resources in one possibility

⊗ (b) This idiom means to not make plans for something that might not happen.

30. Give the benefit of doubt

- (a) To be partial to someone
- (b) To be judgemental
- (c) Regard someone as innocent until proven otherwise
- (d) Say something exactly right

⊗ (c) Benefit of doubt means to regard someone as innocent until proven otherwise.

Directions (Q. Nos. 31-35) *In this section each item consists of six sentences of a passage. The first and sixth sentences are given in the beginning as S1 and S6. The middle four sentences in each have been jumbled up and labelled P, Q, R and S. You are required to find the proper sequence of the four sentences and mark your response accordingly on the Answer Sheet.*

31. S1 : The Subsidiary Alliance system was extremely advantageous to the British.

S6 : They controlled the defence and the foreign relations of the protected ally.

P : They could now maintain a large army at the cost of Indian states.

Q : if many war occurred in the territories

R : either of the British ally or of the Britishers

S : This enabled them to fight wars far away from their own territories

The proper sequence should be

- (a) P Q R S
- (b) P S Q R
- (c) Q R P S
- (d) S R P Q

⊗ (b) PSQR is the correct sequence.

32. S1 : In reality, by signing a Subsidiary Alliance, an Indian state virtually signed away its independence.

S6 : In fact, the Indian ruler lost all vestiges of sovereignty in external matters.

P : of maintaining diplomatic relations

Q : It lost the right of self defence

R : with its neighbours

S : and of settling its disputes

The proper sequence should be

- (a) P Q R S
- (b) R S P Q
- (c) Q P S R
- (d) Q S R P

⊗ (c) QPSR is the correct sequence.

33. S1 : A mighty popular Revolt broke out in Northern and Central India in 1857.

S6 : Millions of peasants, artisans and soldiers fought heroically and wrote a glorious chapter.

P : Sepoys, or the Indian soldiers of the Company's army

Q : but soon engulfed wide regions and involved the masses

R : and nearly swept away the British rule

S : It began with a mutiny of the

The proper sequence should be

- (a) R S P Q
- (b) P Q R S
- (c) S R P Q
- (d) Q R P S

⊗ (a) RSPQ is the correct sequence.

34. S1: The Indian Civil Service gradually developed into one of the most efficient and powerful civil services in the world.

S6 : though these qualities obviously served. British, and not Indian interests.

P : and often participated in the making of policy

Q : independence, integrity and hard work

R : They developed certain traditions of

S : Its members exercised vast power

The proper sequence should be

- (a) P Q R S
- (b) Q R S P
- (c) R S Q P
- (d) S P R Q

⊗ (d) SPRQ is the correct sequence.

35. S1 : The ruin of India handicrafts was reflected in the ruin of the towns and cities which were famous for their manufactures.

S6 : Centres were developed and laid waste.

P : Dacca, Surat, Murshidabad and many other rising industrial

Q : ravages of war and plunder, failed to

R : survive British conquest

S : Cities which had withstood the

The proper sequence should be

- (a) P Q R S
- (b) S Q R P
- (c) S R P Q
- (d) Q R S P

⊗ (b) SQRP is the correct sequence.

Directions (Q. Nos. 36-40) *In this section you have few short passages. After each passage, you will find some items based on the passage. First, read a passage and answer the items based on it. You are required to select your answers based on the contents of the passage and opinion of the author only.*

Passage 1

The rule of the road means that in order that the liberties of all may be preserved, the liberties of everybody must be curtailed. When the policeman, say, at a road-crossing steps into the middle of the road and puts out his hand, he is the symbol not of tyranny but of liberty. You have submitted to a curtailment of private liberty in order that you may enjoy a social order which makes your liberty a reality. We have both liberties to preserve — our Individual liberty and our social liberty. That is, we must have a judicious mixture of both. I shall not permit any authority to say that my child must go to this school or that, shall specialise in science or arts. These things are personal. But if I say that my child shall have no education at all, then society will firmly tell me that my child must have education whether I like it or not.

36. According to the author, the “rule of the road” implies

- (a) the rule regulating the traffic on the road
- (b) the principle on which a road is constructed to ensure safe traffic
- (c) unrestricted freedom for all to lead a happy life
- (d) restricted individual freedom to ensure freedom for all

⊗ (d) Rule of the road according to the passage means restricted individual freedom to ensure freedom for all.

37. The author thinks that when a policeman signals you to stop on a road-crossing, he is

- (a) behaving in a whimsical manner
- (b) interfering with your freedom to use the road
- (c) protecting the liberty of all to use the road
- (d) mischievously creating hurdles in your way from some personal motive

⊗ (c) The policeman is protecting the liberty of all to use the road.

38. The author is of the view that we should

- (a) have absolute individual liberty without any restrictions imposed by the society
- (b) have everything, controlled by the society without any kind of individual liberty

- (c) try to strike a sensible balance between our individual liberty and our social liberty
 (d) have more of social liberty than individual liberty
- ⊗ (c) The author is of the view that we should try to strike a sensible balance between our individual liberty and our social liberty.
- 39.** The author holds that
- (a) educating or not educating his child is a matter of personal liberty
 (b) educating or not educating his child is also a matter of social liberty
 (c) choosing the school for his child is a matter of social liberty
 (d) choosing the subject of study for his child is a matter of social liberty
- ⊗ (b) The author is of the opinion that educating or not educating his child is also a matter of social liberty.
- 40.** The most suitable title of the passage would be
- (a) The Policeman at a Road Crossing
 (b) The Laws of the Road
 (c) Importance of Liberty
 (d) Education of Children
- ⊗ The most suitable title of the passage would be option (c). 'Importance of Liberty'.

Passage 2

My most interesting visitor comes at night, when the lights are still burning — a tiny bat who prefers to fly in through the open door, and will use the window only if there is no alternative. His object in entering the house is to snap up the moths that cluster around the lamps. All the bats I have seen fly fairly high, keeping near the ceiling; but this particular bat flies in low, like a dive-bomber, zooming in and out of chair legs and under tables. Once, he passed straight between my legs. Has his radar gone wrong, I wondered, or is he just plain crazy?

- 41.** Consider the following statements
1. The tiny bat flew in low like a dive bomber.

2. The tiny bat like all bats keeps near the ceiling.
 3. It has lost direction because its radar has gone wrong.
 4. It wants to entertain the author with its skill in flying.

Which of the above statements may be assumed to be true from the information given in the passage?

- (a) 1 only (b) 1 and 3
 (c) 2 and 4 (d) 3 and 4
- ⊗ (b) From the given information statements 1 and 3 are true.
- 42.** The bat entered the room
- (a) because there was no alternative
 (b) to eat the moths round the lamps
 (c) as it had gone mad
 (d) as it preferred to fly in through the open door
- ⊗ (b) The bat entered the room to eat the moths round the lamps.
- 43.** After comparing the habits of the tiny bat with those of other bats, the author was
- (a) sure that this bat had lost its direction
 (b) not sure of its preferences
 (c) surprised to find that it was an expert flier
 (d) unable to give the correct explanation for its behaviour
- ⊗ (d) The author was confused and hence was unable to give the correct explanation for the behaviour of the bat.

- 44.** The author calls the tiny bat an "interesting visitor". This means
- (a) the bat visits him at night
 (b) the bat is interested in the moths
 (c) this bat has peculiar qualities
 (d) this bat surprises him by zooming in and out like a dive-bomber
- ⊗ (c) The tiny bat is called an interesting visitor by the author as it has peculiar qualities.

- 45.** What, according to you, can be the most suitable title for the passage?
- (a) Someone visits me
 (b) Night of Mysteries
 (c) My Nocturnal Visitor
 (d) A Funny Visitor

- ⊗ (c) My Nocturnal Visitor is the most suitable title of the passage from the given options.

Directions (Q. Nos. 46-50) *Each of the following sentences in this section has a blank space and four words or group of words given after the sentence. Select the word or group of words you consider most appropriate for the blank space and indicate your response on the Answer Sheet accordingly.*

- 46.** The tired traveller on in the hope of finding some resting place.
- (a) strolled (b) scurried
 (c) paraded (d) plodded
- ⊗ (d) The word 'plodded' means to walk with slow heavy steps. So, from the given options it is most suitable to fill the given blank.
- 47.** The car was damaged beyond repair in the accident.
- (a) outrageous (b) ghastly
 (c) nasty (d) heinous
- ⊗ (b) Ghastly means unpleasant and shocking. So, it should be used to fill the given blank.
- 48.** They gave a dinner to celebrate the occasion, which impressed every guest.
- (a) austere (b) public
 (c) sumptuous (d) summary
- ⊗ (c) Sumptuous means of high quality and often expensive. So, from the given options it is the most suitable word to fill the given blank.
- 49.** Once the manuscript is received by the publishers, it is typed in double space.
- (a) total (b) full
 (c) complete (d) filled
- ⊗ (c) complete is the correct answer.
- 50.** I am used to in queues.
- (a) stand (b) standing
 (c) stand up (d) standing still
- ⊗ (b) standing is the correct answer.

Part B (General Studies)

51. Which one of the following statements is correct?

- (a) Any energy transfer that does not involve temperature difference in some way is not heat.
 - (b) Any energy transfer always requires a temperature difference
 - (c) On heating the length and volume of the object remain exactly the same
 - (d) Whenever there is a temperature difference, heat is the only way of energy transfer
- ⊙ (a) Practically, all the bodies around us either release or absorb energy often in the form of heat. The form of energy which is exchanged among various bodies or system on account of temperature difference is defined as heat. On heating the matter, the energy of atoms increases and hence the average distance between them increases. This results in thermal expansion. Solids can expand in one dimension, two dimensions and three dimensions while liquid and gases usually expand in volume.

52. If T is the time period of an oscillating pendulum, which one of the following statements is NOT correct?

- (a) The motion repeats after time T only once
 - (b) T is the least time after which motion repeats itself
 - (c) The motion repeats itself after nT , where n is a positive integer
 - (d) T remains the same only for small angular displacements
- ⊙ (a) Time-period (T) is the time taken by the particle to complete one oscillation. Time-period of the simple pendulum is given by

$$T = 2\pi \sqrt{\frac{l}{g}}$$

It is clear that the time period is independent of the mass of the pendulum. This formula is valid only when radius of point mass of pendulum is negligible compared to length of pendulum. Here, motion of pendulum repeats itself after a fixed interval i.e it remains same only for small angular displacements (Q). Hence, it is incorrect to say that this motion repeats after time T only once.

53. If an object moves with constant velocity then which one of the following statements is NOT correct?

- (a) Its motion is along a straight line
 - (b) Its speed changes with time
 - (c) Its acceleration is zero
 - (d) Its displacement increases linearly with time
- ⊙ (d) Whenever an object moves with constant velocity, the motion is always in form of straight line, which is parallel to the x-axis. As velocity remains same, hence acceleration of the object is zero. Also the speed of the object changes due to change in displacement so than in distance. Hence, option (d) is incorrect because it is not necessary displacement increases linearly. It decreases linearly for constant velocity.

54. An object is moving, with uniform acceleration a . Its initial velocity is u and after time t its velocity is v . The equation of its motion is $v = u + at$. The velocity (along y-axis) time (along x-axis) graph shall be a straight line

- (a) passing through origin
 - (b) with x-intercept u
 - (c) with y-intercept u
 - (d) with slope u
- ⊙ (c) From the graph for the equation of its motion.

The object has an initial velocity u at point A and then its velocity changes at a uniform rate from A to B in time t . In other words, there is a uniform acceleration ' a ' from A to B and after time t its final velocity becomes ' v ' equal to B in the graph. Hence, the slope of a velocity-time graph is equal to acceleration. Thus, we can say that the velocity time graph for the equation, $v = u + at$ will be straight line having slope equal to acceleration a with y intercept u .

∴ Option (c) is correct.

55. What is the net force experienced by a bar magnet placed in a uniform magnetic field?

- (a) Zero
 - (b) Depends upon length of the magnet
 - (c) Never zero
 - (d) Depends upon temperature
- ⊙ (a) The net force experienced by a bar magnet placed in a uniform magnetic field is zero. A magnetic field is said to be uniform over a region if its magnetic field induction (\vec{B}) has the same magnitude and direction at all point in the region. Thus, net force experienced by a bar magnet in a uniform magnetic field is zero.

56. Which one of the following has maximum inertia ?

- (a) An atom
 - (b) A molecule
 - (c) A one-rupee coin
 - (d) A cricket ball
- ⊙ (d) Inertia means resistance or opposition offered by the body to change its state. Mass of a body is the measurement of its inertia. A body with greater mass shows greater inertia, i.e., it is more difficult to change its state of rest or uniform motion as compared to that of a body having small mass. Hence, in the given option a cricket ball has maximum mass, so it has maximum inertia.

57. Which one of the following is the value of 1 kWh of energy converted into joules?

- (a) 1.8×10^6 J
 - (b) 3.6×10^6 J
 - (c) 6.0×10^6 J
 - (d) 7.2×10^6 J
- ⊙ (b) 1 kilowatt hour is the unit of electrical power.
 1 kilowatt hour = 1000 watt \times 3600s
 = 3.6×10^6 Joule
 (∵ 1 Joule = 1 watt \times 1 sec)

58. Which one of the following statements about gravitational force is NOT correct?

- (a) It is experienced by all bodies in the universe
 - (b) It is a dominant force between celestial bodies
 - (c) It is a negligible force for atoms
 - (d) It is same for all pairs of bodies in our universe
- ⊙ (d) Gravitational force is defined as a non-contact force of attraction between any two bodies in universe (no matter how far the bodies are). It is experienced by all bodies in the universe. The celestial bodies experienced these forces, but it is not same for all pairs of bodies in our universe.

59. Whether an object will float or sink in a liquid, depends on

- (a) mass of the object only
 (b) mass of the object and density of liquid only
 (c) difference in the densities of the object and liquid
 (d) mass and shape of the object only

⊗ (c) When an object is floating then

$$\frac{\text{Volume of sinking part of the object}}{\text{Total volume of the body}} = \frac{\text{Density of the object}}{\text{Density of the liquid}}$$

$$\text{Volume of sinking part of the body} = \frac{\text{Mass of object}}{\text{Density of liquid}}$$

In case of sinking, if the buoyant force or upthrust exerted by the liquid is less than the weight of the object, the object will sink in liquid. Therefore, it is clear that whether an object will float or sink in a liquid depends on difference in the densities of the object and liquid.

60. Which one of the, following devices is non-ohmic?

- (a) Conducting copper coil
 (b) Electric heating coil
 (c) Semi conductor diode
 (d) Rheostat
- ⊗ (c) According to Ohm's law, the electric current flowing through a conductor is directly proportional to the potential difference applied across its ends, provided the physical condition (such as temperature) remain unchanged. Hence, the device which follows Ohm's law for all voltage across it is called as an ohmic device.

For example, a wire rheostat conducting copper coil, electric heating coil, etc. The device that does not follow Ohm's law is known as non-ohmic device.

For example, Semi conductor diode.

61. Which one of the following is the natural phenomenon based on which a simple periscope works?

- (a) Reflection of light
 (b) Refraction of light
 (c) Dispersion of light
 (d) Total internal reflection of light
- ⊗ (a) Periscope is an optical instrument which is based on the phenomenon of reflection of light. Light is reflected from the first mirror into the second one at 45° angle which is then reflected to the eye of the viewer.

62. Which one of the following frequency range is sensitive to human ears?

- (a) 0– 200 Hz
 (b) 20 – 20,000 Hz
 (c) 200 – 20,000 Hz only
 (d) 2,000 – 20,000 Hz only
- ⊗ (b) 20-20,000 Hz, human ear can respond to minute pressure variations in air. The audible frequency range to which ears can respond is 20-20,000 Hz. The sound frequency beyond this limit may damage ear drums and cause hearing disabilities in humans.

63. The accidental touch of Nettle leaves creates a burning sensation, which is due to inject of

- (a) Hydrochloric acid (b) Methanoic acid
 (c) Citric acid
 (d) Sulphuric acid
- ⊗ (b) The accidental touch of Nettle Leaves create a burning sensation. This is due to the methanoic acid secreted by them. It is a Herbaceous plant that grows in the wild. The leaf of the dock plant, which often grows beside the nettle, is the traditional remedy for it.

64. Which of the following properties is true for a tooth paste?

- (a) It is acidic (b) It is neutral
 (c) It is basic
 (d) It is made up of Calcium phosphate, the material of tooth enamel
- ⊗ (c) Tooth pastes are derived from different variety of components namely abrasives, flouride and detergents. Abrasives includes particles of calcium hydrogen phosphates, aluminium hydroxide, etc. Tooth pastes are basic in nature and prevents tooth decay by neutralising the excess of acid. They can neither be acidic nor normal.

65. Which one of the following gives the highest amount of hydrogen ions (H^+) ?

- (a) Sodium hydroxide solution
 (b) Milk of magnesia
 (c) Lemon juice
 (d) Gastric juice
- ⊗ (d) The amount of H^+ ions produced depends upon the strength of an acid which further depends on the corresponding pH values. Relation between pH and concentration of H^+ ions is given by

$$pH = -\log [H^+] = \log \frac{1}{[H^+]}$$

As the pH increases, the acidic nature decreases and thus the amount of H^+ ions. The order of pH values for the above given options are as follows:

Gastric Juice (1.3 – 3.0) < Lemon Juice (2.2-2.4) < Milk of Magnesia (10.5) < Sodium hydroxide (≈ 14)

Thus, Gastric juice gives the highest amount of H^+ ions.

66. Brine is an aqueous solution of

- (a) NaCl (b) NaOH
 (c) $NaHCO_3$ (d) Na_2CO_3
- ⊗ (a) Brine is an aqueous solution of sodium chloride (NaCl). Electrolysis of brine produces Sodium Hydroxide (NaOH), Chlorine (Cl_2) and Hydrogen (H_2). This forms the basis of the chlor-alkali industry.

67. Which one of the following is the chemical formula of Washing Soda ?

- (a) $NaHCO_3$ (b) $Na_2CO_3 \cdot 10H_2O$
 (c) $Na_2CO_3 \cdot 5H_2O$ (d) NaOH
- ⊗ (b) $2NaCl(aq) + 2H_2OCl \rightarrow 2NaOH(aq) + Cl_2(g) + H_2(g)$ chemically washing soda is sodium carbonate decahydrate with formula $Na_2CO_3 \cdot 10H_2O$. Its anhydrous form, i.e. Na_2CO_3 is called soda ash.

68. Which one of the following is NOT true for bleaching powder?

- (a) It is used as a reducing agent in chemical industries
 (b) It is used for bleaching wood pulp in paper factories
 (c) It is used for disinfecting drinking water
 (d) It is used for bleaching linen in textile industry
- ⊗ (a) Bleaching powder ($CaOCl_2$) is produced by the action of chlorine on dry slaked lime [$Ca(OH)_2$]. The following are the uses of bleaching powder:
- It is used for bleaching purposes in textile industries, paper industry and in laundry.
 - It is also used as a disinfectant for water to make it free of germs.
 - It is used as an oxidising agent in many chemical industries.

Thus among the given, option (a) is incorrect.

69. AIDS is caused by a virus whose genetic material is

- (a) single stranded circular DNA
 (b) double stranded DNA
 (c) single stranded RNA
 (d) double stranded RNA
- ⊗ (c) AIDS is caused by Human Immunodeficiency Virus (HIV). It belongs to family retroviridae and genus lentivirus. HIV genome consists of two identical copies of the SSRNA genome, reverse transcriptase enzyme and other proteins to code for viral proteins that are essential during its replication. All these components are: enclosed within the core of viral particle.

70. Which one of the following organelle is NOT found in prokaryotic cells?

- (a) Cell wall (b) Mitochondria
(c) Plasma membrane (d) Ribosome

⊙ (b) Prokaryotic cells are simple and primitive type of cells e.g. bacteria, methanogens, blue-green algae, etc. These cell do not contain membrane bound nucleus and other cellular organelles like other than mitochondria, prokaryotes also lack. Mitochondria is a double membraned organelle, which is responsible for the production of ATP molecules. It is only found in eukaryotic cells.

71. Which one of the following parts of body does NOT take part in the process of breathing?

- (a) Bronchi
(b) Bowman's capsule
(c) Diaphragm
(d) Trachea

⊙ (b) Bowman's capsule is a part of human excretory system. It is closed cup-shaped and double-walled structure of Malpighian body of a kidney.

The human respiratory system includes nose, larynx, trachea, bronchi and bronchioles, alveoli and lungs.

Diaphragm is a dome-shaped sheet that separate the thoracic cavity from abdominal cavity. It also serves major role during breathing.

Trachea or wind pipe conduct air to lungs and bronchi are the branches of wind pipe inside lungs.

72. Which one of the following statements about classification of plants is correct?

- (a) Thallophytes have well differentiated body design
(b) Funaria is a fungus
(c) All Pteridophytes are Phanerogams
(d) Vascular system is not found among Bryophytes

⊙ (d) Bryophytes are very small, photosynthetic and first terrestrial plants. These are non-vascular plants too.

Thylophyta is a group of thaloid plants in which body is not differentiated into true roots, stems and leaves. e.g. Algae.

Funaria (Moss) is a genus of approximately 2010 species of class Bryopsida of Bryophyta.

Pteridophytes have hidden reproductive organs, so, these are called cryptogams. While all gymnosperms and angiosperms are phanerogams.

73. Which one of the following is the correct sequence of levels of hierarchy of classification of organisms from higher to lower?

- (a) Phylum - Class - Order - Family - Genus
(b) Phylum - Class - Family - Order - Genus
(c) Family - Order - Class - Species - Genus
(d) Class - Family - Order - Species - Genus

⊙ (a) A hierarchical system is used for taxonomic classification of organisms. Each level in this classification includes organisms with similar characteristics. According to Linnean hierarchy, proposed by Carlous Linnaeus (Father of systematic Botany), the hierarchy involves seven obligate categories as shown below

Kingdom → Phylum (in Animals)/Division (in plants) → Class → Order → Family → Genus → Species

74. Which one of the following statements about meristematic tissues in plants is correct ?

- (a) These are dead tissues and form wood
(b) They provide flexibility to plant due to their thickened walls
(c) These are present in the bark of a tree only
(d) Growth occurs in plants due to division of cells of these tissues

⊙ (d) Growth occurs in plants due to the division of meristematic cells. Meristematic tissues are a group of undifferentiated immature cells that are either preparing to divide or are in continuous state of division. These tissues contribute towards the growth of the plants as they are present in the actively growing regions of plants.

Due to meristematic tissues, a plant body retains the capacity of unlimited growth throughout their life.

75. Which one of the following Union Territories has the highest female literacy rate?

- (a) Chandigarh
(b) Lakshadweep
(c) Andaman and Nicobar Islands
(d) Puducherry

⊙ (b) Lakshadweep has a sex ratio of 946 females for every 1000 males and a literacy rate of 92.28%. The female literacy of lakshwadweep is 87.95 percent which the highest among all the union territories in India. Daman and Diu comes next with 79.59% in female literacy.

76. Consider the following statements about Roaring Forties

1. They are strong Westerly winds found in the oceans of Southern Hemisphere.
2. The strong east to west air currents are caused by the combination of air being displaced from the Equator towards the South Pole and the earth's rotation and abundance of landmasses to serve as wind breaks.

Which of the statements given above is/ are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) The Roaring Forties are strong westerly winds found in the Southern Hemisphere, generally between the latitudes of 40 and 50 degrees. The strong west-to-east air currents are caused by the combination of air being displaced from the Equator towards the South Pole and the Earth's rotation, and there are few landmasses to serve as windbreaks. Hence, both the given statements are correct.

77. Consider the following statements

1. The doldrums is a low pressure area around Equator where the prevailing winds are calm.
2. Chinook is a hot and dry wind that blows in winter and therefore raises the temperature in a short time.

Which of the statements given above is/ are correct?

- (a) 1 only (b) 2 only
(c) Both 1 and 2 (d) Neither 1 nor 2

⊙ (c) Doldrums, (also called equatorial calms) are equatorial regions of light ocean currents and winds within the Inter Tropical Convergence Zone (ITCZ), a belt of converging winds and rising air encircling Earth near the Equator. It is a low pressure area around the equator where the prevailing winds are calm with no movement.

Chinook are local winds that blow over the Rocky mountains in USA. They are essentially hot and dry wind that blow in the winter season and raises the temperature in a short time thus removing the frost from the crops.

78. Which one of the following is the driest desert of the world ?

- (a) Atacama (b) Gobi
(c) Sahara (d) Kalahari

- ⊗ (a) Atacama desert located in the Andes mountain is the driest desert in the world, as well as the only true desert to receive less precipitation than the polar deserts. Officially, it the driest place on Earth. It receives almost no rainfall. This is due to the fact that the desert lies on the leeward side of the Andes that blocks any winds from reaching here.

79. Which of the following statements about latent heat for a given substance is/are correct?

1. It is fixed at a given temperature.
2. It depends upon the temperature and volume.
3. It is independent of temperature and volume.
4. It depends on the temperature but independent of volume.

Select the correct 'answer using the codes given below

- (a) 2 (b) 1 and 3 (c) 4 only (d) 1 and 4
- ⊗ (b) The amount of heat per unit mass transferred during change of state of the substance is called Latent heat of the substance. It is always fixed at a given temperature and does not changes with temperature and volume of the substance. e.g. latent heat of ice is $3.34 \times 10^5 \text{J}$.

80. Which one of the following statements about the mass of a body is correct?

- (a) It changes from one place to another
 - (b) It is same everywhere
 - (c) It depends on its shape
 - (d) It does not depend on its temperature
- ⊗ (b) Mass is a quantity of matter present inside the body which measures the inertia of a body. The mass of the body cannot be zero. Irrespective of the position of body in the universe, mass of the body always remains constant everywhere, which is independent on its temperature.

81. A ball balanced on a vertical rod is an example of

- (a) stable equilibrium
 - (b) unstable equilibrium
 - (c) neutral equilibrium
 - (d) perfect equilibrium
- ⊗ (b) When the centre of gravity of a body lies below point of suspension or support, the body is said to be in stable equilibrium. When the centre of gravity of a body lies above the point of suspension or support, the body is said to be in unstable equilibrium. A balanced ball on a vertical rod is an example of unstable equilibrium because when the rod is

slightly disturbed its centre of gravity is lowered. The line of action of its weight lies outside the base of the rod. Then the torque due to weight of the toppled it down.

When the centre of gravity of a body lies at the point of suspension, the body is said to be in ventral equilibrium.

82. Which of the following statements about a fluid at rest in a cup is/are correct?

1. Pressure is same-at all the points in the fluid.
2. Pressure is exerted on the walls.
3. Pressure exists everywhere in the fluid.

Select the correct answer 'using the codes given below

- (a) 1 and 2 only (b) 2 and 3 only
(c) 1 only (d) 1, 2 and 3
- ⊗ (d) When a fluid is at rest in a cup then pressure is same at all the points in the fluid, pressure is exerted on the walls and pressure exists everywhere in the fluid. The pressure at a point within a volume of fluid means that the point to be surrounded by a small container by the area of the container.

83. Which one of the following devices is used to measure atmospheric pressure?

- (a) Ammeter (b) Barometer
 - (c) Potentiometer (d) Lactometer
- ⊗ (b) Barometer is used to measure the atmospheric pressure. The function of a barometer is to know whether or not atmospheric pressure is rising or falling. Ammeter is a device which is used to measure electric current in amperes. Potentiometer is used to measure the emf of a cell and. Lactometer is used to measure the purity of milk.

84. Which one of the following is the number of water molecules that share with two formula unit CaSO_4 in Plaster of Paris?

- (a) One (b) Two
 - (c) Five (d) Ten
- ⊗ (a) Plaster of Paris is chemically known as calcium sulphate hemihydrate $\left(\text{CaSO}_4 \cdot \frac{1}{2} \text{H}_2\text{O}\right)$. Thus,

with two formula unit of CaSO_4 , one molecule of water is shared.

It is prepared by heating gypsum at 393 K.

85. How is carbon black obtained?

- (a) By heating wood at high temperature in absence of air
- (b) By heating coal at high temperature in absence of air
- (c) By burning hydrocarbons in a limited supply of air
- (d) By heating coal at high temperature in presence of air

- ⊗ (c) Carbon black is obtained by burning hydrocarbons in a limited supply of air.

It is used as a black pigment in black ink and as filler in automobile tyres. Which charcoal and coke are obtained by heating wood or coal respectively at high temperature.

86. Which one of the following properties is NOT true for graphite?

- (a) Hybridisation of each carbon atom is sp^3
- (b) Hybridisation of each carbon atom is sp^2
- (c) Electrons are delocalised over the whole sheet of atoms
- (d) Each layer is composed of hexagonal rings

- ⊗ (a) A graphite crystal consists of layers of carbon atoms or sheets of carbon atoms. Each carbon atom in a graphite layer is joined to other three carbon atoms by strong covalent bonds to form flat hexagonal rings. In this case, only 3 of the 4 valence electrons of C participate in bonding. Thus, hybridisation is sp^2 having covalent bonds with other 3 C-atoms in same plane.

The electrons are delocalised over the whole sheet of atoms which makes it good conductor of electricity. Thus, among the given options, option 'a' is incorrect.

87. Which one of the following is the purest form of Carbon?

- (a) Charcoal
 - (b) Coke
 - (c) Fullerene
 - (d) Carbon black
- ⊗ (d) Carbon black (lamp black) is the most purest form of carbon. It contains about 98-99% of carbon. It is used for making printer ink, black paint, varnishes and carbon papers.

Charcoal is the impure form of carbon because of its porous structure and large surface area.

Coke contains 80-85% carbon. It is used as a fuel and as a reducing agent in metallurgy.

88. The Poisonous nature of Carbon monoxide (CO) is due to its

- (a) insolubility in water
- (b) ability to form a complex with haemoglobin
- (c) ability to reduce some metal oxides
- (d) property of having one sigma bond

⊗ **(b)** Carbon monoxide (CO) is highly poisonous to living beings because it has an ability to form more stable carboxyhaemoglobin. It is 300 times more stable than oxygen-haemoglobin complex. In blood, when the concentration of carboxyhaemoglobin reaches about 3-4 per cent. The oxygen carrying capacity of blood is greatly reduced. The oxygen deficiency results into headache, weak eyesight, nervousness, etc.

89. Which one of the following elements is needed in the human body to transfer electrical signals by nerve cells?

- (a) Lithium
- (b) Sodium
- (c) Rubidium
- (d) Caesium

⊗ **(b)** Sodium in the form of ions are found in large proportions in biological fluids. It plays an important role in the transmission of nerve signals. It also regulates the flow of water across cell membranes and in transport of sugars and amino acids into the cells.

90. Who among the following first discovered cell ?

- (a) Robert Brown
- (b) Robert Hooke
- (c) Leeuwenhoek
- (d) Rudolf Virchow

⊗ **(b)** Robert Hooke was the first who studied and discovered cell from a thin section of dead cork. He observed small honeycomb-like structures and named them as cells.

Robert Brown reported the discovery of nucleus. Leeuwenhoek was the first person to observe living cells under microscope. Rudolf Virchow proposed that all cells arise from pre-existing cells.

91. Which one of the following group of organisms forms a food chain?

- (a) Grass, human and fish
- (b) Grass, goat and human
- (c) Tree, tree cutter and tiger
- (d) Goat, cow and human

⊗ **(b)** The series of organisms in which one organism is being eaten by other is called food chain. The organisms given in the option (b) form the following food chain: Grass (Producers) → Goat (Primary Consumer) → Human (Secondary Consumer)

92. Which one of the following types of tissues will have contractile proteins?

- (a) Nervous tissue
- (b) Muscle tissue
- (c) Bone tissue
- (d) Blood tissue

⊗ **(b)** Contractile proteins are found in muscles. These proteins are actin and myosin and they are, the main components of thin and thick filaments respectively. Muscle contraction occurs when these filaments slide over one another in a series of repetitive events.

93. If by an unknown accident the acid secreting cells of the stomach wall of an individual are damaged. Digestion of which one of the following biomolecule will be affected to a greater extent?

- (a) Protein only
- (b) Lipid
- (c) Carbohydrate only
- (d) Protein and Carbohydrate

⊗ **(a)** Pepsinogen is an inactive form of pepsin which is secreted by oxyntic cells. It is converted into active form called Pepsin in the presence of HCl. Pepsin converts protein molecules into proteases, peptones and ultimately into amino acids. Hence, proteins will not be digested if acid secreting cells of stomach wall of an individual get damaged.

94. In which one of the following places, Headquarters of a Railway Zone is located?

- (a) Kanpur
- (b) Lucknow
- (c) Hajipur
- (d) New Jalpaiguri

⊗ **(c)** The East Central Railway (ECR) is one of the 17 railway zones in India. It is headquartered at Hajipur (Bihar) and comprises Sonpur, Samastipur, Danapur, Mughalsarai and Dhanbad divisions.

95. Which of the following statements about Indian Academy of Highway Engineers is/ are correct?

1. It is a registered society.
2. It is a collaborative body of both Central Government and State Governments.

Select the correct answer using the codes given below

- (a) 1 only
- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

⊗ **(d)** Indian Academy of Highway Engineers is the apex training institute set-up to address the training needs of Highway and Bridge Engineers in the country. It was set-up as an Institute in the year 1983 with the primary objective to

fulfill the need for training of highway engineers at the entry level and during the service. It is neither a registered society nor is a collaboration between the central and the State Governments.

96. Which one of the following is NOT a tributary of Indus River?

- (a) Beas
- (b) Ravi
- (c) Chenab
- (d) Tawi

⊗ **(d)** The Tributaries of Indus include Beas, Chenab, Gar, Gilgit, Gomal, Hunza, Jhelum, Kabul, Kunar, Kurram, Panjnad, Ravi, Shyok, Soan, Suru, Satluj, Swat, Zanskar, Zhob. Tawi is not one of the tributaries of Indus river. It is one of the left bank tributary of the Chenab River.

97. Which one among the following is the largest tiger reserve of India in terms of area of the core/critical tiger habitat?

- (a) Manas
- (b) Pakke
- (c) Nagarjunasagar Srisailem
- (d) Periyar

⊗ **(c)** Nagarjunsagar-Srisailem Tiger Reserve is the largest tiger reserve in India in terms of area of core and critical habitat. The reserve spreads over five districts, Kurnool district, Prakasam district, Guntur district, Nalgonda district and Mahbubnagar district. The total area of the tiger reserve is 3,568 km² (1,378 sq mi).

98. Which one of the, following is NOT a coastal depositional feature ?

- (a) Tombolo
- (b) Sand bar
- (c) Stack
- (d) Spit

⊗ **(c)** A stack or sea stack is a geological landform consisting of a steep and often vertical column or columns of rock in the sea near a coast, formed by wave erosion. Stacks are formed over time by wind and water, processes of coastal geomorphology. All the other options are forms of coastal depositional landform.

99. Which of the following is/are coastal erosional feature(s) ?

1. Notch
2. Sea Arch
3. Cliff
4. Hook

Select the correct answer using the codes given below

- (a) 1, 2 and 3
- (b) 2, 3 and 4
- (c) 2 and 3 only
- (d) 1 only

⊗ **(a)** A notch or small hollow is an indentation or a concave cut into a surface or edge (as in a coastline). It is not an erosional feature Sea Arch and Cliff are examples of Coastline erosional features. A sea arch is a natural opening eroded out of a cliff face by marine processes.

Some arches appear to have developed from surge channels, which are created by wave refraction causing the focussing of wave fronts on the side of a headland. A cliff is a high area of rock with a very steep side, often on a coast.

100. Chemical weathering of rocks is much greater in a place with

- (a) cold and dry climate
- (b) hot and humid climate
- (c) hot and dry climate
- (d) cold and humid climate

⊗ (b) Chemical Weathering results from chemical reactions between minerals in rocks and external agents like air or water. Oxygen oxidizes minerals to alteration products whereas water can convert minerals to clays or dissolve minerals completely. It occurs majorly in areas with hot and humid climate.

101. Which of the following statements about specific heat of a body is/are correct?

1. It depends upon mass and shape of the body
2. It is independent of mass and shape of the body
3. It depends only upon the temperature of the body

Select the correct answer using the codes given below

- (a) 1 only
- (b) 2 and 3
- (c) 1 and 3
- (d) 2 only

⊗ (a) Every substance has a unique value for the amount of heat absorbed or rejected to change the temperature of unit mass of it by one unit. This quantity is referred as the specific heat capacity of a body. It depends on the nature as well as mass of the substance and its change in temperature. Hence, option (a) is correct.

102. Which one of the, following is an example of the force of gravity of the earth acting on a vibrating pendulum bob?

- (a) Applied force
- (b) Frictional force
- (c) Restoring force
- (d) Virtual force

⊗ (c) An object that is vibrating is acted upon by a restoring force. The restoring force causes the vibrating object to slow down as it moves away from the equilibrium position and to speed up as it approaches the equilibrium position. There is the force of gravity that acts downward upon the bob. And the tension force results from string pulling upon the bob of the pendulum.

103. Which one of the following statements about the refractive index of a material medium with respect to air is correct?

- (a) It can be either positive or negative
- (b) It can have zero value
- (c) It is unity for all materials
- (d) It is always greater than one

⊗ (d) Refractive index of a material is given by the ratio of speed of light in vacuum to the speed of light in any medium. Refractive index is always greater than one because by the definition of refractive index, n of a medium (e.g. glass) is the ratio of the speed of light in a vacuum C , to the speed in the medium v and speed of light is maximum in vacuum, which gives the value of n greater than one.

104. Which one of the following statements about magnetic field lines is NOT correct?

- (a) They can emanate from a point
- (b) They do not cross each other
- (c) Field lines between two poles cannot be precisely straight lines at the ends
- (d) There are no field lines within a bar magnet

⊗ (c) The magnetic field lines is defined as the path along which the compass needles are aligned. They cannot intersect i.e., do not cross each other. Tangent drawn at any point gives the direction of magnetic field. Outside a magnet, they are directed from north to south pole and inside a magnet they are directed from south to north. These lines are always normal to the surface, which are precisely straight at the ends. Hence, statement (c) is not correct.

105. Two convex lenses with power 2 dioptre are kept in contact with each other. The focal length of the combined lens system is

- (a) 0.10 m
- (b) 2m
- (c) 4m
- (d) 0.25m

⊗ (d) Here, $P_1 = P_2 = 2 \therefore$ dioptre (D)
Using the formula total power, $P = P_1 + P_2$
 $= 2 + 2 = 4D, f = \frac{1}{P} = \frac{1}{4m} = 0.25m$

106. Which one of the following alkali metals has lowest melting point?

- (a) Sodium
- (b) Potassium
- (c) Rubidium
- (d) Caesium

⊗ (d) The melting point of alkali metals decreases on moving down the group due to decrease in the extent of metallic bonding. Thus, the sequence of melting point among the given options is

$$Na > K > Rb > Cs$$

Therefore, Caesium (Cs) have the least melting point.

107. Which one of the following metals is alloyed with sodium to transfer heat in a nuclear reactor?

- (a) Potassium
- (b) Calcium
- (c) Magnesium
- (d) Strontium

⊗ (a) Sodium-potassium alloy (NaK) is an alloy of two alkali metals sodium and potassium. It is used as a heat-transfer. Coolant in fast-breeder nuclear reactors and experimentally in gas-turbine power plants.

108. Which one of the following metals is used in the filaments of photo-electric cells that convert light energy into electric energy?

- (a) Tungsten
- (b) Copper
- (c) Rubidium
- (d) Aluminium

⊗ (a) Photo electric cells is a device which convert light-energy directly into electric energy. Main type of these cells are photo voltaic cell, photo emissive cell, photo conductive cell. The filament of photo electric cells are made up of tungsten. Electrons are obtained from the filament by thermionic emission and are accelerated to the anode by a potential difference (~ 100 kV).

109. Which of the following statements about Ring of Fire is/are correct?

1. It is a zone of convergence plate boundaries
2. It is an active seismic and volcanic zone
3. It is associated with deep trench

Select the correct answer using the codes given below

- (a) 1 and 2 only
- (b) 2 and 3 only
- (c) 1 only
- (d) 1, 2 and 3

⊗ (d) The Ring of Fire is a ring of volcanoes around the Pacific Ocean that result from subduction of oceanic plates beneath lighter continental plates. This is also where the Earth's deep ocean trenches are and where the Earth's deep earthquakes are. The trenches form because the downgoing plate is bent downward as it subducts. It is the zone of convergence plate boundaries.

110. Which one of the following Himalayan vegetation species is found between the altitudes of 1800 to 2600 metres?

- (a) Saal
- (b) Chir
- (c) Spruce
- (d) Deodar

⊗ (d) Deodar tree is also known as Himalayan Cedar. These evergreen coniferous trees are native of Pakistan and Himalayas as they thrive at altitudes of 1,500-3,200 meters above sea level.

Deodar grows to a height of 40–60 meters (131–164 feet) with a trunk diameter of 3 meters (10 feet). The timber of Deodar tree is used as construction material for its durability.

111. Which one of the following rivers is NOT a tributary of river Cauvery?

- (a) Hemavati (b) Arkavati
(c) Indravati (d) Amravati

⊗ (c) The tributaries of Kaveri include Amaravati, Arkavathy, Bhavani, Chinnar, Hemavati, Honnuhole, Kabini, Kannika, Kollidam, Lakshmana Tirtha, Lokapavani, Noyyal, Pambar, Shimsha, Sujyothi. Indravati River is a stream of the river Godavari and is its tributary.

112. Which of the following conditions is/are essential for tea cultivation?

1. Tropical and sub-tropical climate
2. Heavy rainfall ranging from 150 cm to 250 cm
3. Soil should contain good amount of lime.

Select the correct answer using the codes given below

- (a) 1, 2 and 3 (b) 1 and 2 only
(c) 2 and 3 only (d) 1 only

⊗ (b) Tea is an evergreen plant. It grows both in tropical and subtropical regions. The tea plant grows well in hot and humid climate. Actually, there is an intimate relationship between climate, yield per hectare and the quality of tea.

(i) The ideal temperature for growing tea is between 20 °C and 30 °C.

(ii) It needs heavy rainfall between 150 and 250 cm. It should be well-distributed throughout the year and should be in the form of frequent showers.

However it does not require soils with lime for its cultivation.

113. Bharatmala Project is related to

- (a) Improving road connectivity
(b) Interlinking ports and railways
(c) Interlinking of rivers
(d) Interlinking major cities with gas pipelines

⊗ (a) Bharatmala project is the second largest highways construction project in the country. It aims to build 50,000 km of highway roads targeted across the country. Bharatmala will look to improve connectivity particularly on economic corridors, border areas and far flung areas with an aim of quicker movement of cargo and boosting exports.

114. Which one of the following is a local wind that blows out from Siberia ?

- (a) Bora (b) Purga
(c) Mistral (d) Blizzard

⊗ (d) Blizzards are the local winds of Siberia which blows out from the Siberian region to parts of south Asia. Blizzards are dangerous winter storms that are a combination of blowing snow and wind resulting in very low visibilities.

115. Which one of the following centres is NOT known for iron and steel industry ?

- (a) Bhadravati (b) Salem
(c) Vishakhapatnam (d) Renukoot

⊗ (d) Mysore Iron and Steel Company (MISCO) is located at Bhadravati on the banks of river Bhadravati in Shimoga district of Karnataka. Salem steel plant is located in the Salem district of Tamil Nadu. The plant has the advantage of rich iron ore and limestone, which is readily available in the adjoining areas. It also enjoys the facilities of cheap power, charcoal and vast market. Hindalco's plant is located in Renukoot which is involved in the smelting of Aluminium.

116. Which of the following are essential prerequisites for establishment of a thermal power station?

1. Availability of fossil fuels
2. Proximity to a river, lake or sea
3. Good transport network
4. Proximity to an urban centre

Select the correct answer using the codes given below

- (a) 1, 2 and 3 (b) 2 and 4
(c) 2 and 3 only (d) 1 and 3 only

⊗ (a) The essential prerequisites of a thermal power plant include that it must be in proximity to the fossil fuel and proximity to a water source like river, lake or sea. It should also have a good transport network for the transportation of raw materials and the finished products. However proximity to an urban centre is not one of the essential conditions for establishment of a power plant.

117. Which of the following statements about 'Aadi Mahotsav' held recently in New Delhi is/are correct?

1. The theme of the festival was 'A Celebration of the Spirit of Tribal Culture, Cuisine and Commerce'
2. The festival was organised by the Ministry of Tourism, Government of India

Select the correct answer using the codes given below

- (a) 1 only
(b) 2 only
(c) Both 1 and 2
(d) Neither 1 nor 2

⊗ (a) The Aadi Mahotsav, a celebration of the spirit of Tribal Culture, Craft, Cuisine and Commerce was held at Dilli Haat, New Delhi, on the of 30th November, 2017. The theme of this festival was 'A Celebration of the Spirit of Tribal Culture, Cuisine and Commerce'. It was organised by the Tribal secretary and not ministry of tourism.

118. Light year is a unit for measurement of

- (a) age of universe
(b) very large distance
(c) very small time intervals
(d) very high temperature

⊗ (b) Light year is a unit of measure of distance travelled by light in one year. It is used for measuring very large distance. 1 light year = 9.46×10^{15} m.

119. Which of the following statements about electromagnetic waves, sound waves and water waves is/are correct?

1. They exhibit reflection
2. They carry energy
3. They exert pressure
4. They can travel in vacuum

Select the correct answer using the codes given below

- (a) 1, 2 and 3 (b) 2 and 4
(c) 1 and 3 only (d) 1 only

⊗ (a) Electromagnetic waves, sound waves and water waves exhibit reflection, carry energy (EM waves), exert pressure (water waves), but sound waves cannot travel in vacuum.

120. Thermal capacity of a body depends on the

- (a) mass of the body only
(b) mass and shape of the body only
(c) density, of the body
(d) mass, shape and temperature of the body

⊗ (d) Thermal capacity of a body can be defined as the amount of heat required to change the temperature of an object by a certain degree. It depends upon the mass, shape and temperature of the body.

121. Who among the following first used the term 'Industrial Revolution' in English to describe, the changes that occurred in British industrial development between 1760 and 1820?

- (a) Karl Marx (b) Georges Michelet
(c) Arnold Toynbee (d) Friedrich Engels

⊗ (c) The term Industrial Revolution was first popularised by the English economic historian Arnold Toynbee to describe Britain's economic development from 1760 to 1820.

122. Which one of the following statements about the Olympe de Gouges (1748- 1793) is correct?

- (a) She declared that although citizens should have equal rights, they are not entitled to the same honours by the State
 (b) She was a supporter of the Jacobin government
 (c) She was jailed for treason by the National Assembly
 (d) She declared that the nation is the union of woman and man
- ⊗ (a) Only the first statement (a) is correct. She declared that although citizens should have equal rights they are not entitled to the same honours by the state.

123. Who among the following built a model steam engine in 1698 called "Miner's Friend" to drain mines?

- (a) Thomas Savery
 (b) Thomas Newcomen
 (c) James Watt
 (d) Richard Arkwright
- ⊗ (a) Thomas Savery was an English inventor and engineer, born in England. He invented the first commercially used steam powered device in 1698, a steam pump which is often referred to as an 'engine'. Savery's 'engine' was a revolutionary method of pumping water, which solved the problem of mine drainage and made widespread public water supply practical.

124. Which one of the following statements about Renaissance Humanist culture is NOT true?

- (a) It slackened the control of religion over human life
 (b) It believed that human nature was many-sided
 (c) It was concerned with good manners
 (d) It criticised material wealth, power and glory
- ⊗ (c) The term Renaissance Humanist was derived from the program of studies called the 'Studia Humanitatis'. However, the idea of calling this 'Humanism' only really arose in the nineteenth century. It majorly advocated that human outlook should be based on a modern plan and not blindly follow a religious plan. It never spoke about good manners.

125. Who gifted the *Badshah Nama* to King George in 1799?

- (a) Abul Fazl
 (b) Abdul Hamid Lahori
 (c) Nawab of Awadh
 (d) William Jones
- ⊗ (c) In 1799, the Nawab (provincial governor) of Awadh in northern India sent the Padshahnama, to King George III of

England. Badshahnama is a genre of works written as the official visual history of Mughal emperor, Shah Jahan's reign.

126. What is the name of the award given to meritorious men in the Mughal Court in the form of a robe of honour that was once worn by the Emperor?

- (a) Sarapa (b) Patka
 (c) Padma murassa (d) Khilat
- ⊗ (c) *Padma murassa* i.e., a lotus blossom set with jewel was considered a special gift. It was gifted by the emperor only in exceptional circumstances. The emperor would receive several gifts from the courtiers. The courtiers would not go to emperor empty-handed.

127. Who among the following social reformer started a society for the encouragement of widow remarriage in 1866 in Maharashtra ?

- (a) Bal Gangadhar Tilak
 (b) Jyotirao Phule
 (c) Vishnushastri Pandit
 (d) Pandita Ramabai
- ⊗ (b) Jyotirao Govindrao Phule was an Indian social activist, a thinker and anti-caste social reformer from Maharashtra. He worked for widow remarriage and started a home for pregnant Brahmin widows to give birth in a safe and secure place in 1863.

128. Name the first major voluntary association representing primarily Indian landlord interests that was set up in Calcutta in 1851 ?

- (a) British Indian Association
 (b) Landholder's Society
 (c) Madras Native Association
 (d) Bombay Association
- ⊗ (a) British Indian Association was created after amalgamating the "Landholders Society" and "British India Society" on 31 October 1851. This was the first political organisation that brought the Indian landlords together. The President of the first committee of this organisation was Raja Radhakanta Deb.

129. Who among the following introduced the Permanent Settlement of Bengal in 1793 ?

- (a) Lord Cornwallis
 (b) Lord Ripon
 (c) Robert Clive
 (d) John Adam
- ⊗ (a) The Permanent Settlement was introduced by Lord Cornwallis in 1793. It was an agreement between the British East India Company and the Landlords of Bengal to settle the Land Revenue to be raised. In this agreement it was agreed

that the landlords would have perpetual and hereditary rights over the land, so long as they pay the fixed revenue to the British Government.

130. Name the rebel who fought against the British in the battle of Chinhat in the course of the 1857 Revolt?

- (a) Ahmadullah Shah (b) Shah Mal
 (c) Mangal Pandey (d) Kunwar Singh
- ⊗ (*) The Battle of Chinhat between the British forces and Indian rebels, at Ismailganj, near Chinhat. The British were led by The Chief Commissioner of Oude, Sir Henry Lawrence. The insurgent force, which consisted of mutineers from the East India Company's army and retainers of local landowners was led by Barkat Ahmad, a mutineer officer of the Company's army.

131. Who among the following are the two civil servants who assisted the Constituent Assembly in framing the Constitution of India ?

- (a) B. N. Rau and K. M. Munshi
 (b) S. N. Mukherjee and Alladi Krishnaswamy Aiyar
 (c) B. N. Rau and S. N. Mukherjee
 (d) K. M. Munshi and Alladi Krishnaswamy Aiyar
- ⊗ (c) Sir Benegal Narsing Rao was an Indian civil servant, jurist, diplomat and statesman known for his key role in drafting the Constitution of India. S.N Mukherjee was another civil servant who assisted in the framing of the Constitution of India.

132. Which member of 'the Constituent Assembly proposed the resolution that the National Flag of India be a "horizontal tricolour of saffron, white and dark green in equal proportion", with a wheel in navy, blue at the centre?

- (a) Jawaharlal Nehru
 (b) B. R. Ambedkar
 (c) Rajendra Prasad
 (d) Sardar Vallabhbhai Patel
- ⊗ (c) In 1947, when India gained freedom from the British, a committee headed by Dr. Rajendra Prasad decided to adopt the flag of the Congress as the national flag of India with a few modifications. With this in mind, the flag of 1931 was adopted as the national flag of India, but the charkha in the middle was replaced with the Ashoka Chakra. Thus, the Indian national flag was born. The saffron colour on top represents sacrifice, white represents peace and purity and green signifies the law of dharma (righteousness).

133. Which of the following is/are NOT historical biography/biographies?

1. Dipavamsa
2. Harshacharita
3. Vikramankadevacharita
4. Prithvirajavijaya

Select the correct answer from the codes given below

- (a) 1 only (b) 2 and 3 only
(c) 2, 3 and 4 only (d) 1, 2, 3 and 4

⊙ (a) Dipavamsa is one of the most important works in Pali Literature. It details the tooth relic and Bodhi Tree's arrival in Sri Lanka. It also deals with the arrival of Buddha's teaching and preachers in Sri Lanka. It mentions that Buddha visited Kelaniya and Dighavapi in Sri Lanka. All the other options are biographies about kings.

134. Which of the following pairs are correctly matched ?

Traveller	Country from
1. Marco Polo	Italy
2. Ibn Battuta	Morocco
3. Nikitin	Russia
4. Seydi Ali Reis	Turkey

Select the correct answer using the codes given below

- (a) 1, 2 and 3 only (b) 2 and 3 only
(c) 1, 2, 3 and 4 (d) 1 and 4 only

⊙ (c) Marco Polo was an Italian merchant, explorer and writer, born in the Republic of Venice. Ibn Battuta was a Moroccan scholar who widely travelled the medieval world. Afanasy Nikitin was a Russian merchant of Tver and one of the first Europeans to travel and to document his visit to India. Seydi Ali Reis was an Ottoman admiral and navigator from Turkey. He commanded the left wing of the Ottoman fleet at the naval Battle of Preveza in 1538. So all the given options are correct.

135. Which of the following clans are included in the Agnikula Rajputs ?

1. Pratiharas
2. Chaulukyas
3. Paramaras
4. Chahamanas

Select the correct answer from the codes given below

- (a) 1 and 3 only (b) 1, 3 and 4 only
(c) 1, 2, 3 and 4 (d) 2 and 4 only

⊙ (c) The four Rajput clans from Agnikunda were Chauhans, Chalukyas, Parmaras and Pratiharas. This theory comes from the Prithvirajraso of Chandarbardai. The Rajputs descended from Agni and this theory is based upon the Agnikula Legend of Bhavishyapurana .

136. Who among the following was the author of Humayun Nama?

- (a) Roshanara Begum
- (b) Ruquaiya Sultan Begum
- (c) Gulbadan Begum
- (d) Gauhara Begum

⊙ (c) Gulbadan begum is best known as the author of Humayun-Nama, the account of the life of her half-brother, Emperor Humayun, which she wrote on the request of her nephew, Emperor Akbar.

137. Which one of the following about the Parliament of India is NOT correct?

- (a) The Parliament consists of the President, the Lok Sabha and the Rajya Sabha
- (b) There are no nominated members in the Lok Sabha
- (c) The Rajya Sabha cannot be dissolved
- (d) Some members of the Rajya Sabha are nominated by the President

⊙ (c) Anglo-Indians are the only community that has its own representatives nominated to the Lok Sabha (Lower House) in India's Parliament. It is done only if the President of India feels that the Anglo Indian community has not been adequately represented in the Lok Sabha.

138. Which one of the following statements with regard to the Comptroller and Auditor General (CAG) of India is NOT correct?

- (a) He is appointed by the President of India
- (b) He can be removed from office in the same way as the judge of the Supreme Court of India
- (c) The CAG is eligible for further office under the Government of India after he has ceased to hold his office
- (d) The salary of the CAG is charged upon the Consolidated Fund of India

⊙ (c) The CAG is not eligible for further office either under the Government of India or under the Government of any State after he has ceased to hold his office. These provisions are in order to ensure the independence of CAG. All the other provisions mentioned are correct.

139. The Superintendence, direction and control of elections in India is vested in

- (a) The Supreme Court of India
- (b) The Parliament of India
- (c) The Election Commission of India
- (d) The Chief Election Commissioner

⊙ (c) According to Article 324 of the Constitution of India the superintendence, direction and control of the preparation of the electoral rolls for,

and the conduct of, all elections shall be vested in the Election Commission. Therefore it is the sole authority in India that takes charge of elections in India.

140. Which of the following provision(s) of the Constitution of India became effective from 26th November, 1949?

1. Elections
2. Citizenship
3. Emergency provisions
4. Appointment of the Judges

Select the correct answer using the codes given below

- (a) 1 only (b) 1 and 2 only
(c) 1, 2 and 3 (d) 2 and 4

⊙ (b) The provisions of elections and citizenship became effective from 26th November 1949. Rest of the provisions including the Emergency provisions and the appointment of the judges were added later in the Constitution.

141. Which of the following statements regarding construction of Rohtang tunnel is NOT correct?

- (a) It is located at an altitude of 5,000 feet
- (b) It will provide all-year connectivity to Lahaul and Spiti Valley
- (c) The tunnel is being built by the Border Roads Organisation
- (d) It will reduce the length of the Leh-Manali highway by approximately 50 km

⊙ (a) The Rohtang tunnel is located at 3,100 metres (10,171 ft). It is being built by the Border Roads organisation to provide all year connectivity to Lahaul and Spiti valley. It also aims at reducing the distance of Manali Leh Highway by Approx 50 km.

142. Who among the following recently became the first woman pilot in Indian Navy?

- (a) Astha Segal
- (b) Roopa A
- (c) Sakthi Maya S
- (d) Shubhangi Swaroop

⊙ (d) Shubhangi Swaroop has made history by becoming the first woman to be inducted into the Indian Navy as a pilot.

143. Who among the following Indians did NOT hold the title of Miss World ?

- (a) Reita Faria
- (b) Sushmita Sen
- (c) Diana Hayden
- (d) Yukta Mookhey

⊙ (b) Sushmita Sen is the winner of the Miss Universe pageant of 1994. Sen was the first Indian woman to win the crown. All the other options are former Miss World.

144. Which one of the following countries has failed to qualify for the first time in 60 years for the FIFA World Cup to be held in Russia in the year 2018 ?

- (a) Mexico (b) Iran
(c) Saudi Arabia (d) Italy

⊙ (d) Italy has failed to qualify for first World Cup in 60 years after play-off defeat to Sweden.

145. The Defence Technology and Trade Initiative (DTTI) is a forum for dialogue on defence partnership between India and

- (a) Russia
(b) United States of America
(c) Israel
(d) France

⊙ (b) Defence Technology and Trade Initiative (DTTI) originally called the 'Carter Initiative' after the name of U.S. Deputy Secretary of Defence Ashton Carter. Its main objective is to strengthen defence cooperation by facilitating the Indian companies to collaborate with US partners in defense co-production, where the US provides technology and guidance for building modern weapon systems.

146. As per the policy applicable in 2017, how much Foreign Direct Investment (FDI) is permitted in the defence sector in India?

- (a) 49 per cent through the automatic route
(b) 26 per cent through the government route
(c) 26 per cent through the automatic route and beyond that up to 49 per cent through the government route
(d) 75 per cent through the automatic route

⊙ (a) In the defence sector foreign investment up to 49% is permitted under the automatic route, foreign investment beyond 49% and upto 100% is permitted through Government approval, wherever

it is likely to result in access to modern technology or for other reasons to be recorded.

147. Which one of the following countries did NOT participate in the 21st edition of Exercise Malabar?

- (a) United States of America
(b) Japan
(c) India
(d) Australia

⊙ (d) The 2017 Malabar exercise was the 21st edition of the exercise and conducted from 10 to 17 July 2017. This edition involved navies from India, USA and Japan. The exercise included a harbor phase at Chennai. Australia was not a participant in this exercise.

148. Justice Dalveer Bhandari of India was recently re-elected to the International Court of Justice after Christopher Greenwood pulled out before 12th round of voting. Christopher Greenwood was a nominee of

- (a) Canada (b) Russia
(c) Britain (d) USA

⊙ (c) Sir Christopher John Greenwood is a British judge at the International Court of Justice, to which he was elected on 6th November 2008. He recently pulled out of before the 12th round of voting.

149. In order to review the Income Tax Act, 1961 and to draft a new Direct Tax Law in consonance with economic needs of the country, the Government of India in November 2017 has constituted a Task Force. Who among the following is made the convenor of it ?

- (a) Shri Arvind Subramanian
(b) Shri Arvind Modi
(c) Shri Amitabh Kant
(d) Dr. Bibek Debroy

⊙ (b) The Union Government has constituted a task force to review the Income Tax Act 1961 and draft a new

direct tax law in consonance with current economic needs. Central Board of Direct Taxes (CBDT) member Arvind Modi will be the convenor of task force while Chief Economic Adviser Dr. Arvind Subramanian will be a permanent Special Invitee. The task force will draft an appropriate direct tax legislation keeping in view the direct tax system in various countries, international best practices and economic needs of the country. It will submit its report within six months.

150. The 5th Global Conference on Cyber Space (GCCS) was held in New Delhi in November, 2017. Which of the following statements about GCCS is/are correct?

1. The 4th version of GCCS was held in London.
2. The main theme of GCCS 2017 is 'Cyber4All : A Secure and Inclusive Cyberspace for Sustainable Development'.
3. 'Bindu' is the logo of GCCS 2017.

Select the correct answer using the codes given below

- (a) 1 only
(b) 2 only
(c) 2 and 3 only
(d) 1, 2 and 3

⊙ (b) The Global Conference on CyberSpace (GCCS) was started in 2011 in London, second GCCS was held in 2012 in Budapest with focus on relationship between internet rights and internet security. The third edition of GCCS was held in 2013 in Seoul. The fourth version GCCS 2015 was held on April 16-17, 2015 in The Hague, Netherlands, which saw participation from 97 countries. Hence the 1st statement is incorrect. Bindu is not the logo for this conference hence the third statement is also incorrect.

NDA/NA

National Defence Academy/Naval Academy

SOLVED PAPER 2017 (II)

PAPER I: Mathematics

1. If $x + \log_{10}(1+2^x) = x \log_{10} 5 + \log_{10} 6$ then x is equal to

- (a) 2, -3 (b) 2 only (c) 1 (d) 3

2. The remainder and the quotient of the binary division $(101110)_2 \div (110)_2$ are respectively

- (a) $(111)_2$ and $(100)_2$ (b) $(100)_2$ and $(111)_2$
(c) $(101)_2$ and $(101)_2$ (d) $(100)_2$ and $(100)_2$

3. The matrix A has x rows and $x+5$ columns. The matrix B has y rows and $11-y$ columns. Both AB and BA exist. What are the values of x and y respectively?

- (a) 8 and 3 (b) 3 and 4
(c) 3 and 8 (d) 8 and 8

4. If $S_n = nP + \frac{n(n-1)Q}{2}$, where S_n denotes the sum of the first n terms of an AP, then the common difference is

- (a) $P+Q$ (b) $2P+3Q$
(c) $2Q$ (d) Q

5. The roots of the equation

$$(q-r)x^2 + (r-p)x + (p-q) = 0 \text{ are}$$

- (a) $\frac{(r-p)}{(q-r)}, \frac{1}{2}$
(b) $\frac{(p-q)}{(q-r)}, 1$
(c) $\frac{(q-r)}{(p-q)}, 1$
(d) $\frac{(r-p)}{(p-q)}, \frac{1}{2}$

6. If E is the universal set and $A = B \cup C$, then the set $E - (E - (E - (E - (E - A))))$ is same as the set

- (a) $B' \cup C'$ (b) $B \cup C$
(c) $B' \cap C'$ (d) $B \cap C$

7. If $A = \{x : x \text{ is a multiple of } 2\}$, $B = \{x : x \text{ is a multiple of } 5\}$ and $C = \{x : x \text{ is a multiple of } 10\}$, then $A \cap (B \cap C)$ is equal to

- (a) A (b) B
(c) C
(d) $\{x : x \text{ is a multiple of } 100\}$

8. If α and β are the roots of the equation $1 + x + x^2 = 0$, then the matrix product

$$\begin{bmatrix} 1 & \beta \\ \alpha & \alpha \end{bmatrix} \begin{bmatrix} \alpha & \beta \\ 1 & \beta \end{bmatrix}$$

is equal to

- (a) $\begin{bmatrix} 1 & 1 \\ 1 & 2 \end{bmatrix}$ (b) $\begin{bmatrix} -1 & -1 \\ -1 & 2 \end{bmatrix}$
(c) $\begin{bmatrix} 1 & -1 \\ -1 & 2 \end{bmatrix}$ (d) $\begin{bmatrix} -1 & -1 \\ -1 & -2 \end{bmatrix}$

9. If $|a|$ denotes the absolute value of an integer, then which of the following are correct?

1. $|ab| = |a||b|$
2. $|a+b| \leq |a| + |b|$
3. $|a-b| \geq |a| - |b|$

Select the correct answer using the code given below.

- (a) 1 and 2 only
(b) 2 and 3 only
(c) 1 and 3 only
(d) 1, 2 and 3

10. How many different permutation can be made out of the letters of the word 'PERMUTATION'?

- (a) 19958400 (b) 19954800
(c) 19952400 (d) 39916800

11. If $A = \begin{bmatrix} 4i-6 & 10i \\ 14i & 6+4i \end{bmatrix}$ and $k = \frac{1}{2i}$,

where $i = \sqrt{-1}$, then kA is equal to

- (a) $\begin{bmatrix} 2+3i & 5 \\ 7 & 2-3i \end{bmatrix}$ (b) $\begin{bmatrix} 2-3i & 5 \\ 7 & 2+3i \end{bmatrix}$
(c) $\begin{bmatrix} 2-3i & 7 \\ 5 & 2+3i \end{bmatrix}$ (d) $\begin{bmatrix} 2+3i & 5 \\ 7 & 2+3i \end{bmatrix}$

12. The sum of all real roots of the equation $|x-3|^2 + |x-3| - 2 = 0$ is

- (a) 2 (b) 3
(c) 4 (d) 6

13. It is given that the roots of the equation $x^2 - 4x - \log_3 P = 0$ are real. For this the minimum value of P is

- (a) $\frac{1}{27}$ (b) $\frac{1}{64}$
(c) $\frac{1}{81}$ (d) 1

14. If A is a square matrix, then the value of $\text{adj } A^T - (\text{adj } A)^T$ is equal to

- (a) A
 (b) $2|A|I$, where I is the identity matrix
 (c) null matrix whose order is same as that of A
 (d) unit matrix whose order is same as that of A

15. The value of the product

$\frac{1}{6^2} \times \frac{1}{6^4} \times \frac{1}{6^8} \times \frac{1}{6^{16}} \times \dots$ up to infinite terms is

- (a) 6 (b) 36 (c) 216 (d) 512

16. The value of the determinant

$$\begin{vmatrix} \cos^2 \frac{\theta}{2} & \sin^2 \frac{\theta}{2} \\ \sin^2 \frac{\theta}{2} & \cos^2 \frac{\theta}{2} \end{vmatrix}$$

for all values of θ , is

- (a) 1 (b) $\cos \theta$ (c) $\sin \theta$ (d) $\cos 2\theta$

17. The number of terms in the expansion of $(x+a)^{100} + (x-a)^{100}$ after simplification is

- (a) 202 (b) 101 (c) 51 (d) 50

18. In the expansion of $(1+x)^{50}$, the sum of the coefficients of odd powers of x is

- (a) 2^{26} (b) 2^{49}
 (c) 2^{50} (d) 2^{51}

19. If a, b, c are non-zero real numbers, then the inverse of the matrix

$$A = \begin{bmatrix} a & 0 & 0 \\ 0 & b & 0 \\ 0 & 0 & c \end{bmatrix}$$

is equal to

(a) $\begin{bmatrix} a^{-1} & 0 & 0 \\ 0 & b^{-1} & 0 \\ 0 & 0 & c^{-1} \end{bmatrix}$

(b) $\frac{1}{abc} \begin{bmatrix} a^{-1} & 0 & 0 \\ 0 & b^{-1} & 0 \\ 0 & 0 & c^{-1} \end{bmatrix}$

(c) $\frac{1}{abc} \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$

(d) $\frac{1}{abc} \begin{bmatrix} a & 0 & 0 \\ 0 & b & 0 \\ 0 & 0 & c \end{bmatrix}$

20. A person is to count 4500 notes. Let a_n denote the number of notes he counts in the n^{th} minute. If $a_1 = a_2 = a_3 = \dots = a_{10} = 150$, and $a_{10}, a_{11}, a_{12}, \dots$ are in AP with the common difference -2 , then the time taken by him to count all the notes is

- (a) 24 minutes (b) 34 minutes
 (c) 125 minutes (d) 135 minutes

21. The smallest positive integer n for which $\left(\frac{1+i}{1-i}\right)^n = 1$, is

- (a) 1 (b) 4 (c) 8 (d) 16

22. If we define a relation R on the set $N \times N$ as $(a, b) R (c, d) \Leftrightarrow a + d = b + c$ for all $(a, b), (c, d) \in N \times N$, then the relation is

- (a) symmetric only
 (b) symmetric and transitive only
 (c) equivalence relation
 (d) reflexive only

23. If $y = x + x^2 + x^3 + \dots$ up to infinite terms where $x < 1$, then which one of the following is correct?

- (a) $x = \frac{y}{1+y}$ (b) $x = \frac{y}{1-y}$
 (c) $x = \frac{1+y}{y}$ (d) $x = \frac{1-y}{y}$

24. If α and β are the roots of the equation $3x^2 + 2x + 1 = 0$, then the equation whose roots are $\alpha + \beta^{-1}$ and $\beta + \alpha^{-1}$ is

- (a) $3x^2 + 8x + 16 = 0$
 (b) $3x^2 - 8x - 16 = 0$
 (c) $3x^2 + 8x - 16 = 0$
 (d) $x^2 + 8x + 16 = 0$

25. The value of

$$\frac{1}{\log_3 e} + \frac{1}{\log_3 e^2} + \frac{1}{\log_3 e^4} + \dots \text{up to infinite terms is}$$

- (a) $\log_e 9$ (b) 0 (c) 1 (d) $\log_e 3$

26. A tea party is arranged for 16 people along two sides of a long table with eight chairs on each side. Four particular men wish to sit on one particular side and two particular men on the other side.

The number of ways they can be seated is

- (a) $24 \times 8! \times 8!$ (b) $(8!)^3$
 (c) $210 \times 8! \times 8!$ (d) $16!$

27. The system of equations $kx + y + z = 1$, $x + ky + z = k$ and $x + y + kz = k^2$ has no solution if k equals.

- (a) 0 (b) 1
 (c) -1 (d) -2

28. If $1.3 + 2.3^2 + 3.3^3 + \dots + n.3^n = \frac{(2n-1)3^a + b}{4}$ then a and b are respectively

- (a) $n, 2$ (b) $n, 3$
 (c) $n+1, 2$ (d) $n+1, 3$

29. In ΔPQR , $\angle R = \frac{\pi}{2}$. If $\tan\left(\frac{P}{2}\right)$ and

$\tan\left(\frac{Q}{2}\right)$ are the roots of the

equation $ax^2 + bx + c = 0$, then which one of the following is correct?

- (a) $a = b + c$ (b) $b = c + a$
 (c) $c = a + b$ (d) $b = c$

30. If $\left|z - \frac{4}{z}\right| = 2$, Then the maximum value of $|z|$ is equal to

- (a) $1 + \sqrt{3}$ (b) $1 + \sqrt{5}$
 (c) $1 - \sqrt{5}$ (d) $\sqrt{5} - 1$

31. The angle of elevation of a stationary cloud from a point 25 m above a lake is 15° and the angle of depression of its image in the lake is 45° . The height of the cloud above the lake level is

- (a) 25 m (b) $25\sqrt{3}$ m
 (c) 50 m (d) $50\sqrt{3}$ m

32. The value of

$\tan 9^\circ - \tan 27^\circ - \tan 63^\circ + \tan 81^\circ$ is equal to

- (a) -1 (b) 0
 (c) 1 (d) 4

33. The value of $\sqrt{3} \operatorname{cosec} 20^\circ - \sec 20^\circ$ is equal to

- (a) 4 (b) 2
 (c) 1 (d) -4

34. Angle α is divided into two parts A and B such that $A - B = x$ and $\tan A : \tan B = p : q$. The value of $\sin x$ is equal to

- (a) $\frac{(\rho + q)\sin\alpha}{\rho - q}$ (b) $\frac{\rho\sin\alpha}{\rho + q}$
 (c) $\frac{\rho\sin\alpha}{\rho - q}$ (d) $\frac{(\rho - q)\sin\alpha}{\rho + q}$

35. The value of $\sin^{-1}\left(\frac{3}{5}\right) + \tan^{-1}\left(\frac{1}{7}\right)$ is equal to
 (a) 0 (b) $\frac{\pi}{4}$ (c) $\frac{\pi}{3}$ (d) $\frac{\pi}{2}$

36. The angles of elevation of the top of a tower from the top and foot of a pole are respectively 30° and 45° . If h_T is the height of the tower and h_p is the height of the pole, then which of the following are correct?

1. $\frac{2h_p h_T}{3 + \sqrt{3}} = h_p^2$
2. $\frac{h_T - h_p}{\sqrt{3} + 1} = \frac{h_p}{2}$
3. $\frac{2(h_p + h_T)}{h_p} = 4 + \sqrt{3}$

Select the correct answer using the code given below.

- (a) 1 and 3 only (b) 2 and 3 only
 (c) 1 and 2 only (d) 1, 2 and 3

37. In a triangle ABC , $a - 2b + c = 0$.

The value of $\cot\left(\frac{A}{2}\right)\cot\left(\frac{C}{2}\right)$ is

- (a) $\frac{9}{2}$ (b) 3 (c) $\frac{3}{2}$ (d) 1

38. $\sqrt{1 + \sin A} = -\left(\sin\frac{A}{2} + \cos\frac{A}{2}\right)$ is true if

- (a) $\frac{3\pi}{2} < A < \frac{5\pi}{2}$ only (b) $\frac{\pi}{2} < A < \frac{3\pi}{2}$ only
 (c) $\frac{3\pi}{2} < A < \frac{7\pi}{2}$ (d) $0 < A < \frac{3\pi}{2}$

39. In triangle ABC , if $\frac{\sin^2 A + \sin^2 B + \sin^2 C}{\cos^2 A + \cos^2 B + \cos^2 C} = 2$

then the triangle is

- (a) right-angled (b) equilateral
 (c) isosceles (d) obtuse-angled

40. The principal value of $\sin^{-1} x$ lies in the interval

- (a) $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right)$ (b) $\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]$
 (c) $\left[0, \frac{\pi}{2}\right]$ (d) $[0, \pi]$

41. The points (a, b) , $(0, 0)$, $(-a, -b)$ and (ab, b^2) are

- (a) the vertices of a parallelogram
 (b) the vertices of a rectangle
 (c) the vertices of a square
 (d) collinear

42. The length of the normal from origin to the plane $x + 2y - 2z = 9$ is equal to

- (a) 2 units (b) 3 units
 (c) 4 units (d) 5 units

43. If α, β and γ are the angles which the vector \vec{OP} (O being the origin) makes with positive direction of the coordinate axes, then which of the following are correct?

1. $\cos^2 \alpha + \cos^2 \beta = \sin^2 \gamma$
2. $\sin^2 \alpha + \sin^2 \beta = \cos^2 \gamma$
3. $\sin^2 \alpha + \sin^2 \beta + \sin^2 \gamma = 2$

Select the correct answer using the code given below.

- (a) 1 and 2 only
 (b) 2 and 3 only
 (c) 1 and 3 only
 (d) 1, 2 and 3

44. The angle between the lines $x + y - 3 = 0$ and $x - y + 3 = 0$ is α and the acute angle between the lines $x - \sqrt{3}y + 2\sqrt{3} = 0$ and $\sqrt{3}x - y + 1 = 0$ is β . Which one of the following is correct?

- (a) $\alpha = \beta$ (b) $\alpha > \beta$
 (c) $\alpha < \beta$ (d) $\alpha = 2\beta$

45. Let $\vec{\alpha} = \hat{i} + 2\hat{j} - \hat{k}$, $\vec{\beta} = 2\hat{i} - \hat{j} + 3\hat{k}$ and $\vec{\gamma} = 2\hat{i} + \hat{j} + 6\hat{k}$ be three vectors. If $\vec{\alpha}$ and $\vec{\beta}$ are both perpendicular to the vector $\vec{\delta}$ and $\vec{\delta} \cdot \vec{\gamma} = 10$, then what is the magnitude of $\vec{\delta}$?

- (a) $\sqrt{3}$ units (b) $2\sqrt{3}$ units
 (c) $\frac{\sqrt{3}}{2}$ unit (d) $\frac{1}{\sqrt{3}}$ unit

46. If \hat{a} and \hat{b} are two unit vectors, then the vector $(\hat{a} + \hat{b}) \times (\hat{a} \times \hat{b})$ is parallel to

- (a) $(\hat{a} - \hat{b})$ (b) $(\hat{a} + \hat{b})$
 (c) $(2\hat{a} - \hat{b})$ (d) $(2\hat{a} + \hat{b})$

47. A force $\vec{F} = \hat{i} + 3\hat{j} + 2\hat{k}$ acts on a particle to displace it from the point $A(\hat{i} + 2\hat{j} - 3\hat{k})$ to the point $B(3\hat{i} - \hat{j} + 5\hat{k})$. The work done by the force will be

- (a) 5 units (b) 7 units
 (c) 9 units (d) 10 units

48. For any vector \vec{a}
 $|\vec{a} \times \hat{i}|^2 + |\vec{a} \times \hat{j}|^2 + |\vec{a} \times \hat{k}|^2$
 is equal to

- (a) $|\vec{a}|^2$ (b) $2|\vec{a}|^2$ (c) $3|\vec{a}|^2$ (d) $4|\vec{a}|^2$

49. A man running round a racecourse notes that the sum of the distances of two flag-posts from him is always 10 m and the distance between the flag-posts is 8 m. The area of the path he encloses is

- (a) 18π square metres
 (b) 15π square metres
 (c) 12π square metres
 (d) 8π square metres

50. The distance of the point $(1, 3)$ from the line $2x + 3y = 6$, measured parallel to the line $4x + y = 4$, is

- (a) $\frac{5}{\sqrt{13}}$ units (b) $\frac{3}{\sqrt{17}}$ units
 (c) $\sqrt{17}$ units (d) $\frac{\sqrt{17}}{2}$ units

51. If the vectors $a\hat{i} + \hat{j} + \hat{k}$, $\hat{i} + b\hat{j} + \hat{k}$ and $\hat{i} + \hat{j} + c\hat{k}$ ($a, b, c \neq 1$) are coplanar, then the value of

$$\frac{1}{1-a} + \frac{1}{1-b} + \frac{1}{1-c}$$

is equal to

- (a) 0 (b) 1
 (c) $a + b + c$ (d) abc

52. The point of intersection of the line joining the points $(-3, 4, -8)$ and $(5, -6, 4)$ with XY -plane is

- (a) $\left(\frac{7}{3}, -\frac{8}{3}, 0\right)$ (b) $\left(-\frac{7}{3}, -\frac{8}{3}, 0\right)$
 (c) $\left(-\frac{7}{3}, \frac{8}{3}, 0\right)$ (d) $\left(\frac{7}{3}, \frac{8}{3}, 0\right)$

53. If the angle between the lines whose direction ratios are $(2, -1, 2)$ and $\langle x, 3, 5 \rangle$ is $\frac{\pi}{4}$, then the smaller value of x is
 (a) 52 (b) 4 (c) 2 (d) 1

54. The position of the point $(1, 2)$ relative to the ellipse $2x^2 + 7y^2 = 20$ is
 (a) outside the ellipse
 (b) inside the ellipse but not at the focus
 (c) on the ellipse
 (d) at the focus

55. The equation of straight line which cuts off an intercept of 5 units on negative direction of Y -axis and makes an angle 120° with positive direction of X -axis is
 (a) $y + \sqrt{3}x + 5 = 0$
 (b) $y - \sqrt{3}x + 5 = 0$
 (c) $y + \sqrt{3}x - 5 = 0$
 (d) $y - \sqrt{3}x - 5 = 0$

56. The equation of the line passing through the point $(2, 3)$ and the point of intersection of lines $2x - 3y + 7 = 0$ and $7x + 4y + 2 = 0$ is
 (a) $21x + 46y - 180 = 0$
 (b) $21x - 46y + 96 = 0$
 (c) $46x + 21y - 155 = 0$
 (d) $46x - 21y - 29 = 0$

57. The equation of the ellipse whose centre is at origin, major axis is along X -axis with eccentricity $\frac{3}{4}$ and latus rectum 4 units is
 (a) $\frac{x^2}{1024} + \frac{7y^2}{64} = 1$ (b) $\frac{49x^2}{1024} + \frac{7y^2}{64} = 1$
 (c) $\frac{7x^2}{1024} + \frac{49y^2}{64} = 1$ (d) $\frac{x^2}{1024} + \frac{y^2}{64} = 1$

58. The equation of the circle which passes through the points $(1, 0)$, $(0, -6)$ and $(3, 4)$ is
 (a) $4x^2 + 4y^2 + 142x + 47y + 140 = 0$
 (b) $4x^2 + 4y^2 - 142x - 47y + 138 = 0$
 (c) $4x^2 + 4y^2 - 142x + 47y + 138 = 0$
 (d) $4x^2 + 4y^2 + 150x - 49y + 138 = 0$

59. A variable plane passes through a fixed point (a, b, c) and cuts the axes

in A, B and C respectively. The locus of the centre of the sphere $OABC$, O being the origin, is

- (a) $\frac{x}{a} + \frac{y}{b} + \frac{z}{c} = 1$ (b) $\frac{a}{x} + \frac{b}{y} + \frac{c}{z} = 1$
 (c) $\frac{a}{x} + \frac{b}{y} + \frac{c}{z} = 2$ (d) $\frac{x}{a} + \frac{y}{b} + \frac{z}{c} = 2$

60. The equation of the plane passing through the line of intersection of the planes $x + y + z = 1$, $2x + 3y + 4z = 7$, and perpendicular to the plane $x - 5y + 3z = 5$ is given by

- (a) $x + 2y + 3z - 6 = 0$
 (b) $x + 2y + 3z + 6 = 0$
 (c) $3x + 4y + 5z - 8 = 0$
 (d) $3x + 4y + 5z + 8 = 0$

61. The inverse of the function $y = 5^{\ln x}$ is

- (a) $x = y^{\frac{1}{n^5}}, y > 0$
 (b) $x = y^{n^5}, y > 0$
 (c) $x = y^{\frac{1}{n^5}}, y < 0$
 (d) $x = 5 \ln y, y > 0$

62. A function is defined as follows :

$$f(x) = \begin{cases} -\frac{x}{\sqrt{x^2}}, & x \neq 0 \\ 0, & x = 0 \end{cases}$$

Which one of the following is correct in respect of the above function?

- (a) $f(x)$ is continuous at $x = 0$ but not differentiable at $x = 0$
 (b) $f(x)$ is continuous as well as differentiable at $x = 0$
 (c) $f(x)$ is discontinuous at $x = 0$
 (d) None of the above

63. If $y = (\cos x)^{(\cos x)^{(\cos x)^\infty}}$, then $\frac{dy}{dx}$ is equal to

- (a) $-\frac{y^2 \tan x}{1 - y \ln(\cos x)}$ (b) $\frac{y^2 \tan x}{1 + y \ln(\cos x)}$
 (c) $\frac{y^2 \tan x}{1 - y \ln(\sin x)}$ (d) $\frac{y^2 \sin x}{1 + y \ln(\sin x)}$

64. Consider the following

1. $x + x^2$ is continuous at $x = 0$
 2. $x + \cos \frac{1}{x}$ is discontinuous at $x = 0$

3. $x^2 + \cos \frac{1}{x}$ is continuous at $x = 0$

Which of the above are correct?

- (a) 1 and 2 only
 (b) 2 and 3 only
 (c) 1 and 3 only
 (d) 1, 2 and 3

65. Consider the following statements :

1. $\frac{dy}{dx}$ at a point on the curve gives slope of the tangent at that point.
 2. If $a(t)$ denotes acceleration of a particle, then $\int a(t)dt + c$ gives velocity of the particle.
 3. If $s(t)$ gives displacement of a particle at time t , then $\frac{ds}{dt}$ gives its acceleration at that instant.

Which of the above statements is/are correct?

- (a) 1 and 2 only (b) 2 only
 (c) 1 only (d) 1, 2 and 3

66. If $y = \sec^{-1}\left(\frac{x+1}{x-1}\right) + \sin^{-1}\left(\frac{x-1}{x+1}\right)$,

then $\frac{dy}{dx}$ is equal to

- (a) 0 (b) 1
 (c) $\frac{x-1}{x+1}$ (d) $\frac{x+1}{x-1}$

67. What is $\int \tan^{-1}(\sec x + \tan x) dx$ equal to?

- (a) $\frac{\pi x}{4} + \frac{x^2}{4} + C$ (b) $\frac{\pi x}{2} + \frac{x^2}{4} + C$
 (c) $\frac{\pi x}{4} + \frac{\pi x^2}{4} + C$ (d) $\frac{\pi x}{4} - \frac{x^2}{4} + C$

68. A function is defined in $(0, \infty)$ by

$$f(x) = \begin{cases} 1 - x^2 & \text{for } 0 < x \leq 1 \\ \ln x & \text{for } 1 < x \leq 2 \\ \ln 2 - 1 + 0.5x & \text{for } 2 < x < \infty \end{cases}$$

Which one of the following is correct in respect of the derivative of the function, i.e., $f'(x)$?

- (a) $f'(x) = 2x$ for $0 < x \leq 1$
 (b) $f'(x) = -2x$ for $0 < x \leq 1$
 (c) $f'(x) = -2x$ for $0 < x < 1$
 (d) $f'(x) = 0$ for $0 < x < \infty$

- 69.** Which one of the following is correct in respect of the function $f(x) = x(x - 1)(x + 1)$?
- The local maximum value is larger than local minimum value
 - The local maximum value is smaller than local minimum value
 - The function has no local maximum
 - The function has no local minimum

- 70.** Consider the following statements :
- Derivative of $f(x)$ may not exist at some point.
 - Derivative of $f(x)$ may exist finitely at some point.
 - Derivative of $f(x)$ may be infinite (geometrically) at some point.
- Which of the above statements are correct?

- 1 and 2 only
- 2 and 3 only
- 1 and 3 only
- 1, 2 and 3

- 71.** The maximum value of $\frac{\ln x}{x}$ is
- e
 - $\frac{1}{e}$
 - $\frac{2}{e}$
 - 1

- 72.** The function $f(x) = |x| - x^3$ is
- odd
 - even
 - both even and odd
 - neither even nor odd

- 73.** If $l_1 = \frac{d}{dx}(e^{\sin x})$
- $$l_2 = \lim_{x \rightarrow 0} \frac{e^{\sin(x+h)} - e^{\sin x}}{h}$$
- $$l_3 = \int e^{\sin x} \cos x dx$$

then which one of the following is correct?

- $l_1 \neq l_2$
- $\frac{d}{dx}(l_3) = l_2$
- $\int l_3 dx = l_2$
- $l_2 = l_3$

- 74.** The general solution of

$$\frac{dy}{dx} = \frac{ax + h}{by + k}$$

represents a circle only when

- $a = b = 0$
- $a = -b \neq 0$
- $a = b \neq 0, h = k$
- $a = b \neq 0$

- 75.** If $\lim_{x \rightarrow \frac{\pi}{2}} \frac{\sin x}{x} = l$ and $\lim_{x \rightarrow \infty} \frac{\cos x}{x} = m$,

then which one of the following is correct?

- $l = 1, m = 1$
- $l = \frac{2}{\pi}, m = \infty$
- $l = \frac{2}{\pi}, m = 0$
- $l = 1, m = \infty$

- 76.** What is $\int_0^{2\pi} \sqrt{1 + \sin \frac{x}{2}} dx$ equal to?

- 8
- 4
- 2
- 0

- 77.** The area bounded by the curve $|x| + |y| = 1$

- 1 square unit
- $2\sqrt{2}$ square units
- 2 square units
- $2\sqrt{3}$ square units

- 78.** If x is any real number, then $\frac{x^2}{1 + x^4}$

belongs to which one of the following intervals?

- $(0, 1)$
- $\left(0, \frac{1}{2}\right)$
- $\left(0, \frac{1}{4}\right)$
- $[0, 1]$

- 79.** The left-hand derivative of

$$f(x) = [x] \sin(\pi x) \text{ at } x = k$$

where k is an integer and $[x]$ is the greatest integer function, is

- $(-1)^k(k - 1)\pi$
- $(-1)^{k-1}(k - 1)\pi$
- $(-1)^k k\pi$
- $(-1)^{k-1} k\pi$

- 80.** If $f(x) = \frac{x}{2} - 1$, then on the interval

$[0, \pi]$ which one of the following is correct?

- $\tan[f(x)]$, where $[\cdot]$ is the greatest integer function, and $\frac{1}{f(x)}$ are both continuous
- $\tan[f(x)]$, where $[\cdot]$ is the greatest integer function, and $f^{-1}(x)$ are both continuous
- $\tan[f(x)]$, where $[\cdot]$ is the greatest integer function, and $\frac{1}{f(x)}$ are both discontinuous
- $\tan[f(x)]$, where $[\cdot]$ is the greatest integer function is discontinuous but $\frac{1}{f(x)}$ is continuous

- 81.** The order and degree of the differential equation

$$\left[1 + \left(\frac{dy}{dx}\right)^2\right]^3 = \rho^2 \left[\frac{d^2y}{dx^2}\right]^2$$

are respectively

- 3 and 2
- 2 and 2
- 2 and 3
- 1 and 3

- 82.** If $y = \cos^{-1}\left(\frac{2x}{1+x^2}\right)$, then $\frac{dy}{dx}$ is

equal to

- $-\frac{2}{1+x^2}$ for all $|x| < 1$
- $-\frac{2}{1+x^2}$ for all $|x| > 1$
- $\frac{2}{1+x^2}$ for all $|x| < 1$
- None of the above

- 83.** The set of all points, where the function $f(x) = \sqrt{1 - e^{-x^2}}$ is differentiable, is

- $(0, \infty)$
- $(-\infty, \infty)$
- $(-\infty, 0) \cup (0, \infty)$
- $(-1, \infty)$

- 84.** Match List-I with List-II and select the correct answer using the code given below the lists :

List-I (Function)	List-II (Maximum value)
A. $\sin x + \cos x$	1. $\sqrt{10}$
B. $3\sin x + 4\cos x$	2. $\sqrt{2}$
C. $2\sin x + \cos x$	3. 5
D. $\sin x + 3\cos x$	4. $\sqrt{5}$

Code

- A B C D
- (a) 2 3 1 4
- (b) 2 3 4 1
- (c) 3 2 1 4
- (d) 3 2 4 1

- 85.** If $f(x) = x(\sqrt{x} - \sqrt{x+1})$, then $f(x)$ is

- continuous but not differentiable at $x = 0$
- differentiable at $x = 0$
- not continuous at $x = 0$
- None of the above

86. Which one of the following graph represents the function $f(x) = \frac{x}{x}$, $x \neq 0$?

(d) None of the above

87. Let $f(n) = \left[\frac{1}{4} + \frac{n}{1000} \right]$, where $[x]$ denotes the integral part of x . Then the value of $\sum_{n=1}^{1000} f(n)$ is

(a) 251 (b) 250 (c) 1 (d) 0

88. $\int (\ln x)^{-1} dx - \int (\ln x)^{-2} dx$ is equal to

(a) $x(\ln x)^{-1} + C$ (b) $x(\ln x)^{-2} + C$
(c) $x(\ln x) + C$ (d) $x(\ln x)^2 + C$

89. A cylindrical jar without a lid has to be constructed using a given surface area of a metal sheet. If the capacity of the jar is to be maximum, then the diameter of the jar must be k times the height of the jar. The value of k is
- (a) 1 (b) 2 (c) 3 (d) 4

90. The value of

$$\int_0^{\frac{\pi}{4}} \sqrt{\tan x} dx + \int_0^{\frac{\pi}{4}} \sqrt{\cot x} dx$$
 is equal to

(a) $\frac{\pi}{4}$ (b) $\frac{\pi}{2}$ (c) $\frac{\pi}{2\sqrt{2}}$ (d) $\frac{\pi}{\sqrt{2}}$

91. Let g be the greatest integer function. Then the function $f(x) = (g(x))^2 - g(x)$ is discontinuous at

(a) all integers
(b) all integers except 0 and 1
(c) all integers except 0
(d) all integers except 1

92. The differential equation of minimum order by eliminating the arbitrary constants A and C in the equation

$$y = A[\sin(x + C) + \cos(x + C)]$$
 is

(a) $y'' + (\sin x + \cos x)y' = 1$
(b) $y'' = (\sin x + \cos x)y'$
(c) $y'' = (y')^2 + \sin x \cos x$
(d) $y'' + y = 0$

93. Consider the following statements:

Statement I :

$$x > \sin x \text{ for all } x > 0$$

Statement II :

$f(x) = x - \sin x$ is an increasing function for all $x > 0$

Which one of the following is correct in respect of the above statements?

(a) Both Statement I and Statement II are true and Statement II is the correct explanation of Statement I
(b) Both Statement I and Statement II are true and Statement II is not the correct explanation of Statement I
(c) Statement I is true but Statement II is false
(d) Statement I is false but Statement II is true

94. The solution of the differential equation

$$\frac{dy}{dx} = \frac{y\phi'(x) - y^2}{\phi(x)}$$
 is

(a) $y = \frac{x}{\phi(x) + c}$
(b) $y = \frac{\phi(x)}{x} + c$
(c) $y = \frac{\phi(x) + c}{x}$
(d) $y = \frac{\phi(x)}{x + c}$

95. If $f(x) = \frac{4x + x^4}{1 + 4x^3}$ and

$$g(x) = \ln\left(\frac{1+x}{1-x}\right),$$
 then what is the

value of $fg\left(\frac{e-1}{e+1}\right)$ equal to?

(a) 2 (b) 1 (c) 0 (d) $\frac{1}{2}$

96. The value of the determinant

$$\begin{vmatrix} 1 - \alpha & \alpha - \alpha^2 & \alpha^2 \\ 1 - \beta & \beta - \beta^2 & \beta^2 \\ 1 - \gamma & \gamma - \gamma^2 & \gamma^2 \end{vmatrix}$$

is equal to

(a) $(\alpha - \beta)(\beta - \gamma)(\alpha - \gamma)$
(b) $(\alpha - \beta)(\beta - \gamma)(\gamma - \alpha)$
(c) $(\alpha - \beta)(\beta - \gamma)(\gamma - \alpha)(\alpha + \beta + \gamma)$
(d) 0

97. The adjoint of the matrix

$$A = \begin{bmatrix} 1 & 0 & 2 \\ 2 & 1 & 0 \\ 0 & 3 & 1 \end{bmatrix}$$
 is

(a) $\begin{bmatrix} -1 & 6 & 2 \\ -2 & 1 & -4 \\ 6 & 3 & 1 \end{bmatrix}$ (b) $\begin{bmatrix} 1 & 6 & -2 \\ -2 & 1 & 4 \\ 6 & -3 & 1 \end{bmatrix}$
(c) $\begin{bmatrix} 6 & 1 & 2 \\ 4 & -1 & 2 \\ 6 & 3 & -1 \end{bmatrix}$ (d) $\begin{bmatrix} -6 & 2 & 1 \\ 4 & -2 & 1 \\ 3 & 1 & -6 \end{bmatrix}$

98. If $A = \begin{pmatrix} -2 & 2 \\ 2 & -2 \end{pmatrix}$, then which one of

the following is correct?

(a) $A^2 = -2A$ (b) $A^2 = -4A$
(c) $A^2 = -3A$ (d) $A^2 = 4A$

99. Geometrically $\operatorname{Re}(z^2 - i) = 2$, where $i = \sqrt{-1}$ and Re is the real part, represents

(a) circle (b) ellipse
(c) rectangular hyperbola
(d) parabola

100. If $p + q + r = a + b + c = 0$, then the determinant

$$\begin{vmatrix} pa & qb & rc \\ qc & ra & pb \\ rb & pc & qa \end{vmatrix}$$
 equals

(a) 0 (b) 1

(c) $pa + qb + rc$

(d) $pa + qb + rc + a + b + c$

101. A committee of two persons is selected from two men and two women. The probability that the committee will have exactly one woman is

(a) $\frac{1}{6}$ (b) $\frac{2}{3}$ (c) $\frac{1}{3}$ (d) $\frac{1}{2}$

102. Let a die be loaded in such a way that even faces are twice likely to occur as the odd faces. What is the probability that a prime number will show up when the die is tossed?

- (a) $\frac{1}{3}$ (b) $\frac{2}{3}$ (c) $\frac{4}{9}$ (d) $\frac{5}{9}$

103. Let the sample space consist of non-negative integers up to 50, X denote the numbers which are multiples of 3 and Y denote the odd numbers. Which of the following is/are correct?

1. $P(X) = \frac{8}{25}$ 2. $P(Y) = \frac{1}{2}$

Select the correct answer using the code given below.

- (a) 1 only
 (b) 2 only
 (c) Both 1 and 2
 (d) Neither 1 nor 2

104. For two events A and B ,

let $P(A) = \frac{1}{2}$, $P(A \cup B) = \frac{2}{3}$ and

$P(A \cap B) = \frac{1}{6}$. What is $P(\bar{A} \cap B)$

equal to?

- (a) $\frac{1}{6}$ (b) $\frac{1}{4}$ (c) $\frac{1}{3}$ (d) $\frac{1}{2}$

105. Consider the following statements :

- Coefficient of variation depends on the unit of measurement of the variable.
- Range is a measure of dispersion.
- Mean deviation is least when measured about median.

Which of the above statements are correct?

- (a) 1 and 2 only (b) 2 and 3 only
 (c) 1 and 3 only (d) 1, 2 and 3

106. Given that the arithmetic mean and standard deviation of a sample of 15 observations are 24 and 0 respectively. Then which one of the following is the arithmetic mean of the smallest five observations in the data?

- (a) 0 (b) 8 (c) 16 (d) 24

107. Which one of the following can be considered as appropriate pair of values of regression coefficient of y on x and regression coefficient of x on y ?

- (a) (1, 1) (b) (-1, 1)
 (c) $(-\frac{1}{2}, 2)$ (d) $(\frac{1}{3}, \frac{10}{3})$

108. Let A and B be two events with $P(A) = \frac{1}{3}$, $P(B) = \frac{1}{6}$ and $P(A \cap B) = \frac{1}{12}$. What is $P(B|\bar{A})$ equal to?

- (a) $\frac{1}{5}$ (b) $\frac{1}{7}$
 (c) $\frac{1}{8}$ (d) $\frac{1}{10}$

109. In a binomial distribution, the mean is $\frac{2}{3}$ and the variance is $\frac{5}{9}$. What is the probability that $X = 2$?

- (a) $\frac{5}{36}$ (b) $\frac{25}{36}$
 (c) $\frac{25}{216}$ (d) $\frac{25}{54}$

110. The probability that a ship safely reaches a port is $\frac{1}{3}$. The probability that out of 5 ships, at least 4 ships would arrive safely is

- (a) $\frac{1}{243}$ (b) $\frac{10}{243}$
 (c) $\frac{11}{243}$ (d) $\frac{13}{243}$

111. What is the probability that at least two persons out of a group of three persons were born in the same month (disregard year)?

- (a) $\frac{33}{144}$ (b) $\frac{17}{72}$
 (c) $\frac{1}{144}$ (d) $\frac{2}{9}$

112. It is given that $\bar{X} = 10$, $\bar{Y} = 90$, $\sigma_x = 3$, $\sigma_y = 12$ and $r_{xy} = 0.8$. The regression equation of X on Y is

- (a) $Y = 32X + 58$
 (b) $X = 32Y + 58$
 (c) $X = -8 + 0.2Y$
 (d) $Y = -8 + 0.2X$

113. If $P(B) = \frac{3}{4}$, $P(A \cap B \cap \bar{C}) = \frac{1}{3}$ and

$P(\bar{A} \cap B \cap \bar{C}) = \frac{1}{3}$, then what is

$P(B \cap C)$ equal to?

- (a) $\frac{1}{12}$ (b) $\frac{3}{4}$
 (c) $\frac{1}{15}$ (d) $\frac{1}{9}$

114. The following table gives the monthly expenditure of two families :

Items	Expenditure (in ₹)	
	Family A	Family B
Foods	3,500	2,700
Clothing	500	800
Rent	1,500	1,000
Education	2,000	1,800
Miscellaneous	2,500	1,800

In construction a pie diagram to the above data, the radii of the circles are to be chosen by which one of the following ratios?

- (a) 1 : 1 (b) 10 : 9
 (c) 100 : 91 (d) 5 : 4

115. If a variable takes values 0, 1, 2, 3, ..., n with frequencies

1, $C(n, 1)$, $C(n, 2)$, $C(n, 3)$, ..., $C(n, n)$ respectively, then the arithmetic mean is

- (a) $2n$ (b) $n + 1$
 (c) n (d) $\frac{n}{2}$

116. In a multiple-choice test, an examinee either knows the correct answer with probability p , or guesses with probability $1 - p$. The probability of answering a question correctly is $\frac{1}{m}$, if he or she merely

guesses. If the examinee answers a question correctly, the probability that he or she really knows the answer is

- (a) $\frac{mp}{1 + mp}$ (b) $\frac{mp}{1 + (m - 1)p}$
 (c) $\frac{(m - 1)p}{1 + (m - 1)p}$ (d) $\frac{(m - 1)p}{1 + mp}$

117. If x_1 and x_2 are positive quantities, then the condition for the difference between the arithmetic mean and the geometric mean to be greater than 1 is

- (a) $x_1 + x_2 > 2\sqrt{x_1x_2}$
 (b) $\sqrt{x_1} + \sqrt{x_2} > \sqrt{2}$
 (c) $|\sqrt{x_1} - \sqrt{x_2}| > \sqrt{2}$
 (d) $x_1 + x_2 < 2(\sqrt{x_1x_2} + 1)$

118. Consider the following statements :

- Variance is unaffected by change of origin and change of scale.
- Coefficient of variance is independent of the unit of observations.

Which of the statements given above is/are correct?

- (a) 1 only (b) 2 only
 (c) Both 1 and 2 (d) Neither 1 nor 2

119. Five sticks of length 1, 3, 5, 7 and 9 feet are given. Three of these sticks are selected at random. What is the probability that the selected sticks can form a triangle?

- (a) 0.5 (b) 0.4 (c) 0.3 (d) 0

120. The coefficient of correlation when coefficients of regression are 0.2 and 1.8 is

- (a) 0.36 (b) 0.2 (c) 0.6 (d) 0.9

PAPER II English Language and General Studies

Part A (English Language)

Directions (Q. Nos. 1-10) *Each item in this section consists of a sentence with an underlined word/words followed by four options. Select the option that is nearest in meaning to the underlined word/words.*

- The discussion was wound up after a long fruitful exchange of view.
 (a) postponed (b) cut short
 (c) interrupted (d) concluded
- He was fully alive to the need for making adjustments.
 (a) concerned about
 (b) worried about
 (c) aware of
 (d) indifferent about
- The police officer tried to intimidate the witness but in vain.
 (a) inform (b) reward
 (c) frighten (d) persuade
- We must adopt drastic measures to control population growth.
 (a) simple (b) dramatic
 (c) realistic (d) severe
- He is extremely meticulous in his approach.
 (a) simple (b) careful
 (c) fair (d) reasonable
- The experts' minute examination brought to light some important clues.
 (a) quick (b) detailed
 (c) superficial (d) prolonged

7. The decision of the Union government to repeal the Urban Land Ceiling Act has been welcomed by all.

- (a) suppress (b) amend
 (c) cancel (d) withhold

8. This is his maiden appearance on the screen.

- (a) first (b) last (c) girlish (d) shy

9. At the end of the marathon everybody was exhauste(d)

- (a) weakened (b) honoured
 (c) satisfied (d) tired

10. He gave me a counterfeit coin.

- (a) rare (b) fake
 (c) unmaturred (d) inferior

Directions (Q. Nos. 11-20) *Each item in this section consists of a sentence with an underlined word/words followed by four options. Select the option that is opposite in meaning to the underlined word/words.*

11. My mother has been working hard for the last two weeks and she feels run down.

- (a) morbid (b) energetic
 (c) exhausted (d) emotional

12. The President condemned the Act of violence during the celebration of the festival.

- (a) reason (b) instigation
 (c) restraint (d) sobriety

13. The students made a generous contribution to the flood relief fund

- (a) niggard (b) selfish
 (c) spendthrift (d) indecent

14. He was just idle by temperament.

- (a) employed (b) occupied
 (c) industrious (d) happy

15. Most of the decisions taken by the officer were unjust.

- (a) serious (b) lenient
 (c) correct (d) imbecile

16. He is a loving father and takes great delight in his children.

- (a) revolt (b) dissatisfaction
 (c) enjoyment (d) disgust

17. He was quite concerned about his son's career.

- (a) unrelated (b) indifferent
 (c) dispassionate (d) carefree

18. They are confident of success.

- (a) imprudent (b) impatient
 (c) diffident (d) reluctant

19. We carried on the search for the missing person.

- (a) delayed
 (b) reconsidered
 (c) broke up
 (d) called off

20. This TV has many indigenous components.

- (a) Indian (b) foreign
 (c) unnatural (d) genuine

Directions (Q. Nos. 21-30) *In the following passage, at certain points you are given a choice of four words marked (a), (b), (c) and (d), one of which fits the meaning of the passage. Choose the best word out of the four. Mark the letter, viz., (a), (b), (c) or (d), relating to this word*

Passage

After this incident I went to Nainital and returned after nearly a month, I had 21. _____ 22. _____ my clothes when I saw Gangu standing 23. _____ a new baby. He was 24. _____ with joy. Even Nanda 25. _____ not have 26. _____ such joy 27. _____ getting Krishna. His face had the same 28. _____ on that 29. _____ face of a 30. _____ man after a full meal

- 21. (a) hardly (b) barely (c) merely (d) rarely taken
- 22. (a) out (b) away (c) off (d) on
- 23. (a) by (b) near (c) with (d) at
- 24. (a) jumping (b) bursting (c) dancing (d) singing
- 25. (a) could (b) would (c) should (d) ought
- 26. (a) experimented (b) shown (c) felt (d) heard
- 27. (a) at (b) in (c) on (d) into
- 28. (a) light (b) glow (c) sense (d) hope
- 29. (a) comes (b) appears (c) rises (d) shows
- 30. (a) starved (b) starving (c) hungry (d) satisfied

Directions (Q. Nos. 31-35) *Each of the following items in this section consists of a sentence, the parts of which have been jumbled. These parts have been labelled P, Q, R and S. Given below each sentence are four sequences namely (a), (b), (c) and (d). You are required to re-arrange the jumbled parts of the sentence and mark your response accordingly.*

- 31. The Spirit of man has slowly and painfully surmounted and his growing intelligence all the obstacles that have come in his way has faced all kinds of danger

- (a) Q P S R (b) S Q P R
- (c) R P Q S (d) P R Q S

- 32. After our school boys had won a well-contested hockey match so that they might communicate the news of their victory to the headmaster who is a keen sportsman they came to school in high spirits and takes a very lively interest in school games

- (a) Q P S R (b) S Q P R
- (c) R P Q S (d) P R Q S

- 33. Even a leisurely game like cricket demanding grace rather than strength and over the rough tactics of the Australian team that visited England in 1921 as we saw in the controversy over body-line bowling can cause much ill-will

- (a) P S R Q (b) R S P Q
- (c) S R Q P (d) Q P R S

- 34. Scientists point out of sunspot activity that it is an aftermath that has now reached its peak of the eleven-year cycle

- (a) R S P Q (b) P Q S R
- (c) Q R P S (d) Q S P R

- 35. As the ship streams from San Diego walls of gray water from a distant storm in the North Pacific making the greener among us miserable with sea sickness rock and toss the ship those of us aboard have a personal demonstration of powerful ocean movement

- (a) P Q R S (b) S R P Q
- (c) S P R Q (d) Q S R P

Directions (Q. Nos. 36-40) *Each item in this section has a sentence with three underlined parts labelled as (a), (b) and (c).*

Read each sentence to find out whether there is any error in any underlined part and mark your response to corresponding letter i.e. (a), (b) or (c). If you find no error, your response should be indicated as (d).

- 36. An electrical circuit is the complete path traversed by electric current.
- 37. He waved us a by-by as he boarded the train which disappeared into the tunnel.
- 38. There was great deal that had to be scrapped, that must be scrapped; but surely India could not have been what she undoubtedly was, and could not have continued a cultured existence for thousands of years.
- 39. With regard to interior decoration, it is the attention given to the less overt aspects of using space that give it life, an identity, a quality that makes it exciting and unusual.
- 40. A small parcel of novels is better than none.

Directions (Q. Nos. 41-50) *Each of the following sentence in this section has a blank space and four words / group of words given after the sentence. Select the word or group / words you consider most appropriate for the blank space and mark your response accordingly.*

- 41. He looks as if he weary.
- 42. My house is insured theft and fire.

43. The result of the prolonged discussion was.....
 (a) disappointment (b) disappointing
 (c) disappointed (d) to disappoint
44. You are lucky in the 20th century.
 (a) by being born (b) to have been born
 (c) for being born (d) to have born
45. Sita is true to.....
 (a) word (b) her words
 (c) the words (d) words
46. Years since I saw her last.
 (a) have passed
 (b) had passed
 (c) had been passing
 (d) have been passing
47. When he heard the terrible noise he asked me what was on.
 (a) happening (b) being
 (c) getting (d) going
48. Could you lend me some money ? I am very of cash at the moment.
 (a) down (b) low (c) short (d) scarce
49. I saw her when she was standing.....the side of the old statue.
 (a) by
 (b) at
 (c) in
 (d) beyond
50. True friends never their loved ones in adversity.
 (a) abuse
 (b) criticise
 (c) befool
 (d) desert

Part B (General Studies)

51. According to the Travel and Tourism Competitiveness Index (TTCI) 2017 released by the World Economic Forum, among the 136 economies across the World, India ranked
 (a) 50th (b) 40th
 (c) 30th (d) 20th
52. Which one of the following is the theme of the 'World Health Day', 2017 celebrated by the World Health Organisation?
 (a) Diabetes
 (b) Food safety
 (c) Depression : Let's Talk
 (d) Ageing and Health
53. Which one of the following ministries has launched a new programme on Interdisciplinary Cyber Physical Systems (ICPS) to foster and promote R and D?
 (a) Ministry of Earth Sciences
 (b) Ministry of Science and Technology
 (c) Ministry of Information and Broadcasting
 (d) Ministry of New and Renewable Energy
54. Consider the following statements about the Nagara style of temple architecture :
 1. This style of temples are commonly found in the areas between Himalayas and Vindhya.
 2. The most striking feature of this style is its pyramidal shikhara
 Which of the statements given above is/are correct?
 (a) Only 1 (b) Only 2
 (c) 1 and 2 (d) Neither 1 nor 2
55. Ashoka's connection with Buddhism is evident from which one of the following edicts?
 (a) Major Rock Edict 13
 (b) Rock Edict 6
 (c) Minor Rock Edict 1
 (d) Pillar Edict 4
56. The Cabinet Mission Plan for India envisaged a
 (a) Federation
 (b) Confederation
 (c) Unitary form of government
 (d) Union of States
57. The creation of the institution of Lokpal was first recommended by
 (a) Law Commission
 (b) Santhanam Committee
 (c) Shah Commission
 (d) Administrative Reforms Commission
58. Which one of the following is a cause of acid rains?
 (a) Ozone (b) Ammonia
 (c) Sulphur dioxide (d) Carbon monoxide
59. The desirable range of pH for drinking water is
 (a) 6.5 to 8.5 (b) 5.0 to 6.5
 (c) 6.5 to 7.0 (d) 7.0 to 8.5
60. Consider the following reaction :

$$\text{CH}_4 + 2\text{O}_2 \longrightarrow \text{CO}_2 + 2\text{H}_2\text{O}$$

 Which of the following about the reaction given above is/are correct?
 1. Carbon is oxidised
 2. Hydrogen is oxidised
 3. Hydrogen is reduced
 4. Carbon is reduced
 Select the correct answer using the code given below :
 (a) Only 1 (b) 1 and 2
 (c) 2 and 3 (d) 2 and 4
61. Sunrise in Eastern Arunachal Pradesh would be about how many hours before the sunrise in Western Gujarat?
 (a) One hour (b) Two hours
 (c) Three hours (d) Four hours
62. Consider the following States of India in terms of percentage of forest area in relation to the total area of the State.
 1. Karnataka 2. Odisha
 3. Kerala 4. Andhra Pradesh
 Which one of the following is the correct descending order?
 (a) 1-2-4-3 (b) 3-1-2-4
 (c) 3-2-1-4 (d) 2-3-1-4
63. Which one of the following States in India has the longest coastline?
 (a) Odisha (b) Tamil Nadu
 (c) Karnataka (d) West Bengal
64. Which one of the following states in India has the largest area under forest cover?
 (a) Maharashtra (b) Chhattisgarh
 (c) Madhya Pradesh (d) Andhra Pradesh
65. Which one of the following is not an igneous rock?
 (a) Gabbro (b) Granite
 (c) Dolomite (d) Basalt
66. The Coriolis effect is the result of
 (a) Pressure gradient
 (b) Earth's axis of inclination
 (c) Earth's rotation
 (d) Earth's revolution
67. Where is Mekong Delta located?
 (a) Thailand (b) Cambodia
 (c) Myanmar (d) Vietnam
68. Which one of the following pairs of rivers and tributaries is not correctly matched?
 (a) Godavari : Indravati
 (b) Ganga : Penganga
 (c) Krishna : Bhima
 (d) Luni : Sukri
69. Consider the following characteristics of a tropical cyclone :
 1. A warm sea temperature of $>26^\circ\text{C}$
 2. High relative humidity of atmosphere at a height of $>700\text{ m}$.

3. Atmospheric instability.

The above mentioned characteristics are associate with which one of the following cycles of its development?

- (a) Formulation and initial stage
(b) Modification stage
(c) Full maturity
(d) Decay
- 70.** In the Mesopotamian records, which one of the following terms was used for the Indus Valley (Harappans)?
(a) Dilmun (b) Meluha
(c) Magan (d) Failaka
- 71.** Who among the following is the Chairman of interdisciplinary committee constituted recently by the Government of India to examine framework for virtual currencies?
(a) Secretary, Department of Financial Services
(b) Special Secretary, Department of Revenue
(c) Special Secretary, Department of Economic Affairs
(d) Deputy Governor, Reserve Bank of India
- 72.** SAMPADA scheme is being implemented by the Ministry of
(a) Finance
(b) Housing and Urban Affairs
(c) Food Processing Industries
(d) Earth Sciences
- 73.** The shortest day length that occurs in the Northern hemisphere is on
(a) March 21 (b) September 23
(c) November 22 (d) December 22
- 74.** The Indian Railways have gone in for qualitative improvements since independence. Which of the following have taken place in recent years?
1. Gauge conversion
2. Track electrification
3. Automatic Signals
Select the correct answer using the codes given below :
(a) 1 and 2 (b) 2 and 3
(c) 1 and 3 (d) All of these
- 75.** In India, maximum rainfall is received from
(a) Western Disturbances
(b) North-East Monsoon
(c) South-West Monsoon
(d) Retreating Monsoon
- 76.** Which set of the following biosphere reserves in India is included in the World Network of Biosphere Reserves?
(a) Gulf of Mannar, Nokrek, Panchmarhi and Simlipal
(b) Gulf of Mannar, Kanchenjunga, Nokrek and Seshachalam
(c) Nilgiri, Nokrek, Panchmarhi and Panna
(d) Nilgiri, Nokrek, Panchmarhi and Seshachalam
- 77.** Which of the following statements about magnetite ore of iron is/are correct?
1. It is known as black ore.
2. It contains 60% to 70% of pure iron.
3. It possesses magnetic properties.
Select the correct answer using the codes given below:
(a) Only 1 (b) 2 and 3
(c) 1 and 3 (d) All of these
- 78.** Which one of the following vitamins has a role in blood clotting?
(a) Vitamin-A (b) Vitamin-D
(c) Vitamin-E (d) Vitamin-K
- 79.** The term 'Probiotic' is applied to
(a) organic food (b) antacid
(c) antibiotic
(d) live microbial food supplement
- 80.** Which one of the following microbes causes acidification and curdling of milk?
(a) Lactic Acid Bacillus
(b) Clostridium botulinum
(c) Vibrio cholerae
(d) Saccharomyces cerevisiae
- 81.** Who among the following shared the Nobel Prize in 1962 along with Francis Crick and James Watson for their discoveries concerning the molecular structure of nucleic acids?
(a) Erwin Chargaff
(b) Maurice Hugh Frederick Wilkins
(c) Rosalind Franklin
(d) Phoebus Levene
- 82.** Water boils at a lower temperature at high altitudes, because
(a) the air pressure is less
(b) outside temperature is less
(c) latent heat is less
(d) None of the above
- 83.** Concave mirror is used in headlights of vehicles, because it
(a) focuses light from the bulb onto nearby vehicles
(b) sends parallel rays
(c) fits well into the shape of the headlight
(d) is cheaper than other mirrors
- 84.** If some object is weighed when submerged in water, what will happen to its weight compared to its weight in air?
(a) Increase
(b) Decrease
(c) Remain exactly the same
(d) Increase or decrease cannot be predicted
- 85.** Light year is a measure of
(a) time
(b) distance
(c) total amount of light falling on the Earth in a year
(d) average intensity of light falling on the Earth in a year
- 86.** Which one of the following was set as a target of average growth of GDP of India over the plan period 2012-17 by the Approach Paper to the Twelfth Five Year Plan?
(a) 7% (b) 8% (c) 9% (d) 10%
- 87.** Which one of the following is not a subject that has been devolved to the Panchayati Raj Institutions by the 11th Schedule of the Constitution of India?
(a) Non-conventional energy resources
(b) Roads
(c) Higher education
(d) Libraries
- 88.** Who among the following used the term Industrial Revolution for the first time in English to describe the changes that occurred in the British industrial development between 1760 and 1820?
(a) Friedrich Engels (b) Eric Hobsbawm
(c) Arnold Toynbee (d) Georges Michelet
- 89.** Who among the following is the author of the book 'The Indian Struggle, 1920-34'?
(a) Maulana Abul Kalam
(b) Jayprakash Narayan
(c) Subhash Chandra Bose
(d) Manabendra Nath Roy
- 90.** Which one of the following about the Swadeshi Campaign in 1896 is not correct?
(a) Its centre was Maharashtra
(b) Its main participants were students.
(c) It opposed the levy of tariff on imports.
(d) It publicly burnt foreign clothes.
- 91.** Which one of the following associations was founded in London by Dadabhai Naoroji in 1866?
(a) The Bengal British India Society
(b) The East India Association
(c) The British Indian Association
(d) The Madras Native Association

- 92.** Mariana Trench is located in the ocean floor of
 (a) Southern Atlantic Ocean
 (b) Western Pacific Ocean
 (c) Eastern Pacific Ocean
 (d) Northern Atlantic Ocean
- 93.** Taklamakan Desert is situated in
 (a) Western Asia
 (b) Southern fringe of Sahara in Africa
 (c) South America
 (d) Central Asia
- 94.** Rudraprayag is situated at the confluence of rivers Alakananda and
 (a) Bhagirathi (b) Mandakini
 (c) Nandakini (d) Dhauliganga
- 95.** Arrange the following Indian cities according to their locations from West to East :
 1. Bilaspur 2. Jodhpur
 3. Bhopal 4. Ranchi
 Select the correct answer using the code given below :
 (a) 3-2-1-4 (b) 2-3-1-4
 (c) 4-1-2-3 (d) 2-1-3-4
- 96.** The Kashmir region receives additional amount of precipitation during the winter brought by
 (a) South-West Monsoon
 (b) Western Disturbances
 (c) Retreating Monsoon
 (d) Temperate Cyclone
- 97.** Which part of India has the Kalakot tertiary coal field?
 (a) Brahmaputra river basin of Assam
 (b) Damodar river basin of Jharkhand and West Bengal
 (c) Himalayan mountain region
 (d) Cardamom hills in Kerala
- 98.** Tendons through which muscles are connected to bones are tightly compacted bundles of which one of the following long fibrous protein?
 (a) Fibrin (b) Collagen
 (c) Elastin (d) Cellulose
- 99.** Which one of the following is the scientific name of the causal organism elephantiasis?
 (a) *Ascaris lumbricoides*
 (b) *Culex pipiens*
 (c) *Wuchereria bancrofti*
 (d) *Fasciola hepatica*
- 100.** Melanin is the natural pigment that gives colour to human skin, hair and the iris provides protection against
 (a) Ultraviolet radiation
 (b) Infrared radiation
 (c) X-ray radiation
 (d) Short wave radio radiation
- 101.** Which one of the following statements about a satellite orbiting around the Earth is correct?
 (a) Satellite is kept in orbit by remote control from ground station.
 (b) Satellite is kept in orbit by retro-rocket and solar energy keeps it moving around the Earth.
 (c) Satellite requires energy from solar panels and solid fuels for orbiting.
 (d) Satellite does not required any energy for orbiting.
- 102.** Which one of the following statements about energy is correct?
 (a) Energy can be created as well as destroyed
 (b) Energy can be created but not destroyed
 (c) Energy can neither be created nor destroyed
 (d) Energy cannot be created but can be destroyed
- 103.** Step-up transformers are used for
 (a) increasing electrical power
 (b) decreasing electrical power
 (c) decreasing voltage
 (d) increasing voltage
- 104.** Which one among the following waves carries the maximum energy per photon?
 (a) X-rays (b) Radio waves
 (c) Light waves (d) Microwaves
- 105.** How much CO₂ is produced on heating of 1 kg of carbon?
 (a) $\frac{11}{3}$ kg (b) $\frac{3}{11}$ kg (c) $\frac{4}{3}$ kg (d) $\frac{3}{4}$ kg
- 106.** Zinc is used to protect iron form corrosion because zinc is
 (a) more electropositive than iron
 (b) cheaper than iron
 (c) a bluish white metal
 (d) a good conductor of heat and electricity
- 107.** Which one of the following gases is placed second in respect of abundance in the Earth's atmosphere?
 (a) Oxygen (b) Hydrogen
 (c) Nitrogen (d) Carbon dioxide
- 108.** Which one of the following is a chemical change?
 (a) Cutting of hair
 (b) Graying of hair naturally
 (c) Swelling of resin in water
 (d) Cutting of fruit
- 109.** Which one among the following chemicals is used as washing soda?
 (a) Calcium carbonate
 (b) Calcium bicarbonate
 (c) Sodium carbonate
 (d) Sodium bicarbonate
- 110.** Why is potassium permanganate used for purifying drinking water?
 (a) It kills germs
 (b) It dissolves the impurities
 (c) It is a reducing agent
 (d) It is an oxidising agent
- 111.** Consider the following movements :
 1. Moplah Rebellion
 2. Bardoli Satyagraha
 3. Champaran Satyagraha
 4. Salt Satyagraha
 Which one of the following is the correct chronological order of the above ascending order?
 (a) 1-3-4-2 (b) 3-1-2-4
 (c) 2-3-1-4 (d) 4-2-1-3
- 112.** Which one of the following travelogues has given an insight on the reign of Muhammed-bin-Tughlaq?
 (a) Ibn Battuta's *Rihla*
 (b) Francois Bernier's *Travels in the Mogul Empire*
 (c) Niccolao Manucci's *Storia do Mogor*
 (d) Tavernier's *Travels in India*
- 113.** Which one of the following was not a Chishti Sufi saint?
 (a) Khwaja Moinuddin
 (b) Baba Fariduddin Gani-i-Shakar
 (c) Nizamuddin Auliya
 (d) Shaikh Bahauddin Zakariya
- 114.** In April, 2017, India celebrated 100 years of Mahatma Gandhi's
 (a) Satyagraha in Kheda
 (b) Dandi March
 (c) Satyagraha in Champaran
 (d) Return from South Africa
- 115.** A rainbow is produced due to which one of the following phenomena?
 (a) Dispersion of light
 (b) Interference of light
 (c) Diffraction of light
 (d) Scattering of light by atmospheric dust
- 116.** Bats detect obstacles in their path by receiving the reflected
 (a) Infrasonic waves (b) Ultrasonic waves
 (c) Radio waves (d) Microwaves
- 117.** The statement that 'heat cannot flow by itself from a body at a lower temperature to a body at a higher temperature', is known as
 (a) Zeroth law of thermodynamics
 (b) First law of thermodynamics
 (c) Second law of thermodynamics
 (d) Third law of thermodynamics
- 118.** Which one of the following waves does not belong to the category of the other three?

- (a) X-rays (b) Microwaves
(c) Radiowaves (d) Sound waves

119. Which one of the following statements is not correct?

- (a) Human eye is a refracting system containing a diverging lens.
(b) The retina of the human eye contains millions of light sensitive cells, called rods and cones, which convert the light into electrical messages.
(c) Every image that is focussed on the retina is upside down.
(d) We need both eyes to judge the relative positions of objects accurately.

120. Which one of the following statements is not correct?

- (a) Ultrasonic waves cannot get reflected, refracted or absorbed.
(b) Ultrasonic waves are used to detect the presence of defects like cracks, porosity, etc in the internal structure of common structure materials.
(c) Ultrasonic waves can be used for making holes in very hard materials like diamond.
(d) Ultrasonic waves cannot travel through vacuum.

121. The principal use of hydrofluoric acid is

- (a) in etching glass
(b) as a bleaching agent
(c) as an extremely strong oxidising agent
(d) in the preparation of strong organic fluorine compounds

122. The species that has the same number of electrons as $^{35}_{17}\text{Cl}$ is

- (a) $^{32}_{16}\text{S}$ (b) $^{34}_{16}\text{S}^+$ (c) $^{40}_{18}\text{Ar}^+$ (d) $^{35}_{16}\text{S}^{2-}$

123. The compound $\text{C}_6\text{H}_{12}\text{O}_4$ contains

- (a) 22 atoms per mole
(b) twice the mass percent of H as compared to the mass percent of C
(c) six times the mass percent of C as compared to the mass percent of H
(d) thrice the mass percent of H as compared to the mass percent of O

124. The proposition 'equal volumes of different gases contain equal numbers of molecules at the same temperature and pressure' is known as

- (a) Avogadro's hypothesis
(b) Gay-Lussac's hypothesis
(c) Planck's hypothesis
(d) Kirchhoff's theory

125. Which one of the following statements about the Ilbert Bill is correct?

- (a) It proposed that the Indian magistrates would try Europeans in criminal cases.
(b) It allowed Indians to file criminal cases against Europeans.
(c) It authorised Indian ICS officers to try Europeans in courts.
(d) It was an agitation led by Ilbert in support of the nationalists.

126. Who among the following can attend the meetings of both Houses of Parliament while not being a member of either House?

- (a) The Solicitor General of India
(b) The Vice-President of India
(c) The Comptroller and Auditor General of India
(d) The Attorney General of India

127. Who among the following was believed to be a leader of the Sanyasis and Fakirs conspiring against the British in 1857?

- (a) Mangal Pandey (b) Bahadur Shah II
(c) Queen Zeenat Mahal
(d) Nana Sahib

128. Who among the following was the founder of the Avadh Kingdom in the 18th century?

- (a) Murshid Quli Khan (b) Saadat Khan
(c) Alivardi Khan (d) Sarfaraz Khan

129. Who among the following was the founder of the Young Bengal Movement?

- (a) Henry Vivian Derozio
(b) David Hare
(c) Dwarkanath Tagore
(d) Prasanna Kumar Tagore

130. Which one of the following statements about the Quit Indian Movement is not correct?

- (a) It broke out in August, 1942.
(b) Ahmedabad Textile Mills went on strike for more than three months.
(c) Muslim League and Hindu Mahasabha actively participated in the movement.
(d) Communist Party did not support the movement.

131. Who among the following is the winner of the Singapore Open Superseries Badminton Men's Singles title 2017?

- (a) Kidambi Srikanth (b) Lin Dan
(c) B Sai Praneeth (d) Kento Momota

132. Koradi Thermal Power Station is located in

- (a) Nagpur (b) Raipur
(c) Mumbai (d) Secunderabad

133. Which one of the following is the theme of the International Day for

Monuments and Sites (World Heritage Day) 2017?

- (a) The Heritage of Sport
(b) Cultural Heritage and Sustainable Tourism
(c) Past and Present Heritage
(d) Heritage and Science

134. In April, 2017, the USA dropped MOAB (Massive Ordnance Air Blast popularly known as the Mother of All Bombs) in the suspected hideouts of militants in which one of the following countries?

- (a) Iran (b) Syria
(c) Afghanistan (d) Somalia

135. Intake of which one of the following food components should be minimised by patients having Gouty Arthritis due to elevated serum uric acid level?

- (a) Food fibres (b) Nucleic acids
(c) Lipids (d) Carbohydrates

136. Which one of the following statements about microbes is not correct?

- (a) They are used in sewage treatment plants.
(b) They are used in industrial fermenters for the production of beverages.
(c) No antibiotic has been obtained from any microbe.
(d) They are used to get many bioactive molecules for the treatment of diseases.

137. Golden rice is a genetically -modified crop plant where the incorporated gene is meant for biosynthesis of

- (a) Omega-3 fatty acids
(b) Vitamin-A
(c) Vitamin-B
(d) Vitamin-C

138. An object moves in a circular path with a constant speed. Which one of the following statements is correct?

- (a) The centripetal acceleration of the object is smaller for a gentle curve (i.e., curve of larger radius) than that for a sharp curve (i.e., curve of smaller radius).
(b) The centripetal acceleration is greater for a gentle curve than that for a sharp curve.
(c) The centripetal acceleration is the same for both, the gentle and sharp curves.
(d) The centripetal acceleration causes the object to slow down.

139. The force acting on a particle of mass m moving along the x -axis is given by $F(x) = Ax^2 - Bx$. Which one of the following is the potential energy of the particle?

- (a) $2Ax - B$ (b) $-\frac{x^2}{6}(2Ax - 3B)$
(c) $Ax^3 - Bx^2$ (d) Zero

- 140.** The symbol of SI unit of inductance is H. It stands for
 (a) Holm (b) Halogen
 (c) Henry (d) Hertz
- 141.** In a vacuum, a five-rupee coin, a feather of sparrow bird and a mango are dropped simultaneously from the same height. The time taken by them to reach the bottom is t_1 , t_2 and t_3 respectively. In this situation, we will observe that
 (a) $t_1 > t_2 > t_3$ (b) $t_1 > t_3 > t_2$
 (c) $t_3 > t_1 > t_2$ (d) $t_1 = t_2 = t_3$
- 142.** Electron emission from a metallic surface by application of light is known as
 (a) Thermionic emission
 (b) Photo electric emission
 (c) High field emission
 (d) Auto electronic emission
- 143.** How long does light take to reach the Earth from the Sun?
 (a) About 4 minutes (b) About 8 minutes
 (c) About 24 minutes (d) About 24 hours
- 144.** Radioactivity is measured by
 (a) GM Counter (b) Polarimeter
 (c) Calorimeter (d) Colorimeter
- 145.** The mirrors used as rear-view mirrors in vehicles are
 (a) concave (b) convex
 (c) cylindrical (d) plane
- 146.** Which one of the following waves is used for detecting forgery in currency notes?
 (a) Ultraviolet waves (b) Infrared waves
 (c) Radio waves (d) Microwaves
- 147.** The majority charge carriers in a p -type semiconductor are
 (a) free electrons
 (b) conduction electrons
 (c) ions
 (d) holes
- 148.** The ionisation energy of hydrogen atom in the ground state is
 (a) 13.6 MeV (b) 13.6 eV
 (c) 13.6 Joule (d) Zero
- 149.** When pure water boils vigorously, the bubbles that rise to the surface are composed primarily of
 (a) air
 (b) hydrogen
 (c) hydrogen and oxygen
 (d) water vapour
- 150.** Which compound, when dissolved in water, conducts electricity and forms a basic solution?
 (a) HCl (b) CH_3COOH
 (c) CH_3OH (d) NaOH

SET THEORY

In NDA exam, generally 3-4 questions are asked from this chapter which are based on types of sets, operations on sets and number of elements in a set.

A set is a collection of well defined distinct objects. By 'well defined' we mean that from any object given we can find whether it is an element of the set or not. Sets are usually denoted by capital letters A, B, C , etc. The members of a set are called its elements and are usually denoted by small letters, a, b, c , etc. If ' a ' is an element of a set A , then we write $a \in A$ i.e. ' a ' belongs to set A and if ' a ' does not belong to set A , then we write $a \notin A$.

Representation of Sets

- 1. Tabular or Roster method** In this method, a set is described by writing elements, separated by commas, within the braces $\{ \}$.
e.g. $N = \{1, 2, 3, 4, \dots\}$ is a set of natural numbers.
 $A = \{2, 3, 5, 7, 11, 13\}$ is a set of first six prime numbers.
 $W = \{0, 1, 2, 3, 4, \dots\}$ is a set of whole numbers.
- 2. Set-builder or Rule method** In this method, a rule or a formula is written in the braces that defines the sets.
e.g. $A = \{x : x = 2n + 1, n \geq 1, n \in N\}$, $B = \{x : 6 \leq x \leq 12, x \in N\}$, $C = \{x : x = 2n, n < 8, n \in N\}$

Different Types of Sets

- 1. Null set** A set which does not contain any element is called a null set. It is denoted by ϕ . A null set is also called an empty set or a void set. Therefore, $\phi = \{ \}$
e.g. $A = \{x : x \text{ is a prime number between } 90 \text{ and } 96\} = \phi$
- 2. Singleton set** A set which contains only one element is called a singleton set.
e.g. $A = \{0\}$, $B = \{x : x + 10 = 0, x \in Z\}$
- 3. Finite set** A set is called a finite set, if it is either void set or its elements can be counted or labelled by natural numbers $1, 2, 3, \dots$ and the process of counting stops at a certain natural number (say ' n ').
e.g. $A = \{a, e, i, o, u\} = \text{Set of all vowels}$

The number of distinct elements of a finite set A is called the **cardinal number** of the set A and it is denoted by $n(A)$.

4. **Infinite set** A set which has unlimited number of elements is called infinite set.
e.g. $N =$ set of all natural numbers $= \{1, 2, 3, \dots\}$
 $Z =$ set of all integers
 $= \{\dots, -2, -1, 0, 1, 2, \dots\}$ are infinite sets.
5. **Equivalent sets** Two finite sets A and B are equivalent, if their cardinal numbers are same, i.e. $n(A) = n(B)$.
e.g. $A = \{a, b, c, d, e\}; B = \{1, 3, 5, 7, 9\}$
Here, $n(A) = n(B)$
So, these sets are equivalent sets.
6. **Equal sets** Two sets A and B are said to be equal, if every element of A is a member of B and every element of B is a member of A .
If sets A and B are equal, we write $A = B$ and $A \neq B$, when A and B are not equal.
e.g.
(i) $A = \{1, 3, 4\}$ and $B = \{3, 1, 4\}$ are equal sets.
(ii) $A =$ Letters of the word MASS $= \{M, A, S, S\}$
 $B =$ Letters of the word SAM $= \{S, A, M\}$
Here, $A = B$
Since, $\{M, A, S, S\} = \{M, A, S\} = \{S, A, M\}$
- Note** Equal sets are equivalent but equivalent sets may or may not be equal. e.g. Set $A = \{4, 5, 3, 2\}$ and $B = \{1, 6, 8, 9\}$ are equivalent but are not equal.
7. **Subset** Let A and B be two sets. If every element of A is an element of B , then A is called a subset of B and it is denoted by $A \subseteq B$.
 $\therefore A \subseteq B$, if $x \in A \Rightarrow x \in B$
e.g. If $A = \{1, 2, 3\}$
and $B = \{1, 2, 3, 4, 5, 6\}$, then $A \subseteq B$.
The total number of subsets of a finite set containing n elements is 2^n .
8. **Superset** Let A and B be two sets. If B contains all elements of A , then B is called superset of A and it is denoted by $B \supseteq A$.
e.g. If $B = \{a, b, c, d, \dots, x, y, z\}$ and $A = \{a, e, i, o, u\}$
Then, $B \supseteq A$.
9. **Proper subset** A set A is said to be a proper subset of set B , if A is a subset of B and A is not equal to B . It is written as $A \subset B$. The total number of proper subsets of a finite set containing n elements is $(2^n - 1)$. e.g. If $A = \{1, 2, 3\}$, then proper subsets of A are $\phi, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{2, 3\}$.
10. **Universal set** All the sets under consideration are likely to be subsets of a set which is called the universal set and is denoted by U .

e.g. Let $A = \{1, 2, 3\}; B = \{2, 4, 6, 8\}; C = \{1, 3, 5, 7, 9\}$
and $U =$ set of natural numbers.

Here, A, B and C are the subsets of U .

Therefore, U is an universal set.

11. **Power set** Let A be a set, then the set of all the possible subsets of A is called the power set of A and is denoted by $P(A)$.

i.e. $P(A) = \{S \mid S \subseteq A\}$

e.g. Let $A = \{1, 2, 3\}$. Then, subsets of A are $\phi, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{2, 3\}$ and $\{1, 2, 3\}$.

$\therefore P(A) = \{\phi, \{1\}, \{2\}, \{3\}, \{1, 2\}, \{1, 3\}, \{2, 3\}, \{1, 2, 3\}\}$

Note • Since, the empty set and the set A itself are subsets of A and also the elements of $P(A)$. Thus, the power set of a given set is always non-empty.

• If a set A has n elements, then its power set will contain 2^n elements.

Some Important Properties

- (i) $A \subseteq A, \forall A$ (ii) $\phi \subseteq A, \forall A$
(iii) $A \subseteq U, \forall A \text{ in } U$ (iv) $A = B \Leftrightarrow A \subseteq B, B \subseteq A$

EXAMPLE 1. Which one of the following is a null set?

- a. $\{x \mid x \in R, 4x^2 - 1 = 0\}$
b. $\{x \mid x \in N, x \text{ is odd and } (x + 3) \text{ is even}\}$
c. $\{x \mid x \in R, x^2 < 3\}$
d. $\{x \mid x \in R, x^2 < 0\}$

Sol. d. Only option (d) satisfies the condition as x^2 can never be less than 0. Therefore, there is no element in it, i.e. it is a null set.

EXAMPLE 2. Two finite sets having m and n elements. The total number of subsets of the first set is 56 more than the total number of subsets of the second set. Find the values of m and n .

- a. 6, 5 b. 6, 3 c. 6, 6 d. 5, 4

Sol. b. Let A and B be two sets having m and n elements respectively. Then, number of subsets of $A = 2^m$,
number of subsets of $B = 2^n$

It is given that, $2^m - 2^n = 56 \Rightarrow 2^n(2^{m-n} - 1) = 2^3(2^3 - 1)$

$$\Rightarrow n = 3 \text{ and } m - n = 3$$

$$\therefore n = 3 \text{ and } m = 6$$

EXAMPLE 3. The number of proper subsets of the set $\{1, 2, 3\}$ is

- a. 6 b. 3
c. 7 d. 8

Sol. c. Number of proper subsets of the set $\{1, 2, 3\}$
 $= 2^3 - 1 = 7$

Venn Diagram

Venn diagram are used to express relationship among sets. In Venn diagram, the universal set U is represented by a rectangle and its subsets are represented by closed curves (usually circles) within the rectangle.

Operations on Sets

Now, we introduce some operations on sets to construct new sets from the given ones.

- Union of two sets** Let A and B be two sets. The union of A and B is the set of all those elements which belongs to either A or B or both A and B . The union of A and B is denoted by $A \cup B$ (read as 'A union B').

Thus, $A \cup B = \{x : x \in A \text{ or } x \in B\}$

e.g. If $A = \{1, 2, 3, 4\}$

and $B = \{3, 4, 5, 6\}$,

then $A \cup B = \{1, 2, 3, 4, 5, 6\}$

Note If A_1, A_2, \dots, A_n is a finite family of sets, then their union is denoted by $\bigcup_{i=1}^n A_i$ or $A_1 \cup A_2 \cup A_3 \cup \dots \cup A_n$.

- Intersection of two sets** Let A and B be two sets. The intersection of A and B is the set of all those elements which belong to both A and B .

The intersection of A and B is denoted by $A \cap B$ (read as 'A intersection B').

Thus, $A \cap B = \{x : x \in A \text{ and } x \in B\}$

e.g. If $A = \{1, 2, 3, 4\}$ and $B = \{3, 4, 5, 6\}$, then $A \cap B = \{3, 4\}$

Note If A_1, A_2, \dots, A_n is a finite family of sets, then their intersection is denoted by $\bigcap_{i=1}^n A_i$ or $A_1 \cap A_2 \cap \dots \cap A_n$.

- Disjoint of two sets** Two sets A and B are said to be disjoint, if $A \cap B = \phi$, i.e. they don't have any common element. If $A \cap B \neq \phi$, then A and B are said to be intersecting or overlapping sets.

e.g. If $A = \{1, 2, 3\}$ and $B = \{4, 5, 6\}$

Then, $A \cap B = \phi$, so A and B are disjoint sets.

- Difference of two sets** Let A and B be two sets. The difference of A and B , written as $(A - B)$ or $A \setminus B$, is the set of all those elements of A which do not belong to B . Thus, $(A - B) = \{x : x \in A, x \notin B\}$. The Venn diagram of $A - B$ is as shown in the figure

Similarly, the difference $(B - A)$ is the set of all those elements of B , which do not belong to A ,

i.e. $(B - A) = \{x : x \in B, x \notin A\}$.

e.g. If $A = \{a, b, c, d, e\}$ and $B = \{a, c, e, g, i\}$ then, $A - B = \{b, d\}$ and $B - A = \{g, i\}$

- Symmetric difference of two sets** Let A and B be two sets. The symmetric difference of sets A and B is the set $(A - B) \cup (B - A)$ and is denoted by $A \Delta B$.

Thus, $A \Delta B = (A - B) \cup (B - A) = \{x : x \notin A \cap B\}$

e.g. If $A = \{a, b, c, d, e\}$ and $B = \{a, c, e, g, i\}$

Then, $A \Delta B = (A - B) \cup (B - A) = \{b, d\} \cup \{g, i\} = \{b, d, g, i\}$

- Complement of a set** The complement of a set A is the set of all those elements which are in universal set but not in A . It is denoted by A' or A^c or $U - A$.

If U is a universal set and $A \subset U$, then $A' = U - A = \{x : x \in U, x \notin A\}$

Clearly, $x \in A' \Leftrightarrow x \notin A$

e.g. If $U = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10\}$ and $A = \{1, 3, 5, 7, 9\}$, then $A' = \{2, 4, 6, 8, 10\}$

EXAMPLE 4. The shaded region in the given figure represents which value of sets $A = \{9, 18, 27, 36\}$, $B = \{18, 36, 54, 72\}$?

- $\{18, 36\}$
- $\{9, 18, 36, 72\}$
- $A \cup B$
- $\{9, 27, 54, 72\}$

Sol. d. Clearly, the diagram represents the condition of symmetric difference of two sets, i.e. $(A - B) \cup (B - A)$, where $\{x : x \notin A \cap B\}$.

Now, $(A - B) = A - (A \cap B) = \{9, 27\}$

$(B - A) = B - (A \cap B) = \{54, 72\}$

So, $(A - B) \cup (B - A) = \{9, 27, 54, 72\}$

Thus, option (d) is correct.

Laws of Algebra of Sets

- Idempotent laws** For any set A , we have
 - $A \cup A = A$
 - $A \cap A = A$
- Identity laws** For any set A , we have
 - $A \cup \phi = A$
 - $A \cap \phi = \phi$
 - $A \cap U = A$
 - $A \cup U = U$
- Commutative laws** For any two sets A and B , we have
 - $A \cup B = B \cup A$
 - $A \cap B = B \cap A$
- Associative laws** If A , B and C are any three sets, then
 - $(A \cup B) \cup C = A \cup (B \cup C)$
 - $A \cap (B \cap C) = (A \cap B) \cap C$
- Distributive laws** If A , B and C are any three sets, then
 - $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$
 - $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$
- De-Morgan's laws** If A , B and C are any three sets, then
 - $(A \cup B)' = A' \cap B'$
 - $(A \cap B)' = A' \cup B'$
- $A - (B \cup C) = (A - B) \cap (A - C)$
 - $A - (B \cap C) = (A - B) \cup (A - C)$
 - $A - B = A \cap B' = B' - A'$
 - $A - (A - B) = A \cap B$
 - $A - B = B - A \Leftrightarrow A = B$
 - $A \cup B = A \cap B \Leftrightarrow A = B$
 - $A \cup A' = U$
 - $A \cap A' = \phi$

EXAMPLE 5. For three events A , B and C , what is the simplest form of $(A \cap B) \cap (A \cup B^c) \cap (A^c \cup B)$?

- a. $A \cap B^c$ b. $A \cup B$ c. $A^c \cap B$ d. $A \cap B$

Sol. d. We have, $\{(A \cap B) \cap (A \cup B^c)\} \cap (A^c \cup B)$
 $= \{A \cap (B \cup B^c)\} \cap (A^c \cup B)$
 $= (A \cap U) \cap (A^c \cup B) = A \cap (A^c \cup B)$
 $= (A \cap A^c) \cup (A \cap B) = A \cap B \quad [\because A \cap A^c = \phi]$

Important Results

If A , B and C are finite sets and U is the finite universal set, then

- $n(A \cup B) = n(A) + n(B) - n(A \cap B)$
- $n(A \cup B) = n(A) + n(B) \Leftrightarrow A, B$ are disjoint non-void sets.
- $n(A - B) = n(A) - n(A \cap B)$,
i.e. $n(A - B) + n(A \cap B) = n(A)$
- $n(A \cup B \cup C) = n(A) + n(B) + n(C) - n(A \cap B) - n(B \cap C) - n(A \cap C) + n(A \cap B \cap C)$

- Number of elements in exactly two of the sets A, B, C .
 $= n(A \cap B) + n(B \cap C) + n(C \cap A) - 3n(A \cap B \cap C)$
- Number of elements in exactly one of the sets A, B, C
 $= n(A) + n(B) + n(C) - 2n(A \cap B) - 2n(B \cap C) - 2n(A \cap C) + 3n(A \cap B \cap C)$
- $n(A' \cup B') = n(A \cap B)' = n(U) - n(A \cap B)$
- $n(A' \cap B') = n(A \cup B)' = n(U) - n(A \cup B)$
- $n(A \Delta B) = n(A) + n(B) - 2n(A \cap B)$
- $n(A') = n(U) - n(A)$
- $n(A \cap B') = n(A) - n(A \cap B)$

EXAMPLE 6. In a group of 500 students, there are 475 students who can speak Hindi and 200 can speak Bengali. What is the number of students who can speak Hindi only?

- a. 275 b. 300 c. 325 d. 350

Sol. b. Given, $n(H)$ = number of students who can speak Hindi = 475
 $n(B)$ = number of students who can speak Bengali = 200
 and $n(H \cup B)$ = total number of students = 500
 Now, $n(H \cap B)$ = number of students who speak both Hindi and Bengali = $n(H) + n(B) - n(H \cup B)$
 $= 475 + 200 - 500 = 175$
 Now, number of students who can speak Hindi only
 $= n(H) - n(H \cap B)$
 $= 475 - 175 = 300$

EXAMPLE 7. In a class of 100 students, 70 have taken Science, 60 have taken Mathematics, 40 have taken both Science and Mathematics.

Consider the following statements

- The number of students who have not taken Science or Mathematics is 10.
- The number of students who have not taken both Science and Mathematics is 10.

Which of the above statement(s) is/are correct?

- a. Only I b. Only II
 c. Both I and II d. None of these

Sol. c. Let A and B be the set of students who have taken Science and Mathematics, respectively.

$$\therefore n(A) = 70, n(B) = 60$$

$$\text{and } n(A \cap B) = \text{Number of students who have taken both} = 40$$

$$\text{We know that, } n(A \cup B) = n(A) + n(B) - n(A \cap B) = 70 + 60 - 40 = 90$$

$$\therefore \text{Number of students who have not taken Science or Mathematics} = \text{Number of students who have not taken both Science and Mathematics} = 100 - n(A \cup B) = 100 - 90 = 10$$

> PRACTICE EXERCISE

- Total number of elements in the power set of A containing 15 elements is
(a) 2^{15} (b) 15^2 (c) 2^{15-1} (d) $2^{15} - 1$
- What is the number of proper subsets of a given finite set with n elements?
(a) $2n - 1$ (b) $2n - 2$ (c) $2^n - 1$ (d) $2^n - 2$
- If $A = P(\{1, 2\})$, where P denotes the power set, then which one of the following is correct?
(a) $\{1, 2\} \subset A$ (b) $1 \in A$ (c) $\emptyset \notin A$ (d) $\{1, 2\} \in A$
- If the cardinality of a set A is 4 and that of a set B is 3, then what is the cardinality of the set $A \Delta B$?
(a) 1 (b) 5
(c) 7 (d) Cannot be determined
- If P , Q and R are three non-collinear points, then what is $PQ \cap PR$ equal to?
(a) Null set (b) $\{P\}$ (c) $\{P, Q, R\}$ (d) $\{Q, R\}$
- The shaded region in the given figure is

- (a) $A \cap (B \cup C)$ (b) $A \cup (B \cap C)$
(c) $A - (B \cap C)$ (d) $A - (B \cup C)$
- If A and B are subsets of a set X , then what is $\{A \cap (X - B)\} \cup B$ equal to?
(a) $A \cup B$ (b) $A \cap B$ (c) A (d) B
- Let $n(U) = 700$, $n(A) = 200$, $n(B) = 300$, $n(A \cap B) = 100$, then $n(A' \cap B')$ is equal to
(a) 400 (b) 600
(c) 300 (d) None of these
- Consider the following Venn diagram.

If $n(E) = 42$, $n(A) = 15$, $n(B) = 12$ and $n(A \cup B) = 22$, then the area represented by shaded portion in the above Venn diagram, is
(a) 25 (b) 27 (c) 32 (d) 37

- If A is the set of the divisions of the number 15, B is the set of prime numbers smaller than 10 and C is the set of even numbers smaller than 9, then $(A \cup C) \cap B$ is the set
(a) $\{1, 3, 5\}$ (b) $\{1, 2, 3\}$ (c) $\{2\}$ (d) $\{2, 5\}$

- In a college of 300 students, every student reads 5 newspapers and every newspaper is read by 60 students. The number of newspapers is
(a) at least 30 (b) almost 20
(c) exactly 25 (d) None of these
- In an examination out of 100 students, 75 passed in English, 60 passed in Mathematics and 45 passed in both English and Mathematics. What is the number of students passed in exactly one of the two subjects?
(a) 45 (b) 60 (c) 75 (d) 90
- If $A = \{4n + 2 \mid n \text{ is a natural number}\}$ and $B = \{3n \mid n \text{ is a natural number}\}$, then what is $(A \cap B)$ equal to?
(a) $\{12n^2 + 6n \mid n \text{ is a natural number}\}$
(b) $\{24n - 12 \mid n \text{ is a natural number}\}$
(c) $\{60n + 30 \mid n \text{ is a natural number}\}$
(d) $\{12n - 6 \mid n \text{ is a natural number}\}$
- If $X = \{(4^n - 3n - 1) \mid n \in \mathbb{N}\}$ and $Y = \{9(n - 1) \mid n \in \mathbb{N}\}$, then what is $X \cup Y$ equal to?
(a) X (b) Y (c) \mathbb{N} (d) A null set
- Let \mathbb{N} denotes the set of natural numbers and $A = \{n^2 : n \in \mathbb{N}\}$ and $B = \{n^3 : n \in \mathbb{N}\}$. Which one of the following is correct?
(a) $A \cup B = \mathbb{N}$
(b) The complement of $(A \cup B)$ is an infinite set
(c) $A \cap B$ must be a finite set
(d) $A \cap B$ must be a proper subset of $\{m^6 : m \in \mathbb{N}\}$
- Out of 800 boys in a school, 224 played cricket, 240 played hockey and 336 played basketball. Of the total, 64 played both basketball and hockey, 80 played cricket and basketball and 40 played cricket and hockey; 24 played all the three games. The number of boys, who did not play any game is
(a) 128 (b) 216 (c) 240 (d) 160
- Consider the set A of all determinants of order 3 with entries 0 or 1 only. Let B be the subset of A consisting of all determinants with value 1. Let C be the subset of the set of all determinants with value -1 . Then,
(a) C is empty
(b) B has as many elements as C
(c) $A = B \cup C$
(d) B has twice as many elements as C

- 18.** If $A = \{x : x^2 - 3x + 2 = 0\}$ and $B = \{x : x^2 + 2x - 8 = 0\}$, then $(A - B)$ is
 (a) $\{1, 2\}$ (b) $\{2\}$
 (c) $\{1\}$ (d) $\{4, 3\}$
- 19.** Let $A = \{x : x \in R, |x| < 1\}$, $B = \{x : x \in R, |x - 1| \geq 1\}$ and $A \cup B = R - D$, then the set D is
 (a) $\{x : 1 < x \leq 2\}$ (b) $\{x : 1 \leq x < 2\}$
 (c) $\{x : 1 \leq x \leq 2\}$ (d) None of these
- 20.** If $A = \{(x, y) : x^2 + y^2 = 25\}$ and $B = \{(x, y) : x^2 + 9y^2 = 144\}$, then $A \cap B$ contains
 (a) one point (b) three points (c) two points (d) four points
- 21.** If two sets A and B having 3 and 6 elements respectively, then which of the following is/are correct?
 I. The minimum number of elements of $(A \cup B) = 6$.
 II. The maximum number of elements of $(A \cap B) = 3$.
 Select the correct answer using the code given below.
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 22.** If A is any set and $P(A)$ is its power set, then which of the following is/are correct?
 I. $P(A) \cap P(B) = P(A \cap B)$
 II. $P(A) \cup P(B) = P(A \cup B)$
 Select the correct answer using the code given below.
 (a) Only II (b) Only I
 (c) Both I and II (d) Neither I nor II
- 23.** Consider the following statements
 I. All poets (P) are learned (L).
 II. All learned (L) are happy (H).
 Which one of the following Venn diagrams correctly represents both the above statements taken together?

- 24.** A relation between three sets is established using two expressions, $(A \cup B) = (A \cup C)$ and $(A \cap B) = (A \cap C)$, which stays valid if and only if
 I. $B = C$ II. $A = B = C$ III. $A = C$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Only III

Directions (Q. Nos. 25-27) In a city, 25% of the families have phone, 15% of the families have car, 65% of the families have neither phone nor car and 2000 families have both phone and car.

- 25.** Percentage of families having both phone and car, is
 (a) 5% (b) 10% (c) 20% (d) 25%
- 26.** Percentage of families having either phone or car, is
 (a) 10% (b) 30% (c) 35% (d) 40%
- 27.** What is the number of families in the city?
 (a) 30000 (b) 40000
 (c) 20000 (d) 10000

Directions (Q. Nos. 28-32) In a class, 3 languages are offered mainly Hindi, English and French. The total number of students learning French is 46. In x denotes the number of students learning Hindi and French but not English, then answer the following using adjacent Venn diagram.

- 28.** How many students learn precisely two languages?
 (a) 55 (b) 40 (c) 30 (d) 13
- 29.** How many students learn atleast two languages?
 (a) 15 (b) 30 (c) 45 (d) 55
- 30.** What is the total strength of the class?
 (a) 124 (b) 100 (c) 96 (d) 66
- 31.** How many students learn English and French?
 (a) 30 (b) 43 (c) 45 (d) 73
- 32.** How many students learn atleast one language?
 (a) 45 (b) 51
 (c) 96 (d) None of these

PREVIOUS YEARS' QUESTIONS

- 33.** If A and B are any two sets, then what is the value of $A \cap (A \cup B)$? ☑ 2012 I
 (a) Complement of A (b) Complement of B
 (c) B (d) A
- 34.** Let $A = \{x : x \text{ is a square of a natural number and } x \text{ is less than } 100\}$ and B is a set of even natural numbers. What is the cardinality of $A \cap B$? ☑ 2012 I
 (a) 4 (b) 5
 (c) 9 (d) None of these
- 35.** Let $U = \{x \in N : 1 \leq x \leq 10\}$ be the universal set, N being the set of natural numbers. If $A = \{1, 2, 3, 4\}$ and $B = \{2, 3, 6, 10\}$, then what is the complement of $(A - B)$? ☑ 2012 I
 (a) $\{6, 10\}$ (b) $\{1, 4\}$
 (c) $\{2, 3, 5, 6, 7, 8, 9, 10\}$ (d) $\{5, 6, 7, 8, 9, 10\}$

- 36.** Which one of the following is a null set? ☑ **2013 I**
 (a) $\{0\}$ (b) $\{\{\{\}\}\}$
 (c) $\{\{\}\}$ (d) $\{x \mid x^2 + 1 = 0, x \in R\}$
- 37.** If A is a subset of B , then which one of the following is correct? ☑ **2013 II**
 (a) $A^c \subseteq B^c$ (b) $B^c \subseteq A^c$ (c) $A^c = B^c$ (d) $A \subseteq A \cap B$
- 38.** If $A = \{1, 3, 5, 7\}$, then what is the cardinality of the power set $P(A)$? ☑ **2013 II**
 (a) 8 (b) 15 (c) 16 (d) 17
- 39.** Consider the following
 I. $A \cup (B \cap C) = (A \cap B) \cup (A \cap C)$
 II. $A \cap (B \cup C) = (A \cup B) \cap (A \cup C)$
 Which of the above statement(s) is/are correct?
 ☑ **2013 II**
 (a) Only I (b) Only II (c) I and II (d) Neither I nor II
- 40.** In a group of 50 people, two tests were conducted, one for diabetes and one for blood pressure. 30 people were diagnosed with diabetes and 40 people were diagnosed with high blood pressure. What is the minimum number of people who were having diabetes and high blood pressure? ☑ **2013 II**
 (a) 0 (b) 10 (c) 20 (d) 30
- 41.** Which one of the following is an example of non-empty set? ☑ **2013 II**
 (a) Set of all even prime numbers
 (b) $\{x : x^2 - 2 = 0 \text{ and } x \text{ is rational}\}$
 (c) $\{x : x \text{ is a natural number, } x < 8 \text{ and simultaneously } x > 12\}$
 (d) $\{x : x \text{ is a point common to any two parallel lines}\}$

Directions (Q. Nos. 42-44) Read the following information carefully to answer the questions that follow.

In a survey of 25 students, it was found that 15 have taken Mathematics, 12 have taken Physics and 11 have taken Chemistry, 5 have taken Mathematics and Chemistry, 9 have taken Mathematics and Physics, 4 have taken Physics and Chemistry and 3 have taken all the three subjects. ☑ **2014 I**

- 42.** The number of students who have taken only Physics, is
 (a) 2 (b) 3 (c) 5 (d) 6
- 43.** The number of students who have taken only two subjects, is
 (a) 7 (b) 8 (c) 9 (d) 10

- 44.** Consider the following statements
 I. The number of students who have taken only one subject is equal to the number of students who have taken only two subjects.
 II. The number of students who have taken atleast two subjects is four times the number of students who have taken all the three subjects.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 45.** In a class of 60 students, 45 students like music, 50 students like dancing, 5 students like neither. Then, the number of students in the class who like both music and dancing, is ☑ **2015 I**
 (a) 35 (b) 40 (c) 50 (d) 55
- 46.** Let $A = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10\}$. Then, the number of subsets of A containing exactly two elements is ☑ **2015 I**
 (a) 20 (b) 40 (c) 45 (d) 90
- 47.** If $A = \{x : x \text{ is a multiple of } 3\}$ and $B = \{x : x \text{ is a multiple of } 4\}$ and $C = \{x : x \text{ is a multiple of } 12\}$, then which one of the following is a null set? ☑ **2015 I**
 (a) $(A \setminus B) \cup C$ (b) $(A \setminus B) \setminus C$
 (c) $(A \cap B) \cap C$ (d) $(A \cap B) \setminus C$
- 48.** If $A = \{x \in R : x^2 + 6x - 7 < 0\}$ and $B = \{x \in R : x^2 + 9x + 14 > 0\}$, then which of the following is/are correct?
 I. $(A \cap B) = (-2, 1)$ II. $(A \setminus B) = (-7, -2)$
 Select the correct answer using the code given below. ☑ **2015 II**
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 49.** A, B, C and D are four sets such that $A \cap B = C \cap D = \phi$. Consider the following
 I. $A \cup C$ and $B \cup D$ are always disjoint.
 II. $A \cap C$ and $B \cap D$ are always disjoint.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II ☑ **2015 II**
 (c) Both I and II (d) Neither I nor II
- 50.** What is the number of natural numbers less than or equal to 1000 which are neither divisible by 10 nor 15 nor 25? ☑ **2016 I**
 (a) 860 (b) 854 (c) 840 (d) 824

HINTS AND SOLUTIONS

1. (a) If a set A has n elements, then its power set will contain 2^n elements.
 \therefore Total number of elements in is power set of $A = 2^{15}$

2. (c)

3. (d) Let $B = \{1, 2\}$

Then, $A = P(B) = \{\emptyset, \{1\}, \{2\}, \{1, 2\}\}$

Clearly, $\{1, 2\} \in A$

4. (d) Since, the sets A and B are not known, then cardinality of the set $A \Delta B$ cannot be determined.

5. (b) Given, P, Q and R are three non-collinear points, then

$$PQ \cap PR = \{P\}.$$

6. (d)

7. (a)

8. (c) $n(A' \cap B') = n(A \cup B)'$

$$= n(U) - n(A \cup B)$$

$$= n(U) - [n(A) + n(B) - n(A \cap B)]$$

$$= 700 - \{200 + 300 - 100\} = 300$$

9. (a) Shaded region

$$= n(E) - n(A \cup B) + n(A \cap B)$$

$$= n(E) - n(A \cup B) + n(A) + n(B)$$

$$- n(A \cap B)$$

$$= 42 - 22 + 15 + 12 - 22 = 25$$

10. (c) Given, $A = \{15, 30, 45, 60, 75, \dots\}$

$$B = \{2, 3, 5, 7\}; C = \{2, 4, 6, 8\}$$

$$\text{Now, } A \cup C = \{15, 30, 45, 60, 75, \dots\}$$

$$\cup \{2, 4, 6, 8\}$$

$$= \{2, 4, 6, 8, 15, 30, 45, 60, \dots\}$$

$$\text{Now, } (A \cup C) \cap B$$

$$= \{2, 4, 6, 8, 15, 30, 45, \dots\} \cap \{2, 3, 5, 7\}$$

$$= \{2\}$$

11. (c) Let n be the number of newspapers. Then, $60 \times n = 300 \times 5$

$$\Rightarrow n = 25$$

12. (a) Let E and M be the set of students passed in English and Mathematics, then $n(E) = 75$, $n(M) = 60$

$$\text{and } n(E \cap M) = 45$$

\therefore Required number of students

$$= n(E) + n(M) - 2n(E \cap M)$$

$$= 75 + 60 - 90$$

$$= 45$$

13. (d) $A = \{4n + 2 \mid n \in N\}$

$$= \{6, 10, 14, 18, 22, 26, 30, \dots\}$$

$$\text{and } B = \{3n \mid n \in N\}$$

$$= \{3, 6, 9, 12, 15, 18, 21,$$

$$24, 27, 30, \dots\}$$

$$\Rightarrow A \cap B = \{6, 18, 30, \dots\}$$

$$\text{or } A \cap B = \{6 + (n-1)12 \mid n \in N\}$$

$$= \{12n - 6 \mid n \in N\}$$

14. (b) $X = \{(4^n - 3n - 1) \mid n \in N\}$

$$\text{and } Y = \{9(n-1) \mid n \in N\}$$

$$\Rightarrow X = \{0, 9, 54, \dots\}$$

$$\text{and } Y = \{0, 9, 18, 27, 36, 54, \dots\}$$

$$\therefore X \cup Y = \{0, 9, 18, 27, 36, 54, \dots\} = Y$$

15. (d) $\because A = \{n^2 : n \in N\}$

$$\text{and } B = \{n^3 : n \in N\}$$

So, $A \cap B$ must be a proper subset of $\{m^6 : m \in N\}$.

16. (d) Given, $n(C) = 224$, $n(H) = 240$,

$$n(B) = 336$$
, $n(H \cap B) = 64$,

$$n(B \cap C) = 80$$
, $n(H \cap C) = 40$,

$$n(C \cap H \cap B) = 24$$
, $n(U) = 800$

$$n(C' \cap H' \cap B') = n[C \cup H \cup B]^c$$

$$= n(U) - n(C \cup H \cup B)$$

$$= 800 - [n(C) + n(H) + n(B)$$

$$- n(C \cap H) - n(H \cap B)$$

$$- n(B \cap C) + n(C \cap H \cap B)]$$

$$= 800 - (224 + 240 + 336 - 40 - 64$$

$$- 80 + 24) = 160$$

17. (b) We know that, the interchange of two adjacent rows (columns) changes the value of a determinant only in sign but not in magnitude. Hence, corresponding to every element Δ of B there is an element Δ' in C obtained by interchanging two adjacent rows (columns) in Δ . It follows that $n(B) \leq n(C)$, i.e. the number of elements in B is less than or equal to the number of elements in C .

$$\text{Similarly, } n(C) \leq n(B)$$

$$\text{Hence, } n(B) = n(C),$$

i.e. B has as many elements as C .

18. (c) Given, $A = \{x : x^2 - 3x + 2 = 0\}$

$$= \{x : (x-1)(x-2) = 0\}$$

$$= \{1, 2\}$$

$$\text{and } B = \{x : x^2 + 2x - 8 = 0\}$$

$$= \{x : (x+4)(x-2) = 0\}$$

$$= \{2, -4\}$$

$$\therefore (A - B) = \{1, 2\} - \{2, -4\} = \{1\}$$

19. (b) We have,

$$A = \{x : x \in R, -1 < x < 1\}$$

$$\text{and } B = \{x : x \in R, x - 1 \leq -1$$

$$\text{or } x - 1 \geq 1\}$$

$$= \{x : x \in R, x \leq 0 \text{ or } x \geq 2\}$$

$$\therefore A \cup B = \{x : x \in R, x < 1 \text{ or } x \geq 2\}$$

$$= R - D$$

where, $D = \{x : x \in R, 1 \leq x < 2\}$

20. (d) Clearly, A is the set of all points on the circle $x^2 + y^2 = 25$ and B is the set of all points on the ellipse $x^2 + 9y^2 = 144$. These two intersect at four points P, Q, R and S .

Hence, $A \cap B$ contains four points.

21. (c) $n(A \cup B) = n(A) + n(B) - n(A \cap B)$

$$= 3 + 6 - n(A \cap B)$$

$$= 9 - n(A \cap B)$$

As maximum number of element in $(A \cap B) =$ minimum of $n(A)$ and $n(B) = 3$

\therefore Minimum number of elements in $(A \cup B) = 9 - 3 = 6$

Hence, both statements are correct.

22. (b) Let $x \in P(A \cap B)$

$$\Leftrightarrow x \subseteq (A \cap B)$$

$$\Leftrightarrow x \subseteq A \text{ and } x \subseteq B$$

$$\Leftrightarrow x \in P(A) \text{ and } x \in P(B)$$

$$\Leftrightarrow x \in P(A) \cap P(B)$$

$$\therefore P(A \cap B) \subseteq P(A) \cap P(B)$$

$$\text{and } P(A) \cap P(B) \subseteq P(A \cap B)$$

$$\text{Hence, } P(A) \cap P(B) = P(A \cap B)$$

Now, consider sets $A = \{1\}, B = \{2\}$

$$\Rightarrow A \cup B = \{1, 2\}$$

$$\therefore P(A) = \{\emptyset, \{1\}\}, P(B) = \{\emptyset, \{2\}\}$$

$$\text{and } P(A \cup B)$$

$$= \{\emptyset, \{1\}, \{2\}, \{1, 2\}\}$$

$$\neq P(A) \cup P(B)$$

Hence, Statement I is true but Statement II is false.

23. (a) We have three categories, i.e. poets, learned and happy for which we can Venn diagram as follows.

Statement I represents

Thus, $P \subseteq L$

Statement II represents

Thus, $L \subseteq H$

On combining both statements, we get $P \subseteq L \subseteq H$ and the Venn diagram of both statements taken together is given below.

24. (a) We have, $B = B \cup (A \cap B)$
 $= B \cup (A \cap C)$ [$\because A \cap B = A \cap C$]
 $= (B \cup A) \cap (B \cup C)$
 $= (A \cup C) \cap (B \cup C)$
 $= (A \cap B) \cup C$
 $= (A \cap C) \cup C = C$

Hence, only statement I is correct

Sol. (Q. Nos. 25-27) Let P and C be the set of families having phone and car, respectively.

Given, $n(P \cap C) = 65\%$
 $\Rightarrow n(U) - n(P \cup C) = 65\%$
 $\Rightarrow n(P \cup C) = 100 - 65 = 35\%$

25. (a) Percentage of families having both phone and car,

$n(P \cap C) = n(P) + n(C) - n(P \cup C)$
 $= 25\% + 15\% - 35\% = 5\%$

26. (c) Percentage of families having either phone or car, $n(P \cup C) = 35\%$

27. (b) If total number of families is x , then
 5% of $x = 2000$
 $\Rightarrow x = \frac{2000}{5} \times 100 = 40000$

Sol. (Q. Nos. 28-32) Given that, the total number of students learning French = 46

$\therefore 15 + 11 + x + 3x = 46$
 $\Rightarrow 4x = 20 \Rightarrow x = 5$

28. (c) The number of students learn precisely two languages

$= x + 2x + 3x$
 $= 6x = 6 \times 5 = 30$

29. (c) The number of students learn atleast two language

$= x + 2x + 3x + 15$
 $= 6x + 15 = 30 + 15 = 45$

30. (a) Total number of students in a class
 $= 28 + 23 + 17 + 11 + x + 2x + 3x + 15$
 $= 79 + 6x + 15 = 94 + 30 = 124$

31. (a) The number of students learn English and French

$= 15 + 3x = 15 + 15 = 30$

32. (c) The number of students learn atleast one language = $124 - 28 = 96$

33. (d) Here, A and B are any two sets and U is the universal set.

34. (a) Given,
 $A = \{1, 4, 9, 16, 25, 36, 49, 64, 81\}$
 and $B = \{2, 4, 6, \dots\}$
 Now, $A \cap B = \{4, 16, 36, 64\}$
 \therefore Cardinality of $(A \cap B)$
 $=$ Number of elements in $(A \cap B) = 4$

35. (c) Given that,
 $U = \{x \in N : 1 \leq x \leq 10\}$
 $A = \{1, 2, 3, 4\}$ and $B = \{2, 3, 6, 10\}$
 Now, $A - B = \{1, 4\}$
 \therefore Complement of $(A - B) = (A - B)'$
 $= U - (A - B) = \{2, 3, 5, 6, 7, 8, 9, 10\}$

36. (d) $\{0\} \rightarrow$ Singleton set and $x^2 + 1 = 0$
 $\Rightarrow x^2 = -1$
 $\Rightarrow x$ is a complex number.
 While $\{x | x^2 + 1 = 0, x \in R\}$.
 So, it is a null set.

37. (b) Let $U = \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10\}$
 $A = \{1, 2, 3, 4, 5\}$, $B = \{1, 2, 3, 4, 5, 6\}$
 Clearly, $A \subseteq B$
 Now, $A^C = \{6, 7, 8, 9, 10\}$,
 $B^C = \{7, 8, 9, 10\}$
 $\Rightarrow B^C \subseteq A^C$
 Now, we have $A \cap B = \{1, 2, 3, 4, 5\}$
 $\Rightarrow A = (A \cap B)$
 Hence, option (b) is correct.

38. (c) Given that, $A = \{1, 3, 5, 7\}$
 Here, $n(A) = 4$
 \therefore Number of elements on power set of A
 $= 2^{n(A)} = 2^4 = 16$
 \therefore Cardinality of the power set
 $P(A) = 16$

39. (a) We know that,
 In set theory, according to 'Distribution law',
 I. $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$
 II. $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$
 So, both statements are incorrect.

40. (c) Given, $n(D) = 30$, $n(B) = 40$
 As, $n(D \cap B) = n(D) + n(B) - n(D \cup B)$
 $= 40 + 30 - n(D \cup B)$
 $= 70 - n(D \cup B)$

As total number of people is 50, therefore maximum value of $n(D \cup B)$ is 50.
 Hence, minimum value of
 $n(D \cap B) = 70 - 50 = 20$

41. (b) Let S be the set of all even prime numbers.
 $\therefore S = \{2\} =$ non-empty set

Sol. (Q. Nos. 42-44)

Given that,
 Total number of surveyed students = 25
 Number of students, who have taken all three subjects = 3
 Number of students, who have taken Physics and Chemistry = 4
 Number of students, who have taken Mathematics and Physics = 9
 Number of students who have taken Mathematics and Chemistry = 5
 Number of students, who have taken Chemistry = 11
 Number of students, who have taken Physics = 12
 Number of students, who have taken Mathematics = 15

42. (a) The number of students, who have taken only Physics
 $= 12 - (1 + 3 + 6)$
 $= 12 - 10 = 2$
43. (c) The number of students, who have taken only two subjects = $6 + 2 + 1 = 9$

- 44.** (b)
 I. The number of students, who have taken only one subject
 $= 2 + 5 + 4 = 11$
 and the number of students, who have taken only two subjects
 $= 6 + 2 + 1 = 9$
 Since, $11 \neq 9$, therefore given statement is not correct.
 II. The number of students, who have taken atleast two subjects
 $= 1 + 2 + 6 + 3 = 12$
 The number of students, who have taken all three subjects = 3
 Since, $12 = 4 \times 3$, therefore given statement is correct.

- 45.** (b) Let the number of students in the class be x , who like both music and dancing.

- $\therefore (45 - x) + x + (50 - x) + 5 = 60$
 $\Rightarrow 100 - x = 60$
 $\Rightarrow x = 100 - 60 = 40$
- 46.** (c) Required number of subsets of A containing exactly two elements
 $= {}^{10}C_2 = \frac{10 \times 9}{2}$
 $= \frac{90}{2} = 45$
- 47.** (d) Here, $A = \{3, 6, 9, 12, 15, \dots\}$
 $B = \{4, 8, 12, 16, 20, \dots\}$
 and $C = \{12, 24, 36, 48, \dots\}$

$\therefore A \cap B = \{12, 24, 36, 48, \dots\}$
 $\Rightarrow (A \cap B) \setminus C = (A \cap B) - C$
 $= \{12, 24, 36, \dots\} - \{12, 24, 36, \dots\}$
 which is a null set.

- 48.** (a) We have,
 $A = \{x \in R : x^2 + 6x - 7 < 0\}$
 $= \{x \in R : (x + 7)(x - 1) < 0\}$
 $= \{x \in R : -7 < x < 1\}$
 and $B = \{x \in R : x^2 + 9x + 14 > 0\}$
 $= \{x \in R : (x + 7)(x + 2) > 0\}$
 $= \{x \in R : x < -7 \text{ and } x > -2\}$
 $\therefore A \cap B = \{x \in R : -2 < x < 1\}$
 $= (-2, 1)$
 and $(A \setminus B) = A - B$
 $= \{x \in R : -7 < x \leq -2\}$
 $= (-7, -2]$

Hence, only Statement I is correct.

- 49.** (b) Since, $A \cap B = \phi$ and $C \cap D = \phi$
 $\therefore (A \cap B) \cap (C \cap D) = \phi$
 $\Rightarrow (A \cap C) \cap (B \cap D) = \phi$
 Hence, $A \cap C$ and $B \cap D$ are always disjoint.
 But $A \cup C$ and $B \cup D$ may be or not disjoint. See example given below

Here, $(A \cap C) \cap (B \cup D) = \phi$
 But, $(A \cup C) \cap (B \cup D) \neq \phi$
 Hence, only Statement II is correct.

- 50.** (b) Let A, B and C be the set of natural numbers (≤ 1000) which are divisible by 10, 15 and 25 respectively.

Then, $n(A) = \left(\frac{1000}{10}\right) = 100,$
 $n(B) = \left(\frac{1000}{15}\right) = 66$
 and $n(C) = \left(\frac{1000}{25}\right) = 40$

Now, $n(A \cap B) = n$ (set of numbers which are divisible by both 10 and 15)
 $= n$ (set of numbers divisible by 30)
 $= \left(\frac{1000}{30}\right) = 33$

Similarly, $n(A \cap C)$
 $= n$ (set of numbers divisible by 50)
 $= \left(\frac{1000}{50}\right) = 20$

$n(B \cap C)$
 $= n$ (set of numbers divisible by 75)
 $= \left(\frac{1000}{75}\right) = 13$

and $n(A \cap B \cap C)$
 $= n$ (set of numbers divisible by 10, 15 and 25)
 $= n$ (set of numbers divisible by 150)
 $= \left(\frac{1000}{150}\right) = 6$

$\therefore n(A \cup B \cup C) = n(A) + n(B)$
 $+ n(C) - n(A \cap B) - n(B \cap C)$
 $- n(C \cap A) + n(A \cap B \cap C)$
 $= 100 + 66 + 40 - 33 - 13 - 20 + 6$
 $= 146$

Hence, required numbers
 $= n(U) - n(A \cup B \cup C)$
 $= 1000 - 146 = 854$

02

RELATIONS AND FUNCTIONS

In NDA exam, generally 4-7 questions are asked from this chapter which are based on inverse relation, types of relation, equivalence relation, domain and range of function, composition of functions and various standard functions.

Ordered Pair

Two elements a and b listed in a particular order, is called ordered pair and it is denoted by (a, b) , where ' a ' is the first element and ' b ' is the second element.

It is evident from the definition that

$$(a, b) \neq (b, a) \Leftrightarrow a \neq b$$

Also, if $(a, b) = (c, d)$, then $a = c$ and $b = d$.

Cartesian Product of Two Sets

Let A and B be any two non-empty sets. The set of all ordered pairs (a, b) such that $a \in A$ and $b \in B$ is called the Cartesian product of the sets A and B and is denoted by $A \times B$.

Thus, $A \times B = \{(a, b) : a \in A \text{ and } b \in B\}$

- Note**
- $A = \phi$ or $B = \phi$, then we define $A \times B = \phi$.
 - If A has n elements and B has m elements, then $A \times B$ has mn elements.
 - If $A \neq B$, then $A \times B \neq B \times A$.

Properties of Cartesian Product

- For any three sets A, B and C , we have
 - $A \times (B \cup C) = (A \times B) \cup (A \times C)$
 - $A \times (B \cap C) = (A \times B) \cap (A \times C)$
 - $A \times (B - C) = (A \times B) - (A \times C)$
- If A and B are two non-empty sets, then $A \times B = B \times A \Leftrightarrow A = B$
- If $A \subseteq B$, then $A \times A \subseteq (A \times B) \cap (B \times A)$
- If $A \subseteq B$, then $A \times C \subseteq B \times C$, for any set C
- If $A \subseteq B$ and $C \subseteq D$, then $A \times C \subseteq B \times D$
- For any sets A, B, C and D ,
$$(A \times B) \cap (C \times D) = (A \cap C) \times (B \cap D)$$
- For any sets A and B ,
$$(A \times B) \cap (B \times A) = (A \cap B) \times (B \cap A)$$
- For any three sets A, B and C ,
 - $A \times (B' \cup C')' = (A \times B) \cap (A \times C)$
 - $A \times (B' \cap C')' = (A \times B) \cup (A \times C)$
- Let A and B be two non-empty sets having n elements in common, then $A \times B$ and $B \times A$ have n^2 elements in common.

EXAMPLE 1. Let A and B be two sets such that $A \times B$ consists of 6 elements. If three elements of $A \times B$ are $(1, 4)$, $(2, 6)$ and $(3, 6)$, then

- a. $(A \times B) = (B \times A)$ b. $(A \times B) \neq (B \times A)$
 c. $A \times B = \{(1, 4), (1, 6), (2, 4)\}$ d. None of these

Sol. b. Since, $(1, 4)$, $(2, 6)$ and $(3, 6)$ are elements of $A \times B$, it follows that 1, 2, 3 are elements of A and 4, 6 are elements of B . It is given that $A \times B$ has 6 elements.

So, $A = \{1, 2, 3\}$ and $B = \{4, 6\}$

Hence, $A \times B = \{1, 2, 3\} \times \{4, 6\}$
 $= \{(1, 4), (1, 6), (2, 4), (2, 6), (3, 4), (3, 6)\}$

and $B \times A = \{4, 6\} \times \{1, 2, 3\}$
 $= \{(4, 1), (4, 2), (4, 3), (6, 1), (6, 2), (6, 3)\}$

RELATION

Relation is a definite manner or pattern which show how a set belongs to another one. Let A and B be two non-empty sets, then a relation R from A to B is a subset of $A \times B$. Thus, R is a relation from A to $B \Leftrightarrow R \subseteq A \times B$. If R is a relation from a non-void set A to a non-void set B and $(a, b) \in R$, then we write aRb which is read as 'a is related to b' by the relation R . If $(a, b) \notin R$, then we write $a \not R b$ and say that 'a is not related to b' by the relation R .

Note If A and B are two non-empty sets consisting of p and q elements respectively, then total number of relations from A to B is 2^{pq} .

Domain of a Relation

Let R be a relation from a set A to a set B . Then, the set of all first components of the ordered pair belonging to R is called the domain of R .

Thus, $\text{Domain}(R) = \{a : (a, b) \in R\}$

It is evident from the definition that the domain of a relation from A to B is a subset of A .

e.g. If $A = \{1, 3, 5, 7\}$, $B = \{2, 4, 6, 8, 10\}$
 and $R = \{(1, 8), (3, 6), (5, 2), (1, 4)\}$ be a relation from A to B .

Then, $\text{dom}(R) = \{1, 3, 5\}$

Range of a Relation

If R is a relation from a set A to a set B , then the set of all second components of the ordered pair of R is called the range of R .

Thus, $\text{Range}(R) = \{b : (a, b) \in R\}$ the range of relation from A to B is a subset of B .

e.g. If $A = \{a, b, c\}$, $B = \{d, e, f, g, h\}$ and
 $R = \{(a, d), (b, e), (c, f)\}$, then range of $R = \{d, e, f\}$

Codomain of a Relation

If R is a relation from set A to the set B , then the set B is called the codomain of the relation R . The range of relation is always a subset of its codomain

EXAMPLE 2. If R is a relation from set $A = \{2, 4, 5\}$ to set $B = \{1, 2, 3, 4, 6, 8\}$ defined by $xRy \Leftrightarrow x$ divides y , then the domain and the range of R are

- a. $\text{Dom}(R) = \{2\}$, $\text{Range}(R) = \{2, 4, 6\}$
 b. $\text{Dom}(R) = \{2, 4\}$, $\text{Range}(R) = \{2, 4, 6, 8\}$
 c. $\text{Dom}(R) = \{4\}$, $\text{Range}(R) = \{2, 4, 6\}$
 d. None of the above

Sol. b. As set $A = \{2, 4, 5\}$ is related to set $B = \{1, 2, 3, 4, 6, 8\}$ through a relation defined as $xRy \Leftrightarrow x$ divides y .

Thus, clearly we have, $2R2$, $2R4$, $2R6$, $2R8$, $4R4$ and $4R8$
 $\therefore R = \{(2, 2), (2, 4), (2, 6), (2, 8), (4, 4), (4, 8)\}$

Now, as we know, domain is the first component of the ordered pair. Thus, $\text{Domain}(R) = \{2, 4\}$ and range is the second components of ordered pair.

Thus, $\text{Range}(R) = \{2, 4, 6, 8\}$

Inverse Relation

Let A and B be non-void sets and R be the relation from a set A to a set B . Then, the inverse of R , denoted by R^{-1} , is a relation from B to A and is defined by

$$R^{-1} = \{(b, a) : (a, b) \in R\}$$

Clearly, $(a, b) \in R \Leftrightarrow (b, a) \in R^{-1}$

Also, $\text{Domain}(R^{-1}) = \text{Range}(R)$

and $\text{Range}(R^{-1}) = \text{Domain}(R)$

EXAMPLE 3. Let N be the set of natural numbers and let $R = \{(a, b) : a \in N, b \in N \text{ and } 2a + b = 10\}$. Then, find

- i. $\text{Dom}(R)$ ii. $\text{Range}(R)$ iii. R^{-1} iv. $\text{Dom}(R^{-1})$ v. $\text{Range}(R^{-1})$

Sol. Clearly $R \subseteq N \times N$. So, R is a binary relation on A .

$$\therefore R = \{(1, 8), (2, 6), (3, 4), (4, 2)\}$$

(i) $\text{Dom}(R) = \{1, 2, 3, 4\}$ (ii) $\text{Range}(R) = \{8, 6, 4, 2\}$

(iii) $R^{-1} = \{(8, 1), (6, 2), (4, 3), (2, 4)\}$

(iv) $\text{Dom}(R^{-1}) = \{8, 6, 4, 2\}$ (v) $\text{Range}(R^{-1}) = \{1, 2, 3, 4\}$

Types of Relations

- Void relation** Let A be a set. Then, $\phi \subseteq A \times A$ and ϕ is a null set, so it is a relation on A . This relation is called the void or empty relation on set A .
- Universal relation** Let A be a set. Then, $A \times A \subseteq A \times A$, so it is a relation on A . This relation is called the universal relation on set A .
 e.g. If $A = \{x, y\}$, then the universal relation on A is the set $\{(x, x), (x, y), (y, x), (y, y)\}$

Note The void and the universal relations on a set A are respectively the smallest and the largest relations on set A .

3. **Identity relation** Let A be a set. Then, the relation $I_A = \{(a, a) : a \in A\}$ on A is called the identity relation on A .

e.g. If $A = \{1, 4, 5\}$, then identity relation,

$$I_A = \{(1, 1), (4, 4), (5, 5)\}$$

In other words, a relation I_A on A is called the identity relation, if every element of A is related to itself only.

4. **Reflexive relation** A relation R on a set A is said to be reflexive, if every element of A is related to itself. Thus, R is reflexive $\Leftrightarrow (a, a) \in R, \forall a \in A$.

A relation R on a set A is not reflexive if there exists an element $a \in R$, such that $(a, a) \notin R$.

e.g. Let $A = \{1, 2, 3\}$ be a set. Then

$R = \{(1, 1), (2, 2), (3, 3), (1, 3)\}$ is a reflexive relation on A . But $R_1 = \{(1, 1), (3, 3), (1, 3), (2, 1)\}$ not a reflexive relation on A .

5. **Symmetric relation** A relation R on a set A is said to be symmetric relation,

$$\text{iff } (a, b) \in R \Rightarrow (b, a) \in R, \forall a, b \in A$$

$$\text{i.e. } aRb \Rightarrow bRa, \forall a, b \in A$$

e.g. Let $A = \{a, b, c, d\}$ be a set, then

$R = \{(a, c), (a, d), (d, a), (c, a), (b, b)\}$ is a symmetric relation.

6. **Transitive relation** Let A be any set. A relation R on A is said to be a transitive relation,

$$\text{iff } (a, b) \in R \text{ and } (b, c) \in R \Rightarrow (a, c) \in R, \forall a, b, c \in A$$

$$\text{i.e. } aRb \text{ and } bRc \Rightarrow aRc, \forall a, b, c \in A$$

e.g. If a relation R is defined by $xRy \Rightarrow x$ is less than y for any $x, y, z \in N$, then R is transitive relation.

7. **Anti-symmetric relation** Let A be any set. A relation R on set A is said to be an anti-symmetric relation,

$$\text{iff } (a, b) \in R \text{ and } (b, a) \in R \Rightarrow a = b, \forall a, b \in A$$

e.g. Let R be a relation on the set of natural numbers defined by $xRy \Leftrightarrow x'$ divides y' for all $x, y \in N$, then R is anti-symmetric relation.

8. **Equivalence relation and equivalence classes** A relation R on a set A is said to be an equivalence relation on A , iff

$$(i) \text{ It is reflexive, i.e. } (a, a) \in R, \forall a \in A$$

$$(ii) \text{ It is symmetric, i.e. } (a, b) \in R$$

$$\Rightarrow (b, a) \in R, \forall a, b \in A$$

$$(iii) \text{ It is transitive, i.e. } (a, b) \in R \text{ and } (b, c) \in R$$

$$\Rightarrow (a, c) \in R, \forall a, b, c \in A$$

Let R be an equivalence relation on the set A . For each $a \in A$, the equivalence class of a 'denoted by $[a]$ ' is defined as the set of all those points of A which are related to a under the relation R .

$$\text{Thus, } [a] = \{x \in A : xRa\}$$

Any two equivalence classes are either equal or disjoint and hence equivalence relation partitions the set A .

EXAMPLE 4. Let A be the set of all real numbers. Then, the relation $R = \{(a, b) : 1 + ab > 0\}$ on A is

- a. reflexive and symmetric but not transitive
- b. reflexive and transitive but not symmetric
- c. symmetric, transitive but not reflexive
- d. None of the above

Sol. a. Given, $R = \{(a, b) : 1 + ab > 0\}$

Reflexivity As $1 + a \cdot a = 1 + a^2 > 0$ for all $a \in A$

$\therefore (a, a) \in R$ is reflexive.

Symmetric $(a, b) \in R \Rightarrow 1 + ab > 0 \Rightarrow 1 + ba > 0 \Rightarrow (b, a) \in R$

Thus, R is symmetric.

Transitivity $(a, b) \in R$ and $(b, c) \in R$ need not imply $(a, c) \in R$.

Hence, R is not transitive.

Properties of Relation

- (i) If any set has n elements, then total number of reflexive relation is $2^{n^2 - n}$.
- (ii) The universal relation on a non-empty set is always reflexive, symmetric and transitive.
- (iii) The identity relation on a non-empty set is always reflexive, symmetric and transitive.
- (iv) The identity relation on a non-empty set is always anti-symmetric.
- (v) If R and S are two equivalence relations on set A , then $R \cap S$ is also an equivalence relation on A .
- (vi) The inverse of an equivalence relation is an equivalence relation.

Composition of Relations

If $R \subseteq A \times B$ and $S \subseteq B \times C$ are two relations. Then, compositions of the relations R and S denoted by $SoR \subseteq A \times C$ and is defined by $(a, c) \in SoR$ if and only if there is an element $b \in B$ such that $(a, b) \in R$ and $(b, c) \in S$.

e.g. Let $A = \{1, 2, 3\}$, $B = \{a, b, c, d\}$, $C = \{\alpha, \beta, \gamma\}$

$$R \subseteq A \times B = \{(1, a), (1, c), (2, d)\}$$

$$S \subseteq B \times C = \{(a, \alpha), (a, \gamma), (a, \beta)\}$$

Then, $SoR \subseteq A \times C = \{(1, \alpha), (1, \gamma), (1, \beta)\}$

Note Remember that $SoR \neq RoS$

Also, $(SoR)^{-1} = R^{-1}oS^{-1}$ is the reversal rule.

EXAMPLE 5. If R is a relation from $A = \{1, 2, 3, 4\}$ to $B = \{1, 3, 5\}$, i.e. $(a, b) \in R \Leftrightarrow a < b$, then RoR^{-1} is

- a. $\{(1, 3), (1, 5), (2, 3), (2, 5), (3, 5), (4, 5)\}$
- b. $\{(3, 1), (5, 1), (3, 2), (5, 2), (5, 3), (5, 4)\}$
- c. $\{(3, 3), (3, 5), (5, 3), (5, 5)\}$ d. $\{(3, 3), (3, 4), (4, 5)\}$

Sol. c. We have, $R = \{(1, 3), (1, 5), (2, 3), (2, 5), (3, 5), (4, 5)\}$
 $\Rightarrow R^{-1} = \{(3, 1), (5, 1), (3, 2), (5, 2), (5, 3), (5, 4)\}$
 Hence, $RoR^{-1} = \{(3, 3), (3, 5), (5, 3), (5, 5)\}$

FUNCTION

A function ' f ' from a set to another set is a rule or method which associates every element of first set to a unique element of second set.

OR

If A and B are two non-empty sets, then function f is a relation such that for every element $x \in A$ their exist a unique element $y \in B$, written as $y = f(x) = B$.

A function is also termed as 'map' or 'mapping'. If an element $x \in A$ is associated to an element $y \in B$, then y is called 'image of x ' or the value of function f at x . If for any value of x , there are more than one value of $f(x)$, then $f(x)$ is not a function but a relation. It is denoted by $f: A \rightarrow B$ or $f: A \xrightarrow{f} B$ which is read as "f is a function of A to B".

Domain of a Function

If $f: A \rightarrow B$ is a function, then the set A is called the domain of the function f and B is called the co-domain of f . Thus, domain is the all possible values of x for which $f(x)$ exists.

Range of a Function

Let f be a mapping from A to B , i.e. $f: A \rightarrow B$. Each element of A has a unique image and each element of B need not appear as the image of an element in A . We define the range of f to consist of those elements in B which appear as the image of atleast one element in A . Hence, range of a function of $f: A \rightarrow B$, denoted by $f(A)$.

Thus, $f(A) = \{f(x) : x \in A\} \Rightarrow f(A) \subseteq B$

\Rightarrow Range is the subset of codomain.

e.g. Let $A = \{a, b, c, d\}$ and $B = \{\alpha, \beta, \gamma\}$

Domain = $\{a, b, c, d\} = A$; Codomain = $\{\alpha, \beta, \gamma\} = B$
 Range = $\{\beta, \gamma\}$

EXAMPLE 6. Find the domain and range of the

function $f(x) = \frac{x}{1+x^2}$.

- a. $R, \left[-\frac{1}{2}, \frac{1}{2}\right]$ b. $R - \{0\}, \left[-\frac{1}{2}, \frac{1}{2}\right]$
- c. $R, \left[-\frac{1}{2}, \frac{1}{2}\right] - \{0\}$ d. None of these

Sol. c. Let $y = f(x) = \frac{x}{1+x^2} \Rightarrow 1+x^2 \neq 0, \forall x \in R$

So, y is defined for all real numbers.

\therefore Domain $(f) = R$

Also, $y = \frac{x}{1+x^2}$

$$\Rightarrow y + x^2y = x$$

$$\Rightarrow x^2y - x + y = 0$$

$$\therefore x = \frac{1 \pm \sqrt{1-4y^2}}{2y}$$

Since, $x \in R$, we have $y \neq 0$ and $1-4y^2 \geq 0$

Now, $1-4y^2 \geq 0$

$$\Rightarrow y^2 \leq \frac{1}{4} \Rightarrow -\frac{1}{2} \leq y \leq \frac{1}{2}$$

$$\therefore -\frac{1}{2} \leq y \leq \frac{1}{2} \text{ and } y \neq 0$$

$$\therefore \text{Range } (f) = \left[-\frac{1}{2}, \frac{1}{2}\right] - \{0\}$$

Types of Functions

- One-one function (Injection)** A mapping $f: A \rightarrow B$ is said to be one-one or one-to-one, if different elements in A have different f -images in B .

i.e. $f(x_1) = f(x_2)$
 $\Rightarrow x_1 = x_2, \forall x_1, x_2 \in A$

- Many-one function** A mapping $f: A \rightarrow B$ is said to be many-one, if two (or more than two) distinct elements in A have the same f -image in B .

i.e. $f(x_1) = f(x_2) \Rightarrow x_1 \neq x_2, \forall x_1, x_2 \in A$

3. **Into function** If the mapping $f : A \rightarrow B$ is such that there is at least one element in B which is not the f -image of any element in A , then f is a mapping of A 'into' B .

4. **Onto function (Surjection)** If the mapping $f : A \rightarrow B$ is such that each element in B is the f -image of at least one element in A , then f is a mapping of A 'onto' B .

5. **One-one-onto function (Bijective)** If the mapping $f : A \rightarrow B$ is such that each element in the co-domain B is mapped to by exactly one element of the domain A i.e. the function is both one-one and onto function well as onto function, then it is called bijective functions.

6. **One-one-into function** If the mapping $f : A \rightarrow B$ is such that different elements in A have different f -images in B and one or more than one element in the codomain B is not an image of any element in the domain A , then it is called one-one into function.

7. **Many-one-onto function** If the mapping $f : A \rightarrow B$ is such that two or more than two elements in A have the same image in B and B has the less element to A , then it is called many one onto function.

8. **Many-one-into function** If the mapping $f : A \rightarrow B$ is such that there is at least one element in B which is not the image of any element in A and B has more element to A , then it is called many one into function.

EXAMPLE 7. If $g(x) = \begin{cases} x, & x \in \theta \\ 0, & x \notin \theta \end{cases}$ and $f(x) = \begin{cases} x, & x \notin \theta \\ 0, & x \in \theta \end{cases}$

then $(f - g)$ will be

- a. one-one onto
- b. one-one into
- c. many-one onto
- d. many-one into

Sol. a. Let $h(x) = f(x) - g(x) = \begin{cases} x - 0, & x \notin \theta \\ 0 - x, & x \in \theta \end{cases}$

i.e. $h(x) = \begin{cases} x, & x \notin \theta \\ -x, & x \in \theta \end{cases} \Rightarrow h(x)$ is one-one and onto.

Some Important Functions

There are following some important functions come under this chapter.

1. **Constant function** A function $f : R \rightarrow R$ defined by $f(x) = c, \forall x \in R$ that assigns the same value to every member of its domain, where c is a constant, is called a **constant function**. The domain and range of this function are R and $\{c\}$, respectively.

2. **Identity function** A function $f : R \rightarrow R$ defined by $f(x) = x, \forall x \in R$ is called **identity function**. Here, domain and range both are equal to R .

3. **Reciprocal function** The function defined by

$$f(x) = \frac{1}{x}, \forall x \in R, x \neq 0$$

is called **reciprocal function**. The domain and range of this function are equal to $R - \{0\}$.

4. **Rational function** When any function is written as the ratio of two algebraic expressions, it is called a **rational function**.

e.g. $f(x) = \frac{x^2 - 3x + 5}{x^3 - 2x^2 + x - 1}$

5. **Absolute or modulus function** A function defined by

$$f(x) = |x| = \begin{cases} x, & \text{if } x \geq 0 \\ -x, & \text{if } x < 0 \end{cases}$$

is called **absolute or modulus function**. Domain and range of absolute function are respectively R and $[0, \infty)$.

Properties of modulus function

(i) $|x| \leq a \Leftrightarrow -a \leq x \leq a$ (ii) $|x| \geq a \Leftrightarrow x \leq -a$ or $x \geq a$

(iii) $|x \pm y| \leq |x| + |y|$ (iv) $|x \pm y| > ||x| - |y||$

6. **Greatest integer function** (Floor function) The function $f(x) = [x]$ is called the **greatest integer function** and means greatest integer less than or equal to x i.e. $[x] \leq x$.
e.g. $[3.12] = 3, [-3.12] = -4, [-3] = -3, [3] = 3$,
Its domain is R and range is I .

Properties of greatest integer function

(i) $[x + n] = [x] + n$, where $x \in R$ and $n \in I$

(ii) $[-x] = \begin{cases} -[x], & \text{if } x \in I \\ -[x] - 1, & \text{if } x \notin I \end{cases}$

(iii) $[x] + [-x] = \begin{cases} 0, & \text{if } x \in I \\ -1, & \text{if } x \notin I \end{cases}$

(iv) $n_1 \leq [x] \leq n_2 \Rightarrow n_1 \leq x < n_2 + 1$

7. **Smallest integer function** For any real number x , we use the symbol $[x]$ to denote the **smallest integer function** greater than or equal to x .
e.g. $[9.7] = 10, [-5.78] = -5$
This is also known as **ceiling function**.

8. **Exponential function** Let $a (\neq 1)$ be a positive real number. Then the function $f : R \rightarrow R$ defined by $f(x) = a^x$ is called the **exponential function**.

Domain of $f = R$

Range of $f = (0, \infty)$

9. **Logarithmic function** Let $a (\neq 1)$ be a positive real number. Then the function $f : (0, \infty) \rightarrow R$ defined by $f(x) = \log_a x$ is called the **logarithmic function**.

Domain of $f = (0, \infty)$

Range of $f = R$

10. **Trigonometric function** The function involving circular functions of variable angles are known as **trigonometric function**.

Function	Domain	Range
$\sin x$	R	$[-1, 1]$
$\cos x$	R	$[-1, 1]$
$\tan x$	$R - \left\{ (2n+1)\frac{\pi}{2} : n \in I \right\}$	R
$\cot x$	$R - \{n\pi : n \in I\}$	R
$\sec x$	$R - \left\{ (2n+1)\frac{\pi}{2} : n \in I \right\}$	$(-\infty, -1] \cup [1, \infty)$
$\operatorname{cosec} x$	$R - \{n\pi : n \in I\}$	$(-\infty, -1] \cup [1, \infty)$

11. **Inverse trigonometric function** The function involving inverse trigonometric ratios are known as **inverse trigonometric functions**.

Function	Domain	Range
$\sin^{-1} x$	$[-1, 1]$	$\left[-\frac{\pi}{2}, \frac{\pi}{2}\right]$
$\cos^{-1} x$	$[-1, 1]$	$[0, \pi]$
$\tan^{-1} x$	R	$\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$
$\cot^{-1} x$	R	$(0, \pi)$
$\sec^{-1} x$	$(-\infty, -1] \cup [1, \infty)$	$[0, \pi] - \left\{\frac{\pi}{2}\right\}$
$\operatorname{cosec}^{-1} x$	$(-\infty, -1] \cup [1, \infty)$	$\left[-\frac{\pi}{2}, \frac{\pi}{2}\right] - \{0\}$

12. **Periodic function** If a function $f(x)$ satisfies the condition $f(x + T) = f(x), \forall x \in X$, where T is the smallest positive real number for which the equality holds, then $f(x)$ is called a **periodic function** and T is called the **period** of the periodic function.

e.g. $\sin x$ is a periodic function with period 2π .

$[\because \sin x = \sin(2\pi + x)]$

13. **Signum function** The function defined by

$$f(x) = \frac{|x|}{x} = \begin{cases} -1, & x < 0 \\ 0, & x = 0 \\ 1, & x > 0 \end{cases}$$

is called the signum function.

Domain = R , Range = $\{-1, 0, 1\}$

EXAMPLE 8. The domain of the function

$$f(x) = \frac{1}{\sqrt{[x]^2 - [x] - 6}}$$
 is

- a. $(-\infty, -2) \cup [4, \infty)$ b. $(-\infty, -2] \cup [4, \infty)$
 c. $(-\infty, -2) \cup (4, \infty)$ d. None of these

Sol. a. $f(x)$ is defined, if $[x]^2 - [x] - 6 > 0$

$$\Rightarrow ([x] - 3)([x] + 2) > 0, [x] < -2 \text{ or } [x] > 3$$

$$\text{But } [x] < -2 \Rightarrow [x] = -3, -4, -5, \dots$$

$$\text{Also, } [x] > 3 \Rightarrow [x] = 4, 5, 6, \dots$$

$$\therefore x \geq 4$$

$$\text{Domain of } f = (-\infty, -2) \cup [4, \infty)$$

Inverse Function

Let $f : A \rightarrow B$ be a one-one onto (bijection) mapping. Then, the mapping, $f^{-1} : B \rightarrow A$, which associates to each element $b \in B$ the element $a \in A$, such that $f(a) = b$, is called the inverse mapping of the mapping $f : A \rightarrow B$.

Method to Find Inverse of Function

Let $f : A \rightarrow B$ be a bijective function.

- (1) Put $f(x) = y$.
- (2) Solve the equation $y = f(x)$ to obtain x in terms of y .
Interchange x and y to obtain the inverse of f .

EXAMPLE 9. The inverse of the function

$$y = \frac{10^x - 10^{-x}}{10^x + 10^{-x}} + 1$$
 is

- a. $y = \log_{10} \left(\frac{x}{2-x} \right)$ b. $y = \frac{1}{2} \log_{10} \left(\frac{x}{2-x} \right)$
 c. $y = \frac{1}{2} \log_{10} \left(\frac{x}{1-x} \right)$ d. None of these

Sol. b. $y = \frac{10^x - 10^{-x}}{10^x + 10^{-x}} + 1 \Rightarrow y - 1 = \frac{10^x - 10^{-x}}{10^x + 10^{-x}}$

Using componendo and dividendo

$$\frac{y-1+1}{y-1-1} = \frac{10^{2x}-1+10^{2x}+1}{10^{2x}-1-10^{2x}-1}$$

$$\frac{y}{y-2} = \frac{2(10^{2x})}{-2} \cdot \frac{y}{2-y} = 10^{2x}$$

$$2x = \log_{10} \left(\frac{y}{2-y} \right) \Rightarrow x = \frac{1}{2} \log_{10} \left(\frac{y}{2-y} \right) = f^{-1}(y)$$

Hence, the inverse of the given functions is

$$y = \frac{1}{2} \log_{10} \left(\frac{x}{2-x} \right)$$

Properties of Function

- (i) If A and B have n and m distinct elements respectively, then the number of mappings from A to B is equal to m^n .
- (ii) If A and B have n equal number of distinct elements, then the number of bijective functions from A to B is equal to $n!$. But if A and B don't have equal number of elements, then number of bijective functions from A to B is 0.
- (iii) The number of one-one functions that can be defined from a finite set A into a finite set B is defined from a finite set A into a finite set B is ${}^{n(B)}P_{n(A)}$, if $n(B) \geq n(A)$ and 0 otherwise.
- (iv) If A and B have n equal number of distinct elements, then number of onto functions from A to B is equal to $2^n - 2$.

Composition of Functions

Let A, B and C be three non-empty sets.

Let $f : A \rightarrow B$ and $g : B \rightarrow C$ be two mappings or functions. Then, the composite of the functions f and g denoted by $(g \circ f)$, is a mapping of $A \rightarrow C$, given by

$$(g \circ f) : A \rightarrow C$$

such that $(g \circ f)(x) = g\{f(x)\}, \forall x \in A$

$g \circ f$ exists iff the range of f is a subset of domain of g . Similarly, $f \circ g$ exists iff range of g is a subset of domain of f .

EXAMPLE 10. If $f(x) = \log \left(\frac{1+x}{1-x} \right)$ and

$$g(x) = \frac{(3x+x^3)}{1+3x^2}$$
, then what is $f[f(g(x))]$ equal to?

- a. $-f(x)$ b. $3[f(x)]$ c. $[f(x)]^3$ d. $-3[f(x)]$

Sol. b. Given, $f(x) = \log \left(\frac{1+x}{1-x} \right)$ and $g(x) = \frac{(3x+x^3)}{1+3x^2}$

$$\begin{aligned} \text{Now, } f[g(x)] &= \log \left(\frac{1+g(x)}{1-g(x)} \right) = \log \left(\frac{1+3x^2+3x+x^3}{1+3x^2-3x-x^3} \right) \\ &= \log \left(\frac{1+x}{1-x} \right)^3 \\ &= 3 \log \left(\frac{1+x}{1-x} \right) \\ &= 3[f(x)] \end{aligned}$$

> PRACTICE EXERCISE

- If $A = \{1, 2, 5, 6\}$ and $B = \{1, 2, 3\}$, then what is $(A \times B) \cap (B \times A)$ equal to?
 - $\{(1, 1), (2, 1), (6, 1), (3, 2)\}$
 - $\{(1, 1), (1, 2), (2, 1), (2, 2)\}$
 - $\{(1, 1), (2, 2)\}$
 - $\{(1, 1), (1, 2), (2, 5), (2, 6)\}$
- Which one of the following is correct?
 - $A \times (B - C) = (A - B) \times (A - C)$
 - $A \times (B - C) = (A \times B) - (A \times C)$
 - $A \cap (B \cup C) = (A \cap B) \cup C$
 - $A \cup (B \cap C) = (A \cup B) \cap C$
- Let $R = \{x \mid x \in N, x \text{ is a multiple of } 3 \text{ and } x \leq 100\}$
 $S = \{x \mid x \in N, x \text{ is a multiple of } 5 \text{ and } x \leq 100\}$.
 What is the number of elements in $(R \times S) \cap (S \times R)$?
 - 36
 - 33
 - 20
 - 6
- If $\phi(x) = a^x$, then $[\phi(p)]^3$ is equal to
 - $\phi(3p)$
 - $3\phi(p)$
 - $6\phi(p)$
 - $2\phi(p)$
- If $f(x) = x^2 - x^{-2}$, then $f\left(\frac{1}{x}\right)$ is equal to
 - $f(x)$
 - $-f(x)$
 - $\frac{1}{f(x)}$
 - $[f(x)]^2$
- If $f(x) = \frac{1+x}{1-x}$, then $\frac{f(x) \cdot f(x^2)}{1 + [f(x)]^2}$ is equal to
 - $\frac{1}{4}$
 - $\frac{1}{6}$
 - $\frac{1}{8}$
 - $\frac{1}{2}$
- Which one of the following functions, $f: R \rightarrow R$ is injective?
 - $f(x) = |x|, \forall x \in R$
 - $f(x) = x^2, \forall x \in R$
 - $f(x) = 11, \forall x \in R$
 - $f(x) = -x, \forall x \in R$
- The domain of the function $f(x) = \sqrt{x-1} + \sqrt{6-x}$ is
 - $[1, \infty)$
 - $(-\infty, 6)$
 - $[1, 6]$
 - None of these
- The period of the function $f(x) = |\sin x| + |\cos x|$ is
 - $\pi/2$
 - π
 - 2π
 - $\pi/4$
- The domain of the function $f(x) = \frac{1}{\log_{10}(1-x)} + \sqrt{x+2}$ is
 - $]-3, -2.5[\cup]-2.5, -2[$
 - $[-2, 0[\cup]0, 1[$
 - $]0, 1[$
 - None of these
- The range of the function $f(x) = \frac{1}{(2 - \sin 3x)}$ is
 - $\left[\frac{1}{3}, 1\right[$
 - $\left[\frac{1}{3}, 1\right]$
 - $\left[\frac{1}{3}, 1\right[$
 - $\left[1, \frac{1}{3}\right]$
- The function $f(x) = \log(x + \sqrt{x^2 + 1})$ is
 - an even function
 - an odd function
 - periodic function
 - None of these
- If $A = \{a, b, c\}$ and $R = \{(a, a), (a, b), (b, c), (b, b), (c, c), (c, a)\}$ is a binary relation on A , then which one of the following is correct?
 - R is reflexive and symmetric, but not transitive
 - R is reflexive and transitive, but not symmetric
 - R is reflexive, but neither symmetric nor transitive
 - R is reflexive, symmetric and transitive
- The values of b and c for which the identity $f(x+1) - f(x) = 8x + 3$ is satisfied, where $f(x) = bx^2 + cx + d$, are
 - $b = 2, c = 1$
 - $b = 4, c = -1$
 - $b = -1, c = 4$
 - None of these
- If the function $f(x) = \frac{(a^x + a^{-x})}{2}$ (where, $a > 2$), then $f(x+y) + f(x-y)$ is equal to
 - $2f(x) \cdot f(y)$
 - $f(x) \cdot f(y)$
 - $\frac{f(x)}{f(y)}$
 - $\frac{f(y)}{f(x)}$
- Let f be a function with domain $[-3, 5]$ and let $g(x) = |3x + 4|$, then the domain of $f \circ g(x)$ is
 - $\left[-3, \frac{1}{3}\right]$
 - $\left[-3, \frac{1}{3}\right]$
 - $\left[-3, \frac{1}{3}\right]$
 - None of these
- Let $f(x) = \frac{\alpha x}{x+1}, x \neq -1$. Then, for what value of α is $f[f(x)] = x$?
 - $\sqrt{2}$
 - $-\sqrt{2}$
 - 1
 - 1
- The inverse of the function $f(x) = \log_a(x + \sqrt{x^2 + 1})$ (where, $a < 0, a \neq 1$) is
 - $\frac{1}{2}(a^x - a^{-x})$
 - not defined for all x
 - defined for $x > 0$
 - None of these
- If $f(x) = 3x + 10$ and $g(x) = x^2 - 1$, then $(f \circ g)^{-1}$ is equal to
 - $\left(\frac{x-7}{3}\right)^{1/2}$
 - $\left(\frac{x+7}{3}\right)^{1/2}$
 - $\left(\frac{x-3}{7}\right)^{1/2}$
 - $\left(\frac{x+3}{7}\right)^{1/2}$
- Let $f(x) = (-1)^{[x]}$ (where $[]$ denotes the greatest integer function), then
 - range of f is $\{-1, 1\}$
 - f is an even function
 - f is an odd function
 - f is one-one function

- 21.** The function $f : R \rightarrow R$ defined by $f(x) = 4^x + 4^{|x|}$ is
 (a) one-one and into (b) many-one and into
 (c) one-one and onto (d) many-one and onto
- 22.** If $f(x)$ satisfies the relation $2f(x) + f(1-x) = x^2$ for all real x , then $f(x)$ is
 (a) $\frac{x^2 + 2x - 1}{6}$ (b) $\frac{x^2 + 2x - 1}{3}$
 (c) $\frac{x^2 + 4x - 1}{3}$ (d) $\frac{x^2 + 4x - 1}{6}$

- 23.** For real numbers x and y , define a relation R , xRy if only if $x - y + \sqrt{2}$ is an irrational number. Then the relation R is
 (a) reflexive (b) symmetric
 (c) transitive (d) an equivalence relation
- 24.** Let $A = \{2, 3, 4, 5, \dots, 16, 17, 18\}$ and $*$ be the equivalence relation on $A \times A$ defined by $(a, b) * (c, d)$ if $ad = bc$. Then, the number of ordered pairs of the equivalence class of $(3, 2)$ is
 (a) 5 (b) 6 (c) 7 (d) 8

- 25.** Consider the following with regard to a relation R on a set of real numbers defined by xRy if and only if $3x + 4y = 5$
 I. $0R1$ II. $1R\frac{1}{2}$ III. $\frac{2}{3}R\frac{3}{4}$
 Which of the above statement(s) is/are correct?
 (a) I and II (b) I and III (c) II and III (d) I, II and III

- 26.** The function $f : R \rightarrow R$ is defined by $f(x) = 3^{-x}$
 I. f is one-one function.
 II. f is onto function.
 III. f is a decreasing function.
 Which of the above statement(s) is/are correct?
 (a) I and II (b) II and III (c) I and III (d) All of these

- 27.** The domain of the given function $f(x) = \sqrt{\log_2 \sin x}$ is
 I. $(4n + 1)\frac{\pi}{3}$ II. $(4n + 1)\frac{2\pi}{3}$
 III. $(4n + 1)\frac{\pi}{2}$ where $n \in N$.
 Choose the correct option using the code given below.
 (a) Only I (b) Only II
 (c) Only III (d) I and II

Directions (Q. Nos. 28-29) Consider the function $f(x) = \sqrt{3x^2 - 4x + 5}$.

- 28.** The domain of function $f(x)$ is
 (a) R (b) $(-\infty, 1)$ (c) $(1, \infty)$ (d) $(\frac{2}{3}, \infty)$

- 29.** If $g(x) = \log_e x^2$, then range of the function $g[f(x)]$ is
 (a) $(-\infty, \log_e \frac{11}{3}]$ (b) $[\log_e \frac{11}{3}, \infty)$
 (c) $[-\log_e \frac{11}{3}, \log_e \frac{11}{3}]$ (d) None of these

Directions (Q. Nos. 30-31) The following functions are defined for the set of variables x_1, x_2, \dots, x_n

$$f(x_i, x_j) = \begin{cases} x_{i+j}, & \text{if } i+j \leq n^2 \\ x_{i+j-n}, & \text{if } i+j > n^2 \end{cases} \text{ and } g(x_i, x_j) = x_m$$

where, m is the remainder when $i \times j$ is divided by n .

- 30.** Find the value of $f[f(x_2, x_3), f(x_5, x_6)]$, if $n = 3$.
 (a) x_5 (b) x_{10} (c) x_{13} (d) x_8
- 31.** Find the value of $g[g(x_2, x_3), g(x_7, x_8)]$, if $n = 5$.
 (a) x_1 (b) x_2 (c) x_5 (d) All of these

Directions (Q. Nos. 32-33) Consider $f(x) = \frac{[x]}{x}$ and $g(x) = |x|$, where $[]$ denotes the greatest integer function.

- 32.** What is the value of $fog(-2/3) - gof(-2/3)$?
 (a) 1 (b) -1 (c) 0 (d) 2
- 33.** What is the value of $fog(-7/4) + gof(-1)$?
 (a) 0 (b) -1 (c) $\frac{1}{4}$ (d) $-\frac{1}{8}$

> **PREVIOUS YEARS' QUESTIONS**

- 34.** If $f(xy) = f(x)f(y)$, then $f(t)$ may be of the form ☑ 2012 I
 (a) $t + k$ (b) $ct + k$ (c) $t^k + c$ (d) t^k
 where k is a constant
- 35.** Let $A = \{x \in W, \text{ the set of whole numbers and } x < 3\}$, $B = \{x \in N, \text{ the set of natural numbers and } 2 \leq x < 4\}$ and $C = \{3, 4\}$, then how many elements will $(A \cup B) \times C$ contain? ☑ 2012 II
 (a) 6 (b) 8 (c) 10 (d) 12
- 36.** Let $P = \{1, 2, 3\}$ and a relation on set P is given by the set $R = \{(1, 2), (1, 3), (2, 1), (1, 1), (2, 2), (3, 3), (2, 3)\}$. Then, R is ☑ 2012 II
 (a) reflexive, transitive but not symmetric
 (b) symmetric, transitive but not reflexive
 (c) symmetric, reflexive but not transitive
 (d) None of the above
- 37.** The relation 'has the same father as' over the set of children is ☑ 2012 II
 (a) only reflexive (b) only symmetric
 (c) only transitive (d) an equivalence relation

- 38.** If $f: R \rightarrow R$ be a function whose inverse is $\frac{x+5}{3}$, then what is the value of $f(x)$? **☑ 2012 II**
 (a) $f(x) = 3x + 5$ (b) $f(x) = 3x - 5$
 (c) $f(x) = 5x - 3$ (d) Does not exist
- 39.** If $A = \{x \in R \mid x \geq 0\}$ and a function $f: A \rightarrow A$ is defined by $f(x) = x^2$, then which one of the following is correct? **☑ 2012 II**
 (a) The functions does not have inverse
 (b) f is its own inverse
 (c) The functions has an inverse but is not its own inverse
 (d) None of the above
- 40.** Consider the following statements
 I. If $f(x) = x^3$ and $g(y) = y^3$, then $f = g$.
 II. Identity function is not always a bijection.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II **☑ 2012 II**
 (c) Both I and II (d) Neither I nor II
- 41.** If $A = \{x, y\}, B = \{2, 3\}, C = \{3, 4\}$, then what is the number of elements in $A \times (B \cup C)$? **☑ 2013 I**
 (a) 2 (b) 4 (c) 6 (d) 8
- 42.** If A is a relation on a set R , then which one of the following is correct? **☑ 2013 I**
 (a) $R \subseteq A$ (b) $A \subseteq R$ (c) $A \subseteq (R \times R)$ (d) $R \subseteq (A \times A)$
- 43.** Let N be the set of natural numbers and $f: N \rightarrow N$ be a function given by $f(x) = x + 1$ for $x \in N$. Which one of the following is correct? **☑ 2013 I**
 (a) f is one-one and onto (b) f is one-one but not onto
 (c) f is only onto (d) f is neither one-one nor onto
- 44.** What is the range of the function $f(x) = \frac{|x|}{x}, x \neq 0$? **☑ 2013 I**
 (a) Set of all real numbers (b) Set of all integers
 (c) $\{-1, 1\}$ (d) $\{-1, 0, 1\}$
- 45.** If $A = \{1, 2\}, B = \{2, 3\}$ and $C = \{3, 4\}$, then what is the cardinality of $(A \times B) \cap (A \times C)$? **☑ 2013 II**
 (a) 8 (b) 6 (c) 2 (d) 1
- 46.** If A is a finite set having n elements, then the number of relations which can be defined in A is **☑ 2013 II**
 (a) 2^n (b) n^2 (c) 2^{n^2} (d) n^n
- 47.** Let $A = \{a, b, c, d\}$ and $B = \{x, y, z\}$. What is the number of elements in $A \times B$? **☑ 2013 II**
 (a) 6 (b) 7
 (c) 12 (d) 64
- 48.** The relation R in the set Z of integers given by $R = \{(a, b) : a - b \text{ is divisible by } 5\}$ is **☑ 2013 II**
 (a) reflexive (b) reflexive but not symmetric
 (c) symmetric and transitive (d) an equivalence relation
- 49.** If f be a function from the set of natural numbers to the set of even natural numbers given by $f(x) = 2x$. Then, f is **☑ 2013 II**
 (a) one-one but not onto (b) onto but not one-one
 (c) Both one-one and onto (d) Neither one-one nor onto
- 50.** Let X be the set of all citizens of India. Elements x, y in X are said to be related, if the difference of their age is 5 yr. Which one of the following is correct? **☑ 2014 I**
 (a) The relation is an equivalence relation on X
 (b) The relation is symmetric but neither reflexive nor transitive
 (c) The relation is reflexive but neither symmetric nor transitive
 (d) None of the above
- 51.** Let S denote set of all integers. Define a relation R on S as ' aRb if $ab \geq 0$, where $a, b \in S$. Then, R is **☑ 2014 I**
 (a) reflexive but neither symmetric nor transitive relation
 (b) reflexive, symmetric but not transitive relation
 (c) an equivalence relation
 (d) symmetric but neither reflexive nor transitive relation
- 52.** Consider the following relations from A to B , where $A = \{u, v, w, x, y, z\}$ and $B = \{p, q, r, s\}$.
 I. $\{(u, p), (v, p), (w, p), (x, q), (y, q), (z, q)\}$
 II. $\{(u, p), (v, q), (w, r), (z, s)\}$
 III. $\{(u, s), (v, r), (w, q), (u, p), (v, q), (z, q)\}$
 IV. $\{(u, q), (v, p), (w, s), (x, r), (y, q), (z, s)\}$
 Which of the above relations are not functions? **☑ 2014 I**
 (a) I and II (b) I and IV (c) II and III (d) III and IV
- 53.** Let N denote the set of all non-negative integers and Z denote the set of all integers. The function $f: Z \rightarrow N$ given by $f(x) = |x|$ is **☑ 2014 I**
 (a) one-one but not onto (b) onto but not one-one
 (c) Both one-one and onto (d) Neither one-one nor onto
- 54.** A and B are two sets having 3 elements in common. If $n(A) = 5$ and $n(B) = 4$, then what is $n(A \times B)$ equal to? **☑ 2014 II**
 (a) 0 (b) 9 (c) 15 (d) 20
- 55.** If $f(x) = ax + b$ and $g(x) = cx + d$ such that $f[g(x)] = g[f(x)]$, then which one of the following is correct? **☑ 2014 II**
 (a) $f(c) = g(a)$ (b) $f(a) = g(c)$ (c) $f(c) = g(d)$ (d) $f(d) = g(b)$
- 56.** The function $f: N \rightarrow N$, N being the set of natural numbers, defined by $f(x) = 2x + 3$ is **☑ 2014 II**
 (a) injective and surjective
 (b) injective but not surjective
 (c) not injective but surjective
 (d) neither injective nor surjective

- 57.** The relation S is defined on the set of integers Z as xSy , if integer x divides integer y . Then
 (a) S is an equivalence relation ☑ 2014 II
 (b) S is only reflexive and symmetric
 (c) S is only reflexive and transitive
 (d) S is only symmetric and transitive

Directions (Q. Nos. 58-60) Read the following information carefully and answer these questions given below.

Consider the function $f(x) = \frac{x-1}{x+1}$. ☑ 2014 II

- 58.** What is $\frac{f(x)+1}{f(x)-1} + x$ equal to?
 (a) 0 (b) 1 (c) $2x$ (d) $4x$
- 59.** What is $f(2x)$ equal to?
 (a) $\frac{f(x)+1}{f(x)+3}$ (b) $\frac{f(x)+1}{3f(x)+1}$ (c) $\frac{3f(x)+1}{f(x)+3}$ (d) $\frac{f(x)+3}{3f(x)+1}$
- 60.** What is $f[f(x)]$ equal to?
 (a) x (b) $-x$
 (c) $-\frac{1}{x}$ (d) None of these
- 61.** Let $A = \{x, y, z\}$ and $B = \{p, q, r, s\}$, what is the number of distinct relations from B to A ? ☑ 2015 I
 (a) 4096 (b) 4094 (c) 128 (d) 126
- 62.** Let X be the set of all persons living in a city. Persons x, y in X are said to be related as $x < y$, if y is atleast 5 yr older than x . Which one of the following is correct? ☑ 2015 I
 (a) The relation is an equivalence relation on X
 (b) The relation is transitive but neither reflexive nor symmetric
 (c) The relation is reflexive but neither transitive nor symmetric
 (d) The relation is symmetric but neither transitive nor reflexive
- 63.** For each non-zero real number x , let $f(x) = \frac{x}{|x|}$.
 The range of f is ☑ 2015 I
 (a) a null set
 (b) a set consisting of only one element
 (c) a set consisting of two elements
 (d) a set consisting of infinitely many elements
- 64.** If $f(x) = \log_e \left(\frac{1+x}{1-x} \right)$, $g(x) = \frac{3x+x^3}{1+3x^2}$ and $gof(t) = g(f(t))$, then what is $gof\left(\frac{e-1}{e+1}\right)$ equal to? ☑ 2015 I
 (a) 2 (b) 1
 (c) 0 (d) $\frac{1}{2}$

- 65.** Consider the following functions
 I. $f(x) = x^3, x \in R$
 II. $f(x) = \sin x, 0 < x < 2\pi$
 III. $f(x) = e^x, x \in R$
 Which of the above functions have inverse defined on their ranges? ☑ 2015 I
 (a) I and II (b) II and III
 (c) I and III (d) I, II and III
- 66.** Let Z be the set of integers and aRb , where $a, b \in Z$ if and only if $(a-b)$ is divisible by 5.
 Consider the following statements
 I. The relation R partitions Z into five equivalent classes.
 II. Any two equivalent classes are either equal or disjoint.
 Which of the above statement(s) is/are correct? ☑ 2015 I
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 67.** The domain of the function $f(x) = \frac{1}{\sqrt{|x|-x}}$ is ☑ 2015 II
 (a) $[0, \infty)$ (b) $(-\infty, 0)$ (c) $[1, \infty)$ (d) $(-\infty, 0]$
- 68.** If $f: R \rightarrow R, g: R \rightarrow R$ are two functions given by $f(x) = 2x - 3$ and $g(x) = x^3 + 5$, then $(f \circ g)^{-1}(x)$ is equal to ☑ 2015 II
 (a) $\left(\frac{x+7}{3}\right)^{1/3}$ (b) $\left(\frac{x-7}{2}\right)^{1/3}$
 (c) $\left(x - \frac{7}{2}\right)^{1/3}$ (d) $\left(x + \frac{7}{2}\right)^{1/3}$
- 69.** Let X be the set of all persons living in Delhi. The persons a and b in X are said to be related, if the difference in their ages is atmost 5 yr. The relation is ☑ 2015 II
 (a) an equivalence relation
 (b) reflexive and transitive but not symmetric
 (c) symmetric and transitive but not reflexive
 (d) reflexive and symmetric but not transitive
- 70.** If $g(x) = \frac{1}{f(x)}$ and $f(x) = x, x \neq 0$, then which one of the following is correct? ☑ 2015 II
 (a) $f(f(g(g(f(x)))))) = g(g(f(f(g(x)))))$
 (b) $f(f(g(g(f(x)))))) = g(g(f(f(g(x)))))$
 (c) $f(g(f(g(g(f(x)))))) = g(g(f(f(g(x)))))$
 (d) $f(f(f(g(g(f(x)))))) = f(f(f(g(f(x)))))$
- 71.** $f(xy) = f(x) + f(y)$ is true for all ☑ 2015 II
 (a) polynomial functions f (b) trigonometric functions f
 (c) exponential functions f (d) logarithmic functions f

72. Consider the following statements
Statement I The function $f:R \rightarrow R$ such that $f(x) = x^3$ for all $x \in R$ is one-one.

Statement II $f(a) = f(b) \Rightarrow a = b$ for all $a, b \in R$, if the function f is one-one.

Which one of the following is correct in respect of the above statements? **2015 II**

- (a) Both the statements are true and Statement II is the correct explanation of Statement I
- (b) Both the statements are true and Statement II is not the correct explanation of Statement I
- (c) Statement I is true but Statement II is false
- (d) Statement I is false but Statement II is true

73. Suppose there is a relation $*$ between the positive numbers x and y given by $x * y$ if and only if $x \leq y^2$. Then which one of the following is correct? **2016 I**

- (a) $*$ is reflexive but not transitive and symmetric
- (b) $*$ is transitive but not reflexive and symmetric
- (c) $*$ is symmetric and reflexive but not transitive
- (d) $*$ is symmetric but not reflexive and transitive

74. If $f(x_1) - f(x_2) = f\left(\frac{x_1 - x_2}{1 - x_1 x_2}\right)$ for $x_1, x_2 \in (-1, 1)$, then what is $f(x)$ equal to? **2016 I**

- (a) $\ln\left(\frac{1-x}{1+x}\right)$
- (b) $\ln\left(\frac{2+x}{1-x}\right)$
- (c) $\tan^{-1}\left(\frac{1-x}{1+x}\right)$
- (d) $\tan^{-1}\left(\frac{1+x}{1-x}\right)$

75. What is the range of the function $y = \frac{x^2}{1+x^2}$ where $x \in R$? **2016 I**

- (a) $[0, 1)$
- (b) $[0, 1]$
- (c) $(0, 1)$
- (d) $(0, 1]$

76. Let R be a relation on the set N of natural numbers defined by ' $nRm \Leftrightarrow n$ is a factor of m '. Then, which one of the following is correct? **2016 I**

- (a) R is reflexive, symmetric but not transitive
- (b) R is transitive, symmetric but not reflexive
- (c) R is reflexive, transitive but not symmetric
- (d) R is an equivalence relation

Directions (Q. Nos. 77-78) Let $f(x)$ be the greatest integer function and $g(x)$ be the modulus function. **2016 I**

77. What is $(gof)\left(-\frac{5}{3}\right) - (fog)\left(-\frac{5}{3}\right)$ equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

78. What is $(fof)\left(-\frac{9}{5}\right) + (gog)(-2)$ equal to?

- (a) -1
- (b) 0
- (c) 1
- (d) 2

Directions (Q. Nos. 79-80) Consider the function

$$f(x) = \frac{27(x^{2/3} - x)}{4}$$

2016 I

79. How many solutions does the function $f(x) = 1$ have?

- (a) One
- (b) Two
- (c) Three
- (d) Four

80. How many solutions does the function $f(x) = -1$ have?

- (a) One
- (b) Two
- (c) Three
- (d) Four

ANSWERS

1	b	2	b	3	a	4	a	5	b	6	d	7	d	8	c	9	a	10	b

HINTS AND SOLUTIONS

1. (b) Given, $A = \{1, 2, 5, 6\}$
and $B = \{1, 2, 3\}$
 $A \times B = \{(1, 1), (1, 2), (1, 3), (2, 1), (2, 2), (2, 3), (5, 1), (5, 2), (5, 3), (6, 1), (6, 2), (6, 3)\}$
 $B \times A = \{(1, 1), (1, 2), (1, 5), (1, 6), (2, 1), (2, 2), (2, 5), (2, 6), (3, 1), (3, 2), (3, 5), (3, 6)\}$
 $\therefore (A \times B) \cap (B \times A)$
 $= \{(1, 1), (1, 2), (2, 1), (2, 2)\}$
2. (b)
3. (a) $\therefore R = \{3, 6, 9, 12, 15, \dots, 99\}$
and $S = \{5, 10, 15, \dots, 95, 100\}$
Now, $(R \times S) \cap (S \times R)$
 $= (R \cap S) \times (S \cap R)$
 $= \{15, 30, 45, 60, 75, 90\}$
 $\times \{15, 30, 45, 60, 75, 90\}$
 \therefore Number of elements in
 $(R \times S) \cap (S \times R) = 6 \times 6 = 36$
4. (a)
5. (b) $f(x) = x^2 - \frac{1}{x^2}$
 $\therefore f\left(\frac{1}{x}\right) = \left(\frac{1}{x}\right)^2 - \frac{1}{1/x^2}$
 $= \frac{1}{x^2} - x^2 = -f(x)$
6. (d) $f(x^2) = \frac{1+x^2}{1-x^2} = \frac{(1+x^2)}{(1+x)(1-x)}$
Now, $\frac{f(x) \cdot f(x^2)}{1 + [f(x)]^2}$
 $= \frac{(1+x)}{(1-x)} \times \frac{(1+x^2)}{(1+x)(1-x)}$
 $= \frac{1 + \frac{(1+x^2)}{(1-x)^2}}{(1-x)^2}$
 $= \frac{(1+x^2)}{(1-x)^2 + (1+x)^2}$
 $= \frac{1+x^2}{2+2x^2} = \frac{(1+x^2)}{2(1+x^2)} = \frac{1}{2}$
7. (d) 8. (c)
9. (a) $f\left(x + \frac{\pi}{2}\right) = |\cos x| + |-\sin x|$
 $= |\cos x| + |\sin x| = f(x)$
10. (b) For $f(x)$ to be defined,
 $x + 2 \geq 0 \Rightarrow x \geq -2$
and $1 - x > 0$ and $1 - x \neq 1$
 $\Rightarrow x < 1$ and $x \neq 0$
 $\therefore x \in [-2, 0] \cup (0, 1]$
11. (b) We have, $2y - y \sin 3x = 1$

$$\Rightarrow \sin 3x = \frac{(2y-1)}{y}$$

Since, $-1 \leq \sin 3x \leq 1$
We have, $-1 \leq \frac{(2y-1)}{y} \leq 1$... (i)

Since, $y > 0$ multiplying the inequality Eq. (i) by y , we obtain
 $-y \leq 2y - 1 \leq y$ or $1 \leq 3y$ and $y \leq 1$
 $\Rightarrow \frac{1}{3} \leq y \leq 1$

12. (b) $f(-x) = \log[-x + \sqrt{1+x^2}]$
 $f(x) + f(-x) = \log[x + \sqrt{1+x^2}]$
 $+ \log[-x + \sqrt{1+x^2}]$
 $= \log[1+x^2 - x^2] = \log 1 = 0$
 $\therefore f(-x) = -f(x)$
So, $f(x)$ is an odd function of x .
13. (c)
14. (b) $f(x+1) - f(x) = 8x + 3$
 $\Rightarrow b[(x+1)^2 - x^2] + c[x+1-x]$
 $+ (d-d) = 8x + 3$
 $\therefore 2bx + (b+c) = 8x + 3$
On comparing,
 $2b = 8, b + c = 3$
 $\Rightarrow b = 4, c = -1$
15. (a)
16. (b) $f \circ g(x) = f[g(x)] = f[3x + 4]$
Since, the domain of f is $[-3, 5]$
 $\therefore -3 \leq 3x + 4 \leq 5$
 $\Rightarrow |3x + 4| \leq 5$
 $\Rightarrow -5 \leq 3x + 4 \leq 5$
 $\Rightarrow -9 \leq 3x \leq 1 \Rightarrow -3 \leq x \leq \frac{1}{3}$
 \therefore Domain of $f \circ g$ is $\left[-3, \frac{1}{3}\right]$.
17. (d)
18. (a) Let $f(x) = y$, then
 $a^y = x + \sqrt{x^2 + 1}$
 $\Rightarrow a^{-y} = \frac{1}{x + \sqrt{x^2 + 1}} = \frac{x - \sqrt{x^2 + 1}}{-1}$
 $\therefore a^y - a^{-y} = 2x \Rightarrow x = \frac{1}{2}(a^y - a^{-y})$
 $\therefore f^{-1}(x) = \frac{1}{2}(a^x - a^{-x})$
19. (a) $f(x) = 3x + 10$ and $g(x) = x^2 - 1$
 $\therefore f \circ g = f[g(x)] = 3[g(x)] + 10$
 $= 3(x^2 - 1) + 10 = 3x^2 + 7$
Let $3x^2 + 7 = y \Rightarrow x^2 = \frac{y-7}{3}$

$$\Rightarrow x = \left(\frac{y-7}{3}\right)^{1/2}$$

So, $(f \circ g)^{-1} = \left(\frac{x-7}{3}\right)^{1/2}$

20. (a) $f(x) = (-1)^{[x]} = \{-1, 1\}$, since $[x] \in \mathbb{Z}$
21. (a) Since, for different values of x , 4^x and $4^{|x|}$ are different positive numbers.
 $\therefore f$ is one-one.
Also, f is not onto as its range is $(0, \infty)$ and it is subset of its codomain \mathbb{R} .
22. (b) Given, $2f(x) + f(1-x) = x^2$... (i)
Replacing x by $(1-x)$, we get
 $2f(1-x) + f(x) = (1-x)^2$
 $\Rightarrow 2f(1-x) + f(x) = 1 + x^2 - 2x$... (ii)
Multiplying Eq. (i) by 2 and subtracting Eq. (ii) from Eq. (i), we get
 $3f(x) = x^2 + 2x - 1$
 $\Rightarrow f(x) = \frac{x^2 + 2x - 1}{3}$
23. (a) Clearly xRx as $x - x + \sqrt{2} = \sqrt{2}$ is an irrational number.
Thus, R is reflexive. Also, $(\sqrt{2}, 1) \in R$ as $\sqrt{2} - 1 + \sqrt{2} = 2\sqrt{2} - 1$ is an irrational number but $(1, \sqrt{2}) \notin R$ as $1 - \sqrt{2} + \sqrt{2} = 1$ is a rational number. So, R is not symmetric. Since, $1R2$ and $2R\sqrt{2}$, but 1 is not related to $\sqrt{2}$.
So, R is not transitive.
24. (b) The number of ordered pairs in the equivalence class of $(3, 2)$ is the number of ordered pairs (a, b) satisfying $(a, b) * (3, 2)$ i.e. $2a = 3b \Rightarrow \frac{a}{b} = \frac{3}{2}$
Clearly, such ordered pairs are $(3, 2), (6, 4), (9, 6), (12, 8), (15, 10)$ and $(18, 12)$
 \therefore Number of ordered pairs = 6
25. (c) The relation is defined as xRy , iff
 $3x + 4y = 5$
If we take, $(x, y) = \left(1, \frac{1}{2}\right)$
and $\left(\frac{2}{3}, \frac{3}{4}\right)$, then these pairs are satisfied by the given relation.
 $1R\frac{1}{2} \Leftrightarrow 3 \cdot 1 + 4 \cdot \frac{1}{2} = 5$
and $\frac{2}{3}R\frac{3}{4} \Leftrightarrow \frac{2}{3} \cdot 3 + 4 \cdot \frac{3}{4} = 5$
But $0R1 \notin R$ as
 $0R1 \Leftrightarrow 0 \times 3 + 4 \times 1 = 4 \neq 5$
26. (c) Since, $f: \mathbb{R} \rightarrow \mathbb{R}$ such that

$$f(x) = 3^{-x}$$

Let y_1 and y_2 be two elements of $f(x)$

such that $y_1 = y_2$

$$\Rightarrow 3^{-x_1} = 3^{-x_2} \Rightarrow x_1 = x_2$$

Since, if two images are equal, then their elements are equal, therefore it is one-one function.

Since, $f(x)$ is positive for every value of x , therefore $f(x)$ in into.

On differentiating w.r.t. x , we get $\frac{dy}{dx} = -3^{-x} \log 3 < 0$, for every value of x .

\therefore It is decreasing function.

\therefore Statements I and III are true.

27. (c) for $f(x)$ to be real $\log_2(\sin x) \geq 0$

$$\Rightarrow \sin x \geq 2^0 \Rightarrow \sin x = 1$$

$$\Rightarrow x = (4n + 1)\frac{\pi}{2}, n \in \mathbb{N}$$

28. (a) $f(x)$ is defined, if $3x^2 - 4x + 5 \geq 0$

$$\Rightarrow 3\left[x^2 - \frac{4}{3}x + \frac{5}{3}\right] \geq 0$$

$$\Rightarrow 3\left[\left(x - \frac{2}{3}\right)^2 + \frac{11}{9}\right] \geq 0$$

Which is true for all real x .

\therefore Domain (f) = $(-\infty, \infty) = \mathbb{R}$

29. (b) $g[f(x)] = \log_e(\sqrt{3x^2 - 4x + 5})^2$

$$= \log_e(3x^2 - 4x + 5)$$

Let $y = \log_e(3x^2 - 4x + 5)$

$$\Rightarrow e^y = 3x^2 - 4x + 5$$

$$\Rightarrow 3x^2 - 4x + (5 - e^y) = 0$$

For x to be real, discriminant ≥ 0

$$\therefore 16 - 12(5 - e^y) \geq 0$$

$$\Rightarrow 12e^y \geq 44$$

$$\Rightarrow e^y \geq \frac{11}{3} \Rightarrow y \geq \log_e \frac{11}{3}$$

$$\therefore \text{Range of } f = \left[\log_e \frac{11}{3}, \infty\right)$$

30. (b) $f(x_2, x_3) = x_{2+3} = x_5$ [$\because 2 + 3 < 3^2$]

and $f(x_5, x_6) = x_{5+6-3}$

$$= x_8 \quad [\because 5 + 6 > 3^2]$$

$$\therefore f[f(x_2, x_3), f(x_5, x_6)] = f(x_5, x_8)$$

$$= x_{5+8-3}$$

$$= x_{10} \quad [\because 5 + 8 > 3^2]$$

31. (a) $g(x_2, x_3) = x_1$ [$\because \frac{2 \times 3}{5} \rightarrow m = 1$]

and $g(x_7, x_8) = x_1$ [$\because \frac{7 \times 8}{5} \rightarrow m = 1$]

$$\therefore g[g(x_2, x_3), g(x_7, x_8)]$$

$$= g(x_1, x_1) \left[\because \frac{1 \times 1}{5} \rightarrow m = 1 \right]$$

$$= x_1$$

32. (c) $f \circ g(-2/3) - g \circ f(-2/3)$

$$= f(g(-2/3)) - g(f(-2/3))$$

$$= f\left(\frac{-2}{3} \times \frac{2}{3}\right) - g\left(\frac{[-2/3]}{-2/3}\right)$$

$$= f\left(-\frac{4}{9}\right) - g\left(\frac{3}{2}\right)$$

$$= \frac{[-4/9]}{-4/9} - \frac{3}{2} \times \frac{3}{2} = \frac{9}{4} - \frac{9}{4} = 0$$

33. (d) $f \circ f\left(-\frac{7}{4}\right) + g \circ g(-1)$

$$= f(f(-7/4)) + g(g(-1))$$

$$= f\left(\frac{[-7/4]}{-7/4}\right) + g(-1 \times 1)$$

$$= f\left(\frac{-2}{-7/4}\right) + g(-1) = f\left(\frac{8}{7}\right) + (-1)$$

$$= \frac{[8/7]}{8/7} - 1 = \frac{7}{8} - 1 = -\frac{1}{8}$$

34. (d) Given that, $f(xy) = f(x) f(y)$

From option (d), we take $f(t) = t^k$

Then, $f(xy) = (xy)^k = (x^k)(y^k)$

$$= f(x) \cdot f(y)$$

35. (b) Given, $A = \{0, 1, 2\}$, $B = \{2, 3\}$

$$C = \{3, 4\}$$

$$\therefore A \cup B = \{0, 1, 2, 3\}$$

$$\therefore (A \cup B) \times C = \{0, 1, 2, 3\} \times \{3, 4\}$$

$$= \{(0, 3), (0, 4), (1, 3), (1, 4), (2, 3), (2, 4), (3, 3), (3, 4)\}$$

So, required number of elements containing by $(A \cup B) \times C$ is 8.

36. (a) Given, relation is

$$R = \{(1, 2), (1, 3), (2, 1), (1, 1), (2, 2), (3, 3), (2, 3)\}$$

and $P = \{1, 2, 3\}$

Reflexive In R , $1R1$, $2R2$ and $3R3$, where $1, 2, 3 \in P$.

So, R is reflexive.

Symmetry In R , $1R3 \not\Rightarrow 3R1$ and $2R3 \not\Rightarrow 3R2$

So, R is not symmetric.

Transitive In R , $1R2$ and $2R3 \Rightarrow 1R3$

So, R is transitive.

Thus, R is reflexive, transitive but not symmetric.

37. (d) $R = \{x : x \text{ is a set of all children of a same father}\}$

Reflexive Let p be the children of same father. Hence, pRp is a reflexive.

Symmetry Let p and q be the children of same father.

So, q and p are the children of same father. Hence, R is symmetric.

Transitive Let p and q be the children

of same father and q and r be the children of same father.

So, p and r are the children of same father. Hence, R is transitive.

Since, R have all three properties such that reflexive, symmetry and transitive, so R is an equivalence relation.

38. (b) $f^{-1}(x) = \frac{x+5}{3}$

$$\Rightarrow f^{-1}(y) = \frac{y+5}{3} \quad \dots(i)$$

$$\because y = f(x) \Rightarrow x = f^{-1}(y)$$

$$\therefore x = \frac{y+5}{3} \Rightarrow 3x = y + 5$$

$$\Rightarrow y = 3x - 5 \Rightarrow f(x) = 3x - 5$$

39. (c) Given, $A = \{x \in \mathbb{R} | x \geq 0\}$

$$f : A \rightarrow A, f(x) = x^2$$

From adjoining figure, $f(x)$ is one-one and onto, so its inverse exists.

Let $f(x) = y$

$$\therefore x^2 = y \Rightarrow x = \sqrt{y} \Rightarrow f^{-1}(x) = \sqrt{x}$$

So, f is not its own inverse.

40. (a) I. Given, $f(x) = x^3$ and $g(y) = y^3$

Since, both the functions are identical.

$$\therefore f = g$$

II. We know that, an identity function $f(x) = y = x$ is always one-one and onto function, i.e. bijective function.

Hence, only Statement I is true.

41. (c) Given that,

$$A = \{x, y\}, B = \{2, 3\}, C = \{3, 4\}$$

$$\therefore B \cup C = \{2, 3\} \cup \{3, 4\} = \{2, 3, 4\}$$

and $A \times (B \cup C) = \{x, y\} \times \{2, 3, 4\}$

$$= \{(x, 2), (x, 3), (x, 4), (y, 2), (y, 3), (y, 4)\}$$

$$\therefore \text{Number of elements in } A \times (B \cup C)$$

$$\text{i.e. } n\{A \times (B \cup C)\} = 6$$

42. (c) If R is a non-empty set, then a relation A from R to R is a subset of $R \times R$, i.e. $A \subseteq (R \times R)$

43. (b) Given that, $f : \mathbb{N} \rightarrow \mathbb{N}$

and $f(x) = x + 1$, for $x \in N$,
 if $x_1, x_2 \in N$, then $f(x_1) = f(x_2)$
 $\Rightarrow x_1 + 1 = x_2 + 1 \Rightarrow x_1 = x_2$
 i.e. $f(x)$ is one-one.

Range of $f(x) \in N - \{1\}$

\therefore Range \subseteq Codomain

So, $f(x)$ is into function.

Hence, f is one-one but not onto.

44. (c) Given function, $f(x) = \frac{|x|}{x}, x \neq 0$

Redefine the given function,

$$f(x) = \begin{cases} \frac{x}{x}, & x > 0 \\ \frac{-x}{x}, & x < 0 \end{cases} = \begin{cases} 1, & x > 0 \\ -1, & x < 0 \end{cases}$$

\therefore Range of $f(x) = \{-1, 1\}$

45. (c) Given that, $A = \{1, 2\}$, $B = \{2, 3\}$
 and $C = \{3, 4\}$

$$\text{Now, } (A \times B) = \{1, 2\} \times \{2, 3\} \\ = \{(1, 2), (1, 3), (2, 2), (2, 3)\}$$

$$\text{and } (A \times C) = \{1, 2\} \times \{3, 4\} \\ = \{(1, 3), (1, 4), (2, 3), (2, 4)\}$$

$$\therefore (A \times B) \cap (A \times C) = \{(1, 3), (2, 3)\}$$

So, the cardinality of

$$(A \times B) \cap (A \times C) \text{ is } 2.$$

46. (c)
 47. (c) Here, $n(A) = 4$ and $n(B) = 3$
 $\therefore n(A \times B) = n(A) \times n(B)$
 $= 4 \times 3 = 12$

48. (d) Given, $R = \{(a, b) : a - b \text{ is divisible by } 5\}$

Reflexive $(a - a)$ is divisible by 5 for all $a \in Z$. So, R is reflexive.

Symmetric Let $(a, b) \in R \Rightarrow (a - b)$ is divisible by 5.

$$\Rightarrow (b - a) \text{ is divisible by } 5 \Rightarrow b - a \in R$$

So, R is symmetric.

Transitive Let $(a, b) \in R$ and $(b, c) \in R$
 $\Rightarrow (a - b)$ and $(b - c)$ are both divisible by 5.

$$\Rightarrow a - b + b - c \text{ is divisible by } 5.$$

$$\Rightarrow (a - c) \text{ is divisible by } 5.$$

$$\Rightarrow (a, c) \in R$$

So, R is transitive.

Thus, R is reflexive, symmetric and transitive.

Hence, R is an equivalence relation.

49. (c) Let $A = \{\text{Set of even natural number}\}$

Given, $f : N \rightarrow A$ and $f(x) = 2x$

For one-one Let $x_1, x_2 \in R$

Considering $f(x_1)$ and $f(x_2)$

Such that $f(x_1) = f(x_2)$

$$\Rightarrow 2x_1 = 2x_2 \Rightarrow x_1 = x_2$$

So, f is one-one.

For onto Let $y = f(x)$

$$\text{Then, } y = 2x \Rightarrow x = \frac{y}{2}$$

$\therefore x \in N$ for every $y \in A$

[every element of codomain has pre-image in domain]

So, f is onto.

Hence, f is both one-one and onto.

50. (b) Given that,

$$X = \{\text{Set of all citizens of India}\}$$

and $R = \{(x, y) : x, y \in X, |x - y| = 5\}$

Reflexive $|x - x| = 0 \neq 5$

$$\therefore xRx \notin R$$

So, R is not reflexive.

Symmetric Again, xRy

$$\Rightarrow |x - y| = 5$$

$$\Rightarrow |y - x| = 5 \Rightarrow yRx$$

So, R is symmetric.

Transitive Let $x, y, z \in X$

$$\text{Then, } xRy \Rightarrow |x - y| = 5$$

$$\text{and } yRz \Rightarrow |y - z| = 5$$

$$\text{But } |x - z| \neq 5$$

So, R is not transitive.

Hence, the relation is symmetric but neither reflexive nor transitive.

51. (c) Given that, $S = \text{Set of all integers.}$
 and $R = \{(a, b), a, b \in S \text{ and } ab \geq 0\}$

Reflexive aRa

$$\Rightarrow a \cdot a = a^2 \geq 0, \forall a \in S$$

So, R is reflexive.

Symmetric $aRb \Rightarrow ab \geq 0, \forall a, b \in S$

$$\Rightarrow b \cdot a \geq 0 \Rightarrow bRa$$

So, R is symmetric.

Transitive If $aRb \Rightarrow ab \geq 0$

$$\text{and } bRc \Rightarrow bc \geq 0, \forall a, b, c \in S$$

$$\text{Then, } ac \geq 0 \Rightarrow aRc$$

So, R is also transitive.

Hence, R is an equivalence relation.

52. (c) Given that, $A = \{u, v, w, x, y, z\}$
 and $B = \{p, q, r, s\}$

We know that, a mapping $f : x \rightarrow y$ is said to be a function, if each element in the set x has its image in set y . It is also possible that there are few elements in set y which are not the image of any element in set x . Every element in set x should have one and only one image.

53. (b) Given that, $f : Z \rightarrow N$
 and $f(x) = |x|$
 Graph of $f(x) = |x|$

We see that, if we draw a parallel line along X' -axis. It cuts the curve into more than one point. So, function $f(x) = |x|$ is not one-one.

Since, $f(x) = |x|$ is always non-negative.

\therefore Range of $f = \text{Set of non-negative integers} = \text{Codomain of } f$
 $\Rightarrow f(x)$ is onto.

Thus, $f(x) = |x|$ is onto but not one-one.

54. (d)
 55. (d) We have, $f(x) = ax + b$
 and $g(x) = cx + d$
 $f[g(x)] = a(cx + d) + b$
 $= acx + ad + b$
 and $g[f(x)] = c(ax + b) + d$
 $= acx + bc + d$
 $\therefore f[g(x)] = g[f(x)]$
 $\Rightarrow ad + b = bc + d \Rightarrow f(d) = g(b)$

56. (b) We have, $f : N \rightarrow N$
 $f(x) = 2x + 3 \Rightarrow f'(x) = 2 > 0$

So, $f(x)$ is increasing, $\forall x \in N$.

Hence, $f(x)$ is injective.

Let $f(x) = y$

$$\Rightarrow y = 2x + 3$$

$$\Rightarrow x = \frac{y - 3}{2}$$

$$\text{Let } y = 4 \Rightarrow x = \frac{1}{2}$$

i.e. $y \in N$ but $x \notin N$

Hence, $f(x)$ is not surjective.

57. (c) The relation S is defined on the set of integers Z and xSy , if integer x divides integer y .

Reflexive Since, every integer divides itself.

\therefore Integer x divides integer $x \Rightarrow xSx$

Hence, S is reflexive.

Symmetric Let $x, y \in z$ such that xSy i.e. integer x divides integer y .

But this does not implies that integer y divides integer x .

Thus, S is not symmetric.

Transitive Let $x, y, z \in Z$ such that xSy and ySz

\Rightarrow Integer x divides integer y and integer y divides integer z .

\Rightarrow Integer x divides integer z .

$\Rightarrow xSz$

\Rightarrow Hence, S is transitive.

58. (a) We have, $f(x) = \frac{x-1}{x+1}$

Applying componendo and dividendo, we get

$$\frac{f(x)+1}{f(x)-1} = \frac{x-1+x+1}{x-1-x-1}$$

$$\Rightarrow \frac{f(x)+1}{f(x)-1} = -x$$

$$\text{Now, } \frac{f(x)+1}{f(x)-1} + x = -x + x = 0$$

59. (c) We have,

$$f(x) = \frac{x-1}{x+1} \Rightarrow f(2x) = \frac{2x-1}{2x+1}$$

$$\Rightarrow f(2x) = \frac{\frac{2[f(x)+1]}{1-f(x)} - 1}{\frac{2[f(x)+1]}{1-f(x)} + 1}$$

$$\left[\because x = \frac{f(x)+1}{1-f(x)} \right]$$

$$\Rightarrow f(2x) = \frac{3f(x)+1}{f(x)+3}$$

60. (c) We have, $f(x) = \frac{x-1}{x+1}$

$$\Rightarrow f[f(x)] = \frac{f(x)-1}{f(x)+1}$$

$$\Rightarrow f[f(x)] = -\frac{1}{x}$$

$$\left[\because x = -\left\{ \frac{f(x)+1}{f(x)-1} \right\} \right]$$

61. (a) Number of distinct relations from

$$B \text{ to } A = 2^{4 \times 3} = 2^{12} = 4096$$

62. (b) We have, $X =$ Set of all persons living in a city

Let R be a relation on X , define as $x < y$, if y is atleast 5 yr older than x .

Since, x cannot be less than x itself, so R is not reflexive. Now, let xRy , then $x < y$, i.e. y is atleast 5 yr older than x .

Thus, x is smaller than y . Hence, R is not symmetric.

Now, let xRy and yRz , then $x < y$ and $y < z$, clearly $x < z$.

Hence, R is transitive.

63. (c) We have, $f(x) = \frac{x}{|x|}$, for $x \neq 0$

$$\text{i.e. } f(x) = \begin{cases} \frac{x}{x}, & \text{if } x > 0 \\ \frac{x}{-x}, & \text{if } x < 0 \end{cases} = \begin{cases} 1, & \text{if } x > 0 \\ -1, & \text{if } x < 0 \end{cases}$$

Thus, range of $f = \{1, -1\}$.

64. (b) We have, $f(x) = \log_e \left(\frac{1+x}{1-x} \right)$

$$\text{and } g(x) = \frac{3x+x^3}{1+3x^2}$$

$$\begin{aligned} \therefore f\left(\frac{e-1}{e+1}\right) &= \log_e \left(\frac{1+\frac{e-1}{e+1}}{1-\frac{e-1}{e+1}} \right) \\ &= \log_e \left(\frac{e+1+e-1}{e+1-e+1} \right) \\ &= \log_e \left(\frac{2e}{2} \right) = \log_e(e) = 1 \dots (i) \\ g \circ f\left(\frac{e-1}{e+1}\right) &= g\left[f\left(\frac{e-1}{e+1}\right)\right] \\ &= g(1) \quad [\text{using Eq. (i)}] \\ &= \frac{3(1)+(1)^3}{1+3(1)^2} = \frac{4}{4} = 1 \end{aligned}$$

65. (c) I. We have, $f(x) = x^3, x \in R$

$$\Rightarrow f'(x) = 3x^2 \geq 0$$

$\Rightarrow f$ is increasing function.

So, f is one-one.

Hence, f is invertible on its range.

II. We have, $f(x) = \sin x, 0 < x < 2\pi$

$$\text{Clearly, } f\left(\frac{\pi}{3}\right) = \sin \frac{\pi}{3} = \frac{\sqrt{3}}{2}$$

$$\begin{aligned} \text{and } f\left(\frac{2\pi}{3}\right) &= \sin\left(\pi - \frac{\pi}{3}\right) \\ &= \sin\left(\frac{\pi}{3}\right) = \frac{\sqrt{3}}{2} \end{aligned}$$

So, f is not one-one.

Hence, f is not invertible on its range.

III. We have, $f(x) = e^x, x \in R$

$$\Rightarrow f'(x) = e^x > 0$$

So, f is increasing function.

$\Rightarrow f$ is one-one.

Hence, f is invertible on its range.

66. (c) We have, aRb , where $a, b \in Z$,

if $(a-b)$ is divisible by 5.

Thus, $(a-b) = 0, 5, 10, 15, \dots$

So, Statement I is true, since the relation R partitions Z into five equivalent classes, which are, 0, 1, 2, 3, 4.

Also, any two equivalent classes are either disjoint or equal.

Hence, both the statements are true.

67. (b) Given, $f(x) = \frac{1}{\sqrt{|x|-x}}$

Here, $f(x)$ is defined only when

$$|x|-x > 0 \quad \text{or} \quad |x| > x$$

which is possible only for negative values of x .

\therefore Domain of f is $(-\infty, 0)$.

68. (b) Given, $f(x) = 2x - 3$

$$\text{and } g(x) = x^3 + 5$$

Now, $f \circ g(x) = f(g(x))$

$$= 2(x^3 + 5) - 3$$

$$= 2x^3 + 10 - 3 = 2x^3 + 7$$

Let $f \circ g(x) = y$, then

$$y = 2x^3 + 7 \Rightarrow x = \left(\frac{y-7}{2}\right)^{1/3}$$

$$\therefore (f \circ g)^{-1}(x) = \left(\frac{x-7}{2}\right)^{1/3}$$

69. (d) Given, $R = \{(a, b) : |a-b| \leq 5\}$

Reflexive $(a, a) \in R$

$$(a, a) = |a-a| = 0, 0 \leq 5, (a, a) \in R$$

Hence, R is reflexive.

Symmetric $(a, b) \in R$

$$\Rightarrow (b, a) \in R$$

$$(a, b) = |a-b| \leq 5,$$

$$(b, a) = |b-a| \leq 5$$

$$\therefore (a, b) \in R \Rightarrow (b, a) \in R$$

Hence, R is symmetric.

Transitive $(a, b) \in R, (b, c) \in R$

$$\Rightarrow (a, c) \in R$$

$$(a, b) = |a-b| \leq 5,$$

$$(b, c) = |b-c| \leq 5$$

$$|a-b| + |b-c| \leq 10, |a-c| \leq 10$$

$$\therefore (a, c) \notin R$$

Hence, R is not transitive.

So, R is reflexive and symmetric but not transitive.

70. (b) Given, $g(x) = \frac{1}{f(x)}$ and $f(x) = x$

$$\therefore g(x) = \frac{1}{x}, x \neq 0$$

Clearly, $g(f(x)) = \frac{1}{f(x)} = \frac{1}{x}$

$$g(g(f(x))) = \frac{1}{\left(\frac{1}{x}\right)} = x$$

$$g(g(g(f(x)))) = \frac{1}{(x)} = \frac{1}{x}$$

$$f(g(g(g(f(x)))))) = \frac{1}{x}$$

$$f(f(g(g(g(f(x)))))) = \frac{1}{x}$$

and $g(f(x)) = \frac{1}{x}$

$$f(g(f(x))) = \frac{1}{x}$$

$$g(f(g(f(x)))) = \frac{1}{\left(\frac{1}{x}\right)} = x$$

$$g(g(f(g(f(x)))))) = \frac{1}{x}$$

From option (b), LHS = RHS

71. (d) Let $f(x) = \log x$

$$\therefore f(xy) = \log(xy)$$

$$\begin{aligned} \text{Now, } f(x) + f(y) &= \log x + \log y \\ &= \log(xy) = f(xy) \end{aligned}$$

Hence, $f(x) + f(y) = f(xy)$

72. (a) I. is correct, since $f(x) = x^3$ is one-one, $\forall x \in R$

$$\therefore f(a) = f(b) \Rightarrow a^3 = b^3 \Rightarrow a = b$$

II. is also correct and is the correct explanation of Statement I.

73. (a) Reflexive Given, $xRy \Rightarrow x$ is less than y^2 .

$$\therefore xRx \Rightarrow x \text{ is less than } x^2.$$

which is true. Hence, R is reflexive.

Symmetric xRy is not equivalent to yRx because

$$1R2 \Rightarrow 1 \text{ is less than } 2^2.$$

$$2R1 \Rightarrow 2 \text{ is less than } 1^2.$$

Thus, it is not symmetric. Hence, option (a) is correct.

74. (a) Let $f(x) = \ln\left(\frac{1-x}{1+x}\right)$

$$\text{Now, } f(x_1) - f(x_2)$$

$$= \ln\left(\frac{1-x_1}{1+x_1}\right) - \ln\left(\frac{1-x_2}{1+x_2}\right)$$

$$= \ln\left(\frac{(1-x_1)(1+x_2)}{(1-x_2)(1+x_1)}\right)$$

$$= \ln\left(\frac{1+x_2-x_1-x_1x_2}{1+x_1-x_2-x_1x_2}\right) \dots(i)$$

$$\text{and } f\left(\frac{x_1-x_2}{1-x_1x_2}\right) = \ln\left(\frac{1-\frac{x_1-x_2}{1-x_1x_2}}{1+\frac{x_1-x_2}{1-x_1x_2}}\right)$$

$$= \ln\left(\frac{1-x_1x_2-x_1+x_2}{1-x_1x_2+x_1-x_2}\right) \dots(ii)$$

\therefore From Eqs. (i) and (ii), we get

$$f(x_1) - f(x_2) = f\left(\frac{x_1-x_2}{1-x_1x_2}\right)$$

75. (a) Let $f(x) = \frac{x^2}{1+x^2}$

Clearly, domain $(f) = R$

$$\text{Let } y = f(x) \Rightarrow y = \frac{x^2}{1+x^2}$$

$$\Rightarrow y + x^2y = x^2 \Rightarrow x^2 - x^2y = y$$

$$\Rightarrow x^2(1-y) = y \Rightarrow x = \pm \sqrt{\frac{y}{1-y}}$$

Clearly, x will take real values,

$$\text{if } \frac{y}{1-y} \geq 0 \Rightarrow \frac{y-0}{y-1} \leq 0$$

$$\Rightarrow 0 \leq y < 1 \Rightarrow y \in [0, 1)$$

Hence, range $f(x)$ is $[0, 1)$.

76. (c) Given, R is a relation on the set N of natural numbers defined by $nRm \Leftrightarrow n$ is a factor of m .

Reflexive Since, n is a factor of n for each $n \in N$, therefore, $nRn, \forall n \in N$, i.e. R is reflexive.

Symmetric Note that 2 is a factor of 4 but 4 is not a factor of 2, i.e. $2R4$ but $4 \not R 2$. Thus, R is not symmetric.

Hence, option (c) is correct.

$$\begin{aligned} 77. (c) (gof)\left(-\frac{5}{3}\right) - (f \circ g)\left(-\frac{5}{3}\right) &= g\left(f\left(-\frac{5}{3}\right)\right) - f\left(g\left(-\frac{5}{3}\right)\right) \\ &= g\left(\left[-\frac{5}{3}\right]\right) - f\left(\left[-\frac{5}{3}\right]\right) \\ &= g(-2) - f\left(\frac{5}{3}\right) \\ &= |-2| - \left[\frac{5}{3}\right] = 2 - 1 = 1 \end{aligned}$$

$$\begin{aligned} 78. (b) (f \circ f)\left(-\frac{9}{5}\right) + (g \circ g)(-2) &= f\left(f\left(-\frac{9}{5}\right)\right) + g(g(-2)) \\ &= f\left(\left[-\frac{9}{5}\right]\right) + g(|-2|) \\ &= f(-2) + g(2) = -2 + 2 = 0 \end{aligned}$$

79. (b) Given function, $f(x) = \frac{27(x^{2/3} - x)}{4}$

$$\text{If } f(x) = 1 \Rightarrow 1 = \frac{27(x^{2/3} - x)}{4} \Rightarrow x^{2/3} - x = \frac{4}{27}$$

$$\text{Let } x^{1/3} = \alpha \Rightarrow x = \alpha^3$$

$$\text{Then, } \alpha^2 - \alpha^3 = \frac{4}{27} \dots(i)$$

$$\Rightarrow \alpha^2(1 - \alpha) = \frac{2}{3} \times \frac{2}{3} \times \frac{1}{3}$$

$$\Rightarrow \alpha \cdot \alpha(1 - \alpha) = \frac{2}{3} \times \frac{2}{3} \times \frac{1}{3}$$

$$\Rightarrow \alpha = \frac{2}{3} \Rightarrow x^{1/3} = \frac{2}{3}$$

$$\therefore x = \frac{8}{27}$$

Also, from Eq. (i)

$$\alpha^2 - \alpha^3 = \frac{4}{27}$$

$$\Rightarrow \alpha \cdot \alpha(1 - \alpha) = \left(-\frac{1}{3}\right) \times \left(-\frac{1}{3}\right) \times \left(\frac{4}{3}\right)$$

$$\Rightarrow \alpha = -\frac{1}{3} \Rightarrow x^{1/3} = \left(-\frac{1}{3}\right)$$

$$\Rightarrow x = -\frac{1}{27}$$

Hence, $f(x)$ has two solutions.

80. (a) Given, $f(x) = \frac{27(x^{2/3} - x)}{4}$

$$\text{We have, } f(x) = -1$$

$$\Rightarrow \frac{27(x^{2/3} - x)}{4} = -1$$

$$\Rightarrow x^{2/3} - x = -\frac{4}{27}$$

$$\text{Let } x^{1/3} = \alpha \Rightarrow x = \alpha^3$$

$$\text{Then, } \alpha^2 - \alpha^3 = -\frac{4}{27}$$

$$\Rightarrow \alpha^3 - \alpha^2 = \frac{4}{27} \Rightarrow \alpha^3 = \alpha^2 + \frac{4}{27}$$

Since, the graph of $y = \alpha^3$ and $y = \alpha^2 + \frac{4}{27}$ intersects at only one point.

$$\therefore \alpha^3 = \alpha^2 + \frac{4}{27} \text{ has only one solution.}$$

Hence, $x - x^{2/3} = \frac{4}{27}$ has only one solution.

03

COMPLEX NUMBERS

In NDA exam, generally 3-5 questions are asked from this chapter which are based on real and imaginary parts of complex number, modulus, argument, square root, cube root of unity etc.

If a and b are two real numbers, then any number of the form $a + ib$ is called a complex number, where $i = \sqrt{-1}$. In other words, we can say that a number consisting of real number and imaginary number is called complex number. It is usually denoted by z , i.e. $z = a + ib$

Iota and Imaginary Quantities

There is no real number whose square is negative real number. Euler was the first Mathematician to introduce the symbol i (iota) for the square root of -1 with the property that $i^2 = -1$. He called this symbol as the imaginary unit. The square root of a negative real number is called an *imaginary quantity* or an *imaginary number*. e.g. $\sqrt{-3}$, $\sqrt{-4}$, $\sqrt{-\frac{9}{4}}$ etc., are imaginary quantities.

Integral Powers of i

We have, $i = \sqrt{-1}$, $i^2 = -1$. Therefore, $i^3 = i^2 \times i = (-1) \times i = -i$, $i^4 = i^2 \times i^2 = (-1) \times (-1) = 1$

Thus, $i + i^2 + i^3 + i^4 = 0$. In general, $i^r + i^{r+1} + i^{r+2} + i^{r+3} = 0$ i.e. the sum of four consecutive powers of i is equal to zero.

EXAMPLE 1. The value of $\left[i^{19} + \left(\frac{1}{i} \right)^{25} \right]^2$ is

a. 2

b. -2

c. 4

d. -4

Sol. d. We have, $\left[i^{19} + \left(\frac{1}{i} \right)^{25} \right]^2 = \left[i^{19} + \frac{1}{i^{25}} \right]^2 = \left[i^3 + \frac{1}{i} \right]^2 = \left[-i + \frac{i}{i^2} \right]^2 = (-i - i)^2 = 4i^2 = -4$

Set of Complex Numbers

The product set $R \times R$ consisting of the ordered pairs of real numbers, called the set of complex numbers. The set of all complex numbers is denoted by C , i.e. $C = \{a + ib \mid a, b \in R\}$.

Since, a real number ' a ' can be written as $a + 0i$, therefore every real number is a complex number.

Hence, $R \subset C$, where R is the set of all real numbers.

Real and Imaginary Parts of a Complex Number

If $z = a + ib$ is a complex number, then ‘ a ’ is called the real part of z and ‘ b ’ is known as the imaginary part of z . The real part of z is denoted by $\text{Re}(z)$ and the imaginary part is denoted by $\text{Im}(z)$.

e.g. If $z = 7 + 5i$, then $\text{Re}(z) = 7$ and $\text{Im}(z) = 5$

A complex number z is purely real, if its imaginary part is zero, i.e. $\text{Im}(z) = 0$ and is said to be purely imaginary, if its real part is zero, i.e. $\text{Re}(z) = 0$.

The complex number $0 = 0 + i0$ is both purely real and purely imaginary.

EXAMPLE 2. Find the $\text{Im}\left(\frac{(3+i)^2}{7-i}\right)$.

a. $\frac{2}{3}i$

b. $\frac{8}{7}i$

c. i

d. $-\frac{4}{7}i$

Sol. c. We have, $\frac{(3+i)^2}{7-i} = \frac{9+i^2+6i}{7-i} = \frac{9-1+6i}{7-i} = \frac{8+6i}{7-i}$
 $= \frac{(8+6i)(7+i)}{(7-i)(7+i)} = \frac{56+8i+42i+6i^2}{49-i^2}$
 $= \frac{56-6+50i}{49+1} = \frac{50+50i}{50} = 1+i,$

$\therefore \text{Im}\left(\frac{(3+i)^2}{7-i}\right) = i$

Equality of Complex Numbers

Two complex numbers $z_1 = a_1 + ib_1$ and $z_2 = a_2 + ib_2$ are equal,

if $a_1 = a_2$ and $b_1 = b_2$

i.e. $\text{Re}(z_1) = \text{Re}(z_2)$ and $\text{Im}(z_1) = \text{Im}(z_2)$

e.g. If $z_1 = 2 - iy$ and $z_2 = x + 3i$ are equal, then

$$2 - iy = x + 3i \Rightarrow x = 2 \text{ and } y = -3$$

Note Two complex numbers cannot be compared, i.e. no greater complex number can be found in two given complex numbers.

Addition of Complex Numbers

Let $z_1 = a_1 + ib_1$ and $z_2 = a_2 + ib_2$ be any two complex numbers. Then,

$$z_1 + z_2 = (a_1 + a_2) + i(b_1 + b_2).$$

Thus, $\text{Re}(z_1 + z_2) = \text{Re}(z_1) + \text{Re}(z_2)$

and $\text{Im}(z_1 + z_2) = \text{Im}(z_1) + \text{Im}(z_2)$

Properties of Addition

- $z_1 + z_2 = z_2 + z_1, \forall z_1, z_2 \in \mathbb{C}$ [Commutative law]
- $(z_1 + z_2) + z_3 = z_1 + (z_2 + z_3), \forall z_1, z_2, z_3 \in \mathbb{C}$ [Associative law]
- $z + 0 = z = 0 + z, \forall z \in \mathbb{C}$, where $0 = 0 + i0$ is the identity element.
- $z + (-z) = 0 = (-z) + z, \forall z \in \mathbb{C}$, where z and $-z$ are additive inverse of each other.

Subtraction of Complex Numbers

Let $z_1 = a_1 + ib_1$ and $z_2 = a_2 + ib_2$ be any two complex numbers. Then,

$$z_1 - z_2 = z_1 + (-z_2) = (a_1 + ib_1) + (-a_2 - ib_2) = (a_1 - a_2) + i(b_1 - b_2)$$

Multiplication of Complex Numbers

Let $z_1 = a_1 + ib_1$ and $z_2 = a_2 + ib_2$ be any two complex numbers. Then,

$$z_1 z_2 = (a_1 + ib_1)(a_2 + ib_2) = (a_1 a_2 - b_1 b_2) + i(a_1 b_2 + a_2 b_1)$$

Thus, $z_1 z_2 = [\text{Re}(z_1)\text{Re}(z_2) - \text{Im}(z_1)\text{Im}(z_2)] + i[\text{Re}(z_1)\text{Im}(z_2) + \text{Re}(z_2)\text{Im}(z_1)]$

Properties of Multiplication

- $z_1 z_2 = z_2 z_1$ [Commutative law]
- $(z_1 z_2) z_3 = z_1 (z_2 z_3)$ [Associative law]
- $z \cdot 1 = z = 1 \cdot z$, where 1 is multiplicative identity.
- $z \cdot z^{-1} = 1 = z^{-1} \cdot z$, where complex number z^{-1} is called the multiplicative inverse or reciprocal of z and is given by

$$z^{-1} = \frac{a}{a^2 + b^2} + i \frac{(-b)}{a^2 + b^2}$$

- (i) $z_1(z_2 + z_3) = z_1 z_2 + z_1 z_3$ [Distributive law]
- (ii) $(z_2 + z_3)z_1 = z_2 z_1 + z_3 z_1$ [Distributive law]

Division of Complex Numbers

The division of a complex number z_1 by a non-zero complex number z_2 is defined as the multiplication of z_1 by the multiplicative inverse of z_2 and is denoted by $\frac{z_1}{z_2}$.

Let $z_1 = a_1 + ib_1$ and $z_2 = a_2 + ib_2$

Then, $\frac{z_1}{z_2} = (a_1 + ib_1) \left\{ \frac{a_2}{a_2^2 + b_2^2} + i \frac{(-b_2)}{a_2^2 + b_2^2} \right\}$

$$= \left(\frac{a_1 a_2 + b_1 b_2}{a_2^2 + b_2^2} \right) + i \left(\frac{a_2 b_1 - a_1 b_2}{a_2^2 + b_2^2} \right)$$

Principal Value of Argument

The value of θ of the argument which satisfies the inequality $-\pi < \theta \leq \pi$ is called the **principal value** of the argument. Principal values of the argument are $\theta, \pi - \theta, -\pi + \theta, -\theta$ according as the complex number lies on the Ist, IInd, IIIrd, or IVth quadrant respectively.

Properties of Argument

If z, z_1 and z_2 are complex numbers, then

- (i) $\arg(\bar{z}) = -\arg(z)$
- (ii) $\arg(z_1 z_2) = \arg(z_1) + \arg(z_2)$
- (iii) $\arg(z_1 \bar{z}_2) = \arg(z_1) - \arg(z_2)$
- (iv) $\arg(z^n) = n \arg(z)$
- (v) $\arg(z_1 / z_2) = \arg(z_1) - \arg(z_2)$
- (vi) $\arg\left(\frac{z}{\bar{z}}\right) = 2 \arg(z)$
- (vii) $|z_1 + z_2|^2 = |z_1|^2 + |z_2|^2 + 2|z_1||z_2|\cos(\theta_1 - \theta_2)$,
and $|z_1 - z_2|^2 = |z_1|^2 + |z_2|^2 - 2|z_1||z_2|\cos(\theta_1 - \theta_2)$,
where $\theta_1 = \arg(z_1)$ and $\theta_2 = \arg(z_2)$
- (viii) $|z_1 + z_2| = |z_1 - z_2| \Leftrightarrow \arg(z_1) - \arg(z_2) = \frac{\pi}{2}$
- (ix) $|z_1 + z_2| = |z_1| + |z_2| \Leftrightarrow \arg(z_1) = \arg(z_2)$
- (x) The argument of zero is not defined.
- (xi) If $\arg(z) = 0 \Rightarrow z$ is real.

EXAMPLE 5. The modulus and argument of the complex number $\frac{1+2i}{1-3i}$ is

- a. $\frac{1}{\sqrt{2}}, \frac{3\pi}{4}$ b. $\frac{1}{\sqrt{2}}, -\frac{3\pi}{4}$ c. $\frac{1}{2}, \frac{3\pi}{4}$ d. None of these

Sol. a. Let $z = \frac{1+2i}{1-3i} \Rightarrow z = \frac{1+2i}{1-3i} \times \frac{1+3i}{1+3i} = \frac{1+3i+2i+6i^2}{1^2-(3i)^2}$
 $[\because (a+b)(a-b) = a^2 - b^2]$
 $= \frac{1+5i+6(-1)}{1-9i^2} \quad [\because i^2 = -1]$
 $= \frac{1+5i-6}{1+9} = \frac{-5+5i}{10} = \frac{-1+i}{2} \Rightarrow z = -\frac{1}{2} + \frac{1}{2}i$
 $\therefore |z| = \sqrt{\left(-\frac{1}{2}\right)^2 + \left(\frac{1}{2}\right)^2} \quad [\because |a+ib| = \sqrt{a^2+b^2}]$
 $= \sqrt{\frac{1}{4} + \frac{1}{4}} = \sqrt{\frac{2}{4}} = \sqrt{\frac{1}{2}} = \frac{1}{\sqrt{2}}$
 Now, $\tan \theta = \frac{\left|\frac{1}{2}\right|}{\left|-\frac{1}{2}\right|} \quad \left[\because \theta = \tan^{-1}\left(\frac{\text{Im}(z)}{\text{Re}(z)}\right)\right]$
 $\Rightarrow \tan \theta = 1 = \tan \frac{\pi}{4} \Rightarrow \theta = \frac{\pi}{4}$

Since, the real part of z is negative and imaginary part of

z is positive, so the point lies in IInd quadrant.

$$\therefore \arg(z) = \pi - \theta = \pi - \frac{\pi}{4} = \frac{3\pi}{4}$$

$$\text{Hence, modulus} = \frac{1}{\sqrt{2}} \text{ and } \arg(z) = \frac{3\pi}{4}$$

Square Root of a Complex Number

Let $(a+ib)$ be any complex number such that $\sqrt{a+ib} = x+iy$, where x and y are real numbers.

If b is positive, then

$$\sqrt{a+ib} = \pm \left[\sqrt{\frac{1}{2}\{\sqrt{a^2+b^2}+a\}} + i \sqrt{\frac{1}{2}\{\sqrt{a^2+b^2}-a\}} \right]$$

If b is negative, then

$$\sqrt{a-ib} = \pm \left[\sqrt{\frac{1}{2}\{\sqrt{a^2+b^2}+a\}} - i \sqrt{\frac{1}{2}\{\sqrt{a^2+b^2}-a\}} \right]$$

Note If $x, y \in R$, then

- $\sqrt{x+iy} + \sqrt{x-iy} = \sqrt{2(\sqrt{x^2+y^2}+x)}$
- $\sqrt{x+iy} - \sqrt{x-iy} = i\sqrt{2(\sqrt{x^2+y^2}-x)}$

EXAMPLE 6. If $\sqrt{-7-24i} = x-iy$, then x^2+y^2 is equal to

- a. 15 b. 25 c. -25 d. -15

Sol. b. We have, $\sqrt{-7-24i} = x-iy$

On squaring both sides, we get $-7-24i = x^2 - y^2 - (2xy)i$

On equating real and imaginary parts, we get

$$x^2 - y^2 = -7 \text{ and } 2xy = 24$$

$$\therefore x^2 + y^2 = \sqrt{49 + 576} = \sqrt{625} = 25$$

Cube Roots of Unity

Let $z = 1^{1/3}$, then $z^3 = 1$ [on cubing both sides]

$$\Rightarrow z^3 - 1 = 0$$

$$\Rightarrow (z-1)(z^2+z+1) = 0$$

$$\Rightarrow z-1=0 \text{ or } z^2+z+1=0$$

$$\Rightarrow z=1 \text{ or } z = \frac{-1 \pm \sqrt{1-4}}{2}$$

$$\Rightarrow z=1 \text{ or } z = \frac{-1 \pm i\sqrt{3}}{2}$$

So, the cube roots of unity are $1, \frac{-1+i\sqrt{3}}{2}$ and $\frac{-1-i\sqrt{3}}{2}$.

Clearly, one of the cube roots of unity is real and the other two are complex.

$$\text{Here, } \frac{-1+i\sqrt{3}}{2} = \omega \text{ and } \frac{-1-i\sqrt{3}}{2} = \omega^2$$

Properties of Cube Root of Unity

- (i) $1 + \omega^r + \omega^{2r} = \begin{cases} 0, & \text{if } r \text{ is not a multiple of } 3 \\ 3, & \text{if } r \text{ is multiple of } 3 \end{cases}$
- (ii) $\omega^3 = 1$ or $\omega^{3r} = 1$ and $1 + \omega + \omega^2 = 0$
- (iii) $\omega^{3r+1} = \omega, \omega^{3r+2} = \omega^2$
- (iv) ω and ω^2 are the roots of the equation $z^2 + z + 1 = 0$.
- (v) $\arg(\omega) = \frac{2\pi}{3}, \arg(\omega^2) = \frac{4\pi}{3}$
- (vi) Cube roots of -1 are $-1, -\omega, -\omega^2$.
- (vii) Cube roots of unity lie on the unit circle $|z|=1$ and divides its circumference into three equal parts.

IMPORTANT RELATIONS

- (i) $x^2 + xy + y^2 = (x - y\omega)(x - y\omega^2)$
- (ii) $x^2 - xy + y^2 = (x + y\omega)(x + y\omega^2)$
- (iii) $x^3 + y^3 = (x + y)(x + y\omega)(x + y\omega^2)$
- (iv) $x^3 - y^3 = (x - y)(x - y\omega)(x - y\omega^2)$

EXAMPLE 7. If $\alpha = \frac{i + \sqrt{3}}{2}$, then what is the value of $1 + \alpha^8 + \alpha^{16} + \alpha^{24} + \alpha^{32}$?

a. 0 b. 1 c. $-\omega$ d. $-\omega^2$

Sol. c. We have, $\alpha = \frac{i + \sqrt{3}}{2}$
 $\Rightarrow i\alpha = i \left(\frac{i + \sqrt{3}}{2} \right) = \frac{-1 + \sqrt{3}i}{2} \Rightarrow i\alpha = \omega \Rightarrow \alpha = \frac{\omega}{i} = -i\omega$
 $\therefore 1 + \alpha^8 + \alpha^{16} + \alpha^{24} + \alpha^{32}$
 $= 1 + (-i\omega)^8 + (-i\omega)^{16} + (-i\omega)^{24} + (-i\omega)^{32}$
 $= 1 + \omega^8 + \omega^{16} + \omega^{24} + \omega^{36}$
 $= 1 + \omega^2 + \omega + 1 + \omega^2 = 0 + 1 + \omega^2 = -\omega$

Trigonometrical or Polar Form of a Complex Number

Let $z = x + iy$ be a complex number represented by a point $P(x, y)$ in the argand plane. Then,

This form of z is called the *polar form* of z .

In general, polar form is $z = r[\cos(2n\pi + \theta) + i \sin(2n\pi + \theta)]$

where, $r = |z|, \theta = \arg(z)$ and $n \in \mathbb{N}$

Euler or Eulerian Form of Complex Number

We have, $e^{i\theta} = \cos \theta + i \sin \theta$ and $e^{-i\theta} = \cos \theta - i \sin \theta$
 These two are called Euler's notations.

Let z be any complex number such that $|z|=r$ and $\arg(z)=\theta$. Then, $z = x + iy = r(\cos \theta + i \sin \theta) = re^{i\theta}$, where r is modulus. This form of z is known as Euler form.

EXAMPLE 8. Let O be the origin and point A be represented by z . If OA is rotated through an angle $\pi/2$ in the anti-clockwise direction keeping the length of OA same, then what represents the new point?

- a. $-iz$ b. $|z|i$ c. iz d. z

Sol. c. Let $z = \cos \theta + i \sin \theta$

Now, on rotating through an angle $\frac{\pi}{2}$, z becomes

$$\begin{aligned} z &= \cos\left(\frac{\pi}{2} + \theta\right) + i \sin\left(\frac{\pi}{2} + \theta\right) \\ &= -\sin \theta + i \cos \theta = i^2 \sin \theta + i \cos \theta \\ &= i(\cos \theta + i \sin \theta) = iz \end{aligned}$$

DE-MOIVRE'S THEOREM

A simple formula for calculating powers of complex numbers in the form of $\cos \theta$ and $\sin \theta$ is known as *De-Moivre's theorem*. If $n \in \mathbb{Z}$ (the set of integers), then

- (i) $(\cos \theta + i \sin \theta)^n = \cos n\theta + i \sin n\theta$
- (ii) $(\cos \theta - i \sin \theta)^n = \cos n\theta - i \sin n\theta$
- (iii) $\frac{1}{\cos \theta + i \sin \theta} = (\cos \theta + i \sin \theta)^{-1}$
 $= \cos \theta - i \sin \theta$
- (iv) $(\sin \theta \pm i \cos \theta)^n \neq \sin n\theta \pm i \cos n\theta$
- (v) $(\sin \theta + i \cos \theta)^n = \left[\cos\left(\frac{\pi}{2} - \theta\right) + i \sin\left(\frac{\pi}{2} - \theta\right) \right]^n$
 $= \cos\left(\frac{n\pi}{2} - n\theta\right) + i \sin\left(\frac{n\pi}{2} - n\theta\right)$
- (vi) $(\cos \theta + i \sin \phi)^n \neq \cos n\theta + i \sin n\phi$

EXAMPLE 9. If $z = \cos \theta + i \sin \theta$, then $\frac{z^{2n} - 1}{z^{2n} + 1}, n \in \mathbb{Z}$ is equal to (where n is a rational)

- a. $i \cot n\theta$ b. $i \tan n\theta$ c. $\tan n\theta$ d. $\cot n\theta$

Sol. b. We have, $\frac{z^{2n} - 1}{z^{2n} + 1} = \frac{(\cos \theta + i \sin \theta)^{2n} - 1}{(\cos \theta + i \sin \theta)^{2n} + 1}$
 $= \frac{\cos 2n\theta + i \sin 2n\theta - 1}{\cos 2n\theta + i \sin 2n\theta + 1}$
 [using De-Moivre's theorem]

> PRACTICE EXERCISE

- What is the value of $1 + i^2 + i^4 + i^6 + \dots + i^{100}$, where $i = \sqrt{-1}$?
 (a) 0 (b) 1
 (c) -1 (d) None of these
- $\left(\frac{1+i}{\sqrt{2}}\right)^8 + \left(\frac{1-i}{\sqrt{2}}\right)^8$ is equal to
 (a) 1 (b) 2 (c) 3 (d) 0
- Evaluate $\left[i^{18} + \left(\frac{1}{i}\right)^{25}\right]^3$.
 (a) $2(1-i)$ (b) $7(i-1)$ (c) $2-7i$ (d) $8i+4$
- $\frac{1+7i}{(2-i)^2}$ is equal to
 (a) $(\sqrt{2}, \pi/4)$ (b) $(\sqrt{2}, \pi/2)$
 (c) $(\sqrt{2}, 3\pi/4)$ (d) None of these
- If $z = \frac{\sqrt{3}+i}{2}$, then $(z^{101} + i^{103})^{105}$ is equal to
 (a) z (b) z^2
 (c) z^3 (d) None of these
- If $z = \left(\frac{\sqrt{3}}{2} + \frac{i}{2}\right)^5 + \left(\frac{\sqrt{3}}{2} - \frac{i}{2}\right)^5$, then
 (a) $\operatorname{Re}(z) = 0$ (b) $\operatorname{Im}(z) = 0$
 (c) $\operatorname{Re}(z) > 0, \operatorname{Im}(z) = 0$ (d) $\operatorname{Re}(z) > 0, \operatorname{Im}(z) < 0$
- The argument of $\frac{1+i\sqrt{3}}{\sqrt{3}+1}$ is
 (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{4}$ (c) $\frac{\pi}{3}$ (d) None of these
- If $z = 1 + i\sqrt{3}$, then $|\arg(z)| + |\arg(\bar{z})|$ is equal to
 (a) $\frac{\pi}{3}$ (b) $\frac{2\pi}{3}$ (c) 0 (d) $\frac{\pi}{2}$
- If $(a+ib)(c+id)(e+if)(g+ih) = A+iB$, then $(a^2+b^2)(c^2+d^2)(e^2+f^2)(g^2+h^2)$ is equal to
 (a) $A^2 - B^2$ (b) $A^2 + B^2$ (c) $A^4 + B^4$ (d) $A^4 - B^4$
- What is the value of $\left(\frac{i+\sqrt{3}}{-i+\sqrt{3}}\right)^{200} + \left(\frac{i-\sqrt{3}}{i+\sqrt{3}}\right)^{200} + 1$?
 (a) -1 (b) 0 (c) 1 (d) 2
- What is the value of $(-\sqrt{-1})^{4n+3} + (i^{41} + i^{-257})^9$, where $n \in N$?
 (a) 0 (b) 1 (c) i (d) $-i$
- If the number $\frac{(1-i)^n}{(1+i)^{n-2}}$ is real and positive, then n is
 (a) any integer (b) any even integer
 (c) any odd integer (d) None of these
- What is the argument of $(1 - \sin \theta) + i \cos \theta$ ($i = \sqrt{-1}$)
 (a) $\frac{\pi}{2} - \frac{\theta}{2}$ (b) $\frac{\pi}{2} + \frac{\theta}{2}$ (c) $\frac{\pi}{4} - \frac{\theta}{2}$ (d) $\frac{\pi}{4} + \frac{\theta}{2}$
- If the cube roots of unity are $1, \omega, \omega^2$, then the roots of equation $(x-1)^3 + 8 = 0$ are
 (a) $-1, 1+2\omega, 1+2\omega^2$ (b) $-1, 1-2\omega, 1-2\omega^2$
 (c) $-1, -1, -1$ (d) None of these
- If ω is a cube root of unity, then the value of $(1 + \omega - \omega^2)(1 - \omega + \omega^2)$ is equal to
 (a) 1 (b) 0 (c) 2 (d) 4
- $\frac{(-1+i\sqrt{3})^{15}}{(1-i)^{20}} + \frac{(-1-i\sqrt{3})^{15}}{(1+i)^{20}}$ is equal to
 (a) 32 (b) 64
 (c) -64 (d) None of these
- What is the conjugate of $\left(\frac{1+2i}{2+i}\right)^2$?
 (a) $\frac{7}{25} + i\frac{24}{25}$ (b) $\frac{7}{25} - i\frac{24}{25}$
 (c) $-\frac{7}{25} + i\frac{24}{25}$ (d) $\frac{7}{25} - i\frac{24}{25}$
- If ω is imaginary cube root of unity, then $\sin\left\{\left(\omega^{13} + \omega^{20}\right)\pi + \frac{\pi}{4}\right\}$ is equal to
 (a) $-\frac{\sqrt{3}}{2}$ (b) $-\frac{1}{\sqrt{2}}$ (c) $\frac{1}{\sqrt{2}}$ (d) $\frac{\sqrt{3}}{2}$
- If ω is the imaginary cube root of unity, then what is $(2 - \omega + 2\omega^2)^{27}$ equal to?
 (a) $3^{27}\omega$ (b) $-3^{27}\omega^2$ (c) 3^{27} (d) -3^{27}
- The modulus of the complex number $z = \frac{(1-i\sqrt{3})(\cos \theta + i \sin \theta)}{2(1-i)(\cos \theta - i \sin \theta)}$ is
 (a) $\frac{1}{\sqrt{2}}$ (b) $\frac{1}{2\sqrt{2}}$ (c) $\frac{1}{\sqrt{3}}$ (d) None of these
- If α, β are complex cube roots of unity and $x = a + b, y = a\alpha + b\beta, z = a\beta + b\alpha$, then xyz is equal to
 (a) $(a+b)^3$ (b) $a^3 + b^3$ (c) $(a-b)^3$ (d) $a^3 - b^3$

- 22.** If $(\sqrt{3} + i)^{100} = 2^{99}(a + ib)$, then $a^2 + b^2$ is equal to
 (a) $\sqrt{2}$ (b) 4
 (c) $\sqrt{3}$ (d) None of these
- 23.** If the number $\frac{z-1}{z+1}$ is purely imaginary, then
 (a) $|z| > 1$ (b) $|z| = 1$
 (c) $|z| < 1$ (d) None of these
- 24.** If $z + z^{-1} = 1$, then $z^{100} + z^{-100}$ is equal to
 (a) i (b) $-i$ (c) 1 (d) -1
- 25.** If $\frac{3 + 2i \sin \theta}{1 - 2i \sin \theta}$ is purely real, then θ is equal to
 (a) $n\pi$ (b) $\frac{n\pi}{2}$ (c) $n\pi \pm \frac{\pi}{3}$ (d) $2n\pi \pm \frac{\pi}{4}$
- 26.** If $x^2 + y^2 = 1$, then what is $\frac{1+x+iy}{1+x-iy}$ equal to?
 (a) $x - iy$ (b) $x + iy$ (c) $2x$ (d) $-2iy$
- 27.** If $z = \frac{1+2i}{2-i} - \frac{2-i}{1+2i}$, then what is the value of $z^2 + z\bar{z}$? ($i = \sqrt{-1}$)
 (a) 0 (b) -1 (c) 1 (d) 8
- 28.** $\frac{a + b\omega + c\omega^2}{c + a\omega + b\omega^2} + \frac{a + b\omega + c\omega^2}{b + c\omega + a\omega^2}$ is equal to
 (a) 1 (b) 0 (c) 2 (d) -1
- 29.** The number of solutions of the equation $z^2 = \bar{z}$ is
 (a) 2 (b) 3
 (c) 4 (d) None of these
- 30.** If $z = \frac{(\sqrt{3} + i)^3}{(1 - i)^{50}}$, then $\arg(z)$ is equal to
 (a) $\frac{2\pi}{3}$ (b) $-\frac{\pi}{3}$ (c) $-\frac{2\pi}{3}$ (d) None of these
- 31.** The solution of the equation $|z| - z = 1 + 2i$ is
 (a) $\frac{3}{2} - 2i$ (b) $\frac{3}{2} + 2i$ (c) $2 - \frac{3}{2}i$ (d) None of these
- 32.** The locus of the point $z = x + iy$ satisfying $\left| \frac{z-2i}{z+2i} \right| = 1$ is
 (a) X-axis (b) Y-axis (c) $y=2$ (d) $x=2$
- 33.** The complex number z satisfying the equations $|z| - 4 = |z - i| - |z + 5i| = 0$ is
 (a) $\sqrt{3} - i, -\sqrt{3} - i$ (b) $2\sqrt{3} - 2i, -2\sqrt{3} - 2i$
 (c) $-\sqrt{3} + i, -\sqrt{3} - i$ (d) $-2\sqrt{3} + 2i, -2\sqrt{3} - 2i$
- 34.** The common roots of the equations $z^3 + 2z^2 + 2z + 1 = 0$ and $z^{1985} + z^{100} + 1 = 0$ are
 (a) $-1, \omega$ (b) $-1, \omega^2$
 (c) ω, ω^2 (d) None of these
- 35.** If α is an n th root of unity other than unity itself, then the value of $1 + \alpha + \alpha^2 + \dots + \alpha^{n-1}$ is equal to
 (a) 0 (b) 1 (c) -1 (d) None of these
- 36.** If $\frac{|z-2|}{|z-3|} = 2$ represents a circle, then its radius is
 (a) 1 (b) $\frac{1}{3}$ (c) $\frac{3}{4}$ (d) $\frac{2}{3}$
- 37.** If $z = 1 + i \tan \alpha$, where $\pi < \alpha < \frac{3\pi}{2}$, then what is $|z|$ equal to?
 (a) $\sec \alpha$ (b) $-\sec \alpha$
 (c) $\sec^2 \alpha$ (d) $-\sec^2 \alpha$
- 38.** The smallest positive integral value of n for which $\left(\frac{1-i}{1+i}\right)^n$ is purely imaginary with positive imaginary part is
 (a) 1 (b) 3 (c) 4 (d) 5
- 39.** The points z_1, z_2, z_3 and z_4 in the complex plane are the vertices of a parallelogram taken in order if and only if
 (a) $z_1 + z_4 = z_2 + z_3$ (b) $z_1 + z_3 = z_2 + z_4$
 (c) $z_1 + z_2 = z_3 + z_4$ (d) None of these
- 40.** If $2x = 3 + 5i$, then what is the value of $2x^3 + 2x^2 - 7x + 72$?
 (a) 4 (b) -4 (c) 8 (d) -8
- 41.** The smallest positive integer for which $(1+i)^{2n} = (1-i)^{2n}$ is
 I. $n = 2$ II. $n = 8$
 (a) Only II (b) Only I
 (c) Both (a) and (b) (d) Neither I nor II
- 42.** If $z_1 = \frac{1+2i}{1-i}$, $z_2 = \frac{2+i}{3-i}$ and $z_3 = \frac{1+i}{2i+1}$ in which quadrant does the each complex number lies.
 I. z_1 in second quadrant and z_2 in second quadrant.
 II. z_1 in second quadrant and z_2 in first quadrant.
 III. z_3 in fourth quadrant and z_1 in first quadrant.
 (a) Only I (b) Only II
 (c) Only III (d) Both I and III
- 43.** In the argand diagram, if O, P and Q represent respectively the origin, the complex numbers (z) and ($z + iz$), then the $\angle OPQ$ is
 I. $\frac{2\pi}{3}$ II. $\frac{\pi}{2}$ III. $\frac{\pi}{3}$
 (a) Only I (b) Only II
 (c) Only III (d) None of these

Directions (Q. Nos. 44-45) If $z_1 = \frac{\sqrt{3} + i}{\sqrt{3} - i}$ and

$$z_2 = \frac{i(\sqrt{3} + i)^4}{(2 - i2\sqrt{3})^2}. \text{ Then,}$$

- 44.** $\text{amp}(z_1) + \text{amp}(z_2)$ is equal to
 (a) $\frac{\pi}{3}$ (b) $\frac{\pi}{6}$ (c) $\frac{\pi}{9}$ (d) $-\frac{\pi}{6}$
- 45.** Which of the following is correct?
 (a) $z_1 < z_2$ (b) $z_1 > z_2$
 (c) $z_1 \geq z_2$ (d) None of these

Directions (Q. Nos. 46-48) If $n \in Z$ (the set of integers), then

$$(\cos \theta + i \sin \theta)^n = \cos n\theta + i \sin n\theta \text{ and}$$

$$(\cos \theta - i \sin \theta)^n = \cos n\theta - i \sin n\theta$$

- 46.** If $\left(\frac{1 + \cos \phi + i \sin \phi}{1 + \cos \phi - i \sin \phi} \right)^n = u + iv$, where u and v all real numbers, then u is
 (a) $n \cos \phi$ (b) $\cos n\phi$ (c) $\cos\left(\frac{n\phi}{2}\right)$ (d) $\sin\left(\frac{n\phi}{2}\right)$
- 47.** If $x + \frac{1}{x} = 2 \cos \theta$, then $x^n + \frac{1}{x^n}$ is equal to
 (a) $2 \cos n\theta$ (b) $2 \sin n\theta$ (c) $\cos n\theta$ (d) $\sin n\theta$
- 48.** If n is a positive integer, then $(1 + i)^n + (1 - i)^n$ is equal to
 (a) $(\sqrt{2})^{n-2} \cos\left(\frac{n\pi}{4}\right)$ (b) $(\sqrt{2})^{n-2} \sin\left(\frac{n\pi}{4}\right)$
 (c) $(\sqrt{2})^{n+2} \cos\left(\frac{n\pi}{4}\right)$ (d) $(\sqrt{2})^{n+2} \sin\left(\frac{n\pi}{4}\right)$

Directions (Q. Nos. 49-51) If z_1, z_2 and z_3 represent the vertices of an equilateral triangle, then $z_1^2 + z_2^2 + z_3^2 = z_1z_2 + z_2z_3 + z_3z_1$

- 49.** If z_0 is the circumcentre of equilateral triangle with vertices z_1, z_2 and z_3 , then $z_1^2 + z_2^2 + z_3^2$, equals to
 (a) z_0^2 (b) $3z_0^2$ (c) $2z_0^2$ (d) 0
- 50.** The origin and the roots of the equation $z^2 + pz + q = 0$ form an equilateral triangle, if
 (a) $p^2 = q$ (b) $p^2 = 3q$ (c) $q^2 = 3p$ (d) $q^2 = p$
- 51.** Consider the following statements
 I. The cube roots of unity form an equilateral triangle.
 II. z_1, z_2 and z_3 are the vertices of equilateral triangle, if $\frac{1}{(z_1 - z_2)} + \frac{1}{(z_2 - z_3)} + \frac{1}{(z_3 - z_1)} = 0$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II (c) Both I and II (d) Neither I nor II

Directions (Q. Nos. 52-55) Let $z = x + iy$ be a complex number such that $|z| = 1$ and $z \neq 1$

- 52.** If $\arg(z_1z) = 0$ and $|z_1| = |z|$, then
 (a) $z_1 + z = 0$ (b) $z_1\bar{z} = 1$
 (c) $z_1 = \bar{z}$ (d) None of these
- 53.** If $z_2 = \frac{1}{1 - z}$, then z_2 lies on
 (a) a parabola (b) a straight line
 (c) a circle (d) an ellipse
- 54.** The complex number $\frac{1+z}{1+\bar{z}}$ is equal to
 (a) z (b) \bar{z}
 (c) $z + \bar{z}$ (d) None of these
- 55.** Consider the following statements
 I. z lies on a unit circle with centre at the origin.
 II. The reciprocal of z is \bar{z} .
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

Directions (Q. Nos. 56-60) Suppose ω and ω^2 are the complex cube root of unity which are given as

$$\omega = \frac{-1 + \sqrt{3}i}{2} \text{ and } \omega^2 = \frac{-1 - \sqrt{3}i}{2}.$$

Also, $1 + \omega + \omega^2 = 0$ and $\omega^3 = 1$.

- 56.** The value of expression
 $2\left(1 + \frac{1}{\omega}\right)\left(1 + \frac{1}{\omega^2}\right) + 3\left(2 + \frac{1}{\omega}\right)\left(2 + \frac{1}{\omega^2}\right)$
 $+ 4\left(3 + \frac{1}{\omega}\right)\left(3 + \frac{1}{\omega^2}\right) + \dots + (n+1)\left(n + \frac{1}{\omega}\right)\left(n + \frac{1}{\omega^2}\right)$,
 is equal to
 (a) $\frac{n(n^2 + 2)}{3}$ (b) $\frac{n(n^2 - 2)}{3}$
 (c) $\frac{n^2(n+1)^2 + 4n}{4}$ (d) None of these
- 57.** If $(1 + \omega)^7 = A + B\omega$, then (A, B) is equal to
 (a) (0, 1) (b) (1, 1)
 (c) (1, 0) (d) (-1, 1)
- 58.** The value of expression
 $4 + 5\left(-\frac{1}{2} + \frac{i\sqrt{3}}{2}\right)^{334} + 3\left(-\frac{1}{2} + \frac{i\sqrt{3}}{2}\right)^{365}$ is equal to
 (a) $1 - i\sqrt{3}$ (b) $-1 + i\sqrt{3}$
 (c) $i\sqrt{3}$ (d) $-i\sqrt{3}$
- 59.** $\arg(i\omega) + \arg(i\omega^2)$ is equal to
 (a) 0 (b) $\pi/2$
 (c) π (d) $\pi/3$

> PREVIOUS YEARS' QUESTIONS

60. If $A + iB = \frac{4+2i}{1-2i}$, where $i = \sqrt{-1}$, then what is the value of A ? ☑ 2012 I

- (a) -8 (b) 0 (c) 4 (d) 8

61. If $z = -\bar{z}$, then which one of the following is correct? ☑ 2012 I

- (a) The real part of z is zero
 (b) The imaginary part of z is zero
 (c) The real part of z is equal to imaginary part of z
 (d) The sum of real and imaginary parts of z is z

62. What is the modulus of $\frac{\sqrt{2} + i}{\sqrt{2} - i}$, where $i = \sqrt{-1}$? ☑ 2012 II

- (a) 3 (b) 1/2 (c) 1 (d) None of these

63. Consider the following statements

- I. $(\omega^{10} + 1)^7 + \omega = 0$
 II. $(\omega^{105} + 1)^{10} = p^{10}$ for some prime number p ,
 where, $\omega \neq 1$ is a cubic root of unity.

Which of the above statement(s) is/are correct?

☑ 2012 II

- (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

64. The value of the sum $\sum_{n=1}^{13} (i^n + i^{n+1})$, where $i = \sqrt{-1}$ is ☑ 2012 II

- (a) i (b) $-i$ (c) 0 (d) $i - 1$

65. What is the value of $\sqrt{-i}$, where $i = \sqrt{-1}$? ☑ 2013 I

- (a) $\pm \frac{1-i}{\sqrt{2}}$ (b) $\pm \frac{1+i}{\sqrt{2}}$ (c) $\pm \frac{1-i}{2}$ (d) $\pm \frac{1+i}{2}$

66. What is the argument of the complex number $(-1 - i)$, where $i = \sqrt{-1}$? ☑ 2013 I

- (a) $\frac{5\pi}{4}$ (b) $-\frac{5\pi}{4}$ (c) $\frac{3\pi}{4}$ (d) None of these

67. What is one of the square roots of $3 + 4i$, where $i = \sqrt{-1}$? ☑ 2013 II

- (a) $2 + i$ (b) $2 - i$ (c) $-2 + i$ (d) $-3 - i$

68. What is the argument of the complex number $\frac{(1+i)(2+i)}{3-i}$, where $i = \sqrt{-1}$? ☑ 2014 I

- (a) 0 (b) $\frac{\pi}{4}$ (c) $-\frac{\pi}{4}$ (d) $\frac{\pi}{2}$

69. If P and Q are two complex numbers, then the modulus of the quotient of P and Q is ☑ 2014 I

- (a) greater than the quotient of their moduli
 (b) less than the quotient of their moduli
 (c) less than or equal to the quotient of their moduli
 (d) equal to the quotient of their moduli

70. Let $z = x + iy$, where x, y are real variables and $i = \sqrt{-1}$. If $|2z - 1| = |z - 2|$, then the point z describes ☑ 2014 I

- (a) a circle (b) an ellipse
 (c) a hyperbola (d) a parabola

71. If $|z + \bar{z}| = |z - \bar{z}|$, then the locus of z is ☑ 2014 I

- (a) a pair of straight lines (b) a line
 (c) a set of four straight lines (d) a circle

72. What is $\frac{(1+i)^{4n+5}}{(1-i)^{4n+3}}$ equal to, where n is a natural number and $i = \sqrt{-1}$? ☑ 2014 II

- (a) 2 (b) $2i$ (c) $-2i$ (d) i

73. What is $\left(\frac{\sqrt{3} + i}{\sqrt{3} - i}\right)^6$ equal to, where $i = \sqrt{-1}$? ☑ 2014 II

- (a) 1 (b) 1/6 (c) 6 (d) 2

74. If z is a complex number such that $|z| = 4$ and $\arg(z) = \frac{5\pi}{6}$, then what is z equal to? ☑ 2014 II

- (a) $2\sqrt{3} + 2i$ (b) $2\sqrt{3} - 2i$ (c) $-2\sqrt{3} + 2i$ (d) $-\sqrt{3} + i$
 where, $i = \sqrt{-1}$

75. If $1, \omega$ and ω^2 are the cube roots of unity, then the value of $(1 + \omega)(1 + \omega^2)(1 + \omega^4)(1 + \omega^8)$ is ☑ 2015 I

- (a) -1 (b) 0 (c) 1 (d) 2

76. If $z = \frac{-2(1+2i)}{(3+i)}$, where $i = \sqrt{-1}$, then the argument θ ($-\pi < \theta \leq \pi$) of z is ☑ 2015 I

- (a) $\frac{3\pi}{4}$ (b) $\frac{\pi}{4}$ (c) $\frac{5\pi}{6}$ (d) $-\frac{3\pi}{4}$

77. What is the square root of i , where $i = \sqrt{-1}$? ☑ 2015 I

- (a) $\frac{1+i}{2}$ (b) $\frac{1-i}{2}$ (c) $\frac{1+i}{\sqrt{2}}$ (d) None of these

78. What is $\left[\frac{\sin \frac{\pi}{6} + i \left(1 - \cos \frac{\pi}{6}\right)}{\sin \frac{\pi}{6} - i \left(1 - \cos \frac{\pi}{6}\right)}\right]^3$, where $i = \sqrt{-1}$, ☑ 2015 I

equal to?

- (a) 1 (b) -1 (c) i (d) $-i$

79. What is the real part of $(\sin x + i \cos x)^3$, where $i = \sqrt{-1}$? ☑ 2015 I

- (a) $-\cos 3x$ (b) $-\sin 3x$
 (c) $\sin 3x$ (d) $\cos 3x$

80. $(x^3 - 1)$ can be factorised as ☑ 2015 I

- (a) $(x-1)(x-\omega)(x+\omega^2)$ (b) $(x-1)(x-\omega)(x-\omega^2)$
 (c) $(x-1)(x+\omega)(x+\omega^2)$ (d) $(x-1)(x+\omega)(x-\omega^2)$

where, ω is one of the cube roots of unity.

81. If z_1 and z_2 are complex numbers with $|z_1| = |z_2|$, then which of the following is/are correct?

- I. $z_1 = z_2$
 II. Real part of $z_1 =$ Real part of z_2
 III. Imaginary part of $z_1 =$ Imaginary part of z_2

Select the correct answer using the code given below **2015 II**

- (a) Only I (b) Only II (c) Only III (d) None of these

82. If the point $z_1 = 1 + i$, where $i = \sqrt{-1}$, is the reflection of a point $z_2 = x + iy$ in the line $i\bar{z} - iz = 5$, then the point z_2 is **2015 II**

- (a) $1 + 4i$ (b) $4 + i$ (c) $1 - i$ (d) $-1 - i$

83. $z\bar{z} + (3 - i)z + (3 + i)\bar{z} + 1 = 0$ represents a circle with **2015 II**

- (a) centre $(-3, -1)$ and radius 3
 (b) centre $(-3, 1)$ and radius 3
 (c) centre $(-3, -1)$ and radius 4
 (d) centre $(-3, 1)$ and radius 4

Directions (Q. Nos. 84-85) Let z_1, z_2 and z_3 be non-zero complex numbers satisfying $z^2 = i\bar{z}$, where $i = \sqrt{-1}$.

2016 I

84. What is $z_1 + z_2 + z_3$ equal to?

- (a) i (b) $-i$ (c) 0 (d) 1

85. Consider the following statements

- I. $z_1 z_2 z_3$ is purely imaginary.
 II. $z_1 z_2 + z_2 z_3 + z_3 z_1$ is purely real.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

Directions (Q. Nos. 86-87) Let z be a complex number satisfying $\left| \frac{z-4}{z-8} \right| = 1$ and $\left| \frac{z}{z-2} \right| = \frac{3}{2}$ **2016 I**

86. What is $|z|$ equal to?

- (a) 6 (b) 12
 (c) 18 (d) 36

87. What is $\left| \frac{z-6}{z+6} \right|$ equal to?

- (a) 3 (b) 2
 (c) 1 (d) 0

88. Suppose, ω is a cube root of unity with $\omega \neq 1$. Suppose, P and Q are the points on the complex plane defined by ω and ω^2 . If O is the origin, then what is the angle between OP and OQ ? **2016 I**

- (a) 60° (b) 90°
 (c) 120° (d) 150°

89. Suppose, ω_1 and ω_2 are two distinct cube roots of unity different from 1. Then, what is $(\omega_1 - \omega_2)^2$ equal to? **2016 I**

- (a) 3 (b) 1
 (c) -1 (d) -3

90. If $z = x + iy = \left(\frac{1}{\sqrt{2}} - \frac{i}{\sqrt{2}} \right)^{-25}$, where $i = \sqrt{-1}$, then what is the fundamental amplitude of $\frac{z - \sqrt{2}}{z - i\sqrt{2}}$? **2016 I**

- (a) π (b) $\frac{\pi}{2}$
 (c) $\frac{\pi}{3}$ (d) $\frac{\pi}{4}$

HINTS AND SOLUTIONS

1. (b) 2. (b)

$$\begin{aligned} 3. (a) \text{ We have, } & \left[i^{18} + \left(\frac{1}{i} \right)^{25} \right]^3 \\ & = [-1 + (-i)^{25}]^3 = [-1 - i]^3 \\ & = -[1 + i]^3 \\ & = -[1 + 3i - 3 - i] = -[-2 + 2i] \\ & = 2(1 - i) \end{aligned}$$

$$\begin{aligned} 4. (c) \frac{1 + 7i}{(2 - i)^2} &= \frac{1 + 7i}{4 + i^2 - 4i} = \frac{1 + 7i}{3 - 4i} \\ &= \frac{(1 + 7i)(3 + 4i)}{(3)^2 - (4i)^2} \\ &= \frac{-25 + 25i}{25} = -1 + i \end{aligned}$$

$$\therefore -1 + i = (\sqrt{2}, \pi - \pi/4) = \left(\sqrt{2}, \frac{3\pi}{4} \right)$$

$$5. (c) iz = \frac{-1 + i\sqrt{3}}{2} = \omega$$

$$\Rightarrow z = \left(\frac{1}{i} \right) \omega = -i\omega \quad \dots(i)$$

$$\begin{aligned} \therefore z^{101} + i^{103} &= (-i)^{101} \omega^{101} + i^{103} \\ &= -i\omega^2 - i = -i(1 + \omega^2) \\ &= -i(-\omega) = i\omega \end{aligned}$$

$$\begin{aligned} \text{Now, } (z^{101} + i^{103})^{105} &= i^{105} \omega^{105} = i \cdot \omega^3 \\ &= i(iz)^3 = i^4 z^3 = z^3 \end{aligned}$$

$$\begin{aligned} 6. (b) z &= \left(\frac{\sqrt{3} + i}{2} \right)^5 + \left(\frac{\sqrt{3} - i}{2} \right)^5 \\ &= (-i\omega)^5 + (i\omega^2)^5 = -i\omega^2 + i\omega \\ &= i[\omega - \omega^2] = i(i\sqrt{3}) = -\sqrt{3} \end{aligned}$$

7. (c)

$$8. (b) |\arg(z)| + |\arg(\bar{z})| = \left| \frac{\pi}{3} \right| + \left| -\frac{\pi}{3} \right| = \frac{2\pi}{3}$$

9. (b) Taking mode on both sides, we get

$$\begin{aligned} |a + ib| |c + id| |e + if| |g + ih| \\ &= |A + iB| \\ \Rightarrow (a^2 + b^2)(c^2 + d^2)(e^2 + f^2) \\ & \quad (g^2 + h^2) \\ &= A^2 + B^2 \end{aligned}$$

$$\begin{aligned} 10. (b) \frac{i + \sqrt{3}}{-i + \sqrt{3}} &= \frac{(\sqrt{3} + i)/2}{(\sqrt{3} - i)/2} = \frac{-i\omega}{i\omega^2} = -\omega^2 \\ \text{and } \frac{i - \sqrt{3}}{i + \sqrt{3}} &= \frac{(-\sqrt{3} + i)/2}{(\sqrt{3} + i)/2} = \frac{-i\omega^2}{-i\omega} = \omega \\ \therefore \left(\frac{i + \sqrt{3}}{-i + \sqrt{3}} \right)^{200} &+ \left(\frac{i - \sqrt{3}}{i + \sqrt{3}} \right)^{200} + 1 \\ &= (-\omega^2)^{200} + \omega^{200} + 1 = 0 \end{aligned}$$

$$\begin{aligned} 11. (c) (-\sqrt{-1})^{4n+3} + (i^{41} + i^{-257})^9 \\ &= (-i)^{4n+3} + \left(i + \frac{1}{i} \right)^9 \quad [\because i^4 = 1] \\ &= (-1)^{4n+3} (i)^{4n} (i)^3 + (i - i)^9 \\ &= -(-1)(-i) + 0 = i \end{aligned}$$

$$\begin{aligned} 12. (d) E &= \left(\frac{1-i}{1+i} \right)^{n-2} (1-i)^2 \\ &= \left(\frac{-2i}{2} \right)^{n-2} (-2i) = 2(-i)^{n-1} \\ &= 2[(-i)^2]^{(n-1)/2} = 2(-1)^{(n-1)/2} \end{aligned}$$

Since, E is real and positive.

$$\text{Therefore, } \frac{n-1}{2} = 2\lambda$$

$$\therefore n = 4\lambda + 1$$

i.e. odd of this type but not any odd.

13. (d) Let $z = (1 - \sin\theta) + i \cos\theta$

$$\Rightarrow \arg(z) = \tan^{-1} \left(\frac{\text{Im}(z)}{\text{Re}(z)} \right)$$

$$= \tan^{-1} \left(\frac{\cos\theta}{1 - \sin\theta} \right) = \tan^{-1} \left(\frac{1 + \tan \frac{\theta}{2}}{1 - \tan \frac{\theta}{2}} \right)$$

$$= \tan^{-1} \left\{ \frac{\cos \frac{\theta}{2} + \sin \frac{\theta}{2}}{\cos \frac{\theta}{2} - \sin \frac{\theta}{2}} \right\}$$

$$= \tan^{-1} \left[\tan \left(\frac{\pi}{4} + \frac{\theta}{2} \right) \right] = \frac{\pi}{4} + \frac{\theta}{2}$$

14. (b) $(x - 1)^3 + 8 = 0$ or $(x - 1)^3 = -8$

$$\therefore x - 1 = (-8)^{1/3} = -2(1)^{1/3} = -2, -2\omega, -2\omega^2$$

$$\text{Hence, } x = -1, 1 - 2\omega, 1 - 2\omega^2$$

15. (d) $(1 + \omega - \omega^2)(1 - \omega + \omega^2)$

$$= (-\omega^2 - \omega^2)(-\omega - \omega)$$

$$= (-2\omega^2) \times (-2\omega) = 4\omega^3 = 4$$

$$16. (c) \frac{(2e^{2\pi i/3})^{15}}{(\sqrt{2} e^{-\pi i/4})^{20}} + \frac{(2e^{-2\pi i/3})^{15}}{(\sqrt{2} e^{\pi i/4})^{20}}$$

$$= 2^5 [e^{15\pi i} + e^{-15\pi i}]$$

$$= 2^5 \cdot 2 \cos 15\pi = 64 \cos \pi = -64$$

17. (d)

18. (b) $\because \omega^{13} + \omega^{20} = \omega + \omega^2 = -1$

$$\therefore E = \sin \left(-\pi + \frac{\pi}{4} \right) = -\sin \frac{3\pi}{4} = -\frac{1}{\sqrt{2}}$$

19. (d) $(2 - \omega + 2\omega^2)^{27}$

$$= \{2 - (-1 - \omega^2) + 2\omega^2\}^{27} = \{3 + 3\omega^2\}^{27}$$

$$= (3)^{27} (1 + \omega^2)^{27} = (3)^{27} (-\omega)^{27}$$

$$= -(3)^{27}$$

20. (a) $\because |e^{i\alpha}| = 1 = |e^{-i\alpha}|$

$$\therefore |z| = \frac{\sqrt{1+3} |e^{i\theta}|}{2\sqrt{1+1} |e^{-i\theta}|} = \frac{2}{2\sqrt{2}} = \frac{1}{\sqrt{2}}$$

21. (b) Let $\alpha = \omega$ and $\beta = \omega^2$

$$\begin{aligned} \text{Then, } xyz &= (a+b)(a\omega+b\omega^2)(a\omega^2+b\omega) \\ &= a^3 + b^3 \end{aligned}$$

22. (b) $(\sqrt{3} + i)^{100} = 2^{99}(a + ib)$

$$\Rightarrow (-2i\omega^2)^{100} = 2^{99}(a + ib)$$

$$\Rightarrow 2^{100}\omega^2 = 2^{99}(a + ib)$$

$$\Rightarrow 2 \left\{ \frac{-1 - \sqrt{3}i}{2} \right\} = a + ib$$

$$\Rightarrow a = -1 \text{ and } b = -\sqrt{3}$$

$$\therefore a^2 + b^2 = (-1)^2 + (-\sqrt{3})^2 = 4$$

23. (b) $\left(\frac{z-1}{z+1} \right) + \left(\frac{\bar{z}-1}{\bar{z}+1} \right) = 0$

$$\Rightarrow \frac{z-1}{z+1} + \frac{\bar{z}-1}{\bar{z}+1} = 0$$

$$\Rightarrow \frac{(z-1)(\bar{z}+1) + (\bar{z}-1)(z+1)}{(z+1)(\bar{z}+1)} = 0$$

$$\Rightarrow \frac{2(1-|z|^2)}{|1+z|^2} = 0 \Rightarrow 1-|z|^2 = 0 \Rightarrow |z|=1$$

24. (d) $z + z^{-1} = 1 \Rightarrow z^2 - z + 1 = 0$

$$z = -\omega \text{ or } -\omega^2$$

For $z = -\omega$, we have

$$z^{100} + z^{-100} = (-\omega)^{100} + (-\omega)^{-100}$$

$$= \omega + 1/\omega = \omega + \omega^2 = -1$$

For $z = -\omega^2$, we have

$$z^{100} + z^{-100} = (-\omega^2)^{100} + (-\omega^2)^{-100}$$

$$= \omega^{200} + \frac{1}{\omega^{200}} = \omega^2 + \frac{1}{\omega^2}$$

$$= \omega^2 + \omega = -1$$

25. (a) For purely real number

$$\left(\frac{3 + 2i \sin \theta}{1 - 2i \sin \theta} \right) = \left(\frac{3 + 2i \sin \theta}{1 - 2i \sin \theta} \right)$$

$$\Rightarrow \frac{3 + 2i \sin \theta}{1 - 2i \sin \theta} = \frac{3 - 2i \sin \theta}{1 + 2i \sin \theta}$$

$$\Rightarrow 3 + 8i \sin \theta - 4 \sin^2 \theta = 3 - 8i \sin \theta - 4 \sin^2 \theta$$

$$\Rightarrow 16i \sin \theta = 0 \Rightarrow \theta = n\pi$$

26. (b)

27. (a) Let $\omega = \frac{1+2i}{2-i} = \frac{1+2i}{2-i} \times \frac{2+i}{2+i}$

$$= \frac{2+5i-2}{4+1} = i$$

$$\therefore z = i - \frac{1}{i} = i + i = 2i$$

$$\begin{aligned} \therefore z^2 + z\bar{z} &= z(z + \bar{z}) \\ &= 2i(2i - 2i) = 0 \end{aligned}$$

28. (d) The given expression can be written as

$$= \frac{\omega(a + b\omega + c\omega^2)}{(c\omega + a\omega^2 + b)} + \frac{a + b\omega + c\omega^2}{b + c\omega + a\omega^2}$$

$$= \frac{(a + b\omega + c\omega^2)(\omega + 1)}{b + c\omega + a\omega^2}$$

$$= \frac{(a + b\omega + c\omega^2)(-\omega^2)}{b + c\omega + a\omega^2} [\because 1 + \omega = -\omega^2]$$

$$= \frac{-(a\omega^2 + b + c\omega)}{b + c\omega + a\omega^2} = -1$$

29. (c) $z^2 = \bar{z} \Rightarrow (x + iy)^2 = x - iy$

$$x^2 - y^2 - x + i(2xy + y) = 0$$

$$\Rightarrow x^2 - y^2 - x = 0 \text{ and } 2xy + y = 0$$

Now, $2xy + y = 0$ gives

$$y = 0 \text{ or } x = -1/2$$

when, $y = 0, x^2 - y^2 - x = 0$
gives $x^2 - x = 0$ or $x = 0, 1$

when, $x = -1/2, x^2 - y^2 - x = 0$ gives
 $1/4 - y^2 + 1/2 = 0 \Rightarrow y = \pm(\sqrt{3}/2)$

Hence, there are four solutions.

30. (c) $z = \frac{(2e^{i\pi/6})^{17}}{(\sqrt{2}e^{-i\pi/4})^{50}} = \frac{1}{2^8} e^{i\frac{17\pi}{6}} \cdot e^{-\frac{25\pi}{2}i}$

$$\therefore \text{amp}(z) = \frac{17\pi}{6} - \frac{25\pi}{2} = \frac{46\pi}{3}$$

$$= 16\pi - \frac{2\pi}{3} = -\frac{2\pi}{3}$$

31. (a) Let $z = x + iy, |z| - z = 1 + 2i$

$$\sqrt{x^2 + y^2} - (x + iy) = 1 + 2i$$

$$\Rightarrow (\sqrt{x^2 + y^2} - x) - iy = 1 + 2i$$

$$\Rightarrow \sqrt{x^2 + y^2} - x = 1 \text{ and } y = -2$$

Now, $\sqrt{x^2 + y^2} - x = 1$

$$\Rightarrow \sqrt{x^2 + 4} = 1 + x \quad [\because y = -2]$$

$$\Rightarrow x^2 + 4 = 1 + x^2 + 2x \Rightarrow x = 3/2$$

\therefore The solution is $3/2 - 2i$.

32. (a) $\left| \frac{z-2i}{z+2i} \right| = 1 \Rightarrow |z-2i| = |z+2i|$

$$\Rightarrow |x+i(y-2)| = |x+i(y+2)|$$

$$\Rightarrow x^2 + (y-2)^2 = x^2 + (y+2)^2$$

$$\Rightarrow y^2 + 4 - 4y = y^2 + 4 + 4y \Rightarrow y = 0$$

\therefore Locus of z lies on X -axis.

33. (b) Let $z = x + iy$

$$|x + iy| = 4, \text{ i.e. } x^2 + y^2 = 16 \quad \dots(i)$$

and $|x + iy - i| = |x + iy + 5i|$

$$\text{or } x^2 + (y-1)^2 = x^2 + (y+5)^2$$

i.e. $y = -2 \quad \dots(ii)$

Putting $y = -2$ in Eq. (i), $x^2 + 4 = 16$
or $x = \pm 2\sqrt{3}$.

Hence, the complex numbers satisfying the given equations are

$$z_1 = 2\sqrt{3} - 2i \text{ and } z_2 = -2\sqrt{3} - 2i$$

34. (c) We have, $z^3 + 2z^2 + 2z + 1 = 0$

$$\Rightarrow (z+1)(z^2 + z + 1) = 0$$

Its roots are $-1, \omega$ and ω^2 . The root $z = -1$ does not satisfy the equation $z^{1985} + z^{100} + 1 = 0$ but $z = \omega$ and $z = \omega^2$ satisfy it. Hence, ω and ω^2 are the common roots.

35. (a)

36. (d) $|z-2| = 2|z-3|$

$$\Rightarrow |(x-2) + iy|^2 = 4|(x-3) + iy|^2$$

$$\Rightarrow (x-2)^2 + y^2 = 4[(x-3)^2 + y^2]$$

$$\Rightarrow 3x^2 + 3y^2 - 20x + 32 = 0$$

$$\Rightarrow x^2 + y^2 - \frac{20}{3}x + \frac{32}{3} = 0$$

$$\text{Radius} = \sqrt{\left(\frac{-10}{3}\right)^2 - \frac{32}{3}} = \frac{2}{3}$$

37. (a) Given, $z = 1 + i \tan \alpha$,
where $\pi < \alpha < 3\pi/2$

$$\Rightarrow |z| = \sqrt{1 + \tan^2 \alpha} \Rightarrow |z| = \sqrt{\sec^2 \alpha}$$

$$\Rightarrow |z| = \sec \alpha \quad \left[\because \pi < \alpha < \frac{3\pi}{2} \right]$$

38. (b) Let $z = \left(\frac{1-i}{1+i} \right)^n = \left\{ \frac{(1-i)(1-i)}{(1+i)(1-i)} \right\}^n$

$$= \left\{ \frac{1-1-2i}{2} \right\}^n = (-i)^n$$

For $n=3, i = (-1)^3 = i$
Hence, required value of $n = 3$

39. (b) Let $ABCD$ be a parallelogram such that affixes of A, B, C, D are z_1, z_2, z_3, z_4 , respectively. Then,

$$AB = DC \Rightarrow z_2 - z_1 = z_3 - z_4$$

$$\Rightarrow z_2 + z_4 = z_1 + z_3$$

40. (a) $(2x-3)^2 = (5i)^2 = -25$

$$\Rightarrow 2x^2 - 6x + 17 = 0$$

Dividing, $2x^3 + 2x^2 - 7x + 72$ by $2x^2 - 6x + 17$, we get quotient = $x + 4$ and remainder = 4

$$\therefore 2x^3 + 2x^2 - 7x + 72 = (x+4)(2x^2 - 6x + 17) + 4 = 4$$

41. (b) $\left(\frac{1-i}{1+i} \right)^{2n} = 1, \left(\frac{1-i}{1+i} \times \frac{1-i}{1-i} \right)^{2n} = 1$

$$\Rightarrow \left(\frac{-2i}{2} \right)^{2n} = 1 \Rightarrow (-i)^n = 1$$

\therefore Smallest positive value of $n = 2$

42. (b) We have, $z_1 = \frac{1+2i}{1-i} \times \frac{1+i}{1+i}$

$$= \frac{1+3i-2}{1+1} = \frac{-1+3i}{2}$$

$$\Rightarrow z_1 \text{ lies in second quadrant.}$$

$$z_2 = \frac{2+i}{3-i} \times \frac{3+i}{3+i} = \frac{6+2i+3i-1}{9+1} = \frac{1+5i}{2}$$

$$\Rightarrow z_2 \text{ lies in first quadrant.}$$

$$z_3 = \frac{1+i}{2i+1} \times \frac{1-2i}{1-2i} = \frac{1-2i+i-2i^2}{1+4} = \frac{3-i}{5}$$

$$\Rightarrow z_3 \text{ lies in fourth quadrant.}$$

43. (b) Let $z = r(\cos \theta + i \sin \theta)$

$$z + iz = r(\cos \theta + i \sin \theta) + ir(\cos \theta + i \sin \theta)$$

$$= r[(\cos \theta - \sin \theta) + i(\sin \theta + \cos \theta)]$$

$$= \sqrt{2}r \left[\cos \left(\theta + \frac{\pi}{4} \right) + i \sin \left(\theta + \frac{\pi}{4} \right) \right]$$

In ΔOPQ ,

$$PQ^2 = r^2 + (\sqrt{2}r)^2 - 2r(\sqrt{2}r) \cos \pi/4$$

$$= r^2 + 2r^2 - 2r^2 = r^2$$

$$PQ^2 = r^2 \Rightarrow PQ = r$$

$\therefore \Delta OPQ$ is right angle triangle.
 $\therefore \angle OPQ = 90^\circ = \frac{\pi}{2}$.

Sol. (Q. Nos. 44-45) Given, $z_1 = \frac{\sqrt{3}+i}{\sqrt{3}-i}$

$$\Rightarrow z_1 = \frac{\sqrt{3}+i}{\sqrt{3}-i} \times \frac{\sqrt{3}+i}{\sqrt{3}+i}$$

$$= \frac{3-1+2\sqrt{3}i}{3+1} = \frac{1}{2} + \frac{\sqrt{3}}{2}i$$

$$\text{amp}(z_1) = \tan^{-1} \left(\frac{\sqrt{3}/2}{1/2} \right)$$

$$= \tan^{-1}(\sqrt{3}) = \frac{\pi}{3}$$

Now, $z_2 = \frac{i(\sqrt{3}+i)^4}{(2-i2\sqrt{3})^2} = \frac{i(2+2\sqrt{3}i)^2}{4(-2-2\sqrt{3}i)}$

$$= \frac{\sqrt{3}+i}{1+\sqrt{3}i} = \frac{\sqrt{3}}{2} - \frac{i}{2}$$

$$\text{amp}(z_2) = \tan^{-1} \left(\frac{-1/2}{\sqrt{3}/2} \right) = -\frac{\pi}{6}$$

44. (b) $\text{amp}(z_1) + \text{amp}(z_2) = \frac{\pi}{3} - \frac{\pi}{6} = \frac{\pi}{6}$

45. (d) Complex numbers do not follow the rule of inequality, i.e. inequality is meaningless in complex numbers.

46. (b) $\left(\frac{1 + \cos \phi + i \sin \phi}{1 + \cos \phi - i \sin \phi} \right)^n = u + iv$

$$\Rightarrow \left[\frac{2 \cos^2 \frac{\phi}{2} + 2i \sin \frac{\phi}{2} \cos \frac{\phi}{2}}{2 \cos^2 \frac{\phi}{2} - 2i \sin \frac{\phi}{2} \cos \frac{\phi}{2}} \right]^n = u + iv$$

$$\Rightarrow \left[\frac{2 \cos \frac{\phi}{2} \left(\cos \frac{\phi}{2} + i \sin \frac{\phi}{2} \right)}{2 \cos \frac{\phi}{2} \left(\cos \frac{\phi}{2} - i \sin \frac{\phi}{2} \right)} \right]^n = u + iv$$

$$\Rightarrow \left(\frac{e^{i\phi/2}}{e^{-i\phi/2}} \right)^n = u + iv \Rightarrow e^{in\phi} = u + iv$$

$$\Rightarrow \cos n\phi + i \sin n\phi = u + iv$$

$$\Rightarrow u = \cos n\phi, v = \sin n\phi$$

47. (a) $x + 1/x = 2 \cos \theta$
 $\Rightarrow x^2 - 2x \cos \theta + 1 = 0 \Rightarrow x = \cos \theta \pm i \sin \theta$
 $\Rightarrow x^n = (\cos \theta \pm i \sin \theta)^n = \cos n\theta \pm i \sin n\theta$
 $\Rightarrow \frac{1}{x^n} = \cos n\theta \mp i \sin n\theta$
 $\therefore x^n + \frac{1}{x^n} = 2 \cos n\theta$

48. (c) $(1+i)^n + (1-i)^n$
 $= \left\{ \sqrt{2} \left(\frac{1}{\sqrt{2}} + \frac{i}{\sqrt{2}} \right) \right\}^n + \left\{ \sqrt{2} \left(\frac{1}{\sqrt{2}} - \frac{i}{\sqrt{2}} \right) \right\}^n$
 $= 2^{n/2} \left(\cos \frac{\pi}{4} + i \sin \frac{\pi}{4} \right)^n + 2^{n/2} \left(\cos \frac{\pi}{4} - i \sin \frac{\pi}{4} \right)^n$
 $= 2^{n/2} \left(\cos \frac{n\pi}{4} + i \sin \frac{n\pi}{4} + \cos \frac{n\pi}{4} - i \sin \frac{n\pi}{4} \right)$
 $= 2^{n/2+1} \cos \left(\frac{n\pi}{4} \right) = (\sqrt{2})^{n+2} \cos \left(\frac{n\pi}{4} \right)$

49. (b) In an equilateral triangle circumcentre, centroid and orthocentre are coincident.
 $\therefore z_0 = \frac{z_1 + z_2 + z_3}{3} \Rightarrow z_1 + z_2 + z_3 = 3z_0$
 Now, z_1, z_2, z_3 are the affixes of the vertices of an equilateral triangle.
 $\therefore z_1^2 + z_2^2 + z_3^2 = z_1 z_2 + z_2 z_3 + z_3 z_1$
 $(z_1 + z_2 + z_3)^2 = 3(z_1 z_2 + z_2 z_3 + z_3 z_1)$
 $\Rightarrow (3z_0)^2 = 3(z_1 z_2 + z_2 z_3 + z_3 z_1)$
 $\Rightarrow z_1 z_2 + z_2 z_3 + z_3 z_1 = 3z_0^2$
 $\Rightarrow z_1^2 + z_2^2 + z_3^2 = 3z_0^2$

50. (b) Let z_1, z_2 be the roots of $z^2 + pz + q = 0$.
 Then, $z_1 + z_2 = -p, z_1 z_2 = q$
 Since, $z_1, z_2, z_3 (= 0)$ form an equilateral triangle.
 $\therefore z_1^2 + z_2^2 + z_3^2 = z_1 z_2 + z_2 z_3 + z_3 z_1$
 $\Rightarrow z_1^2 + z_2^2 = z_1 z_2$ [$\because z_3 = 0$]
 $\Rightarrow (z_1 + z_2)^2 = 3z_1 z_2$
 $\Rightarrow (-p)^2 = 3q \Rightarrow p^2 = 3q$

51. (c) Let P, Q, R represent $1, \omega$ and ω^2 , respectively.
 $PQ = |1 - \omega| = \sqrt{\left(\frac{3}{2}\right)^2 + \left(\frac{\sqrt{3}}{2}\right)^2} = \sqrt{3}$
 $QR = |\omega - \omega^2| = \sqrt{3}$ and
 $RP = |1 - \omega^2| = \sqrt{\left(\frac{3}{2}\right)^2 + \left(\frac{\sqrt{3}}{2}\right)^2} = \sqrt{3}$
 $\therefore PQ = QR = RP$
 Thus, points representing $1, \omega, \omega^2$ form an equilateral triangle.

\therefore Statement I is correct.
 Now, $\frac{1}{z_1 - z_2} + \frac{1}{z_2 - z_3} = \frac{1}{z_1 - z_3}$
 $\Rightarrow z_1 z_2 - z_1 z_3 - z_2^2 + z_2 z_3 = z_1^2 + z_2^2 - 2z_1 z_3$
 $\Rightarrow z_1^2 + z_2^2 + z_3^2 = z_1 z_2 + z_2 z_3 + z_3 z_1$
 Thus, z_1, z_2, z_3 are vertices of equilateral triangle.

\therefore Statement II is correct.
 52. (c) We have, $\arg(z_1 z) = 0$
 $\Rightarrow \arg(z_1) + \arg(z) = 0$
 $\Rightarrow \arg(z_1) = -\arg(z)$
 $\Rightarrow \arg(z_1) = \arg(\bar{z})$ and $|z_1| = |z| = |\bar{z}|$
 Hence, $z_1 = \bar{z}$

53. (b) $z_2 = \frac{1}{1-z} \Rightarrow z = 1 - \frac{1}{z_2} = \frac{z_2 - 1}{z_2}$
 $\therefore |z| = \left| \frac{z_2 - 1}{z_2} \right| \Rightarrow 1 = \left| \frac{z_2 - 1}{z_2} \right| = \frac{|z_2 - 1|}{|z_2|}$
 $[\because |z| = 1]$
 $\Rightarrow |z_2| = |z_2 - 1|$

Let $z_2 = x + iy, |x + iy| = |(x-1) + iy|$
 $\Rightarrow x^2 + y^2 = (x-1)^2 + y^2 \Rightarrow x = 1/2$
 $\therefore z_2$ lies on straight line.

54. (a) We have, $|z| = 1 \Rightarrow |z|^2 = 1 \Rightarrow z\bar{z} = 1$
 $\therefore \frac{1+z}{1+\bar{z}} = \frac{z\bar{z}+z}{1+\bar{z}} = \frac{z(\bar{z}+1)}{1+\bar{z}} = z$

55. (c) $|z| = 1$ represents a unit circle with centre at origin.
 Hence, Statement I is correct.
 Reciprocal of $z = \frac{1}{z} = \frac{\bar{z}}{z\bar{z}} = \frac{\bar{z}}{|z|^2} = \bar{z}$

Hence, Statement II is correct.
 56. (c) In general, n th term of the given expression
 $T_r = (r+1) \left(r + \frac{1}{\omega} \right) \left(r + \frac{1}{\omega^2} \right)$
 $= r^3 + r^2 \left(\frac{1}{\omega^2} + \frac{1}{\omega} + 1 \right)$
 $+ r \left(1 + \frac{1}{\omega^2} + \frac{1}{\omega} \right) + 1$
 $= r^3 + 1$ [$\because 1 + \omega + \omega^2 = 0$]

$\therefore S_n = \sum_{r=1}^n (r^3 + 1)$
 $= \frac{n^2(n+1)^2}{4} + n = \frac{n^2(n+1)^2 + 4n}{4}$

57. (b) We have, $(1+\omega)^7 = A + B\omega$
 $\Rightarrow (-\omega^2)^7 = A + B\omega \Rightarrow -\omega^{14} = A + B\omega$
 $\Rightarrow \omega^2 = A + B\omega \Rightarrow 1 + \omega = A + B\omega$
 On comparing, we get $A = 1, B = 1$

58. (c) $4 + 5 \left(-\frac{1}{2} + \frac{i\sqrt{3}}{2} \right)^{334} + 3 \left(-\frac{1}{2} + \frac{i\sqrt{3}}{2} \right)^{365}$
 $= 4 + 5\omega^{334} + 3\omega^{365}$
 $= 4 + 5\omega + 3\omega^2$
 $= 4 + 5 \left(-\frac{1}{2} + \frac{i\sqrt{3}}{2} \right) + 3 \left(-\frac{1}{2} - \frac{i\sqrt{3}}{2} \right)$
 $= i\sqrt{3}$

59. (c) We have, $\arg(\omega) = \frac{2\pi}{3}$
 and $\arg(\omega^2) = \frac{4\pi}{3}$ or $\arg(\omega^2) = -\frac{2\pi}{3}$
 $\therefore \arg(i\omega) + \arg(i\omega^2)$
 $= \arg(i) + \arg(\omega) + \arg(i) + \arg(\omega^2)$
 $= \frac{\pi}{2} + \frac{2\pi}{3} + \frac{\pi}{2} - \frac{2\pi}{3} = \frac{\pi}{2} + \frac{\pi}{2} = \pi$

60. (b) Given, $A + iB = \frac{4+2i}{1-2i} \times \frac{1+2i}{1+2i}$
 $= \frac{4+10i-4}{1+4} = \frac{10i}{5} = 2i$
 $[\because i^2 = -1]$

$\Rightarrow A + iB = 0 + i \cdot 2$
 $\Rightarrow A = 0$ and $B = 2$

61. (a) Given that, $z = -\bar{z}$
 Let $z = x + iy \Rightarrow (x + iy) = -(\overline{x + iy})$
 $(x + iy) = -(x - iy)$
 $[\because z = x + iy, \bar{z} = x - iy]$
 $\Rightarrow (x + iy) = (-x + iy)$
 $\Rightarrow 2x = 0 \Rightarrow x = 0$

Hence, the real part of z is zero.

62. (c)
 63. (b) I. LHS $= (\omega^{10} + 1)^7 + \omega$
 $= [(\omega^3)^3 \omega + 1]^7 + \omega$
 $= (1 + \omega)^7 + \omega = (-\omega^2)^7 + \omega$
 $[\because 1 + \omega + \omega^2 = 0, \therefore 1 + \omega = -\omega^2]$
 $= -\omega^{14} + \omega = -(\omega^3)^4 \omega^2 + \omega$
 $= -\omega^2 + \omega = (1 + \omega) + \omega$
 $= 1 + 2\omega \neq 0$

So, Statement I is false.
 II. LHS $= (\omega^{105} + 1)^{10} = [(\omega^3)^{35} + 1]^{10}$
 $[\because \omega^3 = 1]$
 $= (1 + 1)^{10} = 2^{10} = 2^{10}$
 which is true for prime number 2.

So, Statement I is false and Statement II is true.

64. (d) $\sum_{n=1}^{13} (i^n + i^{n+1}) = \sum_{n=1}^{13} i^n + \sum_{n=1}^{13} i^{n+1}$
 $= i \left(\frac{1-i^{13}}{1-i} \right) + i^2 \left(\frac{1-i^{13}}{1-i} \right)$
 $= i \left(\frac{1-i}{1-i} \right) - \left(\frac{1-i}{1-i} \right) = i - 1$

79. (b) $(\sin x + i \cos x)^3$
 $= \left[\cos\left(\frac{\pi}{2} - x\right) + i \left(\sin\left(\frac{\pi}{2} - x\right)\right) \right]^3$
 $= \left[e^{i\left(\frac{\pi}{2} - x\right)} \right]^3 = e^{3i\left(\frac{\pi}{2} - x\right)}$
 $= \cos 3\left(\frac{\pi}{2} - x\right) + i \sin 3\left(\frac{\pi}{2} - x\right)$
 $= \cos\left(\frac{3\pi}{2} - 3x\right) + i \sin\left(\frac{3\pi}{2} - 3x\right)$
 $= (-\sin 3x - i \cos 3x)$

Hence, the real part is $-\sin 3x$.

80. (b) $(x^3 - 1) = (x - 1)(x^2 + 1 + x)$
 $= (x - 1)(x^2 + x - \omega - \omega^2)$
 $[\because 1 + \omega + \omega^2 = 0]$
 $= (x - 1)(x^2 - \omega^2 + x - \omega)$
 $= (x - 1)[(x + \omega)(x - \omega) + (x - \omega)]$
 $= (x - 1)(x - \omega)(x + \omega + 1)$
 $= (x - 1)(x - \omega)(x - \omega^2)$

81. (d) We have, $|z_1| = |z_2|$
 Let $z_1 = x_1 + iy_1$ and $z_2 = x_2 + iy_2$
 $\therefore x_1^2 + y_1^2 = x_2^2 + y_2^2$
 $\Rightarrow (x_1^2 - x_2^2) + (y_1^2 - y_2^2) = 0$
 $\Rightarrow x_1^2 - x_2^2 = 0$ or $y_1^2 - y_2^2 = 0$
 $\Rightarrow x_1 = \pm x_2$ or $y_1 = \pm y_2$
 e.g. Let $z_1 = 1 + i$ and $z_2 = -1 - i$
 $|z_1| = \sqrt{2}$ and $|z_2| = \sqrt{2}$
 $\therefore \operatorname{Re}(z_1) \neq \operatorname{Re}(z_2)$ and
 $\operatorname{Im}(z_1) \neq \operatorname{Im}(z_2)$ and $z_1 \neq z_2$

82. (a) Given equation of line is $i\bar{z} - iz = 5$.
 Let $z = x + iy$ and $\bar{z} = x - iy$
 $\therefore i(x - iy) - i(x + iy) = 5 \Rightarrow 2y = 5$
 $\Rightarrow 2y - 5 = 0 \dots(i)$

Since, it is given that reflection of point $x + iy$, i.e. (x, y) about the line (i) is $(1 + i)$, i.e. $(1, 1)$.

$\therefore \frac{1-x}{0} = \frac{1-y}{2} = \frac{-2(2y-5)}{4}$
 $\Rightarrow \frac{1-x}{0} = \frac{-(2y-5)}{2}$

and $\frac{1-y}{2} = -\frac{(2y-5)}{2}$
 $\Rightarrow x = 1$ and $y = 4$

\therefore Required point is $1 + 4i$.

83. (a) Given,
 $z\bar{z} + (3 - i)z + (3 + i)\bar{z} + 1 = 0$
 Put $z = x + iy$ and $\bar{z} = x - iy$,

we get $(x + iy)(x - iy) + (3 - i)(x + iy)$
 $+ (3 + i)(x - iy) + 1 = 0$
 $\Rightarrow x^2 + y^2 + 3x + 3iy - ix + y + 3x$
 $- 3iy + ix + y + 1 = 0$
 $\Rightarrow x^2 + y^2 + 6x + 2y + 1 = 0$
 \therefore Centre $= (-g, -f) = (-3, -1)$
 and radius $= \sqrt{g^2 + f^2 - c}$
 $= \sqrt{9 + 1 - 1} = \sqrt{9} = 3$

Sol. (Q. Nos. 84-85)

We have, $z^2 = i\bar{z} \dots(i)$
 $\Rightarrow |z|^2 = |i\bar{z}|$
 $\Rightarrow |z|^2 = |z| \quad [\because |\bar{z}| = |z|]$
 $\Rightarrow |z|^2 - |z| = 0$
 $\Rightarrow |z|(|z| - 1) = 0$

As, z is non-zero complex number.

$\therefore |z| = 1 \Rightarrow |z|^2 = 1$
 $\Rightarrow z\bar{z} = 1 \Rightarrow \bar{z} = 1/z$

From Eq. (i), we have

$z^2 = i\bar{z}$
 $\Rightarrow z^2 = i \cdot 1/z$
 $\Rightarrow z^3 = i \Rightarrow z^3 - i = 0 \dots(ii)$

If z_1, z_2 and z_3 satisfying the Eq. (ii), then

$z_1 + z_2 + z_3 = 0$
 $z_1z_2 + z_2z_3 + z_1z_3 = 0$ and $z_1z_2z_3 = i$

84. (c) We have, $z_1 + z_2 + z_3 = 0$

85. (c) We have, $z_1z_2z_3 = i$
 $\Rightarrow z_1z_2z_3$ is purely imaginary.

\therefore Statement I is correct.
 and $z_1z_2 + z_2z_3 + z_3z_1 = 0$
 $\Rightarrow z_1z_2 + z_2z_3 + z_3z_1$ is purely real.
 \therefore Statement II is correct.

Sol. (Q. Nos. 87-88) Let $z = x + iy$

$\therefore \left| \frac{z-4}{z-8} \right| = 1 \Rightarrow \left| \frac{x+iy-4}{x+iy-8} \right| = 1$
 $\Rightarrow \frac{|x+iy-4|}{|x+iy-8|} = 1 \quad \left[\because \frac{|z_1|}{|z_2|} = \frac{|z_1|}{|z_2|} \right]$
 $\Rightarrow \frac{\sqrt{(x-4)^2 + y^2}}{\sqrt{(x-8)^2 + y^2}} = 1$

$\Rightarrow (x-4)^2 + y^2 = (x-8)^2 + y^2$
 $\Rightarrow (x-4)^2 = (x-8)^2$
 $\Rightarrow (x-4) = \pm(x-8)$
 $\therefore x = 6$

Also, $\left| \frac{z}{z-2} \right| = \frac{3}{2}$
 $\Rightarrow 2|z| = 3|z-2|$
 $\Rightarrow 2\sqrt{x^2 + y^2} = 3\sqrt{(x-2)^2 + y^2}$
 $\Rightarrow 4(x^2 + y^2) = 9[(x-2)^2 + y^2]$
 For $x = 6, 4(36 + y^2) = 9(16 + y^2)$
 $\Rightarrow 144 + 4y^2 = 144 + 9y^2 \Rightarrow y = 0$
 Hence, $z = 6 + 0i$

86. (a) $|z| = \sqrt{(6)^2 + (0)^2} = 6$

87. (d) As, $z - 6 = 0 \Rightarrow \left| \frac{z-6}{z+6} \right| = 0$

88. (c) We know that, n th roots of unity represent vertex of a regular polygon in argand plane.

Angle between OP and OQ

$= \arg(\omega^2) - \arg(\omega)$
 $= \frac{4\pi}{3} - \frac{2\pi}{3} = \frac{2\pi}{3} = 120^\circ$

89. (d) Given, $(\omega_1 - \omega_2)^2$
 $= \omega_1^2 + \omega_2^2 - 2\omega_1\omega_2$

Let $\omega_1 = \omega^2$ and $\omega_2 = \omega$
 $\therefore (\omega_1 - \omega_2)^2 = (\omega^2)^2 + \omega^2 - 2\omega^2 \cdot \omega$
 $= \omega^4 + \omega^2 - 2\omega^3$
 $= \omega^3 \cdot \omega + \omega^2 - 2\omega^3$
 $= \omega + \omega^2 - 2 = -1 - 2$
 $\Rightarrow (\omega_1 - \omega_2)^2 = -3$

90. (a) We have,

$z = x + iy = \left(\frac{1}{\sqrt{2}} - \frac{i}{\sqrt{2}} \right)^{-25}$
 $= (e^{-i\frac{\pi}{4}})^{-25} = e^{i\frac{25}{4}\pi}$
 $= e^{i\left(6\pi + \frac{\pi}{4}\right)} = e^{i\left(\frac{\pi}{4}\right)}$
 $= \cos \frac{\pi}{4} + i \sin \frac{\pi}{4} = \frac{1}{\sqrt{2}} + i \frac{1}{\sqrt{2}}$
 $\therefore \frac{z - \sqrt{2}}{z - i\sqrt{2}} = \frac{\frac{1}{\sqrt{2}} + i \frac{1}{\sqrt{2}} - \sqrt{2}}{\frac{1}{\sqrt{2}} + i \left(\frac{1}{\sqrt{2}}\right) - i\sqrt{2}}$
 $= \frac{1 + i - 2}{1 + i - 2i}$
 $= -1 + 0i$

Now, $\alpha = \tan^{-1} \left| \frac{0}{-1} \right| = \tan^{-1}(0)$

$= \tan^{-1} |\tan 0| = 0$

$\therefore \theta$ (argument) $= \pi - 0 = \pi$

04

BINARY NUMBERS

In NDA exam, generally 1-2 questions are asked from this chapter which are based on conversion of binary to decimal and decimal to binary. In the binary system, only two symbols 0 and 1 are used as digits, called binary digits or bits. Since, in this system only two numbers are used, so its base or radix is 2.

DECIMAL SYSTEM

In the decimal system, we use 10 digits 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9. Since, 10 basic symbols are used in this system, so its base or radix is 10.

Decimal to Binary Conversion

1. Conversion of Integral Decimal Numbers

Step 1 Take the LCM of the given decimal number taking only 2 as divisor (as the base or radix of binary number is 2).

Step 2 Write the remainder at each step in bracket as shown in the given example.

Step 3 Repeat this process until we obtain quotient less than the divisor.

e.g. Write $(21)_{10}$ into binary number system.

2	21	
2	10	1
2	5	0
2	2	1
	1	0

Step 4 When we obtain 1 as quotient, start writing the number from there to upward direction, as shown above.

$$\therefore (21)_{10} = (10101)_2$$

Therefore, 21 of decimal system is equal to (10101) of binary system.

EXAMPLE 1. Conversion of 175 into a binary number is

a. $(10101111)_2$

b. $(10010011)_2$

c. $(11000111)_2$

d. None of these

Sol. a.

2	175	
2	87	1
2	43	1
2	21	1
2	10	1
2	5	0
2	2	1
	1	0

$\therefore (175)_{10} = (10101111)_2$

2. Conversion of Fractional Decimal Numbers

Fractional numbers can be converted to binary form by successive multiplication by 2. In each step, the digit before the decimal point is being transferred to the binary record and the process is repeated with the remaining fractional number.

The last step is reached, if the fractional part is zero or it is terminated, when the desired accuracy is attained. The first bit obtained is the most significant and the last is the least significant.

EXAMPLE 2. Conversion of 0.638 to binary form is

- a. $(0.1010101110)_2$
- b. $(1111000011)_2$
- c. $(0.1010001101)_2$
- d. None of these

Sol. c.

	Binary
$0.638 \times 2 = 1.276$	1
$0.276 \times 2 = 0.552$	0
$0.552 \times 2 = 1.104$	1
$0.104 \times 2 = 0.208$	0
$0.208 \times 2 = 0.416$	0
$0.416 \times 2 = 0.832$	0
$0.832 \times 2 = 1.664$	1
$0.664 \times 2 = 1.328$	1
$0.328 \times 2 = 0.656$	0
$0.656 \times 2 = 1.312$	1

Rounding off after 10 bits, the binary result is $(0.638)_{10} = (0.1010001101)_2$

Note The point in front of the binary is referred to as the binary point.

BINARY TO DECIMAL CONVERSION

- Conversion of Integral Binary Numbers For converting binary number to decimal number, we start from the least significant bit, i.e. from right, by multiplying them with the powers of 2 in increasing order, i.e. with $2^0, 2^1, 2^2$ and so on. This process is repeated until the most significant bit, i.e. left bit has been processed. Adding all of them, we get the required decimal number.

EXAMPLE 3. Conversion of $(10010)_2$ to its equivalent decimal number is

- a. $(18)_{10}$
- b. $(81)_{10}$
- c. $(16)_{10}$
- d. $(34)_{10}$

Sol. a. $(10010)_2 = 1 \times 2^4 + 0 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$
 $= 16 + 0 + 0 + 2 + 0 = 18$
 $\therefore (10010)_2 = (18)_{10}$

- Conversion of Fractional Binary Numbers In order to convert the binary fractions to decimal numbers, we use negative powers of 2 to the right of the binary point.

EXAMPLE 4. Find the decimal equivalent to $(0.1101)_2$.

- a. $(81.25)_{10}$
- b. $(0.8125)_{10}$
- c. $(8.125)_{10}$
- d. All of these

Sol. b.

1	1	0	1
$2^{-1} = \frac{1}{2}$	$2^{-2} = \frac{1}{4}$	$2^{-3} = \frac{1}{8}$	$2^{-4} = \frac{1}{16}$

$\therefore (0.1101)_2 = \frac{1}{2} \times 1 + \frac{1}{4} \times 1 + \frac{1}{8} \times 0 + \frac{1}{16} \times 1$
 $= 0.5 + 0.25 + 0 + 0.0625 = 0.8125$

Now, $(0.1101)_2 = (0.8125)_{10}$

Arithmetic Operations of Binary Numbers

The arithmetic operations of binary numbers namely addition, subtraction, multiplication and division are almost similar to those of decimal.

Binary Addition

The rules of binary addition are

- (i) $0 + 0 = 0$
- (ii) $0 + 1 = 1$
- (iii) $1 + 0 = 1$
- (iv) $1 + 1 = 10$ (one-zero, not ten)

Note The last rule is often written as $1 + 1 = 0$ with a carry of 1.

EXAMPLE 5. Add $(1101)_2$ and the conversion of $(53)_{10}$ into binary system of numbers. Also find the result.

- a. $(110010)_2$
- b. $(100101)_2$
- c. $(1110011)_2$
- d. None of these

Sol. d. Let us first convert $(53)_{10}$ into binary system of numbers.

2	53	
2	26	1
2	13	0
2	6	1
2	3	0
	1	1

The required number in binary system is obtained by writing the number from left to upward direction, as shown.

$\therefore (53)_{10} = (110101)_2$

Now, add $(1101)_2$ and $(110101)_2$

$$\begin{array}{r} 110101 \\ + 1101 \\ \hline 1000010 \end{array}$$

Hence, the answer is $(1000010)_2$.

Binary Subtraction

The rules of binary subtraction are

- (i) $0 - 0 = 0$ (ii) $1 - 0 = 1$
 (iii) $1 - 1 = 0$ (iv) $0 - 1 = 1$

EXAMPLE 6. Subtract 10001 from 10011.

- a. $(00100)_2$ b. $(11000)_2$
 c. $(00010)_2$ d. None of these

Sol. c. $10011(19)$

$$\begin{array}{r} 10011(19) \\ - 10001(17) \\ \hline 00010(2) \end{array}$$

Binary Multiplication

The rules of binary multiplication are

- (i) $0 \times 0 = 0$ (ii) $0 \times 1 = 0$
 (iii) $1 \times 0 = 0$ (iv) $1 \times 1 = 1$

EXAMPLE 7. What is the value of X , if

$$(1010)_2 \times (111)_2 = (X)_{10}?$$

- a. 60 b. 70 c. 75 d. 80

Sol. b. Firstly, we multiply $(1010)_2$ and $(111)_2$

$$\begin{array}{r} 1010 \\ \times 111 \\ \hline 1010 \\ 1010 \\ 1010 \\ \hline 1000110 \end{array}$$

Now, we convert $(1000110)_2$ to its decimal equivalent

$$1 \times 2^6 + 0 \times 2^5 + 0 \times 2^4 + 0 \times 2^3 + 1 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$$

$$= 64 + 4 + 2 = (70)_2$$

$$\therefore X = 70$$

Binary Division

The rules of binary division are

- (i) $1 \div 1 = 1$ (ii) $0 \div 1 = 0$
 (iii) $0 \div 0 = \text{Not defined}$ (iv) $1 \div 0 = \text{Not defined}$

EXAMPLE 8. Divide $(1111)_2$ by $(11)_2$.

- a. $(11)_2$ b. $(101)_2$
 c. $(10)_2$ d. None of these

Sol. b. $11 \overline{) 1111} (101$

$$\begin{array}{r} 11 \\ \underline{11} \\ 11 \\ \underline{11} \\ \times \end{array}$$

> PRACTICE EXERCISE

- Binary equivalent of 182 is
 (a) $(10110110)_2$ (b) $(111000110)_2$
 (c) $(10111001)_2$ (d) None of these
- The number 0.0011 in binary system represents
 (a) rational number $3/8$ in decimal system
 (b) rational number $1/8$ in decimal system
 (c) rational number $3/16$ in decimal system
 (d) rational number $5/16$ in decimal system
- The binary number corresponding to $(13.0625)_{10}$ is
 (a) $(1011.0010)_2$ (b) $(1110.0101)_2$
 (c) $(1101.0001)_2$ (d) None of these
- The sum of $(1011.01)_2 + (1001.11)_2$ is
 (a) 111011 (b) 10001 (c) 10000 (d) 10101
- What is $(1111)_2 + (1001)_2 - (1010)_2$ equal to?
 (a) $(111)_2$ (b) $(1100)_2$ (c) $(1110)_2$ (d) $(1010)_2$
- The decimal number corresponding to the binary number $(111000.0101)_2$ is
 (a) $(56.3275)_{10}$ (b) $(56.3125)_{10}$
 (c) $(57.4375)_{10}$ (d) $(57.5625)_{10}$
- What is the binary equivalent of the decimal number 18.5625?
 (a) $(10001.10011)_2$ (b) $(10011.10001)_2$
 (c) $(10010.10010)_2$ (d) $(10010.10011)_2$
- In the binary addition, where x, y, z are binary digits

$$\begin{array}{r} x101 \\ + 10y1 \\ \hline 11z00 \end{array}$$
 the possible values of x, y and z respectively are
 (a) 0, 1 and 0 (b) 1, 1 and 0
 (c) 0, 0 and 1 (d) 1, 0 and 1

HINTS AND SOLUTIONS

1. (a)

2	182	
2	91	0
2	45	1
2	22	1
2	11	0
2	5	1
2	2	1
	1	0

$$\therefore (182)_{10} = (10110110)_2$$

2. (c) $(.0011)_2 = 0 \times 2^{-1} + 0 \times 2^{-2} + 1 \times 2^{-3} + 1 \times 2^{-4}$

$$= \frac{1}{8} + \frac{1}{16} = \frac{3}{16}$$

3. (c) For integer part of $(13.0625)_{10}$

i.e. $(13)_{10}$

$$\therefore (13)_{10} = (1101)_2$$

2	13	
2	6	1
2	3	0
2	1	1

For fractional part of $(13.0625)_{10}$ i.e. $(.0625)_{10}$

	Binary
$0.0625 \times 2 = 0.125$	0
$0.125 \times 2 = 0.25$	0
$0.25 \times 2 = 0.5$	0
$0.5 \times 2 = 1.0$	1

$$\therefore (13.0625)_{10} = (1101.0001)_2$$

4. (d) $1\ 0\ 1\ 1.0\ 1$

$$\begin{array}{r} +\ 1\ 0\ 0\ 1.1\ 1 \\ \hline 1\ 0\ 1\ 0\ 1.0\ 0 \end{array}$$

5. (c) $(1111)_2 = 1 \times 2^3 + 1 \times 2^2 + 1 \times 2^1 + 1 \times 2^0 = 15$

$$(1001)_2 = 1 \times 2^3 + 0 + 0 + 1 \times 2^0 = 9$$

$$(1010)_2 = 1 \times 2^3 + 0 + 1 \times 2^1 + 0 = 10$$

$$\therefore 15 + 9 - 10 = 14$$

Now,

2	14	
2	7	0
2	3	1
	1	1

$$\therefore (14)_{10} = (1110)_2$$

6. (b) $(111000.0101)_2 = 1 \times 2^5 + 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2$

$$+ 0 \times 2^1 + 0 \times 2^0 + 0 \times 2^{-1} + 1 \times 2^{-2} + 0 \times 2^{-3} + 1 \times 2^{-4}$$

$$= 32 + 16 + 8 + \frac{1}{4} + \frac{1}{16}$$

$$= 56 + 0.25 + 0.0625 = (56.3125)_{10}$$

7. (c) For integer part of 18.5625 i.e. $(18)_{10}$

2	18	
2	9	0
2	4	1
2	2	0
	1	0

For fractional part of 18.5625 i.e. $(.5625)_{10}$

	Binary
$0.5625 \times 2 = 1.125$	1
$0.125 \times 2 = 0.250$	0
$0.250 \times 2 = 0.500$	2
$0.500 \times 2 = 1.0$	1

$$\therefore (18.5625)_{10} = (10010.10010)_2$$

8. (b) $(x101)_2 = x \times 2^3 + 1 \times 2^2 + 0 + 1 \times 2^0 = 8x + 5$

$$(10y1)_2 = 1 \times 2^3 + 0 + y \times 2^1 + 1 \times 2^0 = 9 + 2y$$

$$(11z00)_2 = 1 \times 2^4 + 1 \times 2^3 + z \times 2^2 + 0 + 0 = 24 + 4z$$

$$\therefore 8x + 5 + 9 + 2y = 24 + 4z \Rightarrow 8x + 2y = 4z + 10$$

As x, y and z can take values 0 and 1 only

$$\Rightarrow x = 1, y = 1, z = 0$$

9. (b) $(10x010)_2 - (11y1)_2 = (10z11)_2$

$$\begin{aligned} \Rightarrow (2^5 \times 1 + 0 + x \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 0) \\ - (2^3 \times 1 + 2^2 \times 1 + y \times 2^1 + 1 \times 2^0) \\ = 2^4 \times 1 + 0 + 2^2 \times z + 2^1 \times 1 + 2^0 \end{aligned}$$

$$\Rightarrow (34 + 8x) - (13 + 2y) = 19 + 4z$$

$$\Rightarrow 2 + 8x - 2y = 4z$$

$$\therefore x = 0, y = 1 \text{ and } z = 0$$

10. (b) Given, $x = (1101)_2 = 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0$

$$= 8 + 4 + 1 = 13$$

$$\text{and } y = (110)_2 = 1 \times 2^2 + 1 \times 2^1 + 0 \times 2^0 = 4 + 2 = 6$$

$$\therefore x^2 - y^2 = (13)^2 - (6)^2 = 169 - 36 = 133$$

Now,

2	133	
2	66	1
2	33	0
2	16	1
2	8	0
2	4	0
2	2	0
	1	0

$$\therefore 133 = (10000101)_2$$

11. (d) $(11)_2 = 1 \times 2^1 + 1 \times 2^0 = 3$

$(10)_2 = 1 \times 2^1 + 0 \times 2^0 = 2$

and $(01)_2 = 0 \times 2^1 + 1 \times 2^0 = 1$

Thus, the given expression can be written as

$$\frac{[(0.101)_2]^3 + [(0.011)_2]^3}{[(0.101)_2]^2 - (0.101)_2(0.011)_2 + [(0.011)_2]^2}$$

$$= (0.101)_2 + (0.011)_2 = (1)_2 \quad \left[\because \frac{a^3 + b^3}{a^2 - ab + b^2} = a + b \right]$$

12. (c)

13. (c) $(11101.001)_2 = 1 \times 2^4 + 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0 + 0 \times 2^{-1} + 0 \times 2^{-2} + 1 \times 2^{-3}$

$$= 16 + 8 + 4 + 0 + 1 + 0 + 0 + \frac{1}{8}$$

$$= 29 + \frac{1}{8} = \frac{233}{8} = (29.125)_{10}$$

14. (a) For integer part of 57.375 i.e. $(57)_{10}$

2	57	
2	28	1
2	14	0
2	7	0
2	3	1
	1	1

$\therefore (57)_{10} = (111001)_2$

For after decimal part of 57.375
i.e. $(0.375)_{10}$

Now,	Binary
$0.375 \times 2 = 0.75$	0
$0.75 \times 2 = 1.5$	1
$0.5 \times 2 = 1.0$	1
$(0.375)_{10} = (0.011)_2$	
$\therefore (57.375)_{10} = (111001.011)_2$	

15. (d) $(1011)_2 = 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0$

$$= 8 + 0 + 2 + 1 = 11$$

16. (d)

17. (d) $(110001)_2 = 1 \times 2^5 + 1 \times 2^4$

$$+ 0 \times 2^3 + 0 \times 2^2 + 0 \times 2^1 + 1 \times 2^0$$

$$= 32 + 16 + 0 + 0 + 0 + 1 = (49)_{10}$$

So, the required decimal number is 49.

18. (c)

19. (b)

20. (a)

$$\begin{array}{r} 11110 \\ + 1010 \\ \hline 101000 \end{array}$$

21. (b) $(1001)_2$

$$= (2^3 \times 1 + 2^2 \times 0 + 2^1 \times 0 + 2^0 \times 1)_{10}$$

$$= (8 + 1)_{10} = (9)_{10}$$

22. (a) $(11101011)_2 = (?)_{10}$

$$= [1 \times 2^7 + 1 \times 2^6 + 1 \times 2^5 + 0 \times 2^4$$

$$+ 1 \times 2^3 + 0 \times 2^2 + 1 \times 2^1 + 1 \times 2^0]_{10}$$

$$= [128 + 64 + 32 + 0 + 8 + 0 + 2 + 1]_{10}$$

$$= (235)_{10}$$

23. (d) $(127.25)_{10} = (?)_2$

2	127	
2	63	1
2	31	1
2	15	1
2	7	1
2	3	1
	1	1

Here, $0.25 \times 2 = 0.50$, carry = 0

and $0.50 \times 2 = 1.00$, carry = 0

$\therefore (127.25)_{10} = (1111111.01)_2$

24. (b) $(100000001)_2 - (0.0101)_2$

$$= (2^9 + 2^0) - (1 \times 2^{-2} + 1 \times 2^{-4})$$

$$= (512 + 1) - \left(\frac{1}{4} + \frac{1}{16} \right)$$

$$= 513 - \frac{5}{16} = 513 - 0.3125$$

$$= (512.6875)_{10}$$

25. (c) $0.3125 \times 2 = 0.625$, carry = 0

$0.625 \times 2 = 1.25$, carry = 1

$0.25 \times 2 = 0.50$, carry = 0

$0.50 \times 2 = 1.00$, carry = 1

$\therefore (0.3125)_{10} = (0.0101)_2$

05

SEQUENCES AND SERIES

In NDA exam, generally 2-5 questions are asked from this chapter which are based on general term and sum of AP/GP, sum of special series and infinite terms of GP, conditions for terms to be in AP/GP/HP and arithmetic/geometric mean.

A succession of numbers $a_1, a_2, a_3, \dots, a_n$ formed according to some definite rule is called a sequence. The different terms of a sequence are usually denoted by a_1, a_2, a_3, \dots or by t_1, t_2, t_3, \dots . The term at the n th place of a sequence, i.e. t_n is called the general term of sequence. A series is obtained by adding or subtracting the terms of a sequence. If $a_1, a_2, a_3, a_4, \dots, a_n, \dots$ is a sequence, then the expression $a_1 + a_2 + a_3 + a_4 + a_5 + \dots + a_n + \dots$ is a series. A series can be finite or infinite depending on the number of terms in the corresponding sequence is finite or infinite.

PROGRESSIONS

The sequences whose terms follow certain patterns are called progressions, but it is not necessary that the terms of every sequence always follows a certain pattern or they are described by some explicit formula.

Arithmetic Progression (AP)

A sequence is called an arithmetic progression if the difference of a term and the previous term is always same, i.e. $a_{n+1} - a_n = \text{constant} (=d), \forall n \in N$.

The constant difference, generally denoted by d is called the common difference.

In other words, if $a_1, a_2, a_3, \dots, a_n$ are in AP, then $a_2 - a_1 = a_3 - a_2 = \dots = a_n - a_{n-1} = d$

If a is the first term and d is the common difference, then AP can be written as

$$a, a+d, a+2d, \dots, \{a+(n-1)d\}$$

e.g. (i) 1, 4, 7, 10, ... is an AP whose first term is 1 and the common difference is $4 - 1 = 7 - 4 = 3$.

(ii) 11, 7, 3, 1, ... is an AP whose first term is 11 and the common difference is $7 - 11 = 3 - 7 = -4$.

General Term of an AP

Let a be the first term and d be the common difference of an AP. Then, its n th term is $a + (n-1)d$,

i.e. $T_n = a + (n-1)d$, where $d = T_n - T_{n-1}$

If l is the last term of a sequence, then

$$l = T_n = a + (n-1)d$$

n th Term of an AP from the End

n th term from the end of an AP consisting of m terms is $(m-n+1)$ th term from the beginning. So, n th term from the end is

$$T_{m-n+1} = a + (m-n+1-1)d = a + (m-n)d.$$

or $l - (n-1)d$, where l is the last term.

EXAMPLE 1. The 3rd, 15th and the last term of an AP are 4, 8 and 18, respectively. Find the first term, the common difference and the number of terms.

- a. $\frac{10}{3}, \frac{1}{3}, 45$ b. $10, \frac{1}{3}, 45$
 c. $\frac{10}{3}, \frac{1}{3}, 50$ d. None of these

Sol. a. Let the first term, common difference and the number of terms of the AP be a, d and n respectively.

The n th term of an AP is given by $T_n = a + (n-1)d$

Therefore, $T_3 = a + 2d = 4$, $T_{15} = a + 14d = 8$

and $T_n = a + (n-1)d = 18$

We have, $T_{15} - T_3 = (a + 14d) - (a + 2d) = 8 - 4$

$$\Rightarrow 12d = 4 \Rightarrow d = 1/3$$

$$\text{Hence, } a = 4 - 2d = 4 - \frac{2}{3} = \frac{10}{3}$$

$$\text{Therefore, } \frac{10}{3} + (n-1)\frac{1}{3} = 18 \Rightarrow \frac{1}{3}(10 + n - 1) = 18$$

$$\Rightarrow 9 + n = 54$$

$$\therefore n = 45$$

EXAMPLE 2. If $\log_3 2, \log_3 (2^x - 5)$ and $\log_3 (2^x - 7/2)$ are in AP, then find the value of x .

- a. 2 b. 3 c. 2 or 3 d. None of these

Sol. b. If the given three numbers $a = \log_3 2, b = \log_3 (2^x - 5)$

and $c = \log_3 (2^x - 7/2)$ are in AP,

then $b - a = c - b \Rightarrow 2b = a + c$

$$2 \log_3 (2^x - 5) = \log_3 2 + \log_3 (2^x - 7/2)$$

$$\Rightarrow \log_3 (2^x - 5)^2 = \log_3 [2(2^x - 7/2)]$$

$$\Rightarrow (2^x - 5)^2 = 2(2^x - 7/2)$$

Let $2^x = y$, then we have $(y - 5)^2 = 2(y - 7/2)$

$$\Rightarrow y^2 - 10y + 25 = 2y - 7$$

$$\Rightarrow y^2 - 12y + 32 = 0$$

$$\Rightarrow (y - 4)(y - 8) = 0$$

Hence, $y = 4$ or $y = 8$

For $y = 4$, we get $2^x = 4 = 2^2$ or $x = 2$

For $y = 8$, we get $2^x = 8 = 2^3$ or $x = 3$

When $x = 2, \log_3 (2^x - 5) = \log_3 (-1)$ is not defined.

Therefore, $x = 3$ is the only solution.

Selection of Terms in an AP

Number of terms	Terms	Common difference
3	$a - d, a, a + d$	d
4	$a - 3d, a - d, a + d, a + 3d$	$2d$
5	$a - 2d, a - d, a, a + d, a + 2d$	d
6	$a - 5d, a - 3d, a - d, a + d, a + 3d, a + 5d$	$2d$

EXAMPLE 3. If the sum of three numbers of an arithmetic sequence is 15 and the sum of their squares is 83, then the numbers are

- a. 4, 5, 6 b. 1, 5, 9
 c. 3, 5, 7 d. 2, 5, 8

Sol. c. Let three numbers are $(a - d), a$ and $(a + d)$.

$$\therefore a - d + a + a + d = 15 \Rightarrow a = 5$$

$$\text{and } (a - d)^2 + a^2 + (a + d)^2 = 83$$

$$\Rightarrow a^2 + d^2 - 2ad + a^2 + a^2 + d^2 + 2ad = 83$$

$$\Rightarrow a^2 + 2(a^2 + d^2) = 83$$

Put $a = 5$ in above equation

$$\Rightarrow 25 + 2(25 + d^2) = 83$$

$$\Rightarrow 2d^2 = 8 \Rightarrow d = 2$$

Thus, the numbers are 3, 5 and 7.

Trick $3 + 5 + 7 = 15$ and $3^2 + 5^2 + 7^2 = 83$

Sum of n Terms of an AP

The sum of n terms S_n of an AP with first term ' a ' and common difference ' d ' is

$$S_n = \frac{n}{2}[2a + (n-1)d] \quad \text{or} \quad S_n = \frac{n}{2}[a + l],$$

where, $l = \text{last term} = a + (n-1)d$

Also, $T_n = S_n - S_{n-1}$

EXAMPLE 4. If the sum of first 10 terms of an arithmetic progression with first term p and common difference q , is 4 times the sum of the first 5 terms, then what is the ratio of $p : q$?

- a. 1 : 2 b. 1 : 4 c. 2 : 1 d. 4 : 1

Sol. a. Since, first term = p and common difference = q

$$\text{According to the question, } \frac{10}{2}[2p + 9q] = 4 \times \frac{5}{2}[2p + 4q]$$

$$\Rightarrow 2p + 9q = 4p + 8q \Rightarrow 2p = q \Rightarrow p : q = 1 : 2$$

Properties of Arithmetic Progression

- (i) If a constant is added or subtracted from each term of an AP, then the resulting sequence is also an AP with the same common difference.

- (ii) If each term of a given AP is multiplied or divided by a non-zero constant k , then the resulting sequence is also an AP with common difference kd or $\frac{d}{k}$, where d is the common difference of the given AP.
- (iii) A sequence is an AP if its n th term is of the form $An + B$, i.e. a linear expression in n .
- (iv) In a finite AP the sum of the terms equidistant from the beginning and end is always same.
i.e. $a_1 + a_n = a_2 + a_{n-1} = a_3 + a_{n-2} = \dots$

n Arithmetic Means between Two Numbers

If $a, A_1, A_2, A_3, \dots, A_n, b$ are in AP, then we say that $A_1, A_2, A_3, \dots, A_n$ are the n arithmetic means (AM) between two numbers a and b . The common difference (d) of this AP is $\frac{b-a}{n+1}$ and m th arithmetic mean is given by $A_m = a + \frac{m(b-a)}{n+1}$

By putting $m=1, 2, 3, \dots, n$, we can get the values of A_1, A_2, \dots, A_n .

The sum of n arithmetic means between two given numbers is n times the single AM between them i.e. $A_1 + A_2 + A_3 + \dots + A_n = n$ (single AM between a and b)

If there is only one arithmetic mean ' A ' between a and b , then $A = \frac{a+b}{2}$

EXAMPLE 5. If n arithmetic means are inserted between 20 and 80 such that the ratio of first mean to the last mean is 1 : 3, then find the value of n .

- a. 12 b. 13 c. 11 d. 14

Sol. c. Let $A_1, A_2, A_3, \dots, A_n$ be n arithmetic means between 20 and 80, and let d be the common difference of the AP; $20, A_1, A_2, \dots, A_n, 80$.

$$\text{Then, } d = \frac{80-20}{n+1} = \frac{60}{n+1} \quad \left[\text{using, } d = \frac{b-a}{n+1} \right]$$

$$\text{Now, } A_1 = 20 + d \Rightarrow A_1 = 20 + \frac{60}{n+1} = 20 \left(\frac{n+4}{n+1} \right)$$

$$\text{and } A_n = 20 + nd \Rightarrow A_n = 20 + \frac{60n}{n+1} = 20 \left(\frac{4n+1}{n+1} \right)$$

$$\therefore \frac{A_1}{A_n} = \frac{1}{3} \Rightarrow \frac{20(n+4)}{20(4n+1)} = \frac{1}{3}$$

$$\Rightarrow \frac{n+4}{4n+1} = \frac{1}{3}$$

$$\Rightarrow 4n+1 = 3n+12 \Rightarrow n = 11$$

Geometric Progression (GP)

A sequence of non-zero numbers is called a geometric progression, if the ratio of a term and the term preceding it is always constant. The constant ratio, generally denoted by r is called the common ratio of the GP.

In other words, if $a_1, a_2, a_3, \dots, a_n$ are in GP, then $\frac{a_2}{a_1} = \frac{a_3}{a_2} = \frac{a_n}{a_{n-1}} = r$ (say), where r is known as common ratio of GP.

e.g. The sequence $\frac{1}{3}, -\frac{1}{2}, \frac{3}{4}, -\frac{9}{8}, \dots$ is a GP with first term $\frac{1}{3}$ and common ratio $\left(-\frac{1}{2}\right) / \left(\frac{1}{3}\right) = -\frac{3}{2}$.

General Term of a GP

The n th term of a GP with first term a and common ratio r is given by $T_n = ar^{n-1}$ or $l = ar^{n-1}$, where l is the last term.

GP can be written as $a, ar, ar^2, \dots, ar^{n-1}$

or $a, ar, ar^2, ar^3, ar^4, \dots, ar^{n-1}, \dots$

accordingly they are finite or infinite.

n th Term from the End of a Finite GP

The n th term from the end of a finite GP consisting of m terms is ar^{m-n} , where a is the first term and r is the common ratio of the GP.

EXAMPLE 6. If x, y, z are the p th, q th and r th terms of a GP, then the value of $x^{q-r} y^{r-p} z^{p-q}$ is equal to

- a. 0 b. 1 c. -1 d. None of these

Sol. b. Let A be the first term and R be the common ratio of the GP. We have, $T_p = AR^{p-1} = x$

$$T_q = AR^{q-1} = y \quad \text{and} \quad T_r = AR^{r-1} = z$$

$$\text{Now, } x^{q-r} = [AR^{p-1}]^{q-r} = A^{q-r} R^{(p-1)(q-r)}$$

$$y^{r-p} = [AR^{q-1}]^{r-p} = A^{r-p} R^{(q-1)(r-p)}$$

$$z^{p-q} = [AR^{r-1}]^{p-q} = A^{p-q} R^{(r-1)(p-q)}$$

$$\begin{aligned} \therefore x^{q-r} y^{r-p} z^{p-q} &= [A^{q-r+r-p+p-q} R^{(p-1)(q-r) + (q-1)(r-p) + (r-1)(p-q)}] \\ &= A^0 R^0 = 1 \end{aligned}$$

Selection of Terms in GP

Number of terms	Terms	Common ratio
3	$\frac{a}{r}, a, ar$	r
4	$\frac{a}{r^3}, \frac{a}{r}, ar, ar^3$	r^2
5	$\frac{a}{r^2}, \frac{a}{r}, a, ar, ar^2$	r

EXAMPLE 7. Find the three numbers in GP, whose sum is 19 and product is 216.

- a. 4, 6, 9 b. 13, 4, 2
 c. 6, 5, 8 d. None of these

Sol. a. Let three numbers in GP be $\frac{a}{r}$, a and ar .

According to the given condition,
 Product of three numbers

$$\frac{a}{r} \cdot a \cdot ar = 216 \Rightarrow a^3 = 216 = 6^3$$

$$\therefore a = 6$$

and sum of three numbers = $\frac{a}{r} + a + ar = 19$

$$\Rightarrow a \left[\frac{1}{r} + 1 + r \right] = 19$$

$$\Rightarrow 6 \left[\frac{1+r+r^2}{r} \right] = 19 \quad [\text{put } a = 6]$$

$$\Rightarrow 6 + 6r + 6r^2 = 19r$$

$$\Rightarrow 6r^2 + 6r - 19r + 6 = 0$$

$$\Rightarrow 6r^2 - 13r + 6 = 0$$

$$\therefore r = \frac{13 \pm \sqrt{(-13)^2 - 4 \cdot 6 \cdot 6}}{2 \cdot 6} \quad \left[\because r = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \right]$$

$$= \frac{13 \pm 5}{12} = \frac{18}{12}, \frac{8}{12} = \frac{3}{2}, \frac{2}{3}$$

When $r = \frac{3}{2}$, then the numbers are $\frac{6}{3/2}, 6, 6 \times \frac{3}{2}$

i.e. 4, 6, 9.

When $r = \frac{2}{3}$, then the numbers are $\frac{6}{2/3}, 6, \frac{6}{3/2}$

i.e. 9, 6, 4.

Hence, the numbers are 4, 6, 9 or 9, 6, 4.

Sum of n Terms of a GP

The sum of n terms of a GP with first terms ‘ a ’ and common ratio ‘ r ’ is given by

$$S_n = a \left(\frac{1-r^n}{1-r} \right) = \frac{a-lr}{1-r}, \text{ for } |r| < 1$$

and $S_n = a \left(\frac{r^n-1}{r-1} \right) = \frac{lr-a}{r-1}, \text{ for } |r| > 1$

If number of terms is infinite, then sum of the terms is

$$S = \frac{a}{1-r}, |r| < 1.$$

EXAMPLE 8. What is the value of

$$7^{6/7} \cdot 7^{6/7^2} \cdot 7^{6/7^3} \dots \text{ upto } \infty?$$

- a. $\log_7 \left(\frac{6}{7} \right)$ b. ∞
 c. $\frac{6}{7}$ d. 7

Sol. d. $7^{6/7} \cdot 7^{6/7^2} \cdot 7^{6/7^3} \dots \infty = 7^{\frac{6}{7} + \frac{6}{7^2} + \frac{6}{7^3} + \dots \infty}$
 $= 7^6 \left(\frac{1}{7} + \frac{1}{7^2} + \frac{1}{7^3} + \dots \infty \right) = 7^6 \left(\frac{1/7}{1-1/7} \right) = 7^6 \left(\frac{1/7}{6/7} \right) = 7^1 = 7$

Properties of Geometric Progression

- (i) If all the terms of a GP be multiplied or divided by the same non-zero constant, then it remains a GP with same common ratio.
- (ii) The reciprocals of the terms of a given GP forms a GP.
- (iii) If each term of a GP be raised to the same power, then the resulting sequence also forms a GP.
- (iv) In a finite GP the product of the terms equidistant from the beginning and the end is always same and is equal to the product of the first and the last term.
- (v) Three non-zero numbers a, b, c are in GP, iff $b^2 = ac$.
- (vi) If the terms of a given GP are chosen at regular intervals, then the new sequence, so formed also forms a GP.
- (vii) If $a_1, a_2, a_3, \dots, a_n, \dots$ is a GP of non-zero, non-negative terms, then $\log a_1, \log a_2, \dots, \log a_n, \dots$ is an AP and *vice-versa*.

n Geometric Means between Two Numbers

If $a, G_1, G_2, G_3, \dots, G_n, b$ are in GP, then $G_1, G_2, G_3, \dots, G_n$ are called n geometric means between two numbers a and b . The common ratio (r) of this GP is $\left(\frac{b}{a} \right)^{1/(n+1)}$ and m th geometric mean is given by

$$G_m = a \left(\frac{b}{a} \right)^{\frac{m}{n+1}}$$

By putting $m = 1, 2, 3, \dots, n$, we can get the values of G_1, G_2, \dots, G_n .

The product of n geometric means is equal to the n th power of single geometric mean between the two quantities, i.e. $G_1 \cdot G_2 \cdot G_3 \cdot G_4 \dots G_n = (\sqrt[n]{ab})^n$.

If there is only one geometric mean ‘ G ’ between a and b , then

$$G = \sqrt{ab}$$

- Note**
- If A and G are the AM and GM between two positive numbers, then the numbers are $A \pm \sqrt{A^2 - G^2}$.
 - If A and G are respectively AM and GM between two positive numbers a and b , then the quadratic equation having a, b as its roots is $x^2 - 2Ax + G^2 = 0$.

EXAMPLE 9. If one geometric mean G and two arithmetic means A_1 and A_2 are inserted between two numbers, then $(2A_1 - A_2)(2A_2 - A_1)$ is equal to

- a. $2G$ b. G c. G^2 d. G^3

Sol. c. We have, $G = \sqrt{ab}$, $A_1 = a + \frac{(b-a)}{3} = \frac{2a+b}{3}$

$$\text{and } A_2 = a + \frac{2(b-a)}{3} = \frac{a+2b}{3}$$

$$\therefore 2A_1 - A_2 = a \text{ and } 2A_2 - A_1 = b$$

$$\Rightarrow (2A_1 - A_2)(2A_2 - A_1) = ab = G^2$$

Harmonic Progression (HP)

A sequence a_1, a_2, \dots, a_n of non-zero numbers is called a harmonic progression, if the sequence of reciprocal of these numbers, i.e. $\frac{1}{a_1}, \frac{1}{a_2}, \dots, \frac{1}{a_n}$ is an AP.

e.g. The sequence $1, \frac{1}{3}, \frac{1}{5}, \frac{1}{7}, \dots$ is a HP because the sequence $1, 3, 5, 7, \dots$ is an AP.

There is no formula for finding the sum of HP sequence.

General Term of a HP

If the sequence a_1, a_2, a_3, \dots is a HP, then its n th term will be

$$T_n = \frac{1}{\frac{1}{a_1} + (n-1)\left(\frac{1}{a_2} - \frac{1}{a_1}\right)} = \frac{a_1 a_2}{a_2 + (n-1)(a_1 - a_2)}$$

and n th term from end,

$$T'_n = \frac{1}{\frac{1}{a_n} - (n-1)\left(\frac{1}{a_2} - \frac{1}{a_1}\right)} = \frac{a_1 a_2 a_n}{a_1 a_2 - a_n(n-1)(a_1 - a_2)}$$

n Harmonic Means between Two Numbers

If $a, H_1, H_2, \dots, H_n, b$ are in GP, then H_1, H_2, \dots, H_n are called n harmonic means between two numbers a and b . The common difference of the corresponding AP is $\frac{a-b}{(n+1)ab}$ and m th harmonic mean is given by

$$H_m = \frac{(n+1)ab}{ma + [n - (m-1)]b}, m = 1, 2, \dots, n$$

By putting $m = 1, 2, \dots, n$, we can get the values of

H_1, H_2, \dots, H_n . If there is only one harmonic mean H between a and b , then a, H, b are in HP. Then, $H = \frac{2ab}{a+b}$.

Relation Among Arithmetic, Geometric and Harmonic Means

Let A, G and H be the arithmetic, geometric and harmonic means between a and b , then

$$(i) A \geq G \geq H \quad (ii) G^2 = AH$$

EXAMPLE 10. If for positive real numbers x, y, z the numbers $x+y, 2y$ and $y+z$ are in harmonic progression, then which one of the following is correct?

- a. x, y, z are in GP b. x, y, z are in AP
c. x, y, z are in HP d. None of these

Sol. a. $\because x+y, 2y$ and $y+z$ are in HP, $2y = \frac{2(x+y)(y+z)}{x+y+y+z}$

$$\Rightarrow 2y(x+2y+z) = 2(xy+xz+y^2+yz)$$

$$\Rightarrow 2xy + 4y^2 + 2yz = 2xy + 2xz + 2y^2 + 2yz$$

$$\Rightarrow 2y^2 = 2xz \Rightarrow y^2 = xz$$

Hence, x, y, z are in GP.

Sum to n Terms of Special Series

The sum of first n terms of special series is given below

$$\Sigma n = 1 + 2 + 3 + \dots + n = \frac{n(n+1)}{2}$$

$$\Sigma n^2 = 1^2 + 2^2 + \dots + n^2 = \frac{n(n+1)(2n+1)}{6}$$

$$\Sigma n^3 = 1^3 + 2^3 + \dots + n^3 = \left[\frac{n(n+1)}{2}\right]^2 = (\Sigma n)^2$$

Note If n th term of the sequence is $T_n = an^3 + bn^2 + cn + d$. Then, sum of n terms is given by

$$S_n = \Sigma T_n = a \Sigma n^3 + b \Sigma n^2 + c \Sigma n + \Sigma d.$$

Arithmetico-Geometric Progression (AGP)

A sequence of the form

$$a, (a+d)r, (a+2d)r^2, \dots, \{a+(n-1)d\}r^{n-1}, \dots$$

is called an arithmetico-geometric sequence, where $\{a+(n-1)d\}r^{n-1}$ is the n th term of the sequence.

Sum of its n terms is

$$S_n = \begin{cases} \frac{a}{1-r} + \frac{dr(1-r^{n-1})}{(1-r)^2} - \frac{\{a+(n-1)d\}r^n}{1-r}, & r \neq 1 \\ \frac{n}{2}\{2a+(n-1)d\}, & r = 1 \end{cases}$$

If this series has infinite terms, then

$$S_\infty = \frac{a}{1-r} + \frac{dr}{(1-r)^2}, |r| < 1$$

Difference Method for Finding Sum of AGP Series

Suppose a_1, a_2, a_3, \dots is a sequence such that the sequence $a_2 - a_1, a_3 - a_2, \dots$ is either an AP or a GP
 The n th term ' a_n ' of this sequence is obtained as follows

$$S = a_1 + a_2 + a_3 + \dots + a_{n-1} + a_n$$

$$S = a_1 + a_2 + \dots + a_{n-1} + a_n$$

$$\Rightarrow a_n = a_1 + [(a_2 - a_1) + (a_3 - a_2) + \dots + (a_n - a_{n-1})]$$

Since, the terms within the brackets are either in AP or in GP, in either case we can find the value of a_n , the n th term, we can now find the sum of the n terms of the

sequence as $S = \sum_{k=1}^n a_{kn}$

EXAMPLE 11. Find the sum to n terms of the series $2 + 5 + 10 + 17 + \dots$

- a. $\frac{n}{5}(2n^2 + 3n + 7)$
- b. $\frac{n}{6}(2n^2 + 3n + 7)$
- c. $\frac{n(n+1)(2n+1)}{6}$
- d. None of these

Sol. b. Here, the difference in consecutive terms are 3, 5, 7, ... which are in AP.

Let $S_n = 2 + 5 + 10 + 17 + \dots + t_{n-1} + t_n$

On shifting every term one place to the right

$$S_n = 2 + 5 + 10 + \dots + t_{n-1} + t_n$$

On subtracting, we get

$$0 = (2 + 3 + 5 + 7 + \dots \text{ to } n \text{ terms}) - t_n$$

$$\Rightarrow t_n = 2 + [3 + 5 + 7 + \dots \text{ to } (n - 1) \text{ terms}]$$

$$= 2 + \frac{n-1}{2} [2 \times 3 + (n-2) \times 2]$$

$$= 2 + \frac{n-1}{2} (2n + 2) = 2 + (n-1)(n+1)$$

$$= 2 + (n^2 - 1) = n^2 + 1$$

Putting $n = 1, 2, 3, \dots, n$ and adding, we get

$$S_n = \sum_{k=1}^n k^2 + n = \frac{n(n+1)(2n+1)}{6} + n$$

$$= \frac{n}{6} (2n^2 + 3n + 1 + 6)$$

$$= \frac{n}{6} (2n^2 + 3n + 7)$$

> PRACTICE EXERCISE

1. If $\frac{3 + 5 + 7 + \dots + n}{5 + 8 + 11 + \dots + 10 \text{ terms}} = 7$, then the value of n is
 (a) 35 (b) 36 (c) 37 (d) 40
2. If sum of n terms of an AP is $3n^2 + 5n$ and $T_m = 164$, then m is equal to
 (a) 26 (b) 27 (c) 28 (d) None of these
3. In a GP, if the $(m + n)$ th term be p and $(m - n)$ th term be q , then its m th term is
 (a) \sqrt{pq} (b) $\sqrt{p/q}$ (c) $\sqrt{q/p}$ (d) $\sqrt{p + q}$
4. The sum of the first ' n ' terms of the series $\frac{1}{2} + \frac{3}{4} + \frac{7}{8} + \frac{15}{16} + \dots$ is
 (a) $2^n - n - 1$ (b) $1 - 2^{-n}$
 (c) $n + 2^{-n} - 1$ (d) $2^n - 1$
5. An AP consists of n (odd terms) and its middle term is m . Then, the sum of the AP is
 (a) $2mn$ (b) $\frac{1}{2}mn$ (c) mn (d) mn^2
6. The sum of $1 + \frac{2}{5} + \frac{3}{5^2} + \frac{4}{5^3} + \dots \infty$ upto n terms is
 (a) $\frac{25}{16}$ (b) $\frac{15}{16}$ (c) $\frac{5}{16}$ (d) $\frac{3}{2}$
7. The sum of n terms of an AP is $an(n - 1)$. The sum of the squares of these terms is equal to
 (a) $a^2n^2(n - 1)^2$ (b) $\frac{a^2}{6}n(n - 1)(2n - 1)$
 (c) $\frac{2a^2}{3}n(n - 1)(2n - 1)$ (d) $\frac{2a^2}{3}n(n + 1)(2n + 1)$
8. If a, b, c are in GP, then $\frac{1}{a^2 - b^2} + \frac{1}{b^2}$ is equal to
 (a) $1/(c^2 - b^2)$
 (b) $4b^2 - c^2$
 (c) $1/(c^2 - a^2)$
 (d) $1/(b^2 - c^2)$
9. If S be the sum to infinity of a GP, whose first term is a , then the sum of first n terms is
 (a) $S \left(1 - \frac{a}{S}\right)^n$ (b) $S \left[1 - \left(1 - \frac{a}{S}\right)^n\right]$
 (c) $a \left[1 - \left(1 - \frac{a}{S}\right)^n\right]$ (d) None of these
10. If the non-zero numbers a, b, c are in AP and $\tan^{-1} a, \tan^{-1} b, \tan^{-1} c$ are also in AP, then
 (a) $a = b = c$ (b) $b^2 = 2ac$ (c) $a^2 = bc$ (d) $c^2 = ab$

- 11.** The harmonic mean of $\frac{a}{1-ab}$ and $\frac{a}{1+ab}$ is equal to
 (a) $\frac{a}{\sqrt{1-a^2b^2}}$ (b) $\frac{a}{1-a^2b^2}$ (c) a (d) $\frac{1}{1-a^2b^2}$
- 12.** If first three terms of sequence $\frac{1}{16}, a, b, \frac{1}{6}$ are in geometric series and the last three terms are in harmonic series, then the values of a and b will be
 (a) $a = -\frac{1}{4}, b = 1$ (b) $a = \frac{1}{12}, b = \frac{1}{9}$
 (c) Both (a) and (b) (d) None of these
- 13.** If a, b, c are in AP, p, q, r are in HP and ap, bq, cr are in GP, then $\frac{p}{r} + \frac{r}{p}$ is equal to
 (a) $\frac{a}{c} - \frac{c}{a}$ (b) $\frac{a}{c} + \frac{c}{a}$ (c) $\frac{b}{q} + \frac{q}{b}$ (d) $\frac{b}{q} - \frac{q}{b}$
- 14.** If $x = 1 + a + a^2 + a^3 + \dots \infty$ ($|a| < 1$) and $y = 1 + b + b^2 + b^3 + \dots \infty$ ($|a| < 1$), then $1 + ab + a^2b^2 + a^3b^3 + \dots \infty$ is equal to
 (a) $\frac{xy}{x+y-1}$ (b) $\frac{x+y}{x+y+1}$
 (c) $\frac{x-y}{x-y+1}$ (d) None of these
- 15.** $\frac{1}{b-a} + \frac{1}{b-c} = \frac{1}{a} + \frac{1}{c}$, then a, b, c are in
 (a) AP (b) GP (c) HP (d) None of these
- 16.** The value of $x + y + z$ is 15, if a, x, y, z, b are in AP while the value of $\frac{1}{x} + \frac{1}{y} + \frac{1}{z}$ is $\frac{5}{3}$, if a, x, y, z, b are in HP. Then, a and b are
 (a) 1, 9 (b) 3, 7
 (c) 7, 3 (d) None of these
- 17.** If $(m+1)$ th, $(n+1)$ th and $(r+1)$ th terms of an AP are in GP and m, n, r are in HP, then the ratio of the first term of the AP to its common difference in terms of n is equal to
 (a) $n/2$ (b) $-n/2$ (c) $n/3$ (d) $-n/3$
- 18.** If the m th and n th term of a HP are n and m respectively, then the mn th term is
 (a) 0 (b) 1 (c) 2 (d) $\frac{1}{2}$
- 19.** Two AM's A_1 and A_2 , two GM's G_1 and G_2 and two HM's H_1 and H_2 are inserted between any two numbers, then $H_1^{-1} + H_2^{-1}$ is equal to
 (a) $A_1^{-1} + A_2^{-1}$ (b) $G_1^{-1} + G_2^{-1}$
 (c) $\frac{G_1 G_2}{A_1 + A_2}$ (d) $\frac{A_1 + A_2}{G_1 G_2}$
- 20.** Which term of the sequence $20, 19\frac{1}{4}, 18\frac{1}{2}, 17\frac{3}{4}, \dots$ is the first negative term?
 (a) 27th (b) 28th
 (c) 29th (d) No such term exists
- 21.** If p times the p th term of an AP is q times the q th term, then what is the $(p+q)$ th term equal to?
 (a) $p+q$ (b) pq (c) 1 (d) 0
- 22.** If $a, 2a+2, 3a+3$ are in GP, then what is the fourth term of the GP?
 (a) -13.5 (b) 13.5
 (c) -27 (d) 27
- 23.** If $\frac{a^{n+1} + b^{n+1}}{a^n + b^n}$ is the arithmetic mean between a and b , then n is equal to
 (a) -1 (b) -2 (c) 0 (d) 1
- 24.** Let a, b, c be three positive real numbers such that their product is unity, then the least value of $(1+a)(1+b)(1+c)$ is
 (a) 16 (b) 8 (c) 0 (d) 3
- 25.** If one AM 'A' and two GM p and q be inserted between any two numbers, then the value of $p^3 + q^3$ is
 (a) $\frac{2pq}{A}$ (b) $2Apq$
 (c) $2Ap^2q^2$ (d) None of these
- 26.** A square is drawn by joining mid-points of the sides of a square. Another square is drawn inside the second square in the same way and the process is continued indefinitely. If, the side of the first square is 16 cm, then what is the sum of the areas of all the squares?
 (a) 256 sq cm (b) 512 sq cm
 (c) 1024 sq cm (d) $512/3$ sq cm
- 27.** Let a, b and c be in an AP. Consider the following statements
 I. $\frac{1}{ab}, \frac{1}{ca}$ and $\frac{1}{bc}$ are in an AP.
 II. $\frac{1}{\sqrt{b} + \sqrt{c}}, \frac{1}{\sqrt{c} + \sqrt{a}}$ and $\frac{1}{\sqrt{a} + \sqrt{b}}$ are in AP.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 28.** Let a, b, c be in AP and a^2, b^2, c^2 are in HP. Consider the following statements.
 I. $a \neq b \neq c$
 II. $-a/2, b$ and c are in GP.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

- 44.** Sum of the squares of the first 3 terms of the given series is
(a) 100 (b) 660 (c) 799 (d) 1000

Directions (Q. Nos. 45-47) *Four different integers form an increasing AP. The largest number is equal to the sum of the squares of the other three numbers. Then,*

- 45.** The smallest number is
(a) -2 (b) 0 (c) -1 (d) 2
- 46.** The common difference of the four number is
(a) 2 (b) 1 (c) 3 (d) 4
- 47.** The sum of all the four numbers is
(a) 10 (b) 8 (c) 2 (d) 6

Directions (Q. Nos. 48-51) *The sum of n terms of an AP is given by $S_n = pn + qn^2$, where p, q are independent of n .*

- 48.** The n th term of the AP is
(a) $q + p(2n - 1)$ (b) $p + q(2n - 1)$
(c) $q + p(n - 1)$ (d) $p + q(n - 1)$
- 49.** The common difference of the AP is
(a) $p + q$ (b) q (c) $2q$ (d) $2p + 3q$
- 50.** If S_1, S_2, S_3 be the sum of $n, 2n, 3n$ terms of AP, then
(a) $2S_2 - S_3 + S_1 = pn$ (b) $S_3 - (S_2 + S_1) = 2qn^2$
(c) $2S_2 - S_3 + S_1 = 3pn$ (d) $S_3 - (S_2 + S_1) = 4qn^2$
- 51.** If sum of 7 terms is 77 and 10 terms is 140. Then sum of 13 terms is
(a) 221 (b) 208 (c) 351 (d) 195

Directions (Q. Nos. 52-55) *If A, G and H are respectively arithmetic, geometric and harmonic means between a and b both being unequal and positive, then*

$$A = \frac{a+b}{2}, G = \sqrt{ab} \text{ and } H = \frac{2ab}{a+b}$$

The equation having a and b as its roots is

$$x^2 - 2Ax + G^2 = 0.$$

- 52.** If the geometric and harmonic means of two numbers are 16 and $12\frac{4}{5}$, then the ratio of one number to the other is
(a) 1 : 4 (b) 2 : 3
(c) 1 : 2 (d) 3 : 1
- 53.** Two numbers whose arithmetic mean is 34 and the geometric mean is 16 are
(a) 16, 16 (b) 64, 4 (c) 32, 36 (d) 48, 20

- 54.** The HM of two numbers is 4 and their AM and GM satisfy the relation $2A + G^2 = 27$, then the number are
(a) -3 and 1 (b) 5 and -25 (c) 5 and 4 (d) 3 and 6

- 55.** If the ratio of AM between two positive real numbers a and b to their HM is $m : n$, then $a : b$ is equal to
(a) $\frac{\sqrt{m-n} + \sqrt{n}}{\sqrt{m-n} - \sqrt{n}}$ (b) $\frac{\sqrt{n} + \sqrt{m-n}}{\sqrt{n} - \sqrt{m-n}}$
(c) $\frac{\sqrt{m} + \sqrt{m-n}}{\sqrt{m} - \sqrt{m-n}}$ (d) $\frac{\sqrt{m-n} + \sqrt{m}}{\sqrt{m-n} - \sqrt{m}}$

PREVIOUS YEARS' QUESTIONS

Directions (Q. Nos. 84-85) Given that $\log_x y$, $\log_z x$, $\log_y z$ are in GP, $xyz = 64$ and x^3, y^3, z^3 are in AP. **2016 I**

- 84.** Which one of the following is correct?
 x , y and z are
 (a) in AP only (b) in GP only
 (c) in both AP and GP (d) Neither in AP nor in GP
- 85.** Which one of the following is correct?
 xy , yz and zx are
 (a) in AP only (b) in GP only
 (c) in both AP and GP (d) Neither in AP nor in GP

$$\begin{aligned} \Rightarrow n^2 \left(d^2 + \frac{2ad}{n} \right) &= ad \times \frac{2mr}{n} + mrd^2 \\ \Rightarrow n^2 \left[d^2 + \frac{2ad}{n} \right] &= mr \left[\frac{2ad}{n} + d^2 \right] \\ \Rightarrow (n^2 - mr) \left[d^2 + \frac{2ad}{n} \right] &= 0 \\ \Rightarrow n^2 = mr \text{ or } d^2 &= -\frac{2ad}{n} \Rightarrow \frac{a}{d} = -\frac{n}{2} \end{aligned}$$

18. (b) Let a be the first term and d the common difference of corresponding AP.

m th and n th term of HP are n and m .
So, m th and n th terms of AP are $\frac{1}{n}$ and $\frac{1}{m}$.

$$\therefore \frac{1}{n} = a + (m-1)d \quad \dots(i)$$

$$\text{and } \frac{1}{m} = a + (n-1)d \quad \dots(ii)$$

On solving Eqs. (i) and (ii), we get

$$d = \frac{1}{mn} \text{ and } a = \frac{1}{mn}$$

$\therefore m$ th term of AP

$$= \frac{1}{mn} + (m-1) \times \frac{1}{mn}$$

$\therefore m$ th term of HP = 1

19. (d) Sum of n AM's = $n \times$ single AM

$$\therefore A_1 + A_2 = 2 \left(\frac{a+b}{2} \right) = a+b \quad \dots(i)$$

Product of n GM's = (single GM) ^{n}

$$G_1 G_2 = (\sqrt{ab})^2 = ab \quad \dots(ii)$$

$\frac{1}{a}, \frac{1}{H_1}, \frac{1}{H_2}, \frac{1}{b}$ are in AP.

$$\therefore \frac{1}{H_1} + \frac{1}{H_2} = \frac{1}{a} + \frac{1}{b} = \frac{a+b}{ab} \quad \text{[from Eq. (i)]}$$

$$\Rightarrow H_1^{-1} + H_2^{-1} = \frac{A_1 + A_2}{G_1 G_2} \quad \text{[from Eqs. (i) and (ii)]}$$

20. (b) Given, series can be rewritten as

$$20, \frac{77}{4}, \frac{37}{2}, \frac{71}{4}, \dots$$

This is an AP series.

$$\text{Here, } a = 20 \text{ and } d = -\frac{3}{4}$$

$$\begin{aligned} \therefore T_n &= a + (n-1)d \\ &= 20 + (n-1) \left(-\frac{3}{4} \right) = \frac{83}{4} - \frac{3}{4}n \end{aligned}$$

For first negative term, $T_n < 0$

$$\Rightarrow \frac{83}{4} - \frac{3}{4}n < 0 \Rightarrow 83 < 3n \Rightarrow n > \frac{83}{3}$$

So, n should be 28.

Hence, 28th term is first negative term.

21. (d) Let a be the first term and d be common difference of AP, then

$$\begin{aligned} t_p &= a + (p-1)d \\ t_q &= a + (q-1)d \end{aligned}$$

Given,

$$\begin{aligned} p[a + (p-1)d] &= q[a + (q-1)d] \\ \Rightarrow ap + p^2d - pd &= aq + q^2d - qd \\ \Rightarrow ap - aq &= d[q^2 - q - p^2 + p] \\ \Rightarrow d[p - q] &= d[(q-p)(q+p-1)] \\ \Rightarrow d(q-p) + d(q-p)(q+p-1) &= 0 \\ \Rightarrow (q-p)[a + d(q+p-1)] &= 0 \\ \Rightarrow q-p = 0 \text{ or } a + d(q+p-1) &= 0 \\ \Rightarrow t_{p+q} &= 0 \end{aligned}$$

22. (a) $a, 2a+2, 3a+3$ are in GP.

$$\begin{aligned} \Rightarrow (2a+2)^2 &= (3a+3)a \\ \Rightarrow 4a^2 + 4 + 8a &= 3a^2 + 3a \\ \Rightarrow a^2 + 5a + 4 &= 0 \Rightarrow a = -1, -4 \end{aligned}$$

Now, $a = -1$ does not satisfy the given series.

$\therefore -4, -6, -9$ are in GP.

$$\begin{aligned} \therefore t_4 &= -4 \left(\frac{3}{2} \right)^3 \\ &= -13.5 \end{aligned}$$

23. (c)

24. (b) Since, $abc = 1$

As, we know $AM \geq GM$

$$\begin{aligned} \Rightarrow \frac{1+a}{2} &\geq \sqrt{a} \\ \Rightarrow 1+a &\geq 2\sqrt{a} \quad \dots(i) \end{aligned}$$

$$\text{Similarly, } 1+b \geq 2\sqrt{b} \quad \dots(ii)$$

$$\text{and } 1+c \geq 2\sqrt{c} \quad \dots(iii)$$

On multiplying Eqs. (i), (ii) and (iii), we get

$$\begin{aligned} (1+a)(1+b)(1+c) &\geq 8\sqrt{abc} \\ \therefore \text{Least value of} & \\ (1+a)(1+b)(1+c) &= 8 \end{aligned}$$

25. (b) A is the arithmetic mean of a and b .

$$\therefore A = \frac{a+b}{2}$$

p and q are two geometric means between a and b .

$$\therefore p = a \left(\frac{b}{a} \right)^{1/3} = a^{2/3} \cdot b^{1/3}$$

$$\text{and } q = a \left(\frac{b}{a} \right)^{2/3} = a^{1/3} b^{2/3}$$

$$\begin{aligned} \Rightarrow p^3 + q^3 &= a^2b + ab^2 = ab(a+b) \\ &= 2Aab = 2Apq \end{aligned}$$

26. (b) Given, $AB = 16$ cm

$$\therefore HG = 8\sqrt{2} = \frac{16}{\sqrt{2}} \text{ cm}$$

$$\text{Similarly, } KL = (4\sqrt{2})\sqrt{2} = \frac{16}{2} \text{ cm}$$

\therefore Required sum

$$\begin{aligned} &= 16^2 + \frac{1}{2}(16)^2 + \frac{1}{4}(16)^2 + \dots \infty \\ &= (16)^2 \left(1 + \frac{1}{2} + \frac{1}{4} + \dots \infty \right) \\ &= 16^2 \left(\frac{1}{1 - \frac{1}{2}} \right) = 512 \text{ sq cm} \end{aligned}$$

27. (c) Let $\frac{1}{ab}, \frac{1}{ca}, \frac{1}{bc}$ are in AP.

$$\Rightarrow \frac{1}{ca} - \frac{1}{ab} = \frac{1}{bc} - \frac{1}{ca} \Rightarrow \frac{b-c}{abc} = \frac{a-b}{abc}$$

$$\Rightarrow b-c = a-b \Rightarrow 2b = a+c$$

So, a, b, c are in AP.

Now, $\frac{1}{\sqrt{b} + \sqrt{c}}, \frac{1}{\sqrt{c} + \sqrt{a}}, \frac{1}{\sqrt{a} + \sqrt{b}}$ are

in AP.

$$\therefore \frac{2}{\sqrt{c} + \sqrt{a}} = \frac{1}{\sqrt{b} + \sqrt{c}} + \frac{1}{\sqrt{a} + \sqrt{b}}$$

$$\begin{aligned} \Rightarrow 2(\sqrt{b} + \sqrt{c})(\sqrt{a} + \sqrt{b}) & \\ &= (\sqrt{c} + \sqrt{a})(\sqrt{a} + 2\sqrt{b} + \sqrt{c}) \end{aligned}$$

$$\Rightarrow 2b = a+c$$

So, a, b, c are in AP.

Hence, both the statements are correct.

28. (b) Given, $b = \frac{a+c}{2} \quad \dots(i)$

$$b^2 = \frac{2a^2c^2}{a^2+c^2} \quad \dots(ii)$$

From Eqs. (i) and (ii), we get

$$\frac{(a+c)^2}{4} = \frac{2a^2c^2}{a^2+c^2}$$

$$\Rightarrow (a^2+c^2+2ac)(a^2+c^2) = 8a^2c^2$$

$$\begin{aligned} \Rightarrow (a^2+c^2)^2 + 2ac(a^2+c^2) & \\ &= 8a^2c^2 \end{aligned}$$

$$\Rightarrow (a^2+c^2+ac)^2 = 9a^2c^2$$

$$\Rightarrow a^2+c^2+ac = \pm 3ac$$

$$\therefore \text{either } a^2+c^2 = 2ac$$

$$\Rightarrow (a-c)^2 = 0 \Rightarrow a=c \Rightarrow a=b=c$$

[from Eq. (i)]

$$\text{or } a^2+c^2+ac = -3ac$$

$$\Rightarrow (a+c)^2 = -2ac$$

$$\Rightarrow 4b^2 = -2ac$$

$$\Rightarrow 2b^2 = -ac \quad \text{[from Eq. (i)]}$$

$$\therefore -\frac{a}{2}, b, c \text{ are in GP.}$$

Thus, only Statement II is correct.

29. (b) Given, 12, 18, 24 are in AP.
 If 18 is added to each term, then the series is (12 + 18), (18 + 18), (24 + 18) or 30, 36, 42 which is in AP.
 Also, 4, 8, 16 are in GP.
 If 8 is added to each term, then series is 12, 16, 24 which is in HP
 Hence, Statement II is correct.

30. (b) The given series is an AGP.
 Let $S = 1 + 2x + 3x^2 + \dots \infty \dots$ (i)
 $\Rightarrow x \cdot S = x + 2x^2 + 3x^3 + \dots \infty \dots$ (ii)
 On subtracting Eq. (ii) from Eq. (i), we get
 $(1 - x)S = 1 + x + x^2 + \dots \infty = \frac{1}{1 - x}$
 $\therefore S = \frac{1}{(1 - x)^2}$

31. (a) Since, a and b are unequal.
 $\therefore \frac{a^2 + b^2}{2} > \sqrt{a^2 b^2}$
 [\because AM > GM for unequal numbers]
 $\Rightarrow a^2 + b^2 > 2ab \dots$ (i)
 Similarly, $b^2 + c^2 > 2ac \dots$ (ii)
 and $c^2 + a^2 > 2ca \dots$ (iii)
 On adding Eqs. (i), (ii) and (iii), we get
 $2(a^2 + b^2 + c^2) > 2(ab + bc + ca)$
 $\Rightarrow ab + bc + ca < 1$ [$\because a^2 + b^2 + c^2 = 1$]

32. (b) When 'n' is even.
 Let $n = 2m$, then
 $= 1^2 - 2^2 + 3^2 - 4^2 + 5^2 - \dots$
 $= (1^2 - 2^2) + (3^2 - 4^2) + (5^2 - 6^2) + \dots + (2m - 1)^2 - (2m)^2$
 $= (1 + 2)(1 - 1) + (3 + 4)(-1) + (5 + 6)(-1) + \dots + (2m - 1 + 2m)(-1)$
 $= -(1 + 2 + 3 + 4 + \dots + 2m)$
 $= \frac{-2m(2m + 1)}{2} = \frac{-n(n + 1)}{2}$

33. (c) Here, $t_{k+1} = ar^k, t'_{k+1} = br^k$
 $\therefore t''_{k+1} = t_{k+1} + t'_{k+1}$
 $= ar^k + br^k = r^k(a + b)$
 which is also a GP.

34. (d) $\frac{S_m}{S_n} = \frac{\frac{m}{2}\{2a + (m - 1)d\}}{\frac{n}{2}\{2a + (n - 1)d\}} = \frac{m^2}{n^2}$
 $\Rightarrow \frac{a + \left(\frac{m-1}{2}\right)d}{a + \left(\frac{n-1}{2}\right)d} = \frac{m}{n}$
 $\Rightarrow a(n - m) = \frac{d}{2}\{mn - m - mn + n\}$
 $\Rightarrow a = \frac{d}{2} \Rightarrow d = 2a \quad [\because m \neq n]$

Now, $S_n = \frac{m}{2}[2a + (m - 1)2a] = am^2$
 $\Rightarrow m = \sqrt{\frac{S_m}{a}}$
 Similarly, $n = \sqrt{\frac{S_n}{a}}$
 $\therefore \frac{a_m}{a_n} = \frac{a + (m - 1)d}{a + (n - 1)d} = \frac{\sqrt{4S_m - \sqrt{a}}}{4S_n - \sqrt{a}}$

35. (d) Let the sides of triangle in increasing form be $(a - d), a, (a + d)$.
 $\therefore (a + d)^2 = (a - d)^2 + a^2$
 $\Rightarrow a^2 + d^2 + 2ad = a^2 + d^2 - 2ad + a^2$
 $\Rightarrow a^2 - 4ad = 0$
 $\Rightarrow a(a - 4d) = 0$
 $\Rightarrow a = 4d \quad [\because a \neq 0]$
 \therefore Sides of triangle are $3d, 4d$ and $5d$.
 \therefore Area of triangle = $\frac{1}{2} \times 3d \times 4d = 6d^2$

36. (b) Since, $3d, 4d$ and $5d$ are three arithmetic means between two numbers say x and y .
 $\therefore x, 3d, 4d, 5d, y$ are in AP.
 $\Rightarrow x = 2 \times (3d) - 4d = 2d$
 and $y = 2 \times (5d) - 4d = 6d$
 Sum of AP = 15
 $\Rightarrow 2d + 3d + 4d + 5d + 6d = 15$
 $\Rightarrow 20d = 15 \Rightarrow d = \frac{3}{4}$
 \therefore Sides of triangle are $\frac{9}{4}, 3, \frac{15}{4}$.

37. (b) Given, $x = \frac{a + b}{2}$ and $y = \frac{b + c}{2}$
 Also, a, b, c , are in GP
 $\Rightarrow b^2 = ac$
 Now, $\frac{a}{x} + \frac{c}{y} = \frac{a}{\frac{a+b}{2}} + \frac{c}{\frac{b+c}{2}}$
 $= \frac{2a}{a+b} + \frac{2c}{b+c} = \frac{2ab + 2ac + 2ac + 2bc}{(a+b)(b+c)}$
 $= \frac{2[ab + 2ac + bc]}{ab + ac + b^2 + bc}$
 $= \frac{2[ab + 2ac + bc]}{ab + ac + ac + bc} = 2 \quad [\because b^2 = ac]$

38. (a) $x + y = \frac{a + b}{2} + \frac{b + c}{2}$
 $= \frac{a + 2b + c}{2} = \frac{a + 2\sqrt{a}\sqrt{c} + c}{2}$
 $= \frac{(\sqrt{a} + \sqrt{c})^2}{2}$
 \therefore Statement I is correct.
 Also, $x + y = \frac{a + 2b + c}{2} = \frac{a + 2b + \frac{b^2}{a}}{2}$
 $= \frac{a^2 + 2ab + b^2}{2a} = \frac{(a + b)^2}{2a}$
 \therefore Statement II is not correct.

39. (b) Last term of series
 $S_1 = 1 \times 2^{100-1} = 2^{99}$
40. (b) For as S_1 (i.e. GP) $T_n = 2^{n-1}$
 For as S_2 (i.e. AP)
 $T_m = 1 + (m - 1)3 = 3m - 2$
 They are common, if $2^{n-1} = 3m - 2$
 $\Rightarrow 2^{n-2} + 1 = \frac{3m}{2} \leq 150$

$\Rightarrow n \leq 9, m \leq 100$
 As, $2^{n-1} = 3m - 2$
 $\therefore (n = 1, m = 1), (n = 3, m = 2),$
 $(n = 5, m = 6), (n = 7, m = 22),$
 $(n = 9, m = 86),$
 and for $n = 2, 4, 6, 8$; m is a fraction which is not possible.
 Hence, number of common terms = 5

41. (c) Sum of 100 terms of series S_2
 $= \frac{100}{2} [2 \times 1 + (100 - 1) \times 3]$
 $= 50 [2 + 99 \times 3] = 50 \times 299 = 14950$

42. (a) $\because S_n = 3n^2 + 5n$
 $\therefore T_n = S_n - S_{n-1}$
 $= (3n^2 + 5n) - [3(n-1)^2 + 5(n-1)]$
 $= (3n^2 + 5n) - [3(n^2 + 1 - 2n) + 5n - 5]$
 $= 3n^2 + 5n - 3n^2 - 3 + 6n - 5n + 5$
 $= (6n + 2)$
 The n th term is a linear function in n .
 Hence, sequence must be an AP.

43. (d) Given,
 $T_n = 5456$
 $\Rightarrow 6n + 2 = 5456$
 $\Rightarrow 6n = 5454 \Rightarrow n = 909$
 \therefore The number 5456 is (909)th term.

44. (b) $T_1^2 + T_2^2 + T_3^2$
 $= (8)^2 + (14)^2 + (20)^2$
 $= 64 + 196 + 400 = 660$

Sol. (Q. Nos. 45-47) Let four integers be $a - d, a, a + d$ and $a + 2d$.
 where, a and d are integers and $d > 0$
 $\therefore a + 2d = (a - d)^2 + a^2 + (a + d)^2$
 $\Rightarrow 2d^2 - 2d + 3a^2 - a = 0 \dots$ (i)
 $\therefore d = \frac{1}{2} [1 \pm \sqrt{1 + 2a - 6a^2}] \dots$ (ii)
 Since, d is positive integer.
 $\therefore 1 + 2a - 6a^2 > 0$
 $6a^2 - 2a - 1 < 0$
 $\Rightarrow \frac{1 - \sqrt{7}}{6} < a < \frac{1 + \sqrt{7}}{6}$
 $\therefore a$ is an integer.
 $\therefore a = 0$ put in Eq. (ii)
 $\therefore d = 1$ or 0 but Eq. (ii) $\because d > 0$
 $\therefore d = 1$
 \therefore So, the four numbers are $-1, 0, 1, 2$.

45. (c) The smallest number is -1
46. (b) Common difference $= 0 - (-1) = 1$
47. (c) Sum of all the four numbers
 $= -1 + 0 + 1 + 2 = 2$
48. (b) $\because S_n = pn + qn^2$
 $\therefore T_n = S_n - S_{n-1}$
 $= (pn + qn^2) - \{p(n-1) + q(n-1)^2\}$
 $= pn + qn^2 - \{pn - p + qn^2 + q - 2qn\}$
 $= p + q(2n - 1)$
49. (c) Common difference $= T_n - T_{n-1}$
 $= p + q(2n - 1) - [p + q\{2(n-1) - 1\}]$
 $= p + 2qn - q - \{p + 2qn - 3q\} = 2q$
50. (d) $S_1 = pn + qn^2, S_2 = 2pn + 4qn^2$
 and $S_3 = 3pn + 9qn^2$
 $\therefore 2S_2 - S_3 + S_1 = 2(2pn + 4qn^2)$
 $- (3pn + 9qn^2) + (pn + qn^2) = 2pn$
 and $S_3 - (S_2 - S_1) = (3pn + 9qn^2)$
 $- (2pn + 4qn^2) - (pn + qn^2) = 4qn^2$
51. (a) Sum of 7 terms, $S_7 = 7p + 49q = 77$
 $\Rightarrow p + 7q = 11 \quad \dots(i)$
 Also, sum of 10 terms,
 $S_{10} = 10p + 100q = 140$
 $\Rightarrow p + 10q = 14 \quad \dots(ii)$
 On solving Eqs. (i) and (ii), we get
 $p = 4$ and $q = 1$
 $\therefore S_{13} = 13p + 169q$
 $= 13(4) + 169(1) = 221$
52. (a) $\sqrt{ab} = 16 \Rightarrow ab = 16^2 = 8 \times 32$
 and $\frac{2ab}{a+b} = \frac{12 \cdot 4}{5} \Rightarrow \frac{2 \times 256}{a+b} = \frac{64}{5}$
 $\Rightarrow a + b = 40 = 8 + 32$
 $\therefore \frac{a}{b} = \frac{8}{32} = \frac{1}{4} \Rightarrow a : b = 1 : 4$
53. (b) $AM = 34 \Rightarrow \frac{a+b}{2} = 34$
 $\Rightarrow a + b = 68 \quad \dots(i)$
 and $GM = 16 \Rightarrow \sqrt{ab} = 16 \Rightarrow ab = 256$
 $\therefore (a-b)^2 = (a+b)^2 - 4ab$
 $\Rightarrow (a-b)^2 = (68)^2 - 4 \times 256 = 3600$
 $\Rightarrow a - b = 60 \quad \dots(ii)$
 On solving Eqs. (i) and (ii), we get
 $a = 64$ and $b = 4$
54. (d) We have, $H = 4, G^2 = AH$
 $\Rightarrow 2A + G^2 = 27 \Rightarrow 2A + AH = 27$
 $\Rightarrow 6A = 27 \Rightarrow A = \frac{9}{2}$
 $\therefore G^2 = 18$
 $\therefore a + b = 9$ and $ab = 18$
 $\Rightarrow a = 3, b = 6$ or $a = 6, b = 3$

55. (c) $A = m\lambda, H = n\lambda$
 $\therefore G^2 = AH = mn\lambda^2$
 $\therefore a, b$ are the roots of
 $x^2 - (a+b)x + ab = 0$
 $\Rightarrow x^2 - 2Ax + G^2 = 0$
 $\Rightarrow x^2 - 2m\lambda + mn\lambda^2 = 0$
 $\therefore x = \frac{2m\lambda \pm 4m^2\lambda^2 - 4mn\lambda^2}{2}$
 $= \lambda\sqrt{m}(\sqrt{m} \pm \sqrt{m-n})$
 $\Rightarrow \frac{a}{b} = \frac{\sqrt{m} + \sqrt{m-n}}{\sqrt{m} - \sqrt{m-n}}$
56. (c)
57. (d) Given series is
 $1 + \frac{1}{\sqrt{3}} + 3 + \frac{1}{3\sqrt{3}} + \dots$
 Here, between each two consecutive terms, no common difference and common ratio are form.
 Hence, the given series does not form any series.
58. (d) Given series is $1 - \frac{1}{2} + \frac{1}{4} - \frac{1}{8} + \dots$
 which form a GP with common ratio $\left(-\frac{1}{2}\right)$.
 \therefore Sum of infinite term of GP
 $= \frac{a}{1-r} = \frac{1}{1 - \left(-\frac{1}{2}\right)} = \frac{1}{1 + 1/2} = \frac{2}{3}$
59. (c) Given that, $1/4, 1/x$ and $1/10$ are in HP.
 $\Rightarrow 4, x$ and 10 are in AP, then
 $2x = 4 + 10 \Rightarrow x = 7$
60. (c) We know that, in a GP the product of two terms equidistant from the beginning and end is a constant and is equal to the product of first term and last term, i.e. if $a_1, a_2, a_3, \dots, a_{(n-2)}, a_{(n-1)}, a_n$ are in GP, then $a_1 a_n = a_2 a_{n-1} = a_3 a_{n-2} = \dots$
 Given that,
 $S_2 S_{11} = S_p S_8 \Rightarrow (p+8) = (2+11)$
 $\therefore p = 13 - 8 = 5$
61. (d) Given that, p, q and r are in AP.
 $\therefore 2q = p + r \quad \dots(i)$
 As well as are in GP.
 $\therefore q^2 = pr \quad \dots(ii)$
 From Eqs. (i) and (ii), we get
 $p + r = 2\sqrt{pr}$
 $\Rightarrow (\sqrt{p})^2 - 2\sqrt{p} \cdot \sqrt{r} + (\sqrt{r})^2 = 0$
 $\Rightarrow (\sqrt{p} - \sqrt{r})^2 = 0$
 $\Rightarrow \sqrt{p} = \sqrt{r} \Rightarrow p = r \quad \dots(iii)$
 From Eq. (ii), we get
 $q^2 = r \cdot r = r^2 \Rightarrow q = r \quad \dots(iv)$
 Now, from Eqs. (iii) and (iv), we get
 $p = q = r$

62. (c) Given series is $1 - \frac{1}{2} + \frac{1}{4} - \frac{1}{8} + \dots$
 Since, it is a geometric progression.
 Here, first term, $a = 1$
 and common ratio, $r = -\frac{1}{2} < 1$
 \therefore Sum of first eight terms of the series,
 i.e. $S_8 = \frac{a(1-r^8)}{(1-r)}$
 $\left[\text{by formula, } S_n = \frac{a(1-r^n)}{1-r}, \text{ when } r < 1 \right]$
 $= \frac{1 \left[1 - \left(-\frac{1}{2}\right)^8 \right]}{1 - \left(-\frac{1}{2}\right)} = \frac{1 - \frac{1}{256}}{1 + \frac{1}{2}} = \frac{85}{128}$
63. (a) Let the angles of triangle be $a, a + d$ and $a + 2d$.
 Given, $a = 30^\circ$
 $\therefore a + a + d + a + 2d = 180^\circ$
 $\therefore 3a + 3d = 180^\circ$
 $\Rightarrow 3 \times 30^\circ + 3d = 180^\circ$
 $\Rightarrow 3d = 90^\circ \Rightarrow d = 30^\circ$
 \therefore Angles of triangle are $30^\circ, 60^\circ$ and 90° .
 Hence, the greatest angle $= 90^\circ = \frac{\pi}{2}$
- Sol. (Q. Nos. 64-65) Let the first term of an AP is a and common difference is d .
 Given, $S_{10} = 120$ and $S_{20} = 440$
 $\therefore S_n = \frac{n}{2}[2a + (n-1)d]$
 $\therefore S_{10} = \frac{10}{2}[2a + (10-1)d]$
 $\Rightarrow 120 = 5(2a + 9d)$
 $\Rightarrow 2a + 9d = 24 \quad \dots(i)$
 and $S_{20} = \frac{20}{2}[2a + (20-1)d]$
 $\Rightarrow 440 = 10(2a + 19d)$
 $\Rightarrow 2a + 19d = 44 \quad \dots(ii)$
 On solving Eq. (i) and Eq. (ii), we get
 $a = 3$ and $d = 2$
64. (b) 65. (b)
66. (a) Given that, $(n-3), (4n-2), (5n+1)$ are in AP.
 $\therefore (4n-2) - (n-3) = (5n+1) - (4n-2)$
 $\Rightarrow 3n+1 = n+3 \Rightarrow 3n-n = 3-1 \Rightarrow 2n = 2$
 $\therefore n = 1$
67. (b) Given pattern is

$$\begin{array}{ccccccc} 0 & 3 & 8 & 15 & 24 \\ \hline & 3 & 5 & 7 & 9 \end{array}$$

 \therefore Sixth term $= 24 + 11 = 35$
 and seventh term $= 35 + (11 + 2) = 48$
68. (c) Let a be the first term and d be the common difference of an AP.

Given, $S_5 = S_{10}$
 $\Rightarrow \frac{5}{2}(2a + 4d) = \frac{10}{2}(2a + 9d)$
 $\Rightarrow a + 2d = 2a + 9d \Rightarrow a + 7d = 0$
 $\therefore a = -7d$... (i)

Thus, the series is
 $-7d, -6d, -5d, -4d, -3d, \dots$
Hence, either the first term or the common difference is negative but not both.

69. (a)

70. (a) a, b, c, d are in AP.
 $\Rightarrow \frac{a}{abcd}, \frac{b}{abcd}, \frac{c}{abcd}, \frac{d}{abcd}$ are in AP.
 $\Rightarrow \frac{1}{bcd}, \frac{1}{acd}, \frac{1}{abd}, \frac{1}{abc}$ are in AP.
 $\Rightarrow bcd, acd, abd, abc$ are in HP.

71 (c) Given that,
sum of an infinite GP = $x \Rightarrow \frac{a}{1-r} = x$
 $\Rightarrow \frac{2}{1-r} = x$... (i)
 $[\because \text{given that, } a = 2 \text{ and } |r| < 1]$
 $\therefore |r| < 1 \Rightarrow -1 < r < 1$
 $\Rightarrow 1 > -r > -1 \Rightarrow 1 + 1 > 1 - r > 1 - 1$
 $\Rightarrow 0 < 1 - r < 2 \Rightarrow (1 - r) < 2$
 $\Rightarrow \frac{1}{1-r} > \frac{1}{2} \Rightarrow \frac{2}{1-r} > 1$
 $\Rightarrow x > 1$ [from Eq. (i)]
Hence, $x \in (1, \infty)$, i.e. $1 < x < \infty$.

72. (a)

73. (b) We have,
 $S_n = \text{Sum of first } n \text{ terms of an AP}$
 $\therefore S_n = \frac{n}{2}[2a + (n-1)d]$
Similarly, $S_{2n} = \frac{2n}{2}[2a + (2n-1)d]$
and $S_{3n} = \frac{3n}{2}[2a + (3n-1)d]$
Now, $3S_n = S_{2n}$
 $\Rightarrow 3\left(\frac{n}{2}\right)[2a + (n-1)d]$
 $= 2\left(\frac{2n}{2}\right)[2a + (2n-1)d]$
 $\Rightarrow 2a = d(n+1)$
 $\therefore S_n = \frac{n}{2}[d(n+1) + d(n-1)] = n^2 d$
 $\Rightarrow S_{2n} = n[d(n+1) + 2n-1] = 3n^2 d$
and $S_{3n} = \frac{3n}{2}[d(n+1) + 3n-1] = 6n^2 d$
 $\therefore \frac{S_{3n}}{S_n} = \frac{6n^2 d}{n^2 d} = 6:1$

74. (a) $\frac{S_{3n}}{S_{2n}} = \frac{6n^2 d}{3n^2 d} = 2:1$

75. (b) We have,
 $f(x) = ax^2 + bx + c$
 $f(1) = a + b + c$
and $f(-1) = a - b + c$
 $\therefore f(1) = f(-1)$
 $\Rightarrow a + b + c = a - b + c$
 $\Rightarrow b = 0$

76. (a) We have, $f'(x) = 2ax + b$
 $\therefore f'(a) = 2a^2, f'(b) = 2ab = 0$
and $f'(c) = 2ac$ [$\because b = 0$]
 $\therefore f'(a) = 2a^2, f'(b) = 0$
and $f'(c) = -2a^2$
 $[\because 2b = a + c \Rightarrow c = -a]$
Hence, $f'(a), f'(b)$ and $f'(c)$ are in AP.

77. (c) $f''(x) = 2a$
 $\therefore f''(a) = f''(b) = f''(c)$
Hence, $f''(a), f''(b)$ and $f''(c)$ are in both AP and GP.

78. (c)

79. (d) $0.5 + 0.55 + 0.555 + \dots n$ terms
 $= \frac{5}{10} + \frac{55}{100} + \frac{555}{1000} + \dots n$ terms
 $= \frac{5}{10} \left[1 + \frac{11}{10} + \frac{111}{100} + \dots n \text{ terms} \right]$
 $= \frac{5}{10} \times \frac{1}{9} \left[9 + \frac{99}{10} + \frac{999}{100} + \dots n \text{ terms} \right]$
 $= \frac{5}{90} \left[(10-1) + \frac{(10^2-1)}{10} \right.$
 $\left. + \frac{(10^3-1)}{10^2} + \dots n \text{ terms} \right]$
 $= \frac{5}{90} \left[10 + \frac{10^2}{10} + \frac{10^3}{10^2} + \dots n \text{ terms} \right]$
 $+ \frac{5}{90} \left[-1 - \frac{1}{10} - \frac{1}{10^2} - \frac{1}{10^3} \right.$
 $\left. - \dots n \text{ terms} \right]$
 $= \frac{5}{90} [10 + 10 + 10 + \dots n \text{ terms}]$
 $+ \frac{5}{90} (-1) \left[1 + \frac{1}{10} + \frac{1}{10^2} + \frac{1}{10^3} \right.$
 $\left. + \dots n \text{ terms} \right]$
 $= \frac{5}{90} \times 10n - \frac{5}{90} \left[\frac{1 - \left(\frac{1}{10}\right)^n}{1 - \frac{1}{10}} \right]$

$$= \frac{5n}{9} - \frac{5}{90} \times \frac{10}{9} \left[\frac{10^n - 1}{10^n} \right]$$

$$= \frac{5}{9} \left[n - \frac{1}{9} \left(1 - \frac{1}{10^n} \right) \right]$$

80. (b) $6^{\frac{1}{2}} \times 6^{\frac{1}{2}} \times 6^{\frac{3}{8}} \times 6^{\frac{1}{4}} \times \dots \infty$
 $= 6^{\frac{1}{2} + \frac{1}{2} + \frac{3}{8} + \frac{1}{4} + \dots \infty} = 6^{\frac{1}{2} \left(1 + \frac{2}{2} + \frac{3}{2^2} + \frac{4}{2^3} + \dots \right)}$
Let $S = 1 + \frac{2}{2} + \frac{3}{2^2} + \frac{4}{2^3} + \dots$, then

$$\frac{1}{2}S = \frac{1}{2} + \frac{2}{2^2} + \frac{3}{2^3} + \dots$$

$$\text{Now, } S - \frac{1}{2}S = 1 + \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \dots$$

$$\Rightarrow \frac{1}{2}S = \frac{1}{1 - \frac{1}{2}} = 2 \Rightarrow S = 4$$

$$\therefore 6^{\frac{1}{2}} \times 6^{\frac{1}{2}} \times 6^{\frac{3}{8}} \times 6^{\frac{1}{4}} \dots \infty$$

$$= 6^{\frac{1}{2} \times 4} = 36$$

81. (d) We have, $t_n = \frac{3+n}{4}$
 $\Rightarrow t_n = \frac{4 + (n-1)}{4} = 1 + (n-1) \frac{1}{4}$
 \therefore First term = 1, Common difference = $\frac{1}{4}$
 $\therefore S_{105} = \frac{105}{2} \left[2 + 104 \times \frac{1}{4} \right] = 1470$

82. (c) We have,
 $\sqrt{2} + 2\sqrt{2} + 3\sqrt{2} + 4\sqrt{2} + \dots n$ terms
 $= \sqrt{2} [1 + 2 + 3 + 4 + \dots n \text{ terms}]$
 $= \sqrt{2} \left[\frac{n(n+1)}{2} \right] = \frac{n(n+1)}{\sqrt{2}}$

83. (b)

Sol. (Q. Nos. 84-85)

Given, $\log_x y, \log_y x, \log_y z$ are in GP.
 $\Rightarrow (\log_x x)^2 = \log_x y \times \log_y z$
 $= \log_x z = \frac{1}{\log_x x}$

$$\Rightarrow (\log_x x)^3 = 1 \Rightarrow \log_x x = 1 \Rightarrow x = z$$

Now, x^3, y^3, z^3 are in AP.

$$\therefore 2y^3 = x^3 + z^3 \Rightarrow 2y^3 = z^3 + z^3$$

$$\Rightarrow y^3 = z^3 \Rightarrow y = z \quad [\because x = z]$$

$$\therefore x = y = z$$

$$\text{Also, } xyz = 64 \Rightarrow xyz = 4^3$$

$$\Rightarrow x = y = z = 4$$

84. (c) x, y, z are in both AP and GP.

85. (c) xy, yz and zx are in both AP and GP.

06

QUADRATIC EQUATIONS AND INEQUALITIES

In NDA exam, generally 4-6 questions are asked from this chapter which are based on nature of roots, finding roots in different conditions, find equation when roots are given and solving in equations etc.

When we equate quadratic polynomial of the form $(ax^2 + bx + c)$ equal to zero we get a quadratic equation, where a, b and c are real numbers and $a \neq 0$.

POLYNOMIAL AND POLYNOMIAL EQUATION

An expression of the form $a_0x^n + a_1x^{n-2} + \dots + a_{n-1}x + a_n$ where $a_0, a_1, a_2 \dots a_n$ are constant ($a \neq 0$) and n is a positive integer is called a polynomial in x of degree n .

If $f(x)$ is a real or complex polynomial, then $f(x)=0$ is known as a *polynomial equation*.
e.g. If $x^2 + 3x + 2$ is a real polynomial, then $x^2 + 3x + 2 = 0$ is a polynomial equation.

QUADRATIC EQUATION

If $f(x)$ is a polynomial of degree 2, then $f(x)=0$ is called a quadratic equation. The general form of a quadratic equation is $ax^2 + bx + c = 0$, where a, b and c are real numbers and $a \neq 0$. Here, x is the variable and a, b, c are the real coefficients.

Roots of a Quadratic Equation

The values of the variable satisfying the given quadratic equation are called roots of that equation. In other words, $x = \alpha$ is a root of the equation, $f(x)=0$, if $f(\alpha)=0$.

The set of all roots of an equation, in a given domain, is called the solution set of the equation. The quadratic equation $ax^2 + bx + c = 0$, where $a, b, c \in R$ and $a \neq 0$ has two roots, namely

$$\alpha = \frac{-b + \sqrt{D}}{2a} \text{ and } \beta = \frac{-b - \sqrt{D}}{2a}$$

where, $D = b^2 - 4ac$ is called the discriminant.

Note If one of the root of the quadratic equation is $a + ib$ or $a + \sqrt{b}$, then the other root will be $a - ib$ or $a - \sqrt{b}$.

EXAMPLE 1. If $x^2 + x - 6$ is a factor of polynomial $x^3 + Px^2 + Q$ then the values of P and Q are respectively

- a. 8 and 17 b. 7 and -36 c. -9 and 4 d. -5 and 14

Sol. b. Let $P(x) = x^3 + Px^2 + Q$

Since, $x^2 + x - 6$ is a factor of $P(x)$.

\therefore Roots of $x^2 + x - 6 = 0$ satisfy the equation $P(x) = 0$.

Now, $x^2 + x - 6 = 0$

$\Rightarrow x^2 + 3x - 2x - 6 = 0$

$\Rightarrow (x + 3)(x - 2) = 0$

$\Rightarrow x = -3, 2$

$\therefore P(-3) = 0 \Rightarrow -27 + 9P + Q = 0 \dots(i)$

and $P(2) = 0 \Rightarrow 8 + 4P + Q = 0 \dots(ii)$

On solving Eqs. (i) and (ii), we get $P = 7$ and $Q = -36$

Nature of the Roots of a Quadratic Equation

Let the quadratic equation be $ax^2 + bx + c = 0$, $a, b, c \in R$ and $a \neq 0$. The nature of the roots of a quadratic equation is decided by discriminant (i.e. $D = b^2 - 4ac$)

- (i) If $b^2 - 4ac > 0$, then the quadratic equation has two real and distinct roots.
 (ii) If $b^2 - 4ac = 0$, then the quadratic equation has two equal roots i.e. $\alpha = \beta = \frac{-b}{2a}$.
 (iii) If $b^2 - 4ac < 0$, then the quadratic equation has two distinct complex roots, namely

$$\alpha = \frac{-b + i\sqrt{4ac - b^2}}{2a} \text{ and } \beta = \frac{-b - i\sqrt{4ac - b^2}}{2a}$$

- (iv) If $a, b, c \in Q$ and D is a perfect square, then equation has rational roots.
 (v) The roots are of the form $p + \sqrt{q}$ ($p, q \in Q$) iff a, b, c are rational and D is not a perfect square.

SOME IMPORTANT POINTS

- (i) If the **roots** of $ax^2 + bx + c = 0$ are **both positives**, then the signs of a and c should be a like and opposite to the sign as b .
 (ii) If the **roots** of $ax^2 + bx + c = 0$ are of **opposite signs**, then the sign of a is opposite to the sign of c .
 (iii) If the **roots** of $ax^2 + bx + c = 0$ are **equal in magnitude**, but opposite in sign, then $b = 0$.
 (iv) If the **roots** of $ax^2 + bx + c = 0$ are **reciprocal** of each other, then $c = a$.
 (v) If roots are negative, then a, b, c are of same sign.
 (vi) The condition that the roots of the equation $ax^2 + bx + c = 0$ may be in the ratio $m : n$ is $mnb^2 = ac(m + n)$.

EXAMPLE 2. If the equation

$$(3x)^2 + (27 \times 3^{1/p} - 15)x + 4 = 0$$

has equal roots, then p is equal to

- a. 0 b. 2 c. $-\frac{1}{2}$ d. None of these

Sol. c. The given equation will have equal roots iff discriminant = 0

$$\Rightarrow (27 \times 3^{1/p} - 15)^2 - 4 \times 9 \times 4 = 0 \quad [\because D = b^2 - 4ac]$$

$$\Rightarrow (27 \times 3^{1/p} - 15)^2 - 144 = 0$$

$$\Rightarrow (27 \times 3^{1/p} - 15)^2 = 144 \Rightarrow 27 \times 3^{1/p} - 15 = \pm 12$$

$$\Rightarrow 27 \times 3^{1/p} = 27 \quad \text{or} \quad 27 \times 3^{1/p} = 3$$

$$\Rightarrow 3^{1/p} = 1 \quad \text{or} \quad 3^{1/p} = \frac{1}{9} = 3^{-2} \Rightarrow \frac{1}{p} = 0 \quad \text{or} \quad \frac{1}{p} = -2$$

But, $\frac{1}{p}$ cannot be zero. So, $p = -\frac{1}{2}$

Relation between Roots and Coefficients

1. **Quadratic equation** Consider the quadratic equation

$$ax^2 + bx + c = 0, \text{ where } a, b, c \in R \text{ and } a \neq 0$$

If α and β are the roots of the equation, then

$$\text{Sum of roots, } \alpha + \beta = \frac{-b}{a} = \frac{-\text{Coefficient of } x}{\text{Coefficient of } x^2}$$

$$\text{and product of roots, } \alpha\beta = \frac{c}{a} = \frac{\text{Constant term}}{\text{Coefficient of } x^2}$$

2. **Cubic equation** If α, β, γ are the roots of the cubic equation $ax^3 + bx^2 + cx + d = 0$, $a \neq 0$, then

$$\text{Sum of roots, } \alpha + \beta + \gamma = -b/a$$

$$\text{Sum of product of two roots, } \alpha\beta + \beta\gamma + \gamma\alpha = c/a \text{ and}$$

$$\text{Product of three roots, } \alpha\beta\gamma = -d/a$$

EXAMPLE 3. If the roots of the equation

$$4\beta^2 + \lambda\beta - 2 = 0 \text{ are of the form } \frac{k}{k+1} \text{ and } \frac{k+1}{k+2}, \text{ then}$$

what is the value of λ ?

- a. $2k$ b. 7 c. 2 d. $k+1$

Sol. b. Let $\frac{k}{k+1}$ and $\frac{k+1}{k+2}$ be the roots of the equation

$$4\beta^2 + \lambda\beta - 2 = 0, \text{ then } \frac{k}{k+1} + \frac{k+1}{k+2} = -\frac{\lambda}{4} \quad \dots(i)$$

$$\text{and } \frac{k}{k+1} \times \frac{k+1}{k+2} = -\frac{2}{4}$$

$$\Rightarrow \frac{k}{k+2} = -\frac{1}{2} \Rightarrow 2k = -k - 2$$

$$\therefore k = -\frac{2}{3}$$

On putting the value of k in Eq. (i), we get

$$\frac{-\frac{2}{3}}{-\frac{2}{3}+1} + \frac{-\frac{2}{3}+1}{-\frac{2}{3}+2} = -\frac{\lambda}{4} \Rightarrow \frac{-\frac{2}{3}}{\frac{1}{3}} + \frac{\frac{1}{3}}{\frac{4}{3}} = -\frac{\lambda}{4}$$

$$\Rightarrow -2 + \frac{1}{4} = -\frac{\lambda}{4} \Rightarrow \lambda = 7$$

Formation of a Quadratic Equation from Given Roots

If α, β are the roots of a quadratic equation, then the equation is

$$x^2 - (\text{sum of the roots})x + (\text{product of roots}) = 0$$

i.e. $x^2 - (\alpha + \beta)x + \alpha\beta = 0$

Note If α, β, γ are the roots of a cubic equation, then the equation is $x^3 - (\alpha + \beta + \gamma)x^2 + (\alpha\beta + \beta\gamma + \gamma\alpha)x - \alpha\beta\gamma = 0$.

Equations in Terms of the Roots of Another Equation

If α, β are the roots of the equation $ax^2 + bx + c = 0$, then

(i) $\alpha \pm h, \beta \pm h$ are the roots of the equation

$$a(x \mp h)^2 + b(x \mp h) + c = 0$$

(ii) $\alpha h, \beta h$ are the roots of the equation

$$ax^2 + bhx + h^2c = 0$$

(iii) $\frac{\alpha}{h}$ and $\frac{\beta}{h}$ are the roots of the equation

$$ah^2x^2 + bhx + c = 0$$

(iv) $-\alpha, -\beta$ are the roots of the equation $ax^2 - bx + c = 0$.

(v) $\frac{1}{\alpha}, \frac{1}{\beta}$ are the roots of the equation $cx^2 + bx + a = 0$.

EXAMPLE 4. If α, β are roots of $x^2 - 3x + 1 = 0$, then

the equation whose roots are $\frac{1}{\alpha-2}, \frac{1}{\beta-2}$ is

a. $x^2 + x - 1 = 0$

b. $x^2 - x - 1 = 0$

c. $x^2 + x + 1 = 0$

d. None of these

Sol. b. α, β are the roots of the equation $x^2 - 3x + 1 = 0$, then $\alpha + \beta = 3$ and $\alpha\beta = 1$.

$$S = \frac{1}{\alpha-2} + \frac{1}{\beta-2} = \frac{\alpha + \beta - 4}{\alpha\beta - 2(\alpha + \beta) + 4} = \frac{3-4}{1-2(3)+4} = 1$$

$$\text{and } p = \frac{1}{(\alpha-2)(\beta-2)} = \frac{1}{\alpha\beta - 2(\alpha + \beta) + 4} = 1$$

Hence, the equation whose roots are $\frac{1}{\alpha-2}$

and $\frac{1}{\beta-2}$ is $x^2 - Sx + p = 0$, i.e. $x^2 - x - 1 = 0$

Method to Find Common Root

To find the common root of two equations, make the coefficient of second degree terms in two equations equal and subtract. The value of x , so obtained is the required common root.

Condition for Common Roots

When only one root is common If α is common root of the equations

$$a_1x^2 + b_1x + c_1 = 0 \quad \dots(i)$$

and $a_2x^2 + b_2x + c_2 = 0 \quad \dots(ii)$

Then, the required condition for one common root is

$$(a_1b_2 - a_2b_1)(b_1c_2 - b_2c_1) = (c_1a_2 - c_2a_1)^2$$

and the value of the common root is

$$\alpha = \frac{c_1a_2 - c_2a_1}{a_1b_2 - a_2b_1} \text{ or } \frac{b_1c_2 - b_2c_1}{c_1a_2 - c_2a_1}$$

When both roots are common If the Eqs. (i) and (ii) have both roots common, then these equations will be identical. Thus, the required condition for both roots common is

$$\frac{a_1}{a_2} = \frac{b_1}{b_2} = \frac{c_1}{c_2}$$

Note If two quadratic equations with real coefficients have an imaginary root common, then both roots will be common.

EXAMPLE 5. If $x^2 - ax + b = 0$ and $x^2 - px + q = 0$ have a root in common and the second equation has equal roots, then

$$\text{a. } b + q = \frac{ap}{2} \quad \text{b. } b + q = ap \quad \text{c. } b + q = 2ap \quad \text{d. } b + q = \frac{ap}{4}$$

Sol. a. Given equations are $x^2 - ax + b = 0 \quad \dots(i)$

and $x^2 - px + q = 0 \quad \dots(ii)$

Let α be the common root. Then, roots, of Eq. (ii) will be α and α .

Let β be the other root of Eq. (i), then

$$\alpha + \beta = a, \quad \alpha\beta = b$$

From Eq. (ii), $\alpha + \alpha = 2\alpha = p$ and $\alpha^2 = q$

Now, $b + q = \alpha\beta + \alpha^2 = \alpha(\alpha + \beta) = \frac{p}{2} \times a = \frac{ap}{2}$

Symmetric Function of Roots of a Quadratic Equation

Let α and β be the roots of a quadratic equation. An expression in α and β which remains same when α and β are interchanged, is known as a symmetric function in α and β , then

- (i) $\alpha^2 + \beta^2 = (\alpha + \beta)^2 - 2\alpha\beta$
(ii) $(\alpha - \beta)^2 = (\alpha + \beta)^2 - 4\alpha\beta$
(iii) $\alpha^2 - \beta^2 = (\alpha - \beta)(\alpha + \beta) = (\alpha + \beta)\sqrt{(\alpha + \beta)^2 - 4\alpha\beta}$
(iv) $\alpha^3 + \beta^3 = (\alpha + \beta)^3 - 3\alpha\beta(\alpha + \beta)$
(v) $\alpha^3 - \beta^3 = (\alpha - \beta)^3 + 3\alpha\beta(\alpha - \beta)$
 $= (\alpha - \beta)(\alpha^2 + \alpha\beta + \beta^2)$
(vi) $\alpha^4 + \beta^4 = (\alpha^2 + \beta^2)^2 - 2\alpha^2\beta^2$
(vii) $\alpha^4 - \beta^4 = (\alpha + \beta)(\alpha - \beta)(\alpha^2 + \beta^2)$
 $= (\alpha + \beta)(\alpha - \beta)[(\alpha + \beta)^2 - 2\alpha\beta]$

EXAMPLE 6. If α and β are the roots of $ax^2 + 2bx + c = 0$, then $\frac{x}{\beta} + \frac{\beta}{\alpha}$ is equal to

a. $\frac{4b^2 - 2ac}{ac}$ b. $\frac{4b^2 - 4ac}{ac}$ c. $\frac{2b^2 - 2ac}{ac}$ d. $\frac{2b^2 - 4ac}{ac}$

Sol. a. α, β are the roots of equation $ax^2 + 2bx + c = 0$

$$\alpha + \beta = \frac{-2b}{a} \text{ and } \alpha\beta = \frac{c}{a}$$

$$\therefore \frac{\alpha}{\beta} + \frac{\beta}{\alpha} = \frac{\alpha^2 + \beta^2}{\alpha\beta} = \frac{(\alpha + \beta)^2 - 2\alpha\beta}{\alpha\beta}$$

$$\Rightarrow \frac{\alpha}{\beta} + \frac{\beta}{\alpha} = \frac{(4b^2/a^2) - 2c/a}{c/a} = \frac{4b^2 - 2ac}{ac}$$

Maximum and Minimum Value of $ax^2 + bx + c$

$$\therefore ax^2 + bx + c = a \left(x + \frac{b}{2a} \right)^2 + \left(\frac{4ac - b^2}{4a} \right)$$

Case I If $a > 0$

Then, minimum value of $ax^2 + bx + c$ is $\frac{4ac - b^2}{4a}$

and this value occurs when $x = -\frac{b}{2a}$. There is no maximum value when $a > 0$.

Case II If $a < 0$

Then, maximum value of $ax^2 + bx + c$ is $\frac{4ac - b^2}{4a}$

and this value occurs when $x = -\frac{b}{2a}$. There is no minimum value when $a < 0$.

Method to Solve Fractional Quadratic Polynomial

Consider the fractional quadratic polynomial be

$$\frac{a_1x^2 + b_1x + c_1}{a_2x^2 + b_2x + c_2}$$

Use following steps to solve it.

Step I Equate the given expression to y .

Step II Obtain quadratic equation in x by simplifying the expression in step I.

Step III Put discriminant ≥ 0 of the equation which we get in step II.

Step IV The values of y obtained by $D \geq 0$ is the solution set for the given rational expression.

EXAMPLE 7. The expression $\frac{x^2 - 3x + 4}{x^2 + 3x + 4}$ lies between

a. $\frac{1}{7}$ and 7 b. $\frac{1}{8}$ and 8 c. $\frac{1}{5}$ and 5 d. $\frac{1}{9}$ and 9

Sol. a. Let $y = \frac{x^2 - 3x + 4}{x^2 + 3x + 4}$

$$\Rightarrow x^2(y - 1) + 3x(y + 1) + 4(y - 1) = 0$$

Since, x is real.

$$\therefore D \geq 0 \Rightarrow 9(y + 1)^2 - 16(y - 1)^2 \geq 0$$

$$\Rightarrow -7y^2 + 50y - 7 \geq 0 \Rightarrow 7y^2 - 50y + 7 \leq 0$$

$$\Rightarrow (7y - 1)(y - 7) \leq 0$$

$$\Rightarrow \frac{1}{7} \leq y \leq 7$$

INEQUATIONS

A statement involving one or more variables and sign of inequality $>, <, \geq,$ or \leq , is called an inequation.

Note For any real number a

- $|x| \leq a \Leftrightarrow -a \leq x \leq a$
- $|x| \geq a \Leftrightarrow -x \leq -a$ or $x \geq a$

Solution of Quadratic Inequations

Let $f(x) = ax^2 + bx + c$, where $a, b, c \in R$ and $a \neq 0$.

Then, $f(x) \geq 0, f(x) > 0, f(x) \leq 0, f(x) < 0$ are called *quadratic inequations*.

The set of real values of x , which satisfy the inequation, is called the *solution set*.

Solution of Linear Inequations in Two Variables

In order to represent the solution set of linear inequation in two variables, we follow the following steps

Step I Convert the given inequation say $ax + by \leq c$ into the equation $ax + by = c$ and draw the graph.

Step II Choose a point not lying on this line $ax + by = c$ substitute its coordinates in the inequation. If the inequation is satisfied, then shade the portion of the plane which contains the chosen point, otherwise shade the portion which does not contain the chosen point.

Step III The shaded region obtained in step II represent the desired solution set.

EXAMPLE 8. The number of positive integral solutions satisfying the inequation $2x + 3y \leq 6$ is

- a. 2 b. 4 c. 6 d. 5

Sol. c. To represent the solution set of the inequation

$2x + 3y \leq 6$, we first draw the line $2x + 3y = 6$.
Let us take a point $(0,0)$.

Clearly, $(0, 0)$ satisfy the given inequation, so the region containing the origin is represented in the figure.

Now, $(1, 1), (2, 0), (3, 0), (0, 1), (0, 2)$ are positive integral solutions of $2x + 3y \leq 6$.

\therefore Number of positive integral solutions = 6

> PRACTICE EXERCISE

- If $x^2 - 2x + \sin^2 \theta = 0$, then x belongs to
(a) $[-1, 1]$ (b) $[0, 2]$ (c) $[-2, 2]$ (d) $[1, 2]$
- If p and q are non-zero constants, the equation $x^2 + px + q = 0$ has roots α and β , then the equation $qx^2 + px + 1 = 0$ has roots
(a) α and $\frac{1}{\beta}$ (b) $\frac{1}{\alpha}$ and β
(c) $\frac{1}{\alpha}$ and $\frac{1}{\beta}$ (d) None of these
- If one root is n times the other root of quadratic equation $ax^2 - bx + c = 0$, then
(a) $na^2 = bc(n+1)^2$ (b) $nb^2 = ca(n+1)^2$
(c) $nc^2 = ab(n+1)^2$ (d) None of these
- The value of k for which one of the roots of $x^2 - x + 3k = 0$ is double of one of the roots of $x^2 - x + k = 0$ is
(a) 1 (b) -2 (c) 2 (d) None of these
- If the roots of $ax^2 + bx + c = 0$ are in the ratio $m : n$, then
(a) $mna^2 = (m+n)c^2$ (b) $mnb^2 = (m+n)ac$
(c) $mnb^2 = (m+n)^2ac$ (d) None of these
- If $2^{2x} - 2^{x-1} = 14$, then x^x is equal to
(a) 1 (b) 2 (c) 256 (d) 4
- If α and β are the roots of the equation $ax^2 + bx + c = 0$, then the equation whose roots are $\frac{1}{\alpha + \beta}, \frac{1}{\alpha} + \frac{1}{\beta}$ is equal to
(a) $acx^2 + (a^2 + bc)x + bc = 0$
(b) $bcx^2 + (b^2 + ac)x + ab = 0$
(c) $abx^2 + (c^2 + ab)x + ca = 0$
(d) None of the above
- If the roots of the equation $ax^2 + bx + c = 0$ are of the form $\frac{k+1}{k}$ and $\frac{k+2}{k+1}$, then $(a+b+c)^2$ is equal to
(a) $b^2 - 4ac$ (b) $b^2 - 2ac$
(c) $2b^2 - ac$ (d) Σa^2
- If the roots of the equation, $x^2 + 2ax + b = 0$ are real and distinct and they differ by at most $2m$, then b lies in the interval
(a) $(a^2 - m^2, a^2)$ (b) $[a^2 - m^2, a^2)$
(c) $(a^2, a^2 + m^2)$ (d) None of these
- If a, b and $c \in R$ and $a + b + c = 0$, then the quadratic equation $4ax^2 + 3bx + 2c = 0$ has
(a) one positive and one negative root
(b) imaginary roots
(c) real roots
(d) None of the above
- If one of the roots of the equation $a(b-c)x^2 + b(c-a)x + c(a-b) = 0$ is 1, then what is the second root?
(a) $-\frac{b(c-a)}{a(b-c)}$ (b) $\frac{b(c-a)}{a(b-c)}$
(c) $\frac{c(a-b)}{a(b-c)}$ (d) $-\frac{c(a-b)}{a(b-c)}$

- 12.** The coefficient of x in the equation $x^2 + px + q = 0$ was taken as 17 in place of 13 and its roots were found to be -2 and -15 . The roots of the original equation are
 (a) $-2, 15$ (b) $-10, -3$ (c) $2, 15$ (d) $10, 3$
- 13.** Let α, β be the roots of the equation $x^2 - 3x + p = 0$ and let γ, δ be the roots of the equation $x^2 - 12x + q = 0$. If the numbers $\alpha, \beta, \gamma, \delta$ (in order) form an increasing GP, then
 (a) $p = 2, q = 16$ (b) $p = 2, q = 32$
 (c) $p = 4, q = 16$ (d) $p = 4, q = 32$
- 14.** If α and β be the roots of the equation $(x - a)(x - b) = c$, $c \neq 0$. Then, the roots of the equation $(x - \alpha)(x - \beta) + c = 0$ are
 (a) a, c (b) b, c (c) a, b (d) $a + b, a + c$
- 15.** If one root of the equation $ax^2 + bx + c = 0$, $a \neq 0$ is reciprocal of the other root, then which one of the following is correct?
 (a) $a = c$ (b) $b = c$ (c) $a = -c$ (d) $b = 0$
- 16.** If p, q, r are rational numbers, then the roots of the equation $x^2 - 2px + p^2 - q^2 + 2qr - r^2 = 0$ are
 (a) complex (b) pure imaginary
 (c) irrational (d) rational
- 17.** If the roots of the equation $(a^2 + b^2)x^2 - 2b(a + c)x + (b^2 + c^2) = 0$ are equal, then which one of the following is correct?
 (a) $2b = a + c$ (b) $b^2 = ac$
 (c) $b + c = 2a$ (d) $b = ac$
- 18.** Consider the equation $(x - p)(x - 6) + 1 = 0$ having integral coefficients. If the equation has integral roots, then what values can p have?
 (a) 4 or 8 (b) 5 or 10
 (c) 6 or 12 (d) 3 or 6
- 19.** If α and β be the roots of the equation $x^2 + x + 1 = 0$. Then, the equation whose roots are α^{19} and β^7 is
 (a) $x^2 - x - 1 = 0$ (b) $x^2 - x + 1 = 0$
 (c) $x^2 + x - 1 = 0$ (d) $x^2 + x + 1 = 0$
- 20.** The equation $\tan^4 x - 2 \sec^2 x + a^2 = 0$ will have atleast one real solution, if
 (a) $|a| \leq 4$ (b) $|a| \leq 2$
 (c) $|a| \leq \sqrt{3}$ (d) None of these
- 21.** If α, β are the roots of the quadratic equation $x^2 - x + 1 = 0$, then which one of the following is correct?
 (a) $(\alpha^4 - \beta^4)$ is real (b) $2(\alpha^5 + \beta^5) = (\alpha\beta)^5$
 (c) $(\alpha^6 - \beta^6) = 0$ (d) $(\alpha^8 + \beta^8) = (\alpha\beta)^8$
- 22.** If the roots of $ax^2 + bx + c = 0$ are $\sin \alpha$ and $\cos \alpha$ for some α , then which one of the following is correct?
 (a) $a^2 + b^2 = 2ac$ (b) $b^2 - c^2 = 2ab$
 (c) $b^2 - a^2 = 2ac$ (d) $b^2 + c^2 = 2ab$
- 23.** If $(x + a)$ is a factor of both the quadratic polynomials $x^2 + px + q$ and $x^2 + lx + m$, where p, q, l and m are constants, then which one of the following is correct?
 (a) $a = (m - q)/(l - p)$ ($l \neq p$)
 (b) $a = (m + q)/(l + p)$ ($l \neq -p$)
 (c) $l = (m - q)/(a - p)$ ($a \neq p$)
 (d) $p = (m - q)/(a - l)$ ($a \neq l$)
- 24.** Let α and γ be the roots of $Ax^2 - 4x + 1 = 0$ and β and δ be the roots of $Bx^2 - 6x + 1 = 0$. If α, β, γ and δ are in HP, then what are the values of A and B respectively?
 (a) 3, 8 (b) $-3, -8$ (c) 3, -8 (d) $-3, 8$
- 25.** If the roots of the equation $\frac{1}{x + p} + \frac{1}{x + q} = \frac{1}{r}$ are equal in magnitude but opposite in sign, then $p + q$ is equal to
 (a) r (b) $2r$ (c) r^2 (d) $\frac{2}{r}$
- 26.** If $a, b \in R$, then the equation $x^2 - abx - a^2 = 0$ has
 (a) one positive and one negative root
 (b) both positive roots
 (c) both negative roots
 (d) non-real roots
- 27.** The number of real solutions of $1 + |e^x - 1| = e^x(e^x - 2)$ is
 (a) 0 (b) 1 (c) 2 (d) 4
- 28.** The product of the roots of the equation $(x - 2)^2 - 3|x - 2| + 2 = 0$ is
 (a) 2 (b) -4 (c) 0 (d) None of these
- 29.** If x is real, then the values of $\frac{x^2 + 34x - 71}{x^2 + 2x - 7}$ does not lie in the interval
 (a) $[5, 9]$ (b) $(-\infty, 5]$ (c) $[9, \infty)$ (d) $(5, 9)$
- 30.** If the equations $x^2 + 2x + 3\lambda = 0$ and $2x^2 + 3x + 5\lambda = 0$ have a non-zero common root, then λ is equal to
 (a) 1 (b) -1 (c) 3 (d) None of these
- 31.** If the equations $ax^2 + bx + c = 0$ and $x^2 + x + 1 = 0$ have common root, then
 (a) $a + b + c = 0$ (b) $a = b = c$
 (c) $a = b$ or $b = c$ or $c = a$ (d) None of these

- 32.** If the quadratic equations $ax^2 + 2cx + b = 0$ and $ax^2 + 2bx + c = 0$ ($b \neq c$) have a common root, then $a + 4b + 4c$ is equal to
 (a) -2 (b) -1 (c) 0 (d) 1
- 33.** The range of values of m for which the equation $(m - 5)x^2 + 2(m - 10)x + m + 10 = 0$ has real roots of the same sign is given by
 (a) $m > 10$ (b) $-5 < m < 5$
 (c) $m < -10, 5 < m \leq 6$ (d) None of these
- 34.** The set of real values of x satisfying the inequality $|x^2 + x - 6| < 6$ is
 (a) $(-4, 3)$ (b) $(-3, 2)$
 (c) $(-4, -3) \cup (2, 3)$ (d) $(-4, -1) \cup (0, 3)$
- 35.** The value of 'a' for which the equation $x^2 - 2(a - 1)x + (2a + 1) = 0$ has both roots positive is
 (a) $a > 0$ (b) $0 < a < 4$ (c) $a \geq 4$ (d) None of these
- 36.** If the roots of the equation $x^2 - 4x - \log_3 N = 0$ are real, then what is the minimum value of N ?
 (a) $\frac{1}{256}$ (b) $\frac{1}{27}$ (c) $\frac{1}{64}$ (d) $\frac{1}{81}$
- 37.** If a, b and c are positive and are in AP, the roots of the quadratic equation $ax^2 + bx + c = 0$ are real for
 (a) $\left| \frac{c}{a} - 7 \right| \geq 4\sqrt{3}$ (b) $\left| \frac{a}{c} - 7 \right| < 4\sqrt{3}$
 (c) all a and c (d) no a and c
- 38.** If the roots of equation $x^2 - px + (p - 1) = 0$ are r_1 and r_2 , then minimum value of $(r_1^2 + r_2^2)$ will be for
 (a) $p = 0$ (b) $p = -1$ (c) $p = 1$ (d) $p = 2$
- 39.** If α, β are roots of the equation $2x^2 + 6x + b = 0$ ($b < 0$), then $\frac{\alpha}{\beta} + \frac{\beta}{\alpha}$ is greater than
 (a) 0 (b) 1 (c) 2 (d) None of these
- 40.** Let α, β be the roots of $a(p + x)^2 + 2bpx + c = 0$, then consider the following statements
 I. $\alpha\beta = p^2 + \frac{c}{a}$ II. $|\alpha - \beta| = \frac{2}{|a|} \sqrt{p^2 - 4ac}$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 41.** α, β are the roots of the equation $x^2 + bx + c = 0$ and $S_n = \alpha^n + \beta^n$.
 Consider the following statements
 I. $S_{n+1} + bS_n + cS_{n-1} = 0$ II. $S_3 = S_1^3 - 3S_1c$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

- 42.** If $\tan A$ and $\tan B$ are the roots of the quadratic equation $x^2 - px + q = 0$, then consider the following statements.
 I. The value of $\tan(A + B)$ is $\frac{p}{1 + q}$.
 II. The value of $(\cot A + \cot B)$ is $\frac{p}{q}$.
 III. Discriminant of the equation is $(\tan A - \tan B)^2$.
 Which of the above statement(s) is/are correct?
 (a) I and II (b) II and III (c) I and III (d) I, II and III
- 43.** If the equation $x^2 - px - q = 0$ has roots u and v , where p and q are non-zero constants, then consider the following statements
 I. $qx^2 + px - 1 = 0$ has roots $\frac{1}{u}$ and $\frac{1}{v}$.
 II. $(x - p)(x + q) = 0$ has roots $u + v$ and uv .
 III. $x^2 + p^2x + q^2 = 0$ has roots u^2 and v^2 .
 Which of the above statement(s) is/are correct?
 (a) I and II (b) II and III (c) I and III (d) I, II and III
- Directions** (Q. Nos. 44-45) α and β are the roots of quadratic equation $x^2 + x\sqrt{\alpha} + \beta = 0$. Considering this statement answer the following questions.
- 44.** The value of α and β is
 (a) $\alpha = 1, \beta = -1$ (b) $\alpha = 1, \beta = -2$
 (c) $\alpha = 2, \beta = 1$ (d) $\alpha = 2, \beta = -2$
- 45.** The quadratic equation having roots $\alpha + 1$ and $\beta + 1$ is
 (a) $x^2 - x + 2 = 0$ (b) $x^2 - x - 2 = 0$
 (c) $x^2 + x + 2 = 0$ (d) $x^2 + x - 2 = 0$
- Directions** (Q. Nos. 46-47) Let the quadratic equation $(ab - bc)x^2 + (bc - ca)x + (ca - ab) = 0$, $a, b, c \in R$ has both the roots equal.
- 46.** a, c, b are in
 (a) AP (b) GP (c) HP (d) None of these
- 47.** The roots of the equation are equal to
 (a) -1 (b) 1 (c) 2 (d) $\frac{1}{2}$
- Directions** (Q. Nos. 48-49) Let α, β be the roots of the equation $ax^2 + bx + c = 0$ such that $\alpha > \beta$.
- 48.** If both roots are positive, then
 (a) $a > 0$ and $b > 0$ (b) $a > 0$ and $b < 0$
 (c) $a > 0$ and $c < 0$ (d) $a < 0$ and $c > 0$
- 49.** If α is positive and β is negative such that $\alpha > |\beta|$, then consider the following statements
 I. c and a have opposite sign.
 II. b and a have same sign.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

Directions (Q. Nos. 50-52) Let a, b and c be real numbers with $a \neq 0$ and let α, β be the roots of the equation $ax^2 + bx + c = 0$.

- 50.** The roots of the equation $a^3x^2 + abcx + c^3 = 0$ is
(a) $\alpha^2\beta, \beta^2\alpha$ (b) α, β^2
(c) $\alpha^2\beta, \beta\alpha$ (d) $\alpha^3\beta, \beta^3\alpha$
- 51.** If $\alpha = \sin\theta, \beta = \cos\theta$, then
(a) $(a-c)^2 = b^2 - c^2$ (b) $(a-c)^2 = b^2 + c^2$
(c) $(a+c)^2 = b^2 - c^2$ (d) $(a+c)^2 = b^2 + c^2$

- 52.** The equation, whose roots are $\frac{1}{\alpha\alpha + b}$ and $\frac{1}{\alpha\beta + b}$ is
(a) $cax^2 - bx + 1 = 0$ (b) $cax^2 + bx + 1 = 0$
(c) $cax^2 + bx - 1 = 0$ (d) None of these

Directions (Q. Nos. 53-56) Let α and β are the roots of the equation $x^2 + x + 1 = 0$.

- 53.** The roots of the equation $x^2 - x + 1 = 0$ is
(a) α^7 and β^{13} (b) α^{13} and β^7
(c) α^{20} and β^{20} (d) None of these
- 54.** If the ratio of the roots of the equation $ax^2 + bx + c = 0$ is equal to $\frac{\alpha}{\beta}$, then a, b, c are in
(a) AP (b) GP
(c) HP (d) None of these
- 55.** The quadratic equation whose roots are $(\alpha + 1)$ and $(\beta + 1)$ is
(a) $x^2 + x + 1 = 0$ (b) $x^2 - x - 1 = 0$
(c) $x^2 - x + 1 = 0$ (d) $x^2 + x - 1 = 0$
- 56.** The value of a and b for which the equation $(a + b)x^2 - ax + 1 = 0$ has roots α^2 and β^2 , are
(a) $-1, 2$ (b) $-2, 3$ (c) $\frac{1}{2}, -2$ (d) None of these

Directions (Q. Nos. 57-60) Let α, β be the roots of the quadratic equation $x^2 + px + q = 0$.

- 57.** If one root is square of the other root, then relation between p and q is
(a) $p^3 - (3p - 1)q + q^2 = 0$
(b) $p^3 - q(3p + 1) + q^2 = 0$
(c) $p^3 + q(3p - 1) + q^2 = 0$
(d) $p^3 + q(3p + 1) + q^2 = 0$
- 58.** If $\alpha\beta = 3$ and $1, p, q$ are in AP, then $\alpha + \beta$ is equal to
(a) -4 (b) 1
(c) 4 (d) -2

- 59.** The value of $\tan^{-1}\alpha + \tan^{-1}\beta$ is

- (a) $\tan^{-1}\left(\frac{p}{q-1}\right)$ (b) $\tan^{-1}\left(\frac{p}{q+1}\right)$
(c) $\tan^{-1}\left(\frac{p}{1-q}\right)$ (d) 0

- 60.** If $\alpha = p$ and $\beta = q$ and $p, q \neq 0$ then the values of p and q are respectively
(a) 2 and -2 (b) 2 and -1 (c) 1 and -2 (d) 1 and 2

PREVIOUS YEARS' QUESTIONS

- 61.** What is the sum of the squares of the roots of the equation $x^2 + 2x - 143 = 0$? **2012 I**
(a) 170 (b) 180 (c) 190 (d) 290
- 62.** If one of the roots of the equation $x^2 + ax - b = 0$ is 1, then what is the value of $(a - b)$? **2012 I**
(a) -1 (b) 1 (c) 2 (d) -2
- 63.** If α and β are the roots of the equation $x^2 - q(1 + x) - r = 0$, then what is the value of $(1 + \alpha)(1 + \beta)$? **2012 I**
(a) $1 - r$ (b) $q - r$ (c) $1 + r$ (d) $q + r$
- 64.** If the difference between the roots of $ax^2 + bx + c = 0$ is 1, then which one of the following is correct? **2012 I**
(a) $b^2 = a(a + 4c)$ (b) $a^2 = b(b + 4c)$
(c) $a^2 = c(a + 4c)$ (d) $b^2 = a(b + 4c)$

Directions (Q. Nos. 65-66) The equation formed by multiplying each root of $ax^2 + bx + c = 0$ by 2 is $x^2 + 36x + 24 = 0$. **2012 I**

- 65.** What is the value of $b : c$?
(a) $3 : 1$ (b) $1 : 2$ (c) $1 : 3$ (d) $3 : 2$
- 66.** Which one of the following is correct?
(a) $bc = a^2$ (b) $bc = 36a^2$
(c) $bc = 72a^2$ (d) $bc = 108a^2$
- 67.** If the roots of a quadratic equation are $m + n$ and $m - n$, then the quadratic equation will be
(a) $x^2 + 2mx + m^2 - mn + n^2 = 0$ **2012 II**
(b) $x^2 + 2mx + (m - n)^2 = 0$
(c) $x^2 - 2mx + m^2 - n^2 = 0$ (d) $x^2 + 2mx + m^2 - n^2 = 0$
- 68.** If the roots of the quadratic equation $3x^2 - 5x + p = 0$ are real and unequal, then which one of the following is correct? **2012 II**
(a) $p = 25/12$ (b) $p < 25/12$ (c) $p > 25/12$ (d) $p \leq 25/12$
- 69.** If α, β are the roots of $x^2 + px - q = 0$ and γ, δ are the roots of $x^2 - px + r = 0$, then what is the value of $(\beta + \gamma)(\beta + \delta)$? **2012 II**
(a) $p + r$ (b) $p + q$ (c) $q + r$ (d) $p - q$

70. What is the degree of the equation

$$\frac{1}{x-3} = \frac{1}{x+2} - \frac{1}{2}?$$

(a) 0 (b) 1 (c) 2 (d) 3 ☑ 2013 I

71. If $4^x - 6 \cdot 2^x + 8 = 0$, then the values of x are

(a) 1, 2 (b) 1, 1 (c) 1, 0 (d) 2, 2 ☑ 2013 I

72. If the roots of the equation $3ax^2 + 2bx + c = 0$ are in the ratio 2 : 3, then which one of the following is correct? ☑ 2013 I

(a) $8ac = 25b$ (b) $8ac = 9b^2$
 (c) $8b^2 = 9ac$ (d) $8b^2 = 25ac$

73. $(x+1)^2 - 1 = 0$ has

(a) one real root (b) two real roots ☑ 2013 I
 (c) two imaginary roots (d) four real roots

74. If the roots of a quadratic equation $ax^2 + bx + c = 0$ are α and β , then the quadratic equation having roots α^2 and β^2 is ☑ 2013 I

(a) $x^2 - (b^2 - 2ac)x + c = 0$
 (b) $a^2x^2 - (b^2 - 2ac)x + c = 0$
 (c) $ax^2 - (b^2 - 2ac)x + c^2 = 0$
 (d) $a^2x^2 - (b^2 - 2ac)x + c^2 = 0$

75. If the sum of the roots of a quadratic equation is 3 and the product is 2, then the equation is ☑ 2013 I

(a) $2x^2 - x + 3 = 0$ (b) $x^2 - 3x + 2 = 0$
 (c) $x^2 + 3x + 2 = 0$ (d) $x^2 - 3x - 2 = 0$

76. If α and β are the roots of the equation $x^2 + bx + c = 0$, then what is the value of $\alpha^{-1} + \beta^{-1}$? ☑ 2013 I

(a) $-\frac{b}{c}$ (b) $\frac{b}{c}$ (c) $\frac{c}{b}$ (d) $-\frac{c}{b}$

77. The roots of the equation $x^2 - 8x + 16 = 0$

(a) are imaginary (b) are distinct and real ☑ 2013 II
 (c) are equal and real (d) Cannot be determined

78. How many real roots does the quadratic equation $f(x) = x^2 + 3|x| + 2 = 0$ have? ☑ 2013 II

(a) One (b) Two (c) Four (d) No real root

79. If α and β are the roots of the equation $ax^2 + bx + b = 0$, then what is the value of

$$\sqrt{\frac{\alpha}{\beta}} + \sqrt{\frac{\beta}{\alpha}} + \sqrt{\frac{b}{a}} = ?$$

(a) -1 (b) 0 (c) 1 (d) 2 ☑ 2013 II

80. What is the difference in the roots of the equation $x^2 - 10x + 9 = 0$? ☑ 2013 II

(a) 2 (b) 3 (c) 5 (d) 8

81. If a and b are rational and b is not perfect square, then the quadratic equation with rational coefficients whose one root is $3a + \sqrt{b}$ is ☑ 2013 II

(a) $x^2 - 6ax + 9a^2 - b = 0$ (b) $3ax^2 + x - \sqrt{b} = 0$
 (c) $x^2 + 3ax + \sqrt{b} = 0$ (d) $\sqrt{bx^2} + x - 3a = 0$

82. If α and β are the roots of the equation $x^2 + x + 2 = 0$, then what is $\frac{\alpha^{10} + \beta^{10}}{\alpha^{-10} + \beta^{-10}}$ equal to? ☑ 2013 II

(a) 4096 (b) 2048 (c) 1024 (d) 512

83. The quadratic equation $x^2 + bx + 4 = 0$ will have real roots, if ☑ 2013 II

(a) Only $b \leq -4$ (b) Only $b \geq 4$
 (c) $-4 < b < 4$ (d) $b \leq -4, b \geq 4$

84. If α and β are the roots of the equation $ax^2 + bx + c = 0$, where $a \neq 0$, then $(a\alpha + b)(a\beta + b)$ is equal to ☑ 2014 I

(a) ab (b) bc (c) ca (d) abc

85. The roots of the equation $2a^2x^2 - 2abx + b^2 = 0$, when $a < 0$ and $b > 0$ are ☑ 2014 I

(a) sometimes complex (b) always irrational
 (c) always complex (d) always real

86. Every quadratic equation $ax^2 + bx + c = 0$, where $a, b, c \in R, a \neq 0$ has ☑ 2014 II

(a) exactly one real root (b) atleast one real root
 (c) atleast two real roots (d) almost two real roots

87. If α, β are the roots of $ax^2 + bx + c = 0$ and $\alpha + h, \beta + h$ are the roots of $px^2 + qx + r = 0$, then what is h equal to? ☑ 2014 II

(a) $\frac{1}{2} \left(\frac{b}{a} - \frac{q}{p} \right)$ (b) $\frac{1}{2} \left(-\frac{b}{a} + \frac{q}{p} \right)$
 (c) $\frac{1}{2} \left(\frac{b}{p} + \frac{q}{a} \right)$ (d) $\frac{1}{2} \left(-\frac{b}{p} + \frac{q}{a} \right)$

88. Consider the following statements in respect of the given equation $(x^2 + 2)^2 + 8x^2 = 6x(x^2 + 2)$.

- I. All the roots of the equation are complex.
 II. The sum of all the roots of the equation is 6.

Which of the above statement(s) is/are correct? ☑ 2015 I

(a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

89. In solving a problem that reduces to a quadratic equation, one student makes a mistake in the constant term and obtains 8 and 2 for roots. Another student makes a mistake only in the coefficient of first degree term and finds -9 and -1 for roots. The correct equation is ☑ 2015 I

(a) $x^2 - 10x + 9 = 0$ (b) $x^2 + 10x + 9 = 0$
 (c) $x^2 - 10x + 16 = 0$ (d) $x^2 - 8x - 9 = 0$

- 90.** If m and n are roots of the equation $(x+p)(x+q) - k = 0$, then roots of the equation $(x-m)(x-n) + k = 0$ are **☑ 2015 I**
 (a) p and q
 (b) $\frac{1}{p}$ and $\frac{1}{q}$
 (c) $-p$ and $-q$
 (d) $p+q$ and $p-q$
- 91.** If $2p + 3q = 18$ and $4p^2 + 4pq - 3q^2 - 36 = 0$, then what is $(2p + q)$ equal to? **☑ 2015 I**
 (a) 6 (b) 7
 (c) 10 (d) 20
- 92.** The number of real roots of the equation $x^2 - 3|x| + 2 = 0$ is **☑ 2015 II**
 (a) 4 (b) 3
 (c) 2 (d) 1
- 93.** If the roots of the equation $x^2 - nx + m = 0$ differ by 1, then **☑ 2015 II**
 (a) $n^2 - 4m - 1 = 0$
 (b) $n^2 + 4m - 1 = 0$
 (c) $m^2 + 4n + 1 = 0$
 (d) $m^2 - 4n - 1 = 0$
- 94.** If the sum of the roots of the equation $ax^2 + bx + c = 0$ is equal to the sum of their squares, then **☑ 2015 II**
 (a) $a^2 + b^2 = c^2$
 (b) $a^2 + b^2 = a + b$
 (c) $ab + b^2 = 2ac$
 (d) $ab - b^2 = 2ac$

Directions (Q. Nos. 95-96) Let α and β ($\alpha < \beta$) be the roots of the equation $x^2 + bx + c = 0$, where $b > 0$ and $c < 0$. **☑ 2016 I**

- 95.** Consider the following
 I. $\beta < -\alpha$ II. $\beta < |\alpha|$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 96.** Consider the following
 I. $\alpha + \beta + \alpha\beta > 0$ II. $\alpha^2\beta + \beta^2\alpha > 0$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 97.** If $x^2 - px + 4 > 0$ for all real values of x , then which one of the following is correct? **☑ 2016 I**
 (a) $|p| < 4$ (b) $|p| \leq 4$
 (c) $|p| > 4$ (d) $|p| \geq 4$
- 98.** If one root of the equation $(l - m)x^2 + lx + 1 = 0$ is double the other and l is real, then what is the greatest value of m ? **☑ 2016 I**
 (a) $-\frac{9}{8}$ (b) $\frac{9}{8}$ (c) $-\frac{8}{9}$ (d) $\frac{8}{9}$
- Directions** (Q. Nos. 99-100) Given that $\tan \alpha$ and $\tan \beta$ are the roots of the equation $x^2 + bx + c = 0$ with $b \neq 0$. **☑ 2016 I**
- 99.** What is $\tan(\alpha + \beta)$ equal to?
 (a) $b(c-1)$ (b) $c(b-1)$ (c) $c(b-1)^{-1}$ (d) $b(c-1)^{-1}$
- 100.** What is $\sin(\alpha + \beta) \sec \alpha \sec \beta$ equal to?
 (a) b (b) $-b$ (c) c (d) $-c$

HINTS AND SOLUTIONS

1. (b) $\because x^2 - 2x + \sin^2 \theta = 0$
 $\therefore x = \frac{2 \pm \sqrt{4 - 4\sin^2 \theta}}{2}$
 $\Rightarrow x = 1 \pm \cos \theta$
 $\because -1 \leq \cos \theta \leq 1$
 $\therefore 0 \leq 1 \pm \cos \theta \leq 2 \Rightarrow 0 \leq x \leq 2$
 $\Rightarrow x \in [0, 2]$
2. (c) Replacing x by $\frac{1}{x}$ in the first equation, we get the second equation and hence, its roots are $\frac{1}{\alpha}$ and $\frac{1}{\beta}$.
3. (b) Let $\alpha, n\alpha$ be the roots of equation $ax^2 - bx + c = 0$.
 $\therefore \alpha + n\alpha = \frac{b}{a} \Rightarrow \alpha(1+n) = \frac{b}{a}$
 $\Rightarrow \alpha = \frac{b}{a(1+n)} \dots(i)$
 and $\alpha \cdot n\alpha = \frac{c}{a} \Rightarrow \alpha^2 n = \frac{c}{a}$
 $\Rightarrow \left[\frac{b}{a(1+n)} \right]^2 n = \frac{c}{a}$ [from Eq. (i)]
 $\Rightarrow b^2 n = ac(1+n)^2$
4. (b) Let α be a root of $x^2 - x + k = 0$. Then, 2α is a root of $x^2 - x + 3k = 0$
 $\therefore 4\alpha^2 - 2\alpha + 3k = 0$ and $\alpha^2 - \alpha + k = 0$
 $\Rightarrow \frac{\alpha^2}{-2k+3k} = \frac{\alpha}{3k-4k} = \frac{1}{-4+2}$
 $\Rightarrow \alpha^2 = -\frac{k}{2}$ and $\alpha = \frac{k}{2}$
 Now, $\alpha^2 = (\alpha)^2 \Rightarrow \left(-\frac{k}{2}\right) = \left(\frac{k}{2}\right)^2$
 $\Rightarrow k^2 + 2k = 0 \Rightarrow k = 0$ or -2
 Since, $k \neq 0$,
 $\therefore k = -2$
5. (c) Given, $\frac{-b + \sqrt{b^2 - 4ac}}{-b - \sqrt{b^2 - 4ac}} = \frac{m}{n}$
 Applying componendo and dividendo rule,
 $\frac{-2b}{2\sqrt{b^2 - 4ac}} = \frac{m+n}{m-n}$
 $\Rightarrow \frac{b^2}{b^2 - 4ac} = \frac{(m+n)^2}{(m-n)^2}$
 $\Rightarrow b^2 mn = ac(m+n)^2$
6. (d) We have, $2^{2x} - 2^{x-1} = 14$
 Let $2^x = y$, then
 $y^2 - \frac{y}{2} = 14$
 $\Rightarrow 2y^2 - y - 28 = 0$

- $\Rightarrow (2y+7)(y-4) = 0$
 $\Rightarrow y = -\frac{7}{2}$ or $y = 4$
 $\Rightarrow 2^x = -\frac{7}{2}$ or $2^x = 4 \Rightarrow x = 2$
 $\therefore x^x = (2)^2 = 4$
7. (b) $S = \frac{1}{\alpha + \beta} + \frac{\alpha + \beta}{\alpha\beta} = -\frac{a}{b} - \frac{b}{c}$
 $= -\frac{(ac + b^2)}{bc}$
 $P = \frac{1}{\alpha + \beta} \cdot \frac{\alpha + \beta}{\alpha\beta} = \frac{1}{\alpha\beta} = \frac{a}{c}$
 Put the values of P and S in $x^2 - Sx + P = 0$, we get
 $bcx^2 + (b^2 + ac)x + ab = 0$
8. (a) We have, $\frac{k+1}{k} + \frac{k+2}{k+1} = -\frac{b}{a} \dots(i)$
 and $\frac{k+1}{k} \cdot \frac{k+2}{k+1} = \frac{c}{a}$
 or $\frac{k+2}{k} = \frac{c}{a} \Rightarrow \frac{2}{k} = \frac{c}{a} - 1 = \frac{c-a}{a}$
 $\therefore k = \frac{2a}{c-a}$
 Putting the value of k in Eq. (i), we get
 $\frac{c+a}{2a} + \frac{2c}{c+a} = -\frac{b}{a}$
 or $(c+a)^2 + 4ac = -2b(a+c)$
 or $(a+c)^2 + 2b(a+c) = -4ac$
 Add b^2 on both sides,
 $(a+c+b)^2 = b^2 - 4ac$
9. (b) $|\alpha - \beta| \leq 2m$.
 On squaring both sides, we get
 $(\alpha - \beta)^2 < 4m^2 \Rightarrow (\alpha + \beta)^2 - 4\alpha\beta < 4m^2$
 $4(\alpha^2 - b) \leq 4m^2 \Rightarrow \alpha^2 - m^2 \leq b$
 $\therefore b \geq \alpha^2 - m^2$
 Also, $\Delta > 0$
 $\therefore a^2 - b > 0 \Rightarrow b < a^2$
 $\therefore b \in [a^2 - m^2, a^2)$
10. (c) Let D be the discriminant of the given quadratic equation, then
 $D = 9b^2 - 32ac$
 $= 9(-a-c)^2 - 32ac$ [$\because a+b+c=0$]
 $= 9a^2 + 9c^2 - 14ac$
 $= c^2 \left\{ 9\left(\frac{a}{c}\right)^2 - 14\left(\frac{a}{c}\right) + 9 \right\}$
 $= c^2 \left\{ \left(\frac{3a}{c} - \frac{7}{3}\right)^2 + \frac{32}{9} \right\} > 0$
 Hence, roots are real.
11. (c) Given quadratic equation is $a(b-c)x^2 + b(c-a)x + c(a-b) = 0$.

- Given root is 1.
 Let the other root be α .
 Then, $\alpha + 1 = -\frac{b(c-a)}{a(b-c)}$
 $\Rightarrow \alpha = -1 - \frac{(bc-ab)}{(ab-ac)}$
 $= \frac{-ab+ac-bc+ab}{a(b-c)}$
 $\Rightarrow \alpha = \frac{-c(-a+b)}{a(b-c)} \Rightarrow \alpha = \frac{c(a-b)}{a(b-c)}$
12. (b) Let α, β be the roots of the original equation, then
 $\alpha + \beta = -13$ and $\alpha\beta = (-2)(-15) = 30$
 \therefore Original equation is
 $x^2 + 13x + 30 = 0$
 $\Rightarrow x^2 + 10x + 3x + 30 = 0$
 $\Rightarrow (x+10)(x+3) = 0$
 $\Rightarrow x = -10, -3$
13. (b) Here, $\beta = \alpha r, \gamma = \alpha r^2, \delta = \alpha r^3, r > 1$
 $\alpha + \beta = 3, \alpha\beta = p, \gamma + \delta = 12, \gamma\delta = q$
 $\left. \begin{aligned} \alpha(1+r) &= 3 \\ \alpha r^2(1+r) &= 12 \end{aligned} \right\} \Rightarrow r^2 = 4 \Rightarrow r = 2$
 $\therefore \alpha = 1$
 $p = \alpha\beta = \alpha^2 r = 2, q = \gamma\delta = \alpha^2 r^5 = 32$
14. (c) Given, quadratic equation is
 $(x-a)(x-b) = c, c \neq 0$
 $\Rightarrow x^2 - (a+b)x + (ab-c) = 0$
 The roots of this equation is (α, β) .
 Then,
 $\alpha + \beta = -\{-(a+b)\} = a+b$
 and $\alpha\beta = ab-c$
 Now, consider the equation,
 $(x-\alpha)(x-\beta) + c = 0$
 $\Rightarrow x^2 - (\alpha + \beta)x + (\alpha\beta + c) = 0$
 $\Rightarrow x^2 - (a+b)x + (ab-c+c) = 0$
 $\therefore x^2 - (a+b)x + ab = 0$
 \therefore So, the roots of this equation is (a, b) .
15. (a) Roots are reciprocal to each other, if product of roots is 1.
 $\therefore \frac{c}{a} = 1 \Rightarrow a = c$
16. (d) The given equation
 $x^2 - 2px + p^2 - q^2 + 2qr - r^2 = 0$
 and p, q, r are rational numbers.
 Now, $D = B^2 - 4AC$
 $D = 4p^2 - 4\{p^2 - (q-r)^2\}$
 $D = 4p^2 - 4p^2 + 4(q-r)^2$

$D = 4(q - r)^2 =$ Rational and positive
So, the roots of the equation will always rational.

17. (b)

18. (a) The given equation can be rewritten as

$$x^2 - (p + 6)x + (6p + 1) = 0$$

Now,

$$b^2 - 4ac = (p + 6)^2 - 4(6p + 1)$$

[∵ equation has integral roots]

$$= p^2 - 12p + 32$$

$$= (p - 4)(p - 8)$$

For integral roots, $b^2 - 4ac$ must be a perfect square

∴ Possible values of p are 4 or 8.

19. (d) The given quadratic equation is

$$x^2 + x + 1 = 0$$

$$x = \frac{-1 \pm \sqrt{1 - 4}}{2} = \frac{-1 \pm i\sqrt{3}}{2}$$

$$\Rightarrow x = \frac{-1 + i\sqrt{3}}{2}, \frac{-1 - i\sqrt{3}}{2} \text{ or } x = \omega, \omega^2$$

i.e. $\alpha = \omega$ and $\beta = \omega^2$

Now, sum of roots

$$= \alpha^{19} + \beta^7 = \omega^{19} + (\omega^2)^7 = \omega + \omega^2 = -1$$

[∵ $1 + \omega + \omega^2 = 0$]

and product of roots

$$\alpha^{19} \cdot \beta^7 = (\omega^{19})(\omega^2)^7 = \omega \cdot \omega^2 = \omega^3 = 1$$

[∵ $\omega^3 = 1$]

So, the required quadratic equation is,

$$x^2 - (-1)x + (1) = 0$$

$$\Rightarrow x^2 + x + 1 = 0$$

20. (c) Given equation,

$$\tan^4 x - 2\sec^2 x + a^2 = 0$$

$$\Rightarrow \tan^4 x - 2 - 2\tan^2 x + a^2 = 0$$

$$\Rightarrow \tan^4 x - 2\tan^2 x + a^2 = 0$$

$$\Rightarrow \tan^2 x = \frac{2 \pm \sqrt{4 - 4(a^2 - 2)}}{2}$$

$$\Rightarrow \tan^2 x = \frac{2 \pm 2\sqrt{1 - a^2 + 2}}{2}$$

$$= 1 \pm \sqrt{3 - a^2}$$

For real values of $\tan^2 x$,

$$3 - a^2 \geq 0 \Rightarrow a^2 - 3 \leq 0$$

$$\Rightarrow |a| \leq \sqrt{3}$$

21. (c) Since, α and β are the roots of the equation $x^2 - x + 1 = 0$.

$$\therefore \alpha + \beta = 1 \text{ and } \alpha\beta = 1$$

$$\alpha = -\omega \text{ and } \beta = -\omega^2$$

Now, (a) $\alpha^4 - \beta^4 = (-\omega)^4 - (-\omega^2)^4$
 $= \omega^4 - \omega^8 = \omega - \omega^2 = \sqrt{3}i$

$\Rightarrow \alpha^4 - \beta^4$ is not real.

(b) $2(\alpha^5 + \beta^5) = 2[(-\omega)^5 + (-\omega^2)^5]$

$$= 2[-\omega^2 - \omega] = 2$$

and $(\alpha\beta)^5 = [(-\omega)(-\omega^2)]^5 = 1$

$$\Rightarrow 2(\alpha^5 + \beta^5) \neq (\alpha\beta)^5$$

(c) $\alpha^6 - \beta^6 = (-\omega)^6 - (-\omega^2)^6$
 $= \omega^6 - \omega^{12} = 0$

Hence, option (c) is correct.

22. (c) Since, $\sin \alpha$ and $\cos \alpha$ are roots of

$$ax^2 + bx + c = 0$$

$$\therefore \sin \alpha + \cos \alpha = \frac{-b}{a}$$

$$\text{and } \sin \alpha \cos \alpha = \frac{c}{a}$$

$$\text{For any real } \alpha, \sin^2 \alpha + \cos^2 \alpha = 1$$

$$\Rightarrow (\sin \alpha + \cos \alpha)^2 - 2 \sin \alpha \cos \alpha = 1$$

$$\Rightarrow \left(\frac{-b}{a}\right)^2 - 2 \times \frac{c}{a} = 1$$

$$\Rightarrow b^2 - 2ac = a^2 \Rightarrow b^2 - a^2 = 2ac$$

23. (a) Since, $(x + a)$ is a factor of $x^2 + px + q$ and $x^2 + lx + m$.

$$\therefore a^2 - ap + q = 0 \quad \dots(i)$$

$$\text{and } a^2 - la + m = 0 \quad \dots(ii)$$

From Eqs. (i) and (ii), we get

$$-ap + q + la - m = 0$$

$$\Rightarrow (l - p)a = m - q$$

$$\therefore a = \frac{m - q}{l - p} \quad [\because l \neq p]$$

24. (a) Since, α and γ are the roots of

$$Ax^2 - 4x + 1 = 0$$

$$\therefore \alpha + \gamma = \frac{4}{A} \text{ and } \alpha\gamma = \frac{1}{A}$$

and β and δ be the roots of

$$Bx^2 - 6x + 1 = 0$$

$$\therefore \beta + \delta = \frac{6}{B} \text{ and } \beta\delta = \frac{1}{B}$$

Also, α, β, γ and δ are in HP.

$$\therefore \frac{1}{\alpha}, \frac{1}{\beta}, \frac{1}{\gamma} \text{ and } \frac{1}{\delta} \text{ are in AP.}$$

$$\Rightarrow \frac{1}{\beta} - \frac{1}{\alpha} = \frac{1}{\delta} - \frac{1}{\gamma} \Rightarrow \frac{1}{\beta} - \frac{1}{\delta} = \frac{1}{\alpha} - \frac{1}{\gamma}$$

$$\Rightarrow \frac{\delta - \beta}{\beta\delta} = \frac{\gamma - \alpha}{\alpha\gamma}$$

$$\Rightarrow \frac{\sqrt{(\delta + \beta)^2 - 4\beta\delta}}{\beta\delta} = \frac{\sqrt{(\gamma + \alpha)^2 - 4\alpha\gamma}}{\alpha\gamma}$$

$$\Rightarrow \frac{\sqrt{36 - 4B}}{1/B} = \frac{\sqrt{16 - 4A}}{1/A}$$

$$\Rightarrow 36 - 4B = 16 - 4A$$

$$\Rightarrow 4B - 4A = 20 \Rightarrow B - A = 5$$

which is possible only, if $A = 3, B = 8$.

25. (b) Given, $\frac{1}{x+p} + \frac{1}{x+q} = \frac{1}{r}$

$$\Rightarrow r[2x + p + q] = x^2 + (p + q)x + pq$$

$$\Rightarrow x^2 + (p + q - 2r)x + pq - r(p + q) = 0$$

As, if roots are equal in magnitude but opposite in sign, then coefficient of x will be zero.

$$\therefore p + q - 2r = 0 \Rightarrow p + q = 2r$$

26. (a) Let α, β be the roots of the given equation.

$$\text{Then, } \alpha + \beta = ab \text{ and } \alpha\beta = -a^2$$

Also, discriminant $= a^2b^2 + 4a^2 > 0$

Thus, $\alpha, \beta \in R$ such that $\alpha\beta < 0$

Therefore, one of α and β is positive and other is negative.

27. (b) We have,

$$1 + |e^x - 1| = e^x(e^x - 2)$$

$$\Rightarrow |e^x - 1| = e^{2x} - 2e^x - 1$$

$$= (e^x - 1)^2 - 2$$

$$\Rightarrow |e^x - 1|^2 - |e^x - 1| - 2 = 0$$

$$\Rightarrow |e^x - 1| = 2, -1$$

$$\Rightarrow |e^x - 1| = 2 \quad [\because |e^x - 1| > 0]$$

$$\Rightarrow e^x - 1 = \pm 2 \Rightarrow e^x = 3, -1$$

$$\Rightarrow e^x = 3 \Rightarrow x = \log_e 3$$

28. (c) We have,

$$(x - 2)^2 - 3|x - 2| + 2 = 0$$

$$\Rightarrow |x - 2|^2 - 3|x - 2| + 2 = 0$$

$$\Rightarrow (|x - 2| - 2)(|x - 2| - 1) = 0$$

$$\Rightarrow |x - 2| = 1, 2 \Rightarrow x - 2 = \pm 1, \pm 2$$

$$\Rightarrow x = 3, 1, 4, 0$$

Hence, product of roots

$$= 3 \times 1 \times 4 \times 0 = 0$$

29. (d) Let $y = \frac{x^2 + 34x - 71}{x^2 + 2x - 7}$. Then,

$$x^2(y - 1) + 2x(y - 17) - (7y - 71) = 0$$

Since, x is real. Therefore, the above equation has real roots.

∴ Discriminant ≥ 0 .

$$\Rightarrow 4(y - 17)^2 + 4(y - 1)(7y - 71) \geq 0$$

$$\Rightarrow y^2 - 14y + 45 \geq 0$$

$$\Rightarrow (y - 5)(y - 9) \geq 0$$

$$\Rightarrow y \leq 5 \text{ or } y \geq 9 \Rightarrow y \in R - (5, 9)$$

Hence, y does not lie in $(5, 9)$.

30. (b) Let α be the common root of the given equation, then

$$\alpha^2 + 2\alpha + 3\lambda = 0$$

$$2\alpha^2 + 3\alpha + 5\lambda = 0$$

Now, by cross-multiplication method

$$\frac{\alpha^2}{10\lambda - 9\lambda} = \frac{\alpha}{6\lambda - 5\lambda} = \frac{1}{3 - 4}$$

$$\Rightarrow \frac{\alpha^2}{\lambda} = \frac{\alpha}{\lambda} = -1$$

$$\Rightarrow \alpha^2 = -\lambda \text{ and } \alpha = -\lambda$$

$$\Rightarrow (-\lambda)^2 = -\lambda \Rightarrow \lambda^2 + \lambda = 0$$

$$\Rightarrow \lambda(\lambda + 1) = 0 \Rightarrow \lambda = -1 \quad [\because \lambda \neq 0]$$

31. (b) Let x be the common root of the given equations, then

$$a\alpha^2 + b\alpha + c = 0, \quad \alpha^2 + \alpha + 1 = 0$$

$$\therefore \frac{\alpha^2}{b - c} = \frac{\alpha}{c - a} = \frac{1}{a - b}$$

$$\Rightarrow \alpha^2 = \frac{b - c}{a - b} \text{ and } \alpha = \frac{c - a}{a - b}$$

$$\Rightarrow \left(\frac{c - a}{a - b}\right)^2 = \frac{b - c}{a - b}$$

$$\begin{aligned} \Rightarrow (c-a)^2 &= (a-b)(b-c) \\ \Rightarrow a^2 + b^2 + c^2 - ab - bc - ca &= 0 \\ \Rightarrow \frac{1}{2} [(a-b)^2 + (b-c)^2 + (c-a)^2] &= 0 \end{aligned}$$

Since, each is zero.

$$\therefore a = b = c$$

- 32.** (c) Since, the coefficient of x^2 in both the equations are equal, therefore common root is obtained by subtracting them

$$\therefore 2x(c-b) + (b-c) = 0 \Rightarrow x = -\frac{1}{2}$$

On putting for x in any equation, we get

$$a + 4b + 4c = 0$$

- 33.** (c) $\Delta > 0 \Rightarrow -25m + 150 \geq 0$

$$\therefore m \leq 6$$

Product of roots = $\frac{m+10}{m-5}$ = positive as

roots are of same sign.

Numerator and denominator both positive $m > 5$ [$\because m \neq 5$]

or both negative $m \leq -10$

$$\therefore m < -10 \text{ and } 5 < m \leq 6$$

- 34.** (d) $|x^2 + x - 6| < 6$

$$\Rightarrow -6 < x^2 + x - 6 < 6$$

$$\Rightarrow -6 < x^2 + x - 6 \text{ and } x^2 + x - 6 < 6$$

$$\Rightarrow x^2 + x > 0 \text{ and } x^2 + x - 12 < 6$$

$$\Rightarrow x(x+1) > 0 \text{ and } (x+4)(x-3) < 0$$

$$\Rightarrow x \in (-\infty, -1) \cup (0, \infty)$$

$$\text{and } -4 < x < 3$$

$$\Rightarrow x \in (-4, -1) \cup (0, 3)$$

- 35.** (c) The given equation has positive real roots, if (i) Discriminant ≥ 0

(ii) Product of roots > 0

Now, (i) Discriminant ≥ 0

$$\Rightarrow 4(a-1)^2 - 4(2a+1) \geq 0$$

$$\Rightarrow a^2 - 4a \geq 0 \Rightarrow a < 0 \text{ or } a \geq 4$$

(ii) Product of roots > 0

$$\Rightarrow (2a+1) > 0$$

$$\Rightarrow a > -1/2$$

$$\therefore a \geq 4$$

- 36.** (d) Given equation is,

$$x^2 - 4x - \log_3 N = 0$$

Then, $\Delta \geq 0$

$$\Rightarrow B^2 - 4AC \geq 0$$

$$\Rightarrow (-4)^2 - 4(1)(-\log_3 N) \geq 0$$

$$\Rightarrow 16 + 4 \log_3 N \geq 0$$

$$\Rightarrow \log_3 (3)^{16} + \log_3 (N)^4 \geq 0$$

$$\Rightarrow \log_3 \{(3)^{16} \cdot (N)^4\} \geq 0$$

$$\Rightarrow 3^{16} \cdot N^4 \geq 3^0 = 1$$

$$\Rightarrow N^4 \geq \frac{1}{3^{16}} \Rightarrow N \geq \frac{1}{3^4} = \frac{1}{81}$$

So, the minimum value of N is $\frac{1}{81}$.

- 37.** (a) $2b = a + c, b^2 - 4ac \geq 0$

$$\Rightarrow \left(\frac{a+c}{2}\right)^2 - 4ac \geq 0$$

$$\Rightarrow a^2 - 14ac + c^2 \geq 0$$

$$\Rightarrow t^2 - 14t + 1 \geq 0, \text{ where } t = \frac{c}{a}$$

$$\Rightarrow (t-7)^2 \geq 48 \Rightarrow |t-7| \geq 4\sqrt{3}$$

$$\Rightarrow \left|\frac{c}{a} - 7\right| \geq 4\sqrt{3}$$

- 38.** (c) Since, the roots of equation $x^2 - px + (p-1) = 0$ are r_1 and r_2 .

$$\therefore r_1 + r_2 = p \text{ and } r_1 r_2 = p-1$$

$$\begin{aligned} \therefore r_1^2 + r_2^2 &= (r_1 + r_2)^2 - 2r_1 r_2 \\ &= p^2 - 2p + 2 = p^2 - 2p + 1 + 1 \\ &= (p-1)^2 + 1 \end{aligned}$$

So, value of $r_1^2 + r_2^2$ will be minimum, if $p-1 = 0$, i.e. $p = 1$

- 39.** (d) We have, $\alpha + \beta = -3$ and $\alpha\beta = \frac{b}{2}$

Since, $b < 0$, therefore discriminant,

$$D = 36 - 8b > 0$$

So, α, β are real.

Now,

$$\begin{aligned} \frac{\alpha}{\beta} + \frac{\beta}{\alpha} &= \frac{\alpha^2 + \beta^2}{\alpha\beta} = \frac{(\alpha + \beta)^2}{\alpha\beta} - 2 \\ &= \frac{18}{b} - 2 < 0 \quad [\because b < 0] \end{aligned}$$

- 40.** (a) We have, $a(p+x)^2 + 2bpx + c = 0$

$$\Rightarrow ax^2 + 2(a+b)px + ap^2 + c = 0$$

$$\therefore \alpha + \beta = \frac{-2(a+b)p}{a}$$

$$\text{and } \alpha\beta = \frac{ap^2 + c}{a} = p^2 + \frac{c}{a}$$

Thus, Statement I is correct.

Now, $(\alpha - \beta)^2 = (\alpha + \beta)^2 - 4\alpha\beta$

$$= \frac{4(a+b)^2 p^2}{a^2} - 4\left(\frac{ap^2 + c}{a}\right)$$

$$= \frac{4}{a^2} [(a+b)^2 p^2 - a^2 p^2 - ac]$$

$$= \frac{4}{a^2} [(2ab + b^2)p^2 - ac]$$

$$\Rightarrow |\alpha - \beta| = \frac{2}{|a|} \sqrt{(2ab + b^2)p^2 - ac}$$

\therefore Statement II is not correct.

- 41.** (c) Since, α, β are roots of equation

$$x^2 + bx + c = 0$$

$$\therefore \alpha^2 + b\alpha + c = 0 \text{ and } \beta^2 + b\beta + c = 0$$

Also, $\alpha + \beta = -b, \alpha\beta = c$

Now, $S_{n+1} + bS_n + cS_{n-1}$

$$= (\alpha^{n+1} + \beta^{n+1}) + b(\alpha^n + \beta^n) + c(\alpha^{n-1} + \beta^{n-1})$$

$$= \alpha^{n-1}[\alpha^2 + b\alpha + c]$$

$$+ \beta^{n-1}[\beta^2 + b\beta + c]$$

$$= \alpha^{n-1} \cdot 0 + \beta^{n-1} \cdot 0$$

Thus, Statement I is correct.

Now, $S_n = \alpha^n + \beta^n$

$$\therefore S_1 = \alpha + \beta = -b \quad \dots(i)$$

$$S_3 = \alpha^3 + \beta^3$$

$$= (\alpha + \beta)^3 - 3\alpha\beta(\alpha + \beta)$$

$$= (S_1)^3 - 3S_1 c$$

Hence, Statement II is also correct.

- 42.** (b) We have, $\tan A + \tan B = p$

$$\text{and } \tan A \cdot \tan B = q$$

$$\therefore \tan(A+B) = \frac{\tan A + \tan B}{1 - \tan A \cdot \tan B} = \frac{p}{1-q}$$

\therefore Statement I is not correct.

$$\begin{aligned} \text{Now, } \cot A + \cot B &= \frac{1}{\tan A} + \frac{1}{\tan B} \\ &= \frac{\tan B + \tan A}{\tan A \cdot \tan B} = \frac{p}{q} \end{aligned}$$

\therefore Statement II is correct.

Now, discriminant = $p^2 - 4q$

$$= (\tan A + \tan B)^2 - 4 \tan A \cdot \tan B$$

$$= (\tan A - \tan B)^2$$

Thus, Statement III is also correct.

- 43.** (a) Given, $x^2 - px - q = 0$,

On replacing x by $\frac{1}{x}$, we get

$$qx^2 + px - 1 = 0$$

Thus, Statement I is correct.

Now, $u + v + uv = p - q$

$$(u+v)uv = -pq$$

\therefore The equation whose roots are $(u+v)$

and (uv) is $x^2 - (p-q)x - pq = 0$

$$\Rightarrow (x-p)(x+q) = 0$$

Thus, Statement II is correct.

Now,

$$u^2 + v^2 = (u+v)^2 - 2uv = p^2 + 2q$$

and $u^2 v^2 = (uv)^2 = q^2$

\therefore The equation whose roots are u^2 and

v^2 is $x^2 - (p^2 + 2q)x + q^2 = 0$.

Thus, Statement III is not correct.

- 44.** (b) Since, α, β are the roots of

$$x^2 + x\sqrt{\alpha} + \beta = 0, \text{ then } \alpha + \beta = -\sqrt{\alpha}$$

$$\text{and } \alpha\beta = \beta \Rightarrow \alpha = 1, \beta = -2$$

- 45.** (b) Now, $\alpha + 1 = 1 + 1 = 2$,

$$\beta + 1 = -2 + 1 = -1$$

Their sum = $2 + (-1) = 1$

Their product = $2(-1) = -2$

\therefore Required equation

$$x^2 - (1)x + (-2) = 0$$

$$\Rightarrow x^2 - x - 2 = 0$$

- 46.** (c) The given equation has equal roots

\therefore Discriminant = 0

$$\Rightarrow (bc - ca)^2 - 4(ab - bc)(ca - ab) = 0$$

$$\Rightarrow b^2 c^2 + c^2 a^2 - 2c^2 ab - 4[a^2 bc - a^2 b^2$$

$$- c^2 ab + b^2 ac] = 0$$

$$\begin{aligned} &\Rightarrow b^2c^2 + c^2a^2 + 4a^2b^2 + 2c^2ab \\ &\quad - 4a^2bc - 4b^2ac = 0 \\ &\Rightarrow (bc + ca - 2ab)^2 = 0 \\ &\Rightarrow bc + ca = 2ab \Rightarrow c(a + b) = 2ab \\ &\Rightarrow c = \frac{2ab}{a + b} \\ &\therefore a, c, b \text{ are in HP.} \end{aligned}$$

47. (b) The root of the equation = $\frac{-(bc - ca)}{2(ab - bc)}$
 $= \frac{-(bc - 2ab + bc)}{2(ab - bc)} = \frac{2(ab - bc)}{2(ab - bc)} = 1$

48. (b) α, β are roots of equation
 $ax^2 + bx + c = 0$
 $\therefore \alpha + \beta = -\frac{b}{a}$ and $\alpha\beta = \frac{c}{a}$
 Since, both roots are positive, i.e.
 $\alpha > 0, \beta > 0$
 $\therefore \alpha + \beta > 0 \Rightarrow -\frac{b}{a} > 0$
 $\Rightarrow a > 0$ and $b < 0$ or $a < 0$ and $b > 0$

49. (a) Given, $\alpha > 0$ and $\beta < 0$
 $\Rightarrow \alpha\beta < 0 \Rightarrow \frac{c}{a} < 0$
 $\therefore c$ and a have opposite sign.
 Thus, Statement I is correct.
 Also, $\alpha > |\beta| \Rightarrow -\alpha < \beta < \alpha \Rightarrow \alpha + \beta > 0$
 $\therefore b$ and a have opposite sign.
 Thus, Statement II is not correct.

50. (a) Dividing the equation
 $a^3x^2 + abcx + c^3 = 0$ by c^2 , we get
 $a\left(\frac{ax}{c}\right)^2 + b\left(\frac{ax}{c}\right) + c = 0$
 $\Rightarrow \frac{ax}{c} = \alpha, \beta$
 $\Rightarrow x = \frac{c}{a}\alpha, \frac{c}{a}\beta$
 $\Rightarrow x = \alpha^2\beta, \alpha\beta^2$
 $\left[\because \frac{c}{a} = \alpha\beta = \text{product of roots}\right]$

Hence, $\alpha^2\beta$ and $\alpha\beta^2$ are the roots of the equation $a^3x^2 + abcx + c^3 = 0$.

51. (a) $\sin \theta + \cos \theta = -\frac{b}{a}$
 $\sin \theta \cos \theta = \frac{c}{a}$
 Now, $(\sin \theta + \cos \theta)^2 = 1 + 2\sin \theta \cos \theta$
 $\Rightarrow \frac{b^2}{a^2} = 1 + \frac{2c}{a} = \frac{a + 2c}{a}$
 $\Rightarrow b^2 = a^2 + 2ac$
 $\Rightarrow b^2 + c^2 = a^2 + 2ac + c^2 = (a + c)^2$
 $\therefore b^2 + c^2 = (a + c)^2$

52. (a) $\alpha + \beta = -\frac{b}{a}, \alpha\beta = \frac{c}{a}$
 The required equation is

$$\begin{aligned} x^2 - \left(\frac{1}{a\alpha + b} + \frac{1}{a\beta + b}\right)x \\ + \frac{1}{a\alpha + b} \cdot \frac{1}{a\beta + b} = 0 \\ \Rightarrow \{a^2\alpha\beta + ab(\alpha + \beta) + b^2\}x^2 \\ - \{a(\alpha + \beta) + 2b\}x + 1 = 0 \\ \Rightarrow (ca - b^2 + b^2)x^2 - (2b - b)x + 1 = 0 \\ \Rightarrow cax^2 - bx + 1 = 0 \end{aligned}$$

Sol. (Q. Nos. 53-56) Since, α and β are the roots of the equation $x^2 + x + 1 = 0$

$$\begin{aligned} \therefore \alpha + \beta = -1 \text{ and } \alpha\beta = 1 \\ \text{Also, } \alpha = \frac{-1 + \sqrt{3}i}{2} \text{ and } \beta = \frac{-1 - \sqrt{3}i}{2} \\ \Rightarrow \alpha = \omega \text{ and } \beta = \omega^2 \end{aligned}$$

53. (a) Let a and b are the roots of equation
 $x^2 - x + 1 = 0$
 $\therefore a + b = 1$ and $ab = 1$
 None of the option (a), (b), (c) are satisfied for the given equation.
 Hence, option (d) is correct.

54. (b) Let α', β' be the roots of
 $ax^2 + bx + c = 0$
 $\therefore \frac{\alpha'}{\beta'} = \frac{\alpha}{\beta} = \frac{\omega}{\omega^2} \Rightarrow \beta' = \alpha'\omega$
 Now, $\alpha' + \beta' = -\frac{b}{a}$ and $\alpha'\beta' = \frac{c}{a}$
 $\Rightarrow \alpha' + \alpha'\omega = -\frac{b}{a}$ and $(\alpha')^2\omega = \frac{c}{a}$
 $\Rightarrow \alpha'\omega^2 = \frac{b}{a}$ and $(\alpha')^2\omega = \frac{c}{a}$
 $\Rightarrow \alpha' = \frac{b}{a}\omega$ and $(\alpha')^2\omega = \frac{c}{a}$
 $\Rightarrow \left(\frac{b}{a}\omega\right)^2\omega = \frac{c}{a} \Rightarrow b^2 = ac$
 $\Rightarrow a, b, c$ are in GP.

55. (c) Sum of roots = $(\alpha + 1) + (\beta + 1)$
 $= (\alpha + \beta) + 2$
 $= -1 + 2 = 1$
 Product of roots = $(\alpha + 1)(\beta + 1)$
 $= \alpha\beta + (\alpha + \beta) + 1$
 $= 1 - 1 + 1 = 1$
 \therefore Required equation is $x^2 - x + 1 = 0$.

56. (a) We have, $\alpha = \omega$ and $\beta = \omega^2$
 $\Rightarrow \alpha^2 = \omega^2$ and $\beta^2 = \omega$
 \therefore The equation whose roots are α^2 and β^2 is $x^2 + x + 1 = 0$... (i)
 Given equation is
 $(a + b)x^2 - ax + 1 = 0$... (ii)
 On comparing Eqs. (i) and (ii), we get
 $a = -1$ and $a + b = 1$
 $\Rightarrow b = 1 - a = 1 - (-1) = 2$

57. (a) Let $\beta = \alpha^2$
 $\therefore \alpha + \alpha^2 = -p$ and $\alpha^3 = q$
 $\Rightarrow \alpha(\alpha + 1) = -p$
 On cubing both sides, we get
 $\alpha^3[\alpha^3 + 1 + 3\alpha(\alpha + 1)] = -p^3$
 $\Rightarrow q(q + 1 - 3p) = -p^3$
 $\Rightarrow p^3 - (3p - 1)q + q^2 = 0$

58. (d) Here, $\alpha + \beta = -p$ and $\alpha\beta = q$
 But $\alpha\beta = 3 \Rightarrow q = 3$
 Also, $p = \frac{1 + q}{2} \Rightarrow p = \frac{1 + 3}{2} = 2$
 $\therefore \alpha + \beta = -2$

59. (a) Here, $\alpha + \beta = -p$ and $\alpha\beta = q$
 $\therefore \tan^{-1}\alpha + \tan^{-1}\beta = \tan^{-1}\left(\frac{\alpha\beta}{1 - \alpha\beta}\right)$
 $= \tan^{-1}\left(\frac{-p}{1 - q}\right) = \tan^{-1}\left(\frac{p}{q - 1}\right)$

60. (c) We have, $p + q = -p$... (i)
 and $pq = q$... (ii)
 From Eq. (ii), $p = 1$ [$\because q \neq 0$]
 From Eq. (i), $q = -2p = -2$ [$\because p = 1$]
 $\therefore p = 1$ and $q = -2$

61. (d)

62. (a) Since, one root of $x^2 + ax - b = 0$ is 1.
 $\therefore 1^2 + a \cdot 1 - b = 0$
 $\Rightarrow 1 + a - b = 0 \Rightarrow a - b = -1$

63. (a) Given that, α and β be the roots of the equation $x^2 - q(1 + x) - r = 0$
 $\Rightarrow x^2 - qx - (q + r) = 0$
 Then, $\alpha + \beta = q$
 and $\alpha\beta = -(q + r)$
 Now, $(1 + \alpha)(1 + \beta) = 1 + (\alpha + \beta) + \alpha\beta$
 $= 1 + q - (q + r) = 1 - r$

64. (a) Let the roots of the equation $ax^2 + bx + c = 0$ are α and $(\alpha - 1)$ by given condition. Then,
 $\Rightarrow \alpha + (\alpha - 1) = -\frac{b}{a}$
 $\Rightarrow 2\alpha = 1 - \frac{b}{a} \Rightarrow \alpha = \frac{a - b}{2a}$
 and $\alpha(\alpha - 1) = \frac{c}{a}$
 $\Rightarrow \frac{(a - b)}{2a} \left\{ \frac{a - b}{2a} - 1 \right\} = \frac{c}{a}$
 $\Rightarrow -(a^2 - b^2) = 4ac$
 $\Rightarrow b^2 = a(a + 4c)$

Sol. (Q. Nos. 65-66) Let α and β be the roots of the equation $ax^2 + bx + c = 0$.
 Then, $\alpha + \beta = -b/a$
 and $\alpha \cdot \beta = c/a$

Also given that, the equation $x^2 + 36x + 24 = 0$ is formed by multiplying each root of $ax^2 + bx + c = 0$ by 2.

$$\begin{aligned} \therefore 2\alpha + 2\beta &= -36 \Rightarrow \alpha + \beta = -18 \\ \Rightarrow \frac{-b}{a} &= -18 \Rightarrow \frac{b}{a} = 18 \quad \dots(i) \\ \text{and } (2\alpha)(2\beta) &= 24 \Rightarrow \alpha\beta = 6 \\ \Rightarrow \frac{c}{a} &= 6 \quad \dots(ii) \end{aligned}$$

65. (a) Now, dividing Eq. (i) by Eq. (ii), we get

$$\frac{b}{c} = \frac{3}{1} \Rightarrow b : c = 3 : 1$$

66. (d) Now, multiplying Eqs. (i) and (ii), we get

$$\begin{aligned} \frac{b}{a} \times \frac{c}{a} &= 18 \times 6 \\ \Rightarrow \frac{bc}{a^2} &= 108 \end{aligned}$$

67. (c)

68. (b) Since, the roots of the quadratic equation $3x^2 - 5x + p = 0$ are real and unequal.

$$\begin{aligned} \therefore \text{Discriminant} > 0 &\Rightarrow b^2 - 4ac > 0 \\ \Rightarrow (-5)^2 - 4(3)(p) &> 0 \\ \Rightarrow 25 - 12p > 0 &\Rightarrow 25 > 12p \\ \Rightarrow 12p < 25 &\Rightarrow p < \frac{25}{12} \end{aligned}$$

69. (c) Since, α and β are the roots of $x^2 + px - q = 0$

$$\begin{aligned} \therefore \alpha + \beta &= -p, \alpha\beta = -q \\ \text{Again, since } \gamma, \delta &\text{ are the roots of } \\ x^2 - px + r &= 0 \\ \therefore \gamma + \delta &= p, \gamma\delta = r \end{aligned}$$

$$\begin{aligned} (\beta + \gamma)(\beta + \delta) &= \beta^2 + \beta(\gamma + \delta) + \gamma\delta \\ &= \beta^2 + \beta(p) + \gamma\delta \\ &= \beta^2 + \beta(-\alpha - \beta) + r \\ &= \beta^2 - \alpha\beta - \beta^2 + r = -\alpha\beta + r \\ &= -(-q) + r = q + r \end{aligned}$$

70. (b)

71. (a) Given that,

$$\begin{aligned} 4^x - 6 \cdot 2^x + 8 &= 0 \Rightarrow 2^{2x} - 6 \cdot 2^x + 8 = 0 \\ \text{Let } 2^x &= z \Rightarrow z^2 - 6z + 8 = 0 \\ \Rightarrow z^2 - 4z - 2z + 8 &= 0 \\ \Rightarrow z(z-4) - 2(z-4) &= 0 \\ \Rightarrow (z-4)(z-2) &= 0 \\ \therefore z &= 2, 4 \Rightarrow 2^x = 2^1, 2^2 \end{aligned}$$

So, the required values of x are 1, 2.

72. (d) Given quadratic equation is

$$3ax^2 + 2bx + c = 0$$

Let its root are 2α and 3α .

$$\begin{aligned} \text{Now, sum of the roots} &= 2\alpha + 3\alpha = \frac{-2b}{3a} \\ \Rightarrow 5\alpha &= \frac{-2b}{3a} \Rightarrow \alpha = \frac{-2b}{15a} \quad \dots(i) \\ \text{and product of the roots} &= 2\alpha \cdot 3\alpha = \frac{c}{3a} \end{aligned}$$

$$\begin{aligned} \Rightarrow 6\alpha^2 &= \frac{c}{3a} \Rightarrow \left(\frac{-2b}{15a}\right)^2 = \frac{c}{18a} \\ &\quad \text{[from Eq. (i)]} \\ \Rightarrow \frac{4b^2}{225a^2} &= \frac{c}{18a} \Rightarrow \frac{4b^2}{25a^2} = \frac{c}{2a} \\ \therefore 8b^2 &= 25ac \end{aligned}$$

73. (b)

74. (d) α, β are the roots of $ax^2 + bx + c = 0$

$$\begin{aligned} \therefore \alpha + \beta &= \frac{-b}{a}, \alpha\beta = \frac{c}{a} \\ \text{We have, } \alpha^2 + \beta^2 &= (\alpha + \beta)^2 - 2\alpha\beta \\ &= \left(\frac{-b}{a}\right)^2 - 2 \cdot \frac{c}{a} \\ &= \frac{b^2}{a^2} - \frac{2c}{a} = \frac{b^2 - 2ac}{a^2} \end{aligned}$$

$$\text{and } \alpha^2 \cdot \beta^2 = (\alpha\beta)^2 = \left(\frac{c}{a}\right)^2 = \frac{c^2}{a^2}$$

\therefore Required quadratic equation whose roots are α^2 and β^2 is

$$\begin{aligned} x^2 - (\alpha^2 + \beta^2)x + \alpha^2\beta^2 &= 0 \\ \Rightarrow x^2 - \frac{(b^2 - 2ac)}{a^2}x + \frac{c^2}{a^2} &= 0 \\ \therefore a^2x^2 - (b^2 - 2ac)x + c^2 &= 0 \end{aligned}$$

75. (b)

76. (a)

77. (c) Given equation is

$$x^2 - 8x + 16 = 0$$

$$\Rightarrow (x - 4)^2 = 0 \Rightarrow x = 4, 4$$

So, the roots of the equation are equal and real.

78. (d) Given quadratic equation,

$$\begin{aligned} x^2 + 3|x| + 2 &= 0 \\ \Rightarrow |x|^2 + 3|x| + 2 &= 0 \\ \Rightarrow (|x| + 2)(|x| + 1) &= 0 \\ \Rightarrow |x| &= -2, -1 \end{aligned}$$

Hence, given quadratic equation has no real roots.

79. (b) Given quadratic equation is

$$ax^2 + bx + b = 0$$

Let (α, β) be the roots of given equation.

$$\therefore \alpha + \beta = -\frac{b}{a} \text{ and } \alpha\beta = \frac{b}{a}$$

Now, we have

$$\begin{aligned} \frac{\sqrt{\alpha}}{\sqrt{\beta}} + \frac{\sqrt{\beta}}{\sqrt{\alpha}} + \sqrt{\frac{b}{a}} &= \frac{\alpha + \beta}{\sqrt{\alpha\beta}} + \sqrt{\frac{b}{a}} \\ &= \frac{-b}{a} \times \frac{\sqrt{a}}{\sqrt{b}} + \sqrt{\frac{b}{a}} = -\sqrt{\frac{b}{a}} + \sqrt{\frac{b}{a}} = 0 \end{aligned}$$

80. (d) Given equation, $x^2 - 10x + 9 = 0$
Let (α, β) be the roots of the given equation.

$$\text{Then, } \alpha + \beta = 10$$

$$\text{and } \alpha \cdot \beta = 9$$

Now, we use the identity

$$\begin{aligned} (\alpha - \beta)^2 &= (\alpha + \beta)^2 - 4\alpha\beta \\ &= (10)^2 - 4(9) = (10)^2 - 4(9) \\ \Rightarrow \alpha - \beta &= \pm 8 \\ \therefore |\alpha - \beta| &= 8 \end{aligned}$$

81. (a) If one root of any quadratic equation is in the form $3a + \sqrt{b}$, then other root of this equation should be $3a - \sqrt{b}$.

\therefore Required equation is

$$\begin{aligned} x^2 - (\text{Sum of roots}) \cdot x \\ + (\text{Product of roots}) &= 0 \\ \Rightarrow x^2 - \{(3a + \sqrt{b}) + (3a - \sqrt{b})\} \cdot x \\ + \{(3a + \sqrt{b})(3a - \sqrt{b})\} &= 0 \\ \therefore x^2 - 6ax + 9a^2 - b &= 0 \end{aligned}$$

82. (c) Given that, (α, β) are the roots of the equation $x^2 + x + 2 = 0$, then $\alpha + \beta = -1$ and $\alpha \cdot \beta = 2$

Now, we have

$$\begin{aligned} \frac{\alpha^{10} + \beta^{10}}{\alpha^{-10} + \beta^{-10}} &= (\alpha\beta)^{10} = (2)^{10} \\ &= 1024 \end{aligned}$$

83. (d) Given that, the equation

$x^2 + bx + 4 = 0$ have real roots, if discriminate $(D) = B^2 - 4AC \geq 0$

$$\begin{aligned} \Rightarrow b^2 - 4(1)(4) &\geq 0 \\ \Rightarrow b^2 - 16 &\geq 0 \\ \Rightarrow (b - 4)(b + 4) &\geq 0 \therefore b \leq -4, b \geq 4 \end{aligned}$$

84. (c)

85. (c) Given equation,

$$2a^2x^2 - 2abx + b^2 = 0$$

When, $a < 0$ and $b > 0$

$$\begin{aligned} \therefore x &= \frac{-(-2ab) \pm \sqrt{(-2ab)^2 - 4 \cdot 2a^2 \cdot b^2}}{2 \cdot 2a^2} \\ &= \frac{2ab \pm \sqrt{4a^2b^2 - 8a^2b^2}}{4a^2} \\ &= \frac{2ab \pm \sqrt{-4a^2b^2}}{4a^2} = \frac{2ab \pm i2ab}{4a^2} \end{aligned}$$

which shows that the roots of the given equation is always complex.

86. (d)

$$87. (a) \because \alpha + \beta = -\frac{b}{a} \text{ and } \alpha\beta = \frac{c}{a}$$

Also, $\alpha + b + \beta + b = -\frac{2b}{a}$

$$\Rightarrow \alpha + \beta + 2b = -\frac{2b}{a}$$

$$\Rightarrow 2b = -\frac{2b}{a} + \frac{b}{a} \left[\because \alpha + \beta = -\frac{b}{a} \right]$$

$$\Rightarrow b = \frac{1}{2} \left[\frac{b}{a} - \frac{2b}{a} \right]$$

88. (b) We have,

$$(x^2 + 2)^2 + 8x^2 = 6x(x^2 + 2) \dots(i)$$

Let $x^2 + 2 = y$, then

$$y^2 + 8x^2 = 6xy$$

$$\Rightarrow y^2 - 6xy + 8x^2 = 0$$

$$\Rightarrow (y - 4x)(y - 2x) = 0$$

$$\Rightarrow (x^2 + 2 - 4x)(x^2 + 2 - 2x) = 0$$

$$\Rightarrow x^2 - 4x + 2 = 0 \text{ or } x^2 - 2x + 2 = 0$$

Since, discriminant of $x^2 - 4x + 2 = 0$ is $16 - 8 > 0$

\therefore It has real solutions. So, Statement I is not correct.

Now, Eq. (i) can be written as

$$x^4 - 6x^3 + 12x^2 - 12x + 4 = 0$$

\therefore Sum of all roots = $-\frac{(-6)}{1} = 6$

So, Statement II is correct.

89. (a) Let the correct equation be $ax^2 + bx + c = 0$

First student roots are 8 and 2. Equation is $x^2 - 10x + 16 = 0$

$a = 1, b = -10$ are correct, $c = 16$ is wrong.

Second student roots are -9 and -1
Equation is $x^2 + 10x + 9 = 0$

$a = 1, c = 9$ are correct, $b = 10$ is wrong

$\therefore a = 1, b = -10$ and $c = 9$

Hence, correct equation is

$$x^2 - 10x + 9 = 0$$

90. (c) Since, m and n are roots of the equation

$$(x + p)(x + q) - k = 0$$

$$\Rightarrow x^2 + (p + q)x + pq - k = 0$$

$\therefore m + n = -(p + q)$ and $mn = pq - k$

Now, $(x - m)(x - n) + k = 0$

$$\Rightarrow x^2 - (m + n)x + mn + k = 0$$

$$\Rightarrow x^2 + (p + q)x + pq - k + k = 0$$

$$\Rightarrow x^2 + (p + q)x + pq = 0$$

Hence, $-p$ and $-q$ are the required roots.

91. (c) We have, $2p + 3q = 18$

and $4p^2 + 4pq - 3q^2 - 36 = 0$

$$\Rightarrow (2p + 3q)^2 - 8pq - 12q^2 = 36$$

$$\Rightarrow 18^2 - 4q(2p + 3q) = 36$$

$$\Rightarrow 324 - 36 = 4q(18) \Rightarrow \frac{288}{18} = 4q$$

$$\Rightarrow q = 4$$

$$\therefore 2p + 3 \times 4 = 18$$

$$\Rightarrow p = \frac{18 - 12}{2} = 3$$

$$\therefore 2p + q = 2 \times 3 + 4 = 10$$

92. (a) We have, $x^2 - 3|x| + 2 = 0$

$$\Rightarrow |x|^2 - 3|x| + 2 = 0$$

$$\Rightarrow (|x| - 2)(|x| - 1) = 0$$

$$\Rightarrow |x| = 2 \text{ or } |x| = 1$$

$$\Rightarrow x = \pm 2 \text{ or } x = \pm 1$$

\therefore There are four real roots of the equation.

93. (a) We have, $x^2 - nx + m = 0$

$\therefore \alpha + \beta = n, \alpha\beta = m$

and given that, $\alpha - \beta = 1$

We know that,

$$(\alpha + \beta)^2 - (\alpha - \beta)^2 = 4\alpha\beta$$

$$\Rightarrow n^2 - 1 = 4m$$

$$\Rightarrow n^2 - 4m - 1 = 0$$

94. (c) We have, $ax^2 + bx + c = 0$

\therefore Sum of roots, i.e. $\alpha + \beta = -\frac{b}{a}$

and product of roots, i.e. $\alpha\beta = \frac{c}{a}$

It is given that, $\alpha + \beta = \alpha^2 + \beta^2$

$$\Rightarrow \alpha + \beta = (\alpha + \beta)^2 - 2\alpha\beta$$

$$\Rightarrow -\frac{b}{a} = \left(-\frac{b}{a}\right)^2 - 2\left(\frac{c}{a}\right)$$

$$\Rightarrow -\frac{b}{a} = \frac{b^2}{a^2} - \frac{2c}{a} \Rightarrow -\frac{b}{a} = \frac{b^2 - 2ac}{a^2}$$

$$\Rightarrow -ab = b^2 - 2ac$$

$$\Rightarrow b^2 = 2ac - ab \Rightarrow b^2 + ab = 2ac$$

Sol. (Q. Nos. 95-96)

Given, α and β are the roots of equation $x^2 + bx + c = 0$.

$$\therefore \alpha + \beta = -b \text{ and } \alpha\beta = c$$

As $b > 0$ and $c < 0$

So, $\alpha + \beta < 0$

$$\Rightarrow \beta < -\alpha$$

and $\alpha\beta < 0$

Also, given that $\alpha < \beta \Rightarrow \alpha < 0$

and $\beta > 0$

95. (c) $\alpha + \beta < 0 \Rightarrow \beta < -\alpha \dots(i)$

\therefore Statement I is correct.

As, $\alpha < 0$ and $-\alpha > \beta$

$$\Rightarrow |\alpha| > \beta$$

\therefore Statement II is correct.

96. (b) As, $\alpha + \beta < 0$ and $\alpha\beta < 0$

$$\Rightarrow \alpha + \beta + \alpha\beta < 0$$

\therefore Statement I is not correct.

Now, $\alpha^2\beta + \beta^2\alpha = \alpha\beta(\alpha + \beta)$

As, $\alpha + \beta < 0$ and $\alpha\beta < 0$

$$\Rightarrow \alpha\beta(\alpha + \beta) > 0$$

\therefore Statement II is correct.

97. (a) $\because x^2 - px + 4 = 0$

Here, $a > 0$ and $f(x) > 0$

$$\therefore D < 0$$

$$\therefore p^2 - 16 < 0 \Rightarrow p^2 < 16 \Rightarrow |p| < 4$$

98. (b) Given equation is

$$(l - m)x^2 + lx + 1 = 0$$

Let α and 2α be the roots of given equation. Then, we have

$$\alpha + 2\alpha = 3\alpha = \frac{-l}{l - m}$$

and $\alpha \cdot 2\alpha = 2\alpha^2 = \frac{1}{l - m}$

$$\Rightarrow \alpha = \frac{-l}{3(l - m)} \text{ and } 2\alpha^2 = \frac{1}{l - m}$$

$$\Rightarrow 2 \cdot \left(\frac{-l}{3(l - m)} \right)^2 = \frac{1}{l - m}$$

$$\Rightarrow \frac{2l^2}{9(l - m)^2} = \frac{1}{l - m}$$

$$\Rightarrow 2l^2 = 9(l - m) \quad [\because l \neq m]$$

$$\Rightarrow 2l^2 - 9l + 9m = 0$$

$$\Rightarrow l = \frac{9 \pm \sqrt{81 - 72m}}{4}$$

$\therefore l$ is real.

$$\therefore D \geq 0$$

$$\Rightarrow 81 - 72m \geq 0$$

$$\Rightarrow 81 \geq 72m \Rightarrow m \leq \frac{81}{72} \Rightarrow m \leq \frac{9}{8}$$

Hence, greatest value of m is $\frac{9}{8}$.

99. (d) Given, $x^2 + bx + c = 0, b \neq 0$

$$\tan \alpha + \tan \beta = -b$$

and $\tan \alpha \tan \beta = c$

Now, $\tan(\alpha + \beta) = \frac{\tan \alpha + \tan \beta}{1 - \tan \alpha \tan \beta}$

$$= -\frac{b}{1 - c} = b(c - 1)^{-1}$$

100. (b) $\because \tan \alpha + \tan \beta = -b$

$$\Rightarrow \frac{\sin \alpha}{\cos \alpha} + \frac{\sin \beta}{\cos \beta} = -b$$

$$\Rightarrow \frac{\sin \alpha \cos \beta + \cos \alpha \sin \beta}{\cos \alpha \cos \beta} = -b$$

$$\Rightarrow \frac{\sin(\alpha + \beta)}{\cos \alpha \cos \beta} = -b$$

$$\Rightarrow \sin(\alpha + \beta) \sec \alpha \sec \beta = -b$$

07

PERMUTATIONS AND COMBINATIONS

In NDA exam, generally 2-3 questions are asked from this chapter which are based on fundamental principle of counting, number of permutation / combination under certain conditions etc.

In our day-to-day life, we are interested to find the number of ways in which a particular work can be done. For this, we have to find all the possible ways to do that work and it can be done with the help of *permutation* and *combination*.

FACTORIAL NOTATION

The continued product of first n natural numbers is denoted by $n!$ or it is read as ' n factorial'. Thus, $n! = n(n-1)(n-2)\dots 3 \times 2 \times 1$, e.g. $5! = 5 \times 4 \times 3 \times 2 \times 1 = 120$ and $4! = 4 \times 3 \times 2 \times 1 = 24$

Properties of Factorial Notation

- (i) $0! = 1$
- (ii) Factorials of negative integers and fractions are not defined.
- (iii) $\frac{n!}{r!} = n(n-1)(n-2)\dots(r+1)$
- (iv) $\frac{n!}{(n-r)!} = n(n-1)(n-2)\dots(n-r+1)$
- (v) $(m+n)! \neq m! + n!$
- (vi) $(mn)! \neq m! n!$
- (vii) $n! = n(n-1)! = n(n-1)(n-2)!$

FUNDAMENTAL PRINCIPLES OF COUNTING

There are following fundamental principles of counting

1. **Fundamental principle of multiplication** "If there are two jobs such that one of them can be completed in m different ways following which a second job can be completed in n different ways, then the two jobs in succession can be completed in $m \times n$ ways. This can be extended to any finite number of operations.

EXAMPLE 1. How many 3-digit numbers, each less than 600, can be formed from (1, 2, 3, 4, 7, 9), if repetition of digits is allowed?

- a. 216 b. 180 c. 144 d. 120

Sol. c. Unit's and ten's place each can be filled by any one of the given numbers, i.e. by 6×6 ways.

But hundredth place can be filled by only 4 ways (7 and 9 cannot be put here).

\therefore Total required number of ways = $4 \times 6 \times 6 = 144$

2. Fundamental principle of addition If there are m ways for doing one work and n ways doing another work, then ways of doing either of the two works = $m + n$. Here, the two works are independent of each other.

EXAMPLE 2. In a class there are 10 boys and 8 girls. The teacher wants to select either a boy or a girl to represent the class in a function. In how many ways can the teacher make this selection?

- a. 80 b. 18 c. 81 d. None of these

Sol. b. Here, the teacher has to perform either of the following two jobs

- (i) selecting a boy among 10 boys or
(ii) selecting a girl among 8 girls.

The first job can be performed in 10 ways and the second in 8 ways. Therefore, by the fundamental principle of addition either of the two jobs can be performed in $(10 + 8) = 18$ ways. Hence, the teacher can make the selection of either a boy or a girl in 18 ways.

PERMUTATIONS

Each of the arrangements which can be made by taking some or all of a number of things is called a *permutation*. Thus, in permutation the order of arrangement is important. When the order is changed, a different permutation is obtained, e.g. The permutations of three letters A, B and C taken all at a time are ABC, ACB, BCA, BAC, CBA and CAB .

SOME IMPORTANT RESULTS ON PERMUTATION

- (i) Let r and n be positive integers such that $0 \leq r \leq n$. Then, the number of all permutations of n distinct things taken r at a time is given by ${}^n P_r$ or $p(n, r)$, where

$${}^n P_r = \frac{n!}{(n-r)!} = n(n-1)(n-2) \dots (n-r+1)$$

where $n \geq r$.

- (ii) The number of all permutations of n distinct things, taken all at a time is ${}^n P_n = n!$.
(iii) The number of permutations of n different things taken r at a time, when each thing may be repeated any number of times is n^r .
(iv) ${}^n P_0 = 1, {}^n P_1 = n$ and ${}^n P_n = n!, {}^n P_{n-1} = n!$

Permutation Under Certain Condition

- The number of all permutations of n different objects taking r at a time
 - when a particular object is always included is $r \cdot {}^{n-1} P_{r-1}$.
 - when a particular object is never included is ${}^{n-1} P_r$.
- Number of permutations of n different things, taken r at a time, when s particular things are to be always included in each arrangement, is $s! [r - (s - 1)] \cdot {}^{n-s} P_{r-s}$.
- Number of permutations of n different things, taken all at a time, when m specified things always come together, is $m! \times (n - m + 1)!$.
- Number of permutations of n different things, taken all at a time, when m specified things never come together, is $n! - m! \times (n - m + 1)!$.
- The number of permutations of n things, of which p_1 are alike of one kind; p_2 are alike of second kind; p_3 are alike of third kind; ...; p_r are alike of r th kind such that $p_1 + p_2 + \dots + p_r = n$, is
$$\frac{n!}{p_1! p_2! p_3! \dots p_r!}$$

EXAMPLE 3. The number of arrangements that can be made with the letters of the word 'MATHEMATICS' in which all vowels come together, is

- a. $\frac{8! \times 4!}{2!2!}$ b. $\frac{8! \times 4!}{2!2!2!}$ c. $\frac{8!}{2!2!2!}$ d. $\frac{8!}{4!2!2!}$

Sol. b. There are 4 vowels viz. A, E, A, I. Considering these four vowels as one letter we have 8 letters (M, T, H, M, T, C, S and one letter obtained by combining all vowels), out of which M occurs twice, T occurs twice and the rest all different. These 8 letters can be arranged in $\frac{8!}{2! \times 2!}$ ways. But, the four

vowels (A, E, A, I) can be put together in $\frac{4!}{2!}$ ways.

Hence, the total number of arrangements in which vowels are always together = $\frac{8!}{2! \times 2!} \times \frac{4!}{2!}$

Circular Permutations

If we arrange the objects along the circumference of a circle, then permutations are known as *circular permutations*.

SOME IMPORTANT RESULTS ON

CIRCULAR PERMUTATION

- (i) The number of circular permutations of n distinct objects is $(n - 1)!$. Here, anti-clockwise and clockwise order of arrangements are considered as distinct permutations.
- (ii) If anti-clockwise and clockwise order of arrangements are not distinct, e.g. arrangement of beads in a necklace, arrangement of flowers in a garland etc., then number of circular permutations of n distinct items is $\frac{(n - 1)!}{2}$.

EXAMPLE 4. There are 20 persons among whom two are brothers. Find the number of ways in which we can arrange them around a circle, so that there is exactly one person between the two brothers.

- a. 18! b. $2 \times 18!$ c. 17! d. $18 \times 17!$

Sol. b. Let B_1 and B_2 be two brothers among 20 persons and let M be the person. Clearly, M can be chosen from 18 persons (excluding B_1 and B_2) in 18 ways. Considering the two brothers B_1 and B_2 and the person M as one person, we have 18 persons in all. These 18 persons can be arranged around a circle in $(18 - 1)! = 17!$ ways. But B_1 and B_2 can be arranged among them solve in $2!$ ways.

Hence, total number of required ways
 $= 18 \times 17! \times 2! = 2 \times 18!$

COMBINATIONS

Each of the different selections made by taking some or all of a number of objects, (irrespective of there arrangements) is called a *combinations*. e.g. The different combinations formed of two out of three letters A, B, C are AB, AC, BC .

Meaning of ${}^n C_r$

The number of combinations of n different things taken r at a time is denoted by ${}^n C_r$ or $C(n, r)$ or $\binom{n}{r}$.

Then,
$${}^n C_r = \frac{n!}{r!(n-r)!} = \frac{{}^n P_r}{r!} \quad [0 \leq r \leq n]$$

$$= \frac{n(n-1)(n-2)\dots(n-r+1)}{r(r-1)(r-2)\dots 2 \cdot 1}, \quad n \in N \text{ and } r \in W$$

If $r > n$, then ${}^n C_r = 0$

Properties of ${}^n C_r$

- (i) ${}^n C_r$ is a natural number.
- (ii) ${}^n C_r = {}^n C_{n-r}$, for $0 \leq r \leq n$
- (iii) ${}^n C_0 = {}^n C_n = 1, {}^n C_1 = n$
- (iv) Let n and r be non-negative integers such that $r \leq n$.
 Then, ${}^n C_r + {}^n C_{r-1} = {}^{n+1} C_r$ [Pascal's law]

$${}^n C_r = \frac{n}{r} \cdot {}^{n-1} C_{r-1} \quad [1 \leq r \leq n]$$
- (v) If $1 \leq r \leq n$, then $n \cdot {}^{n-1} C_{r-1} = (n - r + 1) \cdot {}^n C_{r-1}$
- (vi) ${}^n C_x = {}^n C_y \Rightarrow x = y$ or $x + y = n$
- (vii) ${}^n C_r / {}^n C_{r-1} = \left(\frac{n-r+1}{r}\right)$
- (viii) ${}^n C_0 + {}^n C_1 + {}^n C_2 + \dots + {}^n C_n = 2^n$
- (ix) ${}^n C_0 + {}^n C_2 + {}^n C_4 + \dots = {}^n C_1 + {}^n C_3 + {}^n C_5 \dots = 2^{n-1}$
- (x) $2^{2n+1} C_0 + 2^{2n+1} C_1 + 2^{2n+1} C_2 + \dots + 2^{2n+1} C_n = 2^{2n}$

SOME IMPORTANT RESULTS ON COMBINATIONS

- (i) Number of combinations of n different things taken r at a time
 - (a) When p particular things are always included $= {}^{n-p} C_{r-p}$.
 - (b) When p particular things are never included $= {}^{n-p} C_r$.
 - (c) When p particular things are not together in any selection $= {}^n C_r - {}^{n-p} C_{r-p}$.
- (ii) If there are n person in a room and they shake their hand with others only once, then total number of shake hands $= {}^n C_2$.
- (iii) The total number of combinations of n different things taken one or more at a time or the number of ways of n different things selecting atleast one of them is ${}^n C_1 + {}^n C_2 + \dots + {}^n C_n = 2^n - 1$.
- (iv) The number of combinations of n identical things taking $r (r \leq n)$ at a time is 1.
- (v) The number of ways of selecting r things out of n alike things is $(n + 1)$, (where $r = 0, 1, 2, 3, \dots, n$).
- (vi) If out of $(p + q + r)$ things, p are alike of one kind, q are alike of second kind and rest are alike of third kind, then the total number of combinations is $[(p + 1)(q + 1)(r + 1)] - 1$.

EXAMPLE 5. From 12 books, the difference between number of ways a selection of 5 books, when one specified book is always excluded and one specified book is always included is

- a. 64 b. 118 c. 132 d. 330

Sol. c. If a specified book is always included. It means 4 books are selected out of the remaining 11 books
 \therefore Number of ways = ${}^{11}C_4$
 If a specified book is always excluded. It means 5 books are selected out of the remaining 11 books.
 \therefore Number of ways = ${}^{11}C_5$
 Thus, Required number of ways = ${}^{11}C_5 - {}^{11}C_4$

$$= \frac{11!}{5!6!} - \frac{11!}{4!7!} = 132$$

EXAMPLE 6. How many 5-letter words with or without meaning can be formed out of letters of the word 'EQUATIONS' if repetition of letters is not allowed?

- a. 5^9 b. 9C_5
 c. ${}^9C_5 \times 5!$ d. 9^5

Sol. c. There are 9 letters in the word 'EQUATIONS'. In order to form 5-letter words, we first select 5 letters out of these 9 letters.
 Selection of 5 letters out of 9 letter can be done in 9C_5 ways.
 Arranging of 5 selected letters to form 5-letter words can be done in $5!$ ways.
 \therefore Total number of 5 letter words = ${}^9C_5 \times 5!$

Geometrical Applications of Combinations

Some basic geometrical applications of nC_r are as follows

1. Out of n non-concurrent and non-parallel straight lines points of intersection are nC_2 .
2. Out of ' n ' points the number of straight lines are (when no three are collinear) nC_2 .
3. If out of n points m are collinear, then number of straight lines = ${}^nC_2 - {}^mC_2 + 1$, where $m \geq 3$.
4. In a polygon total number of diagonals out of n points (no three are collinear) = ${}^nC_2 - n = \frac{n(n-3)}{2}$.
5. Number of triangles formed from n points is nC_3 (when no three points are collinear).
6. Number of triangles out of n points in which m are collinear are ${}^nC_3 - {}^mC_3$, where $m \geq 3$.
7. Number of parallelogram in two system of parallel lines (when 1st set contains m parallel lines and 2nd set contains n parallel lines) = ${}^nC_2 \times {}^mC_2$.

EXAMPLE 7. The number of parallelograms that can be formed from a set of four parallel lines intersecting another set of three parallel lines is

- a. 6 b. 18 c. 12 d. 9

Sol. b. Required number of parallelograms

$$= {}^4C_2 \times {}^3C_2 = \frac{4!}{2!2!} \times \frac{3!}{2!1!} = \frac{4 \times 3}{2 \times 1} \times \frac{3}{1} = 18$$

> PRACTICE EXERCISE

1. The product of r consecutive positive integers, divided by $r!$ is
 (a) a proper fraction (b) equal to r
 (c) a positive integer (d) None of these
2. The number of 5 digit telephone numbers having atleast one of their digits repeated is
 (a) 90000 (b) 10000 (c) 30240 (d) 69760
3. Four dice (six faced) are rolled. The number of possible outcomes in which atleast one die shows 2 is
 (a) 1296 (b) 625
 (c) 671 (d) None of these
4. In how many ways 4 boys and 3 girls can be seated in a row, so that they are alternate?
 (a) 108 (b) 144 (c) 96 (d) 72
5. All the letters of the word 'EAMCET' are arranged in possible ways. The number of such arrangements in which no two vowels are adjacent to each other is
 (a) 360 (b) 144 (c) 72 (d) 54
6. The number of words that can be formed from the letters of the word 'INDRAPRASTHA' when the vowels are never separated, is
 (a) 727560 (b) 725760
 (c) 752760 (d) 757260
7. There are 10 lamp in a hall. Each one of them can be switched on independently. The number of ways in which the hall can be illuminated is
 (a) 10^2 (b) 1023 (c) 2^{10} (d) 10!

- 8.** 20 persons are invited for a party. The number of ways in which they and the host can be seated at a circular table, if two particular persons be seated on either side of the host is equal to
 (a) $2 \cdot (18)!$ (b) $18! \cdot 3!$
 (c) $19! \cdot 2!$ (d) None of these
- 9.** Seven women and seven men are to sit round a circular table such that there is a man on either side of every women, then the number of seating arrangements is
 (a) $(17!)^2$ (b) $(6!)^2$ (c) $6! \times 7!$ (d) $7!$
- 10.** What is the value of $\sum_{r=1}^n \frac{P(n,r)}{r!}$?
 (a) $2^n - 1$ (b) 2^n (c) 2^{n-1} (d) $2^n + 1$
- 11.** How many times does the digit 3 appear while writing the integers from 1 to 1000?
 (a) 269 (b) 271 (c) 300 (d) None of these
- 12.** The value of $({}^7C_0 + {}^7C_1) + ({}^7C_1 + {}^7C_2) + \dots + ({}^7C_6 + {}^7C_7)$ is
 (a) $2^7 - 1$ (b) $2^8 - 2$ (c) $2^8 - 1$ (d) 28
- 13.** The solution set of ${}^{10}C_{x-1} > 2 \cdot {}^{10}C_x$ is
 (a) {1, 2, 3} (b) {4, 5, 6} (c) {8, 9, 10} (d) {9, 10, 11}
- 14.** Given 5 line segments of lengths 2, 3, 4, 5, 6 units. Then the number of triangles that can be formed by joining these lines are
 (a) 5C_3 (b) ${}^5C_3 - 3$
 (c) ${}^5C_3 - 2$ (d) ${}^5C_3 - 1$
- 15.** The sides AB, BC, CA of a ΔABC have 3, 5 and 6 interior points, respectively on them. The number of triangles that can be constructed using these points as vertices is given by
 (a) 364 (b) 333
 (c) 240 (d) None of these
- 16.** Everybody in a room shakehands with everybody else. The total number of hand shakes is 66. The total number of persons in the room is
 (a) 11 (b) 12 (c) 13 (d) 14
- 17.** In an examination, there are three multiple choice questions and each question has 4 choices. Then, the number of ways in which a student can fail to get all answer correct is
 (a) 11 (b) 12 (c) 27 (d) 63
- 18.** A parallelogram is cut by two sets of m lines parallel to its sides. The number of parallelograms thus formed is
 (a) ${}^mC_2 \times {}^mC_2$ (b) $2^{(m+2)}C_2$
 (c) $({}^{m+2}C_2)^2$ (d) None of these

- 19.** If ${}^{2n+1}P_{n-1} : {}^{2n-1}P_n = 3:5$, then consider the following statements
 I. The value of n is 3
 II. $P(5, n) = P(6, n - 1)$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 20.** Four-letter words are to be formed using the letters of the word 'FAILURE'.
 Consider the following statements
 I. Number of words of F is included in each word is ${}^6C_3 \times 4!$.
 II. Number of words, if it contains two different vowels and two different consonants is ${}^3C_2 \times {}^4C_2 \times 4!$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- Directions** (Q. Nos. 21-22) Find the number of numbers between 400 and 4000 that can be formed with the digits 2, 3, 4, 5, 6 and 0.
- 21.** When number is of 3 digits
 (a) 75 (b) 90
 (c) 60 (d) 80
- 22.** When number is of 4 digits
 (a) 120 (b) 150
 (c) 180 (d) 160
- Directions** (Q. Nos. 23-24) Find the total numbers of four digits number that are greater than 3000, that can be formed using the digits 1, 2, 3, 4, 5 and 6.
- 23.** If repetition is not allowed
 (a) 240 (b) 24
 (c) 360 (d) 480
- 24.** If repetition is allowed
 (a) 486 (b) 864 (c) 240 (d) 1296
- Directions** (Q. Nos. 25-27) A committee of five members is to be made from 4 gentlemen and 6 ladies. Then, find the number of ways in which committee can be formed.
- 25.** Gentlemen are in majority
 (a) 60 (b) 66 (c) 120 (d) 126
- 26.** Ladies are in majority
 (a) 60 (b) 66 (c) 120 (d) 186
- 27.** Exactly 3 ladies are chosen
 (a) 120 (b) 126 (c) 60 (d) 40

Directions (Q. Nos. 28-30) *There are ten points in a plane, of these ten points four points are in a straight line and with the exception of these four points, no three points are in the same straight line. On the basis of this information answer the following questions.*

- 28.** The number of triangles formed by joining these ten points is
(a) 116 (b) 80 (c) 96 (d) 56
- 29.** The number of straight lines formed by joining these ten points is
(a) 15 (b) 40 (c) 24 (d) 39
- 30.** The number of quadrilaterals formed by joining these ten points is
(a) 82 (b) 48 (c) 185 (d) 64

Directions (Q. Nos. 31-33) *We have to choose Eleven players for cricket team from eight batsmen, six bowlers, four all rounder and two wicket keepers in the following conditions.*

- 31.** The number of selections, when atmost one all rounder and one wicket keeper will play
(a) ${}^4C_1 \times {}^{14}C_{10} + {}^2C_1 \times {}^{14}C_{10} + {}^4C_1 \times {}^2C_1 \times {}^{14}C_9 + {}^{14}C_{11}$
(b) ${}^4C_1 \times {}^{15}C_{11} + {}^{15}C_{11}$ (c) ${}^4C_1 \times {}^{15}C_{10} + {}^{15}C_{11}$
(d) None of the above
- 32.** Number of selections, when two particular batsmen do not want to play when a particular bowler will play
(a) ${}^{17}C_{10} + {}^{19}C_{11}$ (b) ${}^{17}C_{10} + {}^{19}C_{11} + {}^{17}C_{11}$
(c) ${}^{17}C_{10} + {}^{20}C_{11}$ (d) ${}^{19}C_{10} + {}^{19}C_{11}$
- 33.** Number of selections when a particular batsman and a particular wicket keeper do not want to play together
(a) $2^{18}C_{10}$ (b) ${}^{19}C_{11} + {}^{18}C_{10}$
(c) ${}^{19}C_{10} + {}^{19}C_{11}$ (d) None of these

Directions (Q. Nos. 34-37) *Different words are being formed by arranging the letters of the word 'ARRANGE'*

- 34.** The number of arrangement in which two R's are never together is
(a) 900 (b) 1080 (c) 1020 (d) 960
- 35.** The number of arrangement in which two A's are together but not the two R's is
(a) 210 (b) 240 (c) 270 (d) 180
- 36.** The number of arrangements in which neither the two A's nor the two R's are together is
(a) 840 (b) 540 (c) 720 (d) 660
- 37.** The number of words can be formed without changing the relative order of the vowels and consonants is
(a) 48 (b) 36 (c) 72 (d) 27

PREVIOUS YEARS' QUESTIONS

- 38.** What is the number of ways that 4 boys and 3 girls can be seated, so that boys and girls sits alternate? **2012 I**
(a) 12 (b) 72 (c) 120 (d) 144
- 39.** The number of permutations that can be formed from all the letters of the word 'BASEBALL' is **2012 II**
(a) 540 (b) 1260 (c) 3780 (d) 5040
- 40.** What is the number of diagonals which can be drawn by joining the angular points of a polygon of 100 sides? **2012 II**
(a) 4850 (b) 4950 (c) 5000 (d) 10000
- 41.** If $P(77, 31) = x$ and $C(77, 31) = y$, then which one of the following is correct? **2013 I**
(a) $x = y$ (b) $2x = y$ (c) $77x = 31y$ (d) $x > y$
- 42.** In how many ways can the letters of the word 'GLOOMY' be arranged so that the two O's should not be together? **2013 I**
(a) 240 (b) 480 (c) 600 (d) 720
- 43.** If $C(28, 2r) = C(28, 2r - 4)$, then what is r equal to? **2013 II**
(a) 7 (b) 8 (c) 12 (d) 16
- 44.** Out of 7 consonants and 4 vowels, words are to be formed by involving 3 consonants and 2 vowels. The number of such words formed is **2014 I**

HINTS AND SOLUTIONS

- 1.** (c) Consider r consecutive positive integers $n + 1, \dots, n + r - 1, n + r$.
 Then, $\frac{(n + 1) \dots (n + r)}{r!}$
 $= \frac{n!(n + 1) \dots (n + r)}{n! r!} = {}^{n+r}C_r$
 which is a positive integer.
- 2.** (d) A telephone number can be started with zero.
 Therefore, the number of numbers with at least one digit repeated
 $= 10^5 - {}^{10}P_5$
 $= 10^5 - (10 \cdot 9 \cdot 8 \cdot 7 \cdot 6) = 69760$
- 3.** (c) Total number of possible outcomes
 $= 6^4$
 Number of possible outcomes in which 2 does not appear on any dice
 $= 5^4$. Required number $= 6^4 - 5^4 = 671$
- 4.** (b) Possible arrangement will be the form B G B G B G B
 Boys occupy 1, 3, 5, 7 places and girls occupy 2, 4, 6 places.
 \therefore Four boys can be seated in $4!$ ways.
 Three girls can be seated in $3!$ ways.
 \therefore Required number $= 4! \times 3! = 144$
- 5.** (c) Arrangement is $\times M \times C \times T \times$, first we place 3 consonant in $3!$ ways and then 3 vowels.
 At four ' \times ' places (2 between them and 2 on sides) in which one vowel E is repeated can be placed in ${}^4P_3 / 2!$ ways.
 Hence, required number
 $= 3! \cdot {}^4P_3 / 2! = 72$
- 6.** (b) Required number of ways
 $= \frac{9!}{2!} \times \frac{4!}{3!}$
 $= 725760$
- 7.** (b) Each bulb has two choices, either switched on or off.
 \therefore Required number $= 2^{10} - 1 = 1023$
 [Since, in one way when all are switched off, then the hall will not be illuminated]
- 8.** (a) Host can sit on any seat. Two particular guests can sit on either sides of host in $2! = 2$ ways and these three persons consider a single unit and remaining 18 guests in $(18)!$ ways. Hence, total ways
 $= 2 \cdot (18)!$

9. (c) 7 womens can be seated along a circular table in $6!$ ways.

If mens sit at the places marked by 'X', then mens will be on either side of women.

\therefore 7 mens can be seated is $7!$ ways

\therefore Required number = $6! \times 7!$

10. (a)
$$\sum_{r=1}^n \frac{P(n, r)}{r!} = \sum_{r=1}^n \frac{1}{r!} \cdot \frac{n!}{(n-r)!}$$

$$\left[\because {}^n P_r = \frac{n!}{(n-r)!} \right]$$

$$= \sum_{r=1}^n {}^n C_r \left[\because {}^n C_r = \frac{n!}{r!(n-r)!} \right]$$

$$= ({}^n C_1 + {}^n C_2 + {}^n C_3 + \dots + {}^n C_n)$$

$$= (1 + {}^n C_1 + {}^n C_2 + {}^n C_3 + \dots + {}^n C_n) - 1$$

$$= ({}^n C_0 + {}^n C_1 + {}^n C_2 + \dots + {}^n C_n) - 1$$

$$= (1 + 1)^n - 1 = 2^n - 1$$

11. (b) Number of time 3 occurs = (when 3 occurs exactly at one place) + (when 3 occurs exactly at two places) + (when 3 occurs exactly at three places)

$$= {}^3 C_1 \times 9 \times 9 + {}^3 C_2 \times 9 + {}^3 C_3$$

$$= 243 + 27 + 1 = 271$$

12. (b) $({}^7 C_0 + {}^7 C_1) + ({}^7 C_1 + {}^7 C_2)$

$$+ \dots + ({}^7 C_6 + {}^7 C_7)$$

$$= 2[{}^7 C_0 + {}^7 C_1 + \dots + {}^7 C_7] - {}^7 C_0$$

$$= 2 \cdot 2^7 - 2 = 2^8 - 2$$

13. (c) For ${}^{10} C_{x-1}$ and ${}^{10} C_x$, $10 \geq x - 1$ and $10 \geq x$

$$\therefore x \leq 10$$

$$\because {}^{10} C_{x-1} > 2 \cdot {}^{10} C_x$$

$$\Rightarrow \frac{10!}{(11-x)!(x-1)!} > 2 \cdot \frac{10!}{(10-x)!x!}$$

$$\Rightarrow \frac{1}{(11-x) \cdot (10-x)(x-1)!} > 2 \cdot \frac{1}{(10-x)!x \cdot (x-1)!}$$

$$\Rightarrow \frac{1}{11-x} > \frac{2}{x}$$

$$\Rightarrow x > 22 - 2x \quad [\because x \geq 0]$$

$$\Rightarrow x > \frac{22}{3} \Rightarrow x > 7\frac{1}{3}$$

$$\therefore x = \{8, 9, 10\} \quad [\because x \in N]$$

14. (b) We know that, in a triangle, sum of length of two sides is always greater than the third side.
- \therefore The triangle will not be formed if we select segments of lengths. (2, 3, 5), (2, 3, 6) and (2, 4, 6). Hence, number of triangles formed = ${}^5 C_3 - 3$

15. (b) Selection of 3 points from given 14 points can be made in

$${}^{14} C_3 = 364 \quad \dots(i)$$

But selection of 3 points from the points on one line cannot give any triangle. Such selections are

$${}^3 C_3 + {}^5 C_3 + {}^6 C_3$$

$$= 1 + 10 + 20 = 31 \quad \dots(ii)$$

Hence, total number of triangles that can be formed = $364 - 31 = 333$

16. (b) Let there be n persons in a room.

\therefore Total number of handshakes

$$= {}^n C_2 = 66 \Rightarrow \frac{1}{2} n(n-1) = 66$$

$$\Rightarrow n^2 - n - 132 = 0$$

$$\Rightarrow (n+11)(n-12) = 0$$

$$\Rightarrow n = 12 \quad [\because n \neq -11].$$

17. (d) Each question can be answered in 4 ways.

All questions can be answered in 1 way

So, the required number = $4^3 - 1 = 63$

18. (c) The two sets of m parallel lines along with two sets of two parallel lines of the given parallelogram will form two sets of $(m+2)$ parallel lines. Each parallelogram is formed by choosing two parallel lines from each of the above.

\therefore Total number of parallelograms = ${}^{m+2} C_2 \times {}^{m+2} C_2 = ({}^{m+2} C_2)^2$

19. (b) We have, $\frac{{}^{2n+1} P_{n-1}}{{}^{2n-1} P_n} = \frac{3}{5}$

$$\Rightarrow \frac{(2n+1)! \times (n-1)!}{(n+2)! \times (2n-1)!} = \frac{3}{5}$$

$$\Rightarrow \frac{(2n+1)(2n)(2n-1)! \times (n-1)!}{(n+2)(n+1)n(n-1)! \times (2n-1)!} = \frac{3}{5}$$

$$\Rightarrow \frac{2(2n+1)}{(n+2)(n+1)} = \frac{3}{5}$$

$$\Rightarrow 10(2n+1) = 3(n+2)(n+1)$$

$$\Rightarrow 3n^2 + 9n + 6 = 20n + 10$$

$$\Rightarrow 3n^2 - 11n - 4 = 0$$

$$\Rightarrow (n-4)(3n+1) = 0 \Rightarrow n = 4$$

\therefore Statement I is not correct.

Now, for $n = 4$,

$$P(5, n) = {}^5 P_4 = \frac{5!}{1!} = 120$$

and $P(6, n-1) = {}^6 P_3 = \frac{6!}{3!} = 120$

$$\Rightarrow P(5, n) = P(6, n-1), \text{ for } n = 4$$

\therefore Statement II is correct.

20. (c) There are 7 letters in the word 'FAILURE'.
- Number of vowels = 4
- Number of consonants = 3
- Out of four letters, one letter is F and other three letters can be selected from remaining 6 letters in ${}^6 C_3$ ways.
- These four letters can be arranged in $4!$ ways.
- Total number of words = ${}^6 C_3 \times 4!$
- So, Statement I is correct.
- Now, 2 vowels and 2 consonants can be chosen in ${}^3 C_2 \times {}^4 C_2$ ways and can be arranged in $4!$ ways.
- Total number of words = ${}^3 C_2 \times {}^4 C_2 \times 4!$
- So, Statement II is correct.

21. (c) Since, the number should be greater than 400 therefore, hundreds place can be filled up by any one of the three digits 4, 5, 6 in 3 different ways.

Remaining two places can be filled up by remaining five digits in ${}^5 P_2$ ways.

\therefore Required number

$$= 3 \times {}^5 P_2 = 3 \times \frac{5!}{3!} = 60$$

22. (a) Thousands place can be filled up by any of two digits 2 and 3 in 2 ways.

Remaining three places can be filled up by remaining five digits in ${}^5 P_3$ ways.

\therefore Required number

$$= 2 \times {}^5 P_3 = 2 \times \frac{5!}{2!} = 120$$

23. (a) Required number of numbers

$$= 4 \times 5 \times 4 \times 3 = 240$$

24. (b) Required number of numbers

$$= 4 \times 6 \times 6 \times 6 = 864$$

Sol. (Q. Nos. 25-27) The committee of five numbers can be made by choosing gentlemen and ladies in the following manner

Gentlemen (4)	Ladies (6)
0	5
1	4
2	3
3	2
4	1

25. (b) Number of ways to make the committee, when gentlemen are in majority
- $$= {}^4 C_3 {}^6 C_2 + {}^4 C_4 {}^6 C_1$$
- $$= 4 \times 15 + 1 \times 6 = 66$$
26. (d) Number of ways to make a committee, when ladies are in majority
- $$= {}^4 C_0 {}^6 C_5 + {}^4 C_1 {}^6 C_4 + {}^4 C_2 {}^6 C_3$$
- $$= 1 \times 6 + 4 \times 15 + 6 \times 20$$
- $$= 6 + 60 + 120 = 186$$

27. (a) Number of ways to make a committee, when exactly 3 ladies are chosen = ${}^4C_2 \cdot {}^6C_3 = 6 \times 20 = 120$

28. (a) Total number of selections of 3 points out of 10 points
 $= {}^{10}C_3 = \frac{10 \times 9 \times 8}{3!} = 120$

When, 3 collinear points are selected no triangle is formed.

Number of selections of 3 points out of 4 collinear points
 $= {}^4C_3 = 4$

\therefore Required number = $120 - 4 = 116$

29. (b) Total number of selections of 2 points out of 10 points
 $= {}^{10}C_2 = \frac{10 \times 9}{2!} = 45$

Number of selections of two points, when only one straight line is formed = 4C_2
 [If the 4 collinear points are A, B, C, D, then AB, AC, AD, BC, BD, CD are the same line]

\therefore Required number
 $= {}^{10}C_2 - {}^4C_2 + 1 = 45 - 6 + 1 = 40$

30. (c) Total number of selections of 4 points out of 10 given points
 $= {}^{10}C_4 = \frac{10!}{4!6!}$
 $= \frac{10 \times 9 \times 8 \times 7}{24} = 210$

Number of selections of 4 points, when no quadrilateral is formed
 $= {}^4C_3 \cdot {}^6C_1 + {}^4C_4 \cdot {}^6C_0$
 $= 4 \times 6 + 1 \cdot 1 = 25$

Hence, required number
 $= 210 - 25 = 185$

31. (a) When one all rounder and ten players from bowlers and batsmen play, number of ways is ${}^4C_1 \times {}^{14}C_{10}$.

When, one wicketkeeper and 10 players from bowlers and batsmen play, number of ways is ${}^2C_1 \times {}^{14}C_{10}$.

When one all rounder, one wicketkeeper and nine players from batsmen and bowlers play, number of ways is ${}^4C_1 \times {}^2C_1 \times {}^{14}C_9$.

When all eleven players play from bowlers and batsman, then number of ways is ${}^{14}C_{11}$.

Total number of selections is
 ${}^4C_1 \times {}^{14}C_{10} + {}^2C_1 \times {}^{14}C_{10} + {}^4C_1 \times {}^2C_1 \times {}^{14}C_9 + {}^{14}C_{11}$.

32. (b) If the particular bowler plays, then two batsman will not play. so, rest of 10 players can be selected from 17 other players.

Number of such selections is ${}^{17}C_{10}$.

If the particular bowler does not play, then number of selections is ${}^{19}C_{11}$.

If all the three players do not play, then number of selections is ${}^{17}C_{11}$.

Total number of selections is
 ${}^{17}C_{10} + {}^{19}C_{11} + {}^{17}C_{11}$

33. (b) If the particular batsman is selected. Then, rest of 10 players can be selected in ${}^{18}C_{10}$ ways.

If particular wicketkeeper is selected. Then rest of 10 players can be selected in ${}^{18}C_{10}$ ways.

If both are not selected, then number of ways is ${}^{18}C_{11}$.

Hence, total number of ways is
 $2 \cdot {}^{18}C_{10} + {}^{18}C_{11} = {}^{19}C_{11} + {}^{18}C_{10}$.

Sol. (Q. Nos. 34-37)

There are 7 letters in the word 'ARRANGE' and there are two A's and two R's and three different letters. Number of consonants = 4

Number of vowels = 3
 Total number of arrangement when there is no restriction

$$= \frac{7!}{2!2!} = 1260$$

34. (a) Number of arrangement, when two R's are together

$$= \frac{6!2!}{2!2!} = 360$$

\therefore Required number = $1260 - 360 = 900$

35. (b) Number of arrangement, when two A's are together

$$= \frac{6!2!}{2!2!} = 360$$

Number of arrangement, when two A's and two R's are together

$$= \frac{5!2!2!}{2!2!} = 120$$

\therefore Required number = $360 - 120 = 240$

36. (d) Number of arrangement, when two R's are not together = 900

Number of arrangements, when two R's are not together and two A's are together = 240

\therefore Required number = $900 - 240 = 660$

37. (b) Relative order of vowels and consonant remains unchanged, therefore, vowels will occupy only vowel's place and consonants will occupy consonants place.

Now, 4 consonants can be arranged in $\frac{4!}{2!}$

and 3 vowels can be arranged in $\frac{3!}{2!}$

\therefore Required number = $\frac{4!}{2!} \times \frac{3!}{2!} = 36$

38. (d) The required number of ways that 4 boys and 3 girls can be seated, so that boys and girls alternate = $4! \times 3!$
 $= 24 \times 6 = 144$

39. (d) There are 8 letters in word 'BASEBALL' in which 2B, 2A, 2L, 1S and 1E.

So, the number of permutations that can be formed from all the letters of the word 'BASEBALL'

$$= \frac{8!}{2!2!2!} = 5040$$

40. (a) The number of diagonals which can be drawn by joining the angular points of a polygon of 100 sides = ${}^{100}C_2 - 100$

$$= \frac{100!}{2!98!} - 100$$

$$= \frac{100 \times 99 \times 98!}{2 \times 98!} - 100$$

$$= 50 \times 99 - 100 = 4950 - 100 = 4850$$

41. (d) Given that, $P(77, 31) = x$

$$\text{i.e. } {}^{77}P_{31} = x \quad \dots(i)$$

and $C(77, 31) = y$

$$\text{i.e. } {}^{77}C_{31} = y \quad \dots(ii)$$

From Eq. (ii), $\frac{77!}{31!(77-31)!} = y$

$$\Rightarrow \frac{77!}{(77-31)!} = 31!y \Rightarrow {}^{77}P_{31} = 31!y$$

$$\Rightarrow x = (31!y) \quad [\text{from Eq. (i)}]$$

$$\therefore x > y$$

42. (a) First we arrange the four letters G, L, M and Y in the alternate position = $4!$
 Now, rest of letters O, O arrange in 5 alternate positions = 5C_2

$$\therefore \text{Required number of ways} = 4! \times {}^5C_2$$

$$= 24 \times \frac{5 \times 4}{2}$$

$$= 24 \times 10 = 240$$

43. (b) Given, $C(28, 2r) = C(28, 2r - 4)$

$$\Rightarrow {}^{28}C_{2r} = {}^{28}C_{2r-4}$$

$$[\because {}^nC_x = {}^nC_y \Rightarrow x + y = n]$$

$$\Rightarrow 2r + (2r - 4) = 28$$

$$\Rightarrow 4r = 32$$

$$\therefore r = 8$$

44. (a) In out of 7 consonants, 3 consonants can be selected in 7C_3 ways.

In out of 4 vowels, 2 vowels can be selected in 4C_2 ways.

$$\therefore \text{Number of such words}$$

$$= {}^7C_3 \times {}^4C_2 \times 5!$$

[Since, 5 letters can be selected in 5 ways]

$$= 35 \times 6 \times 120 = 25200$$

45. (c) The word 'AGAIN' has five letters 2A, 1G, 1I, 1N. Since, A repeat two times and A is fixed at first position then, we have to arrange remaining 4 letters in three vacant position.
 ∴ Required number of ways
 = $1 \times 4 \times 3 \times 2 = 24$

Sol. (Q. Nos. 46-48)

Given that, $C(n, r) : C(n, r+1) = 1:2$
 $\Rightarrow {}^n C_r : {}^n C_{r+1} = 1:2$
 $\Rightarrow \frac{n!}{r!(n-r)!} : \frac{n!}{(r+1)!(n-r-1)!} = \frac{1}{2}$
 $\Rightarrow \frac{(r+1)!(n-r-1)!}{r!(n-r)!} = \frac{1}{2}$
 $\Rightarrow \frac{(r+1) \cdot r!(n-r-1)!}{r!(n-r)!(n-r-1)!} = \frac{1}{2}$
 $\Rightarrow \frac{r+1}{n-r} = \frac{1}{2}$
 $\Rightarrow 2r+2 = n-r$
 $\Rightarrow n = 3r+2 \dots(i)$
 and $C(n, r+1) : C(n, r+2) = 2:3$
 $\Rightarrow \frac{{}^n C_{r+1}}{n!} : \frac{{}^n C_{r+2}}{n!} = 2:3$
 $\Rightarrow \frac{(r+1)!(n-r-1)!}{n!} : \frac{(r+2)!(n-r-2)!}{n!} = \frac{2}{3}$
 $\Rightarrow \frac{(r+2)!(n-r-2)!}{(r+1)!(n-r-1)!} = \frac{2}{3}$
 $\Rightarrow \frac{(r+2) \cdot (r+1)!(n-r-2)!}{(r+1)!(n-r-1)(n-r-2)!} = \frac{2}{3}$
 $\Rightarrow \frac{r+2}{n-r-1} = \frac{2}{3}$
 $\Rightarrow 3r+6 = 2n-2r-2$
 $\Rightarrow 5r+8 = 2n \dots(ii)$
 On solving Eqs. (i) and (ii), we get
 $r = 4$

46. (d) Put the value of r in Eq. (i), we get
 $n = 3(4) + 2$
 $n = 12 + 2 \Rightarrow n = 14$
47. (c)
48. (b) We have, $P(n, r) : C(n, r)$
 $= \frac{{}^n P_r : {}^n C_r}{n!} = \frac{n!}{(n-r)!} : \frac{n!}{r!(n-r)!}$
 $= 1 : \frac{1}{r!} = r! : 1$
 $= 4! : 1 = 24 : 1 = 24$

49. (a) There are 5 letters and 7 letter boxes.
 First letter can be put any 7 letters boxes = 7 ways
 Similarly, 2nd, 3rd, 4th and 5th letters be put in 7 ways each, respectively.
 ∴ Required number of ways
 $= 7 \times 7 \times 7 \times 7 \times 7 = 7^5$

50. (c)

51. (a) $\sum_{r=0}^1 {}^{n+r} C_n = \sum_{r=0}^1 {}^{n+r} C_{n+r-n}$
 $= \sum_{r=0}^1 {}^{n+r} C_r = {}^n C_0 + {}^{n+1} C_1$
 $= 1 + \frac{n+1}{1!} = 1 + n + 1 = n + 2$
 $= {}^{n+2} C_1$

52. (c) Required number of words
 $= \frac{6!}{2!} - \frac{4! \times 3!}{2!}$
 $= 360 - 72 = 288$

53. (a) Let the number of sides of the polygon be n .
 Then, number of diagonals = ${}^n C_2 - n$
 $\Rightarrow 44 = {}^n C_2 - n$
 $\Rightarrow 44 = \frac{n!}{2!(n-2)!} - n$
 $\Rightarrow 44 = \frac{n(n-1)(n-2)!}{2!(n-2)!} - n$
 $\Rightarrow 44 = \frac{[n(n-1)]}{2} - n$
 $\Rightarrow n^2 - 3n - 88 = 0$
 $\Rightarrow (n-11)(n+8) = 0$
 $\Rightarrow n = 11, -8 \quad [n \neq -8]$

Hence, polygon has 11 sides.

54. (c) We have, digits 0, 1, 2, 3, 4 and 5 for 3-digit even number.

(i) When 0 is at unit place, then

$4 \times 5 \times 1 = 20$ numbers

(ii) When 0 is not at unit place, then

$4 \times 4 \times 2 = 32$ numbers

∴ Total even numbers
 $= 20 + 32 = 52$

55. (b) We have, word 'AGAIN'
 The letter starts from AAGIN
 $= 4! = 24$
 The letter starts from GAAIN
 $= \frac{4!}{2!} = 12$
 The letters starts from IAAGN
 $= \frac{4!}{2!} = 12$

Number of total letters = 48

∴ 49th word is NAAGI and 50th word is NAAIG.

56. (c) Total number of selection of 11 players out of 15 players in which captain is included = ${}^{14} C_{10}$
 $= \frac{14!}{10!4!} = \frac{14 \times 13 \times 12 \times 11}{1 \times 2 \times 3 \times 4}$
 $= 1001$

57. (d) Since, each employees is eligible for one or more ticket(s).
 Hence, total number of ways = $20^3 = 8000$

58. (a) Here, we are given three 0's and two 1's.
 Hence, number of ways of different messages
 $= \frac{5!}{3! \times 2!} = \frac{5 \times 4}{2} = 10$

59. (b) Clearly, number of four-digit decimal numbers that can be formed using the digits 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, when no digit is repeated, are given by

Number of numbers of the type Number of numbers of the type

${}^{10} P_4 - {}^9 P_3 = \frac{10!}{6!} - \frac{9!}{6!} = \frac{9!}{6!} (10-1)$
 $= \frac{9 \times 8 \times 7 \times 6! \times 9}{6!}$
 $= 72 \times 7 \times 9 = 4536$

60. (d) Since, each ticket can be given to any one of the 10 employees of an organisation.

∴ Required number of ways
 $= 10 \times 10 \times 10 = 10^3 = 1000$

08

BINOMIAL THEOREM

In NDA exam, generally 1-2 questions are asked from this chapter which are based on general term, term independent of x , number/sum of terms, middle terms and combinational identities. An algebraic expression consisting of two dissimilar terms with positive or negative sign between them is called a binomial expression, e.g. $(x + a)$,

$x^2 + y^2$, $\frac{a}{x^2} - \frac{b}{x^4}$ and $x - \frac{3}{y}$ etc., are called binomial expressions.

Binomial Theorem for Any Positive Integer n

The formula by which any power of a binomial expression can be expanded is known as binomial theorem. Binomial theorem for any positive integer n is

$$(a + b)^n = C(n, 0)a^n + C(n, 1)a^{n-1}b + C(n, 2)a^{n-2}b^2 + \dots + C(n, n-1)ab^{n-1} + C(n, n)b^n$$

OR $(a + b)^n = {}^nC_0 a^n b^0 + {}^nC_1 a^{n-1} b + {}^nC_2 a^{n-2} b^2 + \dots + {}^nC_{n-1} a b^{n-1} + {}^nC_n a^0 b^n$

i.e. $(a + b)^n = \sum_{r=0}^n {}^nC_r (a)^{n-r} (b)^r$ where, $C(n, r) = \frac{n!}{r!(n-r)!}$, $0 < r < n$; $n, r \in N$

[here, the coefficients ${}^nC_0, {}^nC_1, \dots, {}^nC_n$ are called the **Binomial coefficients**.]

Special Cases

- Putting $a = 1$ and $b = x$, we get $(1+x)^n = {}^nC_0 + {}^nC_1 x + {}^nC_2 x^2 + \dots + {}^nC_n x^n = \sum_{r=0}^n {}^nC_r \cdot x^r$
- Putting $a = 1$ and $b = -x$, we get $(1-x)^n = {}^nC_0 - {}^nC_1 x + {}^nC_2 x^2 + \dots + (-1)^n {}^nC_n x^n = \sum_{r=0}^n (-1)^r {}^nC_r \cdot x^r$

General Term

In the expansion of $(a + b)^n$ the general term is $T_{r+1} = {}^nC_r \cdot a^{n-r} \cdot b^r$.

In the binomial expansion of $(a + b)^n$, the r th term from the end is $\{(n+1)-r+1\} = (n-r+2)$ th term from the beginning.

Middle Term

In the expansion of $(a + b)^n$, the middle term is $\left(\frac{n}{2} + 1\right)$ th term if n is even. If n is odd, the two middle terms are $\left(\frac{n+1}{2}\right)$ th and $\left(\frac{n+1}{2} + 1\right)$ th terms.

Method to Find Greatest Term (Numerically) in the Expansion of $(a + x)^n$

Method 1.

- I. Write T_{r+1} and T_r from the given expansion.
- II. Find $\frac{T_{r+1}}{T_r}$. III. Put $\frac{T_{r+1}}{T_r} > 1$
- IV. Solve the inequality in step III for r to get an inequality of the form $r < m$ or $r > m$.
Then,
 - (i) if m is an integer, then m th and $(m + 1)$ th terms are equal in magnitude and these two are the greatest terms.
 - (ii) if m is not an integer, then obtain the integral part of m , say k . In this case, $(k + 1)$ th term is the greatest term.

Method 2.

- I. Find the value of $m = \frac{(n + 1)|x|}{a + |x|}$.
- II. If m is an integer, then m th and $(m + 1)$ th terms are equal and both are greatest term.
- III. If m is not integer, then obtain the integral part of m , say k . Thus, $(k + 1)$ th term is the greatest term.

EXAMPLE 5. Find the greatest term in the expansion of $(1 + 2x)^9$, where $x = 2/3$.

- a. $\frac{14330}{27}$ b. $\frac{14336}{27}$ c. $\frac{14036}{27}$ d. None of these

Sol. b. We have, $m = \frac{(n+1)2x}{1+2x} = \frac{10 \times 2 \left(\frac{2}{3}\right)}{1+2\left(\frac{2}{3}\right)} = \frac{40}{7} = 5\frac{5}{7} \neq \text{Integer}$

The greatest term in the expansion is $T_{5+1} = T_6$
 \therefore Greatest term $= T_6 = {}^9C_5(2x)^5 = \frac{9 \cdot 8 \cdot 7 \cdot 6}{4 \cdot 3 \cdot 2 \cdot 1} \left(\frac{4}{3}\right)^5 = \frac{14336}{27}$

Combinatorial Identities

1. ${}^nC_r + {}^nC_{r-1} = {}^{n+1}C_r$ 2. ${}^{n+1}C_{r+1} = \frac{n+1}{r+1} \cdot {}^nC_r$
3. ${}^nC_0 + {}^nC_1 + {}^nC_2 + \dots + {}^nC_n = 2^n$
4. ${}^nC_0 - {}^nC_1 + {}^nC_2 - \dots + (-1)^n {}^nC_n = 0$
5. ${}^nC_0 + {}^nC_2 + {}^nC_4 + \dots = 2^{n-1}$
6. ${}^nC_1 + {}^nC_3 + {}^nC_5 + \dots = 2^{n-1}$
7. $C_0^2 + C_1^2 + C_2^2 + \dots + C_n^2 = \frac{2n!}{(n!)^2} = {}^{2n}C_n$
8. $\frac{{}^nC_r}{{}^nC_{r-1}} = \frac{n-r+1}{r}$

9. ${}^nC_1 + 2 {}^nC_2 + 3 {}^nC_3 + \dots + n {}^nC_n = n \cdot 2^{n-1}$
10. ${}^nC_1 - 2 {}^nC_2 + 3 {}^nC_3 - \dots = 0$
11. ${}^nC_0 + 2 {}^nC_1 + 3 {}^nC_2 + \dots + (n+1) {}^nC_n = (n+2) \cdot 2^{n-1}$

BINOMIAL THEOREM FOR ANY INDEX

For any rational number n , $(1 + x)^n = 1 + nx + \frac{n(n-1)}{1 \cdot 2} x^2 + \frac{n(n-1)(n-2)}{1 \cdot 2 \cdot 3} x^3 + \dots + \frac{n(n-1)(n-2)\dots(n-r+1)}{r!} x^r + \dots$

holds, whenever $|x| < 1$.

- Note** For the expansion of
- (i) $(1 + x)^{-n}$ replace n by $-n$,
 - (ii) $(1 - x)^{-n}$ replace n by $-n$ and x by $-x$
 - (iii) $(1 + x)^n$ replace x by $-x$ in above expansion.

General Term in the Expansion of $(1 + x)^n$

General term in the expansion of $(1 + x)^n$ is as follows

$$T_{r+1} = \frac{[n(n-1)(n-2)\dots\{n-(r-1)\}]}{r!} x^r$$

- Note**
- General term in the expansion of $(1 - x)^n$ is $T_{r+1} = (-1)^r \frac{n(n-1)(n-2)\dots[n-(r-1)]}{r!} x^r$.
 - General term in the expansion of $(1 + x)^{-n}$ is $T_{r+1} = (-1)^r \frac{n(n+1)(n+2)\dots + [n+(r-1)]}{r!} x^r$.
 - General term in the expansion of $(1 - x)^{-n}$ is $T_{r+1} = \frac{n(n+1)(n+2)\dots + [n+(r-1)]}{r!} x^r$.

EXAMPLE 6. Find the coefficient of x^4 in the expansion of $(4 - 3x)^{-3/2}$.

- a. $\frac{76545}{786432}$ b. $\frac{76445}{786423}$ c. $\frac{76544}{786423}$ d. $\frac{76542}{786432}$

Sol. a. We have,

$$(4 - 3x)^{-3/2} = 4^{-3/2} \left[1 - \frac{3x}{4}\right]^{-3/2} = \frac{1}{8} \left[1 - \frac{3x}{4}\right]^{-3/2}$$

The general term is given by

$$T_{r+1} = \frac{1}{8} \cdot \frac{\left(-\frac{3}{2}\right)\left(-\frac{3}{2}-1\right)\dots\left(-\frac{3}{2}-r+1\right)}{1 \cdot 2 \cdot 3 \dots r} \left(-\frac{3x}{4}\right)^r$$

On putting $r = 4$, we get the coefficient of x^4 as

$$\begin{aligned} & \frac{1}{8} \cdot \frac{\left(-\frac{3}{2}\right)\left(-\frac{3}{2}-1\right)\left(-\frac{3}{2}-2\right)\left(-\frac{3}{2}-3\right)}{1 \cdot 2 \cdot 3 \cdot 4} \left(-\frac{3}{4}\right)^4 \\ &= \frac{81}{192 \times 256} \cdot \frac{3}{2} \cdot \frac{5}{2} \cdot \frac{7}{2} \cdot \frac{9}{2} = \frac{76545}{3072 \times 256} = \frac{76545}{786432} \end{aligned}$$

> PRACTICE EXERCISE

- The coefficient of x^{53} in the following expansion $\sum_{m=0}^{100} {}^{100}C_m (x-3)^{100-m} \cdot 2^m$ is
 (a) ${}^{100}C_{47}$ (b) ${}^{100}C_{53}$ (c) $-{}^{100}C_{53}$ (d) $-{}^{100}C_{100}$
- The coefficient of x^5 in the expansion of $(1+x)^{21} + (1+x)^{22} + \dots + (1+x)^{30}$ is
 (a) ${}^{51}C_5$ (b) 9C_5
 (c) ${}^{31}C_6 - {}^{21}C_6$ (d) ${}^{30}C_5 + {}^{20}C_5$
- The coefficient of x^4 in the expansion of $(1+x+x^2+x^3)^{11}$ is
 (a) 900 (b) 909 (c) 990 (d) 999
- The coefficient of x^{-n} in $(1+x)^n \left(1 + \frac{1}{x}\right)^n$ is
 (a) 0 (b) 1 (c) 2^n (d) $2n$
- What is the coefficient of x^4 in the expansion of $\left(\frac{1-x}{1+x}\right)^2$?
 (a) -16 (b) 16 (c) 8 (d) -8
- The sum of $1 + n \left(1 - \frac{1}{x}\right) + \frac{n(n+1)}{2!} \left(1 - \frac{1}{x}\right)^2 + \dots$ will be
 (a) x^n (b) x^{-n} (c) $\left(1 - \frac{1}{x}\right)^n$ (d) None of these
- If $(1+x)^n = C_0 + C_1x + C_2x^2 + \dots + C_nx^n$, then $C_0 + \frac{C_1}{2} + \frac{C_2}{3} + \dots + \frac{C_n}{n+1}$ is equal to
 (a) 2^{n+1} (b) $\frac{2^{n+1}-1}{n+1}$ (c) $\frac{2^{n+1}}{n+1}$ (d) $2^{n+1}-1$
- The term independent of x in the expansion of $(1+x)^n \left[1 + \left(\frac{1}{x}\right)\right]^n$ is
 (a) $C_0^2 + 2C_1^3 + 3C_2^2 + \dots + (n+1)C_n^2$
 (b) $C_1 + C_2 + C_3 + \dots + C_n$
 (c) $C_0^2 + C_1^2 + C_2^2 + \dots + C_n^2$
 (d) $C_1 + 2C_2 + 3C_3 + \dots + nC_n$
- What is the term independent of x in the expansion of $(1+x+2x^2)\left(\frac{3x^{-2}}{2} - \frac{1}{3x}\right)^9$?
 (a) $1/3$ (b) $19/54$
 (c) $1/4$ (d) No such term exists in the expansion
- If the r th, $(r+1)$ th and $(r+2)$ th coefficients of $(1+x)^n$ are in AP, then x is a root of the equation
 (a) $x^2 - x(4r+1) + 4r^2 - 2 = 0$
 (b) $x^2 + x(4r+1) + 4r^2 - 2 = 0$
 (c) $x^2 + x(4r+1) + 4r^2 + 2 = 0$
 (d) None of the above
- The greatest term (numerically) in the expansion of $(3-5x)^{11}$, when $x = \frac{1}{5}$ is
 (a) 55×3^9 (b) 46×3^9 (c) 55×3^6 (d) 46×3^6
- If in the expansion of $(1+x)^m(1-x)^n$, the coefficients of x and x^2 are 3 and -6 respectively, then m is
 (a) 6 (b) 9
 (c) 12 (d) 24
- If the coefficient of the middle term in the expansion of $(1+x)^{2n+2}$ is p and the coefficients of middle terms in the expansion of $(1+x)^{2n+1}$ are q and r , then
 (a) $p+q=r$ (b) $p+r=q$
 (c) $p=q+r$ (d) $p+q+r=0$
- If the sum of the coefficients in the expansion of $(\alpha^2x^2 - 2\alpha x + 1)^{51}$ vanishes, then the value of α is
 (a) 2 (b) -1
 (c) 1 (d) -2
- If $(1+x-2x^2)^6 = 1 + a_1x + a_2x^2 + \dots + a_{12}x^{12}$, then consider the following statements.
 I. $a_2 + a_4 + a_6 + \dots + a_{12} = 31$
 II. $a_1 + a_3 + a_5 + \dots + a_{11} = -31$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- If the independent term in the expansion of $\left(\sqrt{x} + \frac{k}{x^2}\right)^{10}$ is 405, then consider the following statements.
 I. The third term is independent of x .
 II. The value of k is ± 3 .
 III. Total number of terms in the expansion is 10.
 Which of the above statement(s) is/are correct?
 (a) I, II (b) II, III
 (c) I, III (d) I, II and III

Directions (Q. Nos. 17-18) *The last term in the binomial expansion of $\left(2^{1/3} - \frac{1}{\sqrt{2}}\right)^n$ is $\left[\frac{1}{3 \cdot (9)^{1/3}}\right]^{\log_3 8}$.*

- 17.** The value of n is
 (a) 9 (b) 10 (c) 11 (d) 12
- 18.** The value of 7th term from the end is
 (a) 420 (b) 240 (c) 210 (d) 120

Directions (Q. Nos. 19-21) *If $x = (a + 1)^6$ and $y = (a - 1)^6$, then*

- 19.** The number of terms in $x + y$ is
 (a) 2 (b) 3 (c) 4 (d) 5
- 20.** The number of terms in $x - y$ is
 (a) 1 (b) 2 (c) 3 (d) 4
- 21.** Find the value of $x - y$, if $a = \sqrt{2}$.
 (a) 198 (b) $140\sqrt{2}$
 (c) 280 (d) None of these

Directions (Q. Nos. 22-24) *The 2nd, 3rd and 4th terms in the expansion of $(x + a)^n$ are 240, 720 and 1080, respectively.*

- 22.** The value of $(x - a)^n$ can be
 (a) 64 (b) -1
 (c) -32 (d) None of these
- 23.** The value of least term in the expansion is
 (a) 16 (b) 160 (c) 32 (d) 81
- 24.** The sum of odd numbered terms is
 (a) 1664 (b) 2376 (c) 1562 (d) 1486

Directions (Q. Nos. 25-27)

Consider $(1 + x + x^2)^{2n} = \sum_{r=0}^{4n} a_r \cdot x^r$, where

$a_0, a_1, a_2, \dots, a_{4n}$ are real numbers and n is positive integer on the basis of above information, answer the following questions.

- 25.** The value of a_2 is
 (a) ${}^{4n+1}C_2$ (b) ${}^{3n+1}C_2$ (c) ${}^{2n+1}C_2$ (d) ${}^{n+1}C_2$
- 26.** The value of a_{4n-1} is
 (a) $2n$ (b) $2n^2 + 4n$ (c) $2n + 3$ (d) $2n^2 + 3n$
- 27.** The correct statement is
 (a) $a_r = a_{n-r}, 0 \leq r \leq n$ (b) $a_{n-r} = a_{n+r}, 0 \leq r < n$
 (c) $a_r = a_{2n-r}, 0 \leq r \leq 2n$ (d) $a_r = a_{4n-r}, 0 \leq r \leq 4n$

Directions (Q. Nos. 28-31) *In the expansion of*

$\left(x - \frac{1}{x^2}\right)^m$, *the sum of first three terms is 55, where m is a natural number.*

- 28.** The value of m is
 (a) 10 (b) 11 (c) 12 (d) 13
- 29.** The coefficient of x^3 is
 (a) 140 (b) -220 (c) 315 (d) 430
- 30.** The value of independent term is
 (a) -540 (b) -624 (c) 350 (d) 495
- 31.** The ratio of 6th term from the beginning and to the 6th term from the end is
 (a) x^6 (b) $\frac{2}{3}x^5$ (c) $-\frac{3}{7}x^8$ (d) $-\frac{4}{5}x^3$

PREVIOUS YEARS' QUESTIONS

- 32.** The value of the term independent of x in the expansion of $\left(x^2 - \frac{1}{x}\right)^3$ is ☑ 2012 I
 (a) 9 (b) 18 (c) 48 (d) 84
- 33.** In the expansion of $(1 + x)^n$, what is the sum of even Binomial coefficients? ☑ 2012 II
 (a) 2^n (b) 2^{n-1}

> HINTS AND SOLUTIONS

- 1.** (c) Given sigma expression can be rewritten as
 $(x-3+2)^{100} = (x-1)^{100} = (1-x)^{100}$
So, x^{53} will occur in T_{54} .
 $\therefore T_{54} = {}^{100}C_{53} (-x)^{53}$
Hence, coefficient of x^{53} is $-{}^{100}C_{53}$.
- 2.** (c) $(1+x)^{21} + (1+x)^{22} + \dots + (1+x)^{30}$
 $= (1+x)^{21} \left[\frac{(1+x)^{10} - 1}{(1+x) - 1} \right]$

$$= \frac{1}{x} [(1+x)^{31} - (1+x)^{21}]$$

\therefore Coefficient of x^5 in the given expansion
= Coefficient of x^5 in
 $\left[\frac{1}{x} \{ (1+x)^{31} - (1+x)^{21} \} \right]$
= Coefficient of x^6 in
 $\{ (1+x)^{31} - (1+x)^{21} \}$
= ${}^{31}C_6 - {}^{21}C_6$

3. (c) $(1+x+x^2+x^3)^{11}$
 $= [(1+x)(1+x^2)]^{11}$
 $= (1+x)^{11} \cdot (1+x^2)^{11}$
 $= ({}^{11}C_0 + {}^{11}C_1x + {}^{11}C_2x^2 + \dots + {}^{11}C_3x^3 + {}^{11}C_4x^4 + \dots)$
 $({}^{11}C_0 + {}^{11}C_1x^2 + {}^{11}C_2x^4 + \dots)$
 \therefore Coefficient of x^4 in
 $(1+x+x^2+x^3)^{11}$
 $= {}^{11}C_0 \cdot {}^{11}C_2 + {}^{11}C_2 \cdot {}^{11}C_1 + {}^{11}C_4 \cdot {}^{11}C_0$
 $= 990$

4. (b) $(1+x)^n \left(1 + \frac{1}{x}\right)^n = \left[(2+x) + \frac{1}{x} \right]^n$
 $= {}^n C_0 (2+x)^n \frac{1}{x} + \dots + {}^n C_n \frac{1}{x^n}$
 \therefore Coefficient of $x^{-n} = {}^n C_n = 1$

5. (b) $(1-x)^2 (1+x)^{-2} = [1-2x+x^2] [1-2x+x^2]$
 $[1-2x+3x^2-4x^3+5x^4+\dots]$
 \therefore Coefficient of x^4
 $= 1 \times 5 + (-2)(-4) + 1 \times 3$
 $= 5 + 8 + 3 = 16$

6. (a) $1 + n \left(1 - \frac{1}{x}\right) + \frac{n(n+1)}{2!} \left(1 - \frac{1}{x}\right)^2 + \dots$
 $= \left[1 - \left(1 - \frac{1}{x}\right) \right]^n = \left[\frac{1}{x} \right]^n = (x)^n$

7. (b) $C_0 + \frac{C_1}{2} + \frac{C_2}{3} + \dots + \frac{C_n}{n+1}$
 $= 1 + \frac{n}{2} + \frac{n(n-1)}{6} + \dots + \frac{1}{n+1}$
 $= \frac{1}{n+1} \left[\frac{(n+1) + \frac{(n+1)n}{2}}{1} + \frac{(n+1)n(n-1)}{3!} + \dots + 1 \right]$
 $= \frac{1}{n+1} ({}^{n+1}C_1 + {}^{n+1}C_2 + \dots + {}^{n+1}C_{n+1})$
 $= \frac{2^{n+1} - 1}{n+1}$

8. (c) $(1+x)^n [1+x^{-1}]^n$
 $= [{}^n C_0 + {}^n C_1 x + {}^n C_2 x^2 + \dots + {}^n C_n x^n]$
 $[{}^n C_0 + {}^n C_1 x^{-1} + {}^n C_2 x^{-2} + \dots + {}^n C_n x^{-n}]$
 \therefore Term independent of x
 $= {}^n C_0 \times {}^n C_0 + {}^n C_1 \times {}^n C_1 + {}^n C_2 \times {}^n C_2 + \dots + {}^n C_n \times {}^n C_n$
 $= C_0^2 + C_1^2 + C_2^2 + \dots + C_n^2$

9. (d) Let T_{r+1} be the term independent of x in $\left(\frac{3x^{-2}}{2} - \frac{1}{3x}\right)^9$.
 $\therefore T_{r+1} = {}^9 C_r \left(\frac{3x^{-2}}{2}\right)^{9-r} \left(-\frac{1}{3x}\right)^r$
 $= (-1)^r {}^9 C_r \left(\frac{3}{2}\right)^{9-r} \cdot \frac{1}{3^r} x^{-18+2r-r}$
 For coefficient of x^0, x^{-1} and x^{-2} , we get
 $-18 + r = 0, -18 + r = -1$
 and $-18 + r = -2 \Rightarrow r = 18, 17, 16$
 which is not possible.
 Thus, no such term exists in the expansion of given expression.

10. (a) Given, ${}^n C_{r-1}, {}^n C_r, {}^n C_{r+1}$ are in AP.
 $\therefore 2 \cdot {}^n C_r = {}^n C_{r-1} + {}^n C_{r+1}$
 $\Rightarrow 2 \cdot \frac{n!}{r!(n-r)!} = \frac{n!}{(r-1)!(n-r+1)!} + \frac{n!}{(r+1)!(n-r-1)!}$

$\Rightarrow \frac{2}{r(n-r)} = \frac{1}{(n-r+1)(n-r)} + \frac{1}{(r+1)r}$
 $\Rightarrow \frac{2}{r(n-r)} = \frac{2r^2 + n^2 - 2nr + n}{r(r+1)(n-r+1)(n-r)}$
 $\Rightarrow n^2 - n(4r+1) + 4r^2 - 2 = 0$
 So, x is a root of the equation
 $x^2 - x(4r+1) + 4r^2 - 2 = 0.$

11. (a) We have, $(3-5x)^{11} = 3^{11} \left(1 - \frac{5x}{3}\right)^{11}$
 $= 3^{11} \left(1 - \frac{1}{3}\right)^{11} \left[\because x = \frac{1}{5}\right]$
 $\therefore m = \frac{|x|(n+1)}{(|x|+1)} \left[\because -\frac{1}{3} < 0\right]$
 $= \frac{\left(-\frac{1}{3}\right)(11+1)}{\left(-\frac{1}{3}\right)+1} = 3$

The greatest terms in the expansion are T_3 and T_4 .

\therefore Greatest term (when $r = 2$)
 $= 3^{11} |T_{2+1}|$
 $= 3^{11} \left| {}^{11} C_2 \left(-\frac{1}{3}\right)^2 \right| = 55 \times 3^9$

12. (c) $(1+x)^m (1-x)^n$
 $= \left(1 + mx + \frac{m(m-1)}{2} \cdot x^2 + \dots\right)$
 $\times \left(1 - nx + \frac{n(n-1)}{2} \cdot x^2 + \dots\right)$

Coefficient of x
 $= (m-n) = 3$ [given] ... (i)
 Coefficient of x^2
 $= \frac{m(m-1)}{2} - mn + \frac{n(n-1)}{2}$
 $= -6$ [given]

$\Rightarrow m^2 - m - 2mn + n^2 - n = -12$
 $\Rightarrow m^2 + n^2 - 2mn - (m+n) = -12$
 $\Rightarrow (m-n)^2 - (m+n) = -12$
 $\Rightarrow (3)^2 - (m+n) = -12$
 $\Rightarrow m+n = 21$... (ii)

On solving Eqs. (i) and (ii), we get
 $m = 12$

13. (c) In $(1+x)^{2n+2}$, index is $2n+2$, which is even, therefore there is one middle term given by T_{n+2} .

$\therefore p = 2n+2$
 C_{n+1}
 In $(1+x)^{2n+1}$, index is $2n+1$, which is odd.

So, there are two middle terms given by T_{n+1} and T_{n+2} .
 $\therefore q = 2n+1$ and $r = 2n+1$
 But ${}^{2n+1} C_n + {}^{2n+1} C_{n+1} = {}^{2n+2} C_{n+1}$
 $\therefore q+r = p$

14. (c) $(\alpha^2 x^2 - 2\alpha x + 1)^{51} = [(1-\alpha x)^2]^{51}$
 $= (1-\alpha x)^{102}$
 $= A_0 + A_1 x + A_2 x^2 + \dots$ [say]
 Put $x = 1$, we get
 $(1-\alpha)^{102} = A_0 + A_1 + A_2 + \dots = 0$ [given]

$\Rightarrow 1-\alpha = 0 \Rightarrow \alpha = 1$

15. (a) Given, $(1+x-2x^2)^6$
 $= 1 + a_1 x + a_2 x^2 + \dots + a_{12} x^{12}$

Putting $x = 1$, we get
 $0 = 1 + a_1 + a_2 + a_3 + \dots + a_{12}$... (i)
 Putting $x = -1$, we get

$64 = 1 - a_1 + a_2 - a_3 + \dots + a_{12}$... (ii)
 On adding Eqs. (i) and (ii), we get
 $64 = 2(1 + a_2 + a_4 + \dots + a_{12})$

$\therefore a_2 + a_4 + a_6 + \dots + a_{12} = 31$
 Thus, Statement I is correct.

Subtracting Eq. (ii) from Eq. (i), we get
 $-64 = 2(a_1 + a_3 + a_5 + \dots + a_{11})$
 $\therefore a_1 + a_3 + a_5 + \dots + a_{11} = -32$
 Thus, Statement II is incorrect.

16. (a) General term of the expansion $\left(\sqrt{x} + \frac{k}{x^2}\right)^{10}$ is
 $T_{r+1} = {}^{10} C_r (\sqrt{x})^{10-r} \left(\frac{k}{x^2}\right)^r$
 $= {}^{10} C_r (x)^{\frac{10-r}{2}} (k)^r \cdot (x)^{-2r}$
 $= {}^{10} C_r (k)^r (x)^{\frac{10-5r}{2}}$... (i)

Since, $(r+1)$ th term is independent of x .
 $\therefore \frac{10-5r}{2} = 0 \Rightarrow r = 2$

Thus, 3rd term is independent of x .
 So, Statement I is correct.

Put $r = 2$ in Eq. (i), we get
 $T_3 = {}^{10} C_2 k^2 \Rightarrow 405 = 45k^2$
 $\Rightarrow k^2 = 9 \Rightarrow k = \pm 3$

Thus, Statement II is correct.
 and total number of terms in $\left(\sqrt{x} + \frac{k}{x^2}\right)^{10}$ is 11.

So, Statement III is not correct.

17. (b) The last term of

$$\left(\sqrt[3]{2} - \frac{1}{\sqrt{2}}\right)^n = \left(\frac{1}{3 \cdot \sqrt[3]{9}}\right)^{\log_3 8}$$

$$\Rightarrow {}^n C_n \cdot \left(-\frac{1}{\sqrt{2}}\right)^n = \left(\frac{1}{3 \cdot \sqrt[3]{9}}\right)^{\log_3 8}$$

$$\Rightarrow (-1)^n \cdot \left(\frac{1}{2}\right)^{n/2} = \left(\frac{1}{3^{5/3}}\right)^{\log_3 8}$$

$$= 3^{-\frac{5}{3} \cdot 3 \log_3 2} = 2^{-5} = \left(\frac{1}{2}\right)^5$$

$$\Rightarrow n = 10$$

18. (c) 7th term from the end

$$= T_{10-7+2} = T_5 = \text{5th term}$$
 Therefore, 5th term in $\left(\sqrt[3]{2} - \frac{1}{\sqrt{2}}\right)^{10}$ is

$$T_5 = T_{4+1} = {}^{10}C_4 (\sqrt[3]{2})^{10-4} \left(-\frac{1}{\sqrt{2}}\right)^4$$

$$= {}^{10}C_4 \cdot (4) \cdot \frac{1}{4} = {}^{10}C_4 = {}^{10}C_6 = 210$$

19. (c) Number of terms in
 $x + y$ or $(a + 1)^6 + (a - 1)^6$
 is equal to $\frac{6}{2} + 1 = 4$

20. (c) Number of terms in $x - y$
 or $(a + 1)^6 - (a - 1)^6$ is equal to $\frac{6}{2} = 3$.

21. (b) $x - y = (a + 1)^6 - (a - 1)^6$

$$= 2({}^6C_1 a^5 + {}^6C_3 a^3 + {}^6C_5 a)$$

$$= 2(6a^4 + {}^6C_3 a^2 + {}^6C_5 a)$$

$$= 2(6 \times 4 + 20 \times 2 + 6) \sqrt{2}$$

$$= 2\sqrt{2} (24 + 40 + 6) = 140\sqrt{2}$$
 [putting $a = \sqrt{2}$]

Sol. (Q. Nos. 22-24)

2nd term is ${}^n C_1 x^{n-1} a = 240 \dots$ (i)

3rd term is ${}^n C_2 x^{n-2} a^2 = 720 \dots$ (ii)

4th term is ${}^n C_3 x^{n-3} a^3 = 1080 \dots$ (iii)

On multiplying Eqs. (i) and (iii) and dividing by the square of Eq. (ii), we get

$$\frac{{}^n C_1 \times {}^n C_3}{({}^n C_2)^2} = \frac{240 \times 1080}{(720)^2}$$

$$\Rightarrow \frac{n \times n(n-1)(n-2)(2!)^2}{n^2(n-1)^2 \times 3!} = \frac{1}{2}$$

$$\Rightarrow 4(n-2) = 3(n-1) \quad [\because n \neq 1]$$

$$\Rightarrow n = 5$$

On putting $n = 5$, from Eqs. (i) and (ii), we get

$$5x^4 a = 240 \text{ and } 10x^3 a^2 = 270$$

$$\Rightarrow \frac{(5x^4 a)^2}{10x^3 a^2} = \frac{(240)^2}{720} \Rightarrow x^5 = 32$$

$$\therefore \frac{x}{a} = \frac{2}{5x^4} = \frac{48}{2^4} = 3$$

Hence, $x = 2, a = 3$ and $n = 5$

22. (b) $(x - a)^n = (2 - 3)^5 = -1$

23. (c) $(2 + 3)^5 = 2^5 + {}^5C_1 2^4 \times 3 + {}^5C_2 2^3 \times 3^2 + {}^5C_3 2^2 \times 3^3 + {}^5C_4 2 \times 3^4 + {}^5C_5 3^5$

$$= 32 + 240 + 720 + 1080 + 810 + 243$$

 Hence, least value of the term is 32.

24. (c) Sum of odd numbered terms is
 $32 + 720 + 810 = 1562$

25. (c) $a_2 =$ Coefficient of x^2 in
 $(1 + x + x^2)^{2n}$
 $=$ Coefficient of x^2 in
 $[1 + {}^{2n}C_1(x + x^2) + {}^{2n}C_2(x + x^2)^2 + \dots]$
 $= {}^{2n}C_1 + {}^{2n}C_2$
 $= {}^{2n+1}C_2$

26. (a) $(1 + x + x^2)^{2n} = \sum_{r=0}^{4n} a_r x^r$
 Replace x by $1/x$, we get

$$\frac{(1 + x + x^2)^{2n}}{(x^2)^{2n}} = \sum_{r=0}^{4n} a_r \left(\frac{1}{x}\right)^r$$

$$\Rightarrow (1 + x + x^2)^{2n} = \sum_{r=0}^{4n} a_r (x)^{-r} \times (x)^{4n}$$

$$= \sum_{r=0}^{4n} a_r (x)^{4n-r}$$

$$\therefore \sum_{r=0}^{4n} a_r x^r = \sum_{r=0}^{4n} a_r (x)^{4n-r}$$

On comparing coefficients, we get

$$a_r = a_{4n-r}$$

$$\therefore a_{4n-1} = a_1$$

 $=$ Coefficient of x in $(1 + x + x^2)^{2n}$
 $= {}^{2n}C_1 = 2n$

27. (d) For $0 \leq r \leq 4n, a_r = a_{4n-r}$

28. (c) $\left(x - \frac{1}{x^2}\right)^m$

$$= {}^m C_0 x^m + {}^m C_1 x^{m-1} \left(\frac{-1}{x^2}\right)$$

$$+ {}^m C_2 x^{m-2} \left(\frac{-1}{x^2}\right)^2 + \dots + {}^m C_m \left(\frac{-1}{x^2}\right)^m$$

$$= {}^m C_0 x^m - {}^m C_1 x^{m-3} + {}^m C_2 x^{m-6}$$

$$+ \dots + {}^m C_m (x)^{-2m}$$

Sum of coefficient of first three terms
 $= 55$

$$\Rightarrow {}^m C_0 - {}^m C_1 + {}^m C_2 = 55$$

$$\Rightarrow 1 - m + \frac{m(m-1)}{2} = 55$$

$$\Rightarrow m^2 - 3m - 108 = 0$$

$$\Rightarrow (m - 12)(m + 9) = 0$$

$$\Rightarrow m = 12 \quad [\because m \in N \therefore m + 9 \neq 0]$$

29. (b) $T_{r+1} = {}^m C_r (x)^{m-r} \left(-\frac{1}{x^2}\right)^r$

$$= {}^m C_r (-1)^r (x)^{m-3r}$$

$$= {}^{12}C_r (-1)^r (x)^{12-3r} \quad [\because m = 12]$$

This general term will contain x^3 , if
 $12 - 3r = 3 \Rightarrow r = 3$

$$\therefore T_4 = {}^{12}C_3 (-1)^3 x^{12-9}$$

$$= -\frac{12 \times 11 \times 10}{3 \times 2} x^3 = -220x^3$$

\therefore Coefficient of $x^3 = -220$

30. (d) T_{r+1} will contain independent term if $12 - 3r = 0 \Rightarrow r = 4$

$$\therefore T_5 = {}^{12}C_4 (-1)^4 (x)^0$$

 \therefore Coefficient of independent term
 $= {}^{12}C_4 = \frac{12 \times 11 \times 10 \times 9}{4 \times 3 \times 2} = 495$

31. (a) 6th term from the beginning $= T_6$
 6th term from the end

$$= T_{12-5+1} = T_8$$

$$\therefore \frac{T_6}{T_8} = \frac{{}^{12}C_5 (-1)^5 (x)^{12-15}}{{}^{12}C_7 (-1)^7 (x)^{12-21}}$$

$$= \frac{{}^{12}C_7 (x)^{-3}}{-{}^{12}C_7 (x)^{-9}} = x^6$$

32. (d) Given, $\left(x^2 - \frac{1}{x}\right)^9$

$$T_{r+1} = {}^9 C_r (x^2)^{9-r} \cdot \left(-\frac{1}{x}\right)^r$$

$$= {}^9 C_r x^{18-2r} (-1)^r x^{-r}$$

$$= {}^9 C_r x^{(18-3r)} (-1)^r \dots$$
(i)

For independent term,
 Put $18 - 3r = 0 \Rightarrow 3r = 18 \Rightarrow r = 6$

$$\therefore T_{(6+1)} = {}^9 C_6 x^{(18-18)} \cdot (-1)^6$$

$$T_7 = {}^9 C_6 \cdot 1 = \frac{9 \cdot 8 \cdot 7}{3 \cdot 2 \cdot 1} = 84$$

33. (b)

34. (a) For the sum of the coefficients in the expansion of $(1 + x)^n$.

Put $x = 1, (1 + x)^n = (1 + 1)^n = 2^n$
 which is the required sum of the coefficients.

35. (c) Given, $(1 + 2x + x^2)^{10} = \{(1 + x)^2\}^{10}$
 $= (1 + x)^{20}$

\therefore Total terms $= 20 + 1 = 21$

36. (d) 37. (b)

Sol. (Q. Nos. 38-40)

In the expansion of $\left(x^3 - \frac{1}{x^2}\right)^n$

General term,

$$T_{r+1} = {}^n C_r (x^3)^{n-r} \cdot \left(\frac{1}{x^2}\right)^r$$

$$= {}^n C_r \cdot (-1)^r \cdot x^{(3n-5r)} \quad \dots(i)$$

Let T_{r_1+1} and T_{r_2+1} be the term containing x^5 and x^{10} respectively.

For coefficient of x^5 , $3n-5r_1 = 5$

$$\Rightarrow r_1 = \frac{3n}{5} - 1 \quad \dots(ii)$$

For coefficient of x^{10} , $3n-5r_2 = 10$

$$\Rightarrow r_2 = \frac{3n}{5} - 2 \quad \dots(iii)$$

From Eqs. (ii) and (iii), we have

$$r_2 = r_1 - 1 \quad \dots(iv)$$

Now, by condition the sum of coefficients of x^5 and $x^{10} = 0$

$$\Rightarrow {}^n C_{r_1} (-1)^{r_1} + {}^n C_{r_2} (-1)^{r_2} = 0$$

$$\Rightarrow {}^n C_{r_1} (-1)^{r_1} + {}^n C_{r_2} (-1)^{r_1-1} = 0$$

$$\Rightarrow (-1)^{r_1} [{}^n C_{r_1} - {}^n C_{r_2}] = 0$$

$$\Rightarrow {}^n C_{r_1} = {}^n C_{r_2} \Rightarrow n = r_1 + r_2$$

$$[\because {}^n C_x = {}^n C_y \Rightarrow n = x + y]$$

$$\Rightarrow n = \frac{3n}{5} - 1 + \frac{3n}{5} - 2 \Rightarrow n = 15$$

38. (c)

39. (c) For the independent term, put $3n - 5r = 0$, [from Eq. (i)]

$$\Rightarrow 5r = 3n = 3 \times 15 \quad [\because n = 15]$$

$$\therefore r = 9$$

Now, put the value of r in Eq. (i), we get

$$T_{9+1} = {}^{15} C_9 (-1)^9 \cdot x^{(3 \times 15 - 5 \times 9)}$$

$$\Rightarrow T_{10} = -{}^{15} C_9 \cdot x^0 = -\frac{15!}{6! 9!}$$

$$= -5005$$

So, the value of independent term is -5005 .

40. (a) Since, $n = 15$

\therefore Total term in the expansion of $\left(x^3 - \frac{1}{x^2}\right)^{15}$ is 16.

So, middle term = $\left(\frac{16}{2}\right)$ th term

and $\left(\frac{16}{2} + 1\right)$ th term

= 8th term and 9th term

Now, the sum of the coefficients of the two middle terms

$$= {}^{15} C_7 (-1)^7 + {}^{15} C_8 (-1)^8$$

$$= -{}^{15} C_7 + {}^{15} C_8$$

$$= -{}^{15} C_7 + {}^{15} C_7 [\because {}^n C_r = {}^n C_{n-r}]$$

$$= 0$$

41. (b) We have, $\left(x^2 + \frac{1}{x}\right)^{15}$

$$T_{r+1} = {}^{15} C_r (x^2)^{15-r} \left(\frac{1}{x}\right)^r$$

$$= {}^{15} C_r x^{30-2r-r} = {}^{15} C_r x^{30-3r}$$

For independent term, $30 - 3r = 0 \Rightarrow r = 10$

Put $r = 10$, we get

$$T_{10+1} = {}^{15} C_{10} = \frac{15!}{10!5!} = 3003$$

42. (a) For coefficient of x^{15} , $30 - 3r = 15 \Rightarrow r = 5$

So, the coefficient of x^{15} is ${}^{15} C_5$ and coefficient of independent of x is ${}^{15} C_{10}$.

So, coefficient of independent of x is ${}^{15} C_{10}$.

$$\therefore \text{Required ratio} = \frac{{}^{15} C_5}{{}^{15} C_{10}}$$

$$= \frac{{}^{15} C_5}{{}^{15} C_5} = 1 \quad [\because {}^n C_r = {}^n C_{n-r}]$$

43. (c) We have, $\left(x^2 + \frac{1}{x}\right)^{15}$

Since, n is odd.

So, it has two middle terms T_8 and T_9 .

Coefficients of $(T_8 + T_9) = {}^{15} C_7 + {}^{15} C_8$

$$= {}^{16} C_8 \quad [\because {}^n C_{r-1} + {}^n C_r = {}^{n+1} C_r]$$

$$= C(16, 8)$$

44. (b) I. We know that, $(a + b)^n$ have total number of terms is $n + 1$.

So, $\left(x^2 + \frac{1}{x}\right)^{15}$ have 16 terms.

So, Statement I is false.

II. For coefficient of x^{12} ,

$$30 - 3r = 12 \Rightarrow r = 6$$

$$\therefore \text{Coefficient of } x^{12} = {}^{15} C_6$$

and for coefficient of x^3 ,

$$30 - 3r = 3 \Rightarrow r = 9$$

$$\therefore \text{Coefficient of } x^3 = {}^{15} C_9$$

$$\therefore {}^{15} C_6 = {}^{15} C_9$$

Hence, Statement II is correct.

45. (c) I. For coefficient of x^2 ,

$$30 - 3r = 2 \Rightarrow r = \frac{28}{3}, r \notin N$$

So, x^2 does not exist in the expansion.

Hence, Statement I is correct.

II. Now, $\left(x^2 + \frac{1}{x}\right)^{15}$

$$= {}^{15} C_0 (x^2)^{15} + {}^{15} C_1 (x^2)^{14} \left(\frac{1}{x}\right)$$

$$+ \dots + {}^{15} C_{15} \left(\frac{1}{x}\right)^{15}$$

Put $x = 1$ on both sides, we get

$$(1 + 1)^{15} = {}^{15} C_0 + {}^{15} C_1 + \dots + {}^{15} C_{15}$$

$$\Rightarrow 2^{15} = {}^{15} C_0 + {}^{15} C_1 + \dots + {}^{15} C_{15}$$

Hence, Statement II is correct.

46. (a) We have, $\left(\sqrt{x} + \frac{1}{3x^2}\right)^{10}$

$$\therefore T_{r+1} = {}^{10} C_r (x)^{\frac{10-r}{2}} (3)^{-r} (x)^{-2r}$$

$$= {}^{10} C_r (3)^{-r} x^{\frac{10-5r}{2}}$$

Since, the term independent of x

$$\therefore \frac{10-5r}{2} = 0 \Rightarrow r = 2$$

Put $r = 2$, we get

$$T_3 = {}^{10} C_2 (3)^{-2} = \frac{10 \times 9}{1 \times 2} \times \frac{1}{9} = 5$$

47. (c) To find the sum of coefficient of all terms, put $x = 1$ in the given expression $(1 + x)^{2n+1}$, we get

$$2^{2n+1} = 2 \cdot 2^{2n} = 2 \cdot 4^n$$

48. (b) Since, $2n + 1$ is odd.

Hence, $\frac{2n+1+1}{2}$

and $\frac{2n+1+3}{2}$ are two middle terms.

i.e. $(n + 1)$ th and $(n + 2)$ th terms are two middle terms.

$$\therefore \frac{{}^{2n+1} C_n + {}^{2n+1} C_{n+1}}{2}$$

$$= \frac{{}^{2n+1+1} C_{n+1}}{2} = \frac{1}{2} {}^{2n+2} C_{n+1}$$

$$= \frac{1}{2} \cdot \frac{2n+2}{n+1} \cdot {}^{2n+1} C_n = {}^{2n+1} C_n$$

49. (a) We have, $(1 + x)^{2n+1}$

General term, $T_{r+1} = {}^{(2n+1)} C_r x^r$

We have, ${}^{2n+1} C_r = {}^{2n+1} C_{r+1}$

$$\therefore 2n + 1 = r + r + 1$$

$$\Rightarrow 2r = 2n \Rightarrow r = n$$

50. (c) We have,

$$(x-1)(x-2)(x-3)\dots(x-100)$$

$$= x^{100} - (1+2+3+\dots+100)x^{99} + \dots$$

\therefore Coefficient of x^{99}

$$= -\frac{100}{2} [2 + 99] = -5050$$

09

LOGARITHM

In NDA exam, 1 question can be asked from this chapter which is based on properties of logarithm.

If a is positive real number other than 1 and x is a rational number such that $a^x = N$, then we say that logarithm of N to base a is x , written as $\log_a N = x$. Thus, $a^x = N \Leftrightarrow \log_a N = x$, where $a > 0$, $a \neq 1$ and $N > 0$.

e.g. $10^2 = 100 \Rightarrow \log_{10} 100 = 2$

It is also known as fundamental logarithmic identity. When base is 'e' then the logarithmic function is called natural or Napierian logarithmic function and when base is 10, then it is called common logarithmic function.

Note • e is the base of **natural logarithm** (Napier logarithm) $\log x = \log_e x$.

- Log of **negative integers** are not defined, $\log_e 0$ is not defined.
- **Logarithmic function** is positive as well as negative but exponential function is always positive.
- The base of a logarithm is never taken as 0, negative number and 1.

Properties of Logarithm

Let m and n be positive number such that $a, b, c > 0$ and $a, b, c \neq 1$

- | | | |
|---|---|---|
| (i) $\log_a a = 1$ | (ii) $\log_a 1 = 0$ | (iii) $\log_c a = \log_b a \cdot \log_c b$ |
| (iv) $\log_c a = \frac{\log_b a}{\log_b c}$ | (v) $\log_b a \cdot \log_a b = 1$ | (vi) $\log_a (m \cdot n) = \log_a m + \log_a n$ |
| (vii) $\log_a \left(\frac{m}{n}\right) = \log_a m - \log_a n$ | (viii) $\log_a m^n = n \log_a m$ | (ix) $\log_{n^q} (m^p) = \frac{p}{q} \log_n m$ |
| (x) $a^{\log_a n} = n$ | (xi) $a^{\log_e x} = x^{\log_e a}$, $x > 0, e > 0$ | |
| (xii) $\log_a b = -\log_{1/a} b$ | | |

EXAMPLE 1. What is the value of $(\log_{13} 625) / (\log_{169} 25)$?

a. $\frac{1}{4}$

b. 1

c. 2

d. 4

Sol. d. We have, $\frac{\log_{13} 625}{\log_{169} 25} = \frac{\log 625}{\log 13} \div \frac{\log 25}{\log 169} = \frac{4 \log 5}{\log 13} \div \frac{2 \log 5}{2 \log 13} = \frac{4 \log 5}{\log 13} \times \frac{2 \log 13}{2 \log 5} = 4$

EXAMPLE 2. If $(\log_3 x)^2 + \log_3 x < 2$, then which one of the following is correct?

- a. $0 < x < \frac{1}{9}$ b. $\frac{1}{9} < x < 3$ c. $3 < x < \infty$ d. $\frac{1}{9} \leq x \leq 3$

Sol. b. $\because (\log_3 x)^2 + \log_3 x < 2 \Rightarrow (\log_3 x)^2 + (\log_3 x) - 2 < 0$
 $\Rightarrow (\log_3 x + 2)(\log_3 x - 1) < 0 \Rightarrow -2 < \log_3 x < 1$
 $\Rightarrow 3^{-2} < x < 3^1 \Rightarrow \frac{1}{9} < x < 3$

Characteristic and Mantissa

In $\log_{10} N$ the integral part of N is called the *characteristic* and decimal part of N is called the *mantissa*.

- (i) (a) If $N > 1$, then the characteristic of $\log_{10} N$ is one less than the number of digits in integral part of N .
- (b) If $0 < N < 1$, then the characteristic of $\log_{10} N$ is one greater than the number of zeros immediately after the decimal point and the first significant digit and is a negative integer.
- (ii) **Insert decimal point in antilog of a number**
 - (a) When characteristic is n , then insert the decimal point after $(n + 1)$ th digit.
 - (b) When characteristic is \bar{n} , then insert the decimal point such that the first significant digit is at n th place.

EXAMPLE 3. If $2\log_8 N = p$, $\log_2 2N = q$ and $q - p = 4$, then find the value of N ?

- a. 512 b. 536 c. 548 d. 560

Sol. a. We are given that, $2\log_8 N = p$... (i)
 $\log_2 2N = q$... (ii)
 and $q - p = 4$... (iii)
 From Eq. (i), $8^p = N^2 \Rightarrow 2^{3p} = N^2$... (iv)
 From Eq. (ii), $2N = 2^q \Rightarrow N = \frac{2^q}{2} = 2^{q-1}$... (v)
 From Eqs. (iv) and (v), $2^{3p} = (2^{q-1})^2$
 $\Rightarrow 2^{3p} = 2^{2q-2} \Rightarrow 3p = 2q - 2 \Rightarrow 2q - 3p = 2$... (vi)
 On solving Eqs. (iii) and (vi), we get $p = 6$ and $q = 10$
 $\therefore N = 2^{10-1} = 2^9 = 512$

EXAMPLE 4. If $\log_{10} 2 = 0.3010$, then what is the number of digits in 20^{64} ?

- a. 81 b. 82 c. 83 d. 84

Sol. d. Let $x = 20^{64}$, Taking log on both sides, we get
 $\log_{10} x = 64 \log_{10} 20 = 64 \times 1.3010 = 83.264$
 \therefore Number of digits in $20^{64} = 83 + 1 = 84$

Logarithmic Inequalities

1. If $a > 1, p > 1 \Rightarrow \log_a p > 0$
2. If $0 < a < 1, p > 1 \Rightarrow \log_a p < 0$
3. If $a > 1, 0 < p < 1 \Rightarrow \log_a p < 0$
4. If $p > a > 1 \Rightarrow \log_a p > 1$
5. If $a > p > 1 \Rightarrow 0 < \log_a p < 1$
6. If $0 < a < p < 1 \Rightarrow 0 < \log_a p < 1$
7. If $0 < p < a < 1 \Rightarrow \log_a p > 1$
8. If $\log_m a > b \Rightarrow \begin{cases} a > m^b, & \text{if } m > 1 \\ a < m^b, & \text{if } 0 < m < 1 \end{cases}$
9. If $\log_m a < b \Rightarrow \begin{cases} a < m^b, & \text{if } m > 1 \\ a > m^b, & \text{if } 0 < m < 1 \end{cases}$
10. $\log_p a > \log_p b \Rightarrow a \geq b$ if base ' p ' is positive and > 1 or $a \leq b$ if base p is positive and < 1 , i.e. $0 < p < 1$.
 In other words, if base is greater than 1 then inequality remains same and if base is positive but less than 1, then the sign of inequality is reversed.
11. For $\phi(x) > 1, \log_{\phi(x)} f(x) \geq \log_{\phi(x)} g(x) \Leftrightarrow f(x) \geq g(x) > 0$
12. For $0 < \phi(x) < 1, \log_{\phi(x)} f(x) \geq \log_{\phi(x)} g(x) \Leftrightarrow 0 < f(x) \leq g(x)$
13. For $\phi(x) > 1, \log_{\phi(x)} f(x) \geq a \Leftrightarrow f(x) \geq a^{\phi(x)}$
14. For $0 < \phi(x) < 1, \log_{\phi(x)} f(x) \geq a \Leftrightarrow 0 < f(x) \leq a^{\phi(x)}$

EXAMPLE 5. If $\log_{0.04} (x - 1) \geq \log_{0.2} (x + 1)$, then x belongs to the interval

- a. $(1, 2]$ b. $(-\infty, 2]$ c. $[2, \infty)$ d. None of these

Sol. c. $\log_{0.04} (x - 1) \geq \log_{0.2} (x - 1)$... (i)
 For log to be defined $x - 1 > 0 \Rightarrow x > 1$
 From Eq. (i), $\log_{(0.2)^2} (x - 1) \geq \log_{0.2} (x - 1)$
 $\Rightarrow \frac{1}{2} \log_{0.2} (x - 1) \geq \log_{0.2} (x - 1) \Rightarrow \sqrt{x - 1} \leq (x - 1)$
 $\Rightarrow \sqrt{x - 1} (1 - \sqrt{x - 1}) \leq 0 \Rightarrow 1 - \sqrt{x - 1} \leq 0$
 $\Rightarrow \sqrt{x - 1} \geq 1 \Rightarrow x \geq 2 \therefore x \in [2, \infty)$

EXAMPLE 6. If $\log_e (x^2 - 16) \leq \log_e (4x - 11)$, then

- a. $4 < x \leq 5$ b. $x < -4$ or $x > 4$
 c. $-1 \leq x \leq 5$ d. $x < -1$ or $x > 5$

Sol. a. $x^2 - 16 \leq 4x - 11$ [base = $e > 1$]
 $\Rightarrow x^2 - 4x - 5 \leq 0 \Rightarrow (x - 5)(x + 1) < 0 \Rightarrow -1 \leq x \leq 5$... (i)
 Also, $x^2 - 16 > 0 \Rightarrow x < -4$ or $x > 4$... (ii)
 And $4x - 11 > 0 \Rightarrow x > \frac{11}{4}$... (iii)
 From Eqs. (i), (ii) and (iii), we get $4 < x \leq 5$

PRACTICE EXERCISE

1. If $\log_{10} 2 = 0.30103$, then $\log_{10} 50$ is equal to
 (a) 2.30103 (b) 2.69897 (c) 1.69897 (d) 0.69897
2. $\frac{\log_8 17}{\log_9 23} - \frac{\log_{2\sqrt{2}} 17}{\log_3 23}$ is equal to
 (a) 0 (b) 1 (c) $\frac{17}{8}$ (d) $\frac{23}{17}$
3. The value of $(yz)^{\log y - \log z} \times (zx)^{\log z - \log x} \times (xy)^{\log x - \log y}$ is equal to
 (a) 2 (b) 1 (c) 4 (d) 3
4. The value of $81^{1/\log_5 3} + 27^{\log_9 36} + 3^{4/\log_7 9}$ is equal to
 (a) 49 (b) 625 (c) 216 (d) 890
5. If $a = \log_{24} 12$, $b = \log_{36} 24$, $c = \log_{48} 36$. Then $1 + abc$ is equal to
 (a) $2ac$ (b) $2bc$
 (c) $2ab$ (d) None of these
6. $\log_{10} \tan 1^\circ + \log_{10} \tan 2^\circ + \dots + \log_{10} \tan 89^\circ$ is equal to
 (a) 0 (b) 1 (c) 27 (d) 81
7. If $\log_{12} 27 = a$, then $\log_6 16$ is equal to
 (a) $2 \cdot \frac{3-a}{3+a}$ (b) $3 \cdot \frac{3-a}{3+a}$
 (c) $4 \cdot \frac{3-a}{3+a}$ (d) None of these
8. If $\frac{1}{\log_a x} + \frac{1}{\log_c x} = \frac{2}{\log_b x}$, then a, b and c are in
 (a) AP (b) GP
 (c) HP (d) None of these
9. $\frac{\log x + \log x^4 + \log x^9 + \dots + \log x^{n^2}}{\log x + \log x^2 + \log x^3 + \dots + \log x^n}$ is equal to
 (a) $\frac{2n+1}{3}$ (b) $\frac{2n-1}{3}$
 (c) $\frac{3(n+2)}{2}$ (d) $\frac{3(n-1)}{2}$
10. If $x^{18} = y^{21} = z^{28}$, then $3, 3 \log y^x, 3 \log_z y, 7 \log_x z$ are in
 (a) AP (b) GP
 (c) HP (d) None of these
11. If $x = \log_3 5$, $y = \log_{17} 25$, then which one of the following is correct?
 (a) $x < y$ (b) $x = y$
 (c) $x > y$ (d) None of these
12. If $\log_{1/3} [\log_4 (x^2 - 12)] > 0$, then x lies in the interval
 (a) $(-\infty, -4) \cup (4, \infty)$ (b) $(-\infty, \infty)$
 (c) $(-\infty, -2) \cup (2, \infty)$ (d) None of these
13. If $\log_a (n - k) < \log_{a^2} (n - k)$ and $a > 1$, then n lies in the interval
 (a) $[k, k + 1]$ (b) $(k, k - 1)$
 (c) $(k, k + 1)$ (d) None of these
14. If $x \in [-2\pi, 2\pi]$ and $\log_{0.5} \sin x = 1 - \log_{0.5} \cos x$, then consider the following statements
 I. Number of solutions in the interval $[-2\pi, 2\pi]$ is 1.
 II. One solution of the equation is $\pi/4$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- Directions** (Q. Nos. 15-16) Let $a, b, c \in R; a \neq b \neq c$ and $\frac{\log x}{b-c} = \frac{\log y}{c-a} = \frac{\log z}{a-b}$
15. The value of $x^a \cdot y^b \cdot z^c$ is
 (a) 0 (b) 1 (c) 2 (d) None of these
16. The value of $\frac{1}{\log_{xy} 2} + \frac{1}{\log_{yz} 2} + \frac{1}{\log_{zx} 2}$
 (a) 0 (b) 1 (c) 2 (d) None of these
- Directions** (Q. Nos. 17-19) Consider the equation $x^{\log_5 x^2 + (\log_5 x)^2 - 12} = \frac{1}{x^4}$
17. The number of solutions of the equation is
 (a) 1 (b) 2
 (c) 3 (d) 4
18. The set of all x satisfying the equation is
 (a) $\left\{1, 25, \frac{1}{125}, \frac{1}{625}\right\}$ (b) $\left\{1, 25, \frac{1}{625}\right\}$
 (c) $\{1, 25\}$ (d) $\{1\}$
19. The product of all values of x is
 (a) 1 (b) 25
 (c) $\frac{1}{25}$ (d) $\frac{1}{3125}$

PREVIOUS YEARS' QUESTIONS

> HINTS AND SOLUTIONS

- 1.** (c) $\log_{10} 50 = \log_{10} \frac{100}{2}$
 $= \log_{10} 100 - \log_{10} 2$
 $= 1.69897$
- 2.** (a) $\frac{\frac{1}{3} \log_2 17}{\frac{1}{2} \log_3 23} - \frac{\frac{2}{3} \log_2 17}{\log_3 23} = 0$
 $\Rightarrow \frac{\frac{2}{3} \log_2 17}{\log_3 23} - \frac{\frac{2}{3} \log_2 17}{\log_3 23} = 0$
- 3.** (b)
- 4.** (d) Let $T_1 = 3^{4 \log_3 5} = 3^{\log_3 (5^4)} = 5^4 = 625$
 $T_2 = (3^3)^{\frac{2}{3} \log_3 6} = 3^{\log_3 6^3} = 216$
 $T_3 = 3^{4 \log_3 7} = 3^{4 \cdot \frac{1}{2} \cdot \log_3 7}$
 $= 3^{\log_3 7^2} = 49$
 $\therefore T_1 + T_2 + T_3 = 625 + 216 + 49 = 890$
- 5.** (b) $abc = \frac{\log 12}{\log 24} \cdot \frac{\log 24}{\log 36} \cdot \frac{\log 36}{\log 48} = \frac{\log 12}{\log 48}$
 $\therefore 1 + abc = \frac{\log 48 + \log 12}{\log 48}$
 $= \frac{\log (48 \cdot 12)}{\log 48} = \frac{\log 24^2}{\log 48}$
 $= 2 \cdot \frac{\log 24}{\log 48} = \frac{\log 24}{\log 36} \times \frac{\log 36}{\log 48}$
 $= 2 \log_{36} 24 \times \log_{48} 36 = 2bc$

- 6.** (a) $\log \tan 89^\circ = \log \cot 1^\circ = -\log \tan 1^\circ$
 \therefore Given expression becomes
 $\log \tan 1^\circ + \log \tan 2^\circ + \dots + \log \tan 44^\circ$
 $+ \log \tan 45^\circ - \log \tan 44^\circ$
 $- \dots - \log \tan 2^\circ - \log \tan 1^\circ$
 $= \log \tan 45^\circ = \log 1 = 0$
- 7.** (c) $\log_6 16 = \log_6 2^4 = 4 \log_6 2 = \frac{4}{\log_2 6}$
 $= \frac{4}{\log_2 2 + \log_2 3} = \frac{4}{1 + \log_2 3} \dots (i)$
 and $a = \log_{12} 27 = \log_{12} 3^3 = 3 \log_{12} 3$
 $= \frac{3}{\log_3 12} = \frac{3}{\log_3 3 + \log_3 4}$
 $= \frac{3}{1 + 2 \log_3 2}$
 $\Rightarrow a + 2a \log_3 2 = 3$
 $\Rightarrow \log_3 2 = \frac{3-a}{2a}$
 $\therefore \log_2 3 = \frac{2a}{3-a}$
 From Eq. (i),
 $\log_6 16 = \frac{4}{1 + \frac{2a}{3-a}}$
 $= \frac{4(3-a)}{3+a}$
- 8.** (b) $\log_x a + \log_x c = 2 \log_x b$
 $\Rightarrow ac = b^2$
 i.e. a, b and c are in GP.

- 9.** (a) Given expression
 $= \frac{(1+4+9+\dots+n^2) \log x}{(1+2+3+\dots+n) \log x}$
 $= \frac{\sum n^2}{\sum n} = \frac{n(n+1)(2n+1)}{n(n+1)}$
 $= \frac{2n+1}{3}$
- 10.** (a) Let $x^{18} = y^{21} = z^{28} = k$, then
 $18 \log x = 21 \log y = 28 \log z = \log k$
 $\Rightarrow \log x = \frac{\log k}{18}, \log y = \frac{\log k}{21}$
 and $\log z = \frac{\log k}{28}$
 $\therefore 3 \log_y x = \frac{3 \log x}{\log y} = \frac{3 \times 21}{18} = \frac{7}{2}$
 $3 \log_z y = \frac{3 \log y}{\log z} = \frac{3 \times 28}{21} = 4$
 $7 \log_x z = \frac{7 \log z}{\log x} = \frac{7 \times 18}{28} = \frac{9}{2}$
 So, $3, \frac{7}{2}, 4, \frac{9}{2}$ are in AP.
- 11.** (c) Given, $y = 2 \log_{17} 5$ and $x = \log_3 5$
 $\therefore \frac{1}{y} = \frac{1}{2} \log_5 17$
 and $\frac{1}{x} = \log_5 3 = \frac{1}{2} \log_5 9$
 Clearly, $\frac{1}{y} > \frac{1}{x} \therefore x > y$

12. (a) Given expression is

$$\begin{aligned} & \log_{1/3} [\log_4 (x^2 - 12)] > 0 \\ \therefore & x^2 - 12 > 4 \\ \Rightarrow & x^2 - 16 > 0 \\ \Rightarrow & |x| > 4 \\ \Rightarrow & x < -4 \text{ or } x > 4 \\ \text{So, } x & \text{ lies in } (-\infty, -4) \cup (4, \infty). \end{aligned}$$

13. (c) $\log_a (n-k) < \log_{a^2} (n-k)$
 $\Rightarrow (n-k)^2 < n^2 k$ [$\because a > 1$]
 $\Rightarrow n^2 - 2kn + k^2 < n^2 k$
 $\Rightarrow n^2 - kn - (k+1)n + k(k+1) < 0$
 $\Rightarrow (n-k)(n-k-1) < 0$
 $\Rightarrow k < n < k+1$
 So, n lies in $(k, k+1)$.

14. (b) Clearly, $\log_{0.5} \sin x$ and $\log_{0.5} \cos x$ are defined, if $x \in (0, \pi/2)$
 Now, $\log_{0.5} \sin x = 1 - \log_{0.5} \cos x$
 $\Rightarrow \log_{0.5} \sin x + \log_{0.5} \cos x = 1$
 $\Rightarrow \log_{0.5} (\sin x \times \cos x) = 1$
 $\Rightarrow \sin x \cos x = (0.5)^1$
 $\Rightarrow \sin 2x = 1$
 $\Rightarrow x = \frac{\pi}{4}, \frac{3\pi}{4}$

Hence, only Statement II is correct.

15. (b) Let $\frac{\log x}{b-c} = \frac{\log y}{c-a} = \frac{\log z}{a-b} = k$
 $\Rightarrow \log x = k(b-c) \Rightarrow x = 10^{k(b-c)}$
 $\log y = k(c-a) \Rightarrow y = 10^{k(c-a)}$
 $\log z = k(a-b) \Rightarrow z = 10^{k(a-b)}$
 Now, $x^a \cdot y^b \cdot z^c$
 $= 10^{k(b-c)a + k(c-a)b + k(a-b)c}$
 $= 10^{k[a(b-c) + b(c-a) + c(a-b)]}$
 $= 10^0 = 1$
16. (a) $\frac{1}{\log_{xy} 2} + \frac{1}{\log_{yz} 2} + \frac{1}{\log_{zx} 2}$
 $= \log_2 xy + \log_2 yz + \log_2 zx$
 $= \log_2 (xy \times yz \times zx)$
 $= \log_2 (xyz)^2 = 2 \log_2 (xyz)$
 $= 2 \log_2 1 = 0$ [$\because xyz = 1$]

Sol. (Q. Nos. 17-19)

We have, $x^{\log_5 x^2 + (\log_5 x)^2 - 12} = \frac{1}{x^4}$

Taking log to the base 5 of both the sides, we get

$$\begin{aligned} & [\log_5 x^2 + (\log_5 x)^2 - 12] \log_5 x \\ & = -4 \log_5 x \\ \Rightarrow & [\log_5 x^2 + (\log_5 x)^2 - 8] \log_5 x \\ & = 0 \\ \Rightarrow & \log_5 x = 0 \\ \text{or } & (\log_5 x)^2 + 2 \log_5 x - 8 = 0 \\ \Rightarrow & x = 5^0 \\ \text{or } & (\log_5 x - 2)(\log_5 x + 4) = 0 \\ \Rightarrow & x = 1 \text{ or } \log_5 x = 2, -4 \end{aligned}$$

$$\Rightarrow x = 1, 25, \frac{1}{625}$$

17. (c) Number of solutions are 3.

18. (b) Solution set is $\left\{1, 25, \frac{1}{625}\right\}$.

19. (c) Product of all values of x
 $= 1 \times 25 \times \frac{1}{625} = \frac{1}{25}$

20. (a) $2 \log_8 2 - \frac{1}{3} \log_3 9$
 $= 2 \log_{(2^3)} 2 - \frac{1}{3} \log_3 (3)^2$
 $= \frac{2}{3} \log_2 2 - \frac{1}{3} \cdot 2 \log_3 3$
 $\left[\because \log_{a^n} b^m = \frac{m}{n} \log_a b \right]$
 $= \frac{2}{3} (1) - \frac{2}{3} (1)$
 $= \frac{2}{3} - \frac{2}{3} = 0$

21. (b) $(\log_3 x)(\log_x 2x)(\log_{2x} y) = \log_x x^2$
 $\Rightarrow \frac{\log x}{\log 3} \times \frac{\log 2x}{\log x} \times \frac{\log y}{\log 2x} = \frac{\log x^2}{\log x}$
 $\left[\because \log_b a = \frac{\log a}{\log b} \right]$

$$\begin{aligned} \Rightarrow & \frac{\log y}{\log 3} = \frac{2 \log x}{\log x} \quad [\because \log a^b = b \log a] \\ \Rightarrow & \log y = 2 \log 3 \\ \Rightarrow & \log y = \log 3^2 \end{aligned}$$

$$\begin{aligned} & [\because \log m = \log n \Rightarrow m = n] \\ \Rightarrow & \log y = \log 9 \\ \therefore & y = 9 \end{aligned}$$

22. (c) $\log_y x^5 \cdot \log_x y^2 \cdot \log_z z^3$
 $= 5 \log_y x \cdot 2 \log_x y \cdot 3 \log_z z$
 $\left[\because \log_a b^n = n \log_a b \right]$
 $= 5 \log_y x \cdot 2 \log_x y \cdot 3 \times 1$ [$\because \log_a a = 1$]
 $= 5 \cdot \frac{\log x}{\log y} \times 2 \cdot \frac{\log y}{\log x} \times 3$ [$\because \log_a b = \frac{\log b}{\log a}$]
 $= 5 \times 2 \times 3 = 30$

23. (b) $\log_{81} 243 = \log_{(3^4)} (3)^5 = \frac{5}{4} \log_3 3$
 $= \frac{5}{4} \times 1 = \frac{5}{4} = 1.25$
 $\left[\because \log_{a^n} a^m = \frac{m}{n} \right]$

24. (a) We have, $\log_8 m + \log_8 \frac{1}{6} = \frac{2}{3}$
 $\Rightarrow \log_8 \frac{m}{6} = \frac{2}{3}$
 $\left[\because \log_a m + \log_a n = \log_a (m \times n) \right]$
 $\Rightarrow \frac{m}{6} = (8)^{2/3} = (2^3)^{2/3} = 2^2 = 4$
 $\Rightarrow m = 6 \times 4 = 24$

25. (d) Given, $\log_a (ab) = x$
 $\Rightarrow \log_a a + \log_a b = x$
 $\Rightarrow 1 + \log_a b = x$
 $\Rightarrow \log_a b = x - 1$
 Now, $\log_b ab = \log_b a + \log_b b$
 $= \frac{1}{\log_a b} + 1$
 $= \frac{1}{x-1} + 1$
 $= \frac{1+x-1}{x-1}$
 $= \frac{x}{x-1}$

10

MATRICES

In NDA exam, generally 1-2 questions are asked from this chapter which are based on equality of matrices, product of matrices, transpose of a matrix etc.

A rectangular array of mn numbers (real or complex) in the form of m horizontal lines (called rows) and n vertical lines (called columns), is called an $m \times n$ matrix (to be read as m by n matrix) or matrix of order $m \times n$.

A $m \times n$ matrix is usually written as, $A = \begin{bmatrix} a_{11} & a_{12} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2n} \\ \vdots & \vdots & \vdots & \vdots \\ a_{m1} & a_{m2} & \dots & a_{mn} \end{bmatrix}_{m \times n}$

A matrix may be represented by the symbols $[a_{ij}]$, (a_{ij}) or by a capital letter A , i.e.

$$A = [a_{ij}]_{m \times n} \text{ or } (a_{ij})_{m \times n}$$

The numbers a_{11}, a_{12}, \dots etc. are known as elements of the matrix A , a_{ij} belongs to the i th row and j th column and is called the (i, j) th element of matrix $A = [a_{ij}]$

Note A matrix is not a number and it has no numerical value.

EXAMPLE 1. Construct a 2×2 matrix $A = (a_{ij})$, whose general element is given by $a_{ij} = (i + 2j)^2 / 2$.

a. $\begin{bmatrix} 9 & 25 \\ 4 & 9 \end{bmatrix}$

b. $\begin{bmatrix} 9/2 & 25/2 \\ 8 & 18 \end{bmatrix}$

c. $\begin{bmatrix} 9 & 5 \\ 4 & 18 \end{bmatrix}$

d. $\begin{bmatrix} 9/2 & 25 \\ 8 & 9 \end{bmatrix}$

Sol. b. $a_{11} = (1 + 2)^2 / 2 = 9/2$, $a_{12} = (1 + 4)^2 / 2 = 25/2$, $a_{21} = (2 + 2)^2 / 2 = 8$, $a_{22} = (2 + 4)^2 / 2 = 18$

$$\therefore A = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{bmatrix} = \begin{bmatrix} 9/2 & 25/2 \\ 8 & 18 \end{bmatrix}$$

Types of Matrices

1. **Row matrix** A matrix having one row and n columns is called as row matrix. It is of the form

$$A = [a_{11} \ a_{12} \ \dots \ a_{1n}]_{1 \times n} \text{ or } A = [a_1 \ a_2 \ \dots \ a_n]_{1 \times n}$$

2. **Column matrix** A matrix having m rows and one column is called column matrix. It is of the form

$$A = \begin{bmatrix} a_{11} \\ a_{21} \\ \vdots \\ a_{m1} \end{bmatrix}_{m \times 1} \text{ or } A = \begin{bmatrix} a_1 \\ a_2 \\ \vdots \\ a_m \end{bmatrix}_{m \times 1}$$

3. **Zero matrix** A matrix in which all the elements are equal to zero is called zero matrix. It is also called a null matrix and is denoted by O .
4. **Singleton matrix** A matrix in which there is only one element is called singleton matrix.
Thus, $A = [a_{ij}]_{m \times n}$ is singleton matrix, if $m = n = 1$.
5. **Square matrix** A matrix in which the number of rows is equal to the number of columns, say n , is called a square matrix of order n , i.e. $m = n$. e.g. $\begin{bmatrix} 2 & 3 \\ 9 & 7 \end{bmatrix}$ is a square matrix of order 2.
6. **Diagonal matrix** A square matrix in which all its elements are zero except those in the leading diagonal is called a diagonal matrix, i.e. $a_{ij} = 0$ for $i \neq j$.
e.g. The matrix, $C = \begin{bmatrix} d_1 & 0 \\ 0 & d_2 \end{bmatrix}$ is diagonal matrix of order 2 and it can be rewritten as $C = \text{diag}(d_1, d_2)$
7. **Identity or unit matrix** A diagonal matrix in which all the diagonal elements are equal to 1 is called an identity matrix. It is also called a unit matrix. An identity matrix of order n is denoted by I or I_n .
8. **Scalar matrix** A diagonal matrix in which all the diagonal elements are equal is called a scalar matrix.
9. **Submatrix** Any matrix obtained by omitting some rows or columns or both from a given $m \times n$ matrix A is called a submatrix of A . As a convention, the given matrix A is also taken as a submatrix of A .
10. **Upper triangular matrix** A square matrix $A = [a_{ij}]$ is called upper triangular matrix, if $a_{ij} = 0$ for all $i > j$.
11. **Lower triangular matrix** A square matrix $A = [a_{ij}]$ is called a lower triangular matrix, if $a_{ij} = 0$ for all $i < j$.

Equal Matrices

Two matrices $A = (a_{ij})_{m \times n}$ and $B = (b_{ij})_{p \times q}$ are said to be equal, if

$$(i) m = p \text{ and } n = q \quad (ii) a_{ij} = b_{ij}, \forall i \text{ and } j$$

Thus, two matrices are said to be equal, if they are of the same order and the corresponding elements are same.

EXAMPLE 2. Find x, y, z and w , if

$$\begin{bmatrix} 3x & y \\ 2z & 3w \end{bmatrix} = \begin{bmatrix} x+4 & x-y \\ z+w & z-w+3x \end{bmatrix}$$

a. 2, 1, 2, 2 b. 2, 2, 2, 2 c. 2, 1, 1, 2 d. 1, 2, 1, 2

Sol. a. The matrix on each side is of order 2×2 .
Equating the corresponding elements, we get

$$3x = x + 4 \Rightarrow 2x = 4 \Rightarrow x = 2$$

$$y = x - y \Rightarrow 2y = x = 2 \Rightarrow y = 1$$

$$2z = z + w \Rightarrow z = w$$

$$3w = z - w + 3x \Rightarrow z = 4w - 6$$

On substituting w in terms of z , we get

$$z = 4z - 6 \Rightarrow 3z = 6 \Rightarrow z = 2$$

Hence, we obtain $x = 2, y = 1, z = 2$ and $w = 2$

Algebra of Matrices

Addition of Matrices

If A and B be any two matrices of the same order ($m \times n$), then their sum $A + B = [a_{ij} + b_{ij}]_{(m \times n)}$

where, $A = [a_{ij}]_{(m \times n)}$ and $B = [b_{ij}]_{(m \times n)}$

Properties of Addition

(i) Matrix addition is commutative, i.e. $A + B = B + A$.

(ii) Matrix addition is associative.

$$\text{i.e. } (A + B) + C = A + (B + C)$$

(iii) $A + O = A = O + A$

Here, the null matrix O is called additive identity.

(iv) $A + (-A) = O = (-A) + A$

Here, $(-A)$ is called the additive inverse of A .

(v) Matrix addition follows cancellation law,

$$\text{i.e. } A + B = A + C \Rightarrow B = C \quad [\text{left cancellation law}]$$

$$\text{and } B + A = C + A \Rightarrow B = C \quad [\text{right cancellation law}]$$

Subtraction of Matrices

If A and B are any two matrices of same order ($m \times n$), then their difference $A - B = [a_{ij} - b_{ij}]_{m \times n}$

where, $A = [a_{ij}]_{m \times n}$ and $B = [b_{ij}]_{m \times n}$

EXAMPLE 3. If $2A + 3B = \begin{bmatrix} 2 & -1 & 4 \\ 3 & 2 & 5 \end{bmatrix}$ and

$A + 2B = \begin{bmatrix} 5 & 0 & 3 \\ 1 & 6 & 2 \end{bmatrix}$ then matrix B is

a. $\begin{bmatrix} 8 & -1 & 2 \\ -1 & 10 & -1 \end{bmatrix}$ b. $\begin{bmatrix} 8 & 1 & 2 \\ -1 & 10 & -1 \end{bmatrix}$

c. $\begin{bmatrix} 8 & 1 & -2 \\ -1 & 10 & -1 \end{bmatrix}$ d. $\begin{bmatrix} 8 & 1 & 2 \\ 1 & 10 & 1 \end{bmatrix}$

Sol. b. Given, $2A + 3B = \begin{bmatrix} 2 & -1 & 4 \\ 3 & 2 & 5 \end{bmatrix}$... (i)

and $A + 2B = \begin{bmatrix} 5 & 0 & 3 \\ 1 & 6 & 2 \end{bmatrix} \Rightarrow 2A + 4B = \begin{bmatrix} 10 & 0 & 6 \\ 2 & 12 & 4 \end{bmatrix}$... (ii)

On subtracting Eq. (i) from Eq. (ii), we get

$$B = \begin{bmatrix} 8 & 1 & 2 \\ -1 & 10 & -1 \end{bmatrix}$$

Scalar Multiplication of Matrices

If a matrix is multiplied by the scalar k , then each element is multiplied by k . Thus, if $A = [a_{ij}]_{m \times n}$ then $kA = [ka_{ij}]_{m \times n}$.

Properties of Scalar Multiplication of Matrices

Let the matrices A and B be of the same order and λ, μ be scalars. Then,

- (i) $\lambda(A + B) = \lambda A + \lambda B$
- (ii) $(\lambda + \mu)A = \lambda A + \mu A$
- (iii) $\lambda(\mu A) = \mu(\lambda A) = (\lambda\mu)A$
- (iv) $(-\lambda)A = -(\lambda A) = \lambda(-A)$

EXAMPLE 4. Find the value or values of x such that

$$x^2 \begin{bmatrix} 2 \\ 1 \end{bmatrix} + x \begin{bmatrix} -3 \\ 1 \end{bmatrix} = \begin{bmatrix} -1 \\ 2 \end{bmatrix}$$

- a. 0
- b. 1
- c. 1/2
- d. Both (b) and (c)

Sol. b. From the left hand side, we have

$$x^2 \begin{bmatrix} 2 \\ 1 \end{bmatrix} + x \begin{bmatrix} -3 \\ 1 \end{bmatrix} = \begin{bmatrix} 2x^2 \\ x^2 \end{bmatrix} + \begin{bmatrix} -3x \\ x \end{bmatrix} = \begin{bmatrix} 2x^2 - 3x \\ x^2 + x \end{bmatrix}$$

$$\therefore \begin{bmatrix} 2x^2 - 3x \\ x^2 + x \end{bmatrix} = \begin{bmatrix} -1 \\ 2 \end{bmatrix} \Rightarrow 2x^2 - 3x = -1 \quad \dots(i)$$

$$\text{and} \quad x^2 + x = 2 \quad \dots(ii)$$

On solving the first equation $2x^2 - 3x + 1 = 0$, we get $x = 1, 1/2$

The second equation $x^2 + x = 2$ is satisfied only when $x = 1$.

Hence, the solution is $x = 1$.

Multiplication of Matrices

If A and B are two matrices such that the number of columns of A is equal to the number of rows in B , i.e. if $A = [a_{ik}]$ is a $m \times n$ matrix and $B = [b_{kj}]$ be a $n \times p$ matrix, then the product AB of these matrices is $m \times p$ matrix and is defined as

$$\begin{aligned} (AB)_{ij} &= \sum_{k=1}^n a_{ik} b_{kj} = a_{i1} b_{1j} + a_{i2} b_{2j} + \dots + a_{in} b_{nj} \\ &= [a_{i1} \ a_{i2} \ \dots \ a_{in}] \begin{bmatrix} b_{1j} \\ b_{2j} \\ \vdots \\ b_{nj} \end{bmatrix} \end{aligned}$$

= Sum of the product of elements of i th row of A with the corresponding elements of j th column of B .

Note In the matrix product AB , the matrix A is called pre multiplier or pre factor and B is called post multiplier or post factor.

Properties of Multiplication of Matrices

- (i) Matrix multiplication is not commutative in general i.e. $AB \neq BA$
- (ii) Multiplication is distributive, i.e. if A, B and C are the matrices of order $m \times n, n \times p$ and $n \times p$ respectively, then $A(B + C) = AB + AC$

(iii) Multiplication is associative, i.e. if A, B and C are the matrices of order $m \times n, n \times p$ and $p \times r$ respectively, then $(AB)C = A(BC)$.

(iv) If A is a $m \times n$ matrix and I_n, I_m are the identity matrices of order $m \times m$ and $n \times n$, then

$$I_m A = A = A I_n$$

Here, I is the multiplicative identity.

(v) If $AB = O$, then it is not necessary that either A or B is O or both are O .

EXAMPLE 5. Let $A = \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$ and $B = \begin{bmatrix} 1 & x \\ 0 & 1 \end{bmatrix}$.

If $AB = BA$, then what is the value of x ?

- a. -1
- b. 0
- c. 1
- d. Any real number

Sol. b. $AB = \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} \begin{bmatrix} 1 & x \\ 0 & 1 \end{bmatrix} = \begin{bmatrix} 1 & x \\ 0 & -1 \end{bmatrix}$

and $BA = \begin{bmatrix} 1 & x \\ 0 & 1 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix} = \begin{bmatrix} 1 & -x \\ 0 & -1 \end{bmatrix}$

$\therefore AB = BA$

$\therefore \begin{bmatrix} 1 & x \\ 0 & -1 \end{bmatrix} = \begin{bmatrix} 1 & -x \\ 0 & -1 \end{bmatrix}$

$\Rightarrow x = -x$

$\Rightarrow 2x = 0 \Rightarrow x = 0$

Transpose of a Matrix

Let A be a $m \times n$ matrix. Then, the $n \times m$ matrix obtained by interchanging the rows and columns of A is called the transpose of A and is denoted by A' or A^T .

e.g. If $A = \begin{bmatrix} 2 & -3 & -1 \\ 4 & 2 & 3 \end{bmatrix}_{2 \times 3}$, then $A' = \begin{bmatrix} 2 & 4 \\ -3 & 2 \\ -1 & 3 \end{bmatrix}_{3 \times 2}$

Properties of the Transpose Matrix

- (i) $(A')' = A$
- (ii) $(A \pm B)' = A' \pm B'$
- (iii) $(kA)' = kA'$
- (iv) $(AB)' = B' A'$

Symmetric and Skew-symmetric Matrices

A real square matrix $A = (a_{ij})$ is said to be symmetric, if $a_{ij} = a_{ji}, \forall i$ and j or $A = A^T$.

A real square matrix $A = (a_{ij})$ is said to be skew-symmetric (anti-symmetric), if $a_{ij} = -a_{ji}, \forall i$ and j or $A = -A^T$.

Properties of Symmetric and Skew-symmetric Matrices

- (i) In a skew-symmetric matrix A , all its diagonal elements are zero, i.e. $a_{ii} = 0, \forall i$.
- (ii) The matrix which is both symmetric and skew-symmetric is a null matrix.
- (iii) For any real square matrix A ; $A + A^T$ and AA^T or $A^T A$ is a symmetric matrix and $A - A^T$ is a skew-symmetric matrix.
- (iv) A real square matrix A can be expressed as the sum of a symmetric matrix and a skew-symmetric matrix.
i.e. $A = \frac{1}{2}(A + A^T) + \frac{1}{2}(A - A^T)$

EXAMPLE 6. If $A = \begin{bmatrix} \cos \alpha & -\sin \alpha \\ \sin \alpha & \cos \alpha \end{bmatrix}$, then find the value of $A^T A$.

- a. O b. I c. A d. A^T

Sol. b. We have, $A^T = \begin{bmatrix} \cos \alpha & \sin \alpha \\ -\sin \alpha & \cos \alpha \end{bmatrix}$

$$\begin{aligned} \text{Therefore, } A^T A &= \begin{bmatrix} \cos \alpha & \sin \alpha \\ -\sin \alpha & \cos \alpha \end{bmatrix} \begin{bmatrix} \cos \alpha & -\sin \alpha \\ \sin \alpha & \cos \alpha \end{bmatrix} \\ &= \begin{bmatrix} \cos^2 \alpha + \sin^2 \alpha & 0 \\ 0 & \sin^2 \alpha + \cos^2 \alpha \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = I \end{aligned}$$

Special Type of Matrix

1. **Orthogonal matrix** A square matrix A is called an orthogonal matrix if the product of matrix A and its transpose A' (or A^T) is an identity matrix, i.e. $AA' = I$

Note If A and B are orthogonal, then AB is also orthogonal.

2. **Conjugate of a matrix** The matrix obtained from any given matrix A containing complex numbers as its elements, on replacing its elements by the corresponding conjugate complex numbers is called conjugate of A and is denoted by \bar{A} .

e.g. If $A = \begin{bmatrix} 1+2i & 2-3i \\ 4-5i & 5+6i \end{bmatrix}$,

then $\bar{A} = \begin{bmatrix} 1-2i & 2+3i \\ 4+5i & 5-6i \end{bmatrix}$

3. **Hermitian matrix** A square matrix such that $(\bar{A}') = A$, then A is known as hermitian matrix.
4. **Skew-hermitian matrix** A square matrix such that $(\bar{A}') = -A$, then A is known as skew-hermitian matrix.
5. **Elementary matrix** A square matrix is called an elementary matrix if it can be obtained from identity matrix I by performing single elementary row or column operation.

PRACTICE EXERCISE

1. If $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$, $B = \begin{bmatrix} 2 & 3 \\ 4 & 5 \end{bmatrix}$ and $4A - 3B + C = O$, then

C is equal to

- (a) $\begin{bmatrix} 2 & -1 \\ 0 & 1 \end{bmatrix}$ (b) $\begin{bmatrix} 2 & 1 \\ 0 & -1 \end{bmatrix}$
 (c) $\begin{bmatrix} -2 & 1 \\ 0 & -1 \end{bmatrix}$ (d) None of these

2. If $A = \begin{bmatrix} 1 & 0 \\ -1 & 7 \end{bmatrix}$ and $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$, then the value of k ,

so that $A^2 = 8A + kI$ is

- (a) 4 (b) 5 (c) 6 (d) -7

3. The value of x for which

$$\begin{bmatrix} 1 & 1 & x \end{bmatrix} \begin{bmatrix} 1 & 0 & 2 \\ 0 & 2 & 1 \\ 2 & 1 & 0 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} = 0 \text{ is}$$

- (a) 2 (b) -2 (c) 3 (d) -3

4. If α, β are the two roots of $1 + x + x^2 = 0$, then matrix product $\begin{bmatrix} 1 & \beta \\ \alpha & \alpha \end{bmatrix} \begin{bmatrix} \alpha & \beta \\ 1 & \beta \end{bmatrix}$ is equal to

- (a) $\begin{bmatrix} 1 & 1 \\ 1 & 2 \end{bmatrix}$ (b) $\begin{bmatrix} -1 & -1 \\ -1 & 2 \end{bmatrix}$
 (c) $\begin{bmatrix} 1 & -1 \\ -1 & 2 \end{bmatrix}$ (d) $\begin{bmatrix} -1 & -1 \\ -1 & -2 \end{bmatrix}$

5. If $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ and $B = \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix}$, where a, b are natural numbers, then which one of the following is correct?

- (a) There exist more than one but finite number of B 's such that $AB = BA$
 (b) There exist exactly one B such that $AB = BA$
 (c) There exist infinitely many B 's such that $AB = BA$
 (d) There cannot exist any B such that $AB = BA$

Directions (Q. Nos. 6-8) If A and B are two matrices of same order, then

6. $(AB)^n = A^n B^n$ is
 (a) always true (b) never true
 (c) true only when $AB = BA$ (d) None of these
7. If A and B are symmetric matrices, then $(ABA)^T$ is
 (a) symmetric matrix (b) skew-symmetric matrix
 (c) diagonal matrix (d) None of these
8. If $AB = BA$, then $(A + B)^2$ is equal to
 (a) $A^2 + 2AB + B^2$ (b) $A^2 + B^2$
 (c) $A^2 + 2BA - B^2$ (d) None of these

Directions (Q. Nos. 9-11) Matrix A has x rows and $x + 5$ columns. Matrix B has y rows and $11 - y$ columns. Both AB and BA exist.

9. Find the value of x .
 (a) 1 (b) 3 (c) 5 (d) 7
10. Find the value of y .
 (a) 8 (b) 6 (c) 4 (d) 2
11. The order of AB is
 (a) 3×3 (b) 8×8 (c) 3×8 (d) 8×3

> PREVIOUS YEARS' QUESTIONS

12. What is the order of the product

$$\begin{bmatrix} x & y & z \end{bmatrix} \begin{bmatrix} a & h & g \\ h & b & f \\ g & f & c \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix}?$$

 (a) 3×1 (b) 1×1
 (c) 1×3 (d) 3×3 ☑ 2012 I
13. The sum and product of matrices A and B exist. Which of the following implications are necessarily true?
 I. A and B are square matrices of same order.
 II. A and B are non-singular matrices.
 Select the correct answer using the code given below. ☑ 2012 I
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
14. If $A = \begin{bmatrix} 3 & 4 \\ 5 & 6 \\ 7 & 8 \end{bmatrix}$ and $B = \begin{bmatrix} 3 & 5 & 7 \\ 4 & 6 & 8 \end{bmatrix}$, then
 Which one of the following is correct? ☑ 2012 II
 (a) B is the inverse of A (b) B is the adjoint of A
 (c) B is the transpose of A (d) None of these

15. A square matrix $[a_{ij}]$ such that $a_{ij} = 0$ for $i \neq j$ and $a_{ij} = k$, where k is a constant for $i = j$ is called ☑ 2012 II
 (a) diagonal matrix but not scalar matrix
 (b) scalar matrix
 (c) unit matrix
 (d) None of the above

16. If the sum of the matrices $\begin{bmatrix} x \\ x \\ y \end{bmatrix}$, $\begin{bmatrix} y \\ y \\ z \end{bmatrix}$ and $\begin{bmatrix} z \\ 0 \\ 0 \end{bmatrix}$ is the matrix $\begin{bmatrix} 10 \\ 5 \\ 5 \end{bmatrix}$, then what is the value of y ? ☑ 2012 II
 (a) -5 (b) 0 (c) 5 (d) 10

17. If the matrix AB is a zero matrix, then which one of the following is correct? ☑ 2012 II
 (a) A must be equal to zero matrix or B must be equal to zero matrix
 (b) A must be equal to zero matrix and B must be equal to zero matrix
 (c) It is not necessary that either A is zero matrix or B is zero matrix
 (d) None of the above

18. Consider the following statements
 I. Every zero matrix is a square matrix.
 II. A matrix has a numerical value.
 III. A unit matrix is a diagonal matrix.
 Which of the above statement(s) is/are correct? ☑ 2012 II
 (a) Only II (b) Only III
 (c) Both II and III (d) Both I and III

19. If $A = \begin{bmatrix} i & 0 \\ 0 & -i \end{bmatrix}$, $B = \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix}$ and $C = \begin{bmatrix} 0 & i \\ i & 0 \end{bmatrix}$, where $i = \sqrt{-1}$, then which one of the following is correct? ☑ 2013 II
 (a) $AB = -C$ (b) $AB = C$
 (c) $A^2 = B^2 = C^2 = I$, where I is the identity matrix
 (d) $BA \neq -C$

20. If $\begin{bmatrix} 2 & 3 \\ 4 & 1 \end{bmatrix} \times \begin{bmatrix} 5 & -2 \\ -3 & 1 \end{bmatrix} = \begin{bmatrix} 1 & -1 \\ 17 & \lambda \end{bmatrix}$, then what is λ equal to? ☑ 2013 II
 (a) 7 (b) -7 (c) 9 (d) -9

21. Consider the following statements ☑ 2013 II
 I. The product of two non-zero matrices can never be identity matrix.
 II. The product of two non-zero matrices can never be zero matrix.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

HINTS AND SOLUTIONS

1. (b) Let $C = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$, then $4 \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} - 3 \begin{bmatrix} 2 & 3 \\ 4 & 5 \end{bmatrix} + \begin{bmatrix} a & b \\ c & d \end{bmatrix} = 0$

$$\Rightarrow \begin{bmatrix} 4-6+a & 8-9+b \\ 12-12+c & 16-15+d \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}$$

$$\Rightarrow a = 2, b = 1, c = 0 \text{ and } d = -1$$

$$\therefore C = \begin{bmatrix} 2 & 1 \\ 0 & -1 \end{bmatrix}$$

2. (d) $\therefore A = \begin{bmatrix} 1 & 0 \\ -1 & 7 \end{bmatrix}, I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$

$$\text{Now, } A^2 = \begin{bmatrix} 1 & 0 \\ -1 & 7 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ -1 & 7 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ -8 & 49 \end{bmatrix}$$

$$\text{and } 8A + kI = \begin{bmatrix} 8 & 0 \\ -8 & 56 \end{bmatrix} + \begin{bmatrix} k & 0 \\ 0 & k \end{bmatrix} = \begin{bmatrix} 8+k & 0 \\ -8 & 56+k \end{bmatrix}$$

$$\therefore A^2 = 8A + kI$$

$$\therefore \begin{bmatrix} 1 & 0 \\ -8 & 49 \end{bmatrix} = \begin{bmatrix} 8+k & 0 \\ -8 & 56+k \end{bmatrix} \Rightarrow 8+k = 1 \Rightarrow k = -7$$

3. (b)

4. (b) α, β are the roots of $1 + x + x^2 = 0$

$$\alpha + \beta = -1 \text{ and } \alpha\beta = 1$$

$$\text{Also, } 1 + \alpha + \alpha^2 = 0 \Rightarrow \alpha + \alpha^2 = -1 \text{ and } 1 + \beta + \beta^2 = 0$$

$$\Rightarrow \beta + \beta^2 = -1$$

$$\therefore \begin{bmatrix} 1 & \beta \\ \alpha & \alpha \end{bmatrix} \begin{bmatrix} \alpha & \beta \\ 1 & \beta \end{bmatrix} = \begin{bmatrix} \alpha + \beta & \beta + \beta^2 \\ \alpha^2 + \alpha & \alpha\beta + \alpha\beta \end{bmatrix} = \begin{bmatrix} -1 & -1 \\ -1 & 2 \end{bmatrix}$$

5. (c) $\therefore A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ and $B = \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix}$

$$\therefore AB = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix} = \begin{bmatrix} a & 2b \\ 3a & 4b \end{bmatrix}$$

$$\text{and } BA = \begin{bmatrix} a & 0 \\ 0 & b \end{bmatrix} \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} = \begin{bmatrix} a & 2a \\ 3b & 4b \end{bmatrix}$$

$$\text{If } AB = BA, \text{ then } \begin{bmatrix} a & 2b \\ 3a & 4b \end{bmatrix} = \begin{bmatrix} a & 2a \\ 3b & 4b \end{bmatrix} \Rightarrow a = b$$

From the above it is clear that there exist infinitely many B 's such that $AB = BA$.

6. (c) We know that, $(AB)^n = A^n B^n$ is true only, when $AB = BA$

7. (a) 8. (a)

Sol. (Q. Nos. 9-11) Since, BA is defined.

$$\therefore \text{Number of columns in } B = \text{Number of rows in } A$$

$$\Rightarrow 11 - y = x \Rightarrow x + y = 11 \quad \dots(i)$$

Also, AB is defined.

$$\therefore \text{Number of columns in } A = \text{Number of rows in } B$$

$$\therefore x + 5 = y \Rightarrow x - y = -5 \quad \dots(ii)$$

9. (b) On adding Eqs. (i) and (ii), we get $2x = 6 \Rightarrow x = 3$

10. (a) On subtracting Eq. (ii) from Eq. (i), we get $2y = 16 \Rightarrow y = 8$

11. (a) Order of $AB = (\text{Number of rows in } A) \times (\text{Number of columns in } B)$

$$= x \times (11 - y)$$

$$= 3 \times 3$$

12. (b) Here, $[x \ y \ z]_{1 \times 3} \begin{bmatrix} a & b & g \\ b & b & f \\ g & f & c \end{bmatrix}_{3 \times 3} \begin{bmatrix} x \\ y \\ z \end{bmatrix}_{3 \times 1}$

$$\text{Order of matrix} = 1 \times 3 : 3 \times 3 : 3 \times 1 = 1 \times 3 : 3 \times 1 = 1 \times 1$$

13. (a)

14. (c)

15. (b) Given, $[a_{ij}] = \begin{cases} a_{ij} = 0, & \text{for } i \neq j \\ a_{ij} = k, & \text{for } i = j \end{cases}$ where k is a constant.

$$\therefore [a_{ij}] \text{ of order } 3 \times 3 = \begin{bmatrix} k & 0 & 0 \\ 0 & k & 0 \\ 0 & 0 & k \end{bmatrix}_{3 \times 3} = \text{Scalar matrix}$$

16. (b)

17. (c) For the matrix AB is a zero matrix. It is not necessary that either A is zero matrix or B is zero matrix.

$$\text{e.g. Let } A = \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} \text{ and } B = \begin{bmatrix} 0 & 0 \\ 0 & -1 \end{bmatrix}$$

$$\therefore AB = 0, \text{ where } A, B \neq 0$$

18. (b) I. Every zero matrix is not necessarily a square matrix.

II. A matrix does not have a numerical value while every determinant have a numerical value.

III. Unit matrix is a diagonal matrix and scalar matrix also.

19. (a) Given that, $A = \begin{bmatrix} i & 0 \\ 0 & -i \end{bmatrix}, B = \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix}$ and $C = \begin{bmatrix} 0 & i \\ i & 0 \end{bmatrix}$

$$\text{Now, } AB = \begin{bmatrix} 0 & -i \\ -i & 0 \end{bmatrix} = - \begin{bmatrix} 0 & i \\ i & 0 \end{bmatrix} = -C$$

20. (b)

21. (d) We know that, the product of two identity matrix are always an identity matrix, which is non-zero matrices.

$$\begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \times \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = \begin{bmatrix} 1+0 & 0+0 \\ 0+0 & 1+0 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} = I = \text{Identity matrix}$$

The product of two non-zero matrices can sometimes be zero matrix.

$$\begin{bmatrix} 0 & c & -b \\ -c & 0 & a \\ b & -a & 0 \end{bmatrix} \times \begin{bmatrix} a^2 & ab & ac \\ ab & b^2 & bc \\ ac & bc & c^2 \end{bmatrix}$$

$$= \begin{bmatrix} 0 + abc - bac & 0 + b^2c - b^2c & 0 + bc^2 - bc^2 \\ -a^2c + 0 + a^2c & -abc + 0 + abc & -ac^2 + 0 + ac^2 \\ a^2b - a^2b + 0 & ab^2 - ab^2 + 0 & abc - abc + 0 \end{bmatrix}$$

$$= \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} = 0 = \text{Zero matrix}$$

So, both the Statements are incorrect.

22. (c) Given that, A is any matrix.

Then, the product AA is defined only when number of columns in A is equal to number of rows in A , i.e. A must be a square matrix.

Thus, $m = n$

23. (d) $\therefore A = A' \Rightarrow \begin{bmatrix} 4 & x+2 \\ 2x-3 & x+1 \end{bmatrix} = \begin{bmatrix} 4 & 2x-3 \\ x+2 & x+1 \end{bmatrix}$

$$\Rightarrow 2x - 3 = x + 2 \Rightarrow x = 5$$

24. (d) We have, $AB = A$

$$\therefore A^2 = (AB) \cdot (AB) = A \cdot (BA) B$$

$$= ABB \quad [\because BA = B]$$

$$= AB = A \quad [\because AB = A]$$

Also, $B^2 = (BA) \cdot (BA) = B \cdot (AB) \cdot A$

$$= B \cdot A \cdot A \quad [\because AB = A]$$

$$= B \cdot A = B \quad [\because BA = B]$$

Again, $(AB)^2 = (AB) \cdot (AB) = A \cdot (BA) B$

$$= A \cdot B \cdot B \quad [\because BA = B]$$

$$= AB$$

Hence, all statements are correct.

25. (b) $\begin{bmatrix} 1 & 5 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ is an elementary matrix. Since, it is obtained by

performing operation $C_2 \rightarrow C_2 + 5C_1$ on identity matrix I_3 .

26. (d) A square matrix A is said to be skew-Hermitian, if $A^* = -A$ or $a_{ij} = -\bar{a}_{ji}$, $\forall i$ and j .

Here, $a_{12} = -4 + i$ and $a_{21} = 4 + i$

Now, $\bar{a}_{12} = \overline{(-4 + i)} = -4 - i = -(4 + i) = -a_{21}$

Hence, the given matrix is skew-Hermitian matrix.

27. (a) $\therefore AX = B$

$$\therefore \begin{bmatrix} p & q \\ r & s \end{bmatrix} \begin{bmatrix} 3 & -4 \\ 1 & -1 \end{bmatrix} = \begin{bmatrix} 5 & 2 \\ -2 & 1 \end{bmatrix} \Rightarrow \begin{bmatrix} 3p + q & -4p - q \\ 3r + s & -4r - s \end{bmatrix} = \begin{bmatrix} 5 & 2 \\ -2 & 1 \end{bmatrix}$$

$$\Rightarrow 3p + q = 5 \text{ and } -4p - q = 2 \Rightarrow -p = 7 \Rightarrow p = -7$$

$$\therefore q = 5 + 21 = 26$$

Also, $3r + 5 = -2$ and $-4r - s = 1$

$$\Rightarrow -r = -1 \Rightarrow r = 1$$

and $s = -2 - 3 = -5$

$$\therefore A = \begin{bmatrix} -7 & 26 \\ 1 & -5 \end{bmatrix}$$

28. (a) We have, $AB = C$

$$\therefore \begin{bmatrix} x+y & y \\ 2x & x-y \end{bmatrix} \begin{bmatrix} 2 \\ -1 \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

$$\Rightarrow \begin{bmatrix} 2x+2y & -y \\ 4x & -x+y \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix} \Rightarrow \begin{bmatrix} 2x+y \\ 3x+y \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

$$\Rightarrow 2x + y = 3 \text{ and } 3x + y = 2 \Rightarrow x = 2 - 3 = -1$$

$$\therefore y = 5$$

$$\therefore A^2 = \begin{bmatrix} x+y & y \\ 2x & x-y \end{bmatrix}^2 = \begin{bmatrix} 4 & 5 \\ -2 & -6 \end{bmatrix} \begin{bmatrix} 4 & 5 \\ -2 & -6 \end{bmatrix}$$

$$= \begin{bmatrix} 16-10 & 20-30 \\ -8+12 & -10+36 \end{bmatrix} = \begin{bmatrix} 6 & -10 \\ 4 & 26 \end{bmatrix}$$

29. (c) Given, $E(\theta) = \begin{bmatrix} \cos\theta & \sin\theta \\ -\sin\theta & \cos\theta \end{bmatrix}$

$$\therefore E(\alpha)E(\beta) = \begin{bmatrix} \cos\alpha & \sin\alpha \\ -\sin\alpha & \cos\alpha \end{bmatrix} \begin{bmatrix} \cos\beta & \sin\beta \\ -\sin\beta & \cos\beta \end{bmatrix}$$

$$= \begin{bmatrix} \cos\alpha \cdot \cos\beta - \sin\alpha \cdot \sin\beta & \cos\alpha \cdot \sin\beta + \sin\alpha \cdot \cos\beta \\ -\sin\alpha \cdot \cos\beta - \sin\beta \cdot \cos\alpha & -\sin\alpha \cdot \sin\beta + \cos\alpha \cdot \cos\beta \end{bmatrix}$$

$$= \begin{bmatrix} \cos(\alpha + \beta) & \sin(\alpha + \beta) \\ -\sin(\alpha + \beta) & \cos(\alpha + \beta) \end{bmatrix} = E(\alpha + \beta)$$

30. (d)

31. (b) We have, $A = \begin{bmatrix} 1 & 1 & -1 \\ 2 & -3 & 4 \\ 3 & -2 & 3 \end{bmatrix}$ and $B = \begin{bmatrix} -1 & -2 & -1 \\ 6 & 12 & 6 \\ 5 & 10 & 5 \end{bmatrix}$

$$\therefore AB = \begin{bmatrix} -1+6-5 & -2+12-10 & -1+6-5 \\ -2-18+20 & -4-36+40 & -2-18+20 \\ -3-12+15 & -6-24+30 & -3-12+15 \end{bmatrix}$$

$$= \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$

Hence, AB is a null matrix.

Since, $A \neq 0$, $B \neq 0$ and $AB = 0$, therefore $BA \neq 0$.

Thus, A and B do not commute.

32. (b) Given, $A = \begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix}$

I. Now, $A^2 = A \times A = \begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} \begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} = \begin{bmatrix} 1+1 & -1-1 \\ -1-1 & 1+1 \end{bmatrix}$

$$A^2 = \begin{bmatrix} 2 & -2 \\ -2 & 2 \end{bmatrix} = 2 \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$$

II. $A^3 = A^2 \cdot A = \begin{bmatrix} 2 & -2 \\ -2 & 2 \end{bmatrix} \begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix} = \begin{bmatrix} -2-2 & 2+2 \\ 2+2 & -2-2 \end{bmatrix}$

$$= \begin{bmatrix} -4 & 4 \\ 4 & -4 \end{bmatrix} = 4 \begin{bmatrix} -1 & 1 \\ 1 & -1 \end{bmatrix}$$

$$\Rightarrow A^3 = 4A$$

Hence, only II is correct.

11 DETERMINANTS

In NDA exam, generally 4-7 questions are asked from this chapter which are based on expansion / value of determinant, adjoint / inverse of a matrix, properties of determinant and solution of system of linear equations.

Every square matrix is associated with a particular expression which is called the **determinant**. The determinant of a square matrix A is denoted by $\det A$ or $|A|$. In determinant, horizontal lines and vertical lines are called rows and columns respectively, as in matrix.

A determinant of order $n \times n$ is represented as follows, $A = \begin{vmatrix} a_{11} & a_{12} & a_{13} & \dots & a_{1n} \\ a_{21} & a_{22} & a_{23} & \dots & a_{2n} \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ a_{n1} & a_{n2} & a_{n3} & \dots & a_{nn} \end{vmatrix}$

Note A matrix is an arrangement of numbers and it has no fixed value but a determinant is a number and it has a fixed value.

Determinant of Square Matrix Order 1

If $A = [a_{11}]$ is a square matrix of order 1, then $|A| = a_{11}$

Determinant of Square Matrix of Order 2

If $A = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{bmatrix}$ is a square matrix of order 2, then determinant of A is defined as

$$|A| = \begin{vmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{vmatrix} = a_{11}a_{22} - a_{12}a_{21}$$

Determinant of Square Matrix of Order 3

If $A = \begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{bmatrix}$ is a square matrix of order 3, then determinant of A is defined as

$$|A| = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

$$\begin{aligned} \therefore |A| &= a_{11} \begin{vmatrix} a_{22} & a_{23} \\ a_{32} & a_{33} \end{vmatrix} - a_{12} \begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13} \begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix} \\ &= a_{11} (a_{22}a_{33} - a_{23}a_{32}) - a_{12} (a_{21}a_{33} - a_{23}a_{31}) + a_{13} (a_{21}a_{32} - a_{22}a_{31}) \end{aligned}$$

Properties of Determinants

- (i) If each entry in any row or column of a determinant is 0, then the value of the determinant is zero.
- (ii) If rows be changed into columns and columns into rows, then the value of the determinant remains unchanged.
- (iii) If any two adjacent rows (columns) of a determinant are interchanged, then the determinant remains its absolute value but changed in sign.
- (iv) If a determinant have any two rows or columns identical, then its value is zero.
- (v) If all the constituents (elements) of one row or of one column, multiplied by the same quantity, then the value of new determinant is k times the value of original determinant.

$$\text{i.e. } \begin{vmatrix} ka_{11} & ka_{12} & ka_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix} = k \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

- (vi) If each constituent of any row or of any column be the sum of the two quantities, then the determinant can be expressed as the sum of the two determinants of the same order.

$$\text{i.e. } \begin{vmatrix} a_{11} + a & a_{12} + b & a_{13} + c \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix} = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix} + \begin{vmatrix} a & b & c \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

- (vii) If each element of a row or column of a determinant is multiplied by a constant k and then added to the corresponding elements of some other row or column, then value of determinant remains same.

$$\begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix} = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} + ka_{21} & a_{32} + ka_{22} & a_{33} + ka_{23} \end{vmatrix}$$

- (viii) Number of elements in n th order determinant = n^2

- (ix) If A and B are two determinants of order n , then $|AB| = |A| |B|$
- (x) $\det(kA) = k^n \det(A)$, if A is of order $n \times n$.
- (xi) If $AB = AC$, then $B = C$ is true only, when $|A| \neq 0$.

EXAMPLE 1. If x, y and z are all positive, then what is

$$\text{the value of } \begin{vmatrix} 1 & \log_x y & \log_x z \\ \log_y x & 1 & \log_y z \\ \log_z x & \log_z y & 1 \end{vmatrix} ?$$

- a. 1 b. 3 c. 0 d. -2

$$\begin{aligned} \text{Sol. c. } \begin{vmatrix} 1 & \log_x y & \log_x z \\ \log_y x & 1 & \log_y z \\ \log_z x & \log_z y & 1 \end{vmatrix} &= \begin{vmatrix} \frac{\log x}{\log x} & \frac{\log y}{\log x} & \frac{\log z}{\log x} \\ \frac{\log x}{\log y} & \frac{\log y}{\log y} & \frac{\log z}{\log y} \\ \frac{\log x}{\log z} & \frac{\log y}{\log z} & \frac{\log z}{\log z} \end{vmatrix} \\ &= \frac{1}{\log x \log y \log z} \begin{vmatrix} \log x & \log y & \log z \\ \log x & \log y & \log z \\ \log x & \log y & \log z \end{vmatrix} \\ &= 0 \quad [\text{since, all rows are identical}] \end{aligned}$$

EXAMPLE 2. If ω is the cube root of unity, then what is one root of the equation

$$\begin{vmatrix} x^2 & -2x & -2\omega^2 \\ 2 & \omega & -\omega \\ 0 & \omega & 1 \end{vmatrix} = 0?$$

- a. 1 b. -2 c. 2 d. ω

$$\begin{aligned} \text{Sol. c. } \begin{vmatrix} x^2 & -2x & -2\omega^2 \\ 2 & \omega & -\omega \\ 0 & \omega & 1 \end{vmatrix} &= 0 \\ \Rightarrow x^2 \begin{vmatrix} \omega & -\omega \\ \omega & 1 \end{vmatrix} + 2x \begin{vmatrix} 2 & -\omega \\ 0 & 1 \end{vmatrix} - 2\omega^2 \begin{vmatrix} 2 & \omega \\ 0 & \omega \end{vmatrix} &= 0 \\ \Rightarrow x^2(\omega + \omega^2) + 2x(2) - 2\omega^2(2\omega) &= 0 \quad [\because 1 + \omega + \omega^2 = 0] \\ \Rightarrow -x^2 + 4x - 4\omega^3 &= 0 \\ \Rightarrow x^2 - 4x + 4 &= 0 \\ \Rightarrow (x-2)^2 &= 0 \Rightarrow x = 2 \end{aligned}$$

MINORS AND COFACTORS

Minor of an Element of a Determinant

If we delete the row and column passing through the element a_{ij} , the determinant, thus obtained is called the minor of a_{ij} and is usually denoted by M_{ij} .

$$\text{e.g. For the } 3 \times 3 \text{ determinant } \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

$$\text{The minor of } a_{11} \text{ is } M_{11} = \begin{vmatrix} a_{22} & a_{23} \\ a_{32} & a_{33} \end{vmatrix}.$$

Cofactor of an Element of a Determinant

The cofactor of an element a_{ij} is $(-1)^{i+j} M_{ij}$ and it is denoted by C_{ij} . Thus, $C_{ij} = \begin{cases} M_{ij}, & \text{when } i+j \text{ is even} \\ -M_{ij}, & \text{when } i+j \text{ is odd} \end{cases}$

$$\text{Let } \Delta = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

$$= a_{11} \begin{vmatrix} a_{22} & a_{23} \\ a_{32} & a_{33} \end{vmatrix} - a_{12} \begin{vmatrix} a_{21} & a_{23} \\ a_{31} & a_{33} \end{vmatrix} + a_{13} \begin{vmatrix} a_{21} & a_{22} \\ a_{31} & a_{32} \end{vmatrix}$$

$$\therefore \Delta = a_{11}M_{11} - a_{12}M_{12} + a_{13}M_{13}$$

$$= a_{11}C_{11} + a_{12}C_{12} + a_{13}C_{13}$$

(i) If $\Delta \neq 0$ and Δ^c denoted the determinant of cofactors, then $\Delta^c = \Delta^{n-1}$, where $n (> 0)$ is the order of Δ .

(ii) If $\Delta = 0$, then $\Delta^c = 0$.

(iii) The sum of the product of constituents of any row (column) of a determinant with the cofactors of the corresponding elements of any other row (column) is zero.

$$\text{i.e. } a_{11}C_{31} + a_{12}C_{32} + a_{13}C_{33} = 0$$

EXAMPLE 3. If Δ is the determinant of the matrix

$$\begin{bmatrix} a & b \\ -b & -a \end{bmatrix} \text{ and } \Delta^c \text{ the determinant of the cofactors of}$$

the elements of the matrix. Then, which one of the following is correct?

a. $\Delta^c = \Delta$ b. $\Delta^c = \Delta^2$ c. $\Delta^c = \Delta^3$ d. $\Delta^c = \frac{1}{\Delta}$

Sol. a. Let $A = \begin{bmatrix} a & b \\ -b & -a \end{bmatrix}$, $\Delta = \begin{vmatrix} a & b \\ -b & -a \end{vmatrix} = -a^2 + b^2$

and matrix of cofactors of $A = \begin{bmatrix} -a & b \\ -b & a \end{bmatrix}$

$$\Delta^c = \begin{vmatrix} -a & b \\ -b & a \end{vmatrix} = -a^2 + b^2 \Rightarrow \Delta = \Delta^c$$

ADJOINT OF A MATRIX

Let $A = [a_{ij}]$ be a square matrix of order n and $C = [c_{ij}]$ be its cofactor matrix. Then, matrix $C^T = [C_{ji}]$, is called the adjoint of matrix A and is written as

$$\text{adj}(A) = C^T = [C_{ji}], 1 \leq i, j \leq n.$$

e.g. If $A = \begin{bmatrix} 1 & 2 & 3 \\ -1 & 0 & 1 \\ 4 & 3 & 2 \end{bmatrix}$, then $C_{11} = -3, C_{12} = 6, C_{13} = -3,$

$$C_{21} = 5, C_{22} = -10, C_{23} = 5$$

$$C_{31} = 2, C_{32} = -4 \text{ and } C_{33} = 2$$

$$\therefore C = \begin{bmatrix} -3 & 6 & -3 \\ 5 & -10 & 5 \\ 2 & 4 & 2 \end{bmatrix}$$

Thus, $\text{adj}(A) = C^T = \begin{bmatrix} -3 & 5 & 2 \\ 6 & -10 & -4 \\ -3 & 5 & 2 \end{bmatrix}$

Properties of Adjoint Matrix

If A, B are square matrices of order n and I_n is corresponding unit matrix, then

(i) $A(\text{adj}A) = |A|I_n = (\text{adj}A)A$ (ii) $|\text{adj}A| = |A|^{n-1}$

(iii) $\text{adj}(\text{adj}A) = |A|^{n-2}A; |A| \neq 0$

(iv) $|\text{adj}(\text{adj}A)| = |A|^{(n-1)^2}$ (v) $\text{adj}(A^T) = (\text{adj}A)^T$

(vi) $\text{adj}(AB) = (\text{adj}B)(\text{adj}A)$

(vii) $\text{adj}(A^m) = (\text{adj}A)^m, m \in \mathbb{N}$

(viii) $\text{adj}(kA) = k^{n-1}(\text{adj}A), k \in \mathbb{R}$

(ix) $\text{adj}(I_n) = I_n$ (x) $\text{adj}(O) = O$

(xi) A is symmetric matrix $\Rightarrow \text{adj}(A)$ is also symmetric matrix.

(xii) A is diagonal matrix $\Rightarrow \text{adj}(A)$ is also diagonal matrix.

(xiii) A is triangular matrix $\Rightarrow \text{adj}(A)$ is also triangular matrix.

EXAMPLE 4. If $A = \begin{bmatrix} 1 & -1 & 1 \\ 0 & 2 & -3 \\ 2 & 1 & 0 \end{bmatrix}$ and $B = (\text{adj}A)$ and

$C = 5A$, then $\frac{|\text{adj}B|}{|C|}$ is equal to

a. 5 b. 25 c. -1 d. 1

Sol. d. $|A| = \begin{vmatrix} 1 & -1 & 1 \\ 0 & 2 & -3 \\ 2 & 1 & 0 \end{vmatrix} = 1(3) + 1(6) + 1(-4) = 5$

$$B = \text{adj}A = \begin{bmatrix} 3 & 1 & 1 \\ -6 & -2 & 3 \\ -4 & -3 & 2 \end{bmatrix}, \text{adj}B = \begin{bmatrix} 5 & -5 & 5 \\ 0 & 10 & -15 \\ 10 & 5 & 0 \end{bmatrix} = 5A$$

and $C = 5A$

$$\therefore \frac{|\text{adj}B|}{|C|} = \frac{|5A|}{|5A|} = 1$$

INVERSE OF A MATRIX

A non-singular square matrix $A = [a_{ij}]$ of order n is said to be invertible or has an inverse, if there exists another non-singular square matrix B of order n , such that

$$AB = BA = I_n$$

where, I is an identity matrix of order n . Then, we write

$$B = A^{-1} \text{ or } A = B^{-1}$$

Hence, we say that A^{-1} is the inverse of A , if

$$AA^{-1} = A^{-1}A = I$$

The inverse of a matrix A is given by $A^{-1} = \frac{1}{|A|} \text{adj}(A)$.

Note Non-singular and singular matrices A matrix A is said to be non-singular, if its determinant is non-zero, i.e. $|A| \neq 0$. The matrix whose determinant is zero, i.e. $|A| = 0$, is called a singular matrix.

Properties of Inverse Matrices

If A and B are invertible matrices of the same order, then

- (i) $(A^{-1})^{-1} = A$ (ii) $(AB)^{-1} = B^{-1}A^{-1}$
 (iii) $(A^k)^{-1} = (A^{-1})^k, k \in \mathbb{N}$
 (iv) $\text{adj}(A^{-1}) = (\text{adj}A)^{-1}$ (v) $|A^{-1}| = \frac{1}{|A|} = |A|^{-1}$

Note If A is an invertible matrix, then

- If A is symmetric matrix, then A^{-1} is also symmetric matrix.
- If A is skew-symmetric matrix, then A^{-1} is also skew symmetric matrix.

EXAMPLE 5. If the inverse of $\begin{bmatrix} 1 & p & q \\ 0 & x & 0 \\ 0 & 0 & 1 \end{bmatrix}$ is

$\begin{bmatrix} 1 & -p & -q \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$, then what is the value of x ?

- a. 1 b. 0 c. -1 d. $\frac{1}{p} + \frac{1}{q}$

Sol. a. Let $A = \begin{bmatrix} 1 & p & q \\ 0 & x & 0 \\ 0 & 0 & 1 \end{bmatrix}$ and $B = \begin{bmatrix} 1 & -p & -q \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$

Thus, $B^{-1} = \begin{bmatrix} 1 & p & q \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix}$

But B is inverse of A , therefore $A = B^{-1}$

$$\Rightarrow \begin{bmatrix} 1 & p & q \\ 0 & x & 0 \\ 0 & 0 & 1 \end{bmatrix} = \begin{bmatrix} 1 & p & q \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} \Rightarrow x = 1$$

SOLUTION OF SYSTEM OF LINEAR EQUATIONS

(i) Using Matrices

Consider, the system of linear equations

$$a_{11}x_1 + a_{12}x_2 + a_{13}x_3 = b_1$$

$$a_{21}x_1 + a_{22}x_2 + a_{23}x_3 = b_2$$

$$a_{31}x_1 + a_{32}x_2 + a_{33}x_3 = b_3$$

We can write these equations in matrix form as

$$AX = B \quad \dots(i)$$

where, $A = \begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{bmatrix}$, $B = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix}$ and $X = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}$

Then, $X = A^{-1}B$

This method is also known as the matrix method to solve a system of equations.

Criterion of Consistency

Let $Ax = B$ be a system of n linear equation with n variables

- (i) If $|A| \neq 0$ (i.e. A is non-singular), then the system of equations is consistent and has a unique solution given by $X = A^{-1}B$.
 (ii) If $|A| = 0$ (i.e. A is singular) and $[\text{adj}(A)]B = 0$, i.e. null matrix, then the system of equations is consistent and infinitely many solutions.
 (iii) If $|A| = 0$ and $[\text{adj}(A)]B \neq 0$, then the system of equations is inconsistent and has no solution.

Homogeneous Equations

The system of equations $AX = B$ is said to homogeneous, if $B = 0$

- (i) If $|A| \neq 0$, then its only solution $X = 0$, is called trivial solution.
 (ii) If $|A| = 0$, then $AX = 0$ has a non-trivial solution. It will have infinitely many solutions.

EXAMPLE 6. The equations

$x + 2y + 3z = 1, x - y + 4z = 0$ and $2x + y + 7z = 1$ have

- a. only two solutions b. only one solution
 c. no solution d. infinitely many solutions

Sol. d. We have, $|A| = \begin{vmatrix} 1 & 2 & 3 \\ 1 & -1 & 4 \\ 2 & 1 & 7 \end{vmatrix} = 1(-11) - 2(-1) + 3(3) = 0$

$$\text{adj}(A) = \begin{bmatrix} -11 & 1 & 3 \\ -11 & 1 & 3 \\ 11 & -1 & -3 \end{bmatrix}^T = \begin{bmatrix} -11 & -11 & 11 \\ 1 & 1 & -1 \\ 3 & 3 & -3 \end{bmatrix}$$

$$\therefore (\text{adj}A)B = \begin{bmatrix} -11 & -11 & 11 \\ 1 & 1 & -1 \\ 3 & 3 & -3 \end{bmatrix} \begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix} = 0$$

So, the given system of equations is consistent and has infinitely many solutions.

(ii) Cramer's Rule

Case I Let us consider a system of equations in two variables

$$a_1x + b_1y = c_1, a_2x + b_2y = c_2$$

then, $\Delta = \begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}$, $\Delta_1 = \begin{vmatrix} c_1 & b_1 \\ c_2 & b_2 \end{vmatrix}$ and $\Delta_2 = \begin{vmatrix} a_1 & c_1 \\ a_2 & c_2 \end{vmatrix}$

By Cramer's rule the solution of system of equation is $x = \frac{\Delta_1}{\Delta}$, $y = \frac{\Delta_2}{\Delta}$, provided $\Delta \neq 0$.

Applications of Determinant in Geometry

1. **Area of triangle** If (x_1, y_1) , (x_2, y_2) and (x_3, y_3) are the vertices of a triangle, then

$$\begin{aligned} \text{Area of triangle} &= \frac{1}{2} \begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix} \\ &= \frac{1}{2} [x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)] \end{aligned}$$

2. **Condition of collinearity of three points** Let three points be $A(x_1, y_1)$, $B(x_2, y_2)$ and $C(x_3, y_3)$, then these points will be collinear, if Area of $\Delta ABC = 0$
3. **Equation of straight line passing through two points** Let two points be $A(x_1, y_1)$ and $B(x_2, y_2)$ and $P(x, y)$ be a point on the line joining points A and B , then the equation of line is given by

$$\begin{vmatrix} x & y & 1 \\ x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \end{vmatrix} = 0$$

EXAMPLE 9. The equation of straight line passing through the points $A(3, 1)$ and $B(9, 3)$ is

- $x - 2 = 0$
- $x - 3y = 0$
- $y + 2 = 0$
- $y - 2 = 0$

Sol. b. Let $P(x, y)$ be any point on the line joining $A(3, 1)$ and $B(9, 3)$.

Then, the points A, B and P are collinear. Therefore, the area of ΔABP will be zero.

$$\begin{aligned} \therefore \frac{1}{2} \begin{vmatrix} 3 & 1 & 1 \\ 9 & 3 & 1 \\ x & y & 1 \end{vmatrix} &= 0 \\ \Rightarrow \frac{1}{2} |3(3 - y) - 1(9 - x) + 1(9y - 3x)| &= 0 \\ \Rightarrow 9 - 3y - 9 + x + 9y - 3x &= 0 \\ \Rightarrow 6y - 2x &= 0 \\ \Rightarrow x - 3y &= 0 \end{aligned}$$

Hence, the equation of the line joining the given points is $x - 3y = 0$.

PRACTICE EXERCISE

1. Let $\Delta = \begin{vmatrix} 1 & \sin \alpha & 1 \\ -\sin \alpha & 1 & \sin \alpha \\ -1 & -\sin \alpha & 1 \end{vmatrix}$, then Δ lies in

the interval

- (a) $[2, 3]$ (b) $[3, 4]$ (c) $[1, 4]$ (d) $[2, 4]$

2. If $f(x) = x^2 - 4x - 5$, then $f(A)$,

where $A = \begin{vmatrix} 1 & 2 & 2 \\ 2 & 1 & 2 \\ 2 & 2 & 1 \end{vmatrix}$, is equal to

- (a) 0 (b) 1 (c) -1 (d) 2!

3. If $\begin{vmatrix} x^2 + 2x & 2x + 1 & 1 \\ 2x + 1 & x + 2 & 1 \\ 3 & 3 & 1 \end{vmatrix} = (x - 1)^k$, then k equals to

- (a) 1 (b) 2 (c) 3 (d) 4

4. If $\Delta = \begin{vmatrix} 1 & a & a^2 \\ \cos(n-1)x & \cos nx & \cos(n+1)x \\ \sin(n-1)x & \sin nx & \sin(n+1)x \end{vmatrix}$, then Δ

is

- (a) independent of x (b) independent of a
(c) independent of n (d) None of these

5. If $p + q + r = a + b + c = 0$, then the value of

$$\begin{vmatrix} pa & qb & rc \\ qc & ra & pb \\ rb & pc & qa \end{vmatrix} \text{ is}$$

- (a) 0 (b) $ap + bq + cr$
(c) 1 (d) None of these

6. The value of the determinant $\Delta = \begin{vmatrix} 1! & 2! & 3! \\ 2! & 3! & 4! \\ 3! & 4! & 5! \end{vmatrix}$ is

- (a) 2! (b) 3! (c) 4! (d) 5!

7. If A, B and C are the angles of a triangle, then

the value of $\Delta = \begin{vmatrix} -1 & \cos C & \cos B \\ \cos C & -1 & \cos A \\ \cos B & \cos A & -1 \end{vmatrix}$ is

- (a) $\cos A \cos B \cos C$ (b) $\sin A \sin B \sin C$
(c) 0 (d) None of these

8. The roots of the equation $\begin{vmatrix} x & \alpha & 1 \\ \beta & x & 1 \\ \beta & \gamma & 1 \end{vmatrix} = 0$ are

- independent of
(a) α (b) β (c) γ (d) α, β and γ

9. If 5 and 7 are the roots of the equation

$$\begin{vmatrix} x & 4 & 5 \\ 7 & x & 7 \\ 5 & 8 & x \end{vmatrix} = 0, \text{ then what is the third root?}$$

(a) -12 (b) 9 (c) 13 (d) 14

10. What is the value of $\begin{vmatrix} 1-i & \omega^2 & -\omega \\ \omega^2+i & \omega & -i \\ 1-2i-\omega^2 & \omega^2-\omega & i-\omega \end{vmatrix}$,

where ω is the cube root of unity?

- (a) -1 (b) 1 (c) 2 (d) 0

11. If $\begin{vmatrix} y & x & y+z \\ z & y & x+y \\ x & z & z+x \end{vmatrix} = 0$, then which one of the following is correct?

- (a) Either $x + y = z$ or $x = y$ (b) Either $x + y = -z$ or $x = z$
 (c) Either $x + z = y$ or $z = y$ (d) Either $z + y = x$ or $x = y$

12. What is the value of k , if $\begin{vmatrix} k & b+c & b^2+c^2 \\ k & c+a & c^2+a^2 \\ k & a+b & a^2+b^2 \end{vmatrix}$

$$= (a-b)(b-c)(c-a)?$$

- (a) 1 (b) -1 (c) 2 (d) 0

13. If T_p, T_q, T_r are p th, q th and r th terms of an AP,

$$\text{then } \begin{vmatrix} T_p & T_q & T_r \\ p & q & r \\ 1 & 1 & 1 \end{vmatrix} \text{ is equal to}$$

- (a) 1 (b) -1 (c) 0 (d) $p+q+r$

14. If $\Delta = \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$ and A_1, B_1, C_1 denote the

cofactors of a_1, b_1, c_1 respectively, then the value

$$\text{of the determinant } \begin{vmatrix} A_1 & B_1 & C_1 \\ A_2 & B_2 & C_2 \\ A_3 & B_3 & C_3 \end{vmatrix} \text{ is}$$

- (a) Δ (b) Δ^2 (c) Δ^3 (d) 0

15. What is the value of

$$\begin{vmatrix} \cos 15^\circ & \sin 15^\circ \\ \cos 45^\circ & \sin 45^\circ \end{vmatrix} \times \begin{vmatrix} \cos 45^\circ & \cos 15^\circ \\ \sin 45^\circ & \sin 15^\circ \end{vmatrix} ?$$

- (a) $\frac{1}{4}$ (b) $\frac{\sqrt{3}}{2}$ (c) $-\frac{1}{4}$ (d) $-\frac{3}{4}$

16. If $f(x) = ax^4 + bx^3 + cx^2 + dx + e$

$$= \begin{vmatrix} x^3 + 3x & x-1 & x+3 \\ x+1 & -2x & x-4 \\ x-3 & x+4 & 3x \end{vmatrix}, \text{ then } e \text{ equals}$$

- (a) 1 (b) -1 (c) 2 (d) 0

17. If $(a_1/x) + (b_1/y) = c_1, (a_2/x) + (b_2/y) = c_2$

$$\Delta_1 = \begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}, \Delta_2 = \begin{vmatrix} b_1 & c_1 \\ b_2 & c_2 \end{vmatrix}, \Delta_3 = \begin{vmatrix} c_1 & a_1 \\ c_2 & a_2 \end{vmatrix},$$

then (x, y) is equal to which one of the following?

- (a) $(\Delta_2/\Delta_1, \Delta_3/\Delta_1)$ (b) $(\Delta_3/\Delta_1, \Delta_2/\Delta_1)$
 (c) $(\Delta_1/\Delta_2, \Delta_1/\Delta_3)$ (d) $(-\Delta_1/\Delta_2, -\Delta_1/\Delta_3)$

18. If the matrix $A = \begin{bmatrix} 2-x & 1 & 1 \\ 1 & 3-x & 0 \\ -1 & -3 & -x \end{bmatrix}$ is singular,

then what is the solution set S ?

- (a) $S = \{0, 2, 3\}$ (b) $S = \{-1, 2, 3\}$
 (c) $S = \{1, 2, 3\}$ (d) $S = \{2, 3\}$

19. If $\begin{bmatrix} 1 & -\tan\theta \\ \tan\theta & 1 \end{bmatrix} \begin{bmatrix} 1 & \tan\theta \\ -\tan\theta & 1 \end{bmatrix}^{-1} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$,

then

- (a) $a = 1, b = 1$ (b) $a = \cos 2\theta, b = \sin 2\theta$
 (c) $a = \sin 2\theta, b = \cos 2\theta$ (d) None of these

20. If a matrix A is such that $3A^3 + 2A^2 + 5A + I = O$, then what is A^{-1} equal to?

- (a) $-(3A^2 + 2A + 5)$ (b) $3A^2 + 2A + 5I$
 (c) $3A^2 - 2A - 5I$ (d) $-(3A^2 + 2A + 5I)$

21. If $A = \begin{bmatrix} \cos x & \sin x & 0 \\ -\sin x & \cos x & 0 \\ 0 & 0 & 1 \end{bmatrix} = f(x)$, then A^{-1} equals

- (a) $f(-x)$ (b) $-f(x)$
 (c) $-f(-x)$ (d) $f(x)$

22. If $l + m + n = 0$, then the system of equations $-2x + y + z = l, x - 2y + z = m, x + y - 2z = n$ has

- (a) a trivial solution
 (b) no solution
 (c) a unique solution
 (d) infinitely many solutions

23. Consider the system of linear equations

$$a_1x + b_1y + c_1z + d_1 = 0, \quad a_2x + b_2y + c_2z + d_2 = 0$$

and $a_3x + b_3y + c_3z + d_3 = 0$

Let us denote by $\Delta(a, b, c)$ the determinant

$$\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$$

If $\Delta(a, b, c) \neq 0$, then the value of x has a unique solution of the above equation, then

- (a) $\frac{\Delta(b, c, d)}{\Delta(a, b, c)}$ (b) $-\frac{\Delta(b, c, d)}{\Delta(a, b, c)}$
 (c) $\frac{\Delta(a, c, d)}{\Delta(a, b, c)}$ (d) $-\frac{\Delta(a, b, d)}{\Delta(a, b, c)}$

- 24.** If $\Delta = \begin{vmatrix} 1+a & 1 & 1 \\ 1 & 1+b & 1 \\ 1 & 1 & 1+c \end{vmatrix}$, then consider the

following statements

I. If $\frac{1}{a} + \frac{1}{b} + \frac{1}{c} = 0$, then $\Delta = abc$.

II. If $a^{-1} + b^{-1} + c^{-1} = -1$, then $\Delta = 0$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

- 25.** If the determinant $\begin{vmatrix} a & b & a\alpha + b \\ b & c & b\alpha + c \\ a\alpha + b & b\alpha + c & 0 \end{vmatrix}$ is equal

to zero, then consider the following statements.

I. a, b, c are in AP.

II. α is a root of the equation $ax^2 + bx + c = 0$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) I and II (d) Neither I nor II

- 26.** If A and B are square matrices such that $B = A^{-1}BA$, then consider the following statements

I. $AB + BA = 0$ II. $A^2 - B^2 = (A + B)(A - B)$

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

- 27.** Let A be a 2×2 matrix with non-zero entries and let $A^2 = I$, where I is 2×2 identity matrix, then consider the following statements

I. Sum of diagonal elements of A is 0.

II. Determinant of matrix A is 1.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

- 28.** Which of the following determinants is purely real?

I. $\begin{vmatrix} 2 & 1+i & 3 \\ 1-i & 0 & 2+i \\ 3 & 2-i & 1 \end{vmatrix}$ II. $\begin{vmatrix} 1 & i & 2 \\ -i & 2 & i \\ 0 & i & -2 \end{vmatrix}$

III. $\begin{vmatrix} \sqrt{6} & 3-i\sqrt{2} & 2+i\sqrt{6} \\ 3+i\sqrt{2} & 0 & 3-i\sqrt{8} \\ 2-i\sqrt{6} & 3+i\sqrt{8} & \sqrt{11} \end{vmatrix}$

- (a) I and II (b) II and III (c) I and III (d) I, II and III

Directions (Q. Nos. 29-30) Given two determinants

$$\Delta_1 = \begin{vmatrix} x & b & b \\ a & x & b \\ a & a & x \end{vmatrix} \text{ and } \Delta_2 = \begin{vmatrix} x & b \\ a & x \end{vmatrix}.$$

- 29.** The $\frac{d}{dx} \Delta_1$ is

- (a) Δ_2 (b) $\Delta_2/2$
(c) $3\Delta_2$ (d) None of these

- 30.** If $\Delta_1 - x\Delta_2 + a^2b = 0$, then x equals to

- (a) $\frac{a+2b}{2}$ (b) $\frac{2a+b}{2}$
(c) $\frac{a+b}{2}$ (d) None of these

Directions (Q. Nos. 31-32) Consider the determinant

$$f(x) = \begin{vmatrix} x^2 - 5x + 3 & 2x - 5 & 3 \\ 3x^2 + x + 4 & 6x + 1 & 9 \\ 7x^2 - 6x + 9 & 14x - 6 & 21 \end{vmatrix}$$

- 31.** The value of $f(0)$ is

- (a) 93 (b) 120 (c) 141 (d) 0

- 32.** The value of $f'(0)$ is

- (a) 0 (b) 7 (c) 19 (d) -1

Directions (Q. Nos. 33-34) Let

$$A(\theta) = \begin{bmatrix} \sin \theta & i \cos \theta \\ i \cos \theta & \sin \theta \end{bmatrix}, \text{ where } i = \sqrt{-1}$$

- 56.** The value of the determinant $\begin{vmatrix} m & n & p \\ p & m & n \\ n & p & m \end{vmatrix}$ is
 (a) is a perfect cube (b) is a perfect square (c) has linear factor (d) is zero
- 57.** The roots of the equation $\begin{vmatrix} 1 & t-1 & 1 \\ t-1 & 1 & 1 \\ 1 & 1 & t-1 \end{vmatrix} = 0$ are
 (a) 1, 2 (b) $-1, 2$ (c) 1, -2 (d) $-1, -2$

- 58.** If D is determinant of order 3 and D' is the determinant obtained by replacing the elements of D by their cofactors, then which one of the following is correct? ☑ 2013 I

(a) $D' = D^2$ (b) $D' = D^3$
 (c) $D' = 2D^2$ (d) $D' = 3D^3$

- 59.** Consider the following statements

I. A matrix is not a number.
 II. Two determinants of different orders may have the same value.

Which of the above statement(s) is/are correct?

(a) Only I (b) Only II ☑ 2013 I
 (c) Both I and II (d) Neither I nor II

- 60.** What is the value of the minor of the element 9

in the determinant $\begin{vmatrix} 10 & 19 & 2 \\ 0 & 13 & 1 \\ 9 & 24 & 2 \end{vmatrix}$? ☑ 2013 I

(a) -9 (b) -7 (c) 7 (d) 0

- 61.** If A and B are two non-singular square matrices such that $AB = A$, then which one of the following is correct? ☑ 2013 I

(a) B is an identity matrix (b) $B = A^{-1}$
 (c) $B = A^2$ (d) Determinant of B is zero

- 62.** The cofactor of the element 4 in the determinant

$\begin{vmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 5 & 8 & 9 \end{vmatrix}$ is ☑ 2013 II

(a) 2 (b) 4
 (c) 6 (d) -6

- 63.** What is the value of the determinant

$\begin{vmatrix} 1 & bc & a(b+c) \\ 1 & ca & b(c+a) \\ 1 & ab & c(a+b) \end{vmatrix}$? ☑ 2013 II

(a) 0 (b) abc
 (c) $ab + bc + ca$ (d) $abc(a + b + c)$

- 64.** If A is a square matrix of order 3 with $|A| \neq 0$, then which one of the following is correct? ☑ 2013 II

(a) $|\text{adj } A| = |A|$ (b) $|\text{adj } A| = |A|^2$
 (c) $|\text{adj } A| = |A|^3$ (d) $|\text{adj } A|^2 = |A|$

- 65.** If $2A = \begin{bmatrix} 2 & 1 \\ 3 & 2 \end{bmatrix}$, then what is A^{-1} equal to? ☑ 2013 II

(a) $\begin{bmatrix} 2 & -1 \\ -3 & 2 \end{bmatrix}$ (b) $\frac{1}{2} \begin{bmatrix} 2 & -1 \\ -3 & 2 \end{bmatrix}$
 (c) $\frac{1}{4} \begin{bmatrix} 2 & -1 \\ -3 & 2 \end{bmatrix}$ (d) None of these

- 66.** Consider the following statements

I. The matrix $\begin{bmatrix} 1 & 2 & 1 \\ a & 2a & 1 \\ b & 2b & 1 \end{bmatrix}$ is singular.

II. The matrix $\begin{bmatrix} c & 2c & 1 \\ a & 2a & 1 \\ b & 2b & 1 \end{bmatrix}$ is non-singular.

Which of the above statement(s) is/are correct?

(a) Only I (b) Only II ☑ 2013 II
 (c) Both I and II (d) Either I or II

- 67.** One of the roots of $\begin{vmatrix} x+a & b & c \\ a & x+b & c \\ a & b & x+c \end{vmatrix} = 0$ is ☑ 2014 I

(a) abc (b) $a + b + c$
 (c) $-(a + b + c)$ (d) $-abc$

- 68.** The determinant of an odd order skew-symmetric matrix is always ☑ 2014 I

(a) zero (b) one
 (c) negative (d) depends on the matrix

- 69.** If any two adjacent rows or columns of a determinant are interchanged in position, the value of the determinant ☑ 2014 I

(a) becomes zero (b) remains the same
 (c) changes its sign (d) is doubled

- 70.** Consider two matrices

$$A = \begin{bmatrix} 1 & 2 \\ 2 & 1 \\ 1 & 1 \end{bmatrix} \text{ and } B = \begin{bmatrix} 1 & 2 & -4 \\ 2 & 1 & -4 \end{bmatrix}$$

Which one of the following is correct? ☑ 2014 I

(a) B is the right inverse of A
 (b) B is the left inverse of A
 (c) B is the both sided inverse of A
 (d) None of the above

- 71.** Consider the following statements in respect of

the matrix $A = \begin{bmatrix} 0 & 1 & 2 \\ -1 & 0 & -3 \\ -2 & 3 & 0 \end{bmatrix}$

I. The matrix A is skew-symmetric.
 II. The matrix A is symmetric.
 III. The matrix A is invertible.

Which of the above statement(s) is/are correct?

(a) Only I (b) Only III (c) I and II (d) II and III ☑ 2014 I

- 72.** If A and B are square matrices of second order such that $|A| = -1$ and $|B| = 3$, then what is $|3AB|$ equal to? ☑ 2014 II

(a) 3 (b) -9
 (c) -27 (d) None of these

73. If the matrix A is such that $\begin{bmatrix} 1 & 3 \\ 0 & 1 \end{bmatrix} A = \begin{bmatrix} 1 & 1 \\ 0 & -1 \end{bmatrix}$,

then what is A equal to? ☑ 2014 II

- (a) $\begin{bmatrix} 1 & 4 \\ 0 & -1 \end{bmatrix}$ (b) $\begin{bmatrix} 1 & 4 \\ 0 & 1 \end{bmatrix}$
 (c) $\begin{bmatrix} -1 & 4 \\ 0 & -1 \end{bmatrix}$ (d) $\begin{bmatrix} 1 & -4 \\ 0 & -1 \end{bmatrix}$

74. From the matrix equation $AB = AC$, where A , B and C are the square matrices of same order, we can conclude $B = C$ provided ☑ 2014 II

- (a) A is non-singular (b) A is singular
 (c) A is symmetric (d) A is skew-symmetric

75. If A is an invertible matrix, then what is $\det(A^{-1})$ equal to? ☑ 2014 II

- (a) $\det(A)$ (b) $\frac{1}{\det(A)}$
 (c) 1 (d) None of these

76. If $\begin{vmatrix} 6i & -3i & 1 \\ 4 & 3i & -1 \\ 20 & 3 & i \end{vmatrix} = x + iy$, where $i = \sqrt{-1}$, then

what is x equal to? ☑ 2014 II

- (a) 3 (b) 2
 (c) 1 (d) 0

77. If $\begin{vmatrix} a & b & 0 \\ 0 & a & b \\ b & 0 & a \end{vmatrix} = 0$, then which one of the following

is correct? ☑ 2014 II

- (a) a/b is one of the cube roots of unity
 (b) a/b is one of the cube roots of -1
 (c) a is one of the cube roots of unity
 (d) b is one of the cube roots of unity

78. Consider the following statements

- I. Determinant is a square matrix.
 II. Determinant is a number associated with a square matrix.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II ☑ 2014 II
 (c) Both I and II (d) Neither I nor II

79. If $a \neq b \neq c$ all are positive, then the value of

determinant $\begin{vmatrix} a & b & c \\ b & c & a \\ c & a & b \end{vmatrix}$ is ☑ 2014 II

- (a) non-negative (b) non-positive
 (c) negative (d) positive

80. The value of $\begin{vmatrix} 1 & 1 & 1 \\ 1 & 1+x & 1 \\ 1 & 1 & 1+y \end{vmatrix}$ is ☑ 2015 I

- (a) $x + y$ (b) $x - y$
 (c) xy (d) $1 + x + y$

81. Consider the following in respect of two non-singular matrices A and B of same order

I. $\det(A + B) = \det A + \det B$

II. $(A + B)^{-1} = A^{-1} + B^{-1}$

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II ☑ 2015 I
 (c) Both I and II (d) Neither I nor II

82. If $A = \begin{bmatrix} 2 & 7 \\ 1 & 5 \end{bmatrix}$, then what is $A + 3A^{-1}$ equal to? ☑ 2015 I

- (a) $3I$ (b) $5I$ (c) $7I$ (d) None of these

Where, I is the identity matrix of order 2.

83. If A is an invertible matrix of order n and k is any positive real number, then the value of $[\det(kA)]^{-1} \det(A)$ is ☑ 2015 II

- (a) k^{-n} (b) k^{-1} (c) k^n (d) nk

84. If the value of the determinant $\begin{vmatrix} a & 1 & 1 \\ 1 & b & 1 \\ 1 & 1 & c \end{vmatrix}$ is

positive, where $a \neq b \neq c$, then the value of abc

☑ 2015 II

- (a) cannot be less than 1 (b) is greater than -8
 (c) is less than -8 (d) must be greater than 8

85. If a , b and c are real numbers, then the value of

the determinant $\begin{vmatrix} 1-a & a-b-c & b+c \\ 1-b & b-c-a & c+a \\ 1-c & c-a-b & a+b \end{vmatrix}$ is ☑ 2015 II

- (a) 0 (b) $(a-b)(b-c)(c-a)$
 (c) $(a+b+c)^2$ (d) $(a+b+c)^3$

86. Consider the following statements in respect of

the determinant $\begin{vmatrix} \cos^2 \frac{\alpha}{2} & \sin^2 \frac{\alpha}{2} \\ \sin^2 \frac{\beta}{2} & \cos^2 \frac{\beta}{2} \end{vmatrix}$ where α , β are

complementary angles.

I. The value of the determinant is $\frac{1}{\sqrt{2}} \cos\left(\frac{\alpha-\beta}{2}\right)$.

II. The maximum value of the determinant is $\frac{1}{\sqrt{2}}$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II ☑ 2015 II
 (c) Both I and II (d) Neither I nor II

87. The matrix $A = \begin{bmatrix} 1 & 3 & 2 \\ 1 & x-1 & 1 \\ 2 & 7 & x-3 \end{bmatrix}$ will have inverse

for every real number x except for ☑ 2015 II

- (a) $x = \frac{11 \pm \sqrt{5}}{2}$ (b) $x = \frac{9 \pm \sqrt{5}}{2}$
 (c) $x = \frac{11 \pm \sqrt{3}}{2}$ (d) $x = \frac{9 \pm \sqrt{3}}{2}$

6. (c) $\Delta = \begin{vmatrix} 1! & 2! & 3! \\ 2! & 3 \cdot (2!) & 4 \cdot (3!) \\ 3! & 4 \cdot 3 \cdot (2!) & 5 \cdot 4 \cdot (3!) \end{vmatrix}$
 $= (2!)(3!) \begin{vmatrix} 1 & 1 & 1 \\ 2 & 3 & 4 \\ 6 & 12 & 20 \end{vmatrix}$
 $= (2!)(3!)[(60 - 48) - (40 - 24) + (24 - 18)]$
 $= (2!)(3!)(2) = 4!$

7. (c) In a triangle, $A + B + C = \pi$
 $\therefore \cos(A + B) = \cos(\pi - C) = -\cos C$
 $\Rightarrow \cos A \cos B + \cos C = \sin A \sin B$
 and $\sin(A + B) = \sin C$
 Expanding the given determinant,
 $\Delta = -(1 - \cos^2 A) + \cos C [\cos C + \cos A \cos B] + \cos B [\cos B + \cos A \cos C]$
 $= -\sin^2 A + \cos C (\sin A \sin B) + \cos B (\sin A \sin C)$
 $= -\sin^2 A + \sin A \sin(B + C)$
 $= -\sin^2 A + \sin^2 A = 0$

8. (a) Given, $\begin{vmatrix} x & \alpha & 1 \\ \beta & x & 1 \\ \beta & \gamma & 1 \end{vmatrix} = 0$

Applying $R_2 \rightarrow R_2 - R_1$ and $R_3 \rightarrow R_3 - R_1$, we get

$$\begin{vmatrix} x & \alpha & 1 \\ \beta - x & x - \alpha & 0 \\ \beta - x & \gamma - \alpha & 0 \end{vmatrix} = 0$$

Expanding with respect to C_3 ,
 $(\beta - x)(\gamma - \alpha) - (x - \alpha)(\beta - x) = 0$
 $\Rightarrow (\beta - x)\{-\alpha + \gamma - x + \alpha\} = 0$
 $\Rightarrow (\beta - x)(\gamma - x) = 0$
 $\therefore x = \beta, \gamma$

So, roots of the given equation is independent of α .

9. (a) Given determinant is, $\begin{vmatrix} x & 4 & 5 \\ 7 & x & 7 \\ 5 & 8 & x \end{vmatrix} = 0$

Expanding with respect to R_1 ,
 $x(x^2 - 56) - 4(7x - 35) + 5(56 - 5x) = 0$
 $\Rightarrow x^3 - 109x + 420 = 0$
 If (5, 7) are the roots of above equation, then
 $x^2(x - 5) + 5x(x - 5) - 84(x - 5) = 0$
 $\Rightarrow (x - 5)(x^2 + 5x - 84) = 0$
 $\Rightarrow (x - 5)(x - 7)(x + 12) = 0$
 $\Rightarrow x = 5, 7, -12$

10. (d)

11. (b) Let $\Delta = \begin{vmatrix} y & x & y + z \\ z & y & x + y \\ x & z & z + x \end{vmatrix}$

Applying $R_1 \rightarrow R_1 + R_2 + R_3$, and taking $(x + y + z)$ common from R_1

$$\Delta = (x + y + z) \begin{vmatrix} 1 & 1 & 2 \\ z & y & x + y \\ x & z & z + x \end{vmatrix}$$

Applying $C_3 \rightarrow C_3 - (C_1 + C_2)$, we get

$$\Delta = (x + y + z) \begin{vmatrix} 1 & 1 & 0 \\ z & y & x - z \\ x & z & 0 \end{vmatrix}$$

$$\Delta = (x + y + z)(x - z)^2$$

Thus, $\Delta = 0$

$$\Rightarrow x + y + z = 0 \text{ or } (x - z)^2 = 0$$

$$\Rightarrow x + y = -z \text{ or } x = z$$

12. (a) Let $\Delta = \begin{vmatrix} k & b + c & b^2 + c^2 \\ k & c + a & c^2 + a^2 \\ k & a + b & a^2 + b^2 \end{vmatrix}$

$$= k \begin{vmatrix} 1 & 0 & 0 \\ b + c & a - b & a - c \\ b^2 + c^2 & a^2 - b^2 & a^2 + b^2 \end{vmatrix}$$

Applying $C_2 \rightarrow C_2 - C_1$ and

$$C_3 \rightarrow C_3 - C_2 - C_1, \text{ we get}$$

$$= k \begin{vmatrix} 1 & 0 & 0 \\ b + c & a - b & a - c \\ b^2 + c^2 & a^2 - b^2 & a^2 - c^2 \end{vmatrix}$$

$$= k(a - b)(b - c)(c - a)$$

$$\text{But } \Delta = (a - b)(b - c)(c - a)$$

Thus, $k = 1$

13. (c) Let a be the first term and d be the common difference of given AP. Then,

$$T_p = a + (p - 1)d, T_q = a + (q - 1)d,$$

$$T_r = a + (r - 1)d$$

$$\therefore T_p - T_r = (p - r)d \text{ and } T_q - T_r = (q - r)d$$

Applying $C_1 \rightarrow C_1 - C_3$ and

$C_2 \rightarrow C_2 - C_3$ in given determinant, we have

$$\Delta = \begin{vmatrix} (p - r)d & (q - r)d & T_r \\ p - r & q - r & r \\ 0 & 0 & 1 \end{vmatrix}$$

$$= (p - r)(q - r) \begin{vmatrix} d & d & T_r \\ 1 & 1 & r \\ 0 & 0 & 1 \end{vmatrix}$$

$$= 0 \quad [\because C_1 \text{ and } C_2 \text{ are identical}]$$

14. (b) $\therefore \Delta \Delta' = \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} \begin{vmatrix} A_1 & B_1 & C_1 \\ A_2 & B_2 & C_2 \\ A_3 & B_3 & C_3 \end{vmatrix}$

$$= \begin{vmatrix} \Sigma a_1 A_1 & 0 & 0 \\ 0 & \Sigma a_2 A_2 & 0 \\ 0 & 0 & \Sigma a_3 A_3 \end{vmatrix}$$

$$= \begin{vmatrix} \Delta & 0 & 0 \\ 0 & \Delta & 0 \\ 0 & 0 & \Delta \end{vmatrix} = \Delta^3$$

$$\therefore \Delta' = \Delta^2$$

15. (c) $\Delta = \begin{vmatrix} \cos 15^\circ & \sin 15^\circ \\ \cos 45^\circ & \sin 45^\circ \end{vmatrix}$
 $\times \begin{vmatrix} \cos 45^\circ & \cos 15^\circ \\ \sin 45^\circ & \sin 15^\circ \end{vmatrix}$

$$= \begin{vmatrix} \cos 15^\circ \cdot \cos 45^\circ + \sin 15^\circ \cdot \sin 45^\circ \\ \cos^2 45^\circ + \sin^2 45^\circ \end{vmatrix}$$

$$\cos^2 15^\circ + \sin^2 15^\circ$$

$$\cos 45^\circ \cdot \cos 15^\circ + \sin 45^\circ \cdot \sin 15^\circ$$

$$= \begin{vmatrix} \cos(45^\circ - 15^\circ) & 1 \\ 1 & \cos(45^\circ - 15^\circ) \end{vmatrix}$$

$$= \begin{vmatrix} \frac{\sqrt{3}}{2} & 1 \\ 1 & \frac{\sqrt{3}}{2} \end{vmatrix} = \frac{3}{4} - 1 = -\frac{1}{4}$$

16. (d) Putting $x = 0$ in given equation,

$$\text{we get } e = \begin{vmatrix} 0 & -1 & 3 \\ 1 & 0 & -4 \\ -3 & 4 & 0 \end{vmatrix} = 0$$

[since, skew-symmetric determinant of odd order is zero]

17. (d) Let $\frac{1}{x} = u, \frac{1}{y} = v,$

$$a_1 u + b_1 v = c_1 \text{ and } a_2 u + b_2 v = c_2$$

Using the method of cross-multiplication,

$$\frac{u}{b_1 c_2 - b_2 c_1} = \frac{v}{c_1 a_2 - c_2 a_1} = \frac{-1}{a_1 b_2 - a_2 b_1}$$

$$\Rightarrow \frac{1}{x} = \frac{1}{y} = \frac{-1}{\Delta_3}$$

$$\Rightarrow \frac{1}{x} = \frac{1}{y} = \frac{-1}{\Delta_3}$$

$$\Rightarrow \frac{1}{x} = \frac{1}{y} = \frac{-1}{\Delta_3}$$

$$\therefore \frac{1}{x} = -\frac{\Delta_2}{\Delta_1} \quad \text{and} \quad \frac{1}{y} = -\frac{\Delta_3}{\Delta_1}$$

$$\Rightarrow x = -\frac{\Delta_1}{\Delta_2} \quad \text{and} \quad y = -\frac{\Delta_1}{\Delta_3}$$

18. (a) For the singular matrix,

$$\begin{vmatrix} 2-x & 1 & 1 \\ 1 & 3-x & 0 \\ -1 & -3 & -x \end{vmatrix} = 0$$

$$\Rightarrow (2-x)[x(x-3)] - [-x] + [-3+(3-x)] = 0$$

$$\Rightarrow x(x-3)(x-2) = 0 \Rightarrow x = 0, 2, 3$$

So, the solution set is, $S = \{0, 2, 3\}$.

19. (b) $\begin{bmatrix} 1 & -\tan \theta \\ \tan \theta & 1 \end{bmatrix} \begin{bmatrix} 1 & \tan \theta \\ -\tan \theta & 1 \end{bmatrix}^{-1} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$

$$\Rightarrow \begin{bmatrix} 1 & -\tan \theta \\ \tan \theta & 1 \end{bmatrix} \frac{1}{1 + \tan^2 \theta} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$$

$$\Rightarrow \frac{1}{1 + \tan^2 \theta} \begin{bmatrix} 1 & -\tan \theta \\ \tan \theta & 1 \end{bmatrix} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$$

$$\Rightarrow \frac{1 - \tan^2 \theta}{1 + \tan^2 \theta} \begin{bmatrix} 1 & -\tan \theta \\ 2 \tan \theta & 1 - \tan^2 \theta \end{bmatrix} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$$

$$\Rightarrow \frac{1 - \tan^2 \theta}{1 + \tan^2 \theta} \begin{bmatrix} 1 - \tan^2 \theta & -2 \tan \theta \\ 2 \tan \theta & 1 - \tan^2 \theta \end{bmatrix} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$$

$$\Rightarrow \begin{bmatrix} \cos 2\theta & -\sin 2\theta \\ \sin 2\theta & \cos 2\theta \end{bmatrix} = \begin{bmatrix} a & -b \\ b & a \end{bmatrix}$$

$$\Rightarrow a = \cos 2\theta, b = \sin 2\theta$$

20. (a) $\therefore 3A^3 + 2A^2 + 5A + I = O$

$$\Rightarrow 3A^3 A^{-1} + 2A^2 A^{-1} + 5A A^{-1} + I A^{-1} = O$$

$$\Rightarrow 3A^2 + 2A + 5 + A^{-1} = O$$

$$\Rightarrow A^{-1} = -(3A^2 + 2A + 5)$$

21. (a) $|A| = \begin{vmatrix} \cos x & \sin x & 0 \\ -\sin x & \cos x & 0 \\ 0 & 0 & 1 \end{vmatrix}$

$$= \cos^2 x + \sin^2 x = 1 \neq 0$$

Now, $c_{11} = \cos x, c_{12} = \sin x, c_{13} = 0$
 $c_{21} = -\sin x, c_{22} = \cos x, c_{23} = 0$
 $c_{31} = 0, c_{32} = 0, c_{33} = 1$

$$\therefore A^{-1} = \frac{1}{|A|} \text{adj}(A) = \text{adj}(A)$$

$$\begin{bmatrix} \cos x & -\sin x & 0 \\ \sin x & \cos x & 0 \\ 0 & 0 & 1 \end{bmatrix} = \begin{bmatrix} \cos(-x) & \sin(-x) & 0 \\ -\sin(-x) & \cos(-x) & 0 \\ 0 & 0 & 1 \end{bmatrix} = f(-x)$$

22. (d) $\Delta = \begin{vmatrix} -2 & 1 & 1 \\ 1 & -2 & 1 \\ 1 & 1 & -2 \end{vmatrix}$

$$= -2(4-1) - 1(-2-1) + 1+2 = 0$$

$$\Delta = \begin{vmatrix} l & 1 & 1 \\ m & -2 & 1 \\ n & 1 & -2 \end{vmatrix} = \begin{vmatrix} l+m+n & 0 & 0 \\ m & -2 & 1 \\ n & 1 & -2 \end{vmatrix}$$

$$= 0 \quad [R_1 \rightarrow R_1 + R_2 + R_3]$$

$$[\because l+m+n=0]$$

Similarly, $\Delta_2 = \Delta_3 = 0$
Hence, the given system of equations has infinitely many solutions.

23. (a) We know that, $x = \frac{\begin{vmatrix} d_1 & b_1 & c_1 \\ d_2 & b_2 & c_2 \\ d_3 & b_3 & c_3 \end{vmatrix}}{\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}}$

$$= \frac{\Delta(d, b, c)}{\Delta(a, b, c)} = \frac{\Delta(b, c, d)}{\Delta(a, b, c)}$$

24. (c) We have, $\Delta = \begin{vmatrix} 1+a & 1 & 1 \\ 1 & 1+b & 1 \\ 1 & 1 & 1+c \end{vmatrix}$

Expanding with respect to R_1 ,

$$\Delta = (1+a)[(1+b)(1+c) - 1] - 1(1+c-1) + (1-1-b)$$

$$= (1+a)(b+c+bc) - c - b$$

$$= bc + ab + ac + abc$$

$$= abc \left\{ \frac{1}{a} + \frac{1}{b} + \frac{1}{c} \right\} + abc$$

If $\frac{1}{a} + \frac{1}{b} + \frac{1}{c} = 0$,
then $\Delta = abc(0) + abc = abc$
 \therefore Statement I is correct.
Now, $\frac{1}{a} + \frac{1}{b} + \frac{1}{c} = -1$
 $\Rightarrow \Delta = abc(-1) + abc = 0$
 \therefore Statement II is correct.

25. (d) We have,

$$\Delta = \begin{vmatrix} a & b & a\alpha + b \\ b & c & b\alpha + c \\ a\alpha + b & b\alpha + c & 0 \end{vmatrix}$$

Applying $R_3 \rightarrow R_3 - (\alpha R_1 + R_2)$, we get

$$\Delta = \begin{vmatrix} a & b & a\alpha + b \\ b & c & b\alpha + c \\ 0 & 0 & -(a\alpha^2 + 2b\alpha + c) \end{vmatrix}$$

$$= -(a\alpha^2 + 2b\alpha + c)(ac - b^2)$$

Hence, Δ is zero, if $ac - b^2 = 0$
or $a\alpha^2 + 2b\alpha + c = 0$
 $\Rightarrow a, b, c$ are in GP.
or α is a root of $ax^2 + 2bx + c = 0$
So, both statements are not correct.

26. (b) $B = A^{-1}BA$

$$\Rightarrow AB = AA^{-1}BA \Rightarrow AB = I(BA)$$

$$\Rightarrow AB = (BA) \Rightarrow AB - BA = 0$$

\therefore Statement I is wrong.
Now, $(A+B)(A-B)$
 $= A(A-B) + B(A-B)$
 $= A^2 - AB + BA - B^2$
 $= A^2 - AB + AB - B^2$ [$\because AB = BA$]
 $= A^2 - B^2$

\therefore Statement II is correct.

27. (a) Let $A = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$

Then, $A^2 = \begin{bmatrix} a & b \\ c & d \end{bmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix}$

$$= \begin{bmatrix} a^2 + bc & ab + bd \\ ac + cd & bc + d^2 \end{bmatrix}$$

Given, $A^2 = I$

$$\Rightarrow \begin{bmatrix} a^2 + bc & ab + bd \\ ac + cd & bc + d^2 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$\Rightarrow b(a+d) = 0 \quad \text{and} \quad c(a+d) = 0$$

$$\Rightarrow a+d = 0 \quad [\because b \neq 0, c \neq 0]$$

So, sum of diagonal elements of A is 0.
So, Statement I is correct.
Now, $|A| = ad - bc = -a^2 - bc$
 $= -(a^2 + bc) = -1$ [$\because a^2 + bc = 1$]
So, Statement II is incorrect.

28. (d) I. Let $z = \begin{vmatrix} 2 & 1+i & 3 \\ 1-i & 0 & 2+i \\ 3 & 2-i & 1 \end{vmatrix}$

Then, $\bar{z} = \begin{vmatrix} 2 & 1-i & 3 \\ 1+i & 0 & 2-i \\ 3 & 2+i & 1 \end{vmatrix}$

$$= \begin{vmatrix} 2 & 1+i & 3 \\ 1-i & 0 & 2+i \\ 3 & 2-i & 1 \end{vmatrix}$$

[interchanging rows and columns]
 $\Rightarrow \bar{z} = z \Rightarrow z$ is purely real.

II. Let $\Delta = \begin{vmatrix} 1 & i & 2 \\ -i & 2 & i \\ 0 & i & -2 \end{vmatrix}$

$$= 1(-4 - i^2) - i(2i - 0) + 2(-i^2 - 0)$$

$$= -3 + 2 + 2 = 1$$

So, Δ is purely real.

III. Let $z = \begin{vmatrix} \sqrt{6} & 3 - i\sqrt{2} & 2 + i\sqrt{6} \\ 3 + i\sqrt{2} & 0 & 3 - i\sqrt{8} \\ 2 - i\sqrt{6} & 3 - i\sqrt{8} & \sqrt{11} \end{vmatrix}$

Then, $\bar{z} = \begin{vmatrix} \sqrt{6} & 3 + i\sqrt{2} & 2 - i\sqrt{6} \\ 3 - i\sqrt{2} & 0 & 3 + i\sqrt{8} \\ 2 + i\sqrt{6} & 3 - i\sqrt{8} & \sqrt{11} \end{vmatrix}$

$$= \begin{vmatrix} \sqrt{6} & 3 - i\sqrt{2} & 2 + i\sqrt{6} \\ 3 + i\sqrt{2} & 0 & 3 - i\sqrt{8} \\ 2 - i\sqrt{6} & 3 + i\sqrt{8} & \sqrt{11} \end{vmatrix}$$

[interchanging rows and columns]

$$= z$$

So, z is purely real.

29. (c) $\frac{d}{dx} \Delta_1 = \begin{vmatrix} 1 & 0 & 0 \\ a & x & b \\ a & a & x \end{vmatrix} + \begin{vmatrix} x & b & b \\ 0 & 1 & 0 \\ a & a & x \end{vmatrix} + \begin{vmatrix} x & b & b \\ a & x & b \\ 0 & 0 & 1 \end{vmatrix}$

$$= \begin{vmatrix} x & b & b \\ a & x & b \\ a & a & x \end{vmatrix} + \begin{vmatrix} x & b \\ a & x \end{vmatrix} + \begin{vmatrix} x & b \\ a & x \end{vmatrix} = 3\Delta_2$$

30. (b) $\Delta_1 = \begin{vmatrix} x & b & b \\ a & x & b \\ a & a & x \end{vmatrix}$

$$= x(x^2 - ab) + b(ab - ax) + b(a^2 - ax)$$

$$= x(x^2 - ab) + ab(a + b) - 2abx$$

and $\Delta_2 = \begin{vmatrix} x & b \\ a & x \end{vmatrix} = x^2 - ab$

Given, $\Delta_1 - x\Delta_2 + a^2b = 0$

$$\Rightarrow ab(a + b) - 2abx + a^2b = 0$$

$$\Rightarrow ab[a + b - 2x + a] = 0 \Rightarrow x = \frac{2a + b}{2}$$

31. (c) We have, $f(0) = \begin{vmatrix} 3 & -5 & 3 \\ 4 & 1 & 9 \\ 9 & -6 & 21 \end{vmatrix}$

$$= 3(21 + 54) + 5(84 - 81) + 3(-24 - 9)$$

$$= 225 + 15 - 99 = 141$$

32. (a) $f'(x) = \begin{vmatrix} 2x - 5 & 2x - 5 & 3 \\ 6x + 1 & 6x + 1 & 9 \\ 14x - 6 & 14x - 6 & 21 \end{vmatrix}$

$$+ \begin{vmatrix} x^2 - 5x + 3 & 2 & 3 \\ 3x^2 + x + 4 & 6 & 9 \\ 7x^2 - 6x + 9 & 14 & 21 \end{vmatrix}$$

$$= 0 + 0 = 0$$

33. (a) We have, $B(\theta) = A\left(\frac{\pi}{2} - \theta\right)$

$$= \begin{bmatrix} \sin\left(\frac{\pi}{2} - \theta\right) & i \cos\left(\frac{\pi}{2} - \theta\right) \\ i \cos\left(\frac{\pi}{2} - \theta\right) & \sin\left(\frac{\pi}{2} - \theta\right) \end{bmatrix}$$

$$= \begin{bmatrix} \cos \theta & i \sin \theta \\ i \sin \theta & \cos \theta \end{bmatrix}$$

Now, $AB = \begin{bmatrix} \sin \theta & i \cos \theta \\ i \sin \theta & \sin \theta \end{bmatrix} \begin{bmatrix} \cos \theta & i \sin \theta \\ i \sin \theta & \cos \theta \end{bmatrix}$

$$= \begin{bmatrix} \sin \theta \cos \theta + i^2 \sin \theta \cos \theta & i \cos^2 \theta + i \sin^2 \theta \\ i \sin^2 \theta + i \cos^2 \theta & i^2 \cos \theta \sin \theta + \sin \theta \cos \theta \end{bmatrix}$$

$$= \begin{bmatrix} 0 & i \\ i & 0 \end{bmatrix}$$

34. (a) $|A(\theta)| = \sin^2 \theta - i^2 \cos^2 \theta$

$$= \sin^2 \theta + \cos^2 \theta = 1$$

$\therefore A(\theta)$ is invertible for all $\theta \in R$

So, Statement I is correct.

Now, $A(\theta)^{-1} = \begin{bmatrix} \sin \theta & -i \cos \theta \\ -i \cos \theta & \sin \theta \end{bmatrix}$

$A(-\theta) = \begin{bmatrix} -\sin \theta & i \cos \theta \\ i \cos \theta & -\sin \theta \end{bmatrix}$

$\therefore A(\theta)^{-1} \neq A(-\theta)$

So, Statement II is not correct.

Sol. (Q. Nos. 35-37) $\Delta = \begin{vmatrix} \alpha & \beta & \gamma \\ \beta & \gamma & \alpha \\ \gamma & \alpha & \beta \end{vmatrix}$

Applying $C_1 \rightarrow C_1 + C_2 + C_3$, we get

$$\Delta = \begin{vmatrix} \alpha + \beta + \gamma & \beta & \gamma \\ \alpha + \beta + \gamma & \gamma & \alpha \\ \alpha + \beta + \gamma & \alpha & \beta \end{vmatrix}$$

$$= (\alpha + \beta + \gamma) \begin{vmatrix} 1 & \beta & \gamma \\ 1 & \gamma & \alpha \\ 1 & \alpha & \beta \end{vmatrix}$$

35. (d) We have, $\alpha + \beta + \gamma = -a$ and $\beta\gamma + \gamma\alpha + \alpha\beta = 0$

$$\therefore \Delta = -a \begin{vmatrix} 1 & \beta & \gamma \\ 1 & \gamma & \alpha \\ 1 & \alpha & \beta \end{vmatrix}$$

$$= -a \begin{vmatrix} 1 & \beta & \gamma \\ 0 & \gamma - \beta & \alpha - \gamma \\ 0 & \alpha - \beta & \beta - \gamma \end{vmatrix}$$

$[C_2 \rightarrow C_2 - C_1$ and $C_3 \rightarrow C_3 - C_1]$

$$= -a[-(\gamma - \beta)^2 - (\alpha - \gamma)(\alpha - \beta)]$$

$$= a[\alpha^2 + \beta^2 + \gamma^2 - (\beta\gamma + \alpha\gamma + \alpha\beta)]$$

$$= a[(\alpha + \beta + \gamma)^2 - 3(\beta\gamma + \alpha\gamma + \alpha\beta)]$$

$$= a[(-a)^2 - 3(0)] = a^3$$

36. (d) We have, $\alpha + \beta + \gamma = 0$

$$\therefore \Delta = (\alpha + \beta + \gamma) \begin{vmatrix} 1 & \beta & \gamma \\ 1 & \gamma & \alpha \\ 1 & \alpha & \beta \end{vmatrix} = 0$$

37. (c) On expanding, we get

$$\Delta = -\frac{1}{2}(\alpha + \beta + \gamma)[(\alpha - \beta)^2 + (\beta - \gamma)^2 + (\gamma - \alpha)^2]$$

Since, α, β, γ are distinct negative real numbers.

Hence, $\Delta \geq 0$

38. (a) p, q, r are the entries of first row and C_{21}, C_{22}, C_{23} are cofactors of second row.

$$\therefore p \cdot C_{21} + q \cdot C_{22} + r \cdot C_{23} = 0$$

39. (c) x, y, z are the entries of second row and C_{21}, C_{22}, C_{23} are cofactors of second row.

$$\therefore x \cdot C_{21} + y \cdot C_{22} + z \cdot C_{23} = \Delta$$

40. (b) $q \cdot M_{12} - y \cdot M_{22} + m \cdot M_{32}$

$$= -q \cdot C_{12} - y \cdot C_{22} - m \cdot C_{32}$$

$$= -(q \cdot C_{12} + y \cdot C_{22} + m \cdot C_{32}) = -\Delta$$

[$\because q, y, m$ are entries of second column and C_{12}, C_{22}, C_{32} are cofactor of second column]

41. (a) $\text{adj}(\text{adj} A) = |A|^{n-2} A = |A| A = -A$

42. (b) $|\text{adj} B| = |B|^{n-1} = |B|^2 = 24^2$

43. (c) $|(\text{adj}(\text{adj}(\text{adj}(\text{adj} A))))|$

$$= |\text{adj}(\text{adj}(-A))| = |-A|^{(n-1)^2} = |-A|^4$$

$$= (|A|)^4 = (-1)^4 = 1$$

44. (a) 45. (a) 46. (d)

47. (c) Let $\Delta = \begin{vmatrix} -a^2 & ab & ac \\ ab & -b^2 & bc \\ ac & bc & -c^2 \end{vmatrix}$

Taking common a, b and c from rows R_1, R_2 and R_3 respectively,

$$\Delta = abc \begin{vmatrix} -a & b & c \\ a & -b & c \\ a & b & -c \end{vmatrix}$$

Again, taking common a, b and c from columns C_1, C_2 and C_3 respectively,

$$\begin{aligned} \Delta &= a^2 b^2 c^2 \begin{vmatrix} -1 & 1 & 1 \\ 1 & -1 & 1 \\ 1 & 1 & -1 \end{vmatrix} \\ &= a^2 b^2 c^2 (0 + 2 + 2) \\ &= 4a^2 b^2 c^2 \end{aligned}$$

48. (b) We know that, every matrix possesses a unique inverse.

Hence, B and C should be equal.

49. (c) Given condition is $A^2 = I$

$$\begin{aligned} \Rightarrow A^{-1} \cdot A^2 &= A^{-1} \cdot I \\ \Rightarrow A^{-1} (A \cdot A) &= A^{-1} \quad [\because A \cdot I = A] \\ \Rightarrow (A^{-1} A) \cdot A &= A^{-1} \\ \Rightarrow I \cdot A &= A^{-1} \quad [\because A^{-1} A = I] \\ \Rightarrow A^{-1} &= A \end{aligned}$$

50. (b) Given $A = \begin{bmatrix} 1 & 2 \\ 1 & 1 \end{bmatrix}$ and $B = \begin{bmatrix} 0 & -1 \\ 1 & 2 \end{bmatrix}$

$$AB = \begin{bmatrix} 1 & 2 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} 0 & -1 \\ 1 & 2 \end{bmatrix} = \begin{bmatrix} 2 & 3 \\ 1 & 1 \end{bmatrix}$$

$$\therefore |AB| = 2 - 3 = -1$$

$$\begin{aligned} \text{Thus, } B^{-1} A^{-1} &= (AB)^{-1} = \frac{\text{adj}(AB)}{|AB|} \\ &= (-1) \begin{bmatrix} 1 & -3 \\ -1 & 2 \end{bmatrix} = \begin{bmatrix} -1 & 3 \\ 1 & -2 \end{bmatrix} \end{aligned}$$

51. (d)

52. (a) Let $\Delta = \begin{vmatrix} x^2 & 1 & y^2 + z^2 \\ y^2 & 1 & z^2 + x^2 \\ z^2 & 1 & x^2 + y^2 \end{vmatrix}$

Applying $C_3 \rightarrow C_3 + C_1$, we get

$$\Delta = \begin{vmatrix} x^2 & 1 & x^2 + y^2 + z^2 \\ y^2 & 1 & x^2 + y^2 + z^2 \\ z^2 & 1 & x^2 + y^2 + z^2 \end{vmatrix}$$

$$\Delta = (x^2 + y^2 + z^2) \begin{vmatrix} x^2 & 1 & 1 \\ y^2 & 1 & 1 \\ z^2 & 1 & 1 \end{vmatrix} = 0$$

$[\because C_2$ and C_3 are identical]

53. (a) If the matrix is not invertible, then determinant of this matrix must be zero.

$$\text{i.e. } \begin{vmatrix} \alpha & 2 & 2 \\ -3 & 0 & 4 \\ 1 & -1 & 1 \end{vmatrix} = 0$$

$$\Rightarrow \alpha(0 + 4) - 2(-3 - 4) + 2(3 - 0) = 0$$

$$\Rightarrow 4\alpha + 14 + 6 = 0$$

$$\Rightarrow 4\alpha = -20 \Rightarrow \alpha = -5$$

54. (c)

55. (a) We know that, a square matrix ' A ' is an orthogonal matrix, if $AA^T = I$.

$$\Rightarrow |AA^T| = |I| \Rightarrow |A||A^T| = 1$$

$$\Rightarrow |A||A| = 1 \quad [\because |A| = |A^T|]$$

$$\Rightarrow |A|^2 = 1$$

$$\therefore |A| = \pm 1$$

56. (c) Let $\Delta = \begin{vmatrix} m & n & p \\ p & m & n \\ n & p & m \end{vmatrix}$

Applying $C_1 \rightarrow C_1 + C_2 + C_3$, we get

$$\Delta = \begin{vmatrix} (m+n+p) & n & p \\ (m+n+p) & m & n \\ (m+n+p) & p & m \end{vmatrix}$$

$$= (m+n+p) \begin{vmatrix} 1 & n & p \\ 1 & m & n \\ 1 & p & m \end{vmatrix}$$

Applying $R_2 \rightarrow R_2 - R_1$ and

$R_3 \rightarrow R_3 - R_1$, we get

$$\begin{aligned} \Delta &= (m+n+p) \begin{vmatrix} 1 & n & p \\ 0 & m-n & n-p \\ 0 & p-n & m-p \end{vmatrix} \\ &= (m+n+p) [(m-n)(m-p) - (n-p)(p-n)] \\ &= (m+n+p)(m^2 + n^2 + p^2 - mn - np - pm) \\ &= \frac{1}{2}(m+n+p)[(m-n)^2 + (n-p)^2 + (p-m)^2] = A \text{ linear factor} \end{aligned}$$

57. (b) Given that, $\begin{vmatrix} 1 & t-1 & 1 \\ t-1 & 1 & 1 \\ 1 & 1 & t-1 \end{vmatrix} = 0$

Applying $C_1 \rightarrow C_1 + C_2 + C_3$, we get

$$\begin{vmatrix} t+1 & t-1 & 1 \\ t+1 & 1 & 1 \\ t+1 & 1 & t-1 \end{vmatrix} = 0$$

$$\Rightarrow (t+1) \begin{vmatrix} 1 & t-1 & 1 \\ 1 & 1 & 1 \\ 1 & 1 & t-1 \end{vmatrix} = 0$$

Applying $R_2 \rightarrow R_2 - R_1$ and $R_3 \rightarrow R_3 - R_1$, we get

$$(t+1) \begin{vmatrix} 1 & t-1 & 1 \\ 0 & 2-t & 0 \\ 0 & 2-t & t-2 \end{vmatrix} = 0$$

$$\Rightarrow (t+1)(2-t)(t-2) = 0$$

$$\Rightarrow (t+1)(t-2)^2 = 0$$

$$\therefore t = -1, 2$$

58. (a) Given that, D is determinant of order 3 and D' is the determinant obtained by replacing the elements of D by their cofactors.

$$\therefore D' = \text{Cofactor of } D$$

$$\Rightarrow |D'| = |\text{Cofactor of } D|$$

$$\Rightarrow |D'| = |\text{adj}(D)|$$

$$[\because |\text{Cofactor of } D| = |\text{adj}(D)|]$$

$$\Rightarrow |D'| = |D|^{(3-1)} [\because |\text{adj}(A)| = |A|^{n-1}]$$

$$\Rightarrow |D'| = |D|^2$$

$$\therefore D' = D^2$$

59. (c) I. A matrix is only an arrangement of numbers, it has no definite value.

Since, determinant is a value of the matrix. Hence, two determinants of different orders may have the same value.

60. (b) Minor of element 9

$$= \begin{vmatrix} 19 & 2 \\ 13 & 1 \end{vmatrix} = 19 - 26 = -7$$

61. (a) Given that, A and B are two non-singular square matrices.

So, A^{-1} and B^{-1} must exist.

We have, $AB = A$

(A^{-1}) operating in left side on both sides, we get $A^{-1}(AB) = (A^{-1})(A)$

$$\Rightarrow (A^{-1}A)B = (A^{-1}A)$$

$$[\because AA^{-1} = I \text{ and } IB = B]$$

$$\Rightarrow IB = I \Rightarrow B = I = \text{Identity matrix}$$

62. (c) Cofactor of the element 4

$$= (-1)^{2+1} \begin{vmatrix} 2 & 3 \\ 8 & 9 \end{vmatrix} = -(18 - 24) = 6$$

63. (a) Let $\Delta = \begin{vmatrix} 1 & bc & a(b+c) \\ 1 & ca & b(c+a) \\ 1 & ab & c(a+b) \end{vmatrix}$

Applying $R_2 \rightarrow R_2 - R_1$ and

$R_3 \rightarrow R_3 - R_1$,

$$\Delta = \begin{vmatrix} 1 & bc & ab+ac \\ 0 & c(a-b) & (b-a)c \\ 0 & b(a-c) & b(c-a) \end{vmatrix}$$

Expanding along C_1 ,

$$\begin{aligned} \Delta &= bc(a-b)(c-a) - bc(a-c)(b-a) \\ &= bc(a-b)(c-a) - bc(a-b)(c-a) \\ &= 0 \end{aligned}$$

64. (b) If A is a square matrix of order n with $|A| \neq 0$, then $|\text{adj } A| = |A|^{n-1}$

For order 3 matrix, Put $n = 3$,

$$|\text{adj } A| = |A|^{3-1} = |A|^2$$

65. (d) Given that, $2A = \begin{bmatrix} 2 & 1 \\ 3 & 2 \end{bmatrix}$

$$\Rightarrow A = \frac{1}{2} \begin{bmatrix} 2 & 1 \\ 3 & 2 \end{bmatrix} = \begin{bmatrix} 1 & 1/2 \\ 3/2 & 1 \end{bmatrix}$$

Now $|A| = 1 - 3/4 = 1/4$

$$\therefore A^{-1} = \frac{\text{adj}(A)}{|A|}$$

$$= 4 \begin{bmatrix} 1 & -1/2 \\ -3/2 & 1 \end{bmatrix} = \begin{bmatrix} 4 & -2 \\ -6 & 4 \end{bmatrix}$$

66. (a) I. Let $A = \begin{bmatrix} 1 & 2 & 1 \\ a & 2a & 1 \\ b & 2b & 1 \end{bmatrix}$

$$\text{Now, } |A| = 1(2a - 2b) - 2(a - b) + 1(2ab - 2ab)$$

$$= 2a - 2b - 2a + 2b + 0 = 0$$

i.e. A is a singular matrix.

II. Let $B = \begin{bmatrix} c & 2c & 1 \\ a & 2a & 1 \\ b & 2b & 1 \end{bmatrix}$

$$\text{Now, } |B| = c(2a - 2b) - 2c(a - b) + 1(2b - 2ab)$$

$$= 2ac - 2bc - 2ac + 2bc + 0 = 0$$

which is also represent a singular matrix. So, Statement I is correct and Statement II is incorrect.

67. (c) Given that,

$$\begin{vmatrix} x+a & b & c \\ a & x+b & c \\ a & b & x+c \end{vmatrix} = 0$$

Applying $C_1 \rightarrow C_1 + C_2 + C_3$,

we get

$$\Rightarrow \begin{vmatrix} x+a+b+c & b & c \\ x+a+b+c & x+b & c \\ x+a+b+c & b & x+c \end{vmatrix} = 0$$

$$\Rightarrow (x+a+b+c) \begin{vmatrix} 1 & b & c \\ 1 & x+b & c \\ 1 & b & x+c \end{vmatrix} = 0$$

Applying $R_2 \rightarrow R_2 - R_1$ and

$R_3 \rightarrow R_3 - R_1$, we get

$$\Rightarrow (x+a+b+c) \begin{vmatrix} 1 & b & c \\ 0 & x & 0 \\ 0 & 0 & x \end{vmatrix} = 0$$

Now, expanding along C_1 ,

$$(x+a+b+c) \cdot 1 \cdot (x^2) = 0$$

$$\Rightarrow x^2 \cdot (x+a+b+c) = 0$$

$$\Rightarrow x = 0 \text{ or } x = -(a+b+c)$$

68. (a) 69. (c)

70. (b) Given matrices, $A = \begin{bmatrix} 1 & 2 \\ 2 & 1 \\ 1 & 1 \end{bmatrix}$

$$\text{and } B = \begin{bmatrix} 1 & 2 & -4 \\ 2 & 1 & -4 \end{bmatrix}$$

$$\text{Now, } AB = \begin{bmatrix} 1 & 2 \\ 2 & 1 \\ 1 & 1 \end{bmatrix}_{3 \times 2} \begin{bmatrix} 1 & 2 & -4 \\ 2 & 1 & -4 \end{bmatrix}_{2 \times 3}$$

$$= \begin{bmatrix} 5 & 4 & -12 \\ 4 & 5 & -12 \\ 3 & 3 & -8 \end{bmatrix}_{3 \times 3}$$

$$\text{And, } BA = \begin{bmatrix} 1 & 2 & -4 \\ 2 & 1 & -4 \end{bmatrix}_{2 \times 3} \begin{bmatrix} 1 & 2 \\ 2 & 1 \\ 1 & 1 \end{bmatrix}_{3 \times 2}$$

$$= \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}_{2 \times 2} = I$$

Now, we observe that B is not the right inverse of A but B is the left inverse of A .

71. (a) The matrix A is skew-symmetric matrix of order 3 which is odd. Thus, determinant of A is zero. Hence, matrix A is non-invertible.

72. (c) A and B are square matrices of order 2. We know that, $|kA| = k^n |A|$, where n is order of matrix A .

$$\therefore |3AB| = 3^2 |A| |B|$$

$$[\because |AB| = |A| |B|]$$

$$= 9(-1)(3) = -27$$

$$[\because |A| = -1, |B| = 3]$$

73. (a) Let $B = \begin{bmatrix} 1 & 3 \\ 0 & 1 \end{bmatrix}$ then $|B| = 1$

$$\therefore B^{-1} = \begin{bmatrix} 1 & -3 \\ 0 & 1 \end{bmatrix} \left[\because A^{-1} = \frac{1}{|A|} \text{adj}(A) \right]$$

Now,

$$BA = \begin{bmatrix} 1 & 1 \\ 0 & -1 \end{bmatrix} \Rightarrow B^{-1}BA = B^{-1} \begin{bmatrix} 1 & 1 \\ 0 & -1 \end{bmatrix}$$

$$\Rightarrow A = \begin{bmatrix} 1 & -3 \\ 0 & 1 \end{bmatrix} \begin{bmatrix} 1 & 1 \\ 0 & -1 \end{bmatrix} = \begin{bmatrix} 1 & 4 \\ 0 & -1 \end{bmatrix}$$

74. (a)

75. (b) Since, $A^{-1}A = I_n$

$$\therefore \det(A^{-1}A) = \det(I_n)$$

$$\Rightarrow \det(A^{-1}) \times \det(A) = 1$$

$$\Rightarrow \det(A^{-1}) = \frac{1}{\det(A)}$$

76. (d) 77. (b) 78. (b)

$$79. (c) \begin{vmatrix} a & b & c \\ b & c & a \\ c & a & b \end{vmatrix} = (a+b+c) \begin{vmatrix} 1 & b & c \\ 1 & c & a \\ 1 & a & b \end{vmatrix}$$

[apply $C_1 \rightarrow C_1 + C_2 + C_3$ and take common $(a+b+c)$]

$$= (a+b+c)$$

$$[bc - a^2 - b^2 + ab + ac - c^2]$$

$$= (a+b+c)$$

$$[-(a^2 + b^2 + c^2 - ab - bc - ca)]$$

$$= -\frac{1}{2}(a+b+c)$$

$$[(a-b)^2 + (b-c)^2 + (c-a)^2]$$

= Negative value

$$80. (c) \begin{vmatrix} 1 & 1 & 1 \\ 1 & 1+x & 1 \\ 1 & 1 & 1+y \end{vmatrix} = \begin{vmatrix} 1 & 1 & 1 \\ 0 & x & 0 \\ 0 & 0 & y \end{vmatrix}$$

[apply $R_2 \rightarrow R_2 - R_1$ and $R_3 \rightarrow R_3 - R_1$]

$$= 1(xy - 0) = xy$$

[expanding along first column]

81. (d)

82. (c) We have, $A = \begin{bmatrix} 2 & 7 \\ 1 & 5 \end{bmatrix}$

$$\Rightarrow |A| = 10 - 7 = 3$$

$$\text{Now, } A^{-1} = \frac{1}{|A|} \text{adj}(A) = \frac{1}{3} \begin{bmatrix} 5 & -7 \\ -1 & 2 \end{bmatrix}$$

$$\therefore A + 3A^{-1} = \begin{bmatrix} 2 & 7 \\ 1 & 5 \end{bmatrix} + 3 \times \frac{1}{3} \begin{bmatrix} 5 & -7 \\ -1 & 2 \end{bmatrix}$$

$$= \begin{bmatrix} 7 & 0 \\ 0 & 7 \end{bmatrix} = 7I$$

83. (a) $[\det(kA)]^{-1} \det(A)$

$$= \frac{1}{\det(kA)} \times \det(A)$$

$$= \frac{1}{k^n \det(A)} \times \det(A) = \frac{1}{k^n} = k^{-n}$$

84. (b) Let $\Delta = \begin{vmatrix} a & 1 & 1 \\ 1 & b & 1 \\ 1 & 1 & c \end{vmatrix}$

$$= a(bc - 1) - 1(c - 1) + 1(1 - b)$$

$$= abc - a - b - c + 2$$

$$\therefore \Delta > 0$$

$$\therefore abc - a - b - c + 2 > 0$$

$$\Rightarrow abc + 2 > a + b + c \quad \dots(i)$$

$$\therefore a \neq b \neq c$$

$$\Rightarrow \text{AM of } a, b, c > \text{GM of } a, b, c$$

$$\Rightarrow \frac{a+b+c}{3} > (abc)^{1/3}$$

$$\Rightarrow a + b + c > 3(abc)^{1/3} \quad \dots(ii)$$

From Eqs. (i) and (ii),

$$abc + 2 > 3(abc)^{1/3}$$

Now, let $x = (abc)^{1/3}$, then we have

$$\begin{aligned} x^3 + 2 &> 3x \\ \Rightarrow x^3 - 3x + 2 &> 0 \\ \Rightarrow (x-1)^2(x+2) &> 0 \\ \Rightarrow x + 2 &> 0 \quad [\because (x-1)^2 > 0] \\ \Rightarrow x &> -2 \\ \Rightarrow (abc)^{1/3} &> -2 \\ \Rightarrow abc &> -8 \end{aligned}$$

85. (a) We have,

$$\Delta = \begin{vmatrix} 1-a & a-b-c & b+c \\ 1-b & b-c-a & c+a \\ 1-c & c-a-b & a+b \end{vmatrix}$$

Applying $C_2 \rightarrow C_2 + C_3$, we get

$$\Delta = \begin{vmatrix} 1-a & a & b+c \\ 1-b & b & c+a \\ 1-c & c & a+b \end{vmatrix}$$

Now, applying $C_1 \rightarrow C_1 + C_2$,

$C_3 \rightarrow C_3 + C_2$ and taking common

$a + b + c$ from C_3 , we get

$$\Delta = (a+b+c) \begin{vmatrix} 1 & a & 1 \\ 1 & b & 1 \\ 1 & c & 1 \end{vmatrix}$$

$\therefore C_1$ and C_3 are identical.

Hence, the determinant is 0.

86. (c) I. We have, $\Delta = \begin{vmatrix} \cos^2 \frac{\alpha}{2} & \sin^2 \frac{\alpha}{2} \\ \sin^2 \frac{\beta}{2} & \cos^2 \frac{\beta}{2} \end{vmatrix}$

$$\begin{aligned} &= \cos^2 \frac{\alpha}{2} \cos^2 \frac{\beta}{2} - \sin^2 \frac{\alpha}{2} \sin^2 \frac{\beta}{2} \\ &= \left(\cos \frac{\alpha}{2} \cos \frac{\beta}{2} + \sin \frac{\alpha}{2} \sin \frac{\beta}{2} \right) \\ &\quad \left(\cos \frac{\alpha}{2} \cos \frac{\beta}{2} - \sin \frac{\alpha}{2} \sin \frac{\beta}{2} \right) \\ &= \cos \left(\frac{\alpha-\beta}{2} \right) \cos \left(\frac{\alpha+\beta}{2} \right) \\ &= \cos \left(\frac{\alpha-\beta}{2} \right) \cos 45^\circ \\ &= \frac{1}{\sqrt{2}} \cos \left(\frac{\alpha-\beta}{2} \right) [\because \alpha + \beta = 90^\circ] \end{aligned}$$

II. The maximum value of $\cos \frac{\alpha-\beta}{2}$ is 1.

\therefore The maximum value of the determinant is $\frac{1}{\sqrt{2}}$.

Hence, both statements are correct.

87. (a) We have, $A = \begin{bmatrix} 1 & 3 & 2 \\ 1 & x-1 & 1 \\ 2 & 7 & x-3 \end{bmatrix}$,

A has inverse, if $|A| \neq 0$

$$\begin{aligned} \therefore |A| &= 1\{(x-1)(x-3) - 7\} \\ &\quad - 3\{(x-3) - 2\} + 2\{7 - 2(x-1)\} \neq 0 \\ \Rightarrow x^2 - 4x - 4 - 3x + 15 \\ &\quad + 14 - 4x + 4 \neq 0 \\ \Rightarrow x^2 - 11x + 29 &\neq 0 \\ \Rightarrow x &\neq \frac{11 \pm \sqrt{121 - 116}}{2} \Rightarrow x \neq \frac{11 \pm \sqrt{5}}{2} \end{aligned}$$

88. (a) $\because A$ is an orthogonal matrix.
 $|AB| = \pm |B|$

$$\therefore |B| = \begin{vmatrix} 1 & 2 & 3 \\ -3 & 0 & 2 \\ 2 & 5 & 0 \end{vmatrix} = 47$$

Now, $|AB| = \pm 47$

Also, $AB \neq BA$

89. (b)

90. (d) Given, $f(x) = \begin{vmatrix} x^3 & \sin x & \cos x \\ 6 & -1 & 0 \\ p & p^2 & p^3 \end{vmatrix}$

$$f'(x) = \begin{vmatrix} 3x^2 & \cos x & -\sin x \\ 6 & -1 & 0 \\ p & p^2 & p^3 \end{vmatrix}$$

$$\begin{aligned} \Rightarrow f'(0) &= \begin{vmatrix} 0 & 1 & 0 \\ 6 & -1 & 0 \\ p & p^2 & p^3 \end{vmatrix} \\ &= (-1)(6p^3 - 0) = -6p^3 \end{aligned}$$

91. (a) From question 90,

$$f'(x) = \begin{vmatrix} 3x^2 & \cos x & -\sin x \\ 6 & -1 & 0 \\ p & p^2 & p^3 \end{vmatrix}$$

$$\Rightarrow f''(x) = \begin{vmatrix} 6x & -\sin x & -\cos x \\ 6 & -1 & 0 \\ p & p^2 & p^3 \end{vmatrix}$$

Since, we have $f''(0) = 0$

$$\Rightarrow f''(0) = \begin{vmatrix} 0 & 0 & 1 \\ 6 & -1 & 0 \\ p & p^2 & p^3 \end{vmatrix} = 0$$

$$\Rightarrow 6p^2 + p = 0 \Rightarrow p = -\frac{1}{6} \text{ or } 0$$

92. (d) I. Now, $\begin{vmatrix} 41 & 1 & 5 \\ 79 & 7 & 9 \\ 29 & 5 & 3 \end{vmatrix} = \begin{vmatrix} 1 & 1 & 5 \\ 7 & 7 & 9 \\ 5 & 5 & 3 \end{vmatrix} = 0$

$[\because C_1$ and C_2 are identical]

II. $\begin{vmatrix} 1 & a & b+c \\ 1 & b & c+a \\ 1 & c & a+b \end{vmatrix} = \begin{vmatrix} 1 & a & a+b+c \\ 1 & b & a+b+c \\ 1 & c & a+b+c \end{vmatrix}$

[apply $C_3 \rightarrow C_2 + C_3$]

$$= (a+b+c) \begin{vmatrix} 1 & a & 1 \\ 1 & b & 1 \\ 1 & c & 1 \end{vmatrix} = 0$$

$[\because C_1$ and C_3 are identical]

III. $\begin{vmatrix} 0 & c & b \\ -c & 0 & a \\ -b & -a & 0 \end{vmatrix}$

$$\begin{aligned} &= 0(0+a) - c(0+ab) + b(ac-0) \\ &= -abc + abc = 0 \end{aligned}$$

Hence, I, II and III determinants have value 'zero'.

93. (a) Given linear equations

$$kx + y + z = 1 \Rightarrow x + ky + z = 1$$

and $x + y + kz = 1$

For unique solution, $\begin{vmatrix} k & 1 & 1 \\ 1 & k & 1 \\ 1 & 1 & k \end{vmatrix} \neq 0$

$$\begin{aligned} \Rightarrow k(k^2 - 1) - 1(k-1) + 1(1-k) &\neq 0 \\ \Rightarrow k(k-1)(k+1) - 2(k-1) &\neq 0 \\ \Rightarrow (k-1)(k-1)(k+2) &\neq 0 \\ \Rightarrow k \neq 1 \text{ and } k \neq -2 \end{aligned}$$

12

MEASUREMENT OF ANGLES AND TRIGONOMETRIC RATIOS

In NDA exam, generally 4-7 questions are asked from this chapter which are based on finding the value of trigonometric ratios by using standard formulae / value, solving trigonometric equations etc.

ANGLE

Let a revolving line starting from OA revolves about its end point 'O' on a plane in clockwise or anti-clockwise direction and occupy the position ' OB '. It is said to trace out $\angle AOB$.

Here, OB is called the terminal side and OA is called initial side. The fixed point 'O' is called the vertex.

Measurement of Angles

The amount of rotation from the initial side to the terminal side is called the measure of the angle.

Note If the rotation is in anti-clockwise sense, the angle measured is positive and if the rotation is in clockwise sense, the angle measured is negative.

Systems of Measurement of Angles

There are three major types of systems of measurement of angles which are as follows

1. **Sexagesimal system** (Degree measure) In this system a right angle is divided into 90 equal parts, called degrees. Each degree is divided into 60 equal parts, called minutes and each minute is further divided into 60 equal parts, called seconds.

Thus, $1 \text{ right angle} = 90 \text{ degrees} = (90^\circ)$, $1^\circ = 60 \text{ min} = (60')$, $1' = 60 \text{ s} = (60'')$

2. **Centesimal system** In this system a right angle is divided into 100 equal parts, called grades. Each grade is subdivided into 100 centesimal minutes and each minute is further divided into 100 centesimal seconds.

Thus, 1 right angle = 100 grades = (100^g)

$$1 \text{ grade} = 100 \text{ min} = (100')$$

$$1 \text{ min} = 100 \text{ s} = (100'')$$

3. **Circular system** In this system the unit of measurement is radian as defined below

(i) One radian, written as 1^r , is the measure of an angle subtended at the centre of a circle by an arc of length equal to the radius of the circle.

(ii) The number of radians in an angle subtended by an arc of a circle at the centre is equal to $\frac{\text{arc}}{\text{radius}}$.

Relation between Degrees, Grades and Radians

The relation between the three systems of measurement of an angle is $\frac{\text{Degree}}{90} = \frac{\text{Grade}}{100} = \frac{2 \text{ Radian}}{\pi}$

Thus,

(i) To convert radians into degrees multiply by $\left(\frac{180}{\pi}\right)$.

(ii) To convert degrees into radians multiply by $\left(\frac{\pi}{180}\right)$.

EXAMPLE 1. Find the angle between the minute hand of a clock and the hour hand when the time is 7 : 20 am.

- a. 90° b. 95° c. 100° d. 105°

Sol. c. We know that, the hour hand completes one rotation in 12 h while the minute hand completes one rotation in 60 min.

\therefore Angle traced by the hour hand in 12 h = 360°

$$7 \text{ h } 20 \text{ min} = \left(7 + \frac{20}{60}\right) \text{ h} = 7 + \frac{1}{3} = \frac{22}{3} \text{ h}$$

\Rightarrow Angle traced by the hour hand in 7 h 20 min.

$$\text{i.e. } \frac{22}{3} \text{ h} = \left(\frac{360}{12} \times \frac{22}{3}\right) = 220^\circ$$

Also, the angle traced by the minute hand in 60 min = 360°

The angle traced by the minute hand in 20 min

$$= \left(\frac{360}{60} \times 20\right) = 120^\circ$$

\therefore Required angle between two hands = $220^\circ - 120^\circ = 100^\circ$

TRIGONOMETRIC RATIOS

The ratios between different sides of a right angled triangle with respect to its acute angles are called trigonometric ratios.

Let PMR be a right angled triangle at M .

$$\text{sine } \theta = \frac{\text{Perpendicular}}{\text{Hypotenuse}} = \frac{q}{r} \text{ and is written as } \sin \theta$$

$$\text{cosine } \theta = \frac{\text{Base}}{\text{Hypotenuse}} = \frac{p}{r} \text{ and is written as } \cos \theta$$

$$\text{tangent } \theta = \frac{\text{Perpendicular}}{\text{Base}} = \frac{q}{p} \text{ and is written as } \tan \theta$$

$$\text{cosecant } \theta = \frac{\text{Hypotenuse}}{\text{Perpendicular}} = \frac{r}{q} \text{ and is written as } \text{cosec } \theta$$

$$\text{secant } \theta = \frac{\text{Hypotenuse}}{\text{Base}} = \frac{r}{p} \text{ and is written as } \sec \theta$$

$$\text{cotangent } \theta = \frac{\text{Base}}{\text{Perpendicular}} = \frac{p}{q} \text{ and is written as } \cot \theta$$

Relation between Trigonometric Ratios

$$(i) \sin \theta = \frac{1}{\text{cosec } \theta} \text{ or } \text{cosec } \theta = \frac{1}{\sin \theta}$$

$$(ii) \cos \theta = \frac{1}{\sec \theta} \text{ or } \sec \theta = \frac{1}{\cos \theta}$$

$$(iii) \cot \theta = \frac{1}{\tan \theta} \text{ or } \tan \theta = \frac{1}{\cot \theta}$$

$$(iv) \tan \theta = \frac{\sin \theta}{\cos \theta} \quad (v) \cot \theta = \frac{\cos \theta}{\sin \theta}$$

Fundamental Trigonometric Identities

The following are some fundamental identities

$$(i) \sin^2 \theta + \cos^2 \theta = 1 \quad (ii) 1 + \tan^2 \theta = \sec^2 \theta$$

$$(iii) 1 + \cot^2 \theta = \text{cosec}^2 \theta$$

EXAMPLE 2. If $1 + \sin^2 A = 3 \sin A \cdot \cos A$, then what is the value of $\tan A$?

- a. $\frac{1}{2}, 1$ b. $\frac{1}{4}, 2$ c. $\frac{1}{6}, 3$ d. $\frac{1}{8}, 4$

Sol. a. We have, $1 + \sin^2 A = 3 \sin A \cos A$

On dividing both sides by $\cos^2 A$, we get

$$\sec^2 A + \tan^2 A = 3 \tan A$$

$$\Rightarrow 1 + \tan^2 A + \tan^2 A = 3 \tan A$$

$$[\because \sec^2 \theta = 1 + \tan^2 \theta]$$

$$\Rightarrow 2 \tan^2 A - 3 \tan A + 1 = 0$$

$$\Rightarrow 2 \tan^2 A - 2 \tan A - \tan A + 1 = 0$$

$$\Rightarrow 2 \tan A (\tan A - 1) - 1 (\tan A - 1) = 0$$

$$\Rightarrow (2 \tan A - 1) (\tan A - 1) = 0$$

$$\Rightarrow \tan A = \frac{1}{2}, 1$$

Domain and Range

Trigonometric Ratios	Domain	Range
$\sin \theta$	R	$[-1, 1]$
$\cos \theta$	R	$[-1, 1]$
$\tan \theta$	$R - \left\{ (2n+1)\frac{\pi}{2} : n \in I \right\}$	R
$\operatorname{cosec} \theta$	$R - \{n\pi : n \in I\}$	$R - (-1, 1)$
$\sec \theta$	$R - \left\{ (2n+1)\frac{\pi}{2} : n \in I \right\}$	$R - (-1, 1)$
$\cot \theta$	$R - \{n\pi : n \in I\}$	R

Trigonometric Ratios of Standard Angles

	0	$\frac{\pi}{6}$	$\frac{\pi}{4}$	$\frac{\pi}{3}$	$\frac{\pi}{2}$
sin	0	$\frac{1}{2}$	$\frac{1}{\sqrt{2}}$	$\frac{\sqrt{3}}{2}$	1
cos	1	$\frac{\sqrt{3}}{2}$	$\frac{1}{\sqrt{2}}$	$\frac{1}{2}$	0
tan	0	$\frac{1}{\sqrt{3}}$	1	$\sqrt{3}$	Undefined
cot	Undefined	$\sqrt{3}$	1	$\frac{1}{\sqrt{3}}$	0
sec	1	$\frac{2}{\sqrt{3}}$	$\sqrt{2}$	2	Undefined
cosec	Undefined	2	$\sqrt{2}$	$\frac{2}{\sqrt{3}}$	1

Note $|\sin \theta| \leq 1$, $|\cos \theta| \leq 1$, $|\sec \theta| \geq 1$, $|\operatorname{cosec} \theta| \geq 1$ for all values of θ for which the functions are defined.

Signs of Trigonometric Ratios in Different Quadrants

Quadrant	$\sin \theta$	$\cos \theta$	$\tan \theta$	$\cot \theta$	$\sec \theta$	$\operatorname{cosec} \theta$
I	+	+	+	+	+	+
II	+	-	-	-	-	+
III	-	-	+	+	-	-
IV	-	+	-	-	+	-

Trigonometric Ratios of Allied Angles

Two angles are said to be allied when their sum or difference is either zero or a multiple of 90° , i.e. the angles $-\theta$, $90^\circ \pm \theta$, $180^\circ \pm \theta$, $270^\circ \pm \theta$ and $360^\circ \pm \theta$ are called allied angles.

θ	$\sin \theta$	$\cos \theta$	$\tan \theta$	$\cot \theta$	$\sec \theta$	$\operatorname{cosec} \theta$
$-\theta$	$-\sin \theta$	$\cos \theta$	$-\tan \theta$	$-\cot \theta$	$\sec \theta$	$-\operatorname{cosec} \theta$
$90^\circ - \theta$	$\cos \theta$	$\sin \theta$	$\cot \theta$	$\tan \theta$	$\operatorname{cosec} \theta$	$\sec \theta$
$90^\circ + \theta$	$\cos \theta$	$-\sin \theta$	$-\cot \theta$	$-\tan \theta$	$-\operatorname{cosec} \theta$	$\sec \theta$
$180^\circ - \theta$	$\sin \theta$	$-\cos \theta$	$-\tan \theta$	$-\cot \theta$	$-\sec \theta$	$\operatorname{cosec} \theta$

θ	$\sin \theta$	$\cos \theta$	$\tan \theta$	$\cot \theta$	$\sec \theta$	$\operatorname{cosec} \theta$
$180^\circ + \theta$	$-\sin \theta$	$-\cos \theta$	$\tan \theta$	$\cot \theta$	$-\sec \theta$	$-\operatorname{cosec} \theta$
$270^\circ - \theta$	$-\cos \theta$	$-\sin \theta$	$\cot \theta$	$\tan \theta$	$-\operatorname{cosec} \theta$	$-\sec \theta$
$270^\circ + \theta$	$-\cos \theta$	$\sin \theta$	$-\cot \theta$	$-\tan \theta$	$\operatorname{cosec} \theta$	$-\sec \theta$
$360^\circ - \theta$	$-\sin \theta$	$\cos \theta$	$-\tan \theta$	$-\cot \theta$	$\sec \theta$	$-\operatorname{cosec} \theta$
$360^\circ + \theta$	$\sin \theta$	$\cos \theta$	$\tan \theta$	$\cot \theta$	$\sec \theta$	$\operatorname{cosec} \theta$

EXAMPLE 3. What is the value of $\cot(-870^\circ)$?

- a. $\sqrt{3}$ b. $1/\sqrt{3}$ c. $-\sqrt{3}$ d. $-1/\sqrt{3}$

Sol. a. $\cot(-870^\circ) = -\cot(2 \times 360^\circ + 150^\circ)$
 $= -\cot 150^\circ = -\cot(90^\circ + 60^\circ) = \tan 60^\circ = \sqrt{3}$

Sum and Difference of Two Angles

- (i) $\sin(A \pm B) = \sin A \cos B \pm \cos A \sin B$
- (ii) $\cos(A \pm B) = \cos A \cos B \mp \sin A \sin B$
- (iii) $\tan(A \pm B) = \frac{\tan A \pm \tan B}{1 \mp \tan A \tan B}$
- (iv) $\cot(A \pm B) = \frac{\cot A \cot B \mp 1}{\cot B \pm \cot A}$
- (v) $\sin(A + B)\sin(A - B) = \sin^2 A - \sin^2 B$
 $= \cos^2 B - \cos^2 A$
- (vi) $\cos(A + B)\cos(A - B) = \cos^2 A - \sin^2 B$
 $= \cos^2 B - \sin^2 A$

Transformation Formulae

- (i) $2 \sin A \cos B = \sin(A + B) + \sin(A - B)$
- (ii) $2 \cos A \sin B = \sin(A + B) - \sin(A - B)$
- (iii) $2 \cos A \cos B = \cos(A + B) + \cos(A - B)$
- (iv) $2 \sin A \sin B = \cos(A - B) - \cos(A + B)$
- (v) $\sin C + \sin D = 2 \sin\left(\frac{C + D}{2}\right) \cos\left(\frac{C - D}{2}\right)$
- (vi) $\sin C - \sin D = 2 \sin\left(\frac{C - D}{2}\right) \cos\left(\frac{C + D}{2}\right)$
- (vii) $\cos C + \cos D = 2 \cos\left(\frac{C + D}{2}\right) \cos\left(\frac{C - D}{2}\right)$
- (viii) $\cos C - \cos D = 2 \sin\left(\frac{C + D}{2}\right) \sin\left(\frac{D - C}{2}\right)$

EXAMPLE 4. If $\sin 2A = \lambda \sin 2B$, then what is the value of $\frac{\tan(A + B)}{\tan(A - B)}$?

- a. $\frac{\lambda - 1}{\lambda + 1}$ b. $\frac{\lambda + 1}{\lambda - 1}$ c. $\frac{\lambda^2 - 1}{\lambda^2 + 1}$ d. $\sqrt{\frac{\lambda - 1}{\lambda + 1}}$

Sol. b. $\therefore \sin 2A = \lambda \sin 2B \Rightarrow \frac{\sin 2A}{\sin 2B} = \lambda$

On applying componendo and dividendo rule,

$$\frac{\sin 2A + \sin 2B}{\sin 2A - \sin 2B} = \frac{\lambda + 1}{\lambda - 1}$$

$$\Rightarrow \frac{2 \sin(A+B) \cos(A-B)}{2 \cos(A+B) \sin(A-B)} = \frac{\lambda + 1}{\lambda - 1} \Rightarrow \frac{\tan(A+B)}{\tan(A-B)} = \frac{\lambda + 1}{\lambda - 1}$$

EXAMPLE 5. Determine the value of $\cos 20^\circ \cos 40^\circ \cos 60^\circ \cos 80^\circ$.

- a. $1/2$ b. $1/4$ c. $1/8$ d. $1/16$

Sol. d. $\cos 20^\circ \cos 40^\circ \cos 60^\circ \cos 80^\circ$

$$= \cos 60^\circ (\cos 20^\circ \cos 40^\circ) \cos 80^\circ$$

$$= \frac{1}{2} \times \frac{1}{2} (2 \cos 20^\circ \cos 40^\circ) \cos 80^\circ \left[\because \cos 60^\circ = \frac{1}{2} \right]$$

$$= \frac{1}{4} [\{\cos(40^\circ + 20^\circ) + \cos(40^\circ - 20^\circ)\} \cos 80^\circ]$$

$$\left[\because 2 \cos A \cos B = \cos(A+B) + \cos(A-B) \right]$$

$$= \frac{1}{4} [(\cos 60^\circ + \cos 20^\circ) \cos 80^\circ]$$

$$= \frac{1}{4} \left[\left(\frac{1}{2} + \cos 20^\circ \right) \cos 80^\circ \right]$$

$$= \frac{1}{8} (\cos 80^\circ + 2 \cos 80^\circ \cos 20^\circ)$$

$$= \frac{1}{8} [\cos 80^\circ + \{\cos(80^\circ + 20^\circ) + \cos(80^\circ - 20^\circ)\}]$$

$$\left[\because 2 \cos A \cos B = \cos(A+B) + \cos(A-B) \right]$$

$$= \frac{1}{8} [\cos 80^\circ + \cos 100^\circ + \cos 60^\circ]$$

$$= \frac{1}{8} [\cos 80^\circ + \cos(180^\circ - 80^\circ) + \cos 60^\circ]$$

$$= \frac{1}{8} [\cos 80^\circ - \cos 80^\circ + \cos 60^\circ]$$

$$= \frac{1}{8} \left[\cos 80^\circ - \cos 80^\circ + \frac{1}{2} \right] = \frac{1}{8} \times \frac{1}{2} = \frac{1}{16}$$

Trigonometric Ratios of Multiple of an Angle

(i) $\sin 2A = 2 \sin A \cos A = \frac{2 \tan A}{1 + \tan^2 A}$

(ii) $\cos 2A = \cos^2 A - \sin^2 A = 2 \cos^2 A - 1$
 $= 1 - 2 \sin^2 A = \frac{1 - \tan^2 A}{1 + \tan^2 A}$

(iii) $\tan 2A = \frac{2 \tan A}{1 - \tan^2 A}$

(iv) $\cot 2A = \frac{\cot^2 A - 1}{2 \cot A}$

(v) $\sin 3A = 3 \sin A - 4 \sin^3 A$

(vi) $\cos 3A = 4 \cos^3 A - 3 \cos A$

(vii) $\tan 3A = \frac{3 \tan A - \tan^3 A}{1 - 3 \tan^2 A}$

(viii) $\cot 3A = \frac{3 \cot A - \cot^3 A}{1 - 3 \cot^2 A}$

Trigonometric Ratios of Submultiples Angles

(i) $\sin A = 2 \sin \frac{1}{2} A \cos \frac{1}{2} A = \frac{2 \tan \frac{1}{2} A}{1 + \tan^2 \frac{1}{2} A}$

(ii) $\cos A = \cos^2 \frac{1}{2} A - \sin^2 \frac{1}{2} A = 2 \cos^2 \frac{1}{2} A - 1$
 $= 1 - 2 \sin^2 \frac{1}{2} A = \frac{1 - \tan^2 \frac{1}{2} A}{1 + \tan^2 \frac{1}{2} A}$

(iii) $\tan A = \frac{2 \tan \frac{1}{2} A}{1 - \tan^2 \frac{1}{2} A}$ (iv) $\cot A = \frac{\cot^2 \frac{1}{2} A - 1}{2 \cot \frac{1}{2} A}$

EXAMPLE 6. What will be the value of

$$\sqrt{2 + \sqrt{2 + \sqrt{2 + 2 \cos 8\theta}}}$$

- a. $2 \sin \theta$ b. $2 \cos \theta$ c. $\sin 2\theta$ d. $\cos 2\theta$

Sol. b. We have, $\sqrt{2 + \sqrt{2 + \sqrt{2 + 2 \cos 8\theta}}}$

$$= \sqrt{2 + \sqrt{2 + \sqrt{2 + 4 \cos^2 4\theta} - 2}}$$

$$= \sqrt{2 + \sqrt{2 + 4 \cos^2 2\theta} - 2}$$

$$= \sqrt{2 + 2 \cos 2\theta} = \sqrt{2 + 4 \cos^2 \theta - 2} = 2 \cos \theta$$

EXAMPLE 7. $\frac{\cot^2 15^\circ - 1}{\cot^2 15^\circ + 1}$ is equal to

- a. $\frac{1}{2}$ b. $\frac{\sqrt{3}}{2}$ c. $\frac{3\sqrt{3}}{4}$ d. $\sqrt{3}$

Sol. b. $\frac{\cot^2 15^\circ - 1}{\cot^2 15^\circ + 1} = \frac{\frac{\cos^2 15^\circ}{\sin^2 15^\circ} - 1}{\frac{\cos^2 15^\circ}{\sin^2 15^\circ} + 1} = \frac{\cos^2 15^\circ - \sin^2 15^\circ}{\cos^2 15^\circ + \sin^2 15^\circ}$
 $= \cos(2 \times 15^\circ) = \cos(30^\circ) = \frac{\sqrt{3}}{2}$

Values of Trigonometric Ratios of Some Specific Angles

(i) $\sin 15^\circ = \frac{\sqrt{3} - 1}{2\sqrt{2}}$ (ii) $\cos 15^\circ = \frac{\sqrt{3} + 1}{2\sqrt{2}}$

(iii) $\tan 15^\circ = \cot 75^\circ = 2 - \sqrt{3}$

(iv) $\cot 15^\circ = \tan 75^\circ = 2 + \sqrt{3}$

$$(v) \sin 18^\circ = \cos 72^\circ = \frac{\sqrt{5}-1}{4}$$

$$(vi) \cos 36^\circ = \sin 54^\circ = \frac{\sqrt{5}+1}{4}$$

$$(vii) \cos 18^\circ = \sin 72^\circ = \frac{\sqrt{10+2\sqrt{5}}}{4}$$

$$(viii) \sin 36^\circ = \cos 54^\circ = \frac{\sqrt{10-2\sqrt{5}}}{4}$$

$$(ix) \sin 22\frac{1}{2}^\circ = \frac{\sqrt{2-\sqrt{2}}}{2}$$

$$(x) \cos 22\frac{1}{2}^\circ = \frac{\sqrt{2+\sqrt{2}}}{2}$$

$$(xi) \tan 22\frac{1}{2}^\circ = \sqrt{2}-1$$

$$(xii) \cot 22\frac{1}{2}^\circ = \sqrt{2}+1$$

EXAMPLE 8. What will be the value of $\cos 12^\circ + \cos 84^\circ + \cos 156^\circ + \cos 132^\circ$?

- a. $2(\sqrt{5})$ b. $-2\sqrt{3}$ c. $\frac{-1}{2}$ d. $\frac{3}{4}$

Sol. c. We have, $\cos 12^\circ + \cos 84^\circ + \cos 156^\circ + \cos 132^\circ$
 $= (\cos 12^\circ + \cos 132^\circ) + (\cos 84^\circ + \cos 156^\circ)$
 $= 2 \cos \left(\frac{12^\circ+132^\circ}{2} \right) \cos \left(\frac{132^\circ-12^\circ}{2} \right)$
 $\quad + 2 \cos \left(\frac{84^\circ+156^\circ}{2} \right) \cos \left(\frac{156^\circ-84^\circ}{2} \right)$
 $= 2 \cos 72^\circ \cos 60^\circ + 2 \cos 120^\circ \cos 36^\circ$
 $= 2 \sin 18^\circ \cos 60^\circ + 2 \cos 120^\circ \cos 36^\circ$
 $= 2 \left(\frac{\sqrt{5}-1}{4} \right) \left(\frac{1}{2} \right) + 2 \left(\frac{-1}{2} \right) \left(\frac{\sqrt{5}+1}{4} \right) = \frac{-1}{2}$

Maximum and Minimum Values of $(a \sin \theta \pm b \cos \theta)$

The maximum and minimum values of $a \sin \theta \pm b \cos \theta$ are respectively, $\sqrt{a^2 + b^2}$ and $-\sqrt{a^2 + b^2}$.

TRIGONOMETRIC EQUATION

An equation involving one or more trigonometric ratios of unknown angles is called a trigonometric equation.

e.g. $2 \cos \theta + 3 \cos 2\theta = 0$, $\cos^2 \theta + \sin \theta = \frac{1}{3}$ etc.

Solutions or Roots of a Trigonometric Equation

A value of the unknown angle which satisfies the given equation, is called a solution or root of the equation. The trigonometric equation may have infinite number of solutions and can be classified as

- (i) **Principal solution** The least value of unknown angle which satisfies the given equation, is called principal solution of trigonometric equation.
- (ii) **General solution** We know that trigonometric functions are periodic and solutions of trigonometric equations can be generalised with the help of the periodicity of the trigonometric functions. The solution consisting of all possible solutions of a trigonometric equation is called its general solution.

Note A function $f(x)$ is said to be a periodic function, if a least positive real number T is such that $f(x+T) = f(x)$, then T is known as period of function $f(x)$.

Trigonometrical Equations with their General Solution

Trigonometrical equation	General solution
$\sin \theta = 0$	$\theta = n\pi, n \in I$
$\cos \theta = 0$	$\theta = (2n+1)\pi/2, n \in I$
$\tan \theta = 0$	$\theta = n\pi, n \in I$
$\sin \theta = 1$	$\theta = 2n\pi + \pi/2, n \in I$
$\cos \theta = 1$	$\theta = 2n\pi, n \in I$
$\sin \theta = \sin \alpha$	$\theta = n\pi + (-1)^n \alpha, \alpha \in \left[-\frac{\pi}{2}, \frac{\pi}{2}\right], n \in I$
$\cos \theta = \cos \alpha$	$\theta = 2n\pi \pm \alpha, \alpha \in [0, \pi], n \in I$
$\tan \theta = \tan \alpha$	$\theta = n\pi + \alpha, \alpha \in \left(-\frac{\pi}{2}, \frac{\pi}{2}\right), n \in I$
$\sin^2 \theta = \sin^2 \alpha$ $\tan^2 \theta = \tan^2 \alpha$ $\cos^2 \theta = \cos^2 \alpha$	$\theta = n\pi \pm \alpha, n \in I$
$\sin \theta = \sin \alpha$ and $\cos \theta = \cos \alpha$	$\theta = 2n\pi + \alpha, n \in I$

EXAMPLE 9. If $\sin 9\theta = \sin \theta$, then the value of θ will be, if θ is even.

- a. $\frac{2m}{\pi}$ b. $\frac{m\pi}{2}$ c. $\frac{m\pi}{4}$ d. $m\pi$

Sol. c. We have, $\sin 9\theta = \sin \theta$, $9\theta = n\pi + (-1)^n \theta, n \in I$

If n is even, then $9\theta = 2m\pi + \theta \Rightarrow 8\theta = 2m\pi \Rightarrow \theta = \frac{m\pi}{4}$

> PRACTICE EXERCISE

- 1.** What is the measure of the angle $114^\circ 35' 30''$ in radian?
 (a) 1 rad (b) 2 rad
 (c) 3 rad (d) 4 rad
- 2.** The angle between the minute hand and the hour hand of a clock when the time is 8:25 am is
 (a) $92^\circ 45'$ (b) $102^\circ 30'$
 (c) 105° (d) $107^\circ 15'$
- 3.** What is the value of $\sin 292\frac{1}{2}^\circ$?
 (a) $\frac{1}{3}\sqrt{2+\sqrt{3}}$ (b) $-\frac{1}{3}\sqrt{2-\sqrt{3}}$
 (c) $\frac{1}{2}\sqrt{2+\sqrt{2}}$ (d) $-\frac{1}{2}\sqrt{2+\sqrt{2}}$
- 4.** Which one of the following is correct?
 $\left(1 + \cos 67\frac{1}{2}^\circ\right)\left(1 + \cos 112\frac{1}{2}^\circ\right)$ is
 (a) an irrational number and is greater than 1
 (b) a rational number but not an integer
 (c) an integer
 (d) an irrational number and is less than 1
- 5.** What is the value of
 $\cos\left(\frac{\pi}{9}\right) + \cos\left(\frac{\pi}{3}\right) + \cos\left(\frac{5\pi}{9}\right) + \cos\left(\frac{7\pi}{9}\right)$?
 (a) 1 (b) -1
 (c) $-\frac{1}{2}$ (d) $\frac{1}{2}$
- 6.** $\tan \frac{7\pi}{6}$, $\tan \frac{9\pi}{4}$, $\tan \frac{10\pi}{3}$ are in
 (a) AP (b) GP
 (c) HP (d) None of these
- 7.** $\frac{\sin x + \sin 3x + \sin 5x + \sin 7x}{\cos x + \cos 3x + \cos 5x + \cos 7x}$ is equal to
 (a) $\tan 16x$ (b) $\tan 8x$
 (c) $\tan 4x$ (d) $\tan 2x$
- 8.** If $\tan \theta + \sin \theta = m$ and $\tan \theta - \sin \theta = n$, then
 (a) $m^2 - n^2 = 4mn$ (b) $m^2 + n^2 = 4mn$
 (c) $m^2 - n^2 = m^2 + n^2$ (d) $m^2 - n^2 = 4\sqrt{mn}$
- 9.** If $\cos \theta = \frac{a \cos \phi + b}{a + b \cos \phi}$, then $\tan \frac{\theta}{2}$ is equal to
 (a) $\sqrt{\frac{a-b}{a+b}} \tan \frac{\phi}{2}$ (b) $\sqrt{\frac{a+b}{a-b}} \cos \frac{\phi}{2}$
 (c) $\sqrt{\frac{a-b}{a+b}} \sin \frac{\phi}{2}$ (d) None of these
- 10.** If an angle α is divided into two parts A and B such that $A - B = x$ and $\tan A : \tan B = 2 : 1$, then what is $\sin x$ equal to?
 (a) $3 \sin \alpha$ (b) $\frac{2 \sin \alpha}{3}$ (c) $\frac{\sin \alpha}{3}$ (d) $2 \sin \alpha$
- 11.** What is the maximum value of $3 \cos x + 4 \sin x + 5$?
 (a) 5 (b) 7 (c) 10 (d) 12
- 12.** If $\tan A - \tan B = x$ and $\cot B - \cot A = y$, then what is $\cot(A - B)$ equal to?
 (a) $\frac{1}{y} - \frac{1}{x}$ (b) $\frac{1}{x} - \frac{1}{y}$ (c) $\frac{1}{x} + \frac{1}{y}$ (d) $-\frac{1}{x} - \frac{1}{y}$
- 13.** If $\cos A + \cos B = m$ and $\sin A + \sin B = n$, where $m, n \neq 0$, then what is $\cos(A + B)$ equal to?
 (a) $\frac{m^2 - n^2}{m^2 + n^2}$ (b) $\frac{2mn}{m^2 + n^2}$
 (c) $\frac{m^2 + n^2}{2mn}$ (d) $\frac{m^2 + n^2}{m^2 - n^2}$
- 14.** If $A + B = 90^\circ$, then minimum and maximum values of $(\cos A \cos B)$ respectively are
 (a) $-\frac{1}{4}, \frac{1}{4}$ (b) $-\frac{1}{3}, \frac{1}{3}$
 (c) $-\frac{1}{2}, \frac{1}{2}$ (d) None of these
- 15.** The smallest positive value of x (in degrees) for which $\tan(x + 100^\circ) = \tan(x + 50^\circ) \tan x \tan(x - 50^\circ)$ is
 (a) 60° (b) 90° (c) 45° (d) 30°
- 16.** If α, β are acute angles and $\cos 2\alpha = \frac{3 \cos 2\beta - 1}{3 - \cos 2\beta}$, then the value of $(\tan \alpha \cdot \cot \beta)$ is
 (a) $\sqrt{3}$ (b) $\sqrt{2}$
 (c) 1 (d) None of these
- 17.** If $\sin x + \sin^2 x = 1$, then the value of $(\cos^8 x + 2 \cos^6 x + \cos^4 x)$ is
 (a) 0 (b) -1 (c) 1 (d) 2
- 18.** If $x = y \cos \frac{2\pi}{3} = z \cos \frac{4\pi}{3}$, then $xy + yz + zx$ equals
 (a) -1 (b) 0 (c) 1 (d) 2
- 19.** Consider the following statements
 I. If $\theta = 1200^\circ$, then $(\sec \theta + \tan \theta)^{-1}$ is positive.
 II. If $\theta = 1200^\circ$, then $(\operatorname{cosec} \theta - \cot \theta)$ is negative.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

- 20.** Consider the following statements
 I. $\sin 66^\circ$ is greater than $\cos 66^\circ$.
 II. $\cos 26^\circ$ is smaller than $\sin 26^\circ$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 21.** If A, B, C, D are the angles of a cyclic quadrilateral taken in order, then consider the following statements
 I. $\cos A + \cos B = -(\cos C + \cos D)$
 II. $\cos(\pi + A) + \cos(\pi - B) + \cos(\pi - C) - \sin\left(\frac{\pi}{2} - D\right) = 0$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 22.** Which among the following is/are correct statement(s)?
 I. The general value of θ satisfying the equations $\sin^2\theta = \sin^2\alpha$, $\cos^2\theta = \cos^2\alpha$ and $\tan^2\theta = \tan^2\alpha$ is given by $\theta = n\pi \pm \alpha$.
 II. The general value of θ satisfying equations $\sin\theta = \sin\alpha$ and $\cos\theta = \cos\alpha$ simultaneously is given by $\theta = 2n\pi \pm \alpha$, $n \in Z$.
 Select the correct answer using the code given below
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

Directions (Q. Nos. 23-24) If x, y and z are the angles of a triangle and $z = 135^\circ$.

- 23.** The value of $\sin z + \cos z$ is
 (a) 0 (b) $\sqrt{2}$ (c) $\frac{1}{\sqrt{2}}$ (d) $\frac{\sqrt{3}}{2}$
- 24.** The value of $(1 + \tan x)(1 + \tan y)$ is
 (a) 1 (b) 2 (c) 3 (d) 4
- Directions** (Q. Nos. 25-26) Let $\cos\alpha$ and $\cos\beta$ be the roots of the equation, $8x^2 - 2x - 1 = 0$.
- 25.** The value of $\sin\frac{\alpha}{2} \cdot \sin\frac{\beta}{2}$ is
 (a) $\frac{1}{2}$ (b) $\frac{1}{4}$ (c) $\frac{\sqrt{5}}{4\sqrt{2}}$ (d) $\frac{3}{4\sqrt{2}}$
- 26.** The value of $\cos\frac{\alpha}{2} \cdot \cos\frac{\beta}{2}$ is
 (a) $\frac{1}{2}$ (b) $\frac{3}{4\sqrt{2}}$ (c) $\frac{1}{4}$ (d) $\frac{\sqrt{5}}{4\sqrt{2}}$

Directions (Q. Nos. 27-29) Let $\tan^2 x = 1 - e^2$, e is any constant.

- 27.** The value of $(\sec x + \tan^3 x \operatorname{cosec} x)$ is
 (a) $(2 + e^2)^{3/2}$ (b) $(2 - e^2)^{3/2}$ (c) $(1 - e^2)^{3/2}$ (d) $(1 + e^2)^{3/2}$

- 28.** The value of $\cos 2x$ is
 (a) $\frac{2e^2}{1 + e^2}$ (b) $\frac{2e^2}{1 - e^2}$ (c) $\frac{e^2}{2 - e^2}$ (d) $\frac{e^2}{2 + e^2}$
- 29.** The value of $\sec^4 x - \sec^2 x$ is
 (a) $(e^2 - 2)(e^2 - 1)$ (b) $(e^2 + 2)(e^2 - 1)$
 (c) $(e^2 - 2)(e^2 + 1)$ (d) None of these

Directions (Q. Nos. 30-33) ABC is a triangle right angled at B . The hypotenuse (AC) is four times the perpendicular (BD) drawn to it from the opposite vertex and $AD < DC$.

- 30.** Which one of the following is acute angles of the triangle?
 (a) 15° (b) 30° (c) 45° (d) None of these
- 31.** What is $\angle ABD$?
 (a) 15° (b) 30° (c) 45° (d) None of these
- 32.** What is $AD : DC$ equal to?
 (a) $(7 - 2\sqrt{3}) : 1$ (b) $(7 - 4\sqrt{3}) : 1$
 (c) $1 : 2$ (d) None of these
- 33.** What is $\tan(A - C)$ equal to?
 (a) 0 (b) 1 (c) 2 (d) None of these

Directions (Q. Nos. 34-37) Given, $x = \operatorname{cosec}^2\theta$,
 $y = \sec^2\theta$, $z = \frac{1}{1 - \sin^2\theta \cos^2\theta}$

- 34.** $\frac{1}{x^2} + \frac{1}{y^2}$ is equal to
 (a) $\frac{2+z}{z}$ (b) $\frac{2-z}{z}$ (c) $\frac{z}{2+z}$ (d) $\frac{z}{2-z}$
- 35.** xyz is equal to
 (a) $\frac{1}{2}(x + y + z)$ (b) $xy + z$ (c) $x + y - z$ (d) $\frac{x + y}{z}$
- 36.** $\tan^2 2\theta$ is equal to
 (a) $\frac{4y}{x(2-y)^2}$ (b) $\frac{2y}{x(2-y)^2}$ (c) $\frac{4}{y(2-x)^2}$ (d) $\frac{2}{y(2-x)^2}$
- 37.** Consider the following statements
 I. $\frac{1}{x} + \frac{1}{y} = 1$ II. $\frac{1}{xy} + \frac{1}{yz} + \frac{1}{zx} = 1$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

PREVIOUS YEARS' QUESTIONS

- 38.** Which one of the following is positive in the third quadrant? **☑ 2012 I**
 (a) $\sin\theta$ (b) $\cos\theta$ (c) $\tan\theta$ (d) $\sec\theta$
- 39.** What is the value of $\sin(1920^\circ)$? **☑ 2012 I**
 (a) $\frac{1}{2}$ (b) $\frac{1}{\sqrt{2}}$ (c) $\frac{\sqrt{3}}{2}$ (d) $\frac{1}{3}$

40. What is the value of $\frac{\sin\theta}{\operatorname{cosec}\theta} + \frac{\cos\theta}{\sec\theta}$? ☑ 2012 I
 (a) 1 (b) 1/2 (c) 1/3 (d) 2
41. What is the maximum value of $\sin^2 x$? ☑ 2012 I
 (a) -1 (b) 0 (c) 1 (d) Infinity
42. If $\operatorname{cosec}\theta - \cot\theta = \frac{1}{\sqrt{3}}$, where $\theta \neq 0$, then what is the value of $\cos\theta$? ☑ 2012 I
 (a) 0 (b) $\frac{\sqrt{3}}{2}$ (c) $\frac{1}{2}$ (d) $\frac{1}{\sqrt{2}}$
43. If $\cot A \cdot \cot B = 2$, then what is the value of $\cos(A+B) \cdot \sec(A-B)$? ☑ 2012 I
 (a) 1/3 (b) 2/3 (c) 1 (d) -1
44. What is the maximum value of $\sin 3\theta \cos 2\theta + \cos 3\theta \sin 2\theta$? ☑ 2012 I
 (a) 1 (b) 2 (c) 4 (d) 10
45. What is the value of $\sec^2 \left\{ \tan^{-1} \left(\frac{5}{11} \right) \right\}$? ☑ 2012 I
 (a) 121/96 (b) 217/921 (c) 146/121 (d) 267/121
46. What is the value of $\sin A \cos A \tan A + \cos A \sin A \cot A$? ☑ 2012 I
 (a) $\sin A$ (b) $\cos A$ (c) $\tan A$ (d) 1
47. If $\tan\theta + \sec\theta = 4$, then what is the value of $\sin\theta$? ☑ 2012 I
 (a) 8/17 (b) 8/15 (c) 15/17 (d) 23/32
48. What is the value of $\sin 420^\circ \cdot \cos 390^\circ + \cos(-300^\circ) \cdot \sin(-330^\circ)$? ☑ 2012 I
 (a) 0 (b) 1 (c) 2 (d) -1
49. If $\theta = 18^\circ$, then what is the value of $4 \sin^2\theta + 2 \sin\theta$? ☑ 2012 I
 (a) -1 (b) 1 (c) 0 (d) 2
50. What is the value of $\tan\left(\frac{\pi}{12}\right)$? ☑ 2012 I
 (a) $2 - \sqrt{3}$ (b) $2 + \sqrt{3}$ (c) $\sqrt{2} - \sqrt{3}$ (d) $\sqrt{3} - \sqrt{2}$
51. Consider the following statements ☑ 2012 I
 I. 1° in radian measure is less than 0.02 radians.
 II. 1 radian in degree measure is greater than 45° .
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- Directions** (Q. Nos. 52-54) Let $\sin(A+B) = 1$
 and $\sin(A-B) = 1/2$, where $A, B \in \left[0, \frac{\pi}{2}\right]$. ☑ 2012 I
52. What is the value of A ?
 (a) $\frac{\pi}{6}$ (b) $\frac{\pi}{3}$ (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{8}$
53. What is the value of $\tan(A+2B) \cdot \tan(2A+B)$?
 (a) -1 (b) 0 (c) 1 (d) 2
54. What is the value of $\sin^2 A - \sin^2 B$?
 (a) 0 (b) 1/2 (c) 1 (d) 2
55. The line making an angle (-120°) with X -axis is situated in the ☑ 2012 II
 (a) first quadrant (b) second quadrant
 (c) third quadrant (d) fourth quadrant
56. What is the value of $\tan(-585^\circ)$? ☑ 2012 II
 (a) 1 (b) -1 (c) $-\sqrt{2}$ (d) $-\sqrt{3}$
57. If $\sec\alpha = \frac{13}{5}$, where $270^\circ < \alpha < 360^\circ$, then what is the value of $\sin\alpha$? ☑ 2012 II
 (a) 5/13 (b) 12/13 (c) -12/13 (d) -13/12
58. What is the value of $\sin 15^\circ$? ☑ 2012 II
 (a) $\frac{\sqrt{3}-1}{2\sqrt{2}}$ (b) $\frac{\sqrt{3}+1}{2\sqrt{2}}$ (c) $\frac{\sqrt{3}-1}{\sqrt{3}+1}$ (d) $\frac{\sqrt{3}+1}{\sqrt{3}-1}$
59. If $4 \sin^2\theta = 1$, where $0 < \theta < 2\pi$, how many values does θ take? ☑ 2012 II
 (a) 1 (b) 2 (c) 4 (d) None of these
60. What is the value of $\sin 18^\circ \cos 36^\circ$? ☑ 2012 II
 (a) 4 (b) 2 (c) 1 (d) 1/4
61. If $\sin A = \frac{2}{\sqrt{5}}$ and $\cos B = \frac{1}{\sqrt{10}}$, where A and B are acute angles, then what is the value of $A+B$? ☑ 2012 II
 (a) 135° (b) 90° (c) 75° (d) 60°
62. Consider the following statements
 I. The value of $\cos 46^\circ - \sin 46^\circ$ is positive.
 II. The value of $\cos 44^\circ - \sin 44^\circ$ is negative.
 Which of the above statement(s) is/are correct? ☑ 2012 II
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
63. What is the value of $\tan 105^\circ$? ☑ 2013 I
 (a) $\frac{\sqrt{3}+1}{\sqrt{3}-1}$ (b) $\frac{\sqrt{3}+1}{1-\sqrt{3}}$ (c) $\frac{\sqrt{3}-1}{\sqrt{3}+1}$ (d) $\frac{\sqrt{3}+2}{\sqrt{3}-1}$
64. If $\sin\theta + 2 \cos\theta = 1$, then what is $2 \sin\theta - \cos\theta$ equal to? ☑ 2013 I
 (a) 0 (b) 1 (c) 2 (d) 4
65. If $\operatorname{cosec}\theta + \cot\theta = c$, then what is $\cos\theta$ equal to? ☑ 2013 I
 (a) $\frac{c}{c^2-1}$ (b) $\frac{c}{c^2+1}$
 (c) $\frac{c^2-1}{c^2+1}$ (d) None of these
66. What is $\tan^4 A - \sec^4 A + \tan^2 A + \sec^2 A$ equal to? ☑ 2013 I
 (a) 0 (b) 1 (c) 2 (d) -1

67. If $A + B = 90^\circ$, then what is the value of $\sqrt{\sin A \sec B - \sin A \cos B}$? ☑ 2013 I
 (a) $\sin A$ (b) $\cos A$ (c) $\tan A$ (d) 0

68. If $\tan A = x + 1$ and $\tan B = x - 1$, then $x^2 \tan(A - B)$ has the value ☑ 2013 I
 (a) 1 (b) x (c) 0 (d) 2

69. What is the value of $(\sin^4 \theta - \cos^4 \theta + 1) \operatorname{cosec}^2 \theta$? ☑ 2013 I
 (a) -2 (b) 0 (c) 1 (d) 2

70. The expression $\frac{\cot x + \operatorname{cosec} x - 1}{\cot x - \operatorname{cosec} x + 1}$ is equal to ☑ 2013 I
 (a) $\frac{\sin x}{1 - \cos x}$ (b) $\frac{1 - \cos x}{\sin x}$ (c) $\frac{1 + \cos x}{\sin x}$ (d) $\frac{\sin x}{1 + \cos x}$

71. What is $\frac{1 - \tan^2 \frac{x}{2}}{1 + \tan^2 \frac{x}{2}}$ equal to? ☑ 2013 I
 (a) $\sin x \cdot \cos x$ (b) $\tan x$ (c) $\sin x$ (d) $\cos x$

72. What is $\tan 15^\circ$ equal to? ☑ 2013 II
 (a) $2 - \sqrt{3}$ (b) $2 + \sqrt{3}$ (c) $1 - \sqrt{3}$ (d) $1 + \sqrt{3}$

73. What is $\frac{\cot 54^\circ}{\tan 36^\circ} + \frac{\tan 20^\circ}{\cot 70^\circ}$ equal to? ☑ 2013 II
 (a) 0 (b) 1 (c) 2 (d) 3

74. If $\cos x = 1/3$, then what is $\sin x \cdot \cot x \cdot \operatorname{cosec} x \cdot \tan x$ equal to? ☑ 2013 II
 (a) $\frac{2}{3}$ (b) $\frac{3}{2}$ (c) 2 (d) 1

75. What is $\sin^2 20^\circ + \sin^2 70^\circ$ equal to? ☑ 2013 II
 (a) 1 (b) 0 (c) -1 (d) $\frac{1}{2}$

76. What is $(1 - \sin^2 \theta)(1 + \tan^2 \theta)$ equal to? ☑ 2013 II
 (a) $\sin^2 \theta$ (b) $\cos^2 \theta$ (c) $\tan^2 \theta$ (d) 1

77. Consider the following
 I. $\tan\left(\frac{\pi}{6}\right)$ II. $\tan\left(\frac{3\pi}{4}\right)$
 III. $\tan\left(\frac{5\pi}{4}\right)$ IV. $\tan\left(\frac{2\pi}{3}\right)$
 Which one of the following is the correct order? ☑ 2013 II
 (a) $I < IV < II < III$ (b) $IV < II < I < III$
 (c) $IV < II < III < I$ (d) $I < IV < III < II$

78. What is $\cos 20^\circ + \cos 100^\circ + \cos 140^\circ$ equal to? ☑ 2014 I
 (a) 2 (b) 1 (c) $1/2$ (d) 0

79. What is $\sin^2(3\pi) + \cos^2(4\pi) + \tan^2(5\pi)$ equal to? ☑ 2014 I
 (a) 0 (b) 1 (c) 2 (d) 3

80. What is the value of $\frac{\cot 224^\circ - \cot 134^\circ}{\cot 226^\circ + \cot 316^\circ}$? ☑ 2014 I
 (a) $-\operatorname{cosec} 88^\circ$ (b) $-\operatorname{cosec} 2^\circ$
 (c) $-\operatorname{cosec} 44^\circ$ (d) $-\operatorname{cosec} 46^\circ$

81. What is the value of $\frac{1 + \sin A}{1 - \sin A} - \frac{1 - \sin A}{1 + \sin A}$? ☑ 2014 I
 (a) $\sec A - \tan A$ (b) $2 \sec A \cdot \tan A$
 (c) $4 \sec A \cdot \tan A$ (d) $4 \operatorname{cosec} A \cdot \cot A$

82. If $A + B + C = \pi$, then what is $\cos(A + B) + \cos C$ equal to? ☑ 2014 I
 (a) 0 (b) $2 \cos C$
 (c) $\cos C - \sin C$ (d) $2 \sin C$

83. The complete solution of $3 \tan^2 x = 1$ is given by ☑ 2014 I
 (a) $x = n\pi \pm \frac{\pi}{3}$ (b) $x = n\pi + \frac{\pi}{3}$
 (c) $x = n\pi \pm \frac{\pi}{6}$ (d) $x = n\pi + \frac{\pi}{6}$
 where, $n \in Z$

84. What is the value of $\cos 36^\circ$? ☑ 2014 I
 (a) $\frac{\sqrt{5} - 1}{4}$ (b) $\frac{\sqrt{5} + 1}{4}$ (c) $\frac{\sqrt{10 + 2\sqrt{5}}}{4}$ (d) $\frac{\sqrt{10 - 2\sqrt{5}}}{4}$

85. Consider the following statements
 I. $\sin |x| + \cos |x|$ is always positive.
 II. $\sin(x^2) + \cos(x^2)$ is always positive. ☑ 2014 I
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

86. Consider the following statements
 I. Value of $\sin \theta$ oscillates between -1 and 1.
 II. Value of $\cos \theta$ oscillates between 0 and 1.
 Which of the above statement(s) is/are correct? ☑ 2014 I
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

87. Consider the following statements
 I. $n \left(\sin^2 67 \frac{1^\circ}{2} - \sin^2 22 \frac{1^\circ}{2} \right) > 1$ for all positive integers $n \geq 2$.
 II. If x is any positive real number, then $nx > 1$ for all positive integers $n \geq 2$.
 Which of the above statement(s) is/are correct? ☑ 2014 I
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

88. Consider the following statements
 I. If 3θ is an acute angle such that $\sin 3\theta = \cos 2\theta$, then the measurement of θ in radian equals to $\pi/10$.
 II. One radian is the angle subtended at the centre of a circle by an arc of the same circle whose length is equal to the diameter of that circle.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II **☑ 2014 I**
 (c) Both I and II (d) Neither I nor II

89. What is $\sqrt{1 + \sin 2\theta}$ equal to? **☑ 2014 II**

- (a) $\cos \theta - \sin \theta$ (b) $\cos \theta + \sin \theta$
 (c) $2 \cos \theta + \sin \theta$ (d) $\cos \theta + 2 \sin \theta$

90. If $\cot A = 2$ and $\cot B = 3$, then what is the value of $\cot(A + B)$? **☑ 2014 II**

- (a) $\frac{\pi}{6}$ (b) π (c) $\frac{\pi}{2}$ (d) $\frac{\pi}{4}$

91. What is $\sin^2 66\frac{1^\circ}{2} - \sin^2 23\frac{1^\circ}{2}$ equal to? **☑ 2014 II**

- (a) $\sin 47^\circ$ (b) $\cos 47^\circ$ (c) $2 \sin 47^\circ$ (d) $2 \cos 47^\circ$

92. What is $\frac{\cos 7x - \cos 3x}{\sin 7x - 2 \sin 5x + \sin 3x}$ equal to? **☑ 2014 II**

- (a) $\tan x$ (b) $\cot x$ (c) $\tan 2x$ (d) $\cot 2x$

93. In a $\triangle ABC$, if $\sin A - \cos B = \cos C$, then what is B equal to? **☑ 2014 II**

- (a) π (b) $\frac{\pi}{3}$ (c) $\frac{\pi}{2}$ (d) $\frac{\pi}{4}$

94. If $\frac{\sin(x+y)}{\sin(x-y)} = \frac{a+b}{a-b}$, then what is $\frac{\tan x}{\tan y}$ equal to? **☑ 2014 II**

- (a) $\frac{b}{a}$ (b) $\frac{a}{b}$ (c) ab (d) 1

95. If $\sin A \sin(60^\circ - A) \sin(60^\circ + A) = k \sin 3A$, then what is k equal to? **☑ 2014 II**

- (a) $1/4$ (b) $1/2$ (c) 1 (d) 4

96. Which one of the following is one of the solutions of the equation $\tan 2\theta \cdot \tan \theta = 1$? **☑ 2014 II**

- (a) $\frac{\pi}{12}$ (b) $\frac{\pi}{6}$ (c) $\frac{\pi}{4}$ (d) $\frac{\pi}{3}$

Directions (Q. Nos. 97-99) Read the following information carefully and answer the questions given below.

Given, $16 \sin^5 x = p \sin 5x + q \sin 3x + r \sin x$

☑ 2014 II

97. What is the value of p ?

- (a) 1 (b) 2 (c) -1 (d) -2

98. What is the value of q ?

- (a) 3 (b) 5 (c) 10 (d) -5

99. What is the value of r ?

- (a) 5 (b) 8 (c) 10 (d) -10

100. The line $y = \sqrt{3}$ meets the graph $y = \tan x$, where $x \in \left(0, \frac{\pi}{2}\right)$, in k points. What is k equal to? **☑ 2014 II**

- (a) One (b) Two (c) Three (d) Infinity

101. Let θ be a positive angle. If the number of degrees in θ is divided by the number of radians in θ , then an irrational number $180/\pi$ results. If the number of degrees in θ is multiplied by the number of radians in θ , then an irrational number $\frac{125\pi}{9}$ results. The angle θ must be equal to **☑ 2015 I**

- (a) 30° (b) 45° (c) 50° (d) 60°

Directions (Q. Nos. 102-103) Let α be the root of the equation $25 \cos^2 \theta + 5 \cos \theta - 12 = 0$, where $\frac{\pi}{2} < \alpha < \pi$. **☑ 2015 I**

102. What is $\tan \alpha$ equal to?

- (a) $-\frac{3}{4}$ (b) $\frac{3}{4}$ (c) $-\frac{4}{3}$ (d) $-\frac{4}{5}$

103. What is $\sin 2\alpha$ equal to?

- (a) $\frac{24}{25}$ (b) $-\frac{24}{25}$ (c) $-\frac{5}{12}$ (d) $-\frac{21}{25}$

104. $(1 - \sin A + \cos A)^2$ is equal to **☑ 2015 I**

- (a) $2(1 - \cos A)(1 + \sin A)$ (b) $2(1 - \sin A)(1 + \cos A)$
 (c) $2(1 - \cos A)(1 - \sin A)$ (d) None of these

105. What is $\frac{\cos \theta}{1 - \tan \theta} + \frac{\sin \theta}{1 - \cot \theta}$ equal to? **☑ 2015 I**

- (a) $\sin \theta - \cos \theta$ (b) $\sin \theta + \cos \theta$
 (c) $2 \sin \theta$ (d) $2 \cos \theta$

106. The value of $\sin^2 5^\circ + \sin^2 10^\circ + \sin^2 15^\circ + \sin^2 20^\circ + \dots + \sin^2 90^\circ$ is **☑ 2015 II**

- (a) 7 (b) 8 (c) 9 (d) $19/2$

107. If $\sin x + \sin y = a$ and $\cos x + \cos y = b$, then

$\tan^2\left(\frac{x+y}{2}\right) + \tan^2\left(\frac{x-y}{2}\right)$ is equal to **☑ 2015 II**

- (a) $\frac{a^4 + b^4 + 4b^2}{a^2b^2 + b^4}$ (b) $\frac{a^4 - b^4 + 4b^2}{a^2b^2 + b^4}$
 (c) $\frac{a^4 - b^4 + 4a^2}{a^2b^2 + a^4}$ (d) None of these

108. If $p = \tan\left(-\frac{11\pi}{6}\right)$, $q = \tan\left(\frac{21\pi}{4}\right)$ and $r = \cot\left(\frac{283\pi}{6}\right)$,

then which of the following is/are correct?

I. The value of $p \times r$ is 2.

II. p , q and r are in GP.

Select the correct answer using the code given below. **☑ 2015 II**

- (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

109. On simplifying $\frac{\sin^3 A + \sin 3A}{\sin A} + \frac{\cos^3 A - \cos 3A}{\cos A}$,

we get **☑ 2015 II**

- (a) $\sin 3A$ (b) $\cos 3A$ (c) $\sin A + \cos A$ (d) 3

HINTS AND SOLUTIONS

$$\begin{aligned}
 1. (b) 35' 30'' &= \left(35 + \frac{1}{2}\right)' = \left(\frac{71}{2}\right)' \\
 &\Rightarrow \left(\frac{71}{2}\right)' = \left(\frac{71}{2} \times \frac{1}{60}\right)^\circ = \left(\frac{71}{120}\right)^\circ \\
 \therefore 114^\circ 35' 30'' &= \left(114 + \frac{71}{120}\right)^\circ \\
 &= \left(\frac{13751}{120}\right)^\circ
 \end{aligned}$$

We know that, $2\pi \text{ rad} = 360^\circ$
 $\Rightarrow \left(\frac{13751}{120}\right)^\circ = \frac{2\pi}{360^\circ} \times \frac{13751}{120}$
 $= 2.0008069 \text{ rad}$

$\therefore 114^\circ 35' 30'' = 2 \text{ rad (approx)}$

$$\begin{aligned}
 2. (b) \text{ Angle traced by hour hand in } 1 \text{ h} &= 30^\circ \\
 \text{Angle traced by hour hand in } \frac{101}{12} \text{ h} & \\
 &= \left(30 \times \frac{101}{12}\right)^\circ = 252^\circ 30'
 \end{aligned}$$

Angle traced by minute hand in 1 min = 6°
 Angle traced by minute hand in 25 min
 $= (25 \times 6)^\circ = 150^\circ$

\therefore Required angle
 $= (252^\circ 30' - 150^\circ) = 102^\circ 30'$

$$\begin{aligned}
 3. (a) \sin\left(292\frac{1}{2}\right)^\circ &= \sin\left(\frac{585^\circ}{2}\right) \\
 &= -\sqrt{\frac{1 - \cos 585^\circ}{2}} \\
 &= -\sqrt{\frac{1 - \cos 225^\circ}{2}} = -\sqrt{\frac{1 + \cos 45^\circ}{2}} \\
 &= -\sqrt{\frac{1 + 1/\sqrt{2}}{2}} = -\sqrt{\frac{\sqrt{2} + 1}{2\sqrt{2}}} \\
 &= -\sqrt{\frac{\sqrt{2} + 1}{2\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}}} = -\frac{1}{2}\sqrt{\sqrt{2} + 2}
 \end{aligned}$$

$$\begin{aligned}
 4. (d) \left(1 + \cos 67\frac{1^\circ}{2}\right) \left(1 + \cos 112\frac{1^\circ}{2}\right) & \\
 &= \left(1 + \cos 67\frac{1^\circ}{2}\right) \left\{1 + \cos\left(180^\circ - 67\frac{1^\circ}{2}\right)\right\} \\
 &= \left(1 + \cos 67\frac{1^\circ}{2}\right) \left(1 - \cos 67\frac{1^\circ}{2}\right) \\
 &= 1 - \cos^2 67\frac{1^\circ}{2} = \sin^2 67\frac{1^\circ}{2} \\
 &= \frac{1 - \cos 135^\circ}{2} \\
 &= \frac{\sqrt{2} + 1}{2\sqrt{2}}
 \end{aligned}$$

which is an irrational number and is less than 1.

$$\begin{aligned}
 5. (a) \cos\left(\frac{\pi}{9}\right) + \cos\left(\frac{\pi}{3}\right) + \cos\left(\frac{5\pi}{9}\right) & \\
 &+ \cos\left(\frac{7\pi}{9}\right) \\
 &= \cos(20^\circ) + \cos(60^\circ) + \cos(100^\circ) \\
 &+ \cos(140^\circ) \\
 &= \cos 20^\circ + \frac{1}{2} + 2 \cos 120^\circ \cos 20^\circ \\
 &= \cos 20^\circ + \frac{1}{2} - 2 \sin 30^\circ \cos 20^\circ \\
 &= \cos 20^\circ + \frac{1}{2} - \cos 20^\circ = \frac{1}{2}
 \end{aligned}$$

$$\begin{aligned}
 6. (b) \tan \frac{7\pi}{6} &= \tan\left(\pi + \frac{\pi}{6}\right) = \tan \frac{\pi}{6} = \frac{1}{\sqrt{3}} \\
 \tan \frac{9\pi}{4} &= \tan\left(2\pi + \frac{\pi}{4}\right) = \tan \frac{\pi}{4} = 1 \\
 \tan \frac{10\pi}{3} &= \tan\left(2\pi + \frac{4\pi}{3}\right) \\
 &= \tan\left(\frac{4\pi}{3}\right) = \tan\left(\pi + \frac{\pi}{3}\right) \\
 &= \tan \pi / 3 = \sqrt{3}
 \end{aligned}$$

Clearly, $1/\sqrt{3}, 1, \sqrt{3}$ are in GP.

$$\begin{aligned}
 7. (c) \text{ Given expression} & \\
 &= \frac{\sin x + \sin 7x + \sin 3x + \sin 5x}{\cos x + \cos 7x + \cos 3x + \cos 5x} \\
 &= \frac{2 \sin 4x \cos 3x + 2 \sin 4x \cos x}{2 \cos 4x \cos 3x + 2 \cos 4x \cos x} \\
 &= \frac{2 \sin 4x [\cos 3x + \cos x]}{2 \cos 4x [\cos 3x + \cos x]} = \tan 4x
 \end{aligned}$$

$$\begin{aligned}
 8. (d) \text{ We have, } (m^2 - n^2) & \\
 &= (\tan \theta + \sin \theta)^2 - (\tan \theta - \sin \theta)^2 \\
 &= 4 \tan \theta \sin \theta
 \end{aligned}$$

$$\begin{aligned}
 \text{and } \sqrt{mn} &= \sqrt{\tan^2 \theta - \sin^2 \theta} \\
 &= \sqrt{\frac{\sin^2 \theta}{\cos^2 \theta} - \sin^2 \theta} \\
 &= \sin \theta \sqrt{\frac{1 - \cos^2 \theta}{\cos^2 \theta}} \\
 &= \sin \theta \tan \theta
 \end{aligned}$$

$$\therefore (m^2 - n^2) = 4\sqrt{mn}$$

$$\begin{aligned}
 9. (a) \cos \theta &= \frac{a \cos \phi + b}{a + b \cos \phi} \\
 \text{Applying componendo and dividendo} & \\
 \text{rule,} & \\
 \frac{1 - \cos \theta}{1 + \cos \theta} &= \frac{a(1 - \cos \phi) - b(1 - \cos \phi)}{a(1 + \cos \phi) + b(1 + \cos \phi)}
 \end{aligned}$$

$$\Rightarrow \tan^2 \frac{\theta}{2} = \frac{a-b}{a+b} \tan^2 \frac{\phi}{2}$$

$$\therefore \tan \frac{\theta}{2} = \sqrt{\frac{a-b}{a+b}} \tan \frac{\phi}{2}$$

$$\begin{aligned}
 10. (c) \text{ Given, } A + B &= \alpha \\
 \text{and } A - B &= x \\
 \text{Also, } \frac{\tan A}{\tan B} &= \frac{2}{1} \Rightarrow \frac{\sin A \cdot \cos B}{\sin B \cdot \cos A} = \frac{2}{1} \\
 \Rightarrow \frac{\sin(A+B) + \sin(A-B)}{\sin(A+B) - \sin(A-B)} &= \frac{2}{1} \\
 \Rightarrow \frac{\sin \alpha + \sin x}{\sin \alpha - \sin x} &= \frac{2}{1}
 \end{aligned}$$

Using componendo and dividendo rule,

$$\begin{aligned}
 \frac{2 \sin \alpha}{2 \sin x} &= \frac{2+1}{2-1} \Rightarrow \frac{\sin \alpha}{\sin x} = \frac{3}{1} \\
 \Rightarrow \sin x &= \frac{1}{3} (\sin \alpha)
 \end{aligned}$$

$$\begin{aligned}
 11. (c) \text{ Let } f(x) &= (3 \cos x + 4 \sin x) + 5 \\
 \text{We know that,} & \\
 -\sqrt{a^2 + b^2} &\leq a \cos x + b \sin x \leq \sqrt{a^2 + b^2} \\
 \Rightarrow -\sqrt{3^2 + 4^2} &\leq 3 \cos x + 4 \sin x \leq \sqrt{3^2 + 4^2} \\
 &\leq \sqrt{3^2 + 4^2} \\
 \Rightarrow -\sqrt{25} &\leq 3 \cos x + 4 \sin x \leq \sqrt{25} \\
 \Rightarrow -5 &\leq 3 \cos x + 4 \sin x \leq 5 \\
 \Rightarrow -5 + 5 &\leq (3 \cos x + 4 \sin x + 5) \\
 &\leq 5 + 5 \Rightarrow 0 \leq f(x) \leq 10
 \end{aligned}$$

Hence, the maximum value of $f(x)$ is 10.

$$\begin{aligned}
 12. (c) \text{ Given, } \cot B - \cot A &= y \quad \dots (i) \\
 \text{and } \tan A - \tan B &= x \\
 \Rightarrow \frac{1}{\cot A} - \frac{1}{\cot B} &= x
 \end{aligned}$$

$$\Rightarrow \frac{\cot B - \cot A}{\cot A \cdot \cot B} = x$$

$$\Rightarrow \cot A \cdot \cot B = \frac{y}{x} \quad [\text{using Eq. (i)}]$$

$$\therefore \cot(A-B) = \frac{\cot A \cdot \cot B + 1}{\cot B - \cot A}$$

$$= \frac{\frac{y}{x} + 1}{\frac{y}{x}} = \frac{1}{x} + \frac{1}{y}$$

$$\begin{aligned}
 13. (a) m^2 - n^2 &= (\cos A + \cos B)^2 \\
 &\quad - (\sin A + \sin B)^2 \\
 &= \cos^2 A + \cos^2 B + 2 \cos A \cos B \\
 &\quad - \sin^2 A - \sin^2 B - 2 \sin A \sin B \\
 &= (\cos^2 A - \sin^2 A) + (\cos^2 B - \sin^2 B) \\
 &\quad + 2[\cos A \cos B - \sin A \sin B] \\
 &= \cos 2A + \cos 2B + 2 \cos(A+B) \\
 &= 2 \cos(A+B) \cdot \cos(A-B) + 2 \cos(A+B) \\
 &= 2 \cos(A+B)[\cos(A-B) + 1] \quad \dots (i) \\
 m^2 + n^2 &= \cos^2 A + \cos^2 B + \sin^2 A \\
 &\quad + \sin^2 B + 2 \cos A \cos B + 2 \sin A \sin B
 \end{aligned}$$

$$= 1 + 1 + 2 \cos(A - B)$$

$$= 2[1 + \cos(A - B)] \quad \dots(ii)$$

On dividing Eq. (i) by Eq. (ii), we get

$$\cos(A + B) = \frac{m^2 - n^2}{m^2 + n^2}$$

14. (c) $\cos A \cos B = \frac{1}{2}(2 \cos A \cos B)$

$$= \frac{1}{2}[\cos(A + B) + \cos(A - B)]$$

$$= \frac{1}{2}[\cos 90^\circ + \cos(A - B)]$$

$$= \frac{1}{2} \cos(A - B)$$

$\therefore -1 \leq \cos(A - B) \leq 1$

$$\Rightarrow -\frac{1}{2} \leq \frac{1}{2} \cos(A - B) \leq \frac{1}{2}$$

15. (d) We have,

$$\Rightarrow \tan(x + 100^\circ) = \tan(x + 50^\circ)$$

$$\Rightarrow \frac{\tan(x + 100^\circ)}{\tan(x + 50^\circ)} = \tan(x + 50^\circ) \tan(x - 50^\circ)$$

$$\Rightarrow \frac{\tan(x + 100^\circ)}{\tan(x - 50^\circ)} = \tan(x + 50^\circ) \tan(x - 50^\circ)$$

$$\Rightarrow \frac{\sin(x + 100^\circ) \cos(x - 50^\circ)}{\cos(x + 100^\circ) \sin(x - 50^\circ)} = \frac{\sin(x + 50^\circ) \sin(x - 50^\circ)}{\cos(x + 50^\circ) \cos(x - 50^\circ)}$$

$$\Rightarrow \frac{\sin(2x + 50^\circ)}{\sin 150^\circ} = \frac{\cos 50^\circ}{-\cos(2x + 50^\circ)}$$

[applying componendo and dividendo]

$$\Rightarrow \sin(2x + 50^\circ) \cos(2x + 50^\circ) = -\sin 150^\circ \cos 50^\circ$$

$$\Rightarrow 2 \sin(2x + 50^\circ) \cos(2x + 50^\circ) = -\cos 50^\circ$$

$$\Rightarrow \sin(4x + 100^\circ) = \sin(270^\circ - 50^\circ)$$

$$\Rightarrow \sin(4x + 100^\circ) = \sin 220^\circ$$

$$\Rightarrow 4x + 100^\circ = 220^\circ$$

$$\Rightarrow x = 30^\circ$$

16. (b) We have,

$$(1 - \cos 2\alpha) = 1 - \frac{3 \cos 2\beta - 1}{3 - \cos 2\beta}$$

$$= \frac{3 - \cos 2\beta - 3 \cos 2\beta + 1}{(3 - \cos 2\beta)}$$

$$= \frac{4(1 - \cos 2\beta)}{(3 - \cos 2\beta)}$$

and $(1 + \cos 2\alpha) = 1 + \frac{3 \cos 2\beta - 1}{3 - \cos 2\beta}$

$$= \frac{3 - \cos 2\beta + 3 \cos 2\beta - 1}{3 - \cos 2\beta}$$

$$= \frac{2(1 + \cos 2\beta)}{(3 - \cos 2\beta)}$$

$\therefore \frac{1 - \cos 2\alpha}{1 + \cos 2\alpha} = \frac{2(1 - \cos 2\beta)}{2(1 + \cos 2\beta)}$

$$\Rightarrow \frac{2 \sin^2 \alpha}{2 \cos^2 \alpha} = \frac{4 \sin^2 \beta}{4 \cos^2 \beta}$$

$$\Rightarrow \tan^2 \alpha \cot^2 \beta = 2$$

$$\Rightarrow \tan \alpha \cot \beta = \sqrt{2}$$

17. (c) $\sin x + \sin^2 x = 1$

$$\Rightarrow \sin x = 1 - \sin^2 x = \cos^2 x$$

$$\therefore \cos^8 x + 2 \cos^6 x + \cos^4 x = \sin^4 x + 2 \sin^3 x + \sin^2 x$$

$$= (\sin^2 x)^2 + (\sin x)^2 + 2 \sin x (\sin^2 x)$$

$$= (\sin^2 x + \sin x)^2 = 1$$

18. (b) We have,

$$x = y \cos \frac{2\pi}{3} = z \cos \frac{4\pi}{3} = k \text{ [say]}$$

$$\frac{1}{x} = \frac{1}{k}, \frac{1}{y} = \frac{\cos 2\pi/3}{k}, \frac{1}{z} = \frac{\cos 4\pi/3}{k}$$

$$\therefore \frac{1}{x} + \frac{1}{y} + \frac{1}{z} = \frac{1}{k} \left(1 + \cos \frac{2\pi}{3} + \cos \frac{4\pi}{3} \right)$$

$$\Rightarrow \frac{xy + yz + zx}{xyz} = 1 - \frac{1}{2} - \frac{1}{2} = 0$$

$$\Rightarrow xy + yz + zx = 0$$

19. (d) I. $(\sec \theta + \tan \theta)^{-1}$

$$= (\sec 120^\circ + \tan 120^\circ)^{-1}$$

$$= [\sec(6\pi + 120^\circ) + \tan(6\pi + 120^\circ)]^{-1}$$

$$= (\sec 120^\circ + \tan 120^\circ)^{-1}$$

$$= (-\operatorname{cosec} 30^\circ - \cot 30^\circ)^{-1}$$

$$= (-2 - \sqrt{3})^{-1} = -\frac{1}{2 + \sqrt{3}} \text{ (negative)}$$

II. $\operatorname{cosec} \theta - \cot \theta$

$$= \operatorname{cosec}(6\pi + 120^\circ) - \cot(6\pi + 120^\circ)$$

$$= \operatorname{cosec} 120^\circ - \cot 120^\circ$$

$$= \sec 30^\circ + \tan 30^\circ$$

$$= \frac{2}{\sqrt{3}} + \sqrt{3} \text{ (positive)}$$

Hence, both Statements are incorrect.

20. (a) In first quadrant, $\sin \theta$ is increasing.

$$\cos 66^\circ = \cos(90^\circ - 24^\circ) = \sin 24^\circ$$

$$\sin 24^\circ < \sin 66^\circ \Rightarrow \cos 66^\circ < \sin 66^\circ$$

So, Statement I is correct.

Now, $\cos 26^\circ = \cos(90^\circ - 64^\circ) = \sin 64^\circ$

$$\sin 64^\circ > \sin 26^\circ \Rightarrow \cos 26^\circ > \sin 26^\circ$$

So, Statement II is not correct.

21. (c) The opposite angles of a cyclic quadrilateral are supplementary.

$$\therefore A + C = 180^\circ \text{ and } B + D = 180^\circ$$

$$\Rightarrow A = 180^\circ - C \text{ and } B = 180^\circ - D$$

$$\Rightarrow \cos A = \cos(180^\circ - C) = -\cos C$$

$$\cos B = \cos(180^\circ - D) = -\cos D$$

$$\Rightarrow \cos A + \cos B = -(\cos C + \cos D) \quad \dots(i)$$

So, Statement I is correct.

Now, $\cos(\pi + A) + \cos(\pi - B)$

$$+ \cos(\pi - C) - \sin\left(\frac{\pi}{2} - D\right)$$

$$= -\cos A - \cos B - \cos C - \cos D$$

$$= -(\cos A + \cos B + \cos C + \cos D)$$

$$= -(-\cos C - \cos D + \cos C + \cos D)$$

$$= 0 \quad \text{[using Eq. (i)]}$$

So, Statement II is correct.
Hence, both Statements are correct.

22. (a)

23. (a) We have, $z = 135^\circ = \frac{3\pi}{4}$

$$\therefore \sin z + \cos z = \sin \frac{3\pi}{4} + \cos \frac{3\pi}{4}$$

$$= \sin\left(\pi - \frac{\pi}{4}\right) + \cos\left(\pi - \frac{\pi}{4}\right)$$

$$= \sin \frac{\pi}{4} - \cos \frac{\pi}{4} = \frac{1}{\sqrt{2}} - \frac{1}{\sqrt{2}} = 0$$

24. (b) We have, $x + y + z = 180^\circ$

$$\Rightarrow x + y = 180^\circ - z = 180^\circ - 135^\circ = 45^\circ$$

$$\therefore \tan(x + y) = \tan 45^\circ = 1$$

$$\Rightarrow \frac{\tan x + \tan y}{1 - \tan x \tan y} = 1$$

$$\Rightarrow \tan x + \tan y = 1 - \tan x \tan y$$

$$\Rightarrow \tan x + \tan x \tan y + \tan y = 1 \dots(i)$$

Now, $(1 + \tan x)(1 + \tan y)$

$$= 1 + \tan x + \tan y + \tan x \cdot \tan y$$

$$= 1 + 1 = 2 \quad \text{[using Eq. (i)]}$$

25. (c) We have,

$$8x^2 - 2x - 1 = 8(x - \cos \alpha)(x - \cos \beta)$$

Put $x = 1$, then

$$5 = 8(1 - \cos \alpha)(1 - \cos \beta)$$

$$\Rightarrow 5 = 8\left(2 \sin^2 \frac{\alpha}{2}\right)\left(2 \sin^2 \frac{\beta}{2}\right)$$

$$\Rightarrow \sin \frac{\alpha}{2} \cdot \sin \frac{\beta}{2} = \frac{\sqrt{5}}{\sqrt{32}} = \frac{\sqrt{5}}{4\sqrt{2}}$$

26. (b) $8x^2 - 2x - 1 = 8(x - \cos \alpha)(x - \cos \beta)$

Put $x = -1$, then

$$9 = 8(-1 - \cos \alpha)(-1 - \cos \beta)$$

$$\Rightarrow 9 = 8(1 + \cos \alpha)(1 + \cos \beta)$$

$$\Rightarrow 9 = 8\left(2 \cos^2 \frac{\alpha}{2}\right)\left(2 \cos^2 \frac{\beta}{2}\right)$$

$$\therefore \cos \frac{\alpha}{2} \cdot \cos \frac{\beta}{2} = \frac{\sqrt{9}}{\sqrt{32}} = \frac{3}{4\sqrt{2}}$$

27. (b) $\sec x + \tan^3 x \operatorname{cosec} x$

$$= \sec x \left(1 + \tan^3 x \frac{\operatorname{cosec} x}{\sec x} \right)$$

$$= \sec x (1 + \tan^2 x)$$

$$= \sec x (\sec^2 x) = \sec^3 x$$

$$= (\sec^2 x)^{3/2} = (1 + \tan^2 x)^{3/2}$$

$$= (2 - e^2)^{3/2}$$

28. (c) $\cos 2x = \frac{1 - \tan^2 x}{1 + \tan^2 x}$

$$= \frac{1 - (1 - e^2)}{1 + (1 - e^2)}$$

$$= \frac{e^2}{2 - e^2}$$

29. (a) $\sec^4 x - \sec^2 x = \sec^2 x(\sec^2 x - 1)$
 $= (1 + \tan^2 x)(\tan^2 x)$
 $= (2 - e^2)(1 - e^2) = (e^2 - 2)(e^2 - 1)$

Sol. (Q. Nos. 30-33) Let $BD = p, DE = x \Rightarrow$

$AC = 4p$
 Let E be the mid-point of AC , then
 $AE = EC = BE = 2p$

Now, in $\triangle BDE$,
 $(BE)^2 = (BD)^2 + (ED)^2$
 $\Rightarrow (2p)^2 = (p)^2 + (x)^2$
 $\Rightarrow 4p^2 = p^2 + x^2 \Rightarrow x^2 = 3p^2$
 $\Rightarrow x = \sqrt{3} \cdot p$
 $\therefore AD = 2p - x = 2p - \sqrt{3}p$
 and $DC = 2p + x = 2p + \sqrt{3}p$

30. (a) In $\triangle BAD$, $\tan A = \frac{p}{2p - \sqrt{3}p}$
 $= \frac{1}{2 - \sqrt{3}} \times \frac{2 + \sqrt{3}}{2 + \sqrt{3}}$
 $\Rightarrow \tan A = \frac{2 + \sqrt{3}}{1} = \tan 75^\circ$
 $\Rightarrow A = 75^\circ$

In $\triangle BDC$, $\tan C = \frac{p}{2p + \sqrt{3}p}$
 $= \frac{2 - \sqrt{3}}{(2 + \sqrt{3})(2 - \sqrt{3})} = 2 - \sqrt{3}$
 $\Rightarrow \tan C = \tan 15^\circ \Rightarrow C = 15^\circ$

31. (a) In $\triangle ABD$, $\tan B = \frac{AD}{BD}$
 $= \frac{2p - \sqrt{3}p}{p} = 2 - \sqrt{3} = \tan 15^\circ$
 $\therefore \angle ABD = 15^\circ$

32. (b) $\frac{AD}{DC} = \frac{2p - \sqrt{3}p}{2p + \sqrt{3}p} = \frac{2 - \sqrt{3}}{2 + \sqrt{3}} \times \frac{2 - \sqrt{3}}{2 - \sqrt{3}}$
 $= \frac{4 + 3 - 4\sqrt{3}}{4 - 3} = \frac{7 - 4\sqrt{3}}{1}$
 $\Rightarrow AD : DC = (7 - 4\sqrt{3}) : 1$

33. (d) $\tan(A - C) = \tan(75^\circ - 15^\circ)$
 $= \tan 60^\circ = \sqrt{3}$

34. (b) $\frac{1}{x^2} + \frac{1}{y^2} = \frac{1}{\operatorname{cosec}^4 \theta} + \frac{1}{\sec^4 \theta}$
 $= \sin^4 \theta + \cos^4 \theta$
 $= (\sin^2 \theta + \cos^2 \theta)^2 - 2\sin^2 \theta \cos^2 \theta$
 $= 1 - 2\sin^2 \theta \cos^2 \theta$
 $= 1 - 2\left(1 - \frac{1}{z}\right) = \frac{2 - z}{z}$

35. (b) $z = \frac{1}{1 - \sin^2 \theta \cos^2 \theta} = \frac{1}{1 - \left(\frac{1}{xy}\right)}$
 $\Rightarrow z = \frac{xy}{xy - 1}$

$\Rightarrow xyz - z = xy$
 $\Rightarrow xyz = xy + z$

36. (a) $\sin^2 2\theta = 4\sin^2 \theta \cdot \cos^2 \theta = \frac{4}{y}$
 $\cos^2 2\theta = (2\cos^2 \theta - 1)^2$
 $= \left(\frac{2}{y} - 1\right)^2 = \frac{(2 - y)^2}{y^2}$
 $\therefore \tan^2 2\theta = \frac{4}{xy} \times \frac{y^2}{(2 - y)^2} = \frac{4y}{x(2 - y)^2}$

37. (c) I. $\frac{1}{x} + \frac{1}{y} = \frac{1}{\operatorname{cosec}^2 \theta} + \frac{1}{\sec^2 \theta}$
 $= \sin^2 \theta + \cos^2 \theta = 1$

So, Statement I is correct.

II. We have, $\frac{1}{x} + \frac{1}{y} = 1 \Rightarrow x + y = xy$

$\therefore xyz = xy + z = x + y + z$
 $\Rightarrow 1 = \frac{1}{xy} + \frac{1}{yz} + \frac{1}{zx}$

So, Statement II is also correct.

38. (c)

39. (c) $\sin(1920^\circ) = \sin(360^\circ \times 5 + 120^\circ)$
 $= \sin 120^\circ = \sin(90^\circ + 30^\circ)$
 $= \cos 30^\circ = \frac{\sqrt{3}}{2}$
 $[\because \sin(90^\circ + \theta) = \cos \theta]$

40. (a) Given that, $\frac{\sin \theta}{\operatorname{cosec} \theta} + \frac{\cos \theta}{\sec \theta}$
 $= \frac{\sin \theta}{(1/\sin \theta)} + \frac{\cos \theta}{(1/\cos \theta)}$
 $= \sin^2 \theta + \cos^2 \theta = 1$

41. (c)

42. (c) Given, $\operatorname{cosec} \theta - \cot \theta = \frac{1}{\sqrt{3}}$
 $\Rightarrow \frac{1}{\sin \theta} - \frac{\cos \theta}{\sin \theta} = \frac{1}{\sqrt{3}}$
 $\Rightarrow \frac{(1 - \cos \theta)}{\sin \theta} = \frac{1}{\sqrt{3}}$
 $\Rightarrow \frac{2 \sin^2 \frac{\theta}{2}}{2 \sin \frac{\theta}{2} \cdot \cos \frac{\theta}{2}} = \frac{1}{\sqrt{3}}$

$\Rightarrow \tan \frac{\theta}{2} = \tan 30^\circ \Rightarrow \frac{\theta}{2} = 30^\circ$

$\Rightarrow \theta = 60^\circ$
 $\therefore \cos \theta = \cos 60^\circ = \frac{1}{2}$

43. (a) Given that, $\cot A \cdot \cot B = 2 \dots (i)$
 $\Rightarrow \frac{\cos A \cdot \cos B}{\sin A \cdot \sin B} = \frac{2}{1}$
 $\Rightarrow \frac{\cos A \cdot \cos B - \sin A \cdot \sin B}{\cos A \cdot \cos B + \sin A \cdot \sin B} = \frac{2 - 1}{2 + 1}$

[by componendo and dividendo rule]

$\Rightarrow \frac{\cos(A + B)}{\cos(A - B)} = \frac{1}{3}$

$\Rightarrow \cos(A + B) \cdot \sec(A - B) = \frac{1}{3}$

44. (a) Let $f(\theta) = \sin 3\theta \cdot \cos 2\theta$
 $+ \cos 3\theta \cdot \sin 2\theta$
 $= \sin(3\theta + 2\theta) = \sin 5\theta$
 $[\because \sin(A + B) = \sin A \cdot \cos B$
 $+ \cos A \cdot \sin B]$

We know that,

$-1 \leq \sin 5\theta \leq 1 \Rightarrow -1 \leq f(\theta) \leq 1$

So, the maximum value of $f(\theta)$ is 1.

45. (c) Given, $\sec^2 \left\{ \tan^{-1} \left(\frac{5}{11} \right) \right\}$
 $= 1 + \tan^2 \left\{ \tan^{-1} \left(\frac{5}{11} \right) \right\}$
 $= 1 + \left[\tan \left\{ \tan^{-1} \left(\frac{5}{11} \right) \right\} \right]^2$
 $= 1 + \left(\frac{5}{11} \right)^2 = 1 + \frac{25}{121} = \frac{146}{121}$

46. (d) Let $f(A) = \sin A \cdot \cos A \cdot \tan A$
 $+ \cos A \cdot \sin A \cdot \cot A$
 $= \sin A \cdot \cos A \cdot \frac{\sin A}{\cos A}$
 $+ \cos A \cdot \sin A \cdot \frac{\cos A}{\sin A}$
 $= \sin^2 A + \cos^2 A = 1$
 $[\because \sin^2 \theta + \cos^2 \theta = 1]$

47. (c) $\sec \theta + \tan \theta = 4 \dots (i)$
 As we know that, $\sec^2 \theta - \tan^2 \theta = 1$
 $\Rightarrow (\sec \theta + \tan \theta)(\sec \theta - \tan \theta) = 1$
 $\Rightarrow \sec \theta - \tan \theta = \frac{1}{4} \dots (ii)$

On adding Eqs. (i) and (ii), we get

$2 \sec \theta = 4 + \frac{1}{4} = \frac{17}{4}$

$\Rightarrow \sec \theta = \frac{17}{8} \Rightarrow \cos \theta = \frac{8}{17}$

$\therefore \sin \theta = \sqrt{1 - \left(\frac{8}{17}\right)^2} = \frac{15}{17}$

48. (b) We have, $\sin 420^\circ \cdot \cos 390^\circ$
 $+ \cos(-300^\circ) \cdot \sin(-330^\circ)$
 $= \sin(360^\circ + 60^\circ) \cdot \cos(360^\circ + 30^\circ)$
 $+ \cos 300^\circ (-\sin 330^\circ)$
 $= \sin 60^\circ \cdot \cos 30^\circ - \cos(360^\circ - 60^\circ)$
 $\cdot \sin(360^\circ - 30^\circ)$

$$\begin{aligned} &= \sin 60^\circ \cdot \cos 30^\circ - \cos 60^\circ \cdot (-\sin 30^\circ) \\ &= \sin 60^\circ \cdot \cos 30^\circ + \cos 60^\circ \cdot \sin 30^\circ \\ &= \sin (60^\circ + 30^\circ) = \sin 90^\circ = 1 \end{aligned}$$

49. (b) Given, $\theta = 18^\circ$

$$\begin{aligned} \text{Now, we have } 4\sin^2\theta + 2\sin\theta &= 4\sin^2(18^\circ) + 2\sin(18^\circ) \\ &= 4 \left\{ \frac{\sqrt{5}-1}{4} \right\}^2 + 2 \left\{ \frac{\sqrt{5}-1}{4} \right\} \\ &= \frac{4(5+1-2\sqrt{5})}{16} + \frac{(\sqrt{5}-1)}{2} \\ &= \frac{3-\sqrt{5}}{2} + \frac{\sqrt{5}-1}{2} = 1 \end{aligned}$$

50. (a) $\tan\left(\frac{\pi}{12}\right) = \tan\left(\frac{180^\circ}{12^\circ}\right) = \tan 15^\circ$

$$\begin{aligned} &= \tan(45^\circ - 30^\circ) = \frac{\tan 45^\circ - \tan 30^\circ}{1 + \tan 45^\circ \cdot \tan 30^\circ} \\ &= \frac{1 - \frac{1}{\sqrt{3}}}{1 + \frac{1}{\sqrt{3}}} = \frac{\sqrt{3}-1}{\sqrt{3}+1} \times \frac{\sqrt{3}-1}{\sqrt{3}-1} \\ &= \frac{(\sqrt{3}-1)^2}{3-1} = \frac{3+1-2\sqrt{3}}{2} = 2-\sqrt{3} \end{aligned}$$

51. (b)

I. $1^\circ = \frac{\pi}{180}$ radian $= \frac{3.14}{180} = 0.017$
 $= 0.02$ (approx)

which is equal to 0.02.

II. 1 radian $= \frac{180}{\pi}$ degree
 $= \frac{180}{3.14} = 57.32$ degree

Which is greater than 45° .

Sol. (Q. Nos. 52-54)

Given that, $\sin(A+B) = \frac{1}{2}$
 $\Rightarrow \sin(A+B) = \sin \frac{\pi}{2}$
 $\Rightarrow A+B = \frac{\pi}{2}$... (i)

and $\sin(A-B) = \frac{1}{2}$
 $\Rightarrow \sin(A-B) = \sin \frac{\pi}{3}$
 $\Rightarrow A-B = \frac{\pi}{3}$... (ii)

On adding Eqs. (i) and (ii), we get
 $2A = \frac{2\pi}{3} \Rightarrow A = \frac{\pi}{3}$ and $B = \frac{\pi}{6}$

52. (b)

53. (c) Now, $\tan(A+2B) \cdot \tan(2A+B)$

$$\begin{aligned} &= \tan\left(\frac{\pi}{3} + \frac{\pi}{3}\right) \cdot \tan\left(\frac{2\pi}{3} + \frac{\pi}{6}\right) \\ &= \tan\left(\frac{2\pi}{3}\right) \cdot \tan\left(\frac{5\pi}{6}\right) \end{aligned}$$

$$\begin{aligned} &= \tan\left(\frac{\pi}{2} + \frac{\pi}{6}\right) \cdot \tan\left(\frac{\pi}{2} + \frac{\pi}{3}\right) \\ &= \left(-\cot \frac{\pi}{6}\right) \left(-\cot \frac{\pi}{3}\right) = -(\sqrt{3}) \cdot \left(-\frac{1}{\sqrt{3}}\right) \\ &= 1 \end{aligned}$$

54. (b) Now, $\sin^2 A - \sin^2 B$

$$\begin{aligned} &= \sin^2(\pi/3) - \sin^2(\pi/6) \\ &= \left(\frac{\sqrt{3}}{2}\right)^2 - \left(\frac{1}{2}\right)^2 = \frac{3}{4} - \frac{1}{4} = \frac{2}{4} = \frac{1}{2} \end{aligned}$$

55. (c)

56. (b) $\tan(-585^\circ) = -\tan(585^\circ)$
 $= -\tan(180^\circ \times 3 + 45^\circ)$
 $= -\tan 45^\circ = -1$

57. (c) $\because \sec \alpha = \frac{13}{5} \Rightarrow \cos \alpha = \frac{5}{13}$

$$\begin{aligned} \Rightarrow \sin \alpha &= \sqrt{1 - \cos^2 \alpha} = \sqrt{1 - \frac{25}{169}} \\ &= \sqrt{\frac{144}{169}} = -\frac{12}{13} \end{aligned}$$

Since, $\sin \alpha$ is negative in fourth quadrant, i.e. $270^\circ < \alpha < 360^\circ$.

58. (a) $\sin 15^\circ = \sin(45^\circ - 30^\circ)$

$$\begin{aligned} &= \sin 45^\circ \cos 30^\circ - \cos 45^\circ \sin 30^\circ \\ &= \frac{1}{\sqrt{2}} \times \frac{\sqrt{3}}{2} - \frac{1}{\sqrt{2}} \times \frac{1}{2} = \frac{\sqrt{3}-1}{2\sqrt{2}} \end{aligned}$$

59. (c)

60. (d) $\because \sin 18^\circ = \frac{\sqrt{5}-1}{4}$

and $\cos 36^\circ = \frac{1}{4}(\sqrt{5}+1)$

$$\begin{aligned} \therefore \sin 18^\circ \cos 36^\circ &= \left(\frac{\sqrt{5}-1}{4}\right) \frac{1}{4}(\sqrt{5}+1) \\ &= \frac{(5-1)}{16} = \frac{4}{16} = \frac{1}{4} \end{aligned}$$

61. (a) Given that, A and B are acute angles.
 i.e. $A < 90^\circ$ and $B < 90^\circ$ and
 $\sin A = \frac{2}{\sqrt{5}}$, $\cos B = \frac{1}{\sqrt{10}}$

We know that, $\sin^2 \theta + \cos^2 \theta = 1$

$$\therefore \cos A = \sqrt{1 - \sin^2 A} = \sqrt{1 - \frac{4}{5}} = \frac{1}{\sqrt{5}}$$

$$\sin B = \sqrt{1 - \cos^2 B} = \sqrt{1 - \frac{1}{10}} = \frac{3}{\sqrt{10}}$$

$$\begin{aligned} \therefore \sin(A+B) &= \sin A \cdot \cos B + \cos A \cdot \sin B \\ &= \frac{2}{\sqrt{5}} \cdot \frac{1}{\sqrt{10}} + \frac{1}{\sqrt{5}} \cdot \frac{3}{\sqrt{10}} \\ &= \frac{2+3}{\sqrt{5}\sqrt{10}} = \frac{5}{\sqrt{5}\sqrt{10}} = \frac{\sqrt{5}}{\sqrt{10}} \\ &= \frac{1}{\sqrt{2}} = \sin 135^\circ \end{aligned}$$

$$\therefore A+B = 135^\circ$$

62. (d)

63. (b) $\tan 105^\circ = \tan(60^\circ + 45^\circ)$

$$\begin{aligned} &= \frac{\tan 60^\circ + \tan 45^\circ}{1 - \tan 60^\circ \cdot \tan 45^\circ} \\ &= \frac{\sqrt{3} + 1}{1 - \sqrt{3} \cdot 1} = \frac{\sqrt{3} + 1}{1 - \sqrt{3}} \end{aligned}$$

64. (c) Given equation, $\sin \theta + 2\cos \theta = 1$
 On squaring both sides, we get

$$\begin{aligned} &(\sin \theta + 2\cos \theta)^2 = 1 \\ \Rightarrow \sin^2 \theta + 4\cos^2 \theta + 4\sin \theta \cdot \cos \theta &= 1 \\ \Rightarrow (1 - \cos^2 \theta) + 4(1 - \sin^2 \theta) &+ 4\sin \theta \cdot \cos \theta = 1 \\ \Rightarrow 4\sin^2 \theta + \cos^2 \theta - 4\sin \theta \cdot \cos \theta &= 4 \\ \Rightarrow (2\sin \theta - \cos \theta)^2 = 4 = (2)^2 & \\ \therefore 2\sin \theta - \cos \theta = 2 & \end{aligned}$$

65. (c) Given that,

$$\begin{aligned} \operatorname{cosec} \theta + \cot \theta &= c \\ \Rightarrow \frac{1}{\sin \theta} + \frac{\cos \theta}{\sin \theta} &= c \Rightarrow \frac{1 + \cos \theta}{\sin \theta} = c \\ \Rightarrow \frac{2\cos^2 \frac{\theta}{2}}{2\sin \frac{\theta}{2} \cdot \cos \frac{\theta}{2}} &= c \Rightarrow \frac{\cos \frac{\theta}{2}}{\sin \frac{\theta}{2}} = c \\ \Rightarrow \cot \frac{\theta}{2} = c &\Rightarrow \tan \frac{\theta}{2} = \frac{1}{c} \quad \dots(i) \end{aligned}$$

Now, we have

$$\begin{aligned} \cos \theta &= \frac{1 - \tan^2\left(\frac{\theta}{2}\right)}{1 + \tan^2\left(\frac{\theta}{2}\right)} = \frac{1 - \left(\frac{1}{c}\right)^2}{1 + \left(\frac{1}{c}\right)^2} \\ &= \frac{c^2 - 1}{c^2 + 1} \end{aligned}$$

66. (a) $\tan^4 A - \sec^4 A + \tan^2 A + \sec^2 A$

$$\begin{aligned} &= (\tan^2 A)^2 - (\sec^2 A)^2 + (\tan^2 A + \sec^2 A) \\ &= (\tan^2 A - \sec^2 A)(\tan^2 A + \sec^2 A) \\ &\quad + (\tan^2 A + \sec^2 A) \\ &= (-1)(\tan^2 A + \sec^2 A) \\ &\quad + (\tan^2 A + \sec^2 A) \\ &= -(\tan^2 A + \sec^2 A) + (\tan^2 A + \sec^2 A) \\ &= 0 \end{aligned}$$

67. (b) Given that,

$$A+B = 90^\circ \quad \dots(i)$$

Now, $\sqrt{\sin A \cdot \sec B - \sin A \cdot \cos B}$

$$\begin{aligned} &= \sqrt{\sin A \cdot \sec(90^\circ - A) - \sin A \cdot \cos(90^\circ - A)} \\ &= \sqrt{\sin A \cdot \operatorname{cosec} A - \sin A \cdot \sin A} \\ &= \sqrt{\sin A \cdot \frac{1}{\sin A} - \sin^2 A} = \sqrt{1 - \sin^2 A} \\ &= \sqrt{\cos^2 A} = \cos A \end{aligned}$$

68. (d) Given that, $\tan A = x + 1$... (i)
and $\tan B = x - 1$... (ii)

$$\begin{aligned} \text{Now, } x^2 \tan(A - B) &= x^2 \left(\frac{\tan A - \tan B}{1 + \tan A \cdot \tan B} \right) \\ &= x^2 \left\{ \frac{(x + 1) - (x - 1)}{1 + (x + 1) \cdot (x - 1)} \right\} \\ &\quad [\text{from Eqs. (i) and (ii)}] \\ &= x^2 \left\{ \frac{2}{1 + x^2 - 1} \right\} = x^2 \cdot \frac{2}{x^2} = 2 \end{aligned}$$

69. (d) $(\sin^4 \theta - \cos^4 \theta + 1) \cdot \operatorname{cosec}^2 \theta$
 $= \{(\sin^2 \theta - \cos^2 \theta)(\sin^2 \theta + \cos^2 \theta) + 1\} \cdot \operatorname{cosec}^2 \theta$
 $= \{(\sin^2 \theta - \cos^2 \theta) \cdot 1 + 1\} \operatorname{cosec}^2 \theta$
 $= \{\sin^2 \theta - \cos^2 \theta + 1\} \operatorname{cosec}^2 \theta$
 $= \{\sin^2 \theta - (1 - \sin^2 \theta) + 1\} \operatorname{cosec}^2 \theta$
 $= (2\sin^2 \theta) \cdot \frac{1}{\sin^2 \theta} = 2$

70. (c) $\frac{\cot x + \operatorname{cosec} x - 1}{\cot x - \operatorname{cosec} x + 1} = \frac{\frac{\cos x}{\sin x} + \frac{1}{\sin x} - 1}{\frac{\cos x}{\sin x} - \frac{1}{\sin x} + 1}$
 $= \frac{\cos x + 1 - \sin x}{\cos x - 1 + \sin x}$
 $= \frac{2\cos^2 \frac{x}{2} - 2\sin \frac{x}{2} \cdot \cos \frac{x}{2}}{-2\sin^2 \frac{x}{2} + 2\sin \frac{x}{2} \cdot \cos \frac{x}{2}}$
 $= \frac{2\cos \frac{x}{2} \left(\cos \frac{x}{2} - \sin \frac{x}{2} \right)}{2\sin \frac{x}{2} \left(\cos \frac{x}{2} - \sin \frac{x}{2} \right)}$
 $= \frac{2\cos \frac{x}{2} \cdot \cos \frac{x}{2}}{2\sin \frac{x}{2} \cos \frac{x}{2}} = \frac{1 + \cos x}{\sin x}$

71. (d)

72. (a)

73. (c) $\frac{\cot 54^\circ}{\tan 36^\circ} + \frac{\tan 20^\circ}{\cot 70^\circ}$
 $= \frac{\cot 54^\circ}{\tan(90^\circ - 54^\circ)} + \frac{\tan 20^\circ}{\cot(90^\circ - 20^\circ)}$
 $= \frac{\cot 54^\circ}{\cot 54^\circ} + \frac{\tan 20^\circ}{\tan 20^\circ} = 1 + 1 = 2$

74. (d) Given that, $\cos x = \frac{1}{3}$

$$\begin{aligned} \text{We have, } \sin x \cdot \cot x \cdot \operatorname{cosec} x \cdot \tan x &= \sin x \cdot \frac{\cos x}{\sin x} \cdot \frac{1}{\sin x} \cdot \frac{\sin x}{\cos x} = 1 \end{aligned}$$

75. (a) Given, $\sin^2 20^\circ + \sin^2 70^\circ$
 $= \sin^2 20^\circ + \sin^2 (90^\circ - 20^\circ)$
 $= \sin^2 20^\circ + \cos^2 20^\circ = 1$
 $[\because \sin^2 \theta + \cos^2 \theta = 1]$

76. (d) $(1 - \sin^2 \theta)(1 + \tan^2 \theta)$
 $= \cos^2 \theta \cdot \sec^2 \theta = \cos^2 \theta \times \frac{1}{\cos^2 \theta} = 1$

77. (b)

- I. $\tan\left(\frac{\pi}{6}\right) = \frac{1}{\sqrt{3}}$
 II. $\tan\left(\frac{3\pi}{4}\right) = -1$
 III. $\tan\left(\frac{5\pi}{4}\right) = \tan\left(\pi + \frac{\pi}{4}\right) = \tan \frac{\pi}{4} = 1$
 IV. $\tan\left(\frac{2\pi}{3}\right) = \tan\left(\pi - \frac{\pi}{3}\right) = -\tan \frac{\pi}{3} = -\sqrt{3}$

So, the correct order is IV < II < I < III.

78. (d) We have, $\cos 20^\circ + \cos 100^\circ + \cos 140^\circ$
 $= (\cos 140^\circ + \cos 20^\circ) + \cos 100^\circ$
 $= 2 \cos(80^\circ) \cdot \cos 60^\circ + \cos 100^\circ$
 $= 2 \cos 80^\circ \cdot \frac{1}{2} + \cos 100^\circ$
 $= \cos 80^\circ + \cos 100^\circ$
 $= 2 \cos 90^\circ \cdot \cos 10^\circ$
 $= 2 \times 0 \times \cos 10^\circ = 0$

79. (b) We have,

$$\begin{aligned} \sin^2(3\pi) + \cos^2(4\pi) + \tan^2(5\pi) &= \sin^2(2\pi + \pi) + \cos^2(2\pi + 2\pi) \\ &\quad + \tan^2(4\pi + \pi) \\ &= \sin^2 \pi + \cos^2 2\pi + \tan^2 \pi \\ &= (0)^2 + (1)^2 + (0)^2 \\ &= 0 + 1 + 0 = 1 \end{aligned}$$

80. (b) $\frac{\cot 224^\circ - \cot 134^\circ}{\cot 226^\circ + \cot 316^\circ}$
 $= \frac{\cot(360^\circ - 136^\circ) - \cot(90^\circ + 44^\circ)}{\cot(360^\circ - 134^\circ) + \cot(360^\circ - 44^\circ)}$
 $= \frac{-\cot 136^\circ + \tan 44^\circ}{-\cot 134^\circ - \cot 44^\circ}$
 $= \frac{-\cot(90^\circ + 46^\circ) + \tan 44^\circ}{-\cot(90^\circ + 44^\circ) - \cot(90^\circ - 46^\circ)}$
 $= \frac{\tan 46^\circ + \tan 44^\circ}{\tan 44^\circ - \tan 46^\circ}$
 $= \frac{\left(\frac{\sin 46^\circ}{\cos 46^\circ} + \frac{\sin 44^\circ}{\cos 44^\circ}\right)}{\left(\frac{\sin 44^\circ}{\cos 44^\circ} - \frac{\sin 46^\circ}{\cos 46^\circ}\right)}$
 $= \frac{\sin 46^\circ \cdot \cos 44^\circ + \sin 44^\circ \cdot \cos 46^\circ}{\sin 44^\circ \cdot \cos 46^\circ - \sin 46^\circ \cdot \cos 44^\circ}$
 $= \frac{\sin(46^\circ + 44^\circ)}{\sin(44^\circ - 46^\circ)}$
 $= \frac{\sin 90^\circ}{\sin(-2^\circ)} = \frac{1}{-\sin 2^\circ} = -\operatorname{cosec} 2^\circ$

81. (c)

82. (a) Given that, $A + B + C = \pi$... (i)
 Now, we have, $\cos(A + B) + \cos C$
 $= \cos(\pi - C) + \cos C$ [from Eq. (i)]

$$\begin{aligned} &= -\cos C + \cos C = 0 \\ &[\because \text{in second quadrant, } \cos \theta < 0] \end{aligned}$$

83. (c) Given that, $3 \tan^2 x = 1$

$$\Rightarrow \tan^2 x = \frac{1}{3} \Rightarrow \tan x = \pm \frac{1}{\sqrt{3}}$$

$$\Rightarrow \tan x = \tan(\pm \pi/6)$$

$$\therefore x = n\pi \pm \frac{\pi}{6}, \text{ where } n \in \mathbb{Z}$$

84. (b)

85. (d) In the interval $\left[\pi, \frac{3\pi}{2}\right]$, both $\sin \theta$

and $\cos \theta$ are negative.

As $|x|$ and x^2 are positive and can take any value which lies in the interval $\left[\pi, \frac{3\pi}{2}\right]$.

So, both statements are incorrect.

86. (a)

87. (a) I. We have,

$$\begin{aligned} &n \left(\sin^2 \frac{135^\circ}{2} - \sin^2 \frac{45^\circ}{2} \right) \\ &= n \sin \left(\frac{135^\circ}{2} + \frac{45^\circ}{2} \right) \cdot \sin \left(\frac{135^\circ}{2} - \frac{45^\circ}{2} \right) \end{aligned}$$

$$\begin{aligned} [\because \sin^2 A - \sin^2 B &= \sin(A + B) \cdot \sin(A - B)] \\ &= n \sin 90^\circ \cdot \sin 45^\circ = \frac{n}{\sqrt{2}} = \frac{n\sqrt{2}}{2} \end{aligned}$$

$$\Rightarrow \frac{n\sqrt{2}}{2} > 1 \text{ for all positive integers}$$

$$n \geq 2$$

Hence, Statement I is correct.

- II. Given that, x is any positive real number
 i.e. $x \in \mathbb{R}^+ \Rightarrow x \in (0, \infty)$

If $x \in (0, 1)$ i.e. $0 < x < 1$

then $0 < nx < 1, \forall n > 0$

Hence, Statement II is false.

88. (a) I. Given that, $\sin 3\theta = \cos 2\theta$

$$\Rightarrow \sin 3\theta = \sin \left(\frac{\pi}{2} - 2\theta \right)$$

[since, 3θ is an acute angle]

$$\Rightarrow 3\theta = \frac{\pi}{2} - 2\theta \Rightarrow 5\theta = \frac{\pi}{2}$$

$$\Rightarrow \theta = \frac{\pi}{10}$$

Hence, Statement I is correct.

- II. By definition of radian system, a radian is the angle subtended at the centre of a circle by an arc, whose length is equal to the radius of the circle.

Hence, Statement II is false.

89. (b) Consider, $\sqrt{1 + \sin 2\theta}$
 $= \sqrt{\sin^2 \theta + \cos^2 \theta + 2 \sin \theta \cos \theta}$
 $= \sqrt{(\sin \theta + \cos \theta)^2}$
 $= \sin \theta + \cos \theta$

90. (a) We have, $\cot A = 2$ and $\cot B = 3$

$$\cot(A+B) = \frac{\cot A \cot B - 1}{\cot A + \cot B}$$

$$= \frac{6 - 1}{2 + 3} = \frac{5}{5} = 1$$

$$\Rightarrow \cot(A+B) = \cot\left(\frac{\pi}{4}\right) \Rightarrow A+B = \frac{\pi}{4}$$

91. (b) Consider, $\sin^2 66\frac{1^\circ}{2} - \sin^2 23\frac{1^\circ}{2}$

$$= \left[\sin\left(90^\circ - 23\frac{1^\circ}{2}\right) \right]^2 - \sin^2 23\frac{1^\circ}{2}$$

$$= \cos^2 23\frac{1^\circ}{2} - \sin^2 23\frac{1^\circ}{2}$$

$$= \cos 2\left(23\frac{1^\circ}{2}\right)$$

$$[\because \cos 2A = \cos^2 A - \sin^2 A]$$

$$= \cos \left[2 \times \left(\frac{47^\circ}{2}\right) \right] = \cos 47^\circ$$

92. (b)
$$\frac{\cos 7x - \cos 3x}{\sin 7x - 2 \sin 5x + \sin 3x}$$

$$= \frac{-2 \sin \left(\frac{7x+3x}{2}\right) \cdot \sin \left(\frac{7x-3x}{2}\right)}{2 \sin \left(\frac{7x+3x}{2}\right) \cdot \cos \left(\frac{7x-3x}{2}\right) - 2 \sin 5x}$$

$$= \frac{-2 \sin 5x \cdot \sin 2x}{2 \sin 5x \cos 2x - 2 \sin 5x}$$

$$= \frac{-2 \sin 5x \cdot \sin 2x}{-2 \sin 5x [1 - \cos 2x]} = \frac{\sin 2x}{1 - 1 + 2 \sin^2 x}$$

$$[\because \cos 2x = 1 - 2 \sin^2 x]$$

$$= \frac{2 \sin x \cos x}{2 \sin^2 x} = \cot x$$

93. (c) In a $\triangle ABC$, we have,

$$\sin A - \cos B = \cos C$$

$$\Rightarrow \sin A = \cos B + \cos C$$

$$\Rightarrow 2 \sin \frac{A}{2} \cdot \cos \frac{A}{2}$$

$$= 2 \cos \left(\frac{B+C}{2}\right) \cdot \cos \left(\frac{B-C}{2}\right)$$

$$\Rightarrow 2 \sin \frac{A}{2} \cdot \cos \frac{A}{2}$$

$$= 2 \cos \left(90^\circ - \frac{A}{2}\right) \cdot \cos \left(\frac{B-C}{2}\right)$$

$$[\because A+B+C = 180^\circ]$$

$$\Rightarrow 2 \sin \frac{A}{2} \cdot \cos \frac{A}{2}$$

$$= 2 \sin \frac{A}{2} \cdot \cos \left(\frac{B-C}{2}\right)$$

$$\Rightarrow \cos \frac{A}{2} = \cos \left(\frac{B-C}{2}\right)$$

$$\Rightarrow \frac{A}{2} = \frac{B-C}{2} \Rightarrow A+C = B \quad \dots(i)$$
 Also, $A+C = 180^\circ - B \quad \dots(ii)$
 So, $180^\circ - B = B \Rightarrow 2B = 180^\circ$
 $\therefore B = 90^\circ$

94. (b)
$$\frac{\sin(x+y)}{\sin(x-y)} = \frac{a+b}{a-b}$$
 Applying componendo and dividendo, we get

$$\frac{\sin(x+y) + \sin(x-y)}{\sin(x+y) - \sin(x-y)} = \frac{(a+b) + (a-b)}{(a+b) - (a-b)}$$

$$\Rightarrow \frac{2 \sin x \cdot \cos y}{2 \cos x \cdot \sin y} = \frac{2a}{2b}$$

$$\Rightarrow \tan x \cdot \cot y = \frac{a}{b}$$

$$\therefore \frac{\tan x}{\tan y} = \frac{a}{b}$$

95. (a) We have,

$$\sin A \cdot \sin(60^\circ - A) \sin(60^\circ + A)$$

$$= k \cdot \sin 3A$$

$$\Rightarrow \sin A [\sin^2 60^\circ - \sin^2 A] = k \cdot \sin 3A$$

$$\Rightarrow \sin A \left[\frac{3}{4} - \sin^2 A \right] = k \cdot \sin 3A$$

$$\Rightarrow \frac{3 \sin A - 4 \sin^3 A}{4} = k \cdot \sin 2A$$

$$\Rightarrow \frac{\sin 3A}{4} = k \cdot \sin 3A \Rightarrow k = \frac{1}{4}$$

96. (b) We have, $\tan 2\theta \cdot \tan \theta = 1$

$$\Rightarrow \frac{2 \tan \theta}{1 - \tan^2 \theta} \cdot \tan \theta = 1$$

$$\Rightarrow 2 \tan^2 \theta = 1 - \tan^2 \theta$$

$$\Rightarrow 3 \tan^2 \theta = 1$$

$$\Rightarrow \tan^2 \theta = \frac{1}{3} = \left(\frac{1}{\sqrt{3}}\right)^2$$

$$\Rightarrow \tan^2 \theta = \tan^2 \left(\frac{\pi}{6}\right)$$

$$\Rightarrow \theta = n\pi \pm \frac{\pi}{6} \Rightarrow \theta = \frac{\pi}{6}$$

Sol. (Q. Nos. 97-99) Consider,

$$16 \sin^5 x = 16(\sin^2 x)^2 \cdot \sin x$$

$$= 16 \left(\frac{1 - \cos 2x}{2}\right)^2 \cdot \sin x$$

$$= 4(1 + \cos^2 2x - 2 \cos 2x) \cdot \sin x$$

$$= 4 \left(1 + \frac{1 + \cos 4x}{2} - 2 \cos 2x\right) \cdot \sin x$$

$$= \frac{4}{2} (3 + \cos 4x - 4 \cos 2x) \cdot \sin x$$

$$= (6 + 2 \cos 4x - 8 \cos 2x) \sin x$$

$$= 6 \sin x + 2 \sin x \cos 4x$$

$$= 6 \sin x + \sin 5x - \sin 3x$$

$$[\because 2 \sin A \cos B = \sin(A+B) + \sin(A-B)]$$

$$= 6 \sin x + \sin 5x - \sin 3x - 4 \sin 3x$$

$$= \sin 5x - 5 \sin 3x + 10 \sin x$$

97. (a) Clearly, $p = 1$, hence option (a) is correct.

98. (d) Clearly, $q = -5$, hence option (d) is correct.

99. (c) Clearly, $r = 10$, hence option (c) is correct.

100. (a) We have, $y = \sqrt{3} \quad \dots(i)$
 Also, to meet the graph of $y = \tan x$ and $y = \sqrt{3}$, we should have

$$\sqrt{3} = \tan x \Rightarrow \tan x = \tan 60^\circ$$

$$\Rightarrow x = 60^\circ \quad \left[\because x \in \left(0, \frac{\pi}{2}\right) \right]$$

Hence, one intersecting point possible in given domain, i.e. $k = 1$.

101. (c) Given, $\frac{\theta^\circ}{0^\circ} = \frac{180^\circ}{\pi}$

$$\Rightarrow \theta^\circ = \frac{\pi \times \theta^\circ}{180^\circ} \text{ and } \theta^\circ \times \theta^\circ = \frac{125\pi}{9}$$

$$\therefore \theta^\circ \times \frac{\pi \times \theta^\circ}{180^\circ} = \frac{125\pi}{9} = 125 \times 20^\circ$$

$$= 25 \times 100^\circ = (5 \times 10^\circ)^2$$

$$\Rightarrow \theta^\circ = 50^\circ$$

102. (a) $25 \cos^2 \theta + 5 \cos \theta - 12 = 0$

$$\Rightarrow 25 \cos^2 \theta + 20 \cos \theta - 15 \cos \theta - 12 = 0$$

$$\Rightarrow 5 \cos \theta (5 \cos \theta + 4) - 3(5 \cos \theta + 4) = 0$$

$$\Rightarrow (5 \cos \theta - 3)(5 \cos \theta + 4) = 0$$

$$\Rightarrow \cos \theta = \frac{3}{5} \text{ or } \cos \theta = -\frac{4}{5}$$

$$\therefore \alpha \in \left(\frac{\pi}{2}, \pi\right)$$

Since, α is a root of the given equation.

$$\therefore \cos \alpha = -\frac{4}{5} \Rightarrow \tan \alpha = -\frac{3}{4}$$

103. (b) From the above solution, we have

$$\sin 2\alpha = 2 \sin \alpha \cdot \cos \alpha$$

$$= 2 \times \frac{3}{5} \times -\left(\frac{4}{5}\right) = -\frac{24}{25}$$

104. (b) $(1 - \sin A + \cos A)^2$

$$= 1 + \sin^2 A + \cos^2 A - 2 \sin A$$

$$- 2 \sin A \cos A + 2 \cos A$$

$$= 2 - 2 \sin A - \sin 2A + 2 \cos A$$

$$= 2(1 + \cos A) - 2 \sin A(1 + \cos A)$$

$$= 2(1 - \sin A)(1 + \cos A)$$

105. (b)

106. (a) $\sin^2 5^\circ + \sin^2 10^\circ + \sin^2 15^\circ$

$$+ \dots + \sin^2 90^\circ$$

$$= (\sin^2 5^\circ + \sin^2 85^\circ)$$

$$+ (\sin^2 10^\circ + \sin^2 80^\circ) + \dots +$$

$$\sin^2 45^\circ + \dots + \sin^2 90^\circ$$

$$= \sin^2 5^\circ + \sin^2(90^\circ - 5^\circ) + \sin^2 10^\circ$$

$$+ \sin^2(90^\circ - 10^\circ) + \dots + \sin^2 90^\circ$$

$$\begin{aligned}
 &= (\sin^2 5^\circ + \cos^2 5^\circ) \\
 &\quad + (\sin^2 10^\circ + \cos^2 10^\circ) + \dots + \sin^2 90^\circ \\
 &= 1 + 1 + 1 + 1 + 1 + 1 + 1 + 1 + \left(\frac{1}{\sqrt{2}}\right)^2 + 1 \\
 &= 9 + \frac{1}{2} = \frac{19}{2}
 \end{aligned}$$

- 107.** (b) We have, $\sin x + \sin y = a$... (i)
and $\cos x + \cos y = b$... (ii)

On squaring Eqs. (i) and (ii) and then adding, we get

$$\begin{aligned}
 \Rightarrow 2 + 2 \cos(x - y) &= a^2 + b^2 \\
 \Rightarrow \cos(x - y) &= \frac{a^2 + b^2 - 2}{2} \dots \text{(iii)}
 \end{aligned}$$

Now, dividing Eq. (i) by Eq. (ii), we get

$$\begin{aligned}
 \frac{\sin x + \sin y}{\cos x + \cos y} &= \frac{a}{b} \\
 \Rightarrow \tan\left(\frac{x+y}{2}\right) &= \frac{a}{b} \dots \text{(iv)}
 \end{aligned}$$

$$\begin{aligned}
 \therefore \tan^2\left(\frac{x+y}{2}\right) + \tan^2\left(\frac{x-y}{2}\right) &= \frac{a^2}{b^2} + \frac{1 - \cos(x-y)}{1 + \cos(x-y)} \\
 &= \frac{a^2}{b^2} + \frac{1 - \frac{a^2 + b^2 - 2}{2}}{1 + \frac{a^2 + b^2 - 2}{2}} \\
 &= \frac{a^2}{b^2} + \frac{4 - a^2 - b^2}{a^2 + b^2} \\
 &= \frac{a^4 - b^4 + 4b^2}{a^2 b^2 + b^4}
 \end{aligned}$$

- 108.** (b) $p = \tan\left(-\frac{11\pi}{6}\right) = -\tan\left(\frac{11\pi}{6}\right)$
 $= -\tan\left(2\pi - \frac{\pi}{6}\right)$
 $= \tan\left(\frac{\pi}{6}\right) = \frac{1}{\sqrt{3}}$
 $q = \tan\left(\frac{21\pi}{4}\right) = \tan\left(5\pi + \frac{\pi}{4}\right)$
 $= \tan\left(\frac{\pi}{4}\right) = 1$
 $r = \cot\left(\frac{283\pi}{6}\right)$
 $= \cot\left(47\pi + \frac{\pi}{6}\right)$
 $= \cot\frac{\pi}{6} = \sqrt{3}$

$$\text{Since, } p \times r = \frac{1}{\sqrt{3}} \times \sqrt{3} = 1 = q^2$$

p, q and r is GP.

Hence, only Statement II is correct.

109. (d) $\frac{\sin^3 A + \sin 3A}{\sin A} + \frac{\cos^3 A - \cos 3A}{\cos A}$
 $= \frac{\sin^3 A + (3\sin A - 4\sin^3 A)}{\sin A}$
 $+ \frac{\cos^3 A - (4\cos^3 A - 3\cos A)}{\cos A}$
 $= (-3\sin^2 A + 3) + (-3\cos^2 A + 3)$
 $= 6 - 3(\sin^2 A + \cos^2 A) = 6 - 3(1) = 3$

110. (c) We have,
 $A = (\cos 12^\circ - \cos 36^\circ)$
 $\quad (\sin 96^\circ + \sin 24^\circ)$
 $= -2 \sin 24^\circ \sin(-12^\circ)$
 $\quad (2 \sin 60^\circ \cos 36^\circ)$
 $= 4 \sin 24^\circ \sin 12^\circ \sin 60^\circ \cos 36^\circ$
and $B = (\sin 60^\circ - \sin 12^\circ)$
 $\quad (\cos 48^\circ - \cos 72^\circ)$
 $= 2 \cos 36^\circ \sin 24^\circ$
 $\quad \{(-2 \sin 60^\circ \sin(-12^\circ))\}$
 $= 4 \sin 24^\circ \sin 12^\circ \sin 60^\circ \cos 36^\circ$
Clearly, $\frac{A}{B} = 1$

Sol. (Q. Nos. 111-112) Given equation is

$$\begin{aligned}
 k \sin x + \cos 2x &= 2k - 7 \\
 \Rightarrow k \sin x + 1 - 2 \sin^2 x &= 2k - 7 \\
 \Rightarrow -2 \sin^2 x + k \sin x + 8 - 2k &= 0 \\
 \Rightarrow 2 \sin^2 x - k \sin x + 2k - 8 &= 0
 \end{aligned}$$

$$\therefore \sin x = \frac{k \pm \sqrt{k^2 - 16k + 64}}{4}$$

$$\begin{aligned}
 \Rightarrow \sin x &= \frac{k \pm (k-8)}{4} \\
 \Rightarrow \sin x &= \frac{2k-8}{4}
 \end{aligned}$$

and $\sin x = 2$ [not possible]

As, $-1 \leq \sin x \leq 1$

$$\Rightarrow -1 \leq \frac{2k-8}{4} \leq 1$$

$$\Rightarrow 4 \leq 2k \leq 12 \Rightarrow 2 \leq k \leq 6$$

- 111.** (b) The minimum value of k is 2.

- 112.** (d) The maximum value of k is 6.

- 113.** (b)

I. Since, ABC is an equilateral triangle.

$$\therefore \angle A = \angle B = \angle C = 60^\circ$$

$$\begin{aligned}
 \text{Now, } 3 \tan(A+B) \tan C &= 3 \tan 120^\circ \tan 60^\circ \\
 &= 3 \tan(180^\circ - 60^\circ) \tan 60^\circ \\
 &= (-3) \tan 60^\circ \tan 60^\circ \\
 &= (-3) \cdot \sqrt{3} \cdot \sqrt{3} = -9
 \end{aligned}$$

II. Consider, $\tan\left(\frac{A}{2} + C\right)$

$$\begin{aligned}
 &= \tan\left(\frac{78^\circ}{2} + 36^\circ\right) = \tan 75^\circ \\
 &\quad [\because \angle C = 180^\circ - \angle A - \angle B \\
 &\quad = 180^\circ - 78^\circ - 66^\circ = 36^\circ]
 \end{aligned}$$

As, $\tan 75^\circ < \tan 78^\circ$

[\therefore value of $\tan \theta$ increases, as θ varying from 0° to 90°]

Hence, $\tan\left(\frac{A}{2} + C\right) < \tan A$

III. In any $\triangle ABC$,

$$\angle A + \angle B + \angle C = \pi$$

$$A + B = \pi - C \Rightarrow \left(\frac{A+B}{2}\right) = \left(\frac{\pi - C}{2}\right)$$

$$\text{Now, } \tan\left(\frac{A+B}{2}\right) \sin\left(\frac{C}{2}\right) < \cos\left(\frac{C}{2}\right)$$

$$\tan\left(\frac{\pi - C}{2}\right) \sin\left(\frac{C}{2}\right) < \cos\left(\frac{C}{2}\right)$$

$$\cot\left(\frac{C}{2}\right) \sin\left(\frac{C}{2}\right) < \cos\left(\frac{C}{2}\right)$$

$$\frac{\cos\left(\frac{C}{2}\right)}{\sin\left(\frac{C}{2}\right)} \cdot \sin\left(\frac{C}{2}\right) < \cos\left(\frac{C}{2}\right)$$

$$\cos\left(\frac{C}{2}\right) < \cos\left(\frac{C}{2}\right)$$

which is clearly false.

- 114.** (c) Given, in $\triangle ABC$,

$$\begin{aligned}
 \cos A + \cos B + \cos C &= \sqrt{3} \sin \frac{\pi}{3} \\
 \Rightarrow \cos A + \cos B + \cos C &= \sqrt{3} \times \frac{\sqrt{3}}{2} = \frac{3}{2}
 \end{aligned}$$

We know that, $\cos A + \cos B + \cos C = 1 + 4 \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2}$

$$\Rightarrow 1 + 4 \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2} = \frac{3}{2}$$

$$\Rightarrow 4 \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2} = \frac{3}{2} - 1 = \frac{1}{2}$$

$$\Rightarrow \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2} = \frac{1}{8}$$

- 115.** (d) $\cos\left(\frac{A+B}{2}\right) \cos\left(\frac{B+C}{2}\right) \cos\left(\frac{C+A}{2}\right)$

$$\begin{aligned}
 &= \cos\left(90^\circ - \frac{C}{2}\right) \cos\left(90^\circ - \frac{A}{2}\right) \\
 &\quad \cos\left(90^\circ - \frac{B}{2}\right)
 \end{aligned}$$

[$\because A + B + C = 180^\circ$]

$$= \sin \frac{C}{2} \sin \frac{A}{2} \sin \frac{B}{2} = \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2}$$

$$= \frac{1}{8} \quad [\text{from Q. No. 119}]$$

13

INVERSE TRIGONOMETRIC FUNCTIONS

In NDA exam generally, generally 2-3 questions are asked from this chapter which are based on finding the value of angle / solving the equation by using properties of inverse trigonometric

INVERSE FUNCTION

If $f: X \rightarrow Y$ is a function which is both one-one and onto, then its inverse function $f^{-1}: Y \rightarrow X$ is defined as $y = f(x) \Leftrightarrow f^{-1}(y) = x, \forall x \in X, \forall y \in Y$

INVERSE TRIGONOMETRIC FUNCTIONS

Trigonometric functions are not one-one and onto on their natural domains and ranges, so in order to make them one-one and onto, we restrict their domain and codomain. And thus we obtain inverses of trigonometric functions. Inverse of f is denoted by f^{-1} .

Let $y = f(x) = \sin x$ be a function. Then, its inverse is $x = \sin^{-1} y$.

$$\sin x \xrightarrow{\text{Inverse}} \sin^{-1} x.$$

Domain and Range of Inverse Trigonometric Functions

	y	Domain x	Range y (Principal Value)
(i)	$\sin^{-1} x$	$-1 \leq x \leq 1$	$-\pi/2 \leq y \leq \pi/2$
(ii)	$\operatorname{cosec}^{-1} x$	$x \leq -1$ or $x \geq 1$	$-\pi/2 \leq y \leq \pi/2, y \neq 0$
(iii)	$\cos^{-1} x$	$-1 \leq x \leq 1$	$0 \leq y \leq \pi$
(iv)	$\sec^{-1} x$	$x \leq -1$ or $x \geq 1$	$0 \leq y \leq \pi, y \neq \pi/2$
(v)	$\tan^{-1} x$	$-\infty < x < \infty$	$-\pi/2 < y < \pi/2$
(vi)	$\cot^{-1} x$	$-\infty < x < \infty$	$0 < y < \pi$

EXAMPLE 1. The domain of $\sin^{-1}[x]$ is given by

- a. $[-1, 1]$ b. $[-1, 2]$
 c. $\{-1, 0, 1\}$ d. None of these

Sol. b. Domain of $\sin^{-1}x$ is $[-1, 1]$

and domain of $\sin^{-1}[x]$ is $\{x : -1 \leq [x] \leq 1\}$

$$= \{x : [x] = -1, 0, 1\}$$

$$\text{But } [x] = \begin{cases} -1, & -1 \leq x < 0 \\ 0, & 0 \leq x < 1 \\ +1, & 1 \leq x < 2 \end{cases}$$

$$\therefore x \in [-1, 2]$$

Properties of Inverse Trigonometric Functions

- (i) (a) $\sin^{-1}(\sin \theta) = \theta$ and $\sin(\sin^{-1}x) = x$,
 $-\frac{\pi}{2} \leq \theta \leq \frac{\pi}{2}, -1 \leq x \leq 1$
 (b) $\cos^{-1}(\cos \theta) = \theta$ and $\cos(\cos^{-1}x) = x$,
 $0 \leq \theta \leq \pi, -1 \leq x \leq 1$
 (c) $\tan^{-1}(\tan \theta) = \theta$ and $\tan(\tan^{-1}x) = x$,
 $-\frac{\pi}{2} < \theta < \frac{\pi}{2}, x \in R$
 (d) $\cot^{-1}(\cot \theta) = \theta$ and $\cot(\cot^{-1}x) = x$,
 $0 < \theta < \pi, x \in R$
 (e) $\sec^{-1}(\sec \theta) = \theta$ and $\sec(\sec^{-1}x) = x$
 (f) $\operatorname{cosec}^{-1}(\operatorname{cosec} \theta)$ and $\operatorname{cosec}(\operatorname{cosec}^{-1}x) = x$

EXAMPLE 2. What is the value of $\cos^{-1}\left(\cos \frac{7\pi}{6}\right)$?

- a. $-\frac{\pi}{6}$ b. $\frac{5\pi}{6}$ c. $\frac{\pi}{6}$ d. $\frac{7\pi}{6}$

Sol. b. Since, $\frac{7\pi}{6}$ does not lie between 0 and π .

$$\therefore \cos^{-1}\left(\cos \frac{7\pi}{6}\right) = \cos^{-1}\left(\cos\left(2\pi - \frac{5\pi}{6}\right)\right)$$

$$= \cos^{-1}\left(\cos \frac{5\pi}{6}\right) = \frac{5\pi}{6}$$

- (ii) (a) $\sin^{-1}x = \operatorname{cosec}^{-1}(1/x)$ or $\operatorname{cosec}^{-1}x = \sin^{-1}(1/x)$
 (b) $\cos^{-1}x = \sec^{-1}(1/x)$ or $\sec^{-1}x = \cos^{-1}(1/x)$
 (c) $\tan^{-1}x = \cot^{-1}(1/x)$ or $\cot^{-1}x = \tan^{-1}(1/x)$, if $x > 0$
 (d) $\tan^{-1}x = \cot^{-1}\frac{1}{x} - \pi$ or $\cot^{-1}x = \tan^{-1}\frac{1}{x} - \pi$, if $x < 0$
 (iii) (a) $\sin^{-1}(-x) = -\sin^{-1}(x)$
 (b) $\cos^{-1}(-x) = \pi - \cos^{-1}(x)$
 (c) $\tan^{-1}(-x) = -\tan^{-1}(x)$
 (d) $\cot^{-1}(-x) = \pi - \cot^{-1}(x)$

$$(e) \sec^{-1}(-x) = \pi - \sec^{-1}x$$

$$(f) \operatorname{cosec}^{-1}(-x) = -\operatorname{cosec}^{-1}x$$

$$(iv) (a) 2\sin^{-1}x = \sin^{-1}2x\sqrt{1-x^2} = \cos^{-1}(1-2x^2)$$

$$(b) 2\cos^{-1}x = \cos^{-1}(2x^2-1) = \sin^{-1}(2x\sqrt{1-x^2})$$

$$(c) 2\tan^{-1}x = \tan^{-1}\frac{2x}{1-x^2} = \sin^{-1}\frac{2x}{1+x^2}$$

$$= \cos^{-1}\frac{1-x^2}{1+x^2}$$

$$(d) 3\sin^{-1}x = \sin^{-1}(3x-4x^3)$$

$$(e) 3\cos^{-1}x = \cos^{-1}(4x^3-3x)$$

$$(f) 3\tan^{-1}x = \tan^{-1}\frac{3x-x^3}{1-3x^2}$$

$$(v) (a) \sin^{-1}x + \cos^{-1}x = \pi/2, (-1 \leq x \leq 1)$$

$$(b) \tan^{-1}x + \cot^{-1}x = \pi/2, x \in R$$

$$(c) \sec^{-1}x + \operatorname{cosec}^{-1}x = \pi/2, x \leq -1 \text{ or } x \geq 1$$

EXAMPLE 3. If $\cos^{-1}\left(\frac{1}{\sqrt{5}}\right) = \theta$, then what is the value of $\operatorname{cosec}^{-1}(\sqrt{5})$?

- a. $\frac{\pi}{2} + \theta$ b. $\frac{\pi}{2} - \theta$ c. $\frac{\pi}{2}$ d. $-\theta$

Sol. b. $\therefore \cos^{-1}\left(\frac{1}{\sqrt{5}}\right) = \theta \Rightarrow \sec^{-1}(\sqrt{5}) = \theta$

$$\Rightarrow \frac{\pi}{2} - \operatorname{cosec}^{-1}(\sqrt{5}) = \theta \quad \left[\because \sec^{-1}x + \operatorname{cosec}^{-1}x = \frac{\pi}{2} \right]$$

$$\therefore \operatorname{cosec}^{-1}(\sqrt{5}) = \frac{\pi}{2} - \theta$$

$$(vi) (a) \tan^{-1}x + \tan^{-1}y = \tan^{-1}\left(\frac{x+y}{1-xy}\right), \text{ if } xy < 1$$

$$(b) \tan^{-1}x + \tan^{-1}y = \pi + \tan^{-1}\left(\frac{x+y}{1-xy}\right), \text{ if } xy > 1$$

$$(c) \tan^{-1}x - \tan^{-1}y = \tan^{-1}\left(\frac{x-y}{1+xy}\right), \text{ if } x > 0, y > 0$$

$$(vii) (a) \sin^{-1}x \pm \sin^{-1}y = \sin^{-1}\{x\sqrt{1-y^2} \pm y\sqrt{1-x^2}\}$$

$$(b) \cos^{-1}x \pm \cos^{-1}y = \cos^{-1}\{xy \mp \sqrt{(1-x^2)}\sqrt{(1-y^2)}\}$$

$$(viii) (a) \sin^{-1}x = \cos^{-1}(\sqrt{1-x^2})$$

$$= \tan^{-1}\left(\frac{x}{\sqrt{1-x^2}}\right) = \cot^{-1}\left(\frac{\sqrt{1-x^2}}{x}\right)$$

$$= \sec^{-1}\left(\frac{1}{\sqrt{1-x^2}}\right) = \operatorname{cosec}^{-1}\left(\frac{1}{x}\right)$$

$$\begin{aligned} \text{(b) } \cos^{-1} x &= \sin^{-1}(\sqrt{1-x^2}) = \tan^{-1}\left(\frac{\sqrt{1-x^2}}{x}\right) \\ &= \cot^{-1}\left(\frac{x}{\sqrt{1-x^2}}\right) = \sec^{-1}\left(\frac{1}{x}\right) \\ &= \operatorname{cosec}^{-1}\left(\frac{1}{\sqrt{1-x^2}}\right) \end{aligned}$$

$$\begin{aligned} \text{(c) } \tan^{-1} x &= \sin^{-1}\left(\frac{x}{\sqrt{1+x^2}}\right) \\ &= \cos^{-1}\left(\frac{1}{\sqrt{1+x^2}}\right) = \cot^{-1}\left(\frac{1}{x}\right) \end{aligned}$$

$$\begin{aligned} &= \sec^{-1}(\sqrt{1+x^2}) \\ &= \operatorname{cosec}^{-1}\left(\frac{\sqrt{1+x^2}}{x}\right) \end{aligned}$$

EXAMPLE 4. The principal value of

$$\sin^{-1} \frac{1}{\sqrt{17}} + \cos^{-1} \frac{5}{\sqrt{34}} \text{ is}$$

a. $\frac{\pi}{4}$ b. $\frac{\pi}{2}$ c. $\sin^{-1}\left(\frac{23}{17\sqrt{2}}\right)$ d. $\cos^{-1}\left(\frac{23}{17\sqrt{2}}\right)$

Sol. a. $\sin^{-1} \frac{1}{\sqrt{17}} + \cos^{-1} \frac{5}{\sqrt{34}} = \tan^{-1} \frac{1}{4} + \tan^{-1} \frac{3}{5}$
 $= \tan^{-1} \left[\frac{\frac{1}{4} + \frac{3}{5}}{1 - \frac{1}{4} \cdot \frac{3}{5}} \right] = \tan^{-1}(1) = \frac{\pi}{4}$

> PRACTICE EXERCISE

1. What is the principle value of $\operatorname{cosec}^{-1}(-\sqrt{2})$?

(a) $\frac{\pi}{4}$ (b) $\frac{\pi}{2}$ (c) $-\frac{\pi}{4}$ (d) 0

2. $\sin\left[\frac{\pi}{3} - \sin^{-1}\left(-\frac{1}{2}\right)\right]$ is equal to

(a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) $\frac{1}{4}$ (d) 1

3. $\cos\left(\tan^{-1} \frac{3}{4}\right)$ is equal to

(a) $\frac{4}{5}$ (b) $\frac{3}{4}$ (c) $\frac{4}{3}$ (d) $\frac{5}{4}$

4. If $\cos^{-1} \frac{1}{x} = \theta$, then $\tan \theta$ is equal to

(a) $\frac{1}{\sqrt{x^2-1}}$ (b) $\sqrt{x^2-1}$
 (c) $\sqrt{1-x^2}$ (d) $\sqrt{x^2+1}$

5. If $(\tan^{-1} x)^2 + (\cot^{-1} x)^2 = \frac{5\pi^2}{8}$, then x is equal to

(a) -1 (b) 1 (c) 0 (d) 2

6. If $\sin^{-1} x + \cot^{-1}(1/2) = \pi/2$, then what is the value of x ?

(a) 0 (b) $\frac{1}{\sqrt{5}}$
 (c) $\frac{2}{\sqrt{5}}$ (d) $\frac{\sqrt{3}}{2}$

7. If $4 \sin^{-1} x + \cos^{-1} x = \pi$, then x is equal to

(a) $\frac{1}{2}$ (b) $\frac{\sqrt{3}}{2}$ (c) $-\frac{1}{2}$ (d) $\frac{1}{\sqrt{2}}$

8. If $\sin\left(\sin^{-1} \frac{1}{5} + \cos^{-1} x\right) = 1$, then what is x equal to?

(a) 0 (b) 1
 (c) $\frac{4}{5}$ (d) $\frac{1}{5}$

9. Let $-1 \leq x \leq 1$. If $\cos(\sin^{-1} x) = \frac{1}{2}$, then how many values does $\tan(\cos^{-1} x)$ assume?

(a) One (b) Two (c) Four (d) Infinite

10. If $3 \sin^{-1}\left(\frac{2x}{1+x^2}\right) - 4 \cos^{-1}\left(\frac{1-x^2}{1+x^2}\right)$

$+ 2 \tan^{-1}\left(\frac{2x}{1-x^2}\right) = \frac{\pi}{3}$, then x is equal to

(a) $\sqrt{3}$ (b) $1/\sqrt{3}$ (c) 1 (d) -1

11. $\sec^2(\tan^{-1} 2) + \operatorname{cosec}^2(\cot^{-1} 3)$ is equal to

(a) 5 (b) 13
 (c) 15 (d) 6

12. If $\tan^{-1} 2x + \tan^{-1} 3x = \frac{\pi}{4}$, then x is equal to

(a) -1 (b) 1/6 (c) -1, $\frac{1}{6}$ (d) None of these

13. Consider the following statements

I. The value of $\tan^{-1}\left(\frac{1}{4}\right) + \tan^{-1}\left(\frac{2}{9}\right)$ is equal to

$$\sin^{-1}\left(\frac{1}{\sqrt{5}}\right).$$

II. $\sin^{-1}\left(\frac{8}{17}\right) + \sin^{-1}\left(\frac{3}{5}\right) = \sin^{-1}\left(\frac{77}{85}\right)$

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

14. Consider the following statements

I. If $2 \tan^{-1}(\cos x) = \tan^{-1}(2 \operatorname{cosec} x)$, then the value of x is $\frac{\pi}{4}$.

II. The value of x for which $\tan^{-1}\left(\frac{1-x}{1+x}\right) = \frac{1}{2} \tan^{-1} x$

$$(x > 0) \text{ is } \frac{1}{\sqrt{3}}.$$

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

15. Consider the following statements

I. The simplest form of $\tan^{-1}\left(\frac{x}{\sqrt{a^2 - x^2}}\right)$, $|x| < a$ is

$$\sin^{-1}\left(\frac{x}{a}\right).$$

II. The simplest form of $\cos^{-1}\left(\frac{3}{5} \cos x + \frac{4}{5} \sin x\right)$,

$$\text{where } x \in \left[-\frac{\pi}{2}, \frac{\pi}{4}\right] \text{ is } \tan^{-1}\left(\frac{4}{3}\right).$$

III. The value of $\cos(\sec^{-1} x + \operatorname{cosec}^{-1} x)$, $|x| > 1$ is 0.

Which of the above statement(s) is/are correct?

- (a) I, II (b) II, III (c) I, III (d) I, II and III

Directions (Q. Nos. 16-17) Let $\cos^{-1} x = \alpha$, ($0 < x < 1$)

$$\text{and } \sin^{-1}(2x\sqrt{1-x^2}) + \sec^{-1}\left(\frac{1}{2x^2-1}\right) = \frac{2\pi}{3}$$

16. $\tan^{-1}(2x)$ is equal to

- (a) $\pi/6$ (b) $\pi/4$ (c) $\pi/3$ (d) $\pi/2$

17. If $xy = \frac{1}{2}$, then $\tan^{-1}\left(\frac{1-y}{1+y}\right)$ is equal to

- (a) $\pi/4$ (b) $\pi/6$ (c) $\pi/3$ (d) $\pi/12$

Directions (Q. Nos. 18-20) Read the following information carefully and answer the questions given below.

$$\text{If } \alpha = \cos^{-1}\left(\frac{4}{5}\right) \text{ and } \beta = \tan^{-1}\left(\frac{2}{3}\right), \text{ where}$$

$$0 < \alpha, \beta < \frac{\pi}{2}. \text{ Then,}$$

18. $(\alpha + \beta)$ is equal to

- (a) $\tan^{-1}\left(\frac{17}{6}\right)$ (b) $\sin^{-1}\left(\frac{3}{\sqrt{13}}\right)$
(c) $\sin^{-1}\left(\frac{3}{5}\right)$ (d) $\cos^{-1}\left(\frac{3}{\sqrt{13}}\right)$

19. $\cos^{-1}\left(\frac{44}{125}\right)$ is equal to

- (a) 2α (b) 3α (c) $\pi - 3\alpha$ (d) $\pi - 2\alpha$

20. $\sin[\cot^{-1}[\tan\{\cos^{-1}(3/\sqrt{13})\}]]$ is equal to

- (a) $\sin \beta$ (b) $\cos \beta$ (c) $\tan \beta$ (d) $\sec \beta$

Directions (Q. Nos. 21-23) Consider the equation $\sin^{-1}(ax) + \cos^{-1}(y) + \cos^{-1}(bxy) = \pi/2$.

21. If $a = 1$ and $b = 0$, then (x, y) satisfies the equation

- (a) $x^2 + y^2 = 1$ (b) $x^2 + y^2 = 2$
(c) $x^2 + y^2 = 1/2$ (d) $y = x$

22. If $a = 1$, $b = 1$, then (x, y) is a solution of the equation

- (a) $(x^2 + 1)(y^2 - 1) = 0$ (b) $(x^2 - 1)(y^2 + 1) = 0$
(c) $(x^2 - 1)(y^2 - 1) = 0$ (d) $x^2 + y^2 = \sqrt{2}$

23. If $a = 2$, $b = 2$, then (x, y) satisfies the equation

- (a) $(x^2 - 1)(4y^2 - 1) = 0$ (b) $(4x^2 - 1)(y^2 - 1) = 0$
(c) $(4x^2 - 1)(y^2 - 2) = 0$ (d) $(x^2 - 2)(4y^2 - 1) = 0$

Directions (Q. Nos. 24-27) Let $A = \cos^{-1} x$, $B = \cos^{-1} y$ and $C = \cos^{-1} z$

24. If $A + B + C = \pi$, then $x^2 + y^2 + z^2$ is equal to

- (a) 1 (b) 0 (c) $1 - 2xyz$ (d) $2xyz$

25. If $A + B + C = 3\pi$, then $x(y + z) + y(z + x) + z(x + y)$ is equal to

- (a) 0 (b) 1 (c) 6 (d) 12

26. If $A + B = 2\pi/3$, then $\sin^{-1} x + \sin^{-1} y$ is equal to

- (a) $2\pi/3$ (b) $\pi/3$ (c) $\pi/6$ (d) π

27. If $A + C = \pi/2$ and $\tan^{-1} x - \tan^{-1} z = 0$, then $x^2 + xz + z^2$ is equal to

- (a) 0 (b) $\frac{1}{\sqrt{2}}$ (c) $\frac{3}{2}$ (d) $\frac{1}{8}$

Directions (Q. Nos. 28-32) Read the following information carefully and answer the questions given below.

$$\text{If } \alpha = \tan^{-1}\left(\frac{1}{2}\right) + \tan^{-1}\left(\frac{1}{3}\right)$$

$$\beta = \cos^{-1}\left(\frac{2}{3}\right) + \cos^{-1}\left(\frac{\sqrt{5}}{3}\right)$$

$$\gamma = \sin^{-1}\left[\sin\left(\frac{2\pi}{3}\right)\right] + \frac{1}{2} \cos^{-1}\left[\cos\left(\frac{2\pi}{3}\right)\right], \text{ then}$$

- 28.** $\cos(\alpha + \beta + \gamma)$ is equal to
 (a) $\cos\left(\frac{5\pi}{12}\right)$ (b) $\cos\left(\frac{7\pi}{12}\right)$ (c) $\cos\left(\frac{\pi}{12}\right)$ (d) $\cos\left(\frac{11\pi}{12}\right)$
- 29.** $\tan\alpha - \tan\left(\frac{\beta}{2}\right) + \sqrt{3}\tan\left(\frac{\gamma}{4}\right)$ is equal to
 (a) 4 (b) 3 (c) 2 (d) 1
- 30.** $\sin[\cot^{-1}[\tan\{\cos^{-1}(\sin\gamma)\}]]$ is equal to
 (a) $\sin\gamma$ (b) $\sin\left(\frac{\gamma}{2}\right)$ (c) $\frac{1}{2}\sin\gamma$ (d) $\cos\gamma$
- 31.** $\cos\alpha + \cos\beta + \cos\gamma$ is equal to
 (a) $\frac{\sqrt{2}-1}{2}$ (b) $\frac{\sqrt{2}+1}{2}$ (c) $\frac{\sqrt{2}+\sqrt{3}}{2}$ (d) $\frac{\sqrt{3}-\sqrt{2}}{2}$
- 32.** If $4(\sin^2\alpha + \sin^2\beta + \sin^2\gamma) = a^2$, then a is equal to
 (a) ± 1 (b) ± 2 (c) ± 3 (d) ± 4

PREVIOUS YEARS' QUESTIONS

- 33.** If $\tan^{-1} 2, \tan^{-1} 3$ are two angles of a triangle, then what is the third angle? **2012 I**

 (c) $\tan^{-1}\left(\frac{90}{169}\right)$ (d) $\tan^{-1}\left(\frac{170}{169}\right)$
- 45.** What is $x - y$ equal to?
 (a) $\tan^{-1}\left(\frac{828}{845}\right)$ (b) $\tan^{-1}\left(\frac{8287}{8450}\right)$
 (c) $\tan^{-1}\left(\frac{8281}{8450}\right)$ (d) $\tan^{-1}\left(\frac{8287}{8471}\right)$
- 46.** What is $x - y + z$ equal to?
 (a) $\pi/2$ (b) $\pi/3$
 (c) $\pi/6$ (d) $\pi/4$
- 47.** The value of $\tan\left(2\tan^{-1}\frac{1}{5} - \frac{\pi}{4}\right)$ is **2015 II**
 (a) $-\frac{7}{17}$ (b) $\frac{5}{16}$
 (c) $\frac{5}{4}$ (d) $\frac{7}{17}$
- 48.** Consider the following statements
 I. $\sin^{-1}\frac{4}{5} + \sin^{-1}\frac{3}{5} = \frac{\pi}{2}$
 II. $\tan^{-1}\sqrt{3} + \tan^{-1} 1 = -\tan^{-1}(2 + \sqrt{3})$
 Which of the above statement(s) is/are correct? **2015 II**
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

49. Consider the following statements

I. There exists $\theta \in \left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$ for which

$$\tan^{-1}(\tan \theta) \neq \theta.$$

II. $\sin^{-1}\left(\frac{1}{3}\right) - \sin^{-1}\left(\frac{1}{5}\right) = \sin^{-1}\left(\frac{2\sqrt{2}(\sqrt{3}-1)}{15}\right)$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II **2016 I**
 (c) Both I and II (d) Neither I nor II

50. Consider the following statements

I. $\tan^{-1} x + \tan^{-1}\left(\frac{1}{x}\right) = \pi$.

II. Their exist, $x, y \in [-1, 1]$, where $x \neq y$ such that $\sin^{-1} x + \cos^{-1} y = \frac{\pi}{2}$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II **2016 I**
 (c) Both I and II (d) Neither I nor II

HINTS AND SOLUTIONS

1. (c)

2. (d) $\sin\left[\frac{\pi}{3} - \sin^{-1}\left(-\frac{1}{2}\right)\right]$
 $= \sin\left[\frac{\pi}{3} + \sin^{-1}\left(\frac{1}{2}\right)\right] = \sin\frac{\pi}{2} = 1$

3. (a) $\cos\left(\tan^{-1}\frac{3}{4}\right)$
 $= \cos\left[\cos^{-1}\frac{1}{\sqrt{1+\left(\frac{3}{4}\right)^2}}\right] = \frac{4}{5}$

4. (b) $\cos^{-1}\left(\frac{1}{x}\right) = \theta$
 $\Rightarrow \tan^{-1}\left[\frac{\sqrt{1-(1/x)^2}}{1/x}\right] = \theta$
 $\therefore \tan\theta = \tan[\tan^{-1}\sqrt{x^2-1}] = \sqrt{x^2-1}$

5. (a) Let $\tan^{-1} x = \frac{y}{\pi} - y$
 Then, $\cot^{-1} x = \frac{y}{2} - y$
 $\therefore y^2 + \left(\frac{\pi}{2} - y\right)^2 = \frac{5\pi^2}{8}$
 $\Rightarrow 16y^2 - 8\pi y - 3\pi^2 = 0$
 $\Rightarrow (4y - 3\pi)(4y + \pi) = 0$
 $\Rightarrow y = \tan^{-1} x = -\pi/4$
 $\left[\frac{3\pi}{4} \text{ rejected, since it is greater than } \frac{\pi}{2}\right]$
 $\therefore x = \tan(-\pi/4) = -1$

6. (b) $\sin^{-1} x + \cot^{-1}\left(\frac{1}{2}\right) = \frac{\pi}{2}$
 $\Rightarrow \cot^{-1}\left(\frac{1}{2}\right) = \frac{\pi}{2} - \sin^{-1} x$
 $\Rightarrow \cot^{-1}\left(\frac{1}{2}\right) = \cos^{-1} x$
 $\left[\because \sin^{-1} x + \cos^{-1} x = \frac{\pi}{2}\right]$

$\Rightarrow \cot^{-1}\left(\frac{1}{2}\right) = \cot^{-1}\left(\frac{x}{\sqrt{1-x^2}}\right)$
 $\Rightarrow \frac{1}{2} = \frac{x}{\sqrt{1-x^2}} \Rightarrow \sqrt{1-x^2} = 2x$

On squaring both sides, we get
 $1-x^2 = 4x^2 \Rightarrow 5x^2 = 1 \Rightarrow x = \frac{1}{\sqrt{5}}$

7. (a) 8. (d)

9. (b) $\cos(\sin^{-1} x) = \frac{1}{2}$
 $\Rightarrow \cos(\cos^{-1}\sqrt{1-x^2}) = \frac{1}{2} \Rightarrow \sqrt{1-x^2} = \frac{1}{2}$
 $\Rightarrow 1-x^2 = \frac{1}{4} \Rightarrow x = \pm\frac{\sqrt{3}}{2}$
 Hence, $\tan(\cos^{-1} x)$ have two values.

10. (b) $3 \sin^{-1}\left(\frac{2x}{1+x^2}\right) - 4 \cos^{-1}\left(\frac{1-x^2}{1+x^2}\right)$
 $+ 2 \tan^{-1}\left(\frac{2x}{1-x^2}\right) = \frac{\pi}{3}$

$\Rightarrow 3 \cdot 2 \tan^{-1} x - 4 \cdot 2 \tan^{-1} x$
 $+ 2 \cdot 2 \tan^{-1} x = \frac{\pi}{3}$
 $\Rightarrow (6-8+4) \tan^{-1} x = \frac{\pi}{3}$
 $\therefore \tan^{-1} x = \frac{\pi}{6} \Rightarrow x = \frac{1}{\sqrt{3}}$

11. (c) Let $\tan^{-1} 2 = \alpha \Rightarrow \tan \alpha = 2$
 and $\cot^{-1} 3 = \beta \Rightarrow \cot \beta = 3$
 Now, $\sec^2(\tan^{-1} 2) + \operatorname{cosec}^2(\cot^{-1} 3)$
 $= \sec^2 \alpha + \operatorname{cosec}^2 \beta$
 $= 1 + \tan^2 \alpha + 1 + \cot^2 \beta = 15$

12. (b) $\tan^{-1}(2x) + \tan^{-1}(3x) = \frac{\pi}{4}$
 $= \tan^{-1}\left(\frac{2x+3x}{1-(2x)(3x)}\right) = \frac{\pi}{4}$
 $\Rightarrow \tan^{-1}\left(\frac{5x}{1-6x^2}\right) = \tan^{-1}(1)$
 $\Rightarrow \frac{5x}{1-6x^2} = 1 \Rightarrow 6x^2 + 5x - 1 = 0$
 $\Rightarrow x = -1, \frac{1}{6}$

But, -1 does not hold.

13. (c) I. Consider, $\tan^{-1}\left(\frac{1}{4}\right) + \tan^{-1}\left(\frac{2}{9}\right)$
 $= \tan^{-1}\left(\frac{\frac{1}{4} + \frac{2}{9}}{1 - \frac{1}{4} \times \frac{2}{9}}\right) = \tan^{-1}\left(\frac{9+8}{36-2}\right)$

$$= \tan^{-1}\left(\frac{17}{34}\right) = \tan^{-1}\left(\frac{1}{2}\right)$$

$$= \sin^{-1} \frac{1/2}{\sqrt{1+\left(\frac{1}{2}\right)^2}} = \sin^{-1}\left(\frac{1}{\sqrt{15}}\right)$$

∴ Statement I is true.

II. LHS = $\sin^{-1}\left(\frac{8}{17}\right) + \sin^{-1}\left(\frac{3}{5}\right)$

$$= \sin^{-1}\left[\frac{8}{17}\sqrt{1-\left(\frac{3}{5}\right)^2} + \frac{3}{5}\sqrt{1-\left(\frac{8}{17}\right)^2}\right]$$

$$= \sin^{-1}\left[\frac{32+45}{85}\right] = \sin^{-1}\frac{77}{85} = \text{RHS}$$

Thus, Statement II is also true.

14. (c) I. $2 \tan^{-1}(\cos x) = \tan^{-1}(2 \operatorname{cosec} x)$

$$\Rightarrow \tan^{-1}\left(\frac{2 \cos x}{1 - \cos^2 x}\right) = \tan^{-1}(2 \operatorname{cosec} x)$$

$$\Rightarrow \frac{2 \cos x}{\sin^2 x} = 2 \operatorname{cosec} x \Rightarrow 2 \cos x = 2 \sin x$$

$$\Rightarrow \cot x = 1 \Rightarrow x = \frac{\pi}{4}$$

∴ Statement I is true.

II. $\tan^{-1}\left(\frac{1-x}{1+x}\right) = \frac{1}{2} \tan^{-1} x$

$$\Rightarrow \tan^{-1}\left(\frac{1-\tan\theta}{1+\tan\theta}\right) = \frac{1}{2} \theta$$

[putting $x = \tan\theta$]

$$\Rightarrow \tan^{-1}(1) - \tan^{-1}(\tan\theta) = \frac{\theta}{2}$$

$$\Rightarrow \frac{\pi}{4} - \theta = \frac{\theta}{2} \Rightarrow \theta = \frac{\pi}{6}$$

$$\Rightarrow \tan^{-1} x = \frac{\pi}{6} \Rightarrow x = \frac{1}{\sqrt{3}}$$

∴ Statement II is also true.

15. (c) I. Let $x = a \sin\theta$, then $\sin^{-1}\left(\frac{x}{a}\right) = \theta$

$$\tan^{-1} \frac{x}{\sqrt{a^2 - x^2}}$$

$$= \tan^{-1}\left(\frac{a \sin\theta}{\sqrt{a^2 - a^2 \sin^2\theta}}\right) = \tan^{-1}\left(\frac{\sin\theta}{\cos\theta}\right)$$

$$= \tan^{-1}(\tan\theta) = \theta = \sin^{-1}\left(\frac{x}{a}\right)$$

So, Statement I is correct.

II. Let $\cos\alpha = \frac{3}{5} \Rightarrow \sin\alpha = \sqrt{1 - \frac{9}{25}} = \frac{4}{5}$

and $\tan\alpha = \frac{4}{3}$

Now, $\cos^{-1}\left(\frac{3}{5} \cos x + \frac{4}{5} \sin x\right)$

$$= \cos^{-1}[\cos\alpha \cos x + \sin\alpha \sin x]$$

$$= \cos^{-1}[\cos(\alpha - x)]$$

$$= \alpha - x = \tan^{-1}\frac{4}{3} - x$$

∴ Statement II is not correct.

III. $\cos(\sec^{-1} x + \operatorname{cosec}^{-1} x) = \cos(\pi/2) = 0$

∴ Statement III is correct.

Sol. (Q. Nos. 16-17)

Given, $\cos^{-1} x = \alpha \Rightarrow x = \cos\alpha$

∴ $\sin^{-1}(2 \cos\alpha \sqrt{1 - \cos^2\alpha})$

$$+ \sec^{-1}\left(\frac{1}{2 \cos^2\alpha - 1}\right) = \frac{2\pi}{3}$$

$$\Rightarrow \sin^{-1}(\sin 2\alpha) + \sec^{-1}(\sec 2\alpha) = \frac{2\pi}{3}$$

$$\Rightarrow 4\alpha = \frac{2\pi}{3} \Rightarrow \alpha = \frac{\pi}{6}$$

$$\therefore x = \cos \frac{\pi}{6} = \frac{\sqrt{3}}{2}$$

16. (c) $\tan^{-1}(2x) = \tan^{-1}\left(2 \times \frac{\sqrt{3}}{2}\right)$

$$= \tan^{-1}(\sqrt{3}) = \frac{\pi}{3}$$

17. (d) Given, $xy = \frac{1}{2}$

$$\Rightarrow \frac{\sqrt{3}}{2} \times y = \frac{1}{2} \Rightarrow y = \frac{1}{\sqrt{3}}$$

$$\therefore \tan^{-1}\left(\frac{1-y}{1+y}\right) = \tan^{-1}\left(\frac{1-\frac{1}{\sqrt{3}}}{1+\frac{1}{\sqrt{3}}}\right)$$

$$= \frac{\pi}{4} - \frac{\pi}{6} = \frac{\pi}{12}$$

Sol. (Q. Nos. 18-20)

$$\cos\alpha = \frac{4}{5} \Rightarrow \sin\alpha = \frac{3}{5}, \tan\alpha = \frac{3}{4}$$

$$\tan\beta = \frac{2}{3} \Rightarrow \sin\beta = \frac{2}{\sqrt{13}}, \cos\beta = \frac{3}{\sqrt{13}}$$

18. (a) $\tan(\alpha + \beta) = \frac{\tan\alpha + \tan\beta}{1 - \tan\alpha \tan\beta}$

$$= \frac{\frac{3}{4} + \frac{2}{3}}{1 - \frac{3}{4} \cdot \frac{2}{3}} = \frac{17}{6}$$

$$\Rightarrow (\alpha + \beta) = \tan^{-1}\left(\frac{17}{6}\right)$$

19. (c) $\cos 3\alpha = 4 \cos^3\alpha - 3 \cos\alpha$

$$= 4 \times \frac{64}{125} - 3 \times \frac{4}{5} = -\frac{44}{125}$$

and $\cos(\pi - 3\alpha) = -\cos 3\alpha = \frac{44}{125}$

20. (b) $\sin\left[\cot^{-1}\left\{\tan\left\{\cos^{-1}\left(\frac{3}{\sqrt{13}}\right)\right\}\right\}\right]$

$$= \sin\left[\cot^{-1}\left\{\tan\left\{\cos^{-1}(\cos\beta)\right\}\right\}\right]$$

$$= \sin\left\{\cot^{-1}(\tan\beta)\right\}$$

$$= \sin\left[\cot^{-1}\left\{\cot\left(\frac{\pi}{2} - \beta\right)\right\}\right]$$

$$= \sin\left(\frac{\pi}{2} - \beta\right) = \cos\beta$$

21. (a) When $a = 1$ and $b = 0$, the given equation reduces to

$$\sin^{-1} x + \cos^{-1} y = 0 \left[\because \cos^{-1}(0) = \frac{\pi}{2} \right]$$

$$\sin^{-1} x = -\cos^{-1} y = -\sin^{-1}(\sqrt{1-y^2})$$

This gives, $x = -(\sqrt{1-y^2})$

or $x^2 + y^2 = 1$

22. (c) When $a = 1, b = 1$, then equation is

$$\sin^{-1} x + \cos^{-1} y + \cos^{-1} xy = \pi/2$$

$$\pi/2 - \cos^{-1} x + \cos^{-1} y + \cos^{-1} xy = \pi/2$$

$$\Rightarrow \cos^{-1} xy = \cos^{-1} x - \cos^{-1} y$$

$$\cos^{-1} xy = \cos^{-1}\left[xy + \sqrt{1-x^2}\sqrt{1-y^2}\right]$$

$$\Rightarrow xy = xy + \sqrt{1-x^2}\sqrt{1-y^2}$$

$$\Rightarrow (x^2 - 1)(y^2 - 1) = 0$$

23. (b) When $a = 2, b = 2$, the equation becomes

$$\sin^{-1}(2x) + \cos^{-1} y + \cos^{-1}(2xy) = \frac{\pi}{2}$$

$$\Rightarrow \pi/2 - \cos^{-1}(2x) + \cos^{-1} y$$

$$+ \cos^{-1}(2xy) = \pi/2$$

$$\Rightarrow \cos^{-1}(2xy) = \cos^{-1}(2x) - \cos^{-1} y$$

$$\Rightarrow \cos^{-1}(2xy) = \cos^{-1}$$

$$\left[2xy + \sqrt{1-4x^2}\sqrt{1-y^2}\right]$$

$$\Rightarrow 2xy = 2xy + \sqrt{1-4x^2}\sqrt{1-y^2}$$

$$\Rightarrow (4x^2 - 1)(y^2 - 1) = 0$$

24. (c) $A + B + C = \pi$

$$\Rightarrow \cos^{-1} x + \cos^{-1} y + \cos^{-1} z = \pi$$

$$\Rightarrow \cos^{-1}(xy - \sqrt{1-y^2}\sqrt{1-x^2})$$

$$= \pi - \cos^{-1} z$$

$$\Rightarrow xy - \sqrt{1-y^2}\sqrt{1-x^2}$$

$$= \cos(\pi - \cos^{-1} z)$$

$$\Rightarrow xy - \sqrt{1-y^2}\sqrt{1-x^2} = -z$$

$$\Rightarrow xy + z = \sqrt{1-y^2}\sqrt{1-x^2}$$

On squaring both sides, we get

$$x^2 y^2 + z^2 + 2xyz$$

$$= 1 - x^2 - y^2 + x^2 y^2$$

$$\Rightarrow x^2 + y^2 + z^2 = 1 - 2xyz$$

25. (c) Given, $A + B + C = 3\pi$

$$\Rightarrow \cos^{-1} x + \cos^{-1} y + \cos^{-1} z = 3\pi$$

∴ $0 \leq \cos^{-1} x \leq \pi, 0 \leq \cos^{-1} y \leq \pi$

and $0 \leq \cos^{-1} z \leq \pi$

$$\therefore \cos^{-1} x = \cos^{-1} y = \cos^{-1} z = \pi$$

$$\Rightarrow x = y = z = \cos\pi = -1$$

Thus, $x(y+z) + y(z+x) + z(x+y)$

$$= 2(xy + yz + zx) = 6$$

26. (b) Given, $\cos^{-1} x + \cos^{-1} y = \frac{2\pi}{3}$

$$\Rightarrow \frac{\pi}{2} - \sin^{-1} x + \frac{\pi}{2} - \sin^{-1} y = \frac{2\pi}{3}$$

$$\Rightarrow \sin^{-1} x + \sin^{-1} y = \pi - \frac{2\pi}{3} = \frac{\pi}{3}$$

27. (c) Given, $\tan^{-1} x - \tan^{-1} z = 0 \Rightarrow x = z$

Also, $A + C = \frac{\pi}{2}$

$$\Rightarrow \cos^{-1} x + \cos^{-1} z = \frac{\pi}{2}$$

$$\Rightarrow 2 \cos^{-1} x = \frac{\pi}{2}$$

$$\Rightarrow \cos^{-1} x = \frac{\pi}{4} \Rightarrow x = \frac{1}{\sqrt{2}}$$

$$\begin{aligned} \text{Hence, } x^2 + xz + z^2 \\ = 3x^2 = 3\left(\frac{1}{\sqrt{2}}\right)^2 = \frac{3}{2} \end{aligned}$$

Sol. (Q. Nos. 28-32)

$$\begin{aligned} \alpha &= \tan^{-1}\left(\frac{1}{2}\right) + \tan^{-1}\left(\frac{1}{3}\right) \\ &= \tan^{-1}\left(\frac{\frac{1}{2} + \frac{1}{3}}{1 - \frac{1}{2} \cdot \frac{1}{3}}\right) = \tan^{-1}\left(\frac{\frac{5}{6}}{\frac{5}{6}}\right) \\ &= \tan^{-1}(1) = \frac{\pi}{4} \end{aligned}$$

$$\begin{aligned} \beta &= \cos^{-1}\left(\frac{2}{3}\right) + \cos^{-1}\left(\frac{\sqrt{5}}{3}\right) \\ \Rightarrow \beta &= \cos^{-1}\left(\frac{2}{3}\right) + \sin^{-1}\left(\sqrt{1 - \frac{5}{9}}\right) \\ \Rightarrow \beta &= \cos^{-1}\left(\frac{2}{3}\right) + \sin^{-1}\left(\frac{2}{3}\right) = \frac{\pi}{2} \end{aligned}$$

$$\begin{aligned} \text{and } \gamma &= \sin^{-1}\left[\sin\left(\frac{2\pi}{3}\right)\right] \\ &\quad + \frac{1}{2}\cos^{-1}\left[\cos\left(\frac{2\pi}{3}\right)\right] \\ &= \sin^{-1}\left(\sin\frac{\pi}{3}\right) + \frac{1}{2}\cos^{-1}\left[\cos\frac{2\pi}{3}\right] \\ &= \frac{\pi}{3} + \frac{1}{2} \cdot \frac{2\pi}{3} = \frac{2\pi}{3} \end{aligned}$$

$$\begin{aligned} 28. (b) \cos(\alpha + \beta + \gamma) \\ = \cos\left(\frac{\pi}{4} + \frac{\pi}{2} + \frac{2\pi}{3}\right) = \cos\frac{7\pi}{12} \end{aligned}$$

$$\begin{aligned} 29. (d) \tan\alpha - \tan\frac{\beta}{2} + \sqrt{3}\tan\frac{\gamma}{4} \\ = \tan\frac{\pi}{4} - \tan\frac{\pi}{4} + \sqrt{3}\tan\frac{\pi}{6} \\ = \sqrt{3} \cdot \frac{1}{\sqrt{3}} = 1 \end{aligned}$$

$$\begin{aligned} 30. (a) \sin[\cot^{-1}\{\tan(\cos^{-1}(\sin\gamma))\}] \\ = \sin\left[\cot^{-1}\left\{\tan\left(\cos^{-1}\left(\sin\frac{2\pi}{3}\right)\right)\right\}\right] \\ = \sin\left[\cot^{-1}\left\{\tan\left(\cos^{-1}\frac{\sqrt{3}}{2}\right)\right\}\right] \\ = \sin\left[\cot^{-1}\left\{\tan\frac{\pi}{6}\right\}\right] = \sin\left[\cot^{-1}\frac{1}{\sqrt{3}}\right] \\ = \sin\frac{\pi}{3} = \sin\left(\pi - \frac{2\pi}{3}\right) \\ = \sin\frac{2\pi}{3} = \sin\gamma \end{aligned}$$

$$\begin{aligned} 31. (a) \cos\alpha + \cos\beta + \cos\gamma \\ = \cos\frac{\pi}{4} + \cos\frac{\pi}{2} + \cos\frac{2\pi}{3} \\ = \frac{1}{\sqrt{2}} + 0 - \frac{1}{2} = \frac{\sqrt{2}-1}{2} \end{aligned}$$

$$\begin{aligned} 32. (c) 4(\sin^2\alpha + \sin^2\beta + \sin^2\gamma) = a^2 \\ \Rightarrow 4\left(\sin^2\frac{\pi}{4} + \sin^2\frac{\pi}{2} + \sin^2\frac{2\pi}{3}\right) = a^2 \end{aligned}$$

$$\begin{aligned} \Rightarrow 4\left(\frac{1}{2} + 1 + \frac{3}{4}\right) = a^2 \\ \Rightarrow \frac{4(2+4+3)}{4} = a^2 \\ \Rightarrow a^2 = 9 \Rightarrow a = \pm 3 \end{aligned}$$

$$\begin{aligned} 33. (c) \text{ Let } \alpha \text{ be the third angle of the} \\ \text{triangle, then} \\ \text{In } \triangle ABC, \tan^{-1}2 + \tan^{-1}3 + \alpha = 180^\circ \\ \Rightarrow \tan^{-1}\left(\frac{2+3}{1-2\cdot 3}\right) + \alpha = 180^\circ \\ \Rightarrow \tan^{-1}(-1) + \alpha = 180^\circ \\ \therefore \alpha = 180^\circ - \tan^{-1}(-1) = \pi - \frac{3\pi}{4} = \frac{\pi}{4} \end{aligned}$$

34. (b)

$$\begin{aligned} 35. $$\begin{aligned} 46. (d) x - y + z = \tan^{-1}\left(\frac{8281}{8450}\right) + \tan^{-1}\left(\frac{1}{99}\right) \\ = \tan^{-1}\left(\frac{49}{50}\right) + \tan^{-1}\left(\frac{1}{99}\right) \\ = \tan^{-1}\left(\frac{\frac{49}{50} + \frac{1}{99}}{1 - \frac{49}{50} \times \frac{1}{99}}\right) \\ = \tan^{-1}(1) = \frac{\pi}{4} \end{aligned}$$

47. (a)

$$\begin{aligned} 48. (a) \text{ I. LHS} = \sin^{-1}\left(\frac{4}{5}\right) + \sin^{-1}\left(\frac{3}{5}\right) \\ = \sin^{-1}\left(\frac{4}{5}\right) + \cos^{-1}\left(\frac{4}{5}\right) \\ = \frac{\pi}{2} = \text{RHS} \end{aligned}$$

$$\begin{aligned} \text{II. LHS} = \tan^{-1}\sqrt{3} + \tan^{-1}1 \\ = \pi + \tan^{-1}\left(\frac{\sqrt{3}+1}{1-\sqrt{3}} \times \frac{1+\sqrt{3}}{1+\sqrt{3}}\right) \\ = \pi + \tan^{-1}\left(\frac{3+1+2\sqrt{3}}{1-3}\right) \\ = \pi - \tan^{-1}(2+\sqrt{3}) \neq \text{RHS} \\ \text{Hence, only Statement I is correct.} \end{aligned}$$

$$\begin{aligned} 49. (b) \tan^{-1}(\tan\theta) = \theta, -\frac{\pi}{2} < \theta < \frac{\pi}{2} \\ \therefore \text{Statement I is incorrect.} \\ \text{Now, } \sin^{-1}\left(\frac{1}{3}\right) - \sin^{-1}\left(\frac{1}{5}\right) \end{aligned}$$

$$\begin{aligned} = \sin^{-1}\left[\frac{1}{3}\sqrt{1 - \left(\frac{1}{5}\right)^2} - \frac{1}{5}\sqrt{1 - \left(\frac{1}{3}\right)^2}\right] \\ = \sin^{-1}\left[\frac{2\sqrt{2}(\sqrt{3}-1)}{15}\right] \\ \therefore \text{Statement II is correct.} \end{aligned}$$

$$\begin{aligned} 50. (d) \text{ We know that,} \\ \tan^{-1}x + \cot^{-1}x = \frac{\pi}{2} \\ \therefore \tan^{-1}x + \tan^{-1}\left(\frac{1}{x}\right) = \frac{\pi}{2} \end{aligned}$$

$$\begin{aligned} \therefore \text{Statement I is incorrect.} \\ \text{Let } x = y \\ \text{Given that, } \sin^{-1}x + \cos^{-1}y = \frac{\pi}{2} \\ \Rightarrow \sin^{-1}(x) + \cos^{-1}(x) = \frac{\pi}{2} \end{aligned}$$

This is true for $x \in [-1, 1]$.
 \therefore Statement II is not correct.

14

HEIGHT AND DISTANCE

In NDA exam, generally 1-2 questions are asked from this chapter which are based on finding required term length / height / distance etc., by using angle of elevation / depression in triangle.

Height and distance is one of the most important application of trigonometry which helps us to find the height of any object and distance of objects between points which are not directly measurable.

Line of Sight

When the eye of a person at a point O looks at an object P , then the line OP is called the line of sight.

Angle of Elevation

Let P be an object and OX be a horizontal line, an observer at O to perceive the object P has to elevate his eye from direction OX to the direction OP . As such, we define $\angle XOP$ as the angle at elevation of P at O .

EXAMPLE 1. The angle of elevation of a ladder leaning against a wall is 60° and the foot of the ladder is 4.6 m away from the wall. The length of the ladder is

a. 2.3 m

b. 9.2 m

c. 4.6 m

d. None of these

Sol. b. Let AB be the wall and BC be the ladder. Then,

$$\angle ACB = 60^\circ \text{ and } AC = 4.6 \text{ m}$$

$$\text{In } \triangle ACB, \cos 60^\circ = \frac{AC}{BC} \Rightarrow \frac{1}{2} = \frac{4.6}{BC}$$

$$\Rightarrow BC = (4.6 \times 2) \text{ m} = 9.2 \text{ m}$$

EXAMPLE 2. What should be the height of a flag, where a 20 ft long ladder reaches 20 ft below the flag. The angle of elevation of the top of the flag at the foot of the ladder is 60° ?

- a. 20 ft b. 30 ft c. 40 ft d. $20\sqrt{2}$ ft

Sol. b. Let BD be a flag and $BD = (h + 20)$ ft

In $\triangle ABD$, $\tan 60^\circ = \frac{BD}{AB}$

$\Rightarrow \sqrt{3} = \frac{h + 20}{AB}$

$\Rightarrow AB = \frac{(h + 20)}{\sqrt{3}} \dots(i)$

Now, in $\triangle ABC$,

$AC^2 = AB^2 + BC^2 \Rightarrow 20^2 = \frac{(h + 20)^2}{3} + h^2$

$\Rightarrow 400 = \frac{(h + 20)^2 + 3h^2}{3}$

$\Rightarrow 1200 = h^2 + 40h + 400 + 3h^2$

$\Rightarrow 4h^2 + 40h - 800 = 0 \Rightarrow h^2 + 10h - 200 = 0$

$\Rightarrow (h + 20)(h - 10) = 0$

$\Rightarrow h = 10 \quad [\because h \neq -20]$

\therefore Height of flag = $BD = BC + CD = 10 + 20 = 30$ ft

Angle of Depression

Let P be an object and OX be a horizontal line, an observer at O to perceive the object P has to depress his eye from the direction OX to direction OP . As such, we define $\angle XOP$ as the angle of depression of P at O .

- Note**
- Any perpendicular line to a plane is perpendicular to all lines lying in the plane.
 - Angle of elevation and depression are always acute angles.

EXAMPLE 3. Looking from the top of a 20 m high building, the angle of elevation of the top of a tower is 60° and the angle of depression of its bottom is 30° . What is the height of the tower?

- a. 50 m b. 60 m c. 70 m d. 80 m

Sol. d. Let AD be the building and BF be the tower.

Draw $DC \perp BF$. Then,

$\angle FDC = 60^\circ$

and $\angle DBA = 30^\circ$

$AD = BC = 20$ m

In $\triangle ABD$, $\tan 30^\circ = \frac{AD}{AB}$

$\Rightarrow AB = 20\sqrt{3}$ m

In $\triangle DCF$, $\tan 60^\circ = \frac{h}{DC}$

$\Rightarrow h = \sqrt{3} \times 20 \times \sqrt{3} \quad [\because AB = DC = 20\sqrt{3}]$

$\Rightarrow h = 60$ m

\therefore Height of tower, $BF = 60 + 20 = 80$ m

m-n Theorem

If D divides AB in the ratio $m : n$,

(i) $(m + n)\cot \theta = n\cot A - m\cot B$

(ii) $(m + n)\cot \theta = m\cot \alpha - n\cot \beta$

EXAMPLE 4. A man observes that when he moves up a distance C metres on a slope, the angle of depression of a point on the horizontal plane from the base of the slope is 30° , and when he moves up further a distance C metres the angle of depression of that point is 45° . The angle of inclination of the slope with the horizontal is

- a. 60° b. 45° c. 75° d. 30°

Sol. c. Applying m - n theorem, we get

$(c + c)\cot(\theta - 30^\circ) = c\cot 15^\circ - c\cot 30^\circ$

$\Rightarrow \cot(\theta - 30^\circ) = \left(\frac{1}{2}\right) \frac{\sin(30^\circ - 15^\circ)}{\sin 15^\circ \sin 30^\circ}$

$\Rightarrow \cot(\theta - 30^\circ) = \frac{1}{2\sin 30^\circ} = 1 = \cot 45^\circ$

$\Rightarrow \theta - 30 = 45^\circ \Rightarrow \theta = 45^\circ + 30^\circ = 75^\circ$

> PRACTICE EXERCISE

- A 30 m long ladder is placed against a wall 15 m high such that it just reaches the top of the wall. The angle made by the ladder with the horizontal is
(a) 30° (b) 45° (c) 60° (d) 90°
- What is the angle subtended by 1 m pole at a distance 1 km on the ground in sexagesimal measure?
(a) $\frac{9}{50\pi}$ degree (b) $\frac{9}{5\pi}$ degree
(c) 3.4 min (d) 3.5 min
- The angle of elevation of the top of a flag post from a point 5 m away from its base is 75° . What is the approximate height of the flag post?
(a) 15 m (b) 17 m (c) 19 m (d) 21 m
- The angle of elevation of the top of two vertical towers as seen from the middle point of the line joining the foot of the towers are 60° and 30° , respectively. The ratio of the heights of the tower is
(a) 2 : 1 (b) $\sqrt{3} : 1$ (c) 3 : 2 (d) 3 : 1
- Two vertical poles AL and BM of heights 20 m and 80 m, respectively stand apart on a horizontal plane. If A and B be the feet of the poles and AM and BL intersect at P , the height of P is equal to
(a) 50 m (b) 18 m (c) 16 m (d) 15 m
- A tower 100 m tall stands on the top of a mount. From a point on the ground, the angles of elevation of the top and the bottom of the tower are found to be 75° and 45° , respectively. The height of the mount in metres is
(a) $100(\sqrt{3} - 1)$ m (b) $50(\sqrt{3} - 1)$ m
(c) $50(\sqrt{3} + 1)$ m (d) None of these
- A chimney 20 m high standing on the top of a building subtends an angle whose tangent is $1/6$ at a distance 70 m from the foot of the building. The height of the building is
(a) 50 m (b) 40 m (c) 60 m (d) 20 m
- An aeroplane flying at a height of 300 m above the ground passes vertically above another plane at an instant when the angles of elevation of two plane from the same point on the ground are 60° and 45° , respectively. What is the height of the lower plane from the ground?
(a) 500 m (b) $\frac{100}{\sqrt{3}}$ m
(c) $100\sqrt{3}$ m (d) $150(\sqrt{3} + 1)$ m
- A man standing on the bank of a river observes that the angle of elevation of the top of a tree just on the opposite bank is 60° . The angle of elevation is 30° from a point at a distance y m from the bank. What is the height of the tree?
(a) y m (b) $2y$ m (c) $\frac{\sqrt{3}y}{2}$ m (d) $\frac{y}{2}$ m
- Two poles of equal heights are standing opposite to each other on either side of a road, which is 30 m wide. From a point between them on the road, the angles of elevation of the tops are 30° and 60° . The height of each pole is
(a) $\frac{15}{2}\sqrt{3}$ m (b) $15\sqrt{3}$ m
(c) $10\sqrt{3}$ m (d) None of these
- A man on the top of a tower, standing on the sea-shore finds that a boat coming towards him takes 10 min for the angle of depression to change from 30° to 60° . The time taken by the boat to reach the shore from this position will be
(a) 5 min (b) 15 min (c) $7\frac{1}{2}$ min (d) 245 s
- The angles of elevation of the top of a tower from two points at distances a and b metres from the base and in the same straight line with it, are complementary. The height of the tower (in metres) is
(a) $\sqrt{a+b}$ (b) $\sqrt{a-b}$ (c) \sqrt{ab} (d) $\sqrt{\frac{a}{b}}$
- The shadow of a pole standing on a horizontal plane is d metre longer when the Sun's altitude is α , then when it is β . What is the height of the pole?
(a) $d \cdot \frac{\cos \alpha \cos \beta}{\cos(\alpha - \beta)}$ (b) $d \cdot \frac{\sin \alpha \cos \beta}{\sin(\alpha - \beta)}$
(c) $d \cdot \frac{\sin \alpha \sin \beta}{\sin(\beta - \alpha)}$ (d) $d \cdot \frac{\sin \beta \cos \alpha}{\cos(\alpha + \beta)}$
- The foot of a tower of height h m is in a direct line between two observers A and B . If the angles of elevation of the top of the tower as seen from A and B are α and β , respectively and if $AB = d$ m, what is h/d equal to?
(a) $\frac{\tan(\alpha + \beta)}{\cot \alpha \cot \beta - 1}$ (b) $\frac{\cot(\alpha + \beta)}{\cot \alpha \cot \beta - 1}$
(c) $\frac{\tan(\alpha + \beta)}{\cot \alpha \cot \beta + 1}$ (d) $\frac{\cot(\alpha + \beta)}{\cot \alpha \cot \beta + 1}$

15. AB is a vertical pole. The end A is on the ground, C is the middle point of AB and P is a point on the level ground. The portion BC subtends an angle α at P . If $AP = n$. AB , then $\tan \alpha$ is

(a) $\frac{n}{(n^2 - 1)}$ (b) $\frac{n}{(n^2 + 1)}$ (c) $\frac{n}{(2n^2 + 1)}$ (d) $\left(\frac{n^2 - 1}{n^2 + 1}\right)$

16. Let PT be a tower of height 2^x m, P being the foot, T being the top of the tower, A, B are points on the same line with P . If $AP = 2^{x+1}$ m, $BP = 192$ m and the angle of elevation of the tower as seen from B is double the angle of the elevation of the tower as seen from A , then

I. The value of x is 8.

II. The value of θ is $\frac{\pi}{4}$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

17. A round balloon of radius r subtends an angle α at the eye of the observer while the angle of elevation of its centre is β . Then height of the centre of the balloon is

I. $h = r \sin \alpha \operatorname{cosec} \beta$ II. $h = r \sin \beta \sin \alpha$

III. $h = r \operatorname{cosec} \left(\frac{\alpha}{2}\right) \sin \beta$

- (a) Only I (b) Only II
(c) Only III (d) None of these

Directions (Q. Nos. 18-19) *The angle of elevation of a cloud from a point 200 m above a lake is 30° and the angle of depression of its reflection in the lake is 60° .*

18. The height of the cloud above the lake is
(a) 240 m (b) 500 m (c) 300 m (d) 400 m
19. The horizontal distance of the cloud from point of observation is
(a) $240\sqrt{3}$ m (b) $400\sqrt{3}$ m
(c) $200\sqrt{3}$ m (d) None of these

Directions (Q. Nos. 20-21) *An aeroplane flying horizontally 900 m above the ground is observed at an elevation of 60° . After 10 s, the elevation changes to 30° .*

20. The uniform speed of the aeroplane (in km/h) is
(a) $\frac{50}{\sqrt{3}}$ (b) $180\sqrt{3}$
(c) $216\sqrt{3}$ (d) None of these
21. The angle of elevation after 40 s is
(a) $\tan^{-1}\left(\frac{1}{5\sqrt{3}}\right)$ (b) $\tan^{-1}\left(\frac{1}{3\sqrt{3}}\right)$
(c) $\tan^{-1}\left(\frac{\sqrt{3}}{5}\right)$ (d) $\tan^{-1}\left(\frac{\sqrt{3}}{7}\right)$

PREVIOUS YEARS' QUESTIONS

22. The angle of elevation of a tower at a level ground is 30° . The angle of elevation becomes θ when moved 10 m towards the tower. If the height of tower is $5\sqrt{3}$ m, then what is the value of θ ? **2012 I**
(a) 45° (b) 60° (c) 75° (d) 90°
23. From the top of a lighthouse 70 m high with its base at sea level, the angle of depression of a boat is 15° . The distance of the boat from the foot of the lighthouse is **2012 II**
(a) $70(2 - \sqrt{3})$ m (b) $70(2 + \sqrt{3})$ m
(c) $70(3 - \sqrt{3})$ m (d) $70(3 + \sqrt{3})$ m
24. The top of a hill observed from the top and bottom of a building of height h is at angles of elevation α and β , respectively. The height of the hill is **2012 II**
(a) $\frac{h \cot \beta}{\cot \beta - \cot \alpha}$ (b) $\frac{h \cot \alpha}{\cot \alpha - \cot \beta}$
(c) $\frac{h \tan \alpha}{\tan \alpha - \tan \beta}$ (d) None of these
25. The shadow of a tower standing on a level plane is found to be 50 m longer when the Sun's elevation is 30° than when it is 60° . The height of the tower is **2013 I**
(a) 25 m (b) $25\sqrt{3}$ m (c) 50 m (d) $50\sqrt{3}$ m
26. A man walks 10 m towards a lamp post and notices that the angle of elevation of the top of the post increases for 30° to 45° . The height of the lamp post is **2013 I**
(a) 10 m (b) $(5\sqrt{3} + 5)$ m
(c) $(5\sqrt{3} - 5)$ m (d) $(10\sqrt{3} + 10)$ m
27. The angle of elevation of the top of a tower of height H from the foot of another tower in the same plane is 60° and the angle of elevation of the top of the second tower from the foot of the first tower is 30° . If h is the height of the other tower, then which one of the following is correct? **2013 I**
(a) $H = 2h$ (b) $H = \sqrt{3}h$ (c) $H = 3h$ (d) $H = h$
28. A person standing on the bank of a river observes that the angle subtended by a tree on the opposite of bank is 60° . When he retires 40 m from the bank, he finds the angle to be 30° . What is the breadth of the river? **2013 II**
(a) 60 m (b) 40 m (c) 30 m (d) 20 m
29. The angles of elevation of the top of a tower from two places situated at distances 21 m and x m from the base of the tower are 45° and 60° , respectively. What is the value of x ? **2013 II**
(a) $7\sqrt{3}$ m (b) $(7 - \sqrt{3})$ m (c) $7 + \sqrt{3}$ m (d) 14 m

- 30.** From an aeroplane above a straight road the angles of depression of two positions at a distance 20 m apart on the road are observed to be 30° and 45° . The height of the aeroplane above the ground is **☑ 2014 I**
 (a) $10\sqrt{3}$ m (b) $10(\sqrt{3} - 1)$ m
 (c) $10(\sqrt{3} + 1)$ m (d) 20 m
- 31.** A lamp post stands on a horizontal plane. From a point situated at a distance 150 m from its foot, the angle of elevation of the top is 30° . What is the height of the lamp post? **☑ 2014 II**
 (a) 50 m (b) $50\sqrt{3}$ m
 (c) $\frac{50}{\sqrt{3}}$ m (d) 100 m
- 32.** The angle of elevation of the top of a tower from a point 20 m away from its base is 45° . What is the height of the tower? **☑ 2015 I**
 (a) 10 m (b) 20 m
 (c) 30 m (d) 40 m

- 33.** The angles of elevation of the top of a tower standing on a horizontal plane from two points on a line passing through the foot of the tower at distances 49 m and 36 m are 43° and 47° , respectively. What is the height of the tower? **☑ 2015 I**
 (a) 40 m (b) 42 m (c) 45 m (d) 47 m
- 34.** Two poles are 10 m and 20 m high. The line joining their tops makes an angle of 15° with the horizontal. The distance between the poles is approximately equal to **☑ 2015 II**
 (a) 36.3 m (b) 37.3 m (c) 38.3 m (d) 39.3 m
- 35.** A vertical tower standing on a levelled field is mounted with a vertical flag staff of length 3 m. From a point on the field, the angles of elevation of the bottom and tip of the flag staff are 30° and 45° , respectively. Which one of the following gives the best approximation to the height of the tower? **☑ 2015 II**
 (a) 3.90 m (b) 4.00 m (c) 4.10 m (d) 4.25 m

> **ANSWERS**

> **HINTS AND SOLUTIONS**

- 1. (a)** Let AB be the wall and BC be the ladder and $\angle ACB = \theta$

Then, $AB = 15$ m

$$BC = 30 \text{ m}$$

$$\begin{aligned} \text{Then, } \sin \theta &= \frac{AB}{BC} \\ &= \frac{15}{30} = \frac{1}{2} \end{aligned}$$

$$\Rightarrow \theta = \sin^{-1}(1/2) = 30^\circ$$

- 2. (a)** Let BC be the pole and A be the point of elevation. Let $\angle CAB = \theta$

$$\tan \theta = \frac{BC}{AB} = \frac{1}{1000} \text{ rad}$$

$$\Rightarrow \tan \theta = 0.001 \text{ rad}$$

$$\Rightarrow \theta = \tan^{-1}(0.001) \text{ rad}$$

$$= 9.999 \times 10^{-4} \text{ rad}$$

$$= 9.999 \times 10^{-4} \times \frac{180}{\pi} \text{ degree}$$

$$= \frac{9}{50\pi} \text{ degree}$$

- 3. (c)** Let h be the height of the flag post.

$$\text{In } \triangle ABC, \tan 75^\circ = \frac{AB}{BC} = \frac{h}{5}$$

$$\Rightarrow \frac{\tan 45^\circ + \tan 30^\circ}{1 - \tan 45^\circ \tan 30^\circ} = \frac{h}{5}$$

$$\Rightarrow \frac{1 + \sqrt{3}}{\sqrt{3} - 1} = \frac{h}{5}$$

$$\Rightarrow h = \frac{(\sqrt{3} + 1)^2}{(\sqrt{3})^2 - (1)^2} \times 5$$

$$\Rightarrow h = 5 \left(\frac{3 + 1 + 2\sqrt{3}}{3 - 1} \right)$$

$$= 5(2 + \sqrt{3}) = 5 \times 3.732$$

$$= 18.660 \text{ m} = 19 \text{ m (approx)}$$

- 4. (d)** Let h_1 and h_2 be the heights of two towers.

$$\tan 60^\circ = \frac{h_1}{a} \Rightarrow h_1 = a \tan 60^\circ$$

$$\tan 30^\circ = \frac{h_2}{a}$$

$$\Rightarrow h_2 = a \tan 30^\circ$$

$$\therefore \frac{h_1}{h_2} = \frac{a \tan 60^\circ}{a \tan 30^\circ} = \frac{3}{1}$$

5. (c) Let b be the height of point P from horizontal plane.

In $\triangle ABM$ and $\triangle AQP$

$$\tan \theta = \frac{80}{AB} = \frac{b}{AQ}$$

$$\Rightarrow AQ = b \cdot \frac{AB}{80}$$

Now, in $\triangle BAL$ and $\triangle BQP$

$$\tan \phi = \frac{20}{AB} = \frac{b}{BQ}$$

$$\therefore BQ = b \cdot \frac{AB}{20}$$

$$\text{Now, } AB = AQ + BQ$$

$$= b \cdot AB \left(\frac{1}{80} + \frac{1}{20} \right)$$

$$\Rightarrow 1 = b \left(\frac{1+4}{80} \right) \Rightarrow b = 16 \text{ m}$$

6. (b) Let $QR = b$ m be the height of the mount.

Then, $PR = (100 + b)$ m

In $\triangle ORQ$,

$$\text{Then, } \frac{b}{x} = \tan 45^\circ \Rightarrow \frac{b}{x} = 1$$

$$\Rightarrow b = x \quad \dots(i)$$

$$\text{In } \triangle ORP, \quad \frac{100 + b}{x} = \tan 75^\circ$$

$$\Rightarrow \frac{b + 100}{b} = 2 + \sqrt{3}$$

$$\therefore \tan(A + B) = \frac{\tan A + \tan B}{1 - \tan A \tan B}$$

$$\Rightarrow b(2 + \sqrt{3} - 1) = 100$$

$$\Rightarrow b = \frac{100}{\sqrt{3} + 1} = \frac{100}{\sqrt{3} + 1} \times \frac{\sqrt{3} - 1}{\sqrt{3} - 1}$$

$$= \frac{100(\sqrt{3} - 1)}{3 - 1} = 50(\sqrt{3} - 1) \text{ m}$$

7. (a) Let $AB = H$ m be the building and CB be the chimney.

$$\tan \theta = \frac{1}{6}, \tan \alpha = \frac{H + 20}{70}$$

$$\tan \beta = \frac{H}{70}$$

$$\text{Now, } \tan \theta = \frac{1}{6} \Rightarrow \tan(\alpha - \beta) = \frac{1}{6}$$

$$\Rightarrow \frac{(\tan \alpha - \tan \beta)}{1 + \tan \alpha \tan \beta} = \frac{1}{6}$$

$$\Rightarrow 6 \left(\frac{H + 20}{70} - \frac{H}{70} \right) = 1 + \left(\frac{H + 20}{70} \cdot \frac{H}{70} \right)$$

$$\Rightarrow 6 \times \frac{20}{70} = \frac{4900 + 20H + H^2}{70 \times 70}$$

$$\Rightarrow H^2 + 20H + 4900 - 8400 = 0$$

$$\therefore H^2 + 20H - 3500 = 0$$

$$\Rightarrow (H - 50)(H + 70) = 0$$

$$\therefore H = 50 \text{ m}$$

8. (c) Let the height of the lower plane from the ground = x and $PA = y$

Now, in $\triangle BAP$,

$$\tan 45^\circ = \frac{AB}{PA} = \frac{x}{y} = 1 \Rightarrow x = y \quad \dots(i)$$

Again, in $\triangle CAP$,

$$\tan 60^\circ = \frac{AC}{AP} = \frac{300}{y} = \sqrt{3}$$

$$\Rightarrow y = \frac{300}{\sqrt{3}} \Rightarrow x = \frac{300}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} = \frac{300\sqrt{3}}{3}$$

$$\therefore x = 100\sqrt{3} \text{ m} \quad [\text{from Eq. (i)}]$$

9. (c) Let the height of tree = b

Given, $AC = y$

$$\text{In } \triangle BPC, \tan 60^\circ = \frac{b}{BC} = \sqrt{3}$$

$$\Rightarrow BC = b/\sqrt{3} \quad \dots(i)$$

Now, in $\triangle PBA$,

$$\tan 30^\circ = \frac{b}{BA} = \frac{b}{BC + AC} = \frac{1}{\sqrt{3}}$$

$$\Rightarrow \sqrt{3} b = \{b/\sqrt{3} + y\}$$

[from Eq. (i)]

$$\Rightarrow 3b = b + y\sqrt{3}$$

$$\Rightarrow 2b = y\sqrt{3} \Rightarrow b = \frac{\sqrt{3}}{2} y \text{ m}$$

10. (a) Let AB and CD be the poles and O be the point of observation.

Let $AB = CD = b$ m

$$\angle AOB = 30^\circ, \angle COD = 60^\circ.$$

Let $OA = x$.

Then, $OC = (30 - x)$ m

$$\text{In } \triangle BAO, \frac{x}{b} = \cot 30^\circ = \sqrt{3}$$

$$\Rightarrow x = b\sqrt{3} \quad \dots(i)$$

$$\text{In } \triangle DCO, \frac{30 - x}{b} = \cot 60^\circ = \frac{1}{\sqrt{3}}$$

$$\Rightarrow 30 - x = \frac{b}{\sqrt{3}}$$

$$\Rightarrow x = \left(30 - \frac{b}{\sqrt{3}} \right)$$

$$\therefore b\sqrt{3} = 30 - \frac{b}{\sqrt{3}} \quad [\text{from Eq. (i)}]$$

$$\Rightarrow \left(b\sqrt{3} + \frac{b}{\sqrt{3}} \right) = 30$$

$$\Rightarrow 4b = 30\sqrt{3} \Rightarrow b = \frac{15}{2}\sqrt{3} \text{ m}$$

11. (a) Let AB be the tower and C and D be the two positions of the boat.
Let $AB = h$, $CD = x$ and $AD = y$.

In $\triangle BAD$, $\frac{y}{h} = \cot 60^\circ = \frac{1}{\sqrt{3}} \Rightarrow y = \frac{h}{\sqrt{3}}$

In $\triangle BAC$, $\frac{x+y}{h} = \cot 30^\circ = \sqrt{3}$

$\Rightarrow x + y = \sqrt{3}h$

$\therefore x = (x + y) - y = \sqrt{3}h - \frac{h}{\sqrt{3}} = \frac{2h}{\sqrt{3}}$

$\frac{2h}{\sqrt{3}}$ is covered in 10 min.

$\frac{h}{\sqrt{3}}$ will be covered in $\left(10 \times \frac{\sqrt{3}}{2h} \times \frac{h}{\sqrt{3}}\right)$

= 5 min

12. (c) Let AB be the tower and C and D be the points of observation.

Then, $AC = a$, $AD = b$,

$\angle ACB = \theta$, $\angle ADB = 90^\circ - \theta$

$\frac{AB}{AC} = \tan \theta$

$\Rightarrow \frac{h}{b} = a \tan \theta$

and $\frac{AB}{AD} = \tan(90^\circ - \theta) = \cot \theta$

$\Rightarrow h = b \cot \theta$, $h^2 = ab$

Hence, $h = \sqrt{ab}$

13. (c) Let CD be the pole, whose length is h .

In $\triangle BCD$, $\tan \beta = \frac{CD}{BC} \Rightarrow \tan \beta = \frac{h}{x}$

$\Rightarrow x = h \cot \beta$... (i)

and in $\triangle ACD$, $\tan \alpha = \frac{CD}{AC}$

$\Rightarrow \tan \alpha = \frac{h}{x+d} \Rightarrow x+d = h \cot \alpha$

$\Rightarrow h \cot \beta + d = h \cot \alpha$ [from Eq. (i)]

$\Rightarrow h(\cot \alpha - \cot \beta) = d$
 $\therefore h = \frac{d \sin \alpha \sin \beta}{\cos \alpha \sin \beta - \cos \beta \sin \alpha}$
 $= \frac{d \sin \alpha \sin \beta}{\sin(\beta - \alpha)}$

14. (b) Let $AD = x$
 $\therefore DB = d - x$

In $\triangle ADC$, $\tan \alpha = \frac{h}{x} \Rightarrow x = h \cot \alpha$... (i)

In $\triangle CDB$, $\tan \beta = \frac{h}{d-x}$

$\Rightarrow d - x = h \cot \beta$... (ii)

On adding Eqs. (i) and (ii), we get

$d = h(\cot \alpha + \cot \beta)$

We know that,

$\cot(\alpha + \beta) = \frac{\cot \alpha \cot \beta - 1}{\cot \beta + \cot \alpha}$

$\Rightarrow \cot \beta + \cot \alpha = \frac{\cot \alpha \cot \beta - 1}{\cot(\alpha + \beta)}$

$\Rightarrow d = h \left[\frac{\cot \alpha \cot \beta - 1}{\cot(\alpha + \beta)} \right]$

$\therefore \frac{h}{d} = \frac{\cot(\alpha + \beta)}{\cot \alpha \cot \beta - 1}$

15. (c) Let $\angle APC = \theta$. Then,

$\tan(\theta + \alpha) = \frac{AB}{AP} = \frac{1}{n}$

$\tan \theta = \frac{AC}{AP} = \frac{1}{2} \cdot \frac{AB}{AP} = \frac{1}{2n}$

$\tan(\theta + \alpha) = \frac{\tan \theta + \tan \alpha}{1 - \tan \theta \tan \alpha}$

$\Rightarrow \frac{1}{n} = \frac{\left(\frac{1}{2n} + \tan \alpha\right)}{\left(1 - \frac{1}{2n} \tan \alpha\right)}$

$\Rightarrow \tan \alpha = \frac{1}{(1 + 2n^2)}$

16. (a) $\because PT = 2^x$ m, $AP = 2^{x+1}$ m and $BP = 192$ m

In $\triangle PTA$, $\tan \theta = \frac{PT}{AP}$

$\Rightarrow \tan \theta = \frac{2^x}{2^{x+1}} = \frac{1}{2}$

Now, in $\triangle PTB$, $\tan 2\theta = \frac{PT}{PB} = \frac{2^x}{192}$

$\Rightarrow \frac{2 \tan \theta}{1 - \tan^2 \theta} = \frac{2^x}{192} \Rightarrow \frac{2 \times \frac{1}{2}}{1 - \frac{1}{4}} = \frac{2^x}{192}$

$\Rightarrow \frac{4}{3} \times 192 = 2^x \Rightarrow 2^x = 256$

$\Rightarrow 2^x = 2^8 \Rightarrow x = 8$

$\tan \theta = \frac{TP}{AP} = \frac{2^8}{2^9} = \frac{1}{2}$

$\theta = \tan^{-1}\left(\frac{1}{2}\right) \neq \frac{\pi}{4}$

17. (c) Let C be the centre of the balloon and AC and BC be radii, where OA and OB are tangents from O .

Draw $CD \perp OD$.

$\angle AOB = \alpha$, $\angle BOC = \frac{\alpha}{2}$

and $\angle COD = \beta$, $\frac{OC}{AC} = \text{cosec } \frac{\alpha}{2}$

$\Rightarrow OC = r \text{ cosec } \frac{\alpha}{2}$, $\frac{CD}{OC} = \sin \beta$

$\Rightarrow CD = OC \sin \beta = r \sin \beta \text{ cosec } (\alpha/2)$

Sol. (Q. Nos. 18-19) Let AB be the upper layer of the lake, C be the cloud, C' its reflection and O be the point of observation. Draw $OD \perp CC'$. Then,

$CB = C'B = x$, $\angle COD = 30^\circ$,
 $\angle C'OD = 60^\circ$, $AO = BD = 200$ m

$\tan 30^\circ = \frac{CD}{OD}$

$\Rightarrow \frac{1}{\sqrt{3}} = \frac{CB - BD}{AB} = \frac{x - 200}{AB}$

$$\Rightarrow x - 200 = \frac{AB}{\sqrt{3}} \quad \dots(i)$$

$$\tan 60^\circ = \frac{C'D}{OD}$$

$$\Rightarrow \sqrt{3} = \frac{C'B + BP}{AB} = \frac{x + 200}{AB}$$

$$\Rightarrow x + 200 = AB\sqrt{3} \quad \dots(ii)$$

18. (d) On dividing Eq. (i) by Eq. (ii), we get

$$\frac{x - 200}{x + 200} = \frac{1}{3}$$

$$\Rightarrow 3x - 600 = x + 200$$

$$\Rightarrow x = 400 \text{ m}$$

Height of the cloud above the lake
 $= x = 400 \text{ m}$

19. (c) We have, $AB = (x - 200)\sqrt{3}$
 $= (400 - 200)\sqrt{3} = 200\sqrt{3}$

Horizontal distance $= AB = 200\sqrt{3} \text{ m}$

Sol. (Q. Nos. 20-21) Let A and B be the two positions of the aeroplane and O be the point of observation.

$$\frac{OD}{BD} = \cot 30^\circ = \sqrt{3} \Rightarrow OD = 900\sqrt{3} \text{ m}$$

$$\frac{OC}{AC} = \cot 60^\circ = \frac{1}{\sqrt{3}} \Rightarrow OC = \frac{900}{\sqrt{3}} \text{ m}$$

$$\therefore AB = CD = OD - OC$$

$$= \left(900\sqrt{3} - \frac{900}{\sqrt{3}} \right) = \frac{1800}{\sqrt{3}} \text{ m}$$

20. (c) Speed $= \frac{\text{Distance}}{\text{Time}} = \left(\frac{1800}{\sqrt{3} \times 10} \right) \text{ m/s}$
 $= \left(\frac{180}{\sqrt{3}} \times \frac{18}{5} \right) = 216\sqrt{3} \text{ km/h}$

21. (b) Let E be the position of the aeroplane after 40 s and θ be its elevation.

$$\therefore AE = \text{Speed} \times \text{Time}$$

$$= \left(\frac{1800}{\sqrt{3} \times 10} \times 40 \right) \text{ m} = \frac{7200}{\sqrt{3}} \text{ m}$$

$$OF = OC + CF = OC + AE$$

$$= \frac{900}{\sqrt{3}} + \frac{7200}{\sqrt{3}} = \frac{8100}{\sqrt{3}} \text{ m}$$

$$\tan \theta = \frac{EF}{OF} = \frac{900 \times \sqrt{3}}{8100} = \frac{1}{3\sqrt{3}}$$

$$\therefore \theta = \tan^{-1} \left(\frac{1}{3\sqrt{3}} \right)$$

22. (b) Given, height of tower

$$= CD = 5\sqrt{3} \text{ m}$$

$$\text{In } \triangle BCD, \tan \theta = \frac{CD}{BC} = \frac{5\sqrt{3}}{x} \quad \dots(i)$$

Again, in $\triangle ACD$,

$$\tan 30^\circ = \frac{CD}{AC} = \frac{5\sqrt{3}}{10 + x} = \frac{1}{\sqrt{3}}$$

$$\Rightarrow 10 + x = 15, x = 5 \text{ m}$$

From Eq. (i),

$$\tan \theta = \frac{5\sqrt{3}}{5} = \sqrt{3} = \tan 60^\circ \Rightarrow \theta = 60^\circ$$

23. (b) In $\triangle ABC$, $\tan 15^\circ = \frac{AB}{BC}$

$$\Rightarrow \tan(45^\circ - 30^\circ) = \frac{70}{x}$$

$$\left[\because \tan(A - B) = \frac{\tan A - \tan B}{1 + \tan A \tan B} \right]$$

$$\Rightarrow \frac{1 - \frac{1}{\sqrt{3}}}{1 + \frac{1}{\sqrt{3}}} = \frac{70}{x} \Rightarrow \frac{\sqrt{3} - 1}{1 + \sqrt{3}} = \frac{70}{x}$$

$$\Rightarrow x = 70 \left(\frac{\sqrt{3} + 1}{\sqrt{3} - 1} \right) \times \left(\frac{\sqrt{3} + 1}{\sqrt{3} + 1} \right)$$

$$= \frac{70(3 + 1 + 2\sqrt{3})}{3 - 1} = 70(2 + \sqrt{3})$$

Hence, the required distance is $70(2 + \sqrt{3}) \text{ m}$.

24. (b) Let $AD = BE = y$ and $AB = DE = b$

$$\text{Now, in } \triangle ACD, \tan \alpha = \frac{x}{y}$$

$$\Rightarrow y = x \cot \alpha \quad \dots(i)$$

$$\text{Now, in } \triangle BCE, \tan \beta = \frac{x + b}{y}$$

$$\Rightarrow y = (x + b) \cot \beta \quad \dots(ii)$$

From Eqs. (i) and (ii),

$$x \cot \alpha = (x + b) \cot \beta$$

$$\Rightarrow x(\cot \alpha - \cot \beta) = b \cot \beta$$

$$\Rightarrow x = \frac{b \cot \beta}{\cot \alpha - \cot \beta} \quad \dots(iii)$$

\therefore Required height

$$CE = CD + DE = x + b$$

$$= \frac{b \cot \beta}{\cot \alpha - \cot \beta} + b$$

$$= \frac{b \cot \alpha}{\cot \alpha - \cot \beta}$$

25. (b) Let shadow of a tower made by a Sun at an angle 60° is $x \text{ m}$. Then, by given condition, the shadow of a tower made by a Sun at angle 30° is 50 m longer than at angle 60° , i.e. $(50 + x) \text{ m}$.

Now, in $\triangle ABC$,

$$\tan 60^\circ = \frac{h}{x} = \sqrt{3} \Rightarrow x = \frac{h}{\sqrt{3}} \text{ m}$$

$$\text{and in } \triangle ABD, \tan 30^\circ = \frac{h}{x + 50} = \frac{1}{\sqrt{3}}$$

$$\Rightarrow \sqrt{3}h = x + 50 \Rightarrow \sqrt{3}h = \frac{h}{\sqrt{3}} + 50$$

$$\Rightarrow \left(\sqrt{3} - \frac{1}{\sqrt{3}} \right) h = 50$$

$$\Rightarrow \frac{(3 - 1)h}{\sqrt{3}} = 50 \Rightarrow 2h = 50\sqrt{3}$$

$$\therefore h = 25\sqrt{3} \text{ m}$$

26. (b) Let $BL = x \text{ m}$ and $PL = h \text{ m}$

$$\text{In } \triangle PLB, \tan 45^\circ = \frac{h}{x} = 1, x = h \quad \dots(i)$$

$$\text{Now, in } \triangle PLA, \tan 30^\circ = \frac{h}{10 + x} = \frac{1}{\sqrt{3}}$$

$$\Rightarrow \sqrt{3}h = 10 + x$$

$$\Rightarrow \sqrt{3}h = 10 + h \text{ [from Eq. (i)]}$$

$$\Rightarrow (\sqrt{3} - 1)h = 10$$

$$\therefore h = \frac{10}{\sqrt{3} - 1} \times \frac{\sqrt{3} + 1}{\sqrt{3} + 1}$$

$$= \frac{10(\sqrt{3} + 1)}{3 - 1} = \frac{10(\sqrt{3} + 1)}{2}$$

$$= 5(\sqrt{3} + 1) = (5\sqrt{3} + 5) \text{ m}$$

27. (c) Let AB and CD are two towers.

$$\text{In } \triangle DCB, \tan 60^\circ = \frac{H}{BC}$$

$$\Rightarrow \sqrt{3} = \frac{H}{BC} \Rightarrow BC = \frac{H}{\sqrt{3}} \quad \dots(i)$$

$$\text{In } \triangle ABC, \tan 30^\circ = \frac{h}{BC} \Rightarrow \frac{1}{\sqrt{3}} = \frac{h}{BC}$$

$$\Rightarrow BC = h\sqrt{3} \quad \dots(ii)$$

From Eqs. (i) and (ii), we get

$$\frac{H}{\sqrt{3}} = h\sqrt{3}$$

$$\therefore H = 3h$$

28. (d) Let x be the breadth of the river and h be the height of the tree.

$$\text{Now, in } \triangle ADC, \tan 60^\circ = \frac{h}{x}$$

$$\Rightarrow \sqrt{3} = \frac{h}{x} \Rightarrow h = \sqrt{3}x \quad \dots(i)$$

$$\text{Again, in } \triangle ADB, \tan 30^\circ = \frac{h}{x+40} = \frac{1}{\sqrt{3}}$$

$$\Rightarrow h\sqrt{3} = x + 40$$

$$\Rightarrow \sqrt{3} \cdot x \cdot \sqrt{3} = x + 40 \quad [\text{from Eq. (i)}]$$

$$\Rightarrow 3x - x = 40$$

$$\therefore x = 20 \text{ m}$$

So, the breadth of the river is 20 m.

29. (a) Let h be the height of the tower.

$$\text{In } \triangle ADC, \tan 45^\circ = \frac{h}{21} \Rightarrow 1 = \frac{h}{21}$$

$$\Rightarrow h = 21 \text{ m} \quad \dots(i)$$

Again, in $\triangle ADB$,

$$\tan 60^\circ = \frac{h}{x} \Rightarrow \sqrt{3} = \frac{h}{x}$$

$$\therefore x = \frac{21}{\sqrt{3}} = 7\sqrt{3} \text{ m}$$

[from Eq. (i)]

30. (c) Let the height of the aeroplane above the ground is b and $QB = x$ m.

Given that, $PQ = 20$ m, $\angle APB = 30^\circ$

and $\angle AQB = 45^\circ$

$$\text{Now, in } \triangle ABQ, \tan 45^\circ = \frac{AB}{QB} = \frac{b}{x} \Rightarrow 1 = \frac{b}{x} \Rightarrow x = b \dots(i)$$

$$\text{and in } \triangle ABP, \tan 30^\circ = \frac{AB}{PB} = \frac{b}{PQ + QB}$$

$$\Rightarrow \frac{1}{\sqrt{3}} = \frac{b}{20 + x}$$

$$\Rightarrow \sqrt{3}b = 20 + x = 20 + b$$

[from Eq. (i)]

$$\Rightarrow (\sqrt{3}b - b) = 20$$

$$\Rightarrow b(\sqrt{3} - 1) = 20$$

$$\therefore b = \frac{20 \cdot \sqrt{3} + 1}{\sqrt{3} - 1 \cdot \sqrt{3} + 1} \quad [\text{rationalisation}]$$

$$= \frac{20(\sqrt{3} + 1)}{(3 - 1)} = \frac{20(\sqrt{3} + 1)}{2}$$

$$= 10(\sqrt{3} + 1)$$

Hence, the required height is $10(\sqrt{3} + 1)$ m.

31. (b) Let AB be the lamp post of height b and C be a point situated at a distance of 150 m from its foot B .

In $\triangle ABC$, we have

$$\tan 30^\circ = \frac{b}{150} \Rightarrow \frac{1}{\sqrt{3}} = \frac{b}{150}$$

$$\therefore b = \frac{150}{\sqrt{3}} \text{ m} = \frac{150 \times \sqrt{3}}{3} = 50\sqrt{3} \text{ m}$$

32. (b)

33. (b) In $\triangle ACD$, $\tan 47^\circ = \frac{b}{36} \quad \dots(i)$

and in $\triangle ABD$, $\tan 43^\circ = \frac{b}{49} \quad \dots(ii)$

$$\Rightarrow \frac{1}{\cot 43^\circ} = \frac{b}{49}$$

$$\Rightarrow \frac{49}{\cot 43^\circ} = b$$

$$\Rightarrow b = \frac{49}{\cot (90^\circ - 47^\circ)}$$

$$\Rightarrow b = \frac{49}{\tan 47^\circ}$$

$$\Rightarrow b = \frac{49}{\left(\frac{b}{36}\right)} \quad [\text{using Eq. (i)}]$$

$$\Rightarrow b^2 = 49 \times 36$$

$$\Rightarrow b = 7 \times 6 = 42 \text{ m}$$

34. (b) Here, $CB = CN - BN = 20 - 10 = 10$ m

$$\tan 15^\circ = (45^\circ - 30^\circ) = \frac{1 - \frac{1}{\sqrt{3}}}{\tan 45^\circ - \tan 30^\circ} = \frac{\sqrt{3} - 1}{1 - \frac{1}{\sqrt{3}}}$$

$$\text{Now, in } \triangle ABC, \tan 15^\circ = \frac{BC}{AB}$$

$$\Rightarrow AB = \frac{BC}{\tan 15^\circ} = \frac{10(\sqrt{3} + 1)}{(\sqrt{3} - 1)}$$

$$= \frac{10(\sqrt{3} + 1)}{\sqrt{3} - 1} \times \frac{\sqrt{3} + 1}{\sqrt{3} + 1}$$

$$= 10(2 + \sqrt{3}) = 37.3 \text{ m}$$

35. (c) Let AB be tower of height b m and BC is the flag.

$$\text{In } \triangle BDA, \tan 30^\circ = \frac{b}{x}$$

$$\Rightarrow x = \sqrt{3}b \quad \dots(i)$$

$$\text{Now, in } \triangle CDA, \tan 45^\circ = \frac{b+3}{x}$$

$$\Rightarrow x = b + 3$$

$$\Rightarrow b = x - 3 = \sqrt{3}b - 3 \quad [\text{from Eq. (i)}]$$

$$\Rightarrow b(1 - \sqrt{3}) = -3$$

$$\therefore b = \frac{3}{\sqrt{3} - 1} = \frac{3(\sqrt{3} + 1)}{2}$$

$$= 15 \times 2.732 = 4.098 \text{ m}$$

$$= 4.10 \text{ m (approx)}$$

15

PROPERTIES OF TRIANGLES

In NDA exam, generally 1 question is asked from this chapter which is based on area of triangle, sine / cosine rule, etc.

A triangle has six components, three sides and three angles. The three angles of a ΔABC are denoted by the letters A, B and C and the sides opposite to these angles by letters a, b and c respectively, i.e. $a = BC, b = CA$ and $c = AB$. Semi-perimeter of the ΔABC is $\frac{a+b+c}{2}$, which is denoted by s and its area denoted by Δ .

Also, sum of angles of a triangle is 180° , i.e. $\angle A + \angle B + \angle C = 180^\circ$

Sine Rule

In any ΔABC , $\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$, i.e. the sines of the angles are proportional to the lengths of the opposite sides.

Let $\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} = K$ (say)

Then, $a = K \sin A, b = K \sin B, c = K \sin C$ or $\sin A = \frac{1}{K} a, \sin B = \frac{1}{K} b, \sin C = \frac{1}{K} c$

EXAMPLE 1. The angles of a triangle are in the ratio $1 : 5 : 6$. The ratio of its sides is

- a. $(\sqrt{3}-1):(\sqrt{3}+1):2\sqrt{2}$ b. $(\sqrt{3}-1):2\sqrt{2}:(\sqrt{3}+1)$ c. $2\sqrt{2}:(\sqrt{3}-1):(\sqrt{3}+1)$ d. None of these

Sol. a. Let the angles be $x^\circ, 5x^\circ, 6x^\circ$. Then, $x + 5x + 6x = 180 \Rightarrow x = 15$

\therefore Angles are $15^\circ, 75^\circ, 90^\circ$.

\therefore Ratio of sides = $\sin 15^\circ : \sin 75^\circ : \sin 90^\circ = \frac{(\sqrt{3}-1)}{2\sqrt{2}} : \frac{(\sqrt{3}+1)}{2\sqrt{2}} : 1 = (\sqrt{3}-1) : (\sqrt{3}+1) : 2\sqrt{2}$

Cosine Rule

In any ΔABC ,

- (i) $a^2 = b^2 + c^2 - 2bc \cos A$ or $\cos A = \frac{b^2 + c^2 - a^2}{2bc}$ (ii) $b^2 = c^2 + a^2 - 2ac \cos B$ or $\cos B = \frac{a^2 + c^2 - b^2}{2ac}$
(iii) $c^2 = a^2 + b^2 - 2ab \cos C$ or $\cos C = \frac{a^2 + b^2 - c^2}{2ab}$

EXAMPLE 2. The sides of triangle are $3x + y$, $4x + 3y$, and $5x + 5y$ units, where $x, y > 0$. The triangle is

- a. right angled b. equilateral
c. obtuse angled d. None of these

Sol. c. Let $a = 3x + 4y$, $b = 4x + 3y$, and $c = 5x + 5y$.

Clearly, c is the largest side and thus the largest angle C is given by

$$\begin{aligned} \cos C &= \frac{a^2 + b^2 - c^2}{2ab} \\ &= \frac{(3x + 4y)^2 + (4x + 3y)^2 - (5x + 5y)^2}{2(3x + 4y)(4x + 3y)} \\ &= \frac{-2xy}{2(12x^2 + 25xy + 12y^2)} < 0 \quad [\text{since, } x, y > 0] \end{aligned}$$

$\Rightarrow C$ is an obtuse angle.

Projection Formulae

In any $\triangle ABC$,

- (i) $a = b \cos C + c \cos B$ (ii) $b = c \cos A + a \cos C$
(iii) $c = a \cos B + b \cos A$

Note Any side of a triangle is equal to the sum of the projections of other two sides on it.

Trigonometrical Ratios of Half Angles of a Triangle

In any $\triangle ABC$, let $s = (a + b + c)/2$, then

- (i) $\sin \frac{A}{2} = \sqrt{\frac{(s-b)(s-c)}{bc}}$ (ii) $\sin \frac{B}{2} = \sqrt{\frac{(s-a)(s-c)}{ac}}$
(iii) $\sin \frac{C}{2} = \sqrt{\frac{(s-a)(s-b)}{ab}}$ (iv) $\cos \frac{A}{2} = \sqrt{\frac{s(s-a)}{bc}}$
(v) $\cos \frac{B}{2} = \sqrt{\frac{s(s-b)}{ac}}$ (vi) $\cos \frac{C}{2} = \sqrt{\frac{s(s-c)}{ab}}$
(vii) $\tan \frac{A}{2} = \sqrt{\frac{(s-b)(s-c)}{s(s-a)}}$ (viii) $\tan \frac{B}{2} = \sqrt{\frac{(s-a)(s-c)}{s(s-b)}}$
(ix) $\tan \frac{C}{2} = \sqrt{\frac{(s-a)(s-b)}{s(s-c)}}$

EXAMPLE 3. If in $\triangle ABC$, $\sin \frac{A}{2} \sin \frac{C}{2} = \sin \frac{B}{2}$ and $2s$ is the perimeter of the triangle, then s is

- a. $2b$ b. b c. $3b$ d. $4b$

Sol. a. Given, $\sin \frac{A}{2} \sin \frac{C}{2} = \sin \frac{B}{2}$

$$\begin{aligned} \therefore \sqrt{\frac{(s-b)(s-c)}{bc}} \sqrt{\frac{(s-a)(s-b)}{ab}} &= \sqrt{\frac{(s-a)(s-c)}{ac}} \Rightarrow \frac{s-b}{b} = 1 \\ \Rightarrow s &= 2b \end{aligned}$$

Some Other Formulae

In any $\triangle ABC$, by $\sin 2\theta = 2 \sin \theta \cdot \cos \theta$

- (i) $\sin A = \frac{2}{bc} \sqrt{s(s-a)(s-b)(s-c)} = \frac{2\Delta}{bc}$
(ii) $\sin B = \frac{2}{ac} \sqrt{s(s-a)(s-b)(s-c)} = \frac{2\Delta}{ac}$
(iii) $\sin C = \frac{2}{ab} \sqrt{s(s-a)(s-b)(s-c)} = \frac{2\Delta}{ab}$

where, $\Delta =$ area of scalene triangle, when $a \neq b \neq c$.

Area of Triangle

In a $\triangle ABC$, if the sides of the triangle are a, b, c and corresponding angles are A, B and C respectively, then area of triangle

- (i) $\Delta = \frac{1}{2} ab \sin C, \Delta = \frac{1}{2} bc \sin A, \Delta = \frac{1}{2} ca \sin B$
(ii) $\Delta = \frac{c^2 \sin A \sin B}{2 \sin C}, \Delta = \frac{a^2 \sin B \sin C}{2 \sin A}, \Delta = \frac{b^2 \sin C \sin A}{2 \sin B}$
(iii) $\Delta = \sqrt{s(s-a)(s-b)(s-c)}$

EXAMPLE 4. The area of the $\triangle ABC$, in which $a = 1, b = 2, \angle C = 60^\circ$, is

- a. 4 sq units b. $\frac{1}{2}$ sq unit c. $\frac{\sqrt{3}}{2}$ sq unit d. $\sqrt{3}$ sq units

Sol. c. Given, $a = 1, b = 2, \angle C = 60^\circ$

$$\begin{aligned} \therefore \text{Area of triangle} &= \frac{1}{2} ab \sin C = \frac{1}{2} \times 1 \times 2 \times \sin 60^\circ \\ &= \sin 60^\circ = \frac{\sqrt{3}}{2} \text{ sq unit} \end{aligned}$$

Tangent Formulae or Napier's Analogy or Law of Tangents

In any $\triangle ABC$,

- (i) $\tan \left(\frac{B-C}{2} \right) = \left(\frac{b-c}{b+c} \right) \cot \frac{A}{2}$
(ii) $\tan \left(\frac{C-A}{2} \right) = \left(\frac{c-a}{c+a} \right) \cot \frac{B}{2}$
(iii) $\tan \left(\frac{A-B}{2} \right) = \left(\frac{a-b}{a+b} \right) \cot \frac{C}{2}$

EXAMPLE 5. If in $\triangle ABC, a = 6, b = 3$ and $\cos(A - B) = \frac{4}{5}$, then its area will be

- a. 7 sq units b. 8 sq units
c. 9 sq units d. None of these

Sol. c. We have, $a = 6, b = 3, \cos(A - B) = \frac{4}{5}$

Let $t = \tan\left(\frac{A - B}{2}\right)$, then
 $\cos(A - B) = \frac{1 - t^2}{1 + t^2} \Rightarrow \frac{4}{5} = \frac{1 - t^2}{1 + t^2} \Rightarrow t = \frac{1}{3}$

So, $\tan\left(\frac{A - B}{2}\right) = \frac{1}{3}$

Then, $\tan\left(\frac{A - B}{2}\right) = \frac{a - b}{a + b} \cot \frac{C}{2}$

$\Rightarrow \frac{1}{3} = \frac{6 - 3}{6 + 3} \cot \frac{C}{2} \Rightarrow C = 90^\circ$

Hence, $\Delta = \frac{1}{2}(6)(3)\sin 90^\circ = 9$ sq units

Circumcircle of a Triangle

A circle passing through the vertices of a ΔABC is called circumcircle and its radius is called circumradius (R) and its centre is known as circumcentre.

Circumradius of triangle is given by

$$R = \frac{a}{2\sin A} = \frac{b}{2\sin B} = \frac{c}{2\sin C} = \frac{abc}{4\Delta}$$

Incircle of a Triangle

The circle which can be inscribed within the triangle so as to touch each of its sides is called its inscribed circle or incircle and its centre is called incentre and its radius is called inradius (r).

In any ΔABC ,

(i) $r = \frac{\Delta}{s}$

(ii) $r = (s - a) \tan \frac{A}{2} = (s - b) \tan \frac{B}{2} = (s - c) \tan \frac{C}{2}$

(iii) $r = 4R \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2}$

(iv) $r = \frac{a \sin B/2 \sin C/2}{\cos A/2}$
 $= \frac{b \sin A/2 \sin C/2}{\cos B/2}$
 $= \frac{c \sin B/2 \sin A/2}{\cos C/2}$

Escribed Circles of a Triangle

The circle which touches the sides BC and two sides AB and AC produced of a ΔABC , is called the escribed circle opposite to the $\angle A$. Its radius is denoted by r_1 . Similarly, r_2 and r_3 denote the radii of the escribed circles opposite to the angles B and C , respectively.

The centres of the escribed circles are called excentres.

In any ΔABC ,

(i) $r_1 = \frac{\Delta}{s - a} = s \tan \frac{A}{2} = 4R \sin \frac{A}{2} \cos \frac{B}{2} \cos \frac{C}{2}$

(ii) $r_2 = \frac{\Delta}{s - b} = s \tan \frac{B}{2} = 4R \sin \frac{B}{2} \cos \frac{C}{2} \cos \frac{A}{2}$

(iii) $r_3 = \frac{\Delta}{s - c} = s \tan \frac{C}{2} = 4R \sin \frac{C}{2} \cos \frac{A}{2} \cos \frac{B}{2}$

(iv) $r_1 + r_2 + r_3 = 4R + r$

(v) $r_1 r_2 + r_2 r_3 + r_3 r_1 = s^2 = \frac{r_1 r_2 r_3}{r}$

(vi) $r_1 = \frac{a \cos B/2 \cos C/2}{\cos A/2}$

(vii) $r_2 = \frac{b \cos C/2 \cos A/2}{\cos B/2}$

(viii) $r_3 = \frac{c \cos A/2 \cos B/2}{\cos C/2}$

(ix) $\frac{1}{r_1} + \frac{1}{r_2} + \frac{1}{r_3} = \frac{s}{\Delta} = \frac{1}{r}$

and $r_1 r_2 r_3 = r^2 \left(\cot \frac{A}{2} \cot \frac{B}{2} \cot \frac{C}{2} \right)^2$

EXAMPLE 6. If $r_1 = r_2 + r_3 + r$, then triangle is

- a. right angled
- b. obtuse angled
- c. equilateral
- d. None of these

Sol. a. $\because r_1 - r = r_2 + r_3$

$\Rightarrow \frac{\Delta}{s - a} - \frac{\Delta}{s} = \frac{\Delta}{s - b} + \frac{\Delta}{s - c} \Rightarrow \frac{s - s + a}{s(s - a)} = \frac{s - c + s - b}{(s - b)(s - c)}$

$\Rightarrow \frac{a}{s(s - a)} = \frac{a}{(s - b)(s - c)} \Rightarrow s^2 - (b + c)s + bc = s^2 - as$

$\Rightarrow s(-a + b + c) = bc \Rightarrow \frac{(b + c + a)(b + c - a)}{2} = bc$

$\Rightarrow (b + c)^2 - a^2 = 2bc \Rightarrow b^2 + c^2 + 2bc - a^2 = 2bc$

$\Rightarrow b^2 + c^2 = a^2$
 $\therefore \angle A = 90^\circ$

Thus, the triangle is right angled triangle.

PRACTICE EXERCISE

- $\frac{1 + \cos(A - B)\cos C}{1 + \cos(A - C)\cos B}$ is equal to
 (a) $\frac{a^2 + b^2}{a^2 + c^2}$ (b) $\frac{b^2 + c^2}{b^2 - c^2}$
 (c) $\frac{c^2 - a^2}{a^2 + b^2}$ (d) None of these
- In any ΔABC , $\frac{c - a \cos B}{a - c \cos B}$ is equal to
 (a) $\frac{\cos A}{\cos C}$ (b) $\frac{\cos C}{\cos A}$ (c) $\frac{\sin A}{\sin C}$ (d) $\frac{\sin C}{\sin A}$
- If $\cos \frac{A}{2} = \sqrt{\frac{b+c}{2c}}$, then
 (a) $a^2 + b^2 = c^2$ (b) $b^2 + c^2 = a^2$
 (c) $c^2 + a^2 = b^2$ (d) None of these
- If $a = 16, b = 24, c = 20$, then $\cos\left(\frac{B}{2}\right)$ is equal to
 (a) $3/4$ (b) $1/4$ (c) $1/2$ (d) $1/3$
- The area of the ΔABC , in which $a = 1, b = 2, \angle C = 60^\circ$, is
 (a) 4 sq units (b) $\frac{1}{2}$ sq unit
 (c) $\frac{\sqrt{3}}{2}$ sq unit (d) $\sqrt{3}$ sq units
- If $c^2 = a^2 + b^2$, then $4s(s - a)(s - b)(s - c)$ is equal to
 (a) s^4 (b) b^2c^2 (c) c^2a^2 (d) a^2b^2
- In any ΔABC , $\frac{b^2 + c^2 - a^2}{4 \cot A}$ equals
 (a) Δ (b) $1/\Delta$ (c) 2Δ (d) None of these
- In a ΔABC , $a + b = 3(1 + \sqrt{3})$ cm and $a - b = 3(1 - \sqrt{3})$ cm. If $\angle A$ is 30° , then what is the measure of $\angle B$?
 (a) 120° (b) 90° (c) 75° (d) 60°
- ABC is a triangle in which $BC = 10$ cm, $CA = 6$ cm and $AB = 8$ cm. Which one of the following is correct?
 (a) ABC is an acute angled triangle
 (b) ABC is an obtuse angled triangle
 (c) ABC is a right angled triangle
 (d) None of the above
- In a ΔABC , if $\cos B = (\sin A)/(2 \sin C)$, then the triangle is
 (a) isosceles triangle (b) equilateral triangle
 (c) right angled triangle (d) scalene triangle
- If A, B, C are in AP and $b : c = \sqrt{3} : \sqrt{2}$, then what is the value of $\sin C$?
 (a) 1 (b) $1/\sqrt{3}$ (c) $\sqrt{3}$ (d) $1/\sqrt{2}$
- In a ΔABC , if $2R + r = r_1$, then
 (a) $\angle A = \pi/2$ (b) $\angle B = \pi/2$
 (c) $\angle C = \pi/2$ (d) None of these
- If $\frac{\sin A}{\sin C} = \frac{\sin(A - B)}{\sin(B - C)}$, then the sides of ΔABC are in
 (a) AP (b) GP (c) HP (d) None of these
- If $a \cos A = b \cos B$, then ΔABC is
 (a) isosceles (b) right angled
 (c) equilateral (d) Either (a) or (b)
- If $\frac{\cos A}{a} = \frac{\cos B}{b} = \frac{\cos C}{c}$ and the side $a = 2$, then area of triangle is
 (a) 1 (b) 2 (c) $\frac{\sqrt{3}}{2}$ (d) $\sqrt{3}$
- If in a ΔABC , $a + c = 2b$, then the value of $\cot \frac{A}{2} \cdot \cot \frac{C}{2}$ is equal to
 (a) 4.5 (b) 3 (c) 1.5 (d) 1
- If $a = 4, b = 3$ and $\angle A = 60^\circ$, then c is the root of the equation
 (a) $c^2 - 3c - 7 = 0$ (b) $c^2 + 3c + 7 = 0$
 (c) $c^2 - 3c + 7 = 0$ (d) $c^2 + 3c - 7 = 0$
- The straight roads intersect at an angle of 60° . A bus on one road is 2 km away from the intersection and a car on the other road is 3 km away from the intersection. Then, the direct distance between the two vehicles is
 (a) 1 km (b) $\sqrt{2}$ km (c) 4 km (d) $\sqrt{7}$ km
- In a ΔABC , $a^4 + b^4 + c^4 = 2(a^2 + c^2)b^2$, then the $\angle B$ is
 (a) $45^\circ, 135^\circ$ (b) $45^\circ, 45^\circ$
 (c) $45^\circ, 90^\circ$ (d) None of these
- ABC is a triangle in which $AB = 6$ cm, $BC = 8$ cm and $CA = 10$ cm. What is the value of $\cot(A/4)$?
 (a) $\sqrt{5} - 2$ (b) $\sqrt{5} + 2$ (c) $\sqrt{3} - 1$ (d) $\sqrt{3} + 1$
- In a ΔABC , $\frac{a - b}{a + b}$ is equal to
 (a) $\frac{\sin(A - B)}{\sin(A + B)}$ (b) $\frac{\cos(A - B)}{\cos(A + B)}$
 (c) $\frac{\tan\left(\frac{A - B}{2}\right)}{\tan\left(\frac{A + B}{2}\right)}$ (d) None of these

22. In a $\triangle ABC$, if $\cot A$, $\cot B$, $\cot C$ are in AP, then a^2 , b^2 , c^2 are in

- (a) AP (b) GP (c) HP (d) None of these

23. In a $\triangle ABC$, $(a + b + c) \left(\tan \frac{A}{2} + \tan \frac{B}{2} \right)$ is equal to

- (a) $2a \cot \frac{A}{2}$ (b) $2b \cot \frac{B}{2}$ (c) $2c \cot \frac{C}{2}$ (d) None of these

24. In $\triangle ABC$, if $a = 7$, $b = 8$ and $c = 9$, then the length of line segment joining B to the mid-point of AC is

- (a) 5 (b) 6 (c) 7 (d) 8

25. In $\triangle ABC$, if $\cot \frac{A}{2} : \cot \frac{B}{2} : \cot \frac{C}{2} = 3 : 5 : 7$, then $a : b : c$ is equal to

- (a) 4 : 5 : 6 (b) 5 : 6 : 4 (c) 6 : 5 : 4 (d) 6 : 4 : 5

26. In any $\triangle ABC$, $a \cos A + b \cos B + c \cos C$ is equal to

- (a) $4R$ (b) $\sin A \sin B \sin C$
(c) $R \sin A \sin B \sin C$ (d) $4R \sin A \sin B \sin C$

27. In a $\triangle ABC$, consider the following statements.

I. $r_1 r_2 r_3 = \Delta^2$

II. $r_1 r_2 + r_2 r_3 + r_3 r_1 = s^2$

Which of the above statement(s) is/are is correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

28. Consider the following statements

I. In $\triangle ABC$, $b \cos^2 \frac{C}{2} + c \cos^2 \frac{B}{2} = s$

II. In $\triangle ABC$, $\cot \frac{A}{2} = \frac{b+c}{2} \Rightarrow B = 90^\circ$

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

29. In a triangle, the greatest angle is 120° , when sides of triangle are

I. x , y and $\sqrt{x^2 + xy + y^2}$, ($x, y > 0$)

II. $a - b$, $a + b$ and $\sqrt{3a^2 + b^2}$, ($a, b > 0$)

III. 2 , $\sqrt{6}$ and $\sqrt{3} - 1$

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II (c) Only III (d) All of these

Directions (Q. Nos. 30-31) In a $\triangle ABC$,

$$\frac{2 \cos A}{a} + \frac{\cos B}{b} + \frac{2 \cos C}{c} = \frac{a}{bc} + \frac{b}{ac}. \text{ Then,}$$

30. $b^2 + c^2$ is equal to

- (a) a^2 (b) ac (c) bc (d) ab

31. $\triangle ABC$ is

- (a) an equilateral triangle (b) a right angled triangle
(c) an isosceles triangle (d) Cannot be determined

Directions (Q. Nos. 32-33) In a $\triangle ABC$,

$$\frac{b+c}{11} = \frac{c+a}{12} = \frac{a+b}{13}$$

32. The ratio $\sin A : \sin B : \sin C$ is

- (a) 9 : 10 : 11 (b) 7 : 19 : 25
(c) 7 : 6 : 5 (d) 13 : 12 : 11

33. The value of $\cos A$ is

- (a) $1/5$ (b) $19/35$ (c) $5/7$ (d) None of these

Directions (Q. Nos. 34-35) In a $\triangle ABC$, $a = 5$, $b = 4$

and $\cos(A - B) = \frac{31}{32}$. Then,

34. Find the value of $\cos C$.

- (a) $\frac{1}{2}$ (b) $\frac{4}{3}$ (c) $\frac{6}{7}$ (d) $\frac{1}{8}$

35. Find the value of side c .

- (a) 2 (b) 6 (c) 10 (d) 12

Directions (Q. Nos. 36-38) In any $\triangle ABC$, $\tan \frac{A}{2} = \frac{5}{6}$

and $\tan \frac{B}{2} = \frac{20}{37}$

36. What is the value of $\tan \frac{C}{2}$?

- (a) $\frac{4}{5}$ (b) $\frac{3}{5}$ (c) $\frac{2}{5}$ (d) None of these

37. The sides of the triangle a , b , c are in

- (a) AP (b) GP (c) HP (d) None of these

38. Consider the following statements

I. $\sin A$, $\sin B$, $\sin C$ are in HP.

II. Altitudes are in HP.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
(c) Both I and II (d) Neither I nor II

Directions (Q. Nos. 39-42) Given that

$$\Delta = 6, r_1 = 2, r_2 = 3, r_3 = 6.$$

39. Circumradius R is equal to

- (a) 2.5 (b) 3.5 (c) 1.5 (d) 4.2

40. Inradius is equal to

- (a) 2 (b) 1 (c) 1.5 (d) 2.5

41. Difference between the greatest and the least angle is

(a) $\cos^{-1} \left(\frac{4}{5} \right)$ (b) $\tan^{-1} \left(\frac{3}{4} \right)$

(c) $\cos^{-1} \left(\frac{3}{5} \right)$ (d) None of these

42. The value of $\sin^2 A + \sin^2 B + \sin^2 C$ is

- (a) 0 (b) 1 (c) -1 (d) 2

HINTS AND SOLUTIONS

$$\begin{aligned}
 1. (a) \quad & \frac{1 + \cos(A-B)\cos C}{1 + \cos(A-C)\cos B} \\
 &= \frac{1 - \cos(A-B)\cos(A+B)}{1 - \cos(A-C)\cos(A+C)} \\
 & \quad [\text{in a triangle, } \cos C = -\cos(A+B) \\
 & \quad \text{and } \cos B = -\cos(A+C)] \\
 &= \frac{1 - (\cos^2 A - \sin^2 B)}{1 - (\cos^2 A - \sin^2 C)} \\
 &= \frac{\sin^2 A + \sin^2 B}{\sin^2 A + \sin^2 C} = \frac{a^2 + b^2}{a^2 + c^2}
 \end{aligned}$$

$$\begin{aligned}
 2. (a) \quad & \text{Using } c = a \cos B + b \cos A \text{ and} \\
 & a = b \cos C + c \cos B \text{ from the projection} \\
 & \text{formula, we get the given expression,} \\
 & \frac{a \cos B + b \cos A - a \cos B}{b \cos C + c \cos B - c \cos B} = \frac{\cos A}{\cos C}
 \end{aligned}$$

$$\begin{aligned}
 3. (a) \quad & \text{Given, } \cos \frac{A}{2} = \sqrt{\frac{b+c}{2c}} \\
 \Rightarrow \quad & \cos^2 \frac{A}{2} = \frac{b+c}{2c} \\
 \Rightarrow \quad & \frac{s(s-a)}{bc} = \frac{b+c}{2c} \\
 \Rightarrow \quad & 2s(s-a) = b(b+c) \\
 \Rightarrow \quad & (a+b+c)(b+c-a) = 2b(b+c) \\
 \Rightarrow \quad & (b+c)^2 - a^2 = 2b^2 + 2bc \\
 \Rightarrow \quad & c^2 = a^2 + b^2
 \end{aligned}$$

$$4. (a) \quad 5. (c)$$

$$\begin{aligned}
 6. (d) \quad & \because c^2 = a^2 + b^2 \Rightarrow \angle C = 90^\circ \\
 \therefore \quad & 4s(s-a)(s-b)(s-c) = 4\Delta^2 \\
 &= 4 \left(\frac{1}{2} ab \right)^2 = a^2 b^2
 \end{aligned}$$

$$\begin{aligned}
 7. (a) \quad & \frac{b^2 + c^2 - a^2}{4 \cot A} = \frac{b^2 + c^2 - a^2}{4 \cos A} \sin A \\
 &= \frac{b^2 + c^2 - a^2}{4(b^2 + c^2 - a^2)} \times 2bc \times \sin A \\
 &= \frac{1}{2} \times bc \times \sin A = \Delta
 \end{aligned}$$

$$\begin{aligned}
 8. (d) \quad & a + b = 3(1 + \sqrt{3}) \quad \dots(i) \\
 & a - b = 3(1 - \sqrt{3}) \quad \dots(ii)
 \end{aligned}$$

On solving Eqs. (i) and (ii), we get

$$a = 3 \text{ and } b = 3\sqrt{3}$$

$$\text{By sine rule, } \frac{\sin A}{a} = \frac{\sin B}{b}$$

$$\Rightarrow \frac{\sin 30^\circ}{3} = \frac{\sin B}{3\sqrt{3}} \Rightarrow \frac{1}{2} = \frac{\sin B}{\sqrt{3}}$$

$$\Rightarrow \sin B = \frac{\sqrt{3}}{2} \Rightarrow \sin B = \sin 60^\circ$$

$$\therefore B = 60^\circ$$

$$9. (c)$$

$$\begin{aligned}
 10. (a) \quad & \text{Given, } \cos B = \frac{\sin A}{2 \sin C} \\
 \Rightarrow \quad & \frac{a^2 + c^2 - b^2}{2ac} = \frac{a}{2c} \quad [\text{by sine rule}] \\
 \Rightarrow \quad & a^2 + c^2 - b^2 = a^2 \\
 \Rightarrow \quad & b^2 = c^2 \Rightarrow b = c
 \end{aligned}$$

Since, two sides of angle are equal, so triangle is isosceles.

$$\begin{aligned}
 11. (d) \quad & \text{Given, } A, B \text{ and } C \text{ are in AP.} \\
 \Rightarrow \quad & 2B = A + C \quad \dots(i) \\
 & \text{and in } \triangle ABC, A + B + C = \pi \quad \dots(ii) \\
 & \text{From Eqs. (i) and (ii), } B = \frac{\pi}{3} = 60^\circ
 \end{aligned}$$

By sine formula,

$$\begin{aligned}
 \frac{\sin B}{b} &= \frac{\sin C}{c} \Rightarrow \sin C = \frac{c}{b} \cdot \sin B \\
 &= \frac{\sqrt{2}}{\sqrt{3}} \cdot \sin 60^\circ \left[\text{given, } \frac{b}{c} = \frac{\sqrt{3}}{\sqrt{2}} \right] \\
 &= \frac{\sqrt{2}}{\sqrt{3}} \times \frac{\sqrt{3}}{2} = \frac{1}{\sqrt{2}}
 \end{aligned}$$

$$\begin{aligned}
 12. (a) \quad & \text{Given, } 2R + r = r_1 \\
 \Rightarrow \quad & 2R = r_1 - r \\
 \Rightarrow \quad & 2R = 4R \sin \frac{A}{2} \cos \frac{B}{2} \cos \frac{C}{2} \\
 & \quad - 4R \sin \frac{A}{2} \sin \frac{B}{2} \sin \frac{C}{2} \\
 \Rightarrow \quad & 2R = 4R \sin \frac{A}{2} \left[\cos \frac{B}{2} \cos \frac{C}{2} - \sin \frac{B}{2} \sin \frac{C}{2} \right] \\
 \Rightarrow \quad & 2R = 4R \sin \frac{A}{2} \cos \left(\frac{B+C}{2} \right) \\
 \Rightarrow \quad & 1 = 2 \sin^2 \frac{A}{2} \left[\because \frac{B+C}{2} = \frac{\pi}{2} - \frac{A}{2} \right] \\
 \Rightarrow \quad & \sin \frac{A}{2} = \frac{1}{\sqrt{2}} \Rightarrow \angle A = \frac{\pi}{2}
 \end{aligned}$$

$$\begin{aligned}
 13. (a) \quad & \text{We know that,} \\
 \sin C &= \sin[\pi - (A+B)] = \sin(A+B) \\
 \text{and } \sin A &= \sin(B+C) \\
 \therefore \quad & \frac{\sin A}{\sin C} = \frac{\sin(A-B)}{\sin(B-C)} \\
 \Rightarrow \quad & \frac{\sin(B+C)}{\sin(A+B)} = \frac{\sin(A-B)}{\sin(B-C)} \\
 \Rightarrow \quad & \sin^2 B - \sin^2 C = \sin^2 A - \sin^2 B \\
 & \quad [\because \sin(A+B) \cdot \sin(A-B) \\
 & \quad = \sin^2 A - \sin^2 B] \\
 \Rightarrow \quad & b^2 - c^2 = a^2 - b^2 \\
 \Rightarrow \quad & 2b^2 = a^2 + c^2 \\
 & \text{So, } a, b \text{ and } c \text{ are in AP.}
 \end{aligned}$$

$$14. (d) \quad k \sin A \cos A = k \sin B \cos B \quad [\text{by sine rule}]$$

$$\begin{aligned}
 \Rightarrow \quad & \sin 2A = \sin 2B \\
 \Rightarrow \quad & 2A = 2B \text{ or } (\pi - 2B) \\
 \text{So, } \quad & A = B, \text{ i.e. } \triangle ABC \text{ is isosceles.} \\
 \text{or } \quad & A + B = \frac{\pi}{2}, \text{ so that } C = \frac{\pi}{2} \\
 & \text{i.e. } \triangle ABC \text{ is right angled.}
 \end{aligned}$$

$$\begin{aligned}
 15. (d) \quad & \text{By sine rule,} \\
 & \frac{\cos A}{K \sin A} = \frac{\cos B}{K \sin B} = \frac{\cos C}{K \sin C} \\
 \Rightarrow \quad & \tan A = \tan B = \tan C \\
 \Rightarrow \quad & \text{Triangle is equilateral.} \\
 \therefore \quad & \Delta = \frac{1}{2} a \cdot a \sin 60^\circ = \sqrt{3} \text{ as } a = 2
 \end{aligned}$$

$$16. (b)$$

$$\begin{aligned}
 17. (a) \quad & \text{By cosine rule,} \\
 \cos A &= \frac{b^2 + c^2 - a^2}{2bc} \\
 \therefore \quad \cos 60^\circ &= \frac{(3)^2 + c^2 - (4)^2}{2 \times 3 \times c} \\
 \Rightarrow \quad \frac{1}{2} &= \frac{9 + c^2 - 16}{2 \times 3 \times c} \\
 \Rightarrow \quad 3c &= c^2 - 7 \\
 \Rightarrow \quad c^2 - 3c - 7 &= 0
 \end{aligned}$$

$$18. (d) \quad a = 2, b = 3, \angle C = 60^\circ$$

$$\begin{aligned}
 \therefore \quad c^2 &= a^2 + b^2 - 2ab \cos 60^\circ \\
 &= 13 - 12 \cdot \frac{1}{2} = 7 \Rightarrow c = \sqrt{7} \text{ km}
 \end{aligned}$$

$$\begin{aligned}
 19. (a) \quad \cos B &= \left(\frac{c^2 + a^2 - b^2}{2ca} \right) \\
 \Rightarrow \quad \cos^2 B &= \frac{a^4 + b^4 + c^4 - 2b^2 c^2 - 2a^2 b^2 + 2a^2 c^2}{4a^2 c^2} \\
 \Rightarrow \quad \cos^2 B &= \frac{1}{2} \\
 \Rightarrow \quad \cos B &= \pm \frac{1}{\sqrt{2}} \\
 \therefore \quad B &= 45^\circ \text{ or } 135^\circ
 \end{aligned}$$

$$20. (b) \quad \text{Here, } a = 8, b = 10 \text{ and } c = 6 \text{ cm}$$

$$s = \frac{8+10+6}{2} = 12$$

$$\therefore \tan \frac{A}{2} = \sqrt{\frac{(12-10)(12-6)}{12(12-8)}}$$

$$= \sqrt{\frac{1}{4}} = \frac{1}{2} \Rightarrow \cot \frac{A}{2} = 2$$

Now, $\cot\left(\frac{A}{2}\right) = \cot\left(\frac{A}{4} + \frac{A}{4}\right)$

$$= \frac{\cot^2 \frac{A}{4} - 1}{2 \cot \frac{A}{4}} = \frac{\cot^2 \frac{A}{4} - 1}{2 \cot \frac{A}{4}}$$

Let $\cot\left(\frac{A}{4}\right) = x$

$$\therefore 2 = \frac{x^2 - 1}{2x} \Rightarrow x^2 - 4x - 1 = 0$$

$$\Rightarrow x = \frac{4 \pm \sqrt{16+4}}{2} = 2 \pm \sqrt{5}$$

Since, A is an acute angle.

$$\therefore \cot\left(\frac{A}{4}\right) = 2 + \sqrt{5}$$

21. (c) $\frac{a-b}{a+b} = \frac{K \sin A - K \sin B}{K \sin A + K \sin B}$

$$= \frac{(\sin A - \sin B)}{(\sin A + \sin B)}$$

$$= \frac{2 \cos\left(\frac{A+B}{2}\right) \sin\left(\frac{A-B}{2}\right)}{2 \sin\left(\frac{A+B}{2}\right) \cos\left(\frac{A-B}{2}\right)}$$

$$= \frac{\tan\left(\frac{A-B}{2}\right)}{\tan\left(\frac{A+B}{2}\right)}$$

22. (a) Since, $\cot A, \cot B, \cot C$ are in AP.

$$\Rightarrow \cot B - \cot A = \cot C - \cot B$$

$$\Rightarrow \frac{\cos B}{\sin B} - \frac{\cos A}{\sin A} = \frac{\cos C}{\sin C} - \frac{\cos B}{\sin B}$$

$$\Rightarrow \frac{\sin(A-B)}{\sin A} = \frac{\sin(B-C)}{\sin C}$$

$$\Rightarrow \frac{\sin(A-B)}{\sin[\pi-(B+C)]} = \frac{\sin(B-C)}{\sin[\pi-(A+B)]}$$

$$\Rightarrow \sin(A-B) \sin(A+B) = \sin(B-C) \sin(B+C)$$

$$\Rightarrow \sin^2 A - \sin^2 B = \sin^2 B - \sin^2 C$$

$$\Rightarrow a^2 - b^2 = b^2 - c^2$$

$$\Rightarrow a^2, b^2, c^2 \text{ are in AP.}$$

23. (c) Given expression

$$= (2s) \left[\sqrt{\frac{(s-b)(s-c)}{s(s-a)}} + \sqrt{\frac{(s-a)(s-c)}{s(s-b)}} \right]$$

$$= (2s) \sqrt{\frac{(s-c)}{s}} \left[\frac{\sqrt{(s-b)}}{\sqrt{(s-a)}} + \frac{\sqrt{(s-a)}}{\sqrt{(s-b)}} \right]$$

$$= (2s) \sqrt{\frac{(s-c)}{s}} \cdot \frac{[2s-(a+b)]}{(\sqrt{s-a})(\sqrt{s-b})}$$

$$= 2(s)c \cdot \frac{1}{s} \cdot \sqrt{\frac{s(s-c)}{(s-a)(s-b)}} = 2c \cot \frac{C}{2}$$

24. (c) Let D be the mid-point of AC . Then,

$$AD = DC = 4$$

Let $BD = K$

From $\triangle ABC$, we have

$$\cos A = \frac{b^2 + c^2 - a^2}{2bc} = \frac{(64+81-49)}{(2 \times 8 \times 9)} = \frac{2}{3}$$

From $\triangle ABD$, we have

$$\cos A = \frac{9^2 + 4^2 - K^2}{2 \times 9 \times 4}$$

$$\Rightarrow \frac{2}{3} = \frac{97 - K^2}{72} \Rightarrow K^2 = 49,$$

i.e. $K = 7$

Hence, $BD = 7$

25. (c) $\cot \frac{A}{2} : \cot \frac{B}{2} : \cot \frac{C}{2} = 3 : 5 : 7$

$$\Rightarrow \frac{s(s-a)}{\Delta} : \frac{s(s-b)}{\Delta} : \frac{s(s-c)}{\Delta} = 3 : 5 : 7$$

$$\Rightarrow (s-a):(s-b):(s-c) = 3 : 5 : 7$$

$$\Rightarrow \frac{(b+c-a)}{2} : \frac{(c+a-b)}{2} : \frac{(a+b-c)}{2}$$

$$= 3 : 5 : 7$$

$$\Rightarrow (b+c-a):(c+a-b):(a+b-c)$$

$$= 3 : 5 : 7$$

Let $b+c-a = 3K, c+a-b = 5K$

and $a+b-c = 7K$

Adding, $(a+b+c) = 15K$

$\therefore 2a = 12K, 2b = 10K, 2c = 8K$

$\Rightarrow a : b : c = 6 : 5 : 4$

26. (d) $a \cos A + b \cos B + c \cos C$

$$= 2R \sin A \cos A + 2R \sin B \cos B + 2R \sin C \cos C$$

$[\because a = 2R \sin A, b = 2R \sin B$

and $c = 2R \sin C]$

$$= R(\sin 2A + \sin 2B + \sin 2C)$$

$$= R[2 \sin(A+B) \cos(A-B)$$

$$+ 2 \sin C \cos C]$$

$$= 2R[\sin(\pi - C) \cos(A-B)$$

$$+ \sin C \cos\{\pi - (A+B)\}]$$

$$= 2R[\sin C \{\cos(A-B)$$

$$- \cos(A+B)\}]$$

$$= 4R \sin A \sin B \sin C$$

27. (c) We have,

$$r_1 r_2 r_3 = \frac{\Delta}{s} \times \frac{\Delta}{s-a} \times \frac{\Delta}{s-b} \times \frac{\Delta}{s-c}$$

$$= \frac{\Delta^4}{\Delta^2} = \Delta^2$$

So, Statement I is true.

Now, $r_1 r_2 + r_2 r_3 + r_3 r_1$

$$= \frac{\Delta^2}{(s-a)(s-b)} + \frac{\Delta^2}{(s-b)(s-c)} + \frac{\Delta^2}{(s-c)(s-a)}$$

$$= s(s-c) + s(s-a) + s(s-b)$$

$$= s(s-a + s-b + s-c) = s^2$$

So, Statement II is also true.

28. (a) We have, $b \cos^2 \frac{C}{2} + c \cos^2 \frac{B}{2}$

$$= b \frac{s(s-c)}{ab} + c \frac{s(s-b)}{ac}$$

$$= \frac{s}{a}(2s-b-c) = s$$

So, Statement I is true.

Now, let $\cot \frac{A}{2} = \frac{b+c}{a}$

$$\Rightarrow \frac{\cos \frac{A}{2}}{\sin \frac{A}{2}} = \frac{\sin B + \sin C}{\sin A}$$

$$\Rightarrow \frac{\cos \frac{A}{2}}{\sin \frac{A}{2}} = \frac{2 \sin\left(\frac{B+C}{2}\right) \cos\left(\frac{B-C}{2}\right)}{2 \sin \frac{A}{2} \cos \frac{A}{2}}$$

$$\Rightarrow \cos \frac{A}{2} = \cos\left(\frac{B-C}{2}\right)$$

$$\Rightarrow \frac{A}{2} = \frac{B-C}{2}$$

$$\Rightarrow A + C = B$$

$$\Rightarrow 2B = 180^\circ$$

$$\Rightarrow B = 90^\circ$$

But, Statement II is $\cot \frac{A}{2} = \frac{b+c}{a}$

So, Statement II is not true.

29. (d) I. Clearly, $\sqrt{x^2 + xy + y^2}$

is the greatest side.

$$\therefore \cos \theta = \frac{x^2 + y^2 - (x^2 + xy + y^2)}{2xy}$$

$$= \frac{-1}{2}$$

$$\Rightarrow \theta = \cos^{-1}\left(\frac{-1}{2}\right) = 120^\circ$$

So, Statement I is true.

II. $\sqrt{3a^2 + b^2}$ is the greatest side.

$$\begin{aligned} \therefore \cos \theta &= \frac{(a-b)^2 + (a+b)^2 - (3a^2 + b^2)}{2a^2 + 2b^2 - 3a^2 - b^2} \\ &= \frac{2(a-b)(a+b)}{2(a^2 - b^2)} \\ &= \frac{-(a^2 - b^2)}{2(a^2 - b^2)} = \frac{-1}{2} \end{aligned}$$

$$\therefore \theta = \cos^{-1}\left(\frac{-1}{2}\right) = 120^\circ$$

So, Statement II is also true.

III. We have,

$$\begin{aligned} \cos \theta &= \frac{(2)^2 + (\sqrt{3}-1)^2 - (\sqrt{6})^2}{2(2)(\sqrt{3}-1)} \\ &= \frac{4 + 4 - 2\sqrt{3} - 6}{4(\sqrt{3}-1)} = \frac{-1}{2} \end{aligned}$$

$$\Rightarrow \theta = \cos^{-1}\left(\frac{-1}{2}\right) = 120^\circ$$

So, Statement III is also true.

30. (a) We have,

$$\frac{2 \cos A}{a} + \frac{\cos B}{b} + \frac{2 \cos C}{c} = \frac{a}{bc} + \frac{b}{ac}$$

Multiplying both sides by abc ,

$$2bc \cos A + ac \cos B + 2ab \cos C = a^2 + b^2$$

$$\Rightarrow (b^2 + c^2 - a^2) + \frac{(c^2 + a^2 - b^2)}{2}$$

$$+ (a^2 + b^2 - c^2) = a^2 + b^2$$

$$\Rightarrow c^2 + a^2 - b^2 = 2a^2 - 2b^2$$

$$\Rightarrow b^2 + c^2 = a^2$$

31. (b) Since, $b^2 + c^2 = a^2$

Hence, $\triangle ABC$ is a right angled triangle.

Sol. (Q. Nos 32-33)

Let $\frac{b+c}{11} = \frac{c+a}{12} = \frac{a+b}{13} = k$. Then,

$$b+c = 11k, c+a = 12k, a+b = 13k$$

On adding, we get $2(a+b+c) = 36k$

$$\Rightarrow a+b+c = 18k$$

$$\therefore a = 7k, b = 6k \text{ and } c = 5k$$

32. (c) Since, $\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$

$$\Rightarrow \sin A : \sin B : \sin C = a : b : c = 7 : 6 : 5$$

33. (a) $\cos A = \frac{b^2 + c^2 - a^2}{2bc}$

$$= \frac{36k^2 + 25k^2 - 49k^2}{2 \cdot (6k)(5k)} = \frac{12k^2}{60k^2} = \frac{1}{5}$$

34. (d) We know that, $\tan\left(\frac{A-B}{2}\right)$

$$= \sqrt{\frac{1 - \cos(A-B)}{1 + \cos(A-B)}} = \sqrt{\frac{1 - \frac{31}{32}}{1 + \frac{31}{32}}} = \frac{1}{\sqrt{63}}$$

$$\Rightarrow \frac{a-b}{a+b} \cdot \cot \frac{C}{2} = \frac{1}{\sqrt{63}}$$

$$\left[\because \tan\left(\frac{A-B}{2}\right) = \frac{a-b}{a+b} \cot \frac{C}{2} \right]$$

$$\Rightarrow \frac{1}{9} \cot \frac{C}{2} = \frac{1}{\sqrt{63}} \Rightarrow \tan \frac{C}{2} = \frac{\sqrt{7}}{3}$$

$$\text{Now, } \cos C = \frac{1 - \tan^2 \frac{C}{2}}{1 + \tan^2 \frac{C}{2}} = \frac{1 - \frac{7}{9}}{1 + \frac{7}{9}} = \frac{2}{16}$$

35. (b) $\because c^2 = a^2 + b^2 - 2ab \cos C$

$$\therefore c^2 = 25 + 16 - 40 \times \frac{1}{8} = 36 \Rightarrow c = 6$$

36. (c) We have, $\tan \frac{A}{2} = \frac{5}{6}$ and $\tan \frac{B}{2} = \frac{20}{37}$

$$\Rightarrow \tan\left(\frac{A+B}{2}\right) = \frac{\frac{5}{6} + \frac{20}{37}}{1 - \frac{5}{6} \times \frac{20}{37}} = \frac{305}{122}$$

$$\Rightarrow \tan\left(\frac{\pi - C}{2}\right) = \frac{305}{122} \Rightarrow \cot \frac{C}{2} = \frac{305}{122}$$

$$\Rightarrow \tan \frac{C}{2} = \frac{122}{305} = \frac{2}{5}$$

37. (a) $\tan \frac{A}{2} \cdot \tan \frac{C}{2} = \frac{5}{6} \times \frac{2}{5} = \frac{1}{3}$

$$\Rightarrow \frac{\Delta}{s(s-a)} \times \frac{\Delta}{s(s-c)} = \frac{1}{3}$$

$$\Rightarrow \frac{s-b}{s} = \frac{1}{3}$$

$$\Rightarrow 2s = 3b \Rightarrow a+c = 2b$$

$\therefore a, b, c$ are in AP.

38. (b) Since, a, b, c are in AP.

$\Rightarrow \sin A, \sin B, \sin C$ are in AP.

So, Statement I is not correct.

Let P_1, P_2, P_3 be the altitudes of $\triangle ABC$.

$\therefore a, b, c$ are in AP.

$$\Rightarrow \frac{2\Delta}{P_1}, \frac{2\Delta}{P_2}, \frac{2\Delta}{P_3} \text{ are in AP.}$$

$$\Rightarrow P_1, P_2, P_3 \text{ are in HP.}$$

So, Statement II is correct.

Sol. (Q. Nos. 39-42) We have,

$$r_1 = \frac{\Delta}{s-a} = 2, r_2 = \frac{\Delta}{s-b} = 3,$$

$$r_3 = \frac{\Delta}{s-c} = 6$$

Given, $\Delta = 6$

$$\therefore s-a=3 \Rightarrow b+c-a=6 \quad \dots(i)$$

$$s-b=2 \Rightarrow a+c-b=4 \quad \dots(ii)$$

$$s-c=1 \Rightarrow a+b-c=2 \quad \dots(iii)$$

On solving Eqs. (i), (ii) and (iii), we get

$$a=3, b=4, c=5.$$

39. (a) $R = \frac{abc}{4\Delta} = \frac{60}{24} = 2.5$

40. (b) $r = \frac{\Delta}{s} = \frac{6}{3+4+5} = \frac{6}{6} = 1$

41. (c) Since, the triangle is right angled, greatest angle is 90° .

Also, the least angle is opposite to side a ,

which is $\sin^{-1}\left(\frac{3}{5}\right)$.

$$\therefore \text{Difference} = 90^\circ - \sin^{-1}\left(\frac{3}{5}\right)$$

$$= \cos^{-1}\left(\frac{3}{5}\right)$$

42. (d) Since, side c of $\triangle ABC$ is greatest.

$$\therefore \angle C = 90^\circ \text{ and } \angle B = 90^\circ - A$$

$$\therefore \sin^2 A + \sin^2 B + \sin^2 C$$

$$= \sin^2 A + \sin^2(90^\circ - A) + \sin^2 90^\circ$$

$$= \sin^2 A + \cos^2 A + 1 = 2$$

Sol. (Q. Nos. 43-46) $AD = p_1$,

$$BE = p_2 \text{ and } CF = p_3$$

$$\therefore \Delta = \frac{1}{2} \cdot a \cdot p_1 = \frac{1}{2} \cdot b \cdot p_2 = \frac{1}{2} \cdot c \cdot p_3$$

$$\therefore p_1 = \frac{2\Delta}{a}, p_2 = \frac{2\Delta}{b}, p_3 = \frac{2\Delta}{c}$$

43. (c) $p_1^{-2} + p_2^{-2} + p_3^{-2}$

$$= \left(\frac{2\Delta}{a}\right)^{-2} + \left(\frac{2\Delta}{b}\right)^{-2} + \left(\frac{2\Delta}{c}\right)^{-2}$$

$$= \frac{a^2 + b^2 + c^2}{4\Delta^2} = \frac{\Sigma a^2}{4\Delta^2}$$

44. (b) $\because p_1, p_2, p_3$ are in AP.

$$\Rightarrow \frac{2\Delta}{a}, \frac{2\Delta}{b}, \frac{2\Delta}{c} \text{ are in AP.}$$

$\therefore a, b, c$ are in HP.

45. (b) $\frac{\sin A}{p_1} + \frac{\sin B}{p_2} + \frac{\sin C}{p_3}$

$$= \frac{2\Delta}{bc} + \frac{2\Delta}{ca} + \frac{2\Delta}{ab}$$

$$= 2\Delta \left(\frac{1}{p_1 bc} + \frac{1}{p_2 ca} + \frac{1}{p_3 ab} \right)$$

$$= 2\Delta \left(\frac{a}{2\Delta bc} + \frac{b}{2\Delta ca} + \frac{c}{2\Delta ab} \right)$$

$$= \frac{abc}{2R} \left(\frac{a^2 + b^2 + c^2}{2\Delta abc} \right) = \frac{a^2 + b^2 + c^2}{4\Delta R}$$

46. (d) Given, $\frac{1}{p_1} + \frac{1}{p_2} + \frac{1}{p_3} = \frac{1}{2}$

∴ AM > GM
 $\frac{\frac{1}{p_1} + \frac{1}{p_2} + \frac{1}{p_3}}{3} \geq \left(\frac{1}{p_1} \cdot \frac{1}{p_2} \cdot \frac{1}{p_3}\right)^{1/3}$

or $\left(\frac{1}{3}\right)^3 \geq \frac{1}{p_1 p_2 p_3}$

∴ $p_1 p_2 p_3 \geq 216$

47. (d) Given angles A, B and C are in AP.
 Thus, $2B = A + C$

In $\triangle ABC$, $\angle A + \angle B + \angle C = 180^\circ$
 $2B + B = 180^\circ \Rightarrow B = 60^\circ$

According to cosine rule,

$$\cos B = \frac{a^2 + c^2 - b^2}{2ac} = \cos 60^\circ$$

$$\Rightarrow \frac{1}{2} = \frac{a^2 + c^2 - b^2}{2ac}$$

$$\Rightarrow ac = a^2 + c^2 - b^2$$

$$\Rightarrow b^2 = a^2 + c^2 - ac$$

48. (d) Given that, $a = 18, b = 24$ and $c = 30$

Now, by cosine law,

$$\cos C = \left(\frac{-c^2 + a^2 + b^2}{2ab}\right)$$

$$= \frac{(18)^2 + (24)^2 - (30)^2}{2 \times 18 \times 24}$$

$$= \frac{324 + 576 - 900}{864} = \frac{900 - 900}{864} = 0$$

$\Rightarrow \cos C = \cos 90^\circ \Rightarrow \angle C = 90^\circ$
 $\therefore \sin C = \sin 90^\circ = 1$

49. (a) Let $\angle A = 30^\circ, \angle B = 45^\circ$ and

$AB = \sqrt{3} + 1$

Then, $\angle C = 180^\circ - (\angle A + \angle B)$
 $\Rightarrow \angle C = 180^\circ - (30^\circ + 45^\circ) = 105^\circ$

By sine rule, $\frac{\sin 30^\circ}{BC} = \frac{\sin 105^\circ}{\sqrt{3} + 1}$

$\Rightarrow BC = (\sqrt{3} + 1) \times \left(\frac{2\sqrt{2}}{\sqrt{3} + 1}\right) \times \frac{1}{2} = \sqrt{2}$

Again, by sine rule, $\frac{\sin 45^\circ}{AC} = \frac{\sin 105^\circ}{\sqrt{3} + 1}$

$\Rightarrow AC = \frac{(\sqrt{3} + 1) \times 2\sqrt{2}}{\sqrt{2}(\sqrt{3} + 1)} = 2$

∴ Area of $\triangle ABC$
 $= \frac{1}{2} \times BC \times AC \times \sin 105^\circ$
 $= \frac{1}{2} \times 2 \times \sqrt{2} \times \frac{(\sqrt{3} + 1)}{2\sqrt{2}} = \frac{\sqrt{3} + 1}{2} \text{ cm}^2$

50. (c) I. Given that, $\sin A + \sin B = \sin C$
 $(aK) + (bK) = (cK)$
 $\Rightarrow a + b = c$

It is not possible, because the sum of the length of two sides of a triangle is always greater than the length of the third side.

Hence, there exists no $\triangle ABC$ for which $\sin A + \sin B = \sin C$.

II. Given that, the ratio of the angles of a triangle are $A : B : C = 1 : 2 : 3$.

Let $A = \alpha, B = 2\alpha$ and $C = 3\alpha$

We know that, $A + B + C = 180^\circ$

$\Rightarrow \alpha + 2\alpha + 3\alpha = 180^\circ$

$\Rightarrow 6\alpha = 180^\circ \Rightarrow \alpha = 30^\circ$

∴ $A = 30^\circ, B = 60^\circ$ and $C = 90^\circ$

∴ $a : b : c = \sin A : \sin B : \sin C$
 [by sine rule]
 $= \sin 30^\circ : \sin 60^\circ : \sin 90^\circ$
 $= \frac{1}{2} : \frac{\sqrt{3}}{2} : 1 = 1 : \sqrt{3} : 2$

Hence, Statement II is correct.

51. (a) By sine rule,

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$\Rightarrow \sin C = \frac{c \cdot \sin A}{a} = \frac{2 \cdot \sin 45^\circ}{2\sqrt{2}}$$

$$= \frac{1}{\sqrt{2}} \cdot \frac{1}{\sqrt{2}} = \frac{1}{2} = \sin 30^\circ$$

∴ $C = 30^\circ$

52. (a) Here, $a = 1 + \sqrt{3}, b = 2, \angle C = 60^\circ$

∴ $\cos C = \frac{a^2 + b^2 - c^2}{2ab}$

$\Rightarrow \cos 60^\circ = \frac{(1 + \sqrt{3})^2 + (2)^2 - c^2}{2(1 + \sqrt{3}) \cdot 2}$

$\Rightarrow 2 + 2\sqrt{3} = 4 + 2\sqrt{3} + 4 - c^2$

$\Rightarrow c^2 = 8 - 2 = 6 \Rightarrow c = \sqrt{6}$

∴ $\cos A = \frac{b^2 + c^2 - a^2}{2bc}$

$= \frac{4 + 6 - (1 + \sqrt{3})^2}{2 \times 2 \times \sqrt{6}}$

$= \frac{3 - \sqrt{3}}{2\sqrt{6}} = \frac{3\sqrt{3} - 1}{2\sqrt{6}}$

$= \frac{\sqrt{3} - 1}{2\sqrt{2}}$

$= \cos 75^\circ$

∴ $A = 75^\circ,$

$B = 45^\circ$

and $C = 60^\circ$

53. (b) We have,

$2a \sin^2 \frac{C}{2} + 2c \sin^2 \frac{A}{2}$

$= 2a + 2c - 3b$

$\Rightarrow a(1 - \cos C) + c(1 - \cos A)$

$= 2a + 2c - 3b$

$\Rightarrow (a + c) - (a \cos C + c \cos A)$

$= 2a + 2c - 3b$

$\Rightarrow a + c - b = 2a + 2c - 3b$

[∵ $b = a \cos C + c \cos A$]

$\Rightarrow -a - c = -2b$

$\Rightarrow a + c = 2b$

Hence, a, b, c are in AP.

54. (b) Since, a, b, c are in AP.

So, $K \sin A, K \sin B, K \sin C$ also in AP, where K is an any non-zero constant.

∴ $\sin A, \sin B, \sin C$ are in AP.

55. (b) Since, a, b and c are sides of a triangle

∴ a, b and c are positive numbers

and $a + b > c$

Therefore, for $p > 0$

$(a + b)^{1/p} > c^{1/p}$... (i)

Now, for any two positive numbers and $p > 1$

$(a)^{1/p} + (b)^{1/p} > (a + b)^{1/p}$... (ii)

From Eqs. (i) and (ii), we get

$(a)^{1/p} + (b)^{1/p} > (c)^{1/p}$

$\Rightarrow (a)^{1/p} + (b)^{1/p} - (c)^{1/p} > 0$

$\Rightarrow a^{1/p} + b^{1/p} > c^{1/p}$

16

COORDINATE SYSTEM AND STRAIGHT LINES

In NDA exam, generally 5-7 questions are asked from this chapter which are based on section formula, area of triangle, equation of straight line in different conditions, angle between two lines, distance of a point from a line, etc.

COORDINATE SYSTEM

A system in which points are defined as the ordered pair (x, y) is called the coordinate system. Here, x and y are called abscissa and ordinate, respectively.

Cartesian Coordinates

In coordinate system, there are two mutually perpendicular straight lines XOX' and YOY' , called X and Y -axes, respectively.

These axes divide the coordinate plane into four parts called quadrants. OX and OX' are called positive and negative directions, respectively of X -axis and similarly OY and OY' are called positive and negative directions, respectively of Y -axis.

Distance Formula

The distance between any two points in the plane is the length of the line segment joining them.

Let $P(x_1, y_1)$ and $Q(x_2, y_2)$ be any two points in the XY -plane, then

$$|PQ| = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

$$\text{or } |PQ| = \sqrt{(\text{Difference of abscissas})^2 + (\text{Difference of ordinates})^2}$$

Note Distance between the origin $O(0, 0)$ and the point $P(x, y)$ is $OP = \sqrt{x^2 + y^2}$.

EXAMPLE 1. Find a point P , which is equidistant from the three points $A(0, 1)$, $B(1, 0)$ and $C(4, 3)$.

- a. (1, 2) b. (2, 2)
c. (2, 3) d. (3, 3)

Sol. Let $P(a, b)$ be the required point.

Then, $PA = PB = PC$ or $PA^2 = PB^2 = PC^2$.

Now, $PA^2 = PB^2 \Rightarrow a^2 + (b - 1)^2 = (a - 1)^2 + b^2$

$\Rightarrow a^2 + b^2 - 2b + 1 = a^2 - 2a + 1 + b^2 \Rightarrow b = a$

and $PA^2 = PC^2$

$\Rightarrow a^2 + (b - 1)^2 = (a - 4)^2 + (b - 3)^2$

$\Rightarrow a^2 + b^2 - 2b + 1 = a^2 - 8a + 16 + b^2 - 6b + 9$

$\Rightarrow 8a + 4b - 24 = 0$

On substituting $b = a$, we get $12a - 24 = 0$

$\Rightarrow a = 2$

Hence, the required point is $P(2, 2)$.

Applications of Distance Formula

1. Collinear Points

Three points in $\alpha - \gamma$ plane will be collinear, if sum of distances between two pairs of points is equal to third pair of points.

2. Three Points In A Plane

Any three non-collinear points always form a triangle. Given three points would form a

- (i) **Isosceles triangle** If lengths of any two sides are equal.
- (ii) **Equilateral triangle** If lengths of all three sides are equal.
- (iii) **Right angled triangle** If sum of squares of lengths of two sides is equal to length of third side.

3. Four points in a plane

Any four non-collinear points form a quadrilateral. Given four points would form

- (i) **Square** If all four sides are equal and diagonals are also equal.
- (ii) **Rhombus** If all four sides are equal.
- (iii) **Rectangle** If opposite sides are equal and diagonals are equal.
- (iv) **Parallelogram** If opposite sides are equal.

Note

- In a parallelogram, diagonals cut each other at mid-point.
- In a rhombus, diagonals bisect each other at right angles.

EXAMPLE 2. Figure formed from the four coordinates $(1, -2)$, $(3, 6)$, $(5, 10)$ and $(3, 2)$ is

- a. Square b. Rectangle
c. Rhombus d. Parallelogram

Sol. Let $A = (1, -2)$, $B = (3, 6)$, $C = (5, 10)$ and $D = (3, 2)$

Now, using distance formula

$$AB = \sqrt{(1-3)^2 + (-2-6)^2} = 2\sqrt{17}$$

$$BC = \sqrt{(3-5)^2 + (6-10)^2} = 2\sqrt{5}$$

$$CD = \sqrt{(5-3)^2 + (10-2)^2} = 2\sqrt{17}$$

$$AD = \sqrt{(1-3)^2 + (-2-2)^2} = 2\sqrt{5}$$

$$AC = \sqrt{(1-5)^2 + (-2-10)^2} = 4\sqrt{10}$$

and $BD = \sqrt{(3-3)^2 + (6-2)^2} = 4$

Clearly, we have

$$AB = CD, BC = AD \text{ and } AC \neq BD$$

Thus, $ABCD$ is a parallelogram.

Section Formulae

Let $A(x_1, y_1)$ and $B(x_2, y_2)$ be the two given points and the point $P(x, y)$ divide the line joining the points A and B in the ratio $m : n$, then

(i) Point of internal division

$$(x, y) = \left(\frac{mx_2 + nx_1}{m+n}, \frac{my_2 + ny_1}{m+n} \right)$$

(ii) Point of external division

$$(x, y) = \left(\frac{mx_2 - nx_1}{m-n}, \frac{my_2 - ny_1}{m-n} \right)$$

Note If P is the mid-point of AB , then $P(x, y) = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$.

EXAMPLE 3. The coordinates of the point dividing internally the lines joining the points $(4, -2)$ and $(8, 6)$ in the ratio $7 : 5$ will be

- a. (16, 18) b. (18, 16) c. $\left(\frac{19}{3}, \frac{8}{3}\right)$ d. $\left(\frac{8}{3}, \frac{19}{3}\right)$

Sol. c. Let the coordinates of the required point be (x, y) .

$$\text{Then, } x = \frac{4 \times 5 + 8 \times 7}{7 + 5} = \frac{19}{3} \text{ and } y = \frac{-2 \times 5 + 6 \times 7}{7 + 5} = \frac{8}{3}$$

$$\therefore \text{ Required coordinates} = \left(\frac{19}{3}, \frac{8}{3} \right)$$

Area of a Triangle

Let $A(x_1, y_1)$, $B(x_2, y_2)$ and $C(x_3, y_3)$ be the vertices of a ΔABC , then

$$\text{Area of } \Delta ABC = \frac{1}{2} \begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix}$$

$$\Delta = \frac{1}{2} |x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)|$$

Note The three points $A(x_1, y_1)$, $B(x_2, y_2)$ and $C(x_3, y_3)$ are collinear, if the area of ΔABC is zero.

EXAMPLE 4. For what value of k are the points $(k, 2 - 2k)$, $(-k + 1, 2k)$ and $(-4 - k, 6 - 2k)$ are collinear?

- a. $\frac{1}{2}$ b. 1 c. $\frac{1}{2}$ or -1 d. -1

Sol. c. Let three given points be $A = (x_1, y_1) = (k, 2 - 2k)$

$$B = (x_2, y_2) = (-k + 1, 2k)$$

and

$$C = (x_3, y_3) = (-4 - k, 6 - 2k).$$

If the given points are collinear, then $\Delta = 0$.

$$\Rightarrow x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2) = 0$$

$$\Rightarrow k(2k - 6 + 2k) + (-k + 1)(6 - 2k - 2 + 2k)$$

$$+ (-4 - k)(2 - 2k - 2k) = 0$$

$$\Rightarrow k(4k - 6) - 4(k - 1) + (4 + k)(4k - 2) = 0$$

$$\Rightarrow 4k^2 - 6k - 4k + 4 + 4k^2 + 14k - 8 = 0$$

$$\Rightarrow 8k^2 + 4k - 4 = 0 \Rightarrow 2k^2 + k - 1 = 0$$

$$\Rightarrow (2k - 1)(k + 1) = 0$$

$$\Rightarrow k = \frac{1}{2} \text{ or } -1$$

Hence, the given points are collinear for $k = \frac{1}{2}$ or $k = -1$.

Area of Quadrilateral

Area of quadrilateral $ABCD$ with vertices $A(x_1, y_1)$, $B(x_2, y_2)$, $C(x_3, y_3)$ and $D(x_4, y_4)$ taken in order is

$$\text{Area} = \frac{1}{2} \begin{vmatrix} x_1 - x_3 & y_1 - y_3 \\ x_2 - x_4 & y_2 - y_4 \end{vmatrix}$$

DIFFERENT POINTS RELATED TO TRIANGLE

Centroid of a Triangle

The coordinates of the centroid G of a triangle, whose vertices are $A(x_1, y_1)$, $B(x_2, y_2)$ and $C(x_3, y_3)$ is given

$$\text{by } \left(\frac{x_1 + x_2 + x_3}{3}, \frac{y_1 + y_2 + y_3}{3} \right).$$

Note If D , E and F are the mid-points of sides BC , CA and AB of a ΔABC , then centroid of ΔABC = centroid of ΔDEF .

Incentre of a Triangle

If (x, y) is the incentre of the ΔABC , where $A(x_1, y_1)$, $B(x_2, y_2)$, $C(x_3, y_3)$ are coordinates and a, b, c are the sides of the triangle, then $\left(\frac{ax_1 + bx_2 + cx_3}{a + b + c}, \frac{ay_1 + by_2 + cy_3}{a + b + c} \right)$ will be incentre of a triangle.

Circumcentre of a Triangle

If $P(x, y)$ is the circumcentre of ΔABC , then

$$PA = PB = PC \quad \dots(i)$$

We can determine the coordinates of P by simplifying Eq. (i) for x and y .

Note The circumcentre of a right angled triangle is the mid-point of its hypotenuse.

Orthocentre of a Triangle

The coordinates of the orthocentre of a triangle, whose vertices are $A(x_1, y_1)$, $B(x_2, y_2)$ and $C(x_3, y_3)$ is given by

$$\left(\frac{x_1 \tan A + x_2 \tan B + x_3 \tan C}{\tan A + \tan B + \tan C}, \frac{y_1 \tan A + y_2 \tan B + y_3 \tan C}{\tan A + \tan B + \tan C} \right)$$

SOME IMPORTANT POINTS

- (i) Orthocentre of the right angled ΔABC , right angled at A , is A .
- (ii) Orthocentre of a triangle will lie inside, if triangle is acute and in case of obtuse triangle, orthocentre will lie outside.
- (iii) In a ΔABC , the circumcentre S , centroid G and orthocentre O are collinear and $SG : GO = 1 : 2$
- (iv) In equilateral triangle, orthocentre, centroid, circumcentre and incentre coincide.

Excentre of Triangle

There are three excentres in a triangle. Coordinate of each can be obtained by changing the sign of a, b, c respectively in the formula of incentre as given by I_1, I_2 and I_3 . The coordinates of I_1 are given by

$$\left(\frac{-ax_1 + bx_2 + cx_3}{-a + b + c}, \frac{-ay_1 + by_2 + cy_3}{-a + b + c} \right)$$

EXAMPLE 5. The vertices of a triangle are $A(5, -1)$, $B(-1, 5)$ and $C(6, 6)$. Find the coordinates of the circumcentre.

- a. $\left(\frac{10}{3}, \frac{10}{3} \right)$ b. $\left(\frac{23}{8}, \frac{23}{8} \right)$ c. $\left(\frac{28}{3}, \frac{28}{3} \right)$ d. None of these

Sol. . Let $P(x, y)$ be the circumcentre of the $\triangle ABC$.

Then, $PA = PB = PC$ or $PA^2 = PB^2 = PC^2$
 Now, $PA^2 = PB^2$,
 we get $(x - 5)^2 + (y + 1)^2 = (x + 1)^2 + (y - 5)^2$
 $\Rightarrow x^2 + y^2 - 10x + 2y + 26 = x^2 + y^2 + 2x - 10y + 26$
 $\Rightarrow x - y = 0$... (i)
 Now, $PB^2 = PC^2$, we get
 $(x + 1)^2 + (y - 5)^2 = (x - 6)^2 + (y - 6)^2$
 $\Rightarrow x^2 + y^2 + 2x - 10y + 26 = x^2 + y^2 - 12x - 12y + 72$
 $\Rightarrow 7x + y - 23 = 0$... (ii)
 On solving Eqs. (i) and (ii), we get $x = 23/8$ and $y = 23/8$
 Hence, the coordinates of the circumcentre are $(23/8, 23/8)$.

LOCUS OF A POINT

The curve described by a point which moves under given condition or conditions is called its locus. The equation of the locus of a point is the relation which is satisfied by the coordinates of every point on the locus of the point.

EXAMPLE 6. The sum of the squares of the distances of a moving point from two fixed points $(p, 0)$ and $(-p, 0)$ is equal to a constant quantity $2\lambda^2$, find the equation of the locus.

- a. $x^2 + y^2 = \lambda^2 - p^2$
- b. $x^2 + y^2 = \lambda^2 + p^2$
- c. $x^2 - y^2 = \lambda^2 - p^2$
- d. $x^2 - y^2 = \lambda^2 + p^2$

Sol. . Let $P(h, k)$ be any position of the moving point and $A(p, 0), B(-p, 0)$ be the given points.

Then, $PA^2 + PB^2 = 2\lambda^2$
 $\Rightarrow (h - p)^2 + (k - 0)^2 + (h + p)^2 + (k - 0)^2 = 2\lambda^2$
 $\Rightarrow h^2 - 2ph + p^2 + k^2 + h^2 + 2ph + p^2 + k^2 = 2\lambda^2$
 $\Rightarrow 2h^2 + 2k^2 + 2p^2 = 2\lambda^2$
 $\Rightarrow h^2 + k^2 = \lambda^2 - p^2$
 Hence, the locus of (h, k) is $x^2 + y^2 = \lambda^2 - p^2$.

STRAIGHT LINES

A straight line is the locus of all those points which are collinear with two given points.

The equation of a straight line l is a linear relationship in x and y , i.e. it is a first degree polynomial equation in x and y . An equation of the form $ax + by + c = 0$, where a, b and c are constants, represents a straight line in general form.

Slope or Gradient of a Line

The trigonometrical tangent of the angle α ($\alpha \neq \pi/2$) which a given line makes with the positive direction of X -axis, is called the slope or gradient of the line. It is generally denoted by m , i.e. $m = \tan \alpha$.

Slopes in Different Conditions

- (i) Slope of X -axis or a line parallel to X -axis is
 $m = \tan 0^\circ = 0$
- (ii) Slope of Y -axis or a line parallel to Y -axis is
 $m = \tan \frac{\pi}{2} = \infty$
- (iii) The slope of the line joining the points (x_1, y_1) and (x_2, y_2) is obtained as
 $m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{\text{Difference of ordinates}}{\text{Difference of abscissas}}$

Angle between Two Lines

Let θ be the angle between two lines of slopes m_1 and m_2 , then $\tan \theta = \pm \frac{m_2 - m_1}{1 + m_1 m_2}$

Above lines are parallel, if $m_1 = m_2$
 and lines are perpendicular, if $m_1 m_2 = -1$

Some Facts about General Equation of Line $ax + by + c = 0$

- (i) The slope of the line $ax + by + c = 0$ is
 $m = -\frac{a}{b} = -\frac{\text{Coefficient of } x}{\text{Coefficient of } y}$
- (ii) Let two straight lines be given by
 $a_1x + b_1y + c_1 = 0$ and $a_2x + b_2y + c_2 = 0$
 Then, the lines are
 - (a) coincident or identical, if $\frac{a_1}{a_2} = \frac{b_1}{b_2} = \frac{c_1}{c_2}$
 - (b) parallel, if their slopes are equal, i.e.
 $m_1 = m_2$ or $-\frac{a_1}{b_1} = -\frac{a_2}{b_2}$ or $\frac{a_1}{b_1} = \frac{a_2}{b_2}$
 - (c) perpendicular, if the product of their slopes is -1 , i.e. $m_1 m_2 = -1$
 or $\left(-\frac{a_1}{b_1}\right)\left(-\frac{a_2}{b_2}\right) = -1$ or $a_1 a_2 + b_1 b_2 = 0$
 - (d) intersecting, if $\frac{a_1}{a_2} \neq \frac{b_1}{b_2}$
- (iii) The equation of a line which is
 - (a) parallel to $ax + by + c = 0$ can be written as
 $ax + by + k = 0$ [$\because m_1 = m_2$]
 - (b) perpendicular to $ax + by + c = 0$ can be written as
 $bx - ay + k = 0$ [$\because m_1 m_2 = -1$]
 where, k is an arbitrary constant to be determined using given condition.

Equations of Line in Different Forms

1. **Slope-intercept form** $y = mx + c$, is called the slope form or slope intercept form or the tangent form of the equation of the line, the constant c is called the intercept made by the line on the Y -axis. To find the slope and the intercept on the Y -axis of a line given in the form $ax + by + c = 0$, we write it in the form

$$y = -\frac{a}{b}x - \frac{c}{b}$$

Therefore, the slope of the line is $m = -a/b$ and the intercept of the line on the Y -axis is $-c/b$.

2. **Slope-point form** The equation of a line passing through the point (x_1, y_1) and having the slope 'm' is

$$y - y_1 = m(x - x_1)$$

EXAMPLE 7. What will be the equation of a line that has y -intercept 4 and is perpendicular to the line joining $(2, -3)$ and $(4, 2)$?

- a. $2x + 5y - 20 = 0$ b. $5x + 2y - 20 = 0$
c. $5x - 2y + 20 = 0$ d. $2x - 5y + 20 = 0$

Sol. Let m be the slope of the required line.

Since, the required line is perpendicular to the line joining $A(2, -3)$ and $B(4, 2)$.

Therefore, $m \times \text{slope of } AB = -1 \Rightarrow m \times \frac{2+3}{4-2} = -1$

$$\Rightarrow m = \frac{-2}{5}$$

The required line cuts-off an intercept 4 on Y -axis. So, $c = 4$.

Hence, the equation of the required line is

$$y = -\frac{2}{5}x + 4 \Rightarrow 2x + 5y - 20 = 0$$

3. **Two points form** The equation of a line passing through the points (x_1, y_1) and (x_2, y_2) is

$$(y - y_1) = \frac{y_2 - y_1}{x_2 - x_1}(x - x_1)$$

4. **Intercept form** If a line cuts the intercepts a and b on the axes, then the equation of line is

$$\frac{x}{a} + \frac{y}{b} = 1$$

EXAMPLE 8. What will be the equation of the line passes through the point $(3, 2)$ and the sum of its intercepts on the axes is 12?

- I. $2x + y = 8$ II. $x + 3y = 9$
a. Only I b. Only II
c. Both I and II d. None of these

Sol. Let the equation of the line be $\frac{x}{a} + \frac{y}{b} = 1$... (i)

This passes through $(3, 2)$, therefore $\frac{3}{a} + \frac{2}{b} = 1$... (ii)

It is given that $a + b = 12$ or $b = 12 - a$

Putting $b = 12 - a$ in Eq. (ii), we get

$$\frac{3}{a} + \frac{2}{12-a} = 1 \Rightarrow a^2 - 13a + 36 = 0 \Rightarrow a = 9, 4$$

For $a = 9$, $b = 12 - 9 = 3$ For $a = 4$, $b = 12 - 4 = 8$

Putting the values of a and b in Eq. (ii), we get the

equations of the lines $\frac{x}{9} + \frac{y}{3} = 1$ and $\frac{x}{4} + \frac{y}{8} = 1$

i.e. $x + 3y = 9$ and $2x + y = 8$

5. **Normal or perpendicular form** If p is the normal from the origin to the line AB and if the normal makes an angle α with X -axis, then the equation of the line in the form, $x \cos \alpha + y \sin \alpha = p$ is called the normal form of the line.

Note In the normal form of a straight line the sum of the squares of the coefficient of x and y is equal to one.

FAMILY OF LINES

Let $L_1 = a_1x + b_1y + c_1 = 0$ and $L_2 = a_2x + b_2y + c_2 = 0$ be two given lines. Then, the equation, $L_1 + \lambda L_2 = 0$

i.e. $a_1x + b_1y + c_1 + \lambda(a_2x + b_2y + c_2) = 0$... (i)

represents the equation of a line, passing through the point of intersection of the given lines, where $\lambda \in R$.

EXAMPLE 9. Find the equation of the line joining the points $(3, -1)$ and $(2, 3)$. Also, find the equation of another line perpendicular to this line and passing through the point $(5, 2)$.

- a. $4x + y - 11 = 0, x - 4y + 3 = 0$
b. $4x + y + 11 = 0, x - 4y + 3 = 0$
c. $x + 4y - 11 = 0, 4x - y + 3 = 0$
d. $x - 4y + 11 = 0, 4x - y + 3 = 0$

Sol. Equation of line passing through $(3, -1)$ and $(2, 3)$.

$$y + 1 = \frac{3+1}{2-3}(x-3)$$

$$\Rightarrow y + 1 = -4(x-3)$$

$$\Rightarrow 4x + y - 11 = 0$$

which is the required equation.

Equation of line perpendicular to it $x - 4y + k = 0$

But it passes through the point $(5, 2)$. So, it will satisfy this equation.

$$\therefore 5 - 4(2) + k = 0 \Rightarrow k = 3$$

Hence, the another required equation is $x - 4y + 3 = 0$.

EXAMPLE 10. Find the equation of the line which passes through the point of intersection of the lines $x - 2y + 3 = 0$ and $2x + y - 4 = 0$ and

(i) has slope 2.

- a. $x + y + 2 = 0$
- b. $2x - y = 0$
- c. $2x + y = 0$
- d. $x + 2y + 2 = 0$

(ii) is parallel to the line $3x + 5y - 1 = 0$.

- a. $3x + 5y + 1 = 0$
- b. $3x + y + 13 = 0$
- c. $3x + 5y + 13 = 0$
- d. None of these

Sol. (i) → b (ii) → d

The equation of the line which passes through the point of intersection of the lines

$$x - 2y + 3 = 0 \text{ and } 2x + y - 4 = 0$$

can be written as $(x - 2y + 3) + \lambda(2x + y - 4) = 0$

$$\Rightarrow (1 + 2\lambda)x + (-2 + \lambda)y + 3 - 4\lambda = 0 \quad \dots(A)$$

where λ is an arbitrary constant to be determined.

(i) Slope of the line (A) is $m = \frac{-(1 + 2\lambda)}{-2 + \lambda} = 2$

$$\Rightarrow -1 - 2\lambda = -4 + 2\lambda \Rightarrow 4\lambda = 3 \Rightarrow \lambda = 3/4$$

The equation of the required line becomes

$$\left(1 + \frac{3}{2}\right)x + \left(-2 + \frac{3}{4}\right)y + 3 - 3 = 0$$

$$\Rightarrow \frac{5}{2}x - \frac{5}{4}y = 0 \Rightarrow 2x - y = 0$$

(ii) The line (A) is parallel to the line $3x + 5y - 1 = 0$

Therefore, their slopes are equal.

Hence, $\frac{-(1 + 2\lambda)}{-2 + \lambda} = -\frac{3}{5} \Rightarrow 5 + 10\lambda = -6 + 3\lambda$

$$\Rightarrow 7\lambda = -11 \Rightarrow \lambda = -11/7$$

The equation of the line becomes

$$\left(1 - \frac{22}{7}\right)x + \left(-2 - \frac{11}{7}\right)y + 3 + \frac{44}{7} = 0$$

$$\Rightarrow -\frac{15}{7}x - \frac{25}{7}y + \frac{65}{7} = 0 \Rightarrow 3x + 5y - 13 = 0$$

Concurrency of Three Lines

To find, whether three lines are concurrent or not, we find the point of intersection of any two lines. If this point lies on the third line, i.e. the coordinates of this point of intersection satisfy the equation of the third line, then the given straight lines are concurrent.

The condition that the three lines

$$a_1x + b_1y + c_1 = 0 \quad \dots(i)$$

$$a_2x + b_2y + c_2 = 0 \quad \dots(ii)$$

and $a_3x + b_3y + c_3 = 0 \quad \dots(iii)$

are concurrent, is $\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} = 0$

Note Three or more straight lines are said to be concurrent lines, if they meet at a point.

Perpendicular Distance of a Point from a Line

The perpendicular distance d from $P(x_1, y_1)$ to the line

$$ax + by + c = 0 \text{ is given by } d = \left| \frac{ax_1 + by_1 + c}{\sqrt{a^2 + b^2}} \right|$$

The perpendicular distance from the origin to the line

$$ax + by + c = 0 \text{ is } d = \left| \frac{c}{\sqrt{a^2 + b^2}} \right|$$

EXAMPLE 11. The intercepts of a straight line upon the coordinate axes are a and b . If the length of the perpendicular on this line from the origin be 1, then which one of the following relations is correct?

- a. $\frac{1}{a^2} + \frac{1}{b^2} = 2$
- b. $\frac{1}{a^2} + \frac{1}{b^2} = \frac{1}{\sqrt{2}}$
- c. $\frac{1}{a^2} + \frac{1}{b^2} = \frac{1}{2}$
- d. $\frac{1}{a^2} + \frac{1}{b^2} = 1$

Sol. The equation of line passing through A and B is

$$\frac{x}{a} + \frac{y}{b} = 1 \Rightarrow \frac{x}{a} + \frac{y}{b} - 1 = 0 \quad \dots(i)$$

Length of perpendicular from $(0, 0)$ to the Eq. (i)

$$= \left| \frac{\frac{0}{a} + \frac{0}{b} - 1}{\sqrt{\frac{1}{a^2} + \frac{1}{b^2}}} \right|$$

Given that, $1 = \frac{1}{\sqrt{\frac{1}{a^2} + \frac{1}{b^2}}} \Rightarrow \frac{1}{a^2} + \frac{1}{b^2} = 1$

Distance between Two Parallel Lines

The distance between the parallel lines $ax + by + c_1 = 0$

and $ax + by + c_2 = 0$ is given by $d = \left| \frac{c_1 - c_2}{\sqrt{a^2 + b^2}} \right|$

Image of a Point about a Straight Line or Mirror

Let AB be a given line and P be any point in the plane. Draw PM perpendicular to AB . Extend PM to Q such that $PM = MQ$.

Then, the point Q is called the image of the point P about the straight line AB , where M is the mid-point of PQ .

The image (or reflection) of the point $P(x_1, y_1)$ in the given line AB , $ax + by + c = 0$, is (h, k) , where

$$\frac{h - x_1}{a} = \frac{k - y_1}{b} = \frac{-2(ax_1 + by_1 + c)}{a^2 + b^2}$$

Note The foot of the perpendicular (h, k) from (x_1, y_1) to the line $ax + by + c = 0$ is given by

$$\frac{h - x_1}{a} = \frac{k - y_1}{b} = \frac{-(ax_1 + by_1 + c)}{a^2 + b^2}$$

EXAMPLE 12. Find the image of the point $P(2, 1)$ about the straight line $x - y + 5 = 0$.

- a. $(-4, 7)$ b. $(4, 7)$ c. $(4, -7)$ d. $(-4, -7)$

Sol. The slope of the given line is 1. Therefore, slope of the perpendicular line from P to the line is -1 . Hence, the equation of the line PM , passing through $P(2, 1)$ and having slope -1 , is

$$y - 1 = -1(x - 2) \text{ or } x + y - 3 = 0$$

On solving the equations, $x - y + 5 = 0$ and $x + y - 3 = 0$, we obtain the coordinates of the point M as $(-1, 4)$.

Let the coordinates of the point Q be (h, k) . Since, Q is the image of P , M is the mid-point of PQ .

We have, $(h + 2)/2 = -1$ and $(k + 1)/2 = 4$,

$$\Rightarrow h = -4 \text{ and } k = 7$$

Therefore, $(-4, 7)$ is the image point of $(2, 1)$ about the line $x - y + 5 = 0$.

Equations of the Bisectors of Angles between Two Lines

Let AB and CD be two given lines represented by

$$a_1x + b_1y + c_1 = 0 \text{ and } a_2x + b_2y + c_2 = 0$$

Then, equation of the bisector of the angle between them are

$$\frac{a_1x + b_1y + c_1}{\sqrt{a_1^2 + b_1^2}} = \pm \frac{a_2x + b_2y + c_2}{\sqrt{a_2^2 + b_2^2}}$$

Conditions	Acute angle bisector	Obtuse angle bisector
$a_1a_2 + b_1b_2 > 0$	-	+
$a_1a_2 + b_1b_2 < 0$	+	-

Note A line which is equally inclined to given two lines is parallel to the angle bisectors of the given lines.

EXAMPLE 13. Find the equations of the bisector of the angles between the straight lines $3x + 4y + 7 = 0$ and $12x + 5y - 8 = 0$.

- a. $7x + 9y + 17 = 0, 99x + 77y + 51 = 0$
 b. $7x - 9y - 17 = 0, 99x + 77y - 51 = 0$
 c. $7x - 9y + 17 = 0, 99x + 77y + 51 = 0$
 d. None of the above

Sol. Equations of the bisectors of the angles between the given straight lines are given by

$$\frac{3x + 4y + 7}{\sqrt{9 + 16}} = \pm \frac{12x + 5y - 8}{\sqrt{144 + 25}}$$

$$\Rightarrow 13(3x + 4y + 7) = \pm 5(12x + 5y - 8)$$

$$\Rightarrow 39x + 52y + 91 = \pm (60x + 25y - 40)$$

Taking positive signs, $39x + 52y + 91 = 60x + 25y - 40$

$$\Rightarrow -21x + 27y + 131 = 0$$

$$\Rightarrow 21x - 27y - 131 = 0$$

Taking negative signs, $(39x + 52y + 91) = -(60x + 25y - 40)$

$$\Rightarrow 99x + 77y + 51 = 0$$

> PRACTICE EXERCISE

- The coordinates of the middle points of the sides of a triangle are $(4, 2)$, $(3, 3)$ and $(2, 2)$, then find the coordinates of its centroid are
 (a) $(3, \frac{7}{3})$ (b) $(3, 3)$
 (c) $(4, 3)$ (d) None of these
- The co-ordinates of incentre of ΔABC with vertices $A(0, 6)$, $B(8, 12)$ and $C(8, 0)$ is
 (a) $(\frac{16}{3}, 0)$ (b) $(8, 11)$ (c) $(-4, 3)$ (d) $(5, 6)$
- The middle point of the segment of the straight line joining the points (p, q) and $(q, -p)$ is $(r/2, s/2)$. What is the length of the segment?
 (a) $[(s^2 + r^2)^{1/2}]/2$ (b) $[(s^2 + r^2)^{1/2}]/4$
 (c) $(s^2 + r^2)^{1/2}$ (d) $s + r$
- If $t_1 \neq t_2$ and the points $A(a, 0)$, $B(at_1^2, 2at_1)$ and $C(at_2^2, 2at_2)$ are collinear, then t_1t_2 is equal to
 (a) 1 (b) 2 (c) -1 (d) -2
- The area of quadrilateral $ABCD$ whose vertices in order are $A(1, 1)$, $B(7, -3)$, $C(12, 2)$ and $D(7, 21)$ is
 (a) 66 sq units (b) 132 sq units
 (c) 124 sq units (d) 86.5 sq units
- The distance between the lines $4x + 3y = 11$ and $8x + 6y = 15$ is
 (a) $7/2$ (b) $7/3$ (c) $7/5$ (d) $7/10$
- The equation of line parallel to the line $2x + 3y + 5 = 0$ and sum of whose intercepts on the axes is 15 is
 (a) $2x + 3y = 15$ (b) $3x - 2y + 2 = 0$
 (c) $3x - 2y + 8 = 0$ (d) $2x + 3y - 18 = 0$

- 8.** The line $x + y = 4$ divides the line joining the points $(-1, 1)$ and $(5, 7)$ in the ratio
 (a) 2 : 3 (b) 1 : 2 (c) 1 : 1 (d) 4 : 3
- 9.** Foot of perpendicular drawn from $(0, 5)$ to the line $3x - 4y - 5 = 0$ is
 (a) $(1, 3)$ (b) $(2, 3)$ (c) $(3, 2)$ (d) $(3, 1)$
- 10.** A point $P(h, k)$ lies on the straight line $x + y + 1 = 0$ and is at a distance 5 units from the origin. If k is negative, then h is equal to
 (a) -3 (b) 3 (c) -4 (d) 4
- 11.** The area of a triangle is 5 and two of its vertices are $A(2, 1), B(3, -2)$. Then, the third vertex, in 1st quadrant which lies on the line $y = x + 3$ is
 (a) $\left(\frac{7}{2}, \frac{13}{2}\right)$ (b) $\left(\frac{5}{2}, \frac{5}{2}\right)$ (c) $\left(\frac{3}{2}, \frac{3}{2}\right)$ (d) $(0, 0)$
- 12.** The diagonals of a quadrilateral $ABCD$ are along the lines $x + 3y = 4$ and $6x - 2y = 7$. Then, $ABCD$ must be a
 (a) rectangle (b) parallelogram
 (c) cyclic quadrilateral (d) rhombus
- 13.** The equation of straight line passing through the point of intersection of the straight line $3x - y + 2 = 0$ and $5x - 2y + 7 = 0$ and having infinite slope is
 (a) $x = 2$ (b) $x + y = 3$ (c) $x = 3$ (d) $x = 4$
- 14.** If $(-5, 4)$ divides the line segment between the coordinate axes in the ratio 1 : 2, then what is its equation?
 (a) $8x + 5y + 20 = 0$ (b) $5x + 8y - 7 = 0$
 (c) $8x - 5y + 60 = 0$ (d) $5x - 8y + 57 = 0$
- 15.** What is the locus of a point which is equidistant from the point $(m + n, n - m)$ and the point $(m - n, n + m)$?
 (a) $mx = ny$ (b) $nx = -my$ (c) $nx = my$ (d) $mx = -ny$
- 16.** If $x \cos \theta + y \sin \theta = 2$ is perpendicular to the line $x - y = 3$, then what is one of the value of θ ?
 (a) $\pi/6$ (b) $\pi/4$ (c) $\pi/2$ (d) $\pi/3$
- 17.** The two points $(2, 1)$ and $(3, -1)$ with respect to the line $3x - 5y + 7 = 0$
 (a) on the line (b) on same side of the line
 (c) on opposite side of the line (d) None of these
- 18.** ABC is a triangle formed by the lines $xy = 0$ and $x + y = 1$. Consider the following statements
 I. Orthocentre of ΔABC is at the origin.
 II. Circumcentre of ΔABC is at the point $(1/2, 1/2)$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) None of these

- 19.** If $(a \cos \theta_1, a \sin \theta_1), (a \cos \theta_2, a \sin \theta_2)$ and $(a \cos \theta_3, a \sin \theta_3)$ represents the vertices of an equilateral triangle inscribed in a circle, then consider the following statements.
 I. $\cos \theta_1 + \cos \theta_2 + \cos \theta_3 = 0$
 II. $\sin \theta_1 + \sin \theta_2 + \sin \theta_3 = 0$
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II
- 20.** Consider the following statements
 I. The area of equilateral triangle is a rational number.
 II. In a triangle, the centroid divides the joint of circumcentre and orthocentre in the ratio 1 : 2.
 III. Circumcentre is the only point which is equidistant from all the three vertex of a triangle.
 Which of the above statement(s) is/are correct?
 (a) I and III are correct (b) I, II and III are correct
 (c) II and III are correct (d) I and II are correct

Directions (Q. Nos. 21-22) *The sides of a rectangle are represented by lines $x = a, x = a', y = b$ and $y = b'$.*

- 21.** The point of intersection of the diagonals of the rectangle is
 (a) $\left(\frac{a + a'}{2}, \frac{b + b'}{2}\right)$ (b) $\left(\frac{a + b}{2}, \frac{a' + b'}{2}\right)$
 (c) $\left(\frac{a + a'}{2}, \frac{a' + b}{2}\right)$ (d) None of these
- 22.** Area of the rectangle is
 (a) $|a - b| |a' - b'|$ (b) $|b' - b| |a' - a|$
 (c) $|a - b'| |a' - b|$ (d) None of these

Directions (Q. Nos. 23-24) *Let $ABCD$ be a parallelogram whose equations for the consecutive sides AB and AD are $4x + 5y = 0$ and $7x + 2y = 0$. The equation of one of the diagonal is $11x + 7y = 9$.*

- 23.** The equation of the other diagonal is
 (a) $x + y = 0$ (b) $x - y = 0$
 (c) $2x + y = 0$ (d) $x - 3y = 0$
- 24.** Area of parallelogram $ABCD$ is
 (a) 8 sq units (b) $\frac{7}{2}$ sq units (c) 3 sq units (d) 6 sq units

Directions (Q. Nos. 25-26) *Consider the line segment $L : x \sec \theta + y \tan \theta = p$.*

- 25.** The locus of mid-point of the portion of the line L intercepted between the axes is
 (a) $\frac{p^2}{4x^2} - \frac{p^2}{4y^2} = 1$ (b) $\frac{p^2}{4x^2} + \frac{p^2}{4y^2} = 1$
 (c) $\frac{p^2}{2x^2} - \frac{p^2}{2y^2} = 1$ (d) None of these

- 26.** The equation of line perpendicular to line L and passing through $(p \cot \theta, 2p \cos^3 \theta)$ is
 (a) $x \tan \theta - y \sec \theta + p \cos 2\theta = 0$
 (b) $x \tan \theta - y \sec \theta - p \cos 2\theta = 0$
 (c) $x \tan \theta + y \sec \theta + p \sin 2\theta = 0$
 (d) None of the above

Directions (Q. Nos. 27-28) The equation of an altitude of an equilateral triangle is $\sqrt{3}x + y = 2\sqrt{3}$ and one of the vertices is $(3, \sqrt{3})$.

- 27.** The possible number of triangles is
 (a) 1 (b) 2 (c) 3 (d) 4
- 28.** The area of equilateral triangle is (in sq units)
 (a) $3\sqrt{3}$ (b) $\sqrt{3}$
 (c) $6\sqrt{3}$ (d) $2\sqrt{3}$

Directions (Q. Nos. 29-31) The lines $L_1: 4x - 3y + 7 = 0$ and $L_2: 3x - 4y + 14 = 0$, intersect the line $L_3: x + y = 0$ at P and Q , respectively. The bisectors of the acute angle between L_1 and L_2 intersect L_3 at R .

- 29.** The equation of the bisector of acute angle is
 (a) $x + y + 3 = 0$ (b) $x - y - 3 = 0$
 (c) $x - y + 3 = 0$ (d) $3x - y - 7 = 3$
- 30.** The ratio $PR:RQ$ equals to

- 73.** Consider the following points
 I. (0, 5) II. (2, -1) III. (3, -4)
 Which of the above lie on the line $3x + y = 5$ and at a distance $\sqrt{10}$ from (1, 2)? **☑ 2014 I**
 (a) Only I (b) Only II (c) I and II (d) I, II and III
- 74.** Which one of the following is correct in respect of the equations $\frac{x-1}{2} = \frac{y-2}{3}$ and $2x + 3y = 5$? **☑ 2014 II**
 (a) They represent two lines which are parallel
 (b) They represent two lines which are perpendicular
 (c) They represent two lines which are neither parallel nor perpendicular
 (d) The first equation does not represent a line
- 75.** $A(3, 4)$ and $B(5, -2)$ are two points and P is a point such that $PA = PB$. If the area of ΔPAB is 10 sq units, then what are the coordinates of P ? **☑ 2014 II**
 (a) Only (1, 0) (b) Only (7, 2)
 (c) Either (1, 0) or (7, 2) (d) Neither (1, 0) nor (7, 2)
- 76.** What is the product of the perpendiculars drawn from the points $(\pm\sqrt{a^2 - b^2}, 0)$ upon the line $bx \cos \alpha + ay \sin \alpha = ab$? **☑ 2014 II**
 (a) a^2 (b) b^2 (c) $a^2 + b^2$ (d) $a + b$
- Directions** (Q. Nos. 77-79) Consider the ΔABC with vertices $A(-2, 3)$, $B(2, 1)$ and $C(1, 2)$. **☑ 2015 I**
- 77.** What is the circumcentre of the $\angle ABC$?
 (a) $(-2, -2)$ (b) $(2, 2)$ (c) $(-2, 2)$ (d) $(2, -2)$
- 78.** What is the centroid of the ΔABC ?
 (a) $(\frac{1}{3}, 1)$ (b) $(\frac{1}{3}, 2)$ (c) $(1, \frac{2}{3})$ (d) $(\frac{1}{2}, 3)$
- 79.** What is the foot of the altitude from the vertex A of ΔABC ?
 (a) (1, 4) (b) (-1, 3) (c) (-2, 4) (d) (-1, 4)
- 80.** The perpendicular distance between the straight lines $6x + 8y + 15 = 0$ and $3x + 4y + 9 = 0$ is **☑ 2015 I**
 (a) $3/2$ units (b) $3/10$ unit (c) $3/4$ unit (d) $2/7$ unit
- 81.** A line passes through (2, 2) and is perpendicular to the line $3x + y = 3$, its y -intercept is **☑ 2015 I**
 (a) $\frac{3}{4}$ (b) $\frac{4}{3}$ (c) $\frac{1}{3}$ (d) 3
- 82.** The area of a triangle, whose vertices are (3, 4), (5, 2) and the point of intersection of the lines $x = a$ and $y = 5$, is 3 square units. What is the value of a ? **☑ 2015 I**
 (a) 2 (b) 3 (c) 4 (d) 5
- 83.** The length of perpendicular from the origin to a line is 5 units and the line makes an angle 120° with the positive direction of X -axis. The equation of the line is **☑ 2015 I**
 (a) $x + \sqrt{3}y = 5$ (b) $\sqrt{3}x + y = 10$
 (c) $\sqrt{3}x - y = 10$ (d) None of these
- 84.** The equation of the line joining the origin to the point of intersection of the lines $\frac{x}{a} + \frac{y}{b} = 1$ and $\frac{x}{b} + \frac{y}{a} = 1$ is **☑ 2015 I**
 (a) $x - y = 0$ (b) $x + y = 0$ (c) $x = 0$ (d) $y = 0$
- 85.** If a line is perpendicular to the line $5x - y = 0$ and forms a triangle of area 5 sq units with coordinate axes, then its equation is **☑ 2015 II**
 (a) $x + 5y \mp 5\sqrt{2} = 0$ (b) $x - 5y \pm 5\sqrt{2} = 0$
 (c) $5x + y \pm 5\sqrt{2} = 0$ (d) $5x - y \pm 5\sqrt{2} = 0$
- 86.** The area of the figure formed by the lines $ax + by + c = 0$, $ax - by + c = 0$, $ax + by - c = 0$ and $ax - by - c = 0$ is **☑ 2015 II**
 (a) $\frac{c^2}{ab}$ (b) $\frac{2c^2}{ab}$ (c) $\frac{c^2}{2ab}$ (d) $\frac{c^2}{4ab}$
- 87.** The three lines $4x + 4y = 1$, $8x - 3y = 2$, $y = 0$ are **☑ 2015 II**
 (a) the sides of an isosceles triangle
 (b) concurrent
 (c) mutually perpendicular
 (d) the sides of an equilateral triangle
- 88.** The line $3x + 4y - 24 = 0$ intersects the X -axis at A and Y -axis at B . Then, the circumcentre of the ΔOAB , where O is the origin, is **☑ 2015 II**
 (a) (2, 3) (b) (3, 3)
 (c) (4, 3) (d) None of these
- 89.** The product of the perpendiculars from the two points $(\pm 4, 0)$ to the line $3x \cos \phi + 5y \sin \phi = 15$ is **☑ 2015 II**
 (a) 25 (b) 16 (c) 9 (d) 8
- 90.** Two straight lines passing through the point $A(3, 2)$ cut the line $2y = x + 3$ and X -axis perpendicularly at P and Q , respectively. The equation of the line PQ is **☑ 2015 II**
 (a) $7x + y - 21 = 0$ (b) $x + 7y + 21 = 0$
 (c) $2x + y - 8 = 0$ (d) $x + 2y + 8 = 0$

Directions (Q. Nos. 91-92) Consider the lines $y = 3x$, $y = 6x$ and $y = 9$. ☑ 2016 I

- 91.** What is the area of the triangle formed by these lines?
 (a) $\frac{27}{4}$ sq units (b) $\frac{27}{2}$ sq units
 (c) $\frac{19}{4}$ sq units (d) $\frac{19}{2}$ sq units

- 92.** The centroid of the triangle is at which one of the following points?
 (a) (3, 6) (b) $(\frac{3}{2}, 6)$ (c) (3, 3) (d) $(\frac{3}{2}, 9)$

Directions (Q. Nos. 93-95) Consider a parallelogram, whose vertices are $A(1, 2)$, $B(4, y)$, $C(x, 6)$ and $D(3, 5)$ taken in order. ☑ 2016 I

- 93.** What is the value of $AC^2 - BD^2$?
 (a) 25 (b) 30 (c) 36 (d) 40
- 94.** What is the point of intersection of the diagonals?
 (a) $(\frac{7}{2}, 4)$ (b) (3, 4) (c) $(\frac{7}{2}, 5)$ (d) (3, 5)
- 95.** What is the area of the parallelogram?
 (a) $\frac{7}{2}$ sq units (b) 4 sq units
 (c) $\frac{11}{2}$ sq units (d) 7 sq units

- 96.** A straight line intersects X and Y -axes at P and Q , respectively. If (3, 5) is the middle point of PQ , then what is the area of the ΔOPQ ?
 (a) 12 sq units (b) 15 sq units ☑ 2016 I
 (c) 20 sq units (d) 30 sq units

Directions (Q. Nos. 97-98) Consider the two lines $x + y + 1 = 0$ and $3x + 2y + 1 = 0$. ☑ 2016 I

- 97.** What is the equation of the line passing through the point of intersection of the given lines and parallel to X -axis?
 (a) $y + 1 = 0$ (b) $y - 1 = 0$
 (c) $y - 2 = 0$ (d) $y + 2 = 0$
- 98.** What is the equation of the line passing through the point of intersection of the given lines and parallel to Y -axis?
 (a) $x + 1 = 0$ (b) $x - 1 = 0$ (c) $x - 2 = 0$ (d) $x + 2 = 0$
- 99.** $(a, 2b)$ is the mid-point of the line segment joining the points (10, -6) and $(k, 4)$. If $a - 2b = 7$, then what is the value of k ? ☑ 2016 I
 (a) 2 (b) 3 (c) 4 (d) 5
- 100.** What is the acute angle between the lines represented by the equations $y - \sqrt{3}x - 5 = 0$ and $\sqrt{3}y - x + 6 = 0$? ☑ 2016 I
 (a) 30° (b) 45° (c) 60° (d) 75°

> ANSWERS

> HINTS AND SOLUTIONS

- 1.** (a) Centroid of ΔABC coincide with the centroid of triangle formed by mid-points of AB , BC and CA .

\therefore Required coordinates

$$\equiv \left(\frac{4+3+2}{3}, \frac{2+3+2}{3} \right) \equiv (3, 7/3)$$

- 2.** (d) $a = BC = \sqrt{0^2 + (12-0)^2} = 12$

$$b = AC = \sqrt{(0-8)^2 + (6-0)^2} = 10$$

$$c = AB = \sqrt{8^2 + 6^2} = 10$$

Incentre is

$$\left(\frac{ax_1 + bx_2 + cx_3}{a+b+c}, \frac{ay_1 + by_2 + cy_3}{a+b+c} \right)$$

$$\text{i.e. } \left(\frac{12 \times 0 + 10 \times 8 + 10 \times 8}{12 + 10 + 10}, \frac{12 \times 6 + 10 \times 12 + 10 \times 0}{12 + 10 + 10} \right)$$

$$= \left(\frac{160}{32}, \frac{192}{32} \right) = (5, 6)$$

- 3.** (c) Mid-point of (p, q) and $(q, -p)$ is $\left(\frac{p+q}{2}, \frac{q-p}{2} \right)$, which is given $\left(\frac{r}{2}, \frac{s}{2} \right)$.

$$\therefore \frac{p+q}{2} = \frac{r}{2}$$

$$\text{and } \frac{q-p}{2} = \frac{s}{2}$$

Now, length of segment

$$= \sqrt{(p-q)^2 + (q+p)^2} = \sqrt{s^2 + r^2}$$

4. (c) $\Delta = \frac{1}{2} \begin{vmatrix} a & 0 & 1 \\ at_1^2 & 2at_1 & 1 \\ at_2^2 & 2at_2 & 1 \end{vmatrix}$
 $= \frac{1}{2} \times (2a) \times a \times \begin{vmatrix} 1 & 0 & 1 \\ t_1^2 & t_1 & 1 \\ t_2^2 & t_2 & 1 \end{vmatrix}$
 $\therefore \Delta = 0 \Rightarrow (t_1 - t_2) + (t_1^2 t_2 - t_2^2 t_1) = 0$
 $\Rightarrow (t_1 - t_2) + t_1 t_2 (t_1 - t_2) = 0$
 $\Rightarrow (t_1 - t_2)(1 + t_1 t_2) = 0$
 $\Rightarrow t_1 t_2 = -1$
5. (b) Area of quadrilateral $ABCD$
 $= \frac{1}{2} \begin{vmatrix} x_1 - x_3 & y_1 - y_3 \\ x_2 - x_4 & y_2 - y_4 \end{vmatrix}$
 $= \frac{1}{2} \begin{vmatrix} (1-12) & (1-2) \\ (7-7) & (-3-21) \end{vmatrix}$
 $= \frac{1}{2} \begin{vmatrix} -11 & -1 \\ 0 & -24 \end{vmatrix} = \frac{1}{2} (264 - 0)$
 $= 132$ sq units
6. (d) Given lines are $4x + 3y = 11$
and $4x + 3y = 15/2$.
Distance between them
 $= \left| \frac{11 - \frac{15}{2}}{\sqrt{16+9}} \right| = \left| \frac{7}{2 \times 5} \right| = \frac{7}{10}$
7. (d) Equation of line parallel to
 $2x + 3y + 5 = 0$ is $2x + 3y = \lambda$
 $\Rightarrow \frac{x}{(\lambda/2)} + \frac{y}{(\lambda/3)} = 1$
Given, $\frac{\lambda}{2} + \frac{\lambda}{3} = 15 \Rightarrow \lambda = 18$
 \therefore Required line is $2x + 3y = 18$
8. (b) Let required ratio be $\lambda : 1$. Then, the
coordinates of point which divides the
line joining $(-1, 1)$ and $(5, 7)$ in the ratio
 $\lambda : 1$, is $\left(\frac{5\lambda - 1}{\lambda + 1}, \frac{7\lambda + 1}{\lambda + 1} \right)$.
But it lies on $x + y = 4$
 $\therefore \frac{5\lambda - 1}{\lambda + 1} + \frac{7\lambda + 1}{\lambda + 1} = 4$
 $\Rightarrow 12\lambda = 4\lambda + 4 \Rightarrow \lambda = 1/2$
 \therefore Required ratio = $1 : 2$
9. (d) Equation of perpendicular line from
 $3x - 4y - 5 = 0$... (i)
is $4x + 3y + c = 0$
Since it passes through $(0, 5)$.
 $\therefore c = -15$... (ii)
 $\Rightarrow 4x + 3y - 15 = 0$... (ii)
On solving Eqs. (i) and (ii), we get $(3, 1)$

10. (b) Since, the point (b, k) lies on
 $x + y + 1 = 0 \Rightarrow b + k + 1 = 0$
and $b^2 + k^2 = 25$
 $(-1-k)^2 + k^2 = 25$
 $\Rightarrow 2k^2 + 2k - 24 = 0$
 $\Rightarrow k^2 + k - 12 = 0$
 $\Rightarrow k = -4$ or $k = 3$ [rejected as $k < 0$]
 $\therefore b = -1 - (-4) = 3$
11. (a) Let the third vertex be (p, q) , then
 $q = p + 3$... (i)
Also, $\Delta = |5| = \pm 5$
 $\therefore q + 3p - 7 = \pm 10$
 $\therefore 3p + q = 17$... (ii)
and $3p + q = -3$... (iii)
On solving Eq. (i) with Eq. (ii) and Eq.
(iii), we get $\left(\frac{7}{2}, \frac{13}{2} \right)$ and $\left(-\frac{3}{2}, \frac{3}{2} \right)$
 \therefore Required vertex = $\left(\frac{7}{2}, \frac{13}{2} \right)$
12. (d) Slope of line $x + 3y = 4$ is $m_1 = -1/3$
Slope of line $6x - 2y = 7$ is $m_2 = \frac{-6}{-2} = 3$
 $\therefore m_1 m_2 = -1$
 \therefore The given diagonals are perpendicular
to each other.
Thus, $ABCD$ is a rhombus.
13. (c) Required line should be
 $(3x - y + 2) + \lambda(5x - 2y + 7) = 0$... (i)
 $\Rightarrow (3 + 5\lambda)x - (2\lambda + 1)y + (2 + 7\lambda) = 0$
 $\Rightarrow y = \frac{3 + 5\lambda}{2\lambda + 1}x + \frac{2 + 7\lambda}{2\lambda + 1}$... (ii)
As, the Eq. (ii) has infinite slope,
 $2\lambda + 1 = 0 \Rightarrow \lambda = -1/2$
On putting the value of λ in Eq. (i),
we get $x = 3$
14. (c) Let $A(a, 0)$ and $B(0, b)$ be two
points on respective coordinate axes and
 $(-5, 4)$ divides AB in the ratio $1 : 2$.
 $\therefore -5 = \frac{1 \times 0 + 2 \times a}{3} \Rightarrow a = \frac{-15}{2}$
and $4 = \frac{1 \times b + 2 \times 0}{3} \Rightarrow b = 12$
Hence, equation of line joining
 $\left(-\frac{15}{2}, 0 \right)$ and $(0, 12)$ is
 $(y - 0) = \frac{12 - 0}{0 + \frac{15}{2}} \cdot \left(x + \frac{15}{2} \right)$
 $\Rightarrow 8x - 5y + 60 = 0$
15. (c) Let the coordinate of the moving
point P be (b, k) .
Then, $[b - (m + n)]^2 + [k - (n - m)]^2$
 $= [b - (m - n)]^2 + [k - (n + m)]^2$

- $$\begin{aligned} &\Rightarrow b^2 + (m + n)^2 - 2b(m + n) + k^2 \\ &+ (n - m)^2 - 2k(n - m) = b^2 + (m - n)^2 \\ &- 2b(m - n) + k^2 + (n + m)^2 - 2k(m + n) \\ &\Rightarrow -2[b(m + n) + k(n - m)] \\ &= -2[b(m - n) + k(m + n)] \\ &\Rightarrow mb + nb + nk - mk \\ &= mb - nb + mk + nk \\ &\Rightarrow 2nb = 2mk \Rightarrow nb = mk \\ &\therefore \text{Required locus is } nx = my \end{aligned}$$
16. (b) Since, slope of line
 $x \cos \theta + y \sin \theta = 2$ is $-\cot \theta$
and slope of line $x - y = 3$ is 1 .
Also, these lines are perpendicular to
each other.
 $\therefore (-\cot \theta)(1) = -1$
 $\Rightarrow \cot \theta = 1 = \cot \frac{\pi}{4} \Rightarrow \theta = \frac{\pi}{4}$
17. (b)
18. (c) The equations of the sides of $\triangle ABC$
are $x = 0$, $y = 0$ and $x + y = 1$. Clearly,
 $\triangle ABC$ is right angled triangle with right
angle at the origin and coordinates the
end-points of hypotenuse as $(1, 0)$ and
 $(0, 1)$. So, orthocentre of the triangle
is at the origin and circumcentre at
the mid-point of its hypotenuse, i.e. at
 $(1/2, 1/2)$.
So, both statements are correct.
19. (c) Vertices
 $(a \cos \theta_1, a \sin \theta_1)$, $(a \cos \theta_2, a \sin \theta_2)$
and $(a \cos \theta_3, a \sin \theta_3)$ are equidistant
from origin $(0, 0)$. Hence, the origin is
circumcentre (centroid) of circumcircle.
Therefore, the coordinates of centroid
are
 $\left(\frac{a(\cos \theta_1 + \cos \theta_2 + \cos \theta_3)}{3}, \frac{a(\sin \theta_1 + \sin \theta_2 + \sin \theta_3)}{3} \right)$
- But as the centroid is the origin $(0, 0)$,
therefore $\cos \theta_1 + \cos \theta_2 + \cos \theta_3 = 0$
and $\sin \theta_1 + \sin \theta_2 + \sin \theta_3 = 0$.
Hence, both statements are correct.
20. (c) Area of equilateral triangle is
 $\frac{\sqrt{3}}{4} (\text{side})^2$ which is an irrational
number. So, Statement I is false.
In a triangle, the circumcentre (S),
centroid (G), and orthocentre (O) are
collinear and
 $SG : GO = 1 : 2$ or $OG : GS = 2 : 1$
So, Statement II is true.
In a triangle, circumcentre is the only
point which is equidistant from all the
three vertex of the triangle.
So, Statement III is true.

21. (a) Let $ABCD$ be the rectangle the equation of whose sides AB, BC, CD and DA , respectively are $x = a, y = b, x = a'$ and $y = b'$

Then, its vertices are $A(a, b'), B(a, b), C(a', b)$ and $D(a', b')$. Since, diagonals of rectangle bisect each other. Therefore, coordinates of point of intersection are $x = \frac{a+a'}{2}$ and $y = \frac{b+b'}{2}$

22. (b) $AB = \sqrt{(a-a')^2 + (b'-b)^2} = |b' - b|$
 and $BC = \sqrt{(a-a')^2 + (b-b')^2} = |a' - a|$
 \therefore Area of rectangle $ABCD = AB \times BC = |b' - b| |a' - a|$

23. (b) Equations for sides AB and AD are
 $4x + 5y = 0$... (i)
 and $7x + 2y = 0$... (ii)
 The point of intersection of AB and AD is $A(0, 0)$, clearly $A(0, 0)$ does not lie on diagonal
 $11x + 7y = 9$... (iii)

On solving Eqs. (i) and (iii), we get

$$B \equiv \left(\frac{5}{3}, \frac{-4}{3}\right)$$

On solving Eqs. (ii) and (iii), we get

$$D \equiv \left(-\frac{2}{3}, \frac{7}{3}\right)$$

Since, H is the middle point of BD .

$$\therefore H = \left(\frac{\frac{5}{3} - \frac{2}{3}}{2}, \frac{-\frac{4}{3} + \frac{7}{3}}{2}\right) = \left(\frac{1}{2}, \frac{1}{2}\right)$$

Equation of diagonal AC is

$$y - 0 = \frac{0 - \frac{1}{2}}{\frac{3}{3} - \frac{1}{2}}(x - 0) \Rightarrow x - y = 0$$

24. (c) Area of $\triangle ABD = \frac{1}{2} \begin{vmatrix} 0 & 0 & 1 \\ \frac{5}{3} & -\frac{4}{3} & 1 \\ -\frac{2}{3} & \frac{7}{3} & 1 \end{vmatrix}$

$$= \frac{1}{2} \left[\frac{35}{9} - \frac{8}{9} \right] = \frac{3}{2} \text{ sq units}$$

$$\therefore \text{Area of } \parallel\text{gm } ABCD = 2 \times \text{ar}(\triangle ABD) = 2 \times \frac{3}{2} = 3 \text{ sq units}$$

25. (a) The equation of the given line is $\frac{x}{p \cos \theta} + \frac{y}{p \cot \theta} = 1$... (i)

Let the line (i) cuts X -axis and Y -axis at the points A and B respectively, then $A \equiv (p \cos \theta, 0)$ and $B \equiv (0, p \cot \theta)$
 If $P(x, y)$ is the mid-point of AB , then $2x = p \cos \theta$ and $2y = p \cot \theta$
 $\therefore \sec \theta = \frac{p}{2x}$ and $\tan \theta = \frac{p}{2y}$

Since $\sec^2 \theta - \tan^2 \theta = 1$
 $\Rightarrow \frac{p^2}{4x^2} - \frac{p^2}{4y^2} = 1$

26. (a) Equation of line perpendicular to line L is $x \tan \theta - y \sec \theta + k = 0$
 Since, this line passes through

$$(p \cot \theta, 2p \cos^3 \theta)$$

$$\therefore p \cot \theta \cdot \tan \theta - 2p \cos^3 \theta \cdot \sec \theta + k = 0$$

$$\Rightarrow p - 2p \cos^2 \theta + k = 0$$

$$\Rightarrow k = p(2 \cos^2 \theta - 1) = p \cos 2\theta$$

\therefore Required equation is

$$x \tan \theta - y \sec \theta + p \cos 2\theta = 0$$

27. (b)

Two equilateral triangles ABC and $A'BC$ are possible with one vertices $(3, \sqrt{3})$ and AD as an altitude.

28. (a)
 29. (c) The equations of lines L_1 and L_2 by making constant term positive, are
 $4x - 3y + 7 = 0$... (i)
 and $3x - 4y + 14 = 0$... (ii)

$\therefore 4 \times 3 + (-3)(-4) = 24 + 0$
 i.e. $a_1 a_2 + b_1 b_2 > 0$
 So, the bisector of the acute angle is given by

$$\frac{4x - 3y + 7}{\sqrt{4^2 + (-3)^2}} = \frac{3x - 4y + 14}{\sqrt{3^2 + (-4)^2}}$$

$$\Rightarrow 4x - 3y + 7 = -3x + 4y - 14$$

$$\Rightarrow x - y + 3 = 0$$

30. (c) Let O be the points of intersection of lines L_1 and L_2 .

Solving Eqs. (i) and (ii), we get $O \equiv (2, 5)$

Equation of L_3 is $x + y = 0$... (iii)

Solving Eqs. (i) and (iii), we get $P \equiv (-1, 1)$

Solving Eqs. (ii) and (iii), we get $Q \equiv (-2, 2)$

$$\therefore OP = \sqrt{(2+1)^2 + (5-1)^2} = 5$$

$$\text{and } OQ = \sqrt{(2+2)^2 + (5-2)^2} = 5$$

\therefore In any triangle, bisector of an angle divides the triangle into two similar triangles.

$$\therefore \frac{PR}{RQ} = \frac{OP}{OQ} = \frac{5}{5} = 1 = 1:1$$

31. (b) Area of $\triangle OPQ = \frac{1}{2} \begin{vmatrix} 2 & 5 & 1 \\ -1 & 1 & 1 \\ -2 & 2 & 1 \end{vmatrix}$
 $= \frac{1}{2} [-2 - 5 + 0] = \frac{7}{2}$ sq units

32. (b) Area of the $\triangle AMB = \frac{1}{2} \begin{vmatrix} x & x & 1 \\ -2 & 0 & 1 \\ 0 & 4 & 1 \end{vmatrix}$
 $= \left| \frac{1}{2} (-4x + 2x - 8) \right| = |-(x + 4)|$

which is minimum for $x = 0$ and thus the coordinates of M are $(0, 0)$.

33. (a) As P divides AB in the ratio $2 : 1$. The base of the Δ 's APM and BPM are in the ratio $2 : 1$ and the length of the perpendicular from the vertex M on the base is same. So, the ratio of the areas of the $\triangle APM$ and $\triangle BPM$ is also $2 : 1$.

34. (b) $ABCD$ is a quadrilateral with $AD = 1, BC = 2$

$$DC = \frac{1}{2} AB = \frac{1}{2} \sqrt{2^2 + 4^2} = \sqrt{5}$$

So, the required perimeter is $1 + 2 + \sqrt{5} + 2\sqrt{5} = 3 + 3\sqrt{5}$

Sol. (Q. Nos. 35-38)

We have, $O(0, 0), A(1, 1)$ and $B(0, 3)$

$$\text{Coordinates of } P = \left(\frac{0}{3}, \frac{3}{3}\right) = (0, 1)$$

$$\text{Coordinates of } Q = \left(\frac{1+0}{2}, \frac{1+1}{2}\right) = \left(\frac{1}{2}, 1\right)$$

Coordinates of R

$$= \left(\frac{0+1}{3}, \frac{6+1}{3} \right) = \left(\frac{1}{3}, \frac{7}{3} \right)$$

35. (a) $(PR)^2 = \left(0 - \frac{1}{3} \right)^2 + \left(1 - \frac{7}{3} \right)^2$
 $= \frac{1}{9} + \frac{16}{9} = \frac{17}{9}$

$$(QR)^2 = \left(\frac{1}{2} - \frac{1}{3} \right)^2 + \left(1 - \frac{7}{3} \right)^2$$

$$= \frac{1}{36} + \frac{16}{9} = \frac{65}{36}$$

Now, $\alpha(QR)^2 = \beta(PR)^2$

$$\Rightarrow \alpha \left(\frac{65}{36} \right) = \beta \left(\frac{17}{9} \right) \Rightarrow \frac{\alpha}{\beta} = \frac{68}{65}$$

36. (b) Area of ΔOAB

$$= \frac{1}{2} \times 1 \times 3 = \frac{3}{2} \text{ sq units}$$

$$\text{Area of } \Delta PQR = \frac{1}{2} \begin{vmatrix} 0 & 1 & 1 \\ \frac{1}{2} & \frac{1}{2} & 1 \\ \frac{1}{3} & \frac{7}{3} & 1 \end{vmatrix}$$

$$= \frac{1}{2} \left[-1 \left(\frac{1}{2} - \frac{1}{3} \right) + 1 \left(\frac{7}{6} - \frac{1}{3} \right) \right]$$

$$= \frac{1}{3} \text{ sq units}$$

$$\therefore \frac{\text{ar}(\Delta PQR)}{\text{ar}(\Delta OAB)} = \frac{\frac{1}{3}}{\frac{3}{2}} = \frac{2}{9}$$

37. (c) Coordinates of S

$$= \left(\frac{0 + \frac{1}{2}}{2}, \frac{1 + \frac{7}{3}}{2} \right) = \left(\frac{1}{4}, \frac{10}{6} \right)$$

$$\therefore QS = \sqrt{\left(\frac{1}{2} - \frac{1}{4} \right)^2 + \left(1 - \frac{10}{6} \right)^2}$$

$$= \frac{\sqrt{5}}{3}$$

$$OQ = \sqrt{\left(0 - \frac{1}{2} \right)^2 + (0 - 1)^2}$$

$$= \frac{\sqrt{5}}{2}$$

Clearly, $QS = \frac{2}{3} OQ$

38. (c) Centroid of ΔPQR

$$= \left(\frac{0 + \frac{1}{2} + \frac{1}{3}}{3}, \frac{1 + 1 + \frac{7}{3}}{3} \right) = \left(\frac{5}{18}, \frac{13}{9} \right)$$

So, Statement I is true.

$$\therefore OP = 1, AP = 1 \text{ and } OA = \sqrt{2}$$

$$\therefore OP^2 + AP^2 = OA^2$$

$\therefore OAP$ is right angled triangle.

So, Statement II is also true.

39. (a) $(a + 2b)x \times (a - 3b)y + a - 8b = 0$
 $\Rightarrow a(x + y + 1) + b(2x - 3y - 8) = 0$

These lines are concurrent at point of intersection of the lines $x + y + 1 = 0$ and $2x - 3y - 8 = 0$, which is $(1, -2)$.

Now, line through $A(1, -2)$ which is farthest from the point $B(2, 2)$ is perpendicular to AB .

$$\text{Slope of } AB = \frac{2 + 2}{2 - 1} = 4$$

\therefore Required equation of line is

$$y + 2 = \frac{-1}{4}(x - 1) \Rightarrow x + 4y + 7 = 0$$

40. (c) Also this line $x + 4y + 7 = 0$ meet X -axis at $C(-7, 0)$ and Y -axis at

$$D\left(0, -\frac{7}{4}\right).$$

\therefore Area of ΔOCD

$$= \frac{1}{2} \begin{vmatrix} 0 & 0 & 1 \\ -7 & 0 & 1 \\ 0 & -\frac{7}{4} & 1 \end{vmatrix} = \frac{1}{2} \times \frac{49}{4} = \frac{49}{8}$$

41. (d) The point of intersection of lines $x + 4y + 7 = 0$ and $x - 2y + 1 = 0$ is $(-3, -1)$ which must satisfy the line $3x - 4 + \lambda = 0$.

$$\therefore -9 + 4 + \lambda = 0 \Rightarrow \lambda = 5$$

42. (b) Let $P(x, y)$ be the image of $(2, 2)$ with respect to the line $x + 4y + 7 = 0$

\therefore Point $(1, -2)$ is the mid-point of

$(2, 2)$ and (x, y)

$$\therefore \frac{x+2}{2} = 1 \text{ and } \frac{y+2}{2} = -2$$

$$\Rightarrow x = 0 \text{ and } y = -6$$

Hence, $P(0, -6)$

43. (b) Length of perpendicular

$$= \left| \frac{2 \times 1 + 4 \times 2 + 7}{\sqrt{1^2 + 4^2}} \right| = \sqrt{17} \text{ units}$$

44. (a) Since, both lines are coincident to each other. Hence, the distance between two coincident line is zero.

45. (a) Since, the line passes through the point $(0, 1)$ and making an angle with Y -axis which is equivalent to the slope of the line $y = x - 4$.

$$\text{i.e. } \theta = 45^\circ \Rightarrow \tan \theta = 1 = m$$

\therefore Equation of line is

$$(y - 1) = m(x - 0) = 1(x) \Rightarrow y = x + 1$$

46. (d)

47. (a) We know that, if the line making an angle θ with the positive direction of X -axis with y intercept.

Then, equation of the line is

$$y = mx + c = \tan \theta \cdot x + c$$

$$\therefore \theta = 45^\circ \text{ and } c = 101 \text{ unit}$$

$$\therefore y = \tan 45^\circ x + 101$$

$$\Rightarrow y = 1 \cdot x + 101 \Rightarrow x - y + 101 = 0$$

48. (c) Let the line $y = 0$ divides the line joining the points $(3, -5)$ and $(-4, 7)$ in the ratio $n : m$, then

By internal section formula,

$$\frac{-5m + 7n}{m + n} = 0 \Rightarrow 5m = 7n$$

$$\Rightarrow \frac{n}{m} = \frac{5}{7} \text{ or } n : m = 5 : 7$$

49. (a) Given,

$$(2x + 3y + 4) + \lambda(6x - y + 12) = 0$$

$$2x + 6\lambda x + 3y - \lambda y + 4 + 12\lambda = 0$$

$$2x(3\lambda + 1) + y(3 - \lambda) + 4 + 12\lambda = 0$$

...(i)

Since, line (i) is parallel to Y -axis.

So, the coefficient of y must be zero.

$$\therefore 3 - \lambda = 0 \Rightarrow \lambda = 3$$

50. (c) 51. (b)

52. (d) Given lines are,

$$3x + 4y - 9 = 0 \quad \dots(i)$$

$$\text{and } 9x + 12y + 28 = 0$$

$$\Rightarrow 3x + 4y + \frac{28}{3} = 0 \quad \dots(ii)$$

$$\therefore \text{Distance between them} = \left| \frac{\frac{28}{3} + 9}{\sqrt{9 + 16}} \right|$$

$$= \left| \frac{55}{3} \times \frac{1}{5} \right| = \frac{11}{3} \text{ units}$$

53. (a) Let the points be $A(5, 1)$, $B(1, -1)$ and $C(11, 4)$.

$$AB = \sqrt{(5-1)^2 + (1+1)^2} = 2\sqrt{5}$$

$$BC = \sqrt{(11-1)^2 + (4+1)^2} = 5\sqrt{5}$$

$$\text{and } CA = \sqrt{(11-5)^2 + (4-1)^2} = 3\sqrt{5}$$

Clearly, $AB + CA = BC$

Hence, they are collinear.

54. (a) Let $A(1, 0)$ and $B(0, -2)$ are two given points and $P(b, k)$ be any variable point.

According to the question,

$$PA = PB \Rightarrow PA^2 = PB^2$$

$$\Rightarrow (b-1)^2 + (k-0)^2 = (b-0)^2 + (k+2)^2$$

$$\Rightarrow 2b + 4k + 3 = 0$$

Hence, locus of point $P(b, k)$ is $2x + 4y + 3 = 0$.

55. (d) 56. (b)

57. (b) Given equation of line,

$$\sqrt{3}x - y - 1 = 0 \Rightarrow y = \sqrt{3}x - 1$$

On comparing with $y = mx + c$, we get

$$m = \sqrt{3} \quad [\because m = \tan \theta]$$

$$\Rightarrow \tan \theta = \sqrt{3} = \tan 60^\circ \Rightarrow \theta = 60^\circ$$

So, the inclination of the given line is 60° .

- 58.** (b) A line which passes through the points (5,0) and (0,3) is
 $\frac{x}{5} + \frac{y}{3} = 1 \Rightarrow 3x + 5y - 15 = 0 \dots(i)$
 Now, length of the perpendicular from the point (4,4) on the line (i) is

$$= \frac{|3(4) + 5(4) - 15|}{\sqrt{(3)^2 + (5)^2}} = \frac{17}{\sqrt{34}} = \sqrt{\frac{17}{2}}$$
- 59.** (a) The equation of line in intercept form is
 $\frac{x}{a} + \frac{y}{b} = 1 \dots(i)$
 Given, $a + b = 14 \dots(ii)$
 Since, the line (i) passes through the point (3, 4), then $\frac{3}{a} + \frac{4}{b} = 1$

$$\Rightarrow \frac{3}{a} + \frac{4}{14-a} = 1$$
 [from Eq. (ii)]

$$\Rightarrow (a-6)(a-7) = 0 \Rightarrow a = 6, 7$$

$$\Rightarrow b = 8, 7$$

 Hence, equations of straight lines are
 $4x + 3y - 24 = 0$ and $x + y = 7$
- 60.** (d)
- 61.** (c) Equation of straight line which passes through the points (5, -2) and (-4, 7) is $(y+2) = \frac{7+2}{-4-5}(x-5)$
 $\therefore x + y = 3$
- 62.** (b) We know that, the equation of straight line in intercept form is
 $\frac{x}{a} + \frac{y}{b} = 1 \dots(i)$
 By given condition, $a = \frac{1}{m}$ and $b = \frac{1}{n}$
 \therefore Required equation of line is
 $\frac{x}{(1/m)} + \frac{y}{(1/n)} = 1 \Rightarrow mx + ny = 1$
- 63.** (c)
- 64.** (a) Let the coordinates of point P is (b, k).
 Now, by given condition,

$$\sqrt{(b-1)^2 + (k-2)^2} = \sqrt{(b+2)^2 + (k-3)^2}$$

$$\Rightarrow 3b - k + 4 = 0$$

 So, the locus of P is $3x - y + 4 = 0$, which represent a straight line.
- 65.** (c) Let $A \equiv (5,2)$ and $B \equiv (-2,3)$
 Slope of $OA (m_1) = \frac{2-0}{5-0} = \frac{2}{5}$
 and slope of $OB (m_2) = \frac{-15-0}{6-0} = \frac{-5}{2}$
 $\therefore m_1 \cdot m_2 = \frac{2}{5} \times \frac{-5}{2} = -1$
 i.e. angle between OA and OB is $\pi/2$.

- 66.** (c) If the lines $2x + 3y + a = 0$ and $5x + ky + a = 0$ are parallel lines, then $\frac{2}{5} = \frac{3}{k} \neq \frac{a}{a} \Rightarrow k = \frac{15}{2} = 7.5$
- 67.** (a) Since, the required line is perpendicular to the line $3x + 4y + 5 = 0$.
 So, the slope of required line is

$$\left[\frac{-1}{(-3/4)} \right] = \frac{4}{3}$$

 Also, required line passing through the point (4, -5). Then, its equation
 $(y + 5) = \frac{4}{3}(x - 4) \Rightarrow 4x - 3y = 31$
- 68.** (d) Perpendicular distance of the line $3x + 4y - 1 = 0$ from the point (1, 1) = Perpendicular distance of the line $4x + 3y + 2k = 0$ from the point (1, 1)

$$\Rightarrow \frac{|3 \times 1 + 4 \times 1 - 1|}{\sqrt{9 + 16}} = \frac{|4 \times 1 + 3 \times 1 + 2k|}{\sqrt{16 + 9}}$$

$$\Rightarrow 6 = 7 + 2k \Rightarrow 2k = -1 \Rightarrow k = -\frac{1}{2}$$
- 69.** (b)
- 70.** (c) Let the required equation be,
 $\frac{x}{a} + \frac{y}{b} = 1 \dots(i)$
 whose intercept on X and Y-axes are a and b, respectively.
- 
- By the given condition,
 $(1, 2) = \left(\frac{a+0}{2}, \frac{0+b}{2} \right) \Rightarrow \frac{a}{2} = 1 \Rightarrow a = 2$
 and $\frac{b}{2} = 2 \Rightarrow b = 4$
 Put the value of a and b in Eq. (i), we get
 $\frac{x}{2} + \frac{y}{4} = 1$

$$\Rightarrow 2x + y = 4$$
- 71.** (a)
- 72.** (d) The given equation of lines are
 $3x - 4y + 12 = 0 \dots(i)$
 and $3x - 4y - 6 = 0 \dots(ii)$
 So, the equation of line mid way between the given lines is

$$3x - 4y + \frac{12 + (-6)}{2} = 0$$

$$\Rightarrow 3x - 4y + 3 = 0$$

- 73.** (c) Let $S \equiv 3x + y - 5 = 0$
 Also, let $A \equiv (0, 5), B \equiv (2, -1)$
 and $C \equiv (3, -4)$
 $S_A = 0 + 5 - 5 = 0$
 $S_B = 6 - 1 - 5 = 0$
 and $S_C = 9 - 4 - 5 = 0$
 Thus, all three points lie on line
 $3x + y - 5 = 0$
 Now, let $D \equiv (1, 2)$
 $AD = \sqrt{(1-0)^2 + (2-5)^2} = \sqrt{10}$
 $BD = \sqrt{(2-1)^2 + (-1-2)^2} = \sqrt{10}$
 and $CD = \sqrt{(1-3)^2 + (2+4)^2} = 2\sqrt{10}$
 Thus, only points A and B at a distance $\sqrt{10}$ from (1, 2). Hence, correct option is (c).
- 74.** (b) Given, equations of lines are
 $\frac{x-1}{2} = \frac{y-2}{3} \dots(i)$
 $\Rightarrow 3x - 2y + 1 = 0 \dots(ii)$
 and $2x + 3y = 5 \dots(iii)$
 \therefore Slope of line (i), $m_1 = \frac{3}{2}$
 and slope of line (ii), $m_2 = -\frac{2}{3}$
 $\therefore m_1 m_2 = -1$
 Hence, two lines are perpendicular to each other.
- 75.** (c) We have, $A(3, 4)$ and $B(5, -2)$
 Let $P(x, y)$
 Given that, $PA = PB$
 $\Rightarrow PA^2 = PB^2$
 $\therefore (x-3)^2 + (y-4)^2 = (x-5)^2 + (y+2)^2$
 $\Rightarrow x - 3y = 1 \dots(i)$
 Area of $\Delta PAB = 10$
 $\therefore \frac{1}{2} \begin{vmatrix} x & y & 1 \\ 3 & 4 & 1 \\ 5 & -2 & 1 \end{vmatrix} = \pm 10$
 $\Rightarrow x(4+2) - y(3-5) + 1(-6-20) = \pm 20$
 $\Rightarrow 6x + 2y - 26 = \pm 20$
 $\Rightarrow 6x + 2y = 46 \dots(ii)$
 or $6x + 2y = 6 \dots(iii)$
 On solving Eqs. (i) and (ii), we get
 $x = 7, y = 2$
 Similarly, solving Eqs. (i) and (iii), we get $x = 1, y = 0$
 Hence, coordinates of P are (7, 2) and (1, 0).
- 76.** (b) We have, equation of line is
 $bx \cos \alpha + ay \sin \alpha - ab = 0$

Perpendicular distance from point $(\sqrt{a^2 - b^2}, 0)$ is d_1

$$= \left| \frac{b \cos \alpha \sqrt{a^2 - b^2} + 0 - ab}{\sqrt{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha}} \right|$$

Similarly, perpendicular distance from point $(-\sqrt{a^2 - b^2}, 0)$ is

$$d_2 = \left| \frac{-b \cos \alpha \sqrt{a^2 - b^2} + 0 - ab}{\sqrt{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha}} \right|$$

Now, $d_1 \times d_2$

$$\begin{aligned} &= \left| \frac{(b \cos \alpha \sqrt{a^2 - b^2} - ab)(b \cos \alpha \sqrt{a^2 - b^2} + ab)}{(\sqrt{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha})(\sqrt{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha})} \right| \\ &= \left| \frac{b^2 \cos^2 \alpha (a^2 - b^2) - a^2 b^2}{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha} \right| \\ &= \left| \frac{a^2 b^2 (\cos^2 \alpha - 1) - b^4 \cos^2 \alpha}{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha} \right| \\ &= \left| \frac{-b^2 [a^2 \sin^2 \alpha + b^2 \cos^2 \alpha]}{b^2 \cos^2 \alpha + a^2 \sin^2 \alpha} \right| \\ &= |-b^2| = b^2 \end{aligned}$$

77. (a) Let $P(x, y)$ is the circumcentre of the ΔABC .

$$\therefore AP^2 = PB^2 \Rightarrow (x+2)^2 + (y-3)^2 = (x-2)^2 + (y-1)^2$$

$$\Rightarrow 2x - y + 2 = 0 \quad \dots(i)$$

$$\text{Also, } AP^2 = PC^2 \Rightarrow (x+2)^2 + (y-3)^2 = (x-1)^2 + (y-2)^2$$

$$\Rightarrow 3x - y + 4 = 0 \quad \dots(ii)$$

On solving Eqs. (i) and (ii), we get $x = -2$ and $y = -2$

Hence, the required circumcentre is $(-2, -2)$.

78. (b) Given, vertices of a triangle are $A(-2, 3)$, $B(2, 1)$ and $C(1, 2)$.

Centroid of the ΔABC

$$= \left(\frac{-2+2+1}{3}, \frac{3+1+2}{3} \right) = \left(\frac{1}{3}, 2 \right)$$

79. (d) Let D be the foot of altitude from A in ΔABC and $D \equiv (x, y)$

Equation of line BC is

$$y - 2 = \frac{2-1}{1-2}(x-1) \Rightarrow x + y - 3 = 0$$

\therefore Coordinates of point is given by

$$\frac{x+2}{1} = \frac{y-3}{1} = \frac{-(-2+3-3)}{1^2+1^2}$$

$$\Rightarrow x+2=1 \text{ and } y-3=1$$

$$\Rightarrow x = -1 \text{ and } y = 4$$

Hence, the required foot of altitude is $(-1, 4)$.

80. (b) We have, $6x + 8y + 15 = 0$ and $6x + 8y + 18 = 0$

\therefore Perpendicular distance between them is $\frac{|18-15|}{\sqrt{36+64}} = \frac{3}{10}$ unit

81. (b) Equation of line perpendicular to the line $3x + y - 3 = 0$ is $x - 3y + k = 0$

Since, it passes through point $(2, 2)$.

$$\therefore 2 - 6 + k = 0 \Rightarrow k = 4$$

\therefore Required equation of the line is

$$\Rightarrow x - 3y + 4 = 0 \Rightarrow \frac{x}{-4} + \frac{y}{4/3} = 1$$

So, y -intercept is $\frac{4}{3}$.

82. (d) We have, $\Delta = 3$ sq units

$$\therefore \left| \begin{vmatrix} 5 & 2 & 1 \\ 1 & 3 & 4 \\ a & 5 & 1 \end{vmatrix} \right| = 3$$

$$\left| \frac{1}{2} [5(4-5) - 2(3-a) + 1(15-4a)] \right| = 3$$

$$\Rightarrow 2 - a = \pm 3 \Rightarrow a = 5 \text{ or } -1$$

$$\therefore a = 5$$

83. (b)

Let the required line intercept X -axis at a .

Slope of the line is

$$m = \tan 120^\circ = -\sqrt{3}$$

$$\text{Also, } \sin 60^\circ = \frac{5}{a} \Rightarrow a = \frac{10}{\sqrt{3}}$$

\therefore Equation of line passing through $(\frac{10}{\sqrt{3}}, 0)$ and having slope $-\sqrt{3}$ is

$$y - 0 = -\sqrt{3} \left(x - \frac{10}{\sqrt{3}} \right)$$

$$\Rightarrow \sqrt{3}x + y = 10$$

84. (a) We have, $\frac{x}{a} + \frac{y}{b} = 1 \quad \dots(i)$

and $\frac{x}{b} + \frac{y}{a} = 1 \quad \dots(ii)$

$$\Rightarrow bx + ay = ab \text{ and } ax + by = ab$$

Equation of line passing through point of intersection of these two lines is

$$(bx + ay - ab) + \lambda(ax + by - ab) = 0$$

Since, it passes through origin $(0, 0)$.

$$\therefore -ab + \lambda(-ab) = 0 \Rightarrow \lambda = -1$$

Hence, required equation of line is

$$(bx + ay - ab) - (ax + by - ab) = 0$$

$$\Rightarrow (b-a)x - (b-a)y = 0$$

$$\therefore x - y = 0$$

85. (a) Equation of the line perpendicular to $5x - y = 0$ is $x + 5y = \lambda$.

Now, area of $\Delta AOB = 5$ sq units

$$\Rightarrow \frac{1}{2} \lambda \times \frac{\lambda}{5} = 5 \Rightarrow \lambda = \pm 5\sqrt{2}$$

\therefore Equation of the lines are $x + 5y = \pm 5\sqrt{2}$

$$\text{i.e. } x + 5y \mp 5\sqrt{2} = 0$$

86. (b) The figure formed by the lines $ax + by + c = 0$, $ax - by + c = 0$, $ax + by - c = 0$ and $ax - by - c = 0$ is shown below

Clearly, $ABCD$ is a rhombus and its area

$$= \frac{1}{2} \times \text{Product of diagonals}$$

$$= \frac{1}{2} \times \frac{2c}{b} \times \frac{2c}{a} = \frac{2c^2}{ab} \text{ sq units}$$

87. (b) Since, the point of intersection of $y = 0$ and $4x + 4y = 1$ is $(\frac{1}{4}, 0)$ and

$(\frac{1}{4}, 0)$ lies on the line $8x - 3y = 2$.

Hence, the given lines are concurrent.

88. (c) Given, $3x + 4y - 24 = 0$

Its x -intercept $A = (8, 0)$

and y -intercept $B = (0, 6)$

Since, AOB is a right angled triangle.

So, the mid-point of hypotenuse is the circumcentre.

Hence, circumcentre

$$= \frac{8+0}{2}, \frac{0+6}{2} = (4, 3)$$

89. (c) Given, $3x \cos \phi + 5y \sin \phi = 15$
Lengths of perpendicular from the point $(\pm 4, 0)$,

$$p_1 = \left| \frac{12 \cos \phi - 15}{\sqrt{9 \cos^2 \phi + 25 \sin^2 \phi}} \right| \dots(i)$$

$$\text{and } p_2 = \left| \frac{-12 \cos \phi - 15}{\sqrt{9 \cos^2 \phi + 25 \sin^2 \phi}} \right| \dots(ii)$$

On multiplying Eqs. (i) and (ii), we get

$$p_1 p_2 = \left| \frac{-(12 \cos \phi - 15)(12 \cos \phi + 15)}{9 \cos^2 \phi + 25 \sin^2 \phi} \right|$$

$$= \left| \frac{144 \cos^2 \phi - 225}{9 + 16 \sin^2 \phi} \right| = 9$$

90. (a) Equation of line passing through $(3, 2)$ and perpendicular to line

$$2y = x + 3 \text{ is}$$

$$y - 2 = -2(x - 3)$$

$$\Rightarrow 2x + y - 8 = 0 \dots(ii)$$

On solving Eqs. (i) and (ii), we get

$$P \equiv \left(\frac{13}{5}, \frac{14}{5} \right)$$

Equation of line passing through $(3, 2)$ and perpendicular to X -axis is $x = 3$

Coordinate at point $Q = (3, 0)$

Now, equation of line PQ is

$$y - \frac{14}{5} = \frac{0 - \frac{14}{5}}{3 - \frac{13}{5}} \left(x - \frac{13}{5} \right)$$

$$\Rightarrow 7x + y - 21 = 0$$

91. (a) Given, lines are $y = 3x \dots(i)$

$$y = 6x \dots(ii) \text{ and } y = 9 \dots(iii)$$

On solving Eqs. (i) and (iii), we get

$$x = 3, y = 9$$

\therefore Coordinates of $A = (3, 9)$

On solving Eqs. (ii) and (iii), we get

$$x = \frac{3}{2}, y = 9$$

\therefore Coordinates of $B = \left(\frac{3}{2}, 9 \right)$

$$\text{Area of } \triangle OAB = \frac{1}{2} \begin{vmatrix} 0 & 0 & 1 \\ 3 & 9 & 1 \\ 3/2 & 9 & 1 \end{vmatrix}$$

$$= \left| \frac{1}{2} \left[27 - \frac{27}{2} \right] \right| = \frac{27}{4} \text{ sq units}$$

92. (b) Let $C(x, y)$ be the centroid of the triangle.

$$\text{Then, } x = \frac{0 + 3 + \frac{3}{2}}{3} = \frac{3}{2}$$

$$\text{and } y = \frac{0 + 9 + 9}{3} = 6$$

Coordinates of the centroid is $\left(\frac{3}{2}, 6 \right)$.

Sol. (Q. Nos. 93-95) Since, in a parallelogram diagonals bisect each other.

\therefore Mid-point of $AC =$ Mid-point of DB

$$\Rightarrow \left(\frac{x+1}{2}, \frac{6+2}{2} \right) \equiv \left(\frac{4+3}{2}, \frac{y+5}{2} \right)$$

$$\Rightarrow \frac{x+1}{2} = \frac{7}{2} \Rightarrow x = 6$$

$$\text{and } y+5 = 6+2 \Rightarrow y = 3$$

\therefore Coordinates of O are $\left(\frac{7}{2}, \frac{8}{2} \right)$

i.e. $\left(\frac{7}{2}, 4 \right)$.

93. (c) Now, $AC^2 = (6-1)^2 + (6-2)^2 = 41$

$$\text{and } BD^2 = (4-3)^2 + (3-5)^2 = 5$$

$$\therefore AC^2 - BD^2 = 41 - 5 = 36$$

94. (a)

95. (d) Vertices of parallelogram $ABCD$ in order are $(1, 2), (4, 3), (6, 6),$ and $(3, 5)$

$$\therefore \text{Area of parallelogram} = \frac{1}{2} \begin{vmatrix} 1-6 & 2-6 \\ 4-3 & 3-5 \end{vmatrix}$$

$$= \frac{1}{2} \begin{vmatrix} -5 & -4 \\ 1 & -2 \end{vmatrix} = \frac{14}{2} = 7 \text{ sq units}$$

96. (d) Let coordinates of P and Q be $(x, 0)$ and $(0, y)$, respectively.

$$\therefore \text{Mid-point of } PQ \text{ is } \frac{x+0}{2} = 3$$

$$\Rightarrow x = 6$$

$$\text{and } \frac{0+y}{2} = 5 \Rightarrow y = 10$$

$$\therefore \text{Area of } \triangle POQ = \frac{1}{2} \times OP \times OQ$$

$$= \frac{1}{2} \times 6 \times 10 = 30 \text{ sq units}$$

Sol. (Q. Nos. 97-98) Consider the two lines $x + y + 1 = 0$ and $3x + 2y + 1 = 0$

97. (d) Given lines are

$$x + y + 1 = 0 \dots(i)$$

$$\text{and } 3x + 2y + 1 = 0 \dots(ii)$$

Point of intersection of these two lines is $(1, -2)$.

\therefore Required equation of line,

$$y = -2 \text{ or } y + 2 = 0$$

98. (b) Equation of line parallel to Y -axis is $x = c$, since this line passes through $(1, -2)$.

\therefore Required equation is $x - 1 = 0$

99. (a) Since, $(a, 2b)$ is the mid-point of the line segment joining the points $(10, -6)$ and $(k, 4)$, therefore we have

$$(a, 2b) = \left(\frac{10+k}{2}, \frac{-6+4}{2} \right)$$

$$\Rightarrow a = \frac{10+k}{2}$$

Also, it is given that $a - 2b = 7$

$$\Rightarrow \frac{10+k}{2} - 2 \left(\frac{-1}{2} \right) = 7$$

$$\Rightarrow 10 + k + 2 = 14 \Rightarrow k = 2$$

100. (a)

CIRCLE

In NDA exam, generally 2-3 questions are asked from this chapter which are based on finding radius of circle, distance between centre of two circles, condition for touching two circles / a line and a circle etc.

A circle is defined as the locus of a point which moves in a plane such that its distance from a fixed point in that plane is always constant. The fixed point is called the **centre** and the constant distance is called the **radius** of the circle.

Equation of a Circle in Standard Form

Let $C(h, k)$ be the centre of the circle and the radius of the circle be r , then equation of circle in standard form

$$(x - h)^2 + (y - k)^2 = r^2$$

Note Above equation is known as the central form of the equation of a circle.

Equation of Circle in Particular Cases

- Circle touching the X-axis** Let the circle touches the X-axis and has its centre $C(h, k)$.

Then, the equation of circle is

$$(x - h)^2 + (y - k)^2 = k^2$$

$$\text{or } x^2 + y^2 - 2hx - 2ky + h^2 = 0$$

- Circle touching the Y-axis** Let the circle touches the Y-axis and has its centre $C(h, k)$.

Then, the equation of circle is

$$(x - h)^2 + (y - k)^2 = h^2$$

$$\text{or } x^2 + y^2 - 2hx - 2ky + k^2 = 0$$

- Circle touching both the axes** Let the circle touches both the axes.

Then, the equation of circle is

$$(x - r)^2 + (y - r)^2 = r^2 \text{ or}$$

$$x^2 + y^2 - 2rx - 2ry + r^2 = 0$$

4. **Circle centre at origin** If the centre of the circle is at origin and radius is 'r', then the equation of the circle is

$$(x-0)^2 + (y-0)^2 = k^2$$

$$\Rightarrow x^2 + y^2 = k^2$$

General Equation of a Circle

The general second degree equation in x and y is $ax^2 + 2bxy + by^2 + 2gx + 2fy + c = 0$, represents a circle whose centre is $(-g, -f)$ and radius $= \sqrt{g^2 + f^2 - c}$, when $a = b$ and $h = 0$.

EXAMPLE 1. The equation of the circle which touches X -axis at $(3, 0)$ and passes through $(1, 4)$ is given by

- a. $x^2 + y^2 - 6x - 5y + 9 = 0$ b. $x^2 + y^2 + 6x + 5y - 9 = 0$
 c. $x^2 + y^2 - 6x + 5y - 9 = 0$ d. $x^2 + y^2 + 6x - 5y + 9 = 0$

Sol. $k^2 = 4 + (k - 4)^2 \Rightarrow k = \frac{5}{2}$

Hence, the required equation of circle is $(x - 3)^2 + \left(y - \frac{5}{2}\right)^2 = \left(\frac{5}{2}\right)^2$

$$\Rightarrow x^2 + y^2 - 6x - 5y + 9 = 0$$

Nature of Circle

- If $g^2 + f^2 - c > 0$, then the radius of the circle is real and circle is also real.
- If $g^2 + f^2 - c = 0$, then radius of circle is zero and circle is known as a **point circle**.
- If $g^2 + f^2 - c < 0$, then radius is imaginary but the centre is real and such circle is called **imaginary circle**, not possible to draw such a circle.

EXAMPLE 2. Find the equation of the circle, whose centre is at $(-1, 2)$ and which passes through the point $(3, 5)$.

- a. $x^2 + y^2 + 2x + 4y + 20 = 0$ b. $x^2 + y^2 + 2x - 4y + 20 = 0$
 c. $x^2 + y^2 - 2x + 4y + 20 = 0$ d. $x^2 + y^2 + 2x - 4y - 20 = 0$

Sol. The centre of the circle is at $(-1, 2)$. Since, the point $(3, 5)$ lies on the circle, the distance of the centre from this point is the radius r of the circle. Therefore, we obtain

$$r = \sqrt{(-1 - 3)^2 + (2 - 5)^2} = \sqrt{16 + 9} = 5$$

The equation of the circle with centre at $(-1, 2)$ and radius 5 is given by

$$(x + 1)^2 + (y - 2)^2 = 5^2 \quad \text{or} \quad x^2 + y^2 + 2x - 4y - 20 = 0$$

Intercepts on the Axes

The lengths of intercepts made by the circle

$$x^2 + y^2 + 2gx + 2fy + c = 0 \quad \text{with}$$

$$X\text{-axis} = A_1A_2 = 2\sqrt{g^2 - c}$$

$$Y\text{-axis} = B_1B_2 = 2\sqrt{f^2 - c}$$

Note Intercepts are always positive.

Concentric Circle

Two circles having the same centre $C(h, k)$ but different radii r_1 and r_2 , respectively are called concentric circles.

Equation of concentric circle with

$$x^2 + y^2 + 2gx + 2fy + c = 0 \quad \text{is}$$

$$x^2 + y^2 + 2gx + 2fy + c_1 = 0$$

Therefore, the equations of concentric circles differ only in constant term.

Equation of Circle if Coordinates of End Points of Diameter are Known

If (x_1, y_1) and (x_2, y_2) are the end points of the diameter of a circle, then equation of circle is

$$(x - x_1)(x - x_2) + (y - y_1)(y - y_2) = 0$$

Position of a Point with Respect to the Circle

Let $S \equiv x^2 + y^2 + 2gx + 2fy + c = 0$ be the equation of a circle, then a point $P(x_1, y_1)$ in the XY -plane lies

- on the circle, if $S_1 = 0$
 - outside the circle, if $S_1 > 0$
 - inside the circle, if $S_1 < 0$
- where, $S_1 \equiv x_1^2 + y_1^2 + 2gx_1 + 2fy_1 + c$

Equation of Tangent

- Equation of tangent at the point $P(x_1, y_1)$ to a circle $x^2 + y^2 + 2gx + 2fy + c = 0$ is $xx_1 + yy_1 + g(x + x_1) + f(y + y_1) + c = 0$
- Equation of tangent to circle $x^2 + y^2 = a^2$ at (x_1, y_1) is given by $xx_1 + yy_1 = a^2$.

Length of Tangent

- The length of tangent from an external point (x_1, y_1) to the circle $x^2 + y^2 + 2gx + 2fy + c = 0$, is $\sqrt{x_1^2 + y_1^2 + 2gx_1 + 2fy_1 + c}$.
- The length of the tangent from an external point (x_1, y_1) to the circle $x^2 + y^2 = a^2$ is $\sqrt{x_1^2 + y_1^2 - a^2}$

EXAMPLE 3. The equations of the tangents to the circle $x^2 + y^2 = a^2$ parallel to the line $\sqrt{3}x + y + 3 = 0$ are

- a. $\sqrt{3}x + y \pm 2a$ b. $\sqrt{3}x + y \pm a = 0$
 c. $\sqrt{3}x + y \pm 4a = 0$ d. None of these

Sol. Equation of line parallel to the $\sqrt{3}x + y + 3 = 0$ is $\sqrt{3}x + y + k = 0$.

But it is a tangent to the circle $x^2 + y^2 = a^2$, then

$$\left| \frac{k}{\sqrt{1+3}} \right| = a \Rightarrow k = \pm 2a$$

Hence, the required equation is $\sqrt{3}x + y \pm 2a = 0$

Contact of Two Circles

Different cases at intersection at two circles Let the equation of two circles be

$$(x - b_1)^2 + (y - k_1)^2 = a_1^2 \quad \dots(i)$$

$$(x - b_2)^2 + (y - k_2)^2 = a_2^2 \quad \dots(ii)$$

with centres $C_1(b_1, k_1)$ and $C_2(b_2, k_2)$ and radii a_1 and a_2 , respectively, then the following cases of intersection at these two circles may arise

- $C_1C_2 > a_1 + a_2$: two circles do not touch each other.
Number of common tangents = 4
- When $C_1C_2 = a_1 + a_2$: two circles touch each other externally. Number of common tangents = 3
- When $C_1C_2 < a_1 + a_2$: two circles intersect each other.
Number of common tangents = 2
- When $C_1C_2 = |a_1 - a_2|$: two circles touch each other internally.
Number of common tangents = 1

EXAMPLE 4. How many common tangents can be drawn to the following circles $x^2 + y^2 = 6x$ and $x^2 + y^2 + 6x + 2y + 1 = 0$?

- a. 4 b. 3 c. 2 d. 1

Sol. Let $S_1 \equiv x^2 + y^2 - 6x = 0$

$$\text{and } S_2 \equiv x^2 + y^2 + 6x + 2y + 1 = 0$$

The coordinates of the centres of the given circles are $C_1(3, 0)$ and $C_2(-3, -1)$.

$$\text{Radius of } S_1 = r_1 = \sqrt{3^2 + 0 - 0} = 3$$

$$\text{Radius of } S_2 = r_2 = \sqrt{(-3)^2 + (-1)^2 - 1} = 3$$

$$\text{Now, } C_1C_2 = \sqrt{(3+3)^2 + (0+1)^2} = \sqrt{37} > r_1 + r_2$$

So, 4 common tangents can be drawn to the given circles.

Common Chord of Two Circles

Let the two circles be

$$S_1 \equiv x^2 + y^2 + 2g_1x + 2f_1y + c_1 = 0$$

$$S_2 \equiv x^2 + y^2 + 2g_2x + 2f_2y + c_2 = 0$$

The equation of the common chord of the above two circles

$$S_1 = 0 \text{ and } S_2 = 0, \text{ is } S_1 - S_2 = 0.$$

$$\text{or } 2(g_1 - g_2)x + 2(f_1 - f_2)y + 2(c_1 - c_2) = 0$$

EXAMPLE 5. Find the length of common chord of the circles $x^2 + y^2 + 2x + 6y = 0$ and $x^2 + y^2 - 4x - 2y - 6 = 0$.

- a. $\frac{2}{5}\sqrt{106}$ b. $\frac{3}{5}\sqrt{107}$ c. $\frac{2}{5}\sqrt{108}$ d. None of these

Sol. The equation of common chord of the circles

$$S_1 \equiv x^2 + y^2 + 2x + 6y = 0$$

$$\text{and } S_2 \equiv x^2 + y^2 - 4x - 2y - 6 = 0$$

$$\text{is } S_1 - S_2 = 0 \text{ or } 6x + 8y + 6 = 0 \text{ or } 3x + 4y + 3 = 0$$

$$\text{Centre of } S_1 \text{ is } (-1, -3), \text{ radius} = \sqrt{1+9} = \sqrt{10}$$

$$\text{Length of perpendicular from } (-1, -3) \text{ to } 3x + 4y + 3 = 0$$

$$= \frac{|-3 - 12 + 3|}{\sqrt{9+16}} = \frac{12}{5} \quad \dots(i)$$

$$\text{Length of common chord} = 2\sqrt{(\text{radius})^2 - [\text{by Eq. (i)}]^2}$$

$$= 2\sqrt{10 - \frac{144}{25}} = \frac{2}{5}\sqrt{106}$$

Angle of Intersection of Two Circles

The angle of intersection θ of the two circles with centres at C_1 and C_2 and the respective radii r_1 and r_2 is given by

$$\cos \theta = \frac{r_1^2 + r_2^2 - (C_1C_2)^2}{2r_1r_2} = \frac{r_1^2 + r_2^2 - d^2}{2r_1r_2}$$

where $C_1C_2 = d$

Two circles intersect **orthogonally**, if angle of intersection between them is 90° , i.e. if

$$\cos 90^\circ = 0 = \frac{r_1^2 + r_2^2 - (C_1C_2)^2}{2r_1r_2}$$

Thus, $r_1^2 + r_2^2 - (C_1C_2)^2 = 0$

i.e. $(C_1C_2)^2 = r_1^2 + r_2^2$

$$\Rightarrow (\sqrt{g_1^2 + f_1^2 - c_1})^2 + (\sqrt{g_2^2 + f_2^2 - c_2})^2$$

$$= (\sqrt{g_1^2 + f_1^2 + g_2^2 + f_2^2 - 2g_1g_2 - 2f_1f_2})^2$$

$$\Rightarrow 2g_1g_2 + 2f_1f_2 = c_1 + c_2$$

Equation of a Circle in Parametric Form

Let $P(x, y)$ be any point on the circle with centre at $C(h, k)$ and radius r , then $x = h + r \cos \alpha$ and $y = k + r \sin \alpha$. So, these are the parametric equations of the circle, where α is called parameter.

> PRACTICE EXERCISE

- For the equation $ax^2 + by^2 + 2hxy + 2gx + 2fy + c = 0$, where $a \neq 0$, to represent a circle, the condition will be
 (a) $a = b$ and $c = 0$ (b) $f = g$ and $h = 0$
 (c) $a = b$ and $h = 0$ (d) $f = g$ and $c = 0$
- The equation of the circle passing through $(4, 5)$ having the centre at $(2, 2)$ is
 (a) $x^2 + y^2 + 4x + 4y - 5 = 0$ (b) $x^2 + y^2 - 4x - 4y - 5 = 0$
 (c) $x^2 + y^2 - 4x = 13$ (d) $x^2 + y^2 - 4x - 4y + 5 = 0$
- Equation of circle which passes through the points $(1, -2)$ and $(3, -4)$ and touch the X -axis is
 (a) $x^2 + y^2 + 6x + 2y + 9 = 0$
 (b) $x^2 + y^2 + 10x + 20y + 25 = 0$
 (c) $x^2 + y^2 + 6x + 4y + 9 = 0$
 (d) None of the above
- A square is inscribed in the circle $x^2 + y^2 + 2gx + 2fy + c = 0$ of radius r , then length of its side is
 (a) r (b) $r\sqrt{2}$ (c) $\frac{1}{2}r$ (d) $\sqrt{2}$
- The lines $2x - 3y = 5$ and $3x - 4y = 7$ are diameters of a circle of area 154 sq units. Then, the equation of this circle is
 (a) $x^2 + y^2 + 2x - 2y = 62$ (b) $x^2 + y^2 + 2x - 2y = 47$
 (c) $x^2 + y^2 - 2x + 2y = 47$ (d) $x^2 + y^2 - 2x + 2y = 62$
- The radius of the circle passing through the point $P(6, 2)$, two of whose diameter are $x + y = 6$ and $x + 2y = 4$ is
 (a) 10 (b) $2\sqrt{5}$ (c) 6 (d) 4
- Equation of a circle passing through $(-1, -2)$ and concentric with the circle $x^2 + y^2 - 3x + 4y - c = 0$ is
 (a) $x^2 + y^2 - 3x + 4y - 1 = 0$ (b) $x^2 + y^2 - 3x + 4y = 0$
 (c) $x^2 + y^2 - 3x + 4y + 2 = 0$ (d) None of these
- Locus of the centre of the circle which always passes through the fixed points $(a, 0)$ and $(-a, 0)$ is
 (a) $x = 1$ (b) $x + y = 6$ (c) $x + y = 2a$ (d) $x = 0$
- Under which one of the following conditions does the circle $x^2 + y^2 + 2gx + 2fy + c = 0$ meet the X -axis in two points on opposite sides of the origin?
 (a) $c > 0$ (b) $c < 0$ (c) $c = 0$ (d) $c \leq 0$
- The centre of the circle $(x - \alpha)^2 + (y - \beta)^2 = 9$ lies on the straight line $x = y$ and the circle touches the circle $x^2 + y^2 = 1$ externally. What are the values of α, β ?
 (a) $\alpha = \pm 2\sqrt{2}, \beta = \pm 2\sqrt{2}$ (b) $\alpha = \pm \sqrt{2}, \beta = \pm \sqrt{2}$
 (c) $\alpha = 0, \beta = 0$ (d) $\alpha = 2, \beta = 2$
- Consider a circle of radius R . What is the length of a chord which subtends an angle θ at the centre?
 (a) $2R \sin\left(\frac{\theta}{2}\right)$ (b) $2R \sin \theta$ (c) $2R \tan\left(\frac{\theta}{2}\right)$ (d) $2R \tan \theta$
- What is the equation to the circle which touches both the axes and has centre on the line $x + y = 4$?
 (a) $x^2 + y^2 - 4x + 4y + 4 = 0$
 (b) $x^2 + y^2 - 4x - 4y + 4 = 0$
 (c) $x^2 + y^2 + 4x - 4y - 4 = 0$
 (d) $x^2 + y^2 + 4x + 4y - 4 = 0$
- A square is inscribed in a circle $x^2 + y^2 - 2x + 4y + 3 = 0$. Its sides are parallel to the coordinate axes. Then, one of the vertex of the square is
 (a) $(1 + \sqrt{2}, -2)$
 (b) $(1 - \sqrt{2}, -2)$
 (c) $(1, -2 + \sqrt{2})$
 (d) None of the above

- 14.** Consider the following statements
 I. Number of circles touching the given three non-concurrent lines is 4.
 II. Number of circles passing through (1,2), (4,8) and (0,0) is one.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
 (c) Both I and II (d) None of these

- 15.** Consider the following statements
 I. The equation $x^2 + y^2 + 2x - 10y + 30 = 0$, represents the equation of a circle.
 II. If point (0, g) lies inside the circle $x^2 + y^2 + 2gx + c = 0$, then $c < 0$.

Which of the above statement(s) is/are correct?

- (a) Only I (b) Only II
 (c) Both I and II (d) Neither I nor II

- 16.** Consider the following circles

I. $x^2 + y^2 + 4x - 6y - 12 = 0$

II. $x^2 + y^2 - 12x - 14y + 60 = 0$

III. $x^2 + y^2 - 10x + 8y + 18 = 0$

Which of the above circles has equal area?

- (a) I, II (b) I, III (c) II, III (d) I, II, III

Directions (Q. Nos. 17-18) Consider the circle $S \equiv x^2 + 4x + (y - 3)^2 = 0$.

- 17.** From the point $A(0, 3)$ on the circle a chord AB is drawn and extended to a point P . Such that $AP = 2AB$. The locus of P is
 (a) $x^2 + (y - 3)^2 = 0$ (b) $x^2 + 4x + (y + 3)^2 = 0$
 (c) $x^2 + 8x + (y - 3)^2 = 6$ (d) $(x + 4)^2 + (y - 3)^2 = 16$

- 18.** The distance of the origin from the centre of S is
 (a) $\frac{7}{2}$ (b) 4 (c) $\sqrt{13}$ (d) $\sqrt{15}$

Directions (Q. Nos. 19-20) Consider the circle $S \equiv x^2 + y^2 - 6x + 12y + 15 = 0$.

- 19.** The equation of circle which is concentric with circle S and has area double of its area is
 (a) $x^2 + y^2 - 6x + 12y - 15 = 0$
 (b) $x^2 + y^2 - 6x + 12y + 40 = 0$
 (c) $x^2 + y^2 - 6x + 12y + 45 = 0$
 (d) None of the above
- 20.** Which of the following line is a diameter of the circle S ?
 (a) $2y + 3x + 3 = 0$ (b) $3y + 2x + 7 = 0$
 (c) $x + y - 3 = 0$ (d) $x - y + 9 = 0$

Directions (Q. Nos. 21-22) A circle always passes through the fixed points (a, 0) and (-a, 0).

- 21.** If given points are the ends of diameter, then the equation of circle is

- (a) $x^2 + y^2 = a^2$ (b) $x^2 + y^2 + a^2 = 0$
 (c) $x^2 + y^2 + 2x + 2y = a^2$ (d) $x^2 + y^2 - 2x - 2y = a^2$

- 22.** How many tangents can be drawn from the origin to the circle that we get in above question?
 (a) 0 (b) 1 (c) 2 (d) 3

Directions (Q. Nos. 23-25) Consider the two circles

$S_1 \equiv x^2 + y^2 = 16$ and $S_2 \equiv x^2 + y^2 - 8x - 10y = 23$ with centres C_1 and C_2 , respectively and radius r_1 and r_2 , respectively.

- 23.** Which of the following is true?
 (a) $r_1 > r_2$ (b) $r_1 < r_2$ (c) $r_1 = r_2$ (d) $r_2 \geq r_1$

- 24.** Find $C_1 C_2$.
 (a) 2 (b) $\sqrt{29}$ (c) $\sqrt{41}$ (d) 5

- 25.** Find the number of common tangents drawn to S_1 and S_2 .
 (a) 2 (b) 1 (c) 3 (d) 4

Directions (Q. Nos. 26-28) Consider the two circles

$S_1 \equiv x^2 + y^2 - 6x + 4y + 11 = 0$ and

$S_2 \equiv x^2 + y^2 - 4x + 6y + 9 = 0$.

- 26.** The equation of common chord is
 (a) $y - x = 1$ (b) $x - y = 1$
 (c) $x + y - 1 = 0$ (d) $x + y = 1$

- 27.** The angle of intersection of the two circle is
 (a) 30° (b) 45° (c) 60° (d) 90°

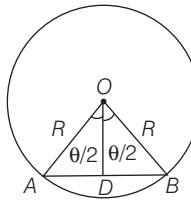

- 28.** The value of k so that $x^2 + y^2 + kx + 3y + k = 0$ and circle S_1 cut orthogonally, is
 (a) $\frac{8}{3}$ (b) $-\frac{8}{3}$ (c) $\frac{5}{4}$ (d) $-\frac{5}{4}$

Directions (Q. Nos. 29-32) Consider the two circles $S_1 \equiv x^2 + y^2 - 4 = 0$ and $S_2 \equiv x^2 + y^2 - 6x - 8y - 24 = 0$.

- 29.** The two circles S_1 and S_2
 (a) touch each other externally
 (b) touch each other internally
 (c) cuts each other at two points
 (d) None of the above
- 30.** The number of common tangents to the given circles is
 (a) 0 (b) 1 (c) 3 (d) 4
- 31.** The number of tangents from centre of circle S_2 to the circle S_1 is
 (a) 0 (b) 1 (c) 2 (d) None of these
- 32.** Consider the following statements
 I. Equation of common chord is $3x + 4y + 10 = 0$.
 II. Equation of common tangent is $4y + 3x = 5$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (d) None of these

HINTS AND SOLUTIONS

1. (c) The general equation of circle is
 $x^2 + y^2 + 2gx + 2fy + c = 0$... (i)
 Hence, on comparing the given equation with Eq. (i), we get
 $a = b$ and $b = 0$
2. (b) Here, $r =$ Distance between $(4, 5)$ and $(2, 2)$
 $\therefore r^2 = 4 + 9 = 13$
 $\Rightarrow (x - 2)^2 + (y - 2)^2 = 13$
 $\Rightarrow x^2 + y^2 - 4x - 4y - 5 = 0$
3. (b) Since, the circle touches X -axis.
 $\therefore (x - h)^2 + (y - k)^2 = k^2$... (i)
 Also, it passes through given points
 $(1 - h)^2 + (-2 - k)^2 = k^2$... (ii)
 and $(3 - h)^2 + (-4 - k)^2 = k^2$... (iii)
 On subtracting Eq. (iii) from Eq. (ii), we get $h = k + 5$
 On solving these equations, we get
 $k = -10, -2$ and $h = -5, 3$
 By putting the values of $(h, k) = (-5, -10)$ or $(3, -2)$ in Eq. (i), we get $x^2 + y^2 + 10x + 20y + 25 = 0$
4. (b) If a is the side of the square inscribed in a circle of radius r , then $a^2 + a^2 = (\text{Diameter})^2$
 $\therefore 2a^2 = 4r^2$
 $\Rightarrow a = r\sqrt{2}$
5. (c) If r is radius of the circle, then $\pi r^2 = 154$
 $\therefore r^2 = 154 \times \frac{7}{22} = 49$ [taking $\pi = \frac{22}{7}$]
 $\Rightarrow r = 7$
 Also, solving the equation of two given diameters, we get the coordinates of the centre as $(1, -1)$.
 Hence, the equation of the circle is
 $(x - 1)^2 + (y + 1)^2 = 7^2 = 49$
 $\Rightarrow x^2 + y^2 - 2x + 2y = 47$
6. (b) The centre of circle is the intersection of equations of the diameter
 $x + y = 6$... (i)
 and $x + 2y = 4$... (ii)
 On solving Eqs. (i) and (ii), we get
 $x = 8$
 and $y = -2$
 \therefore Radius of circle is the distance between $P(6, 2)$ and $C(8, -2)$
 Radius = $\sqrt{(8 - 6)^2 + (2 + 2)^2}$
 $= 2\sqrt{5}$

7. (b) The terms of x and y will remain the same as the two circles are concentric. The new constant $\lambda = 0$ as it passes through $(-1, -2)$. By putting point $(-1, -2)$ in the equation.
8. (d) If (h, k) is centre C and A, B be the given points, then
 $CA^2 = CB^2 \Rightarrow 4ab = 0 \Rightarrow b = 0$
 $\therefore x = 0$
9. (b) The circle
 $x^2 + y^2 + 2gx + 2fy + c = 0$,
 meets X -axis ($y = 0$) in two points on opposite sides of origin.
 It means $x^2 + 2gx + c = 0$
 $\Rightarrow x = \frac{-2g \pm \sqrt{4g^2 - 4c}}{2}$
 $= -g \pm \sqrt{g^2 - c}$
 Circle meets the X -axis in two points on opposite side of origin
 Hence,
 $-g + \sqrt{g^2 - c} > 0, -g - \sqrt{g^2 - c} < 0$
 $\Rightarrow \sqrt{g^2 - c} > g \Rightarrow g^2 - c > g^2 \Rightarrow c < 0$
10. (b) The centre and radius of circle $(x - \alpha)^2 + (y - \beta)^2 = 9$ are (α, β) and 3, respectively.
 Since, (α, β) lies on the straight line $y = x$.
 $\therefore \alpha = \beta$... (i)
 Now, this circle touches the circle $x^2 + y^2 = 1$ externally.
 $\therefore \alpha^2 + \beta^2 = 3 + 1 \Rightarrow \alpha^2 + \beta^2 = 4$
 $\Rightarrow 2\alpha^2 = 4$ [using Eq. (i)]
 $\Rightarrow \alpha = \pm \sqrt{2}$
 $\therefore \alpha = \pm \sqrt{2}$ and $\beta = \pm \sqrt{2}$
11. (a) In $\triangle ADO$,
 $\sin \frac{\theta}{2} = \frac{AD}{OA} = \frac{AD}{R}$
- 
- $\Rightarrow AD = R \sin \frac{\theta}{2}$

\therefore Length of the chord

$$AB = 2AD = 2R \sin\left(\frac{\theta}{2}\right)$$

12. (b) We know that, the equation of circle, which touches both the axes, is
 $x^2 + y^2 - 2rx - 2ry + r^2 = 0$... (i)
 The centre (r, r) of this circle lies on the line $x + y = 4$.
 $\therefore r + r = 4 \Rightarrow r = 2$
 On putting the value of r in Eq. (i), we get $x^2 + y^2 - 4x - 4y + 4 = 0$
 which is the required equation of the circle.
13. (d) Centre of the circle is $(1, -2)$ and sides of the inscribed square are parallel to the coordinate axes. Hence, no vertex of the square can have its coordinates x as 1 and y as -2 .
14. (a)
15. (b) I. The radius of this circle
 $= \sqrt{1^2 + (-5)^2 - 30} = \sqrt{-4}$
 which is imaginary.
 So, Statement I is false.
 II. Since, $(0, g)$ lies inside
 $S \equiv x^2 + y^2 + 2gx + c = 0$
 $\therefore S_1 = 0 + g^2 + 0 + c < 0$
 $\Rightarrow g^2 + c < 0 \Rightarrow c < 0$ [$\because g^2 > 0$]
 So, Statement II is true.
16. (a) I. Centre = $(-2, 3)$
 Radius = $\sqrt{(-2)^2 + 3^2 + 12}$
 $= \sqrt{25} = 5$
 \therefore Area = 25π
 II. Centre = $(6, 7)$
 Radius = $\sqrt{6^2 + 7^2 - 60} = \sqrt{25} = 5$
 \therefore Area = 25π
 III. Centre = $(5, -4)$
 Radius = $\sqrt{5^2 + (-4)^2 - 18} = \sqrt{23}$
 \therefore Area = 23π
 So, I and II have equal area.
17. (d) Let the coordinates of P be (h, k) . Then, B is the mid-point of AP . So, the coordinates of B are $\left(\frac{h}{2}, \frac{k+3}{2}\right)$.
 Since, B lies on the circle.

$$x^2 + 4x + (y - 3)^2 = 0$$

$$\therefore \frac{b^2}{4} + 4\left(\frac{b}{2}\right) + \left(\frac{k+3}{2} - 3\right)^2 = 0$$

$$\Rightarrow b^2 + 8b + (k-3)^2 = 0$$

Hence, the locus of $P(b, k)$ is

$$x^2 + 8x + (y-3)^2 = 0.$$

18. (c) We have,
 $S \equiv x^2 + 4x + y^2 + 9 - 6y = 0$
 or $S \equiv x^2 + y^2 + 4x - 6y + 9 = 0$
 Centre of circle, $S = (-2, 3)$
 Required distance from origin
 $= \sqrt{(-2)^2 + (3)^2} = \sqrt{13}$
19. (a) Equation of circle concentric to given circle is
 $S_1 \equiv x^2 + y^2 - 6x + 12y + k = 0 \dots(i)$
 As, area of circle (S_1)
 $= 2$ area of (given) circle (S)
 \therefore Radius of circle (S_1) $= \sqrt{2}$
 [radius of given circle]
 $\Rightarrow \sqrt{9 + 36 - k} = \sqrt{2} \sqrt{9 + 36 - 15}$
 $\Rightarrow 45 - k = 60 \Rightarrow k = -15$
 Hence, the required equation of circle is
 $x^2 + y^2 - 6x + 12y - 15 = 0$
20. (a) Centre of the circle S is $(3, -6)$.
 Since, centre $(3, -6)$ is satisfying only
 $2y + 3x + 3 = 0$
 $\therefore 2y + 3x + 3 = 0$ is the required line.
21. (a) Since, $(a, 0)$ and $(-a, 0)$ are the end points of diameter, then equation of the circle is
 $(x - a)(x + a) + (y - 0)(y - 0) = 0$
 $\Rightarrow x^2 - a^2 + y^2 = 0 \Rightarrow x^2 + y^2 = a^2$
22. (a) Since, origin lies inside the circle $x^2 + y^2 = a^2$. Hence, no tangent can be drawn.
23. (b) From circle S_1 , $r_1 = \sqrt{16} = 4$
 From circle S_2 , $r_2 = \sqrt{16 + 25 + 23} = 8$
 Clearly, $r_1 < r_2$
24. (d) Here, $C_1(0, 0)$ and $C_2(4, 5)$
 $\therefore C_1C_2 = \sqrt{16 + 25} = \sqrt{41}$
25. (b) Here, $|r_1 - r_2| < C_1C_2 < |r_1 + r_2|$
 Clearly, circles cut each other at two points. Hence, number of common tangents will be 2.
26. (c) Equation of common chord is given by
 $S_1 - S_2 = 0$
 $\Rightarrow -6x + 4y + 11 - (-4x + 6y + 9) = 0$
 $\Rightarrow -2x - 2y + 2 = 0 \Rightarrow x + y - 1 = 0$
27. (b) Centre of circle S_1 is $C_1(3, -2)$.
 Centre of circle S_2 is $C_2(2, -3)$

- Let r_1 and r_2 be their radii
 $r_1 = \sqrt{9 + 4 - 11} = \sqrt{2}$
 and $r_2 = \sqrt{4 + 9 - 9} = 2$
 Also,
 $C_1C_2 = \sqrt{(3-2)^2 + (-2+3)^2} = \sqrt{2}$
 Suppose, two circles intersect at P .
 Then,
 $\cos \angle C_1PC_2 = \frac{C_1P^2 + C_2P^2 - C_1C_2^2}{2C_1P \cdot C_2P}$
 $= \frac{2 + 4 - 2}{2 \times \sqrt{2} \times 2} = \frac{1}{\sqrt{2}}$
 $\Rightarrow \cos \angle C_1PC_2 = \cos 45^\circ$
 $\Rightarrow \angle C_1PC_2 = 45^\circ$
28. (d) The equations of the circles are
 $S_1 \equiv x^2 + y^2 - 6x + 4y + 11 = 0$
 $S_3 \equiv x^2 + y^2 + kx + 3y + k = 0$
 These two circles cut orthogonally, if
 $2\left(-3 \times \frac{k}{2} + 2 \times \frac{3}{2}\right) = 11 + k$
 $[\because 2(g_1g_2 + f_1f_2) = C_1C_2]$
 $\Rightarrow -3k + 6 = 11 + k \Rightarrow k = -\frac{5}{4}$
29. (b) Centre of circle S_1 is $C_1(0, 0)$.
 Centre of circle S_2 is $C_2(3, 4)$.
 $r_1 = 2$ and $r_2 = \sqrt{3^2 + 4^2 + 24} = 7$
 Now, $C_1C_2 = \sqrt{3^2 + 4^2} = 5$
 $C_1C_2 < \text{Sum of the radii}$
 Also, $C_1C_2 = \text{Difference of the radii}$
 Thus, the two circles touch each other internally.
30. (b) Since, the two circles touch each other internally. Therefore, there is only one common tangent.
31. (c) We have,
 $S_1 = (3)^2 + (4)^2 - 4 = 21 > 0$
 \therefore Point $(3, 4)$ lies outside the circle S_1 .
 \therefore Two tangents can be drawn from $(3, 4)$.
32. (a) I. Equation of common chord is given by $S_1 - S_2 = 0$
 i.e. $-4 + 6x + 8y + 24 = 0$
 or $3x + 4y + 10 = 0$
 So, Statement I is true.
 II. Since, two circles touch each other internally, equation of common

tangent is same as equation of common chord.

So, Statement II is false.

33. (a) Radius of the circle, $AC = BC$

$$AC = OB = 3 \text{ and } BC = OA = 3$$

\therefore Radius = 3 units

34. (b) Length of arc = angle subtended at centre \times radius \Rightarrow Angle $= \frac{l}{r} = \frac{1}{3}$
 \Rightarrow Angle $= \frac{1}{3} \times \frac{180^\circ}{\pi} = \frac{60^\circ}{\pi}$
35. (b) The equation of the circle of radius 6 and centre at $(3, 5)$ is
 $(x - 3)^2 + (y - 5)^2 = (6)^2$
 Let $S \equiv (x - 3)^2 + (y - 5)^2 - 36 = 0$
- (a) At point $(-2, -1)$,
 $S \equiv (-2 - 3)^2 + (-1 - 5)^2 - 36$
 $= 25 + 36 - 36 = 25 > 0$
 which represents the point lies outside the circle.
- (b) At point $(0, 1)$,
 $S \equiv (0 - 3)^2 + (1 - 5)^2 - 36$
 $= 9 + 16 - 36 = -11 < 0$
 which represents the point lies inside the circle.
- (c) At point $(-1, -2)$,
 $S \equiv (-1 - 3)^2 + (-2 - 5)^2 - 36$
 $= 16 + 49 - 36 = 29 > 0$
 which represents the point lies outside the circle.
- (d) At point $(2, -1)$,
 $S \equiv (2 - 3)^2 + (-1 - 5)^2 - 36$
 $= 1 + 36 - 36 = 1 > 0$
 which represents the point lies outside the circle.
 Hence, point $(0, 1)$ lies inside the circle S .
36. (b) Given equation of circle is
 $x^2 + y^2 + x + c = 0 \dots(i)$
 Since, the equation of circle passes through the origin.
 $\therefore (0)^2 + (0)^2 + 0 + c = 0 \Rightarrow c = 0$
 From Eq. (i), we get
 $x^2 + y^2 + x = 0$
 $\Rightarrow x^2 + y^2 + x + \frac{1}{4} = \frac{1}{4}$
 $\Rightarrow \left(x + \frac{1}{2}\right)^2 + (y - 0)^2 = \left(\frac{1}{2}\right)^2$
 So, the required radius of circle is $\frac{1}{2}$.

37. (a) Equations of circle are
 $x^2 + y^2 + 2ax + c = 0$
 and $x^2 + y^2 + 2by + c = 0$
 \therefore Centres of two circles are $(-a, 0)$ and $(0, -b)$.
 \therefore Distance between two centres
 $= \sqrt{a^2 + b^2}$

38. (b) Two circles touch each other, iff
 Distance between two centres
 $=$ Sum of radius of two circles
 $\Rightarrow \sqrt{a^2 + b^2} = \sqrt{a^2 - c} + \sqrt{b^2 - c}$
 On squaring both sides, we get
 $a^2 + b^2 = a^2 - c + b^2 - c + 2\sqrt{(a^2 - c)(b^2 - c)}$
 $\Rightarrow c = \sqrt{(a^2 - c)(b^2 - c)}$

Again, squaring both sides, we get
 $c^2 = a^2b^2 - a^2c - b^2c + c^2$
 $\Rightarrow a^2b^2 = (a^2 + b^2)c \Rightarrow \frac{1}{c} = \frac{1}{a^2} + \frac{1}{b^2}$

39. (b) Given, $x^2 + y^2 = \frac{r^2}{4}$
 We know that, the line $y = mx + c$ meets the circle in unique real point or touch the circle $x^2 + y^2 = r^2$, if

$$r = \left| \frac{c}{\sqrt{1+m^2}} \right|$$

Since, the straight line $x = y + 2$ touches the given circle.

Hence, $\left| \frac{2}{\sqrt{2}} \right| = \frac{r}{2} \Rightarrow r = 2\sqrt{2}$

40. (d) We have, centre $= (3, 4)$ and radius $= 5$
 Equation of circle having centre (h, k) and radius a is

$$(x - h)^2 + (y - k)^2 = a^2$$

$$\Rightarrow (x - 3)^2 + (y - 4)^2 = 25$$

For x-intercept
 Put $y = 0$, we get $(x - 3)^2 + 16 = 25$
 $\Rightarrow (x - 3)^2 = 9$
 $\Rightarrow x - 3 = 3$ and $-3 \Rightarrow x = 6$ and 0

For y-intercept
 Put $x = 0$, we get $9 + (y - 4)^2 = 25$
 $\Rightarrow y - 4 = 4$ and $-4 \Rightarrow y = 8$ and 0

Hence, the x -intercept is 6 and y -intercept is 8.

41. (a) Here, radius of circle $= b$ and centre $= (0, b)$ and the equation of line touches the circle is $y = x - \sqrt{2}$

\therefore Perpendicular drawn from centre to the line is

$$b = \left| \frac{0 - b - \sqrt{2}}{\sqrt{2}} \right| = \left| \frac{-(b + \sqrt{2})}{\sqrt{2}} \right|$$

$$\Rightarrow \sqrt{2}b = b + \sqrt{2} \Rightarrow b(\sqrt{2} - 1) = \sqrt{2}$$

$$\Rightarrow b = \frac{\sqrt{2}}{\sqrt{2} - 1} \times \frac{(\sqrt{2} + 1)}{(\sqrt{2} + 1)}$$

$$= \frac{2 + \sqrt{2}}{2 - 1} = (2 + \sqrt{2})$$

42. (a) Given circle are
 $(x - 1)^2 + (y - 3)^2 = r^2$... (i)
 and $x^2 + y^2 - 8x + 2y + 8 = 0$... (ii)

Centre of circle (i) $= (1, 3)$
 and radius $r_1 = r$
 Centre of circle (ii) $= (4, -1)$
 and radius $(r_2) = \sqrt{16 + 1 - 8} = \sqrt{9} = 3$

\therefore Distance between centres
 $= \sqrt{(1 - 4)^2 + (3 + 1)^2}$
 $= \sqrt{9 + 16} = \sqrt{25} = 5$ units

43. (b) Condition for two circles intersect at two distinct points.

Distance between centre $<$ Sum of radius
 $5 < r + 3 \Rightarrow 2 < r$
 But $r > 1$ because $5 \nless 1 + 3$

Sol. (Q. Nos. 44-45) Given that circle passes through $(0, 0)$, (a, b) and $(-b, -a)$.

Now, equation of circle is

$$x^2 + y^2 + 2gx + 2fy + c = 0$$

When $x = 0, y = 0$
 $\Rightarrow c = 0$... (i)

When $x = a, y = b$
 $a^2 + b^2 + 2ga + 2fb = 0$ [$\because c = 0$] ... (ii)
 When $x = -b, y = -a$

$$b^2 + a^2 - 2gb - 2fa = 0$$
 ... (iii)
 Subtracting Eq. (iii) from Eq. (ii), we get

$$2g(a + b) + 2f(a + b) = 0$$

$$\Rightarrow 2(g + f)(a + b) = 0$$

$$\Rightarrow g + f = 0 \Rightarrow g = -f$$
 ... (iv)

Putting $g = -f$ in Eq. (ii), we get
 $a^2 + b^2 - 2fa + 2fb = 0$
 $\Rightarrow f = \frac{1}{2} \left(\frac{a^2 + b^2}{a - b} \right)$

Putting $f = -g$ in Eq. (ii), we get
 $a^2 + b^2 + 2ga - 2gb = 0$
 $\Rightarrow g = -\frac{1}{2} \left(\frac{a^2 + b^2}{a - b} \right)$

44. (a) From Eq. (iv), we have
 $g = -f \Rightarrow y = -x$
 \therefore Required equation of line is $x + y = 0$

45. (b) Intercept on
 X -axis $= \sqrt{g^2 - c} = 2\sqrt{g^2}$ [$\because c = 0$]

Intercept on Y -axis
 $= 2\sqrt{f^2 - c} = 2\sqrt{f^2}$ [$\because c = 0$]

Sum of square of intercepts
 $= (x\text{-intercept})^2 + (y\text{-intercept})^2$
 $= 4g^2 + 4f^2$
 $= 4 \times \frac{1}{4} \left(\frac{a^2 + b^2}{a - b} \right)^2$

$$+ 4 \times \frac{1}{4} \times \left(\frac{a^2 + b^2}{a - b} \right)^2$$

$$= 2 \left(\frac{a^2 + b^2}{a - b} \right)^2$$

18

CONIC SECTION

In NDA exam, generally 2-4 questions are asked from this chapter which are based on finding equation of conics, eccentricity conics, various terms related to conics etc.

A conic section or conic is the locus of a point which moves in such a way that its distance from a fixed point always bears a constant ratio to its perpendicular distance from a fixed line, all being in the same plane. Shape of the conic section obtained depends on the position of cutting plane. This section deals with parabola, hyperbola and ellipse etc.

Various Terms Related to Conic Section

1. **Focus** The fixed points is called the focus of the conic section.
2. **Directrix** The fixed straight line is called the directrix of the conic section.
3. **Eccentricity** The constant ratio of distance of point lying on conic, from focus to its perpendicular distance from directrix is called the eccentricity of the conic section and is denoted by e .
 - (i) For an ellipse, $e < 1$
 - (ii) For a parabola, $e = 1$
 - (iii) For hyperbola, $e > 1$
 - (iv) For a circle, $e = 0$
 - (v) Pair of straight lines, $e = \infty$
4. **Axis** The straight line passing through the focus and perpendicular to the directrix, is called the axis of the conic section.
5. **Vertex** The point of intersection of the conic section and its axis, is called vertex of the conic section.
6. **Centre** The point which bisects every possible chord of the conic passing through it, is called the centre of conic.
7. **Latusrectum** The latusrectum of a conic is the chord passing through the focus and perpendicular to the axis.
8. **Focal chord** Any chord passing through the focus of a conic is called the focal chord of the conic.
9. **Double ordinate** Any chord perpendicular to the axis of a conic is called the double ordinate of that conic.
10. **Focal distance or focal length** The distance between the focus and a point lying on the conic, is known as focal distance or focal length of the given point.

General Equation of Conics of Second Degree

General equation of conics of second degree *viz.*

$$ax^2 + 2bxy + by^2 + 2gx + 2fy + c = 0$$

where, discriminant $\Delta = abc + 2fgh - af^2 - bg^2 - ch^2$

The above equation represents a non-degenerate conic whose nature is as follows

S.No.	Condition	Nature of conic
1.	$\Delta \neq 0, h = 0, a = b, e = 0$	A circle
2.	$\Delta \neq 0, ab - h^2 = 0, e = 1$	A parabola
3.	$\Delta \neq 0, ab - h^2 > 0, e < 1$	An ellipse
4.	$\Delta \neq 0, ab - h^2 < 0, e > 1$	A hyperbola
5.	$\Delta \neq 0, ab - h^2 < 0, a + b = 0, e = 1/2$	A rectangular hyperbola

PARABOLA

A parabola is the locus of a point which is equidistant from a fixed point called focus and from a fixed straight line called directrix.

Since, point $P(x, y)$ lies on the parabola.

$$\therefore \frac{PS}{PM} = e = 1 \quad [\text{here, } e = 1]$$

$$\Rightarrow PS^2 = PM^2$$

$$\Rightarrow (x - a)^2 + (y - 0)^2 = (x + a)^2$$

$$\Rightarrow y^2 = 4ax$$

which is the equation of parabola in standard form.

Note The distance between vertex of parabola and focus is equal to perpendicular distance of vertex from directrix.
or Vertex is the mid-point of line joining focus and point of intersection of directrix and axis.

Other Standard Forms of Parabola

1. Form $y^2 = -4ax$ In this form the focus of the parabola lie in the negative side of X-axis.

2. Form $x^2 = 4ay$ In this form the focus of the parabola lie in the positive side of Y-axis

3. Form $x^2 = -4ay$ In this form the focus of the parabola lie in the negative of Y-axis.

Parabolas with Vertex Other than (0, 0)

If the vertex of the parabola is at the point $A(b, k)$ and its latusrectum is of length $4a$, then its equation is

- (i) $(y - k)^2 = 4a(x - b)$, if its axis is parallel to OX , i.e. parabola opens rightward.
- (ii) $(y - k)^2 = -4a(x - b)$, if its axis is parallel to OX' , i.e. parabola opens leftward.
- (iii) $(x - b)^2 = 4a(y - k)$, if its axis is parallel to OY , i.e. parabola opens upward.
- (iv) $(x - b)^2 = -4a(y - k)$, if its axis is parallel to OY' , i.e. parabola opens downward.

EXAMPLE 1. Find the equation of the parabola, whose focus is at $(-1, -2)$ and the directrix on the line $x - 2y + 3 = 0$.

- a. $x^2 + 4y^2 + 4xy + 32x + 16 = 0$
- b. $4x^2 + y^2 + 4xy + 32y + 16 = 0$
- c. $4x^2 + y^2 + 4xy + 32x + 16 = 0$
- d. None of the above

Sol. Let $P(x, y)$ be any point on the parabola, whose focus is $S(-1, -2)$ and the directrix $x - 2y + 3 = 0$. Draw PM perpendicular from $P(x, y)$ on the directrix $x - 2y + 3 = 0$. Then by definition,

$$SP = PM \Rightarrow SP^2 = PM^2$$

$$\Rightarrow (x + 1)^2 + (y + 2)^2 = \left(\frac{x - 2y + 3}{\sqrt{1 + 4}}\right)^2$$

$$\Rightarrow 5[(x + 1)^2 + (y + 2)^2] = (x - 2y + 3)^2$$

$$\Rightarrow 5(x^2 + y^2 + 2x + 4y + 5) = (x^2 + 4y^2 + 9 - 4xy + 6x - 12y)$$

$$\Rightarrow 4x^2 + y^2 + 4xy + 4x + 32y + 16 = 0$$

Which is the equation of the required parabola.

EXAMPLE 2. If the equation of parabola $y^2 - 8y - x + 19 = 0$, find

- (i) vertex
 - a. (0, 0) b. (3, 4) c. (4, 4) d. (4, 3)
- (ii) focus
 - a. (1, 4) b. $(\frac{3}{4}, 3)$ c. $(\frac{13}{4}, 4)$ d. $(3, \frac{4}{3})$
- (iii) directrix
 - a. $x = \frac{11}{4}$ b. $y = \frac{11}{4}$ c. $x = \frac{4}{11}$ d. $y = \frac{4}{11}$

Sol. We have, the equation of parabola $y^2 - 8y - x + 19 = 0$

$$y^2 - 8y - x + 19 = 0 \Rightarrow y^2 - 8y = x - 19$$

$$\Rightarrow y^2 - 8y + 16 = x - 19 + 16 \Rightarrow (y - 4)^2 = (x - 3) \dots(i)$$

Shifting the origin to the point $(3, 4)$ without rotating the axes and denoting the new coordinates with respect to these new axes by X and Y , we have

$$X = x - 3 \quad \dots(ii)$$

$$Y = y - 4$$

Using these relations, Eq. (i) reduces to $Y^2 = X \quad \dots(iii)$

This is of the form $Y^2 = 4aX$. On comparing, we get $4a = 1$ or $a = 1/4$

(i) **Vertex**

The coordinates of the vertex with respect to the new axes are $(X = 0, Y = 0)$.

So, the coordinates of the vertex with respect to the old axes are $(3, 4)$. [putting $X = 0, Y = 0$ in Eq. (ii)]

(ii) **Focus**

The coordinates of the focus with respect to the new axes are $(X = a, Y = 0)$, i.e. $(X = \frac{1}{4}, Y = 0)$.

So, the coordinates of the focus with respect to the old axes are $(\frac{13}{4}, 4)$. [putting $X = \frac{1}{4}$ and $Y = 0$ in Eq. (ii)]

(iii) **Directrix**

The equation of the directrix with respect to the new axes is $X = -a$ i.e. $X = -\frac{1}{4}$

So, the equation of the directrix with respect to the old axes is $x = \frac{-1}{4} + 3 \Rightarrow x = \frac{11}{4}$ [putting $x = \frac{-1}{4}$ in Eq. (ii)]

Position of a Point with Respect to a Parabola

Let $S \equiv y^2 - 4ax = 0$ be the equation of a parabola, then a point $P(x_1, y_1)$ in the XY -plane lies

- (i) on the parabola, if $S_1 = 0$
 - (ii) outside the parabola, if $S_1 > 0$
 - (iii) inside the parabola, if $S_1 < 0$
- where, $S_1 \equiv y_1^2 - 4ax_1$

EXAMPLE 3. The portion of point $(1, 4)$ with respect to the parabola $y^2 + 9 - 6y = 5x$, is

- a. on curve/parabola b. outside parabola
- c. inside parabola d. None of these

Sol. Let $S = y^2 + 9 - 6y - 5x$
 Now, point (1, 4) lies on S .
 Thus, $S_1 = (4)^2 + 9 - 6(4) - 5(1) = 16 + 9 - 24 - 5$
 $= 25 - 29 = -4 < 0$
 Hence, the point lies inside the parabola.

Equation of Chord

The equation of chord joining the points (x_1, y_1) and (x_2, y_2) on the parabola $y^2 = 4ax$ is

$$y(y_1 + y_2) = 4ax + y_1y_2$$

Condition for the Chord to be a Focal Chord

The chord joining the points $(at_1^2, 2at_1)$ and $(at_2^2, 2at_2)$ passes through focus provided $t_1t_2 = -1$

Tangents and Normals to the Parabola

Equation of tangent to the parabola $y^2 = 4ax$

- (i) at (x_1, y_1) is $yy_1 = 2a(x + x_1)$
- (ii) at $(at^2, 2at)$ is $ty = x + at^2$
- (iii) If m is the slope of tangent to the parabola $y^2 = 4ax$, then its equation is $y = mx + \frac{a}{m}$. Point of contact is $(\frac{a}{m^2}, \frac{2a}{m})$.

Equation of normal to the parabola $y^2 = 4ax$

- (i) at (x_1, y_1) is $y - y_1 = -\frac{y_1}{2a}(x - x_1)$
- (ii) at $(at^2, 2at)$ is $y + tx = 2at + at^3$
- (iii) If m is the slope of normal to the parabola $y^2 = 4ax$, then its equation is given as $y = mx - 2am - m^3$.

EXAMPLE 4. Let $P(2, 2)$ is a point on the parabola $y^2 = 2x$ and A is its vertex. If Q is another point on the parabola such that PQ is perpendicular to AP , then what is the length of PQ ?

- a. $\sqrt{2}$ b. $2\sqrt{2}$ c. $4\sqrt{2}$ d. $6\sqrt{2}$

Sol. Equation of parabola is $y^2 = 2x$.

So, the coordinates of vertex are $A(0, 0)$.
 Let (x_1, y_1) be the coordinates of the point Q .
 $\therefore y_1^2 = 2x_1$... (i)
 and slope of $PQ = \frac{y_1 - 2}{x_1 - 2}$,
 Also, slope of $AP = \frac{2 - 0}{2 - 0} = 1$

So, the PQ and AP are perpendicular to each other
 $\therefore \left(\frac{y_1 - 2}{x_1 - 2}\right) = -1 \Rightarrow y_1 - 2 = -x_1 + 2 \Rightarrow x_1 + y_1 = 4$... (ii)

From Eqs. (i) and (ii), $y_1 = -4$ and 2
 So, the coordinates of point Q are $(8, -4)$.
 \therefore Required distance, $PQ = \sqrt{(8 - 2)^2 + (-4 - 2)^2}$
 $= \sqrt{36 + 36} = \sqrt{72} = 6\sqrt{2}$

ELLIPSE

An ellipse is the locus of that point which moves in a plane such that the ratio of its distance from a fixed point (focus) to a fixed straight line (directrix) is constant and less than unity. This constant ratio is called eccentricity and denoted by e .

Or

The locus of a point whose sum of distance from two fixed points remains constant is called an ellipse.

$$\frac{PS}{PM} = e, PS^2 = e^2 PM^2, (x - ae)^2 + (y - 0)^2 = e^2 \left(\frac{a}{e} - x\right)^2$$

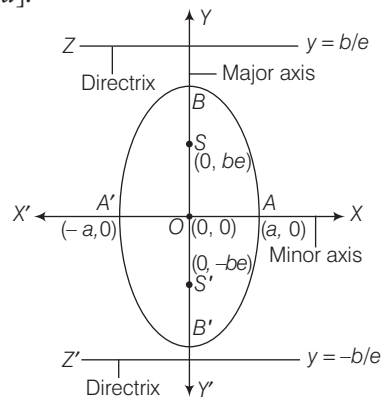

$$\Rightarrow \frac{x^2}{a^2} + \frac{y^2}{a^2(1 - e^2)} = 1 \Rightarrow \frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

Where, $b^2 = a^2(1 - e^2), b < a$

This is the equation of ellipse in standard form. Here, $AA' = 2a$ and $BB' = 2b$ are called major and minor axes, respectively.

Another Form of Ellipse

The another equation of the ellipse is $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ [where, $b > a$].

Here, $AA' = 2a$ and $BB' = 2b$ are minor and major axes, respectively.

Some Important Results Related to Ellipse

	$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1, a > b$	$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1, a < b$
Coordinates of the centre	(0, 0)	(0, 0)
Coordinates of the vertices	(a, 0) and (-a, 0)	(0, b) and (0, -b)
Coordinates of foci	(ae, 0) and (-ae, 0)	(0, be) and (0, -be)
Length of major axis	2a	2b
Length of minor axis	2b	2a
Equation of the major axis	y = 0	x = 0
Equation of the minor axis	x = 0	y = 0
Equation of the directrices	$x = \frac{a}{e}$ and $x = -\frac{a}{e}$	$y = \frac{b}{e}$ and $y = -\frac{b}{e}$
Eccentricity	$e = \sqrt{1 - \frac{b^2}{a^2}}$	$e = \sqrt{1 - \frac{a^2}{b^2}}$
Length of latusrectum	$\frac{2b^2}{a}$	$\frac{2a^2}{b}$
Focal distances of a point (x, y)	$a \pm ex$	$b \pm ey$
Extremities of latusrectum	$\left(\pm ae, \pm \frac{b^2}{a}\right)$	$\left(\pm \frac{a^2}{b}, \pm be\right)$

Note If the centre of ellipse is at (h, k) and its axis are parallel to the coordinate axes, then the equation of ellipse is given as $\frac{(x-h)^2}{a^2} + \frac{(y-k)^2}{b^2} = 1$

EXAMPLE 5. The equation of the ellipse, whose centre is at origin (0, 0), foci (±1, 0) and eccentricity $\frac{1}{2}$, is

- a. $\frac{x^2}{3} + \frac{y^2}{4} = 1$
- b. $\frac{x^2}{4} + \frac{y^2}{3} = 1$
- c. $\frac{x^2}{3} + \frac{y^2}{4} = 12$
- d. $x^2 + y^2 = 12$

Sol. Here, foci are (±1, 0) and eccentricity, $e = \frac{1}{2}$
 $\therefore ae = 1$ and $e = \frac{1}{2} \Rightarrow a = 2$
 $\therefore b^2 = a^2(1 - e^2) \Rightarrow b^2 = 4\left(1 - \frac{1}{4}\right) = 4 \times \frac{3}{4} = 3$
 So, the equation of required ellipse is $\frac{x^2}{4} + \frac{y^2}{3} = 1$.

Position of a Point with Respect to an Ellipse

If $S \equiv \frac{x^2}{a^2} + \frac{y^2}{b^2} - 1 = 0$, is the equation of an ellipse, then a point $P(x_1, y_1)$ in the XY-plane lies

- (i) on the ellipse, if $S_1 = 0$

- (ii) outside the ellipse, if $S_1 > 0$

- (iii) inside the ellipse, if $S_1 < 0$ where, $S_1 \equiv \frac{x_1^2}{a^2} + \frac{y_1^2}{b^2} - 1$

Equation of Ellipse in Parametric Form

Parametric equation of ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ is

$x = a \cos \theta, y = b \sin \theta$ and parametric coordinates of point lying on it is given by $(a \cos \theta, b \sin \theta)$. The angle θ is called the eccentric angle of the point $(a \cos \theta, b \sin \theta)$ on the ellipse.

Equation of Chord

The equation of the chord of the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$, whose mid-point be (x_1, y_1) is $T = S_1$,

where $T = \frac{xx_1}{a} + \frac{yy_1}{b} - 1, S_1 = \frac{x_1^2}{a^2} + \frac{y_1^2}{b^2} - 1$.

The equation of the chord joining the points $P(a \cos \theta_1, b \sin \theta_1)$ and $Q(a \cos \theta_2, b \sin \theta_2)$ is

$$\frac{x}{a} \cos\left(\frac{\theta_1 + \theta_2}{2}\right) + \frac{y}{b} \sin\left(\frac{\theta_1 + \theta_2}{2}\right) = \cos\left(\frac{\theta_1 - \theta_2}{2}\right)$$

Tangents and Normals to the Ellipse

Equation of tangent to the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$

- (i) at the point (x_1, y_1) is $\frac{xx_1}{a^2} + \frac{yy_1}{b^2} = 1$.
- (ii) having slope m is $y = mx \pm \sqrt{a^2 m^2 + b^2}$ and coordinates of point of contacts are $\left(\pm \frac{a^2 m}{\sqrt{a^2 m^2 + b^2}}, \pm \frac{b^2}{\sqrt{a^2 m^2 + b^2}}\right)$.

Equation of normal to the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$

- (i) at the point (x_1, y_1) is $\frac{a^2 x}{x_1} - \frac{b^2 y}{y_1} = a^2 - b^2$.
- (ii) having slope m is $y = mx \pm \frac{m(a^2 - b^2)}{\sqrt{a^2 + b^2 m^2}}$

HYPERBOLA

A hyperbola is the locus of that point which moves in a plane such that the ratio of its distance from a fixed point (focus) to a fixed straight line (directrix) is constant and greater than unity. This constant ratio is called eccentricity and denoted by e .

Or

The locus of points difference of whose distance from two fixed points remain constant.

$$\frac{PS}{PM} = e \Rightarrow PS^2 = e^2 PM^2$$

$$\Rightarrow (x - ae)^2 + y^2 = e^2 \left(x - \frac{a}{e}\right)^2$$

$$\Rightarrow x^2(e^2 - 1) - y^2 = a^2(e^2 - 1)$$

$$\Rightarrow \frac{x^2}{a^2} - \frac{y^2}{a^2(e^2 - 1)} = 1 \Rightarrow \frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$$

where, $b^2 = a^2(e^2 - 1)$

This equation is called the equation of hyperbola in standard form.

EXAMPLE 6. Find the equation of the hyperbola, the length of whose latusrectum is 8 and eccentricity is $3/\sqrt{5}$.

- a. $\frac{x^2}{25} - \frac{y^2}{15} = 1$
- b. $\frac{x^2}{25} - \frac{y^2}{20} = 1$
- c. $\frac{x^2}{20} - \frac{y^2}{15} = 1$
- d. None of these

Sol. Let the equation of the hyperbola be $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1 \dots(i)$

Then, length of the latusrectum = 8

$$\Rightarrow \frac{2b^2}{a} = 8 \Rightarrow b^2 = 4a \Rightarrow a^2(e^2 - 1) = 4a$$

$$\Rightarrow a(e^2 - 1) = 4$$

$$\Rightarrow a\left(\frac{9}{5} - 1\right) = 4 \Rightarrow a = 5$$

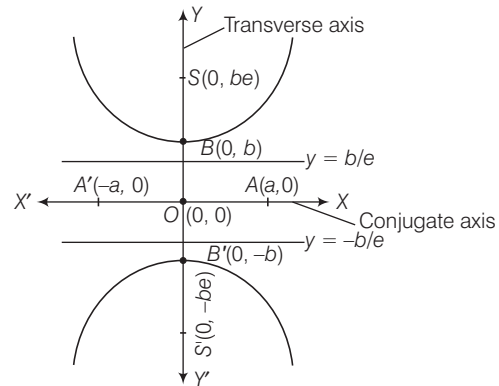

On putting $a = 5$ in $b^2 = 4a$, we get $b^2 = 20$

Hence, the equation of the required hyperbola is

$$\frac{x^2}{25} - \frac{y^2}{20} = 1.$$

Conjugate Hyperbola

The hyperbola whose transverse and conjugate axes are respectively the conjugate and transverse axes of the given hyperbola is called the conjugate hyperbola of the given hyperbola. The equation of conjugate hyperbola of the given hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$ is $-\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$.

Rectangular Hyperbola

It is a particular kind of hyperbola which has its transverse and conjugate axis of equal length. It is also known as equilateral hyperbola. The eccentricity of rectangular hyperbola is $\sqrt{2}$.

Some Important Results Related to Hyperbola and Conjugate Hyperbola

	Hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$	Conjugate hyperbola $-\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$
Coordinates of the centre	(0, 0)	(0, 0)
Coordinates of the vertices	(a, 0) and (-a, 0)	(0, b) and (0, -b)
Coordinates of foci	(±ae, 0)	(0, ±be)
Length of the transverse axis	2a	2b
Length of the conjugate axis	2b	2a
Equations of the directrices	$x = \pm \frac{a}{e}$	$y = \pm \frac{b}{e}$
Eccentricity	$e = \sqrt{\frac{a^2 + b^2}{a^2}}$ or $b^2 = a^2(e^2 - 1)$	$e = \sqrt{\frac{b^2 + a^2}{b^2}}$ or $a^2 = b^2(e^2 - 1)$
Length of the latusrectum	$\frac{2b^2}{a}$	$\frac{2a^2}{b}$
Equation of the transverse axis	$y = 0$	$x = 0$
Equation of the conjugate axis	$x = 0$	$y = 0$
Focal distance	$ex = \pm a$	$ey = \pm b$

Note If centre of hyperbola is at point (h, k) and its axes are parallel to the coordinate axes, then the equation of hyperbola is given as $\frac{(x-h)^2}{a^2} - \frac{(y-k)^2}{b^2} = 1$

Equation of Hyperbola in Parametric Form

Parametric equation of the hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$, is

$x = a \sec \theta, y = b \tan \theta$ and parametric coordinates of point lying on it is given by $(a \sec \theta, b \tan \theta)$.

Position of a Point with Respect to a Hyperbola

Let the equation of hyperbola be $S \equiv \frac{x^2}{a^2} - \frac{y^2}{b^2} - 1 = 0$

Then, the point $P(x_1, y_1)$ lies

- (i) on the hyperbola, if $S_1 = 0$
- (ii) outside the hyperbola, if $S_1 > 0$
- (iii) inside the hyperbola, if $S_1 < 0$

where, $S_1 \equiv \frac{x_1^2}{a^2} - \frac{y_1^2}{b^2} - 1$

Intersection of a Line and a Hyperbola

The straight line $y = mx + c$ will cut the hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$ in two points which may be real, coincident or imaginary, as $c^2 > 1 = 1 < a^2 m^2 - b^2$.

Auxiliary Circle of Hyperbola

Let $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$ be the hyperbola, then equation of the auxiliary circle is $x^2 + y^2 = a^2$.

Let $\angle QCN = \theta$. Here, P and Q are the corresponding points on the hyperbola and the auxiliary circle ($0 \leq \theta < 2\pi$).

Equation of Chord

The equation of chord joining the points $P \equiv (a \sec \theta_1, b \tan \theta_1)$ and $Q \equiv (a \sec \theta_2, b \tan \theta_2)$ is

$$\frac{x}{a} \cos \left(\frac{\theta_1 + \theta_2}{2} \right) - \frac{y}{b} \sin \left(\frac{\theta_1 + \theta_2}{2} \right) = \cos \left(\frac{\theta_1 - \theta_2}{2} \right)$$

Tangents and Normals

Equation of tangent to the hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$

- (i) at the point (x_1, y_1) is $\frac{xx_1}{a^2} - \frac{yy_1}{b^2} = 1$.
- (ii) having slope m is $y = mx \pm \sqrt{a^2 m^2 - b^2}$

Equation of normal to the hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$

- (i) at the point (x_1, y_1) is $\frac{a^2 x}{x_1} + \frac{b^2 y}{y_1} = a^2 + b^2$.
- (ii) having slope m is $y = mx \pm \frac{m(a^2 + b^2)}{\sqrt{a^2 - b^2 m^2}}$

EXAMPLE 7. If the eccentricity and length of latusrectum of a hyperbola are $\frac{\sqrt{13}}{3}$ and $\frac{10}{3}$ units respectively, what is the length of the transverse axis?

- a. $\frac{7}{2}$ units b. 12 units c. $\frac{15}{2}$ units d. $\frac{15}{4}$ units

Sol. Here, $e = \frac{\sqrt{13}}{3}$ and length of latusrectum = $\frac{10}{3}$

$$\Rightarrow \frac{2b^2}{a} = \frac{10}{3} \Rightarrow b^2 = \frac{5a}{3}$$

We know that, $b^2 = a^2(e^2 - 1) \Rightarrow \frac{5a}{3} = a^2 \left(\frac{13}{9} - 1 \right)$

$$\Rightarrow \frac{5a}{3} = \frac{4a^2}{9} \Rightarrow a = \frac{15}{4}$$

$$\therefore \text{Length of transverse axis} = 2a = \frac{2 \times 15}{4} = \frac{15}{2} \text{ units}$$

> PRACTICE EXERCISE

- The two ends of latusrectum of a parabola are the points (3, 6) and (-5, 6), then the focus is
 (a) (1, 6) (b) (-1, 6)
 (c) (1, -6) (d) (-1, -6)
- The parametric representation $(2 + t^2, 2t + 1)$ represents
 (a) a parabola with focus at (2, 1)
 (b) a parabola with vertex at (2, 1)
 (c) an ellipse with centre at (2, 1)
 (d) None of the above
- The equation $y^2 - 2x - 2y + 5 = 0$ represents
 (a) circle centred at (1, 1)
 (b) parabola with directrix at $x = \frac{3}{2}$
 (c) parabola with focus at (1, 2)
 (d) parabola with directrix at $x = -\frac{1}{2}$
- If (0, 4) and (0, 2) are respectively, the vertex and focus of a parabola, then its equation is
 (a) $x^2 + 8y = 32$ (b) $y^2 + 8x = 32$
 (c) $x^2 - 8y = 32$ (d) $y^2 - 8x = 32$
- The coordinates of a point on the parabola $y^2 = 8x$, whose focal distance is 4, is
 (a) (2, 4) (b) (4, 2) (c) (-2, -4) (d) (4, -2)
- An equilateral triangle is inscribed in a parabola $y^2 = 4ax$, whose vertex is at the vertex of the parabola. The length of each side of the triangle is
 (a) $2a\sqrt{3}$ (b) $4a\sqrt{3}$ (c) $6a\sqrt{3}$ (d) $8a\sqrt{3}$
- In the parabola $y^2 = 4ax$, the length of chord passing through the vertex and inclined to the axis at an angle $\left(\frac{\pi}{4}\right)$ is
 (a) $2a\sqrt{2}$ (b) $\sqrt{2}a$ (c) $2a$ (d) $4a\sqrt{2}$
- Equation of the ellipse, whose focus is (6, 7), directrix is $x + y + 2 = 0$ and $e = 1/\sqrt{3}$ is
 (a) $5x^2 + 2xy + 5y^2 - 76x - 88y + 506 = 0$
 (b) $5x^2 - 2xy + 5y^2 - 76x - 88y + 506 = 0$
 (c) $5x^2 - 2xy + 5y^2 + 76x + 88y - 506 = 0$
 (d) None of the above
- The eccentricity of ellipse, if length of major axis is three times the length of minor axis, is
 (a) $\frac{1}{3}$ (b) $\frac{1}{\sqrt{3}}$ (c) $\frac{1}{\sqrt{2}}$ (d) $\frac{2\sqrt{2}}{3}$
- In an ellipse, the distance between its foci is 6 and its minor axis is 8. Then, its eccentricity is
 (a) $\frac{4}{5}$ (b) $\frac{1}{\sqrt{52}}$ (c) $\frac{3}{5}$ (d) $\frac{1}{2}$
- If e_1, e_2 be the eccentricities of ellipse $9x^2 + 4y^2 = 36$ and hyperbola $9x^2 - 4y^2 = 36$, respectively then
 (a) $e_1^2 + e_2^2 > 3$ (b) $e_1^2 + e_2^2 = 2$
 (c) $e_1^2 + e_2^2 > 4$ (d) $e_1^2 + e_2^2 < 3$
- In an ellipse, the distance between the foci is 8 and the distance between the directrices is 25. The length of major axis is
 (a) $10\sqrt{2}$ (b) $20\sqrt{2}$ (c) $30\sqrt{2}$ (d) $50\sqrt{2}$
- A circle is drawn with the two foci of an ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ at the end of the diameter. What is the equation of the circle?
 (a) $x^2 + y^2 = a^2 + b^2$ (b) $x^2 + y^2 = a^2 - b^2$
 (c) $x^2 + y^2 = 2(a^2 + b^2)$ (d) $x^2 + y^2 = 2(a^2 - b^2)$
- A man running around a race course notes that the sum of the distances of two flag posts from him is always 10 m and the distance between the flag posts is 8 m. The area of the path, he encloses in square metres is
 (a) 15π (b) 12π (c) 18π (d) 8π
- If the foci of the ellipse $\frac{x^2}{16} + \frac{y^2}{b^2} = 1$ and the hyperbola $\frac{x^2}{144} - \frac{y^2}{81} = \frac{1}{25}$ coincide, then the value of b^2 is
 (a) 1 (b) 5
 (c) 7 (d) 9
- The eccentricity of the hyperbola with latusrectum 12 and semi-conjugate axis $2\sqrt{3}$, is
 (a) 2 (b) 3 (c) $\frac{\sqrt{3}}{2}$ (d) $2\sqrt{3}$
- If e and e' be the eccentricities of a hyperbola and its conjugate, then $\frac{1}{e^2} + \frac{1}{e'^2}$ is equal to
 (a) 0 (b) 1
 (c) 2 (d) -1
- Equation of the hyperbola with eccentricity $\frac{3}{2}$ and foci at $(\pm 2, 0)$ is $5x^2 - 4y^2 = k^2$. What is the value of k ?
 (a) $\frac{4}{3}$ (b) $\frac{3}{4}$ (c) $\left(\frac{4}{3}\right)\sqrt{5}$ (d) $\left(\frac{3}{4}\right)\sqrt{5}$

- 19.** Consider the following statements
 I. The area of the ellipse $2x^2 + 3y^2 = 6$ is more than the area of the circle $x^2 + y^2 - 2x + 4y + 4 = 0$.
 II. The equation $3x^2 + 4y^2 - 18x + 16y + 43 = k$ represents an ellipse if $k < 0$.
 Which of the above statement(s) is/are correct?
 (a) Only I (b) Only II
 (c) Both I and II (c) None of these

Directions (Q. Nos. 20-21) The parametric equation of the hyperbola are $x = 5 \sec \phi$ and $y = 3 \tan \phi$

- 20.** Distance between the foci is
 (a) $\sqrt{34}$ (b) $2\sqrt{34}$ (c) $4\sqrt{34}$ (d) None of these
- 21.** If $y = mx - 3$ is a tangent to the given hyperbola, then m is
 (a) $\frac{2\sqrt{3}}{5}$ (b) $\frac{2}{5}$ (c) $\frac{3}{5}$ (d) $\frac{3\sqrt{2}}{5}$

Directions (Q. Nos. 22-23) If a hyperbola passes through the foci of the ellipse $\frac{x^2}{25} + \frac{y^2}{16} = 1$ and its transverse and conjugate axis coincide with major and minor axes of the ellipse and product of the eccentricities is 1, then

- 22.** The equation of hyperbola is
 (a) $\frac{x^2}{9} - \frac{y^2}{16} = 1$ (b) $\frac{x^2}{9} - \frac{y^2}{25} = 1$
 (c) $-\frac{x^2}{9} + \frac{y^2}{25} = 1$ (d) $\frac{x^2}{16} - \frac{y^2}{25} = 1$
- 23.** The focus of hyperbola is
 (a) (5, 0) (b) $(5\sqrt{3}, 0)$ (c) (0, 5) (d) $(0, 5\sqrt{3})$

Directions (Q. Nos. 24-26) Consider the equation of hyperbola $3x^2 - 24x + 40y - 4y^2 - 88 = 0$.

- 24.** The eccentricity of the hyperbola is
 (a) $2\sqrt{7}$ (b) $\frac{\sqrt{7}}{2}$ (c) 2 (d) $\frac{\sqrt{13}}{2}$
- 25.** The equation of directrices is
 (a) $x = 5 \pm 2\sqrt{\frac{12}{7}}$ (b) $x = 5 \pm \sqrt{3}$
 (c) $x = 4 \pm 2\sqrt{\frac{12}{7}}$ (d) $x = 4 \pm \sqrt{3}$
- 26.** The equation of hyperbola, whose latusrectum is 6 and eccentricity is same as eccentricity of given hyperbola is
 (a) $\frac{x^2}{18} - \frac{y^2}{10} = 1$ (b) $\frac{x^2}{20} - \frac{y^2}{16} = 1$
 (c) $\frac{x^2}{16} - \frac{y^2}{12} = 1$ (d) None of these

Directions (Q. Nos.27-29) $P : y^2 = 8x$; $E : \frac{x^2}{4} + \frac{y^2}{15} = 1$

- 27.** Equation of a tangent common to both the parabola P and the ellipse E is
 (a) $x - 2y + 8 = 0$ (b) $x \pm 2y + 8 = 0$
 (c) $x + 2y - 8 = 0$ (d) $x \pm 2y - 8 = 0$
- 28.** Equation of the normal at the point of contact of the common tangent, which makes an acute angle with the positive direction of X -axis, to the parabola P is
 (a) $2x + y = 24$ (b) $2x + y + 24 = 0$
 (c) $2x + y = 48$ (d) $2x + y + 48 = 0$
- 29.** Point of contact of a common tangent to P and E on the ellipse is
 (a) $\left(\frac{1}{2}, \frac{15}{4}\right)$ (b) $\left(\pm\frac{1}{2}, \frac{15}{4}\right)$
 (c) $\left(\frac{1}{2}, -\frac{15}{4}\right)$ (d) $\left(-\frac{1}{2}, \pm\frac{15}{4}\right)$

Directions (Q. Nos. 30-33) Consider the equation of parabola $25 [(x - 2)^2 + (y - 4)^2] = (4x - 3y + 12)^2$

- 30.** The coordinates of the focus are
 (a) (3, -2) (b) (2, 4) (c) (-1, 1) (d) None of these
- 31.** Length of latusrectum is

- 32.** The equation of the axis is
 (a) $4x + 3y + 15 = 0$ (b) $4x + 3y + 10 = 0$
 (c) $3x + 4y - 22 = 0$ (d) None of these
- 33.** The equation of the latusrectum is
 (a) $4x - 3y + 4 = 0$ (b) $4x - 3y + 8 = 0$
 (c) $4x + 3y + 7 = 0$ (d) None of these

Directions (Q. Nos. 34-37) Consider the equation of ellipse $12x^2 + 4y^2 + 24x - 16y + 25 = 0$

- 34.** The centre of the ellipse is
 (a) (4, -1) (b) (2, 1) (c) (-1, 2) (d) (-3, 2)
- 35.** The length of major and minor axes are
 (a) 2, 4 (b) $\sqrt{3}, 1$ (c) $2, 2\sqrt{3}$ (d) 4, 6
- 36.** The eccentricity of the ellipse is
 (a) $\sqrt{\frac{1}{3}}$ (b) $\frac{3}{4}$ (c) $\sqrt{\frac{2}{3}}$ (d) $\frac{1}{4}$
- 37.** Coordinates of the foci are
 (a) $\left(0, 1 \pm \frac{1}{\sqrt{3}}\right)$ (b) $\left(0, 2 \pm \sqrt{\frac{1}{3}}\right)$
 (c) $\left(1, 2 \pm \frac{1}{\sqrt{2}}\right)$ (d) $\left(-1, 2 \pm \frac{1}{\sqrt{2}}\right)$

HINTS AND SOLUTIONS

1. (b) Focus is the mid-point latusrectum. Let the two end points of latusrectum be $L_1(3, 6)$ and $L_2(-5, 6)$.

$$\therefore \text{Focus, } x = \frac{3+(-5)}{2} = -1,$$

$$y = \frac{6+6}{2} = 6$$

$$\text{Focus} = (x, y) = (-1, 6)$$

2. (b) Let $x = 2 + t^2, y = 2t + 1$
Eliminating t , we get
 $(y - 1)^2 = 4(x - 2)$
which is a parabola with vertex at $(2, 1)$.

3. (b) Given equation can be rewritten as
 $(y - 1)^2 = 2(x - 2)$
or $Y^2 = 4AX$, where $Y = y - 1$
 $X = x - 2, 4A = 2$
i.e. Directrix is $X = -A \Rightarrow x - 2 = -\frac{1}{2}$
 $\therefore x = -\frac{1}{2} + 2 = \frac{3}{2}$

4. (a) $AS = 2a$. Vertex $(0, 4)$ lies on Y -axis. The parabola is of the form $X^2 = -4AY$ (downward parabola) as focus is below the vertex.

$$(x - 0)^2 = -4 \times 2(y - 4)$$

$$\therefore x^2 + 8y = 32$$

5. (a) Given, $a + x = 4$ or $2 + x = 4$
 $\therefore x = 2$
On putting $x = 2$ in $y^2 = 8x$, we get
 $y = \pm 4$

6. (d) Let $\triangle OAB$ be the equilateral triangle.

Then, $\angle COB = 30^\circ$
Let $OA = OB = AB = b$
Then, B is $B(b \cos 30^\circ, b \sin 30^\circ)$
i.e. $B\left(\frac{\sqrt{3}}{2}b, \frac{1}{2}b\right)$

$$B\left(\frac{\sqrt{3}}{2}b, \frac{1}{2}b\right) \text{ lies on } y^2 = 4ax$$

$$\therefore \frac{b^2}{4} = 2\sqrt{3}ab \Rightarrow b = 8\sqrt{3}a$$

7. (d) Let AP be the chord of length p , making an angle of $\left(\frac{\pi}{4}\right)$ with the axis.

Then, coordinates of P are
 $P\left(p \cos \frac{\pi}{4}, p \sin \frac{\pi}{4}\right)$, i.e. $\left(\frac{p}{\sqrt{2}}, \frac{p}{\sqrt{2}}\right)$
Since, this point lies on $y^2 = 4ax$,
we have $\frac{p^2}{2} = 4a \cdot \frac{p}{\sqrt{2}} \Rightarrow p = 4a\sqrt{2}$

8. (b) By the definition, $SP = e \cdot PM$
$$\sqrt{\{(x - 6)^2 + (y - 7)^2\}}$$

$$= \frac{1}{\sqrt{3}} \cdot \frac{x + y + 2}{\sqrt{(1 + 1)}}$$

On squaring both sides, we get
 $6(x^2 + y^2 - 12x - 14y + 85)$
 $= x^2 + y^2 + 4 + 2xy + 4y + 4x$
 $\therefore 5x^2 + 5y^2 - 76x - 88y - 2xy + 506 = 0$

9. (d) Given, $2a = 3(2b)$
 $\therefore \frac{b^2}{a^2} = \frac{1}{9}$
 $\Rightarrow e^2 = \sqrt{1 - \frac{b^2}{a^2}} = \sqrt{1 - \frac{1}{9}} = \sqrt{\frac{8}{9}}$
 $\therefore e = \frac{2\sqrt{2}}{3}$

10. (c) Distance between foci $= 2ae = 6$
 $\Rightarrow a = 3/e$,
Minor axis $= 2b = 8 \Rightarrow b = 4$
Now, $b^2 = a^2(1 - e^2) \Rightarrow 16 = \frac{9}{e^2}(1 - e^2)$
 $\Rightarrow 16e^2 = 9(1 - e^2) \Rightarrow e = 3/5$

11. (a) $\frac{x^2}{4} + \frac{y^2}{9} = 1, \frac{x^2}{4} - \frac{y^2}{9} = 1$
Major axes along Y -axis, $a_1^2 = 9, b_1^2 = 4$
Transverse axes along X -axis
 $a_2^2 = 4, b_2^2 = 9$
 $e_1^2 = 1 - \frac{b_1^2}{a_1^2} = 1 - \frac{4}{9} = \frac{5}{9}$
 $e_2^2 = 1 + \frac{b_2^2}{a_2^2} = 1 + \frac{9}{4} = \frac{13}{4}$

$$e_1^2 + e_2^2 = \frac{5}{9} + \frac{13}{4} = \frac{137}{36} > 3 \text{ but } < 4$$

12. (a) $2ae = 8, \frac{2a}{e} = 25 \Rightarrow 4a^2 = 200$
 $\therefore a = 5\sqrt{2}$
 $\therefore 2a = 10\sqrt{2}$

13. (b) \therefore Foci of an ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ are
 $(ae, 0)$ and $(-ae, 0)$. Equation of circle with centre $(0, 0)$ and radius ae is
 $x^2 + y^2 = (ae)^2$ [where, $(ae)^2 = a^2 - b^2$]
 $\therefore x^2 + y^2 = a^2 - b^2$

14. (a) Clearly, the race course will be an ellipse with the flag posts as its foci. If a and b are the semi-major and semi-minor axes of the ellipse, then
 $2a = 10$ and $2ae = 8$
 $\therefore a = 5, e = \frac{4}{5}$ and $b^2 = a^2(1 - e^2) = 9$
 \therefore Area of the ellipse
 $= \pi ab = \pi \cdot 5 \cdot 3 = 15\pi$ sq m

15. (c) For hyperbola,
 $e^2 = 1 + \frac{b^2}{a^2} = 1 + \frac{81}{144} = \frac{225}{144}$
 $\therefore e = \frac{15}{12} = \frac{5}{4}$, i.e. $e > 1$

Also, $a^2 = \frac{144}{25}$
Hence, the foci are $(\pm ae, 0)$
i.e. $\left(\pm \frac{12}{5} \cdot \frac{5}{4}, 0\right) = (\pm 3, 0)$

Now, the foci coincide, therefore for ellipse
 $ae = 3$ or $a^2e^2 = 9 \Rightarrow a^2\left(1 - \frac{b^2}{a^2}\right) = 9$
 $\Rightarrow a^2 - b^2 = 9 \Rightarrow 16 - 9 = b^2$
 $\therefore b^2 = 7$

16. (a) We have, $2 \cdot \frac{b^2}{a} = 12$ and $b = 2\sqrt{3}$
 $\therefore a = 2$
 $\therefore e^2 = 1 + \frac{b^2}{a^2} \Rightarrow e = 2$

17. (b) For the hyperbola, $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$
or $e^2 = 1 + \frac{b^2}{a^2} = \frac{a^2 + b^2}{a^2}$

For conjugate hyperbola,
 $\frac{x^2}{a^2} - \frac{y^2}{b^2} = -1$ or $\frac{y^2}{b^2} - \frac{x^2}{a^2} = 1$
 $\therefore e'^2 = 1 + \frac{a^2}{b^2} = \frac{a^2 + b^2}{b^2}$
 $\therefore \frac{1}{e^2} + \frac{1}{e'^2} = \frac{a^2 + b^2}{a^2 + b^2} = 1$

- 18.** (c) Given equation of hyperbola $5x^2 - 4y^2 = k^2 \Rightarrow \frac{x^2}{\frac{k^2}{5}} - \frac{y^2}{\frac{k^2}{4}} = 1$
 $\therefore a = \frac{k}{\sqrt{5}}$ and $b = \frac{k}{2}$
 The eccentricity and foci are $\frac{3}{2}$ and $(\pm 2, 0)$, respectively.
 $\therefore e = \frac{3}{2}$ and $\pm ae = 2$
 $\Rightarrow \frac{k}{\sqrt{5}} \cdot \frac{3}{2} = 2 \Rightarrow k = \frac{4}{3}\sqrt{5}$
- 19.** (a) I. Given ellipse is $\frac{x^2}{3} + \frac{y^2}{2} = 1$,
 whose area is $= \pi\sqrt{3} \cdot \sqrt{2} = \pi\sqrt{6}$
 Circle is $x^2 + y^2 - 2x + 4y + 4 = 0$
 or $(x-1)^2 + (y+2)^2 = 1$
 Its radius is 1. Hence, area is π .
 So, Statement I is true.
 II. The given equation can be written as $3(x-3)^2 + 4(y+2)^2 = k$
 So, no locus for $k < 0$
 Hence, Statement II is false.
- 20.** (b) $\sec \phi = \frac{x}{5}, \tan \phi = \frac{y}{3}$
 $\therefore \frac{x^2}{25} - \frac{y^2}{9} = 1$
 This gives, $a^2 = 25, b^2 = 9$
 $\therefore a = 5$ and $b = 3$,
 $e = \sqrt{\frac{a^2 + b^2}{a^2}} = \sqrt{\frac{25 + 9}{25}} = \frac{\sqrt{34}}{5}$
 Distance between the foci $= 2ae$
 $= 2 \times 5 \times \frac{\sqrt{34}}{5} = 2\sqrt{34}$
- 21.** (d) $y = mx - 3$ will be a tangent to the hyperbola $\frac{x^2}{25} - \frac{y^2}{9} = 1$, if
 $(-3)^2 = 25m^2 - 9$
 $\Rightarrow 9 + 9 = 25m^2 \Rightarrow m = \sqrt{\frac{18}{25}} = \frac{3\sqrt{2}}{5}$
- 22.** (a) Eccentricity of ellipse $= \sqrt{\frac{25-16}{25}} = \frac{3}{5}$
 \therefore Eccentricity of hyperbola $= \frac{5}{3}$
 Foci of ellipse $(\pm 3, 0)$.
 \therefore Equation of hyperbola $\frac{x^2}{9^2} - \frac{y^2}{b^2} = 1$
 where, $b^2 = 9(e^2 - 1)$
 $= 9\left(\frac{25}{9} - 1\right) = 16$
 \therefore Equation of hyperbola is $\frac{x^2}{9} - \frac{y^2}{16} = 1$
- 23.** (a) Focus of hyperbola is $(\pm 3 \times \frac{5}{3}, 0) = (\pm 5, 0)$

- Sol.* (Q. Nos. 24-26) The given hyperbola can be written as $3(x-4)^2 - 4(y-5)^2 = 36$
 or $\frac{(x-4)^2}{12} - \frac{(y-5)^2}{9} = 1$
 $\Rightarrow \frac{X^2}{12} - \frac{Y^2}{9} = 1$... (i)
 where, $X = x - 4, Y = y - 5$
- 24.** (b) From Eq. (i), we have $a^2 = 12$ and $b^2 = 9$
 $\therefore e = \frac{\sqrt{a^2 + b^2}}{a} = \frac{\sqrt{21}}{\sqrt{12}} = \frac{\sqrt{7}}{2}$
- 25.** (c) Equation of the directrices is given by $X = \pm \frac{a}{e} \Rightarrow x - 4 = \pm \frac{\sqrt{12}}{\sqrt{7}} \times 2$
 $\Rightarrow x = 4 \pm 2\sqrt{\frac{12}{7}}$
- 26.** (c) Let the equation be $\frac{x^2}{a_1^2} - \frac{y^2}{b_1^2} = 1$
 We have, $\frac{2b^2}{a} = 6 \Rightarrow b^2 = 3a$
 Now, $b^2 = a^2(e^2 - 1)$
 $\Rightarrow 3a = a^2\left(\frac{7}{4} - 1\right) \Rightarrow 3a = \frac{3a^2}{4} \Rightarrow a = 4$
 $\therefore b^2 = 3a = 3 \times 4 = 12$
 Hence, the equation of the hyperbola is $\frac{x^2}{16} - \frac{y^2}{12} = 1$
- 27.** (b) Equation of any tangent to the parabola $P: y^2 = 8x$ is $y = mx + \frac{2}{m}$
 where, m is the slope of tangent.
 Since, it touches $E: \frac{x^2}{4} + \frac{y^2}{15} = 1$
 $\left(\frac{2}{m}\right)^2 = 4m^2 + 15 \Rightarrow m = \pm \frac{1}{2}$
 Equations of the tangents are $x \pm 2y + 8 = 0$.
- 28.** (a) When $m = \frac{1}{2}$, the slope of the normal is -2 and equation of the normal to the parabola is $y = -2x - 2(2)(-2) - 2(-2)^3$
 $\Rightarrow 2x + y = 24$
- 29.** (d) Equation of the tangent at $(2\cos\theta, \sqrt{15}\sin\theta)$ on the ellipse E to the ellipse is $\frac{x}{2}\cos\theta + \frac{y}{\sqrt{15}}\sin\theta = 1$,
 if it represents the tangent $x - 2y + 8 = 0$, then $\frac{\cos\theta}{2} = \frac{\sin\theta}{-2\sqrt{15}} = \frac{-1}{8}$
 $\Rightarrow \cos\theta = -\frac{1}{4}, \sin\theta = \frac{\sqrt{15}}{4}$
 and the point of contact is $\left(-\frac{1}{2}, \frac{15}{4}\right)$.

Similarly, the point of contact of the other tangent is $\left(-\frac{1}{2}, -\frac{15}{4}\right)$.

- 30.** (b) The given equation of parabola can be written as $(x-2)^2 + (y-4)^2 = \left(\frac{4x-3y+12}{\sqrt{4^2 + (-3)^2}}\right)^2$
 \therefore The coordinates of focus are $(2, 4)$ and the equation of directrix is $4x - 3y + 12 = 0$
- 31.** (c) The distance of the focus from the directrix $= \frac{|4(2) - 3(4) + 12|}{\sqrt{4^2 + (-3)^2}} = \frac{8}{5}$
 \therefore The length of latusrectum $= 2 \times \frac{8}{5} = \frac{16}{5}$
- 32.** (c) Axis of parabola is perpendicular to the directrix.
 \therefore Equation of line perpendicular to $4x - 3y + 12 = 0$ is $3x + 4y + k = 0$.
 Since, $3x + 4y + k = 0$ passes through $(2, 4)$.
 $\therefore 3(2) + 4(4) + k = 0 \Rightarrow k = -22$
 \therefore Equation of axis is $3x + 4y - 22 = 0$
- 33.** (a) Equation of the latusrectum is parallel to the equation of directrix.
 So, equation of line parallel to $4x - 3y + 12 = 0$ is $4x - 3y + k = 0$
 Since, it passes through focus $(2, 4)$
 $\therefore 4(2) - 3(4) + k = 0 \Rightarrow k = 4$
 \therefore Required equation is $4x - 3y + 4 = 0$
- Sol.* (Q. Nos. 34-37) The given equation can be written as $12(x+1)^2 + 4(y-2)^2 = 3$
 or $\frac{(x+1)^2}{\frac{3}{4}} + \frac{(y-2)^2}{\frac{3}{4}} = 1$
- 34.** (c) Coordinates of centre of the ellipse are given by $x + 1 = 0$ and $y - 2 = 0$
 $\Rightarrow x = -1$ and $y = 2$
 \therefore Centre of the ellipse is $(-1, 2)$.
- 35.** (b) Let a and b the length of the semi-minor and semi-major axes, then $a^2 = \frac{1}{4}$ and $b^2 = \frac{3}{4}$
 \therefore Length of major axis $= 2b = 2 \times \sqrt{\frac{3}{4}} = \sqrt{3}$
 Length of minor axis $= 2a = 2 \times \sqrt{\frac{1}{4}} = 1$
- 36.** (c) Eccentricity $= \sqrt{1 - \frac{a^2}{b^2}} = \sqrt{1 - \frac{1}{3}} = \sqrt{\frac{2}{3}} = \sqrt{1 - \frac{1}{3}} = \sqrt{\frac{2}{3}}$

37. (d) We have, $be = \frac{\sqrt{3}}{2} \times \sqrt{\frac{2}{3}} = \frac{1}{\sqrt{2}}$
 Coordinates of foci are given by $x + 1 = 0, y - 2 = \pm be$
 Thus, foci are $\left(-1, 2 \pm \frac{1}{\sqrt{2}}\right)$.

38. (a) The given conic equation is $4x^2 + 9y^2 = 144 \Rightarrow \frac{x^2}{36} + \frac{y^2}{16} = 1$
 $a^2 = 36 \Rightarrow a = 6$ and $b^2 = 16 \Rightarrow b = 4$
 Thus, represent an ellipse, as $a > b$.
 Now, eccentricity, $b^2 = a^2(1 - e^2)$
 $\Rightarrow 16 = 36(1 - e^2)$
 $\Rightarrow \frac{4}{9} = 1 - e^2 \Rightarrow e = \frac{\sqrt{5}}{3}$

39. (b) The eccentricity of ellipse lies between 0 and 1.

40. (b) Since, the sum of focal distances of a point on the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ is equal to $2b$. When $b > a$.
 $\therefore a^2 = 4, b^2 = 9 \Rightarrow a = 2, b = 3$
 \therefore Sum of the focal distances = $2 \times 3 = 6$ units

41. (c)

42. (a) Given that,
 Foci of an ellipse = $(\pm 4, 0) = (\pm ae, 0)$
 $\Rightarrow ae = 4$... (i)
 and vertices of an ellipse = $(\pm 5, 0) = (\pm a, 0) \Rightarrow a = 5$... (ii)
 From Eqs. (i) and (ii), we get $e = \frac{4}{5}$... (iii)

Now, we have a relation $b^2 = a^2(1 - e^2)$
 $\Rightarrow b^2 = 25\left(1 - \frac{16}{25}\right) \Rightarrow b^2 = 9 \Rightarrow b = \pm 3$

\therefore Required equation of an ellipse, $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1 \Rightarrow \frac{x^2}{25} + \frac{y^2}{9} = 1$

43. (b) Given, equation of parabola is $y^2 + 2x = 0 \Rightarrow y^2 = -2x$
 which is of the form $y^2 = -4ax$.
 So, axis of the parabola is $y = 0$.

44. (b) Given equation of ellipse is $4x^2 + 9y^2 = 36 \Rightarrow \frac{x^2}{9} + \frac{y^2}{4} = 1$
 Here, $a^2 = 9$ and $b^2 = 4; (a > b)$
 \therefore Length of latusrectum = $\frac{2b^2}{a} = \frac{2 \times 4}{3} = \frac{8}{3}$

45. (b) Given, equation of hyperbola is $4x^2 - 9y^2 = 1 \Rightarrow \frac{x^2}{(1/4)} - \frac{y^2}{(1/9)} = 1$
 Here, $a^2 = \frac{1}{4}$ and $b^2 = \frac{1}{9}$

\therefore Foci of the hyperbola = $(\pm ae, 0)$
 $= \left(\pm a \frac{\sqrt{a^2 + b^2}}{a}, 0\right) = (\pm \sqrt{a^2 + b^2}, 0)$
 $= \left(\pm \sqrt{\frac{1}{4} + \frac{1}{9}}, 0\right) = \left(\pm \frac{\sqrt{13}}{6}, 0\right)$

46. (a) Let the coordinates of point P be (h, k) .

Now, according to given condition
 Distance between (h, k) and $(1, 2)$
 = Distance between (h, k) and $(-2, 3)$
 $\Rightarrow \sqrt{(h-1)^2 + (k-2)^2} = \sqrt{(h+2)^2 + (k-3)^2}$
 $\Rightarrow h^2 + 1 - 2h + k^2 + 4 - 4k = h^2 + 4 + 4h + k^2 + 9 - 6k$
 $\Rightarrow -2h - 4k + 5 = 4h - 6k + 13$
 $\Rightarrow 6h - 2k + 8 = 0 \Rightarrow 3h - k + 4 = 0$

So, the locus of P is $3x - y + 4 = 0$, which represent a straight line.

47. (c) We know that, length of major axes of an ellipse = $2a$
 and length of minor axes of an ellipse = $2b$

Given that,
 eccentricity of an ellipse = $4/5 = e$... (i)
 and length of latusrectum of an ellipse = 14.4 units
 $\Rightarrow \frac{2b^2}{a} = 14.4 \Rightarrow \frac{b^2}{a} = 7.2$
 $\Rightarrow b^2 = 7.2a$... (ii)

Since, eccentricity of an ellipse, $b^2 = a^2(1 - e^2)$
 $\Rightarrow 7.2a = a^2 \left[1 - \left(\frac{4}{5}\right)^2\right]$ [from Eqs. (i) and (ii)]
 $\Rightarrow 7.2a = a^2 \left(1 - \frac{16}{25}\right) \Rightarrow 7.2a = a^2 \times \frac{9}{25}$
 $\Rightarrow 9a^2 - 7.2 \times 25a = 0$
 $\Rightarrow 9a^2 - 36 \times 5a = 0 \Rightarrow 9a(a - 20) = 0$
 $\Rightarrow a = 20$ [$\because a \neq 0$]

Put the value of a in Eq. (ii), we get $b^2 = 7.2 \times 20 \Rightarrow b^2 = 72 \times 2 = 144$
 Hence, the sum of the major and minor axes = $2a + 2b = 2(20 + 12) = 64$ units

48. (c) Given, vertex of the parabola = $(0, 0)$ and focus of the parabola = $(0, -2)$

Let P be any point on the parabola, then equation directrix is $y - 2 = 0$
 \therefore Equation of parabola is $PS = PM$
 $\Rightarrow \sqrt{(x-0)^2 + (y+2)^2} = \frac{|y-2|}{\sqrt{1}}$
 $\Rightarrow (\sqrt{x^2 + (y+2)^2})^2 = |y-2|^2$
 $\Rightarrow x^2 = -8y$,
 which is the required equation of parabola.

49. (d) Equation of ellipse is $25x^2 + 16y^2 = 400 \Rightarrow \frac{x^2}{16} + \frac{y^2}{25} = 1$
 Here, $a^2 = 16$ and $b^2 = 25$
 \therefore Length of latusrectum = $\frac{2a^2}{b} = \frac{32}{5}$

50. (a) Let $P(x, y)$ be the required point on the parabola which is nearest to the focus.

Then, $D = \sqrt{(x-a)^2 + y^2}$
 $= \sqrt{(x-a)^2 + 4ax}$
 $= \sqrt{(x+a)^2} = (x+a)$

Now, distance will be shortest, when $x = 0$.

51. (c) Since, hyperbola passes through $(3\sqrt{5}, 1)$.

$\therefore \frac{(3\sqrt{5})^2}{a^2} - \frac{1}{b^2} = 1$
 $\Rightarrow \frac{45b^2 - a^2}{a^2b^2} = 1$... (i)

Also, $\frac{2b^2}{a} = \frac{4}{3} \Rightarrow 6b^2 = 4a$
 $\Rightarrow a = \frac{6b^2}{4}$... (ii)

On putting the value from Eq. (ii) in Eq. (i), we get

$45b^2 - \left(\frac{6b^2}{4}\right)^2 = \left(\frac{6b^2}{4}\right)^2 \cdot b^2$
 $\Rightarrow 45b^2 = \frac{36b^4}{16} [b^2 + 1]$
 $\Rightarrow b^4 + b^2 = 20$
 $\therefore b = 2$

$\therefore 2b = 4 =$ length of conjugate axis.

52. (a) We have, an ellipse $\frac{x^2}{25} + \frac{y^2}{9} = 1$

Clearly, its foci are $(4, 0)$ and $(-4, 0)$.
 $[\because \text{foci} = S(ae, 0), S'(ae, 0)]$

$\therefore PS + PS' = 2a =$ Major axis
 $\Rightarrow r + s = 2(5) = 10$ units

53. (b) Given, $\frac{x^2}{1/16} - \frac{y^2}{1/9} = 1$

\therefore Eccentricity, $e^2 = 1 + \frac{b^2}{a^2}$
 $= 1 + \frac{1/9}{1/16}$
 $= 1 + \frac{16}{9}$
 $\Rightarrow e = \frac{5}{3}$

19

THREE DIMENSIONAL GEOMETRY

In NDA exam, generally 3-6 questions are asked from this chapter which are based on finding coordinates of a point, direction ratios/cosine in different condition, equation of a line/plane/sphere, angle between planes/lines, radius/centre of sphere, image of a point, etc.

To represent a point in a space we use x , y and z -coordinates, it is known as three dimensional geometry. In 3-D, there are three mutually perpendicular straight lines XOX' , YOY' and ZOZ' called axes.

Coordinates of a Point in a Space

Three mutually perpendicular lines in space divide the space into 8 octants. Let the lines be XOX' , YOY' and ZOZ' intersecting at O . XOY is called the XY -plane, YOZ is called the YZ -plane, ZOX is called the ZX -plane and all three planes taken together are called the coordinate planes. If $P(x, y, z)$ is a point in space.

Then, $|x|$ = distance from YZ -plane,
 $|y|$ = distance from ZX -plane,
and $|z|$ = distance from XY -plane.

Distance Formula

(i) The distance between two points $P(x_1, y_1, z_1)$ and $Q(x_2, y_2, z_2)$ is given by

$$PQ = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2}$$

(ii) Three points $P(x_1, y_1, z_1)$, $Q(x_2, y_2, z_2)$ and $R(x_3, y_3, z_3)$ are collinear, if $PR = PQ + QR$

Note Let O be the origin and $P(x, y, z)$ be any point, then $OP = \sqrt{x^2 + y^2 + z^2}$.

Section Formulae

Let $P(x_1, y_1, z_1)$ and $Q(x_2, y_2, z_2)$ be two points in space and let R be a point on the line segment joining P and Q such that

- (i) It divides PQ internally in the ratio $m : n$. Then, the coordinate of R are

$$\left(\frac{mx_2 + nx_1}{m+n}, \frac{my_2 + ny_1}{m+n}, \frac{mz_2 + nz_1}{m+n} \right)$$

- (ii) PQ externally in the ratio $m : n (m \neq n)$. Then, the coordinates of R are

$$\left(\frac{mx_2 - nx_1}{m-n}, \frac{my_2 - ny_1}{m-n}, \frac{mz_2 - nz_1}{m-n} \right)$$

Note • Mid-point of $PQ = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}, \frac{z_1 + z_2}{2} \right)$

- If the ratio in which a point divides a line comes out to be positive, then it divides the line internally and if it comes out to negative, then it divides the line externally.

- If $A(x_1, y_1, z_1)$, $B(x_2, y_2, z_2)$ and $C(x_3, y_3, z_3)$ represents the vertices of a triangle, then the centroid of triangle is given by

$$G = \left(\frac{x_1 + x_2 + x_3}{3}, \frac{y_1 + y_2 + y_3}{3}, \frac{z_1 + z_2 + z_3}{3} \right)$$

EXAMPLE 1. Let $P(a, b, c)$, $Q(a+2, b+2, c-2)$ and $R(a+6, b+6, c-6)$ be collinear.

Consider the following statements

- R divides PQ internally in the ratio $3 : 2$.
- R divides PQ externally in the ratio $3 : 2$.
- Q divides PR internally in the ratio $1 : 2$.

Which of the above statement(s) is/are correct?

- a. Only I b. Only II c. I and III d. II and III

Sol. Since, $P(a, b, c)$, $Q(a+2, b+2, c-2)$ and $R(a+6, b+6, c-6)$ are collinear.

Also, $\frac{3(a+2) - 2(a)}{3-2} = a+6$

$$\frac{3(b+2) - 2b}{3-2} = b+6$$

and $\frac{3(c-2) - 2c}{3-2} = c-6$

So, R divides PQ externally in the ratio $3 : 2$.

Also, $\frac{(a+6) + 2a}{3} = a+2$

$$\frac{(b+6) + 2b}{3} = b+2 \quad \text{and} \quad \frac{(c-6) + 2c}{3} = c-2$$

Thus, Q divides PR internally in the ratio $1 : 2$.
Hence, Statements II and III are correct.

Area of Triangle

Let $A(x_1, y_1, z_1)$, $B(x_2, y_2, z_2)$ and $C(x_3, y_3, z_3)$ be the vertices of a triangle, then $\Delta = \sqrt{\Delta_x^2 + \Delta_y^2 + \Delta_z^2}$ when

$$\Delta_x = \frac{1}{2} \begin{vmatrix} y_1 & z_1 & 1 \\ y_2 & z_2 & 1 \\ y_3 & z_3 & 1 \end{vmatrix}, \Delta_y = \frac{1}{2} \begin{vmatrix} x_1 & z_1 & 1 \\ x_2 & z_2 & 1 \\ x_3 & z_3 & 1 \end{vmatrix}$$

$$\Delta_z = \frac{1}{2} \begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix}$$

Direction Cosines

If a line makes angles α, β, γ with the positive directions of X -axis, Y -axis and Z -axis respectively, then $\cos \alpha, \cos \beta, \cos \gamma$ are called its direction cosines. The direction cosines are generally denoted as l, m, n i.e.

$$l = \cos \alpha, m = \cos \beta, n = \cos \gamma$$

The angle α, β, γ are known as direction angles.

Direction Ratios

Three numbers a, b, c proportional to the direction cosines l, m, n of a line are known as the direction ratios of the line. Thus, a, b, c are the direction ratios of a line provided $\frac{l}{a} = \frac{m}{b} = \frac{n}{c}$.

SOME IMPORTANT RESULTS

- (i) If OP is a directed line segment with direction cosines l, m, n such that $OP = r$. Then, the coordinates of P are (lr, mr, nr) .

- (ii) If l, m, n are the direction cosines of a directed line segment, then $l^2 + m^2 + n^2 = 1$

$$\text{or } \cos^2 \alpha + \cos^2 \beta + \cos^2 \gamma = 1$$

- (iii) DC's of X -axis are $1, 0, 0$.
DC's of Y -axis are $0, 1, 0$.
DC's of Z -axis are $0, 0, 1$.

(iv) $l = \frac{a}{\sqrt{a^2 + b^2 + c^2}}, m = \frac{b}{\sqrt{a^2 + b^2 + c^2}}, n = \frac{c}{\sqrt{a^2 + b^2 + c^2}}$

- (v) Direction ratios of a line joining the points $A(x_1, y_1, z_1)$ and $B(x_2, y_2, z_2)$ are $x_2 - x_1, y_2 - y_1$ and $z_2 - z_1$ and its direction cosines are

$$\frac{x_2 - x_1}{|AB|}, \frac{y_2 - y_1}{|AB|}, \frac{z_2 - z_1}{|AB|}$$

- (vi) If $P(x_1, y_1, z_1)$ and $Q(x_2, y_2, z_2)$ are two points, such that the direction cosines of PQ are l, m, n . The, $x_2 - x_1 = l|PQ|, y_2 - y_1 = m|PQ|, z_2 - z_1 = n|PQ|$. These are projections of PQ on X, Y and Z -axes, respectively.

EXAMPLE 2. The direction cosines of a line equally inclined to all the three rectangular coordinate axes are

- a. $\frac{1}{\sqrt{3}}, \frac{1}{\sqrt{3}}, \frac{1}{\sqrt{3}}$ b. $1, 1, 1$ c. $\frac{1}{2}, \frac{1}{2}, \frac{1}{2}$ d. None of these

Sol. a. $l = m = n$ and $l^2 + m^2 + n^2 = 1$

$$\Rightarrow 3l^2 = 1 \Rightarrow l = \pm \frac{1}{\sqrt{3}}, m = \pm \frac{1}{\sqrt{3}}, n = \pm \frac{1}{\sqrt{3}}$$

EXAMPLE 3. If (l, m, n) are direction cosines of a line, then what is the value of $(l + m - n)^2 + (m + n - l)^2$

$$+ (l + m + n)^2 + (n + l - m)^2?$$

- a. 0 b. 1 c. 4 d. $4(lm + mn + nl)$

Sol. $(l + m - n)^2 + (m + n - l)^2 + (l + m + n)^2 + (n + l - m)^2$
 $= (l^2 + m^2 + n^2 + 2ml - 2nl - 2mn)$
 $+ (m^2 + n^2 + l^2 + 2mn - 2ml - 2nl)$
 $+ (n^2 + l^2 + m^2 + 2ml + 2nl + 2mn)$
 $+ (n^2 + l^2 + m^2 + 2nl - 2ml - 2mn)$
 $= 1 + 2ml - 2nl - 2mn + 1 + 2mn - 2ml - 2nl$
 $+ 1 + 2ml + 2nl + 2mn + 1 + 2nl - 2ml - 2mn = 4$
 $[\because l^2 + m^2 + n^2 = 1]$

LINE

If a, b, c are the direction ratios of a line passing through the point (x_1, y_1, z_1) , then the equation of line is

$$\frac{x - x_1}{a} = \frac{y - y_1}{b} = \frac{z - z_1}{c} \text{ and equation of line in terms of}$$

direction cosines l, m, n is $\frac{x - x_1}{l} = \frac{y - y_1}{m} = \frac{z - z_1}{n}$

- (i) General coordinates of line

$$\frac{x - x_1}{l} = \frac{y - y_1}{m} = \frac{z - z_1}{n} = r \text{ (say)}$$

are $(x_1 + lr, y_1 + mr, z_1 + nr)$

- (ii) Equation of line passing through the two points (x_1, y_1, z_1) and (x_2, y_2, z_2) is

$$\frac{x - x_1}{x_2 - x_1} = \frac{y - y_1}{y_2 - y_1} = \frac{z - z_1}{z_2 - z_1}$$

- (iii) Equation of line passing through (x_1, y_1, z_1) and parallel to line having direction ratios $\langle a, b, c \rangle$ is

$$\frac{x - x_1}{a} = \frac{y - y_1}{b} = \frac{z - z_1}{c}$$

- (iv) Equation of line passing through (x_1, y_1, z_1) and parallel to line passing through points P and Q , $\frac{x - x_1}{PQ} = \frac{y - y_1}{PQ} = \frac{z - z_1}{PQ}$, where PQ is the direction ratios of line joining P and Q .

Angle between Two Lines

- (i) The angle θ between two lines whose direction cosines are l_1, m_1, n_1 and l_2, m_2, n_2 is given by

$$\cos \theta = l_1 l_2 + m_1 m_2 + n_1 n_2.$$

These two lines are perpendicular iff

$$l_1 l_2 + m_1 m_2 + n_1 n_2 = 0 \text{ and parallel iff } \frac{l_1}{l_2} = \frac{m_1}{m_2} = \frac{n_1}{n_2}$$

- (ii) The angle θ between two lines whose direction ratios are proportional to a_1, b_1, c_1 and a_2, b_2, c_2 , respectively is given by

$$\cos \theta = \left| \frac{a_1 a_2 + b_1 b_2 + c_1 c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}} \right|$$

These lines are perpendicular, iff

$$a_1 a_2 + b_1 b_2 + c_1 c_2 = 0$$

and parallel, iff $\frac{a_1}{a_2} = \frac{b_1}{b_2} = \frac{c_1}{c_2}$

EXAMPLE 4. What is the angle between the two lines whose direction numbers are $(\sqrt{3} - 1, -\sqrt{3} - 1, 4)$ and $(-\sqrt{3} - 1, \sqrt{3} - 1, 4)$?

- a. $\frac{\pi}{6}$ b. $\frac{\pi}{4}$ c. $\frac{\pi}{3}$ d. $\frac{\pi}{2}$

Sol. Required angle is given by

$$\cos \theta = \frac{a_1 a_2 + b_1 b_2 + c_1 c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}}$$

$$= \frac{-2 - 2 + 16}{\sqrt{24} \sqrt{24}} = \frac{12}{24} = \frac{1}{2} \Rightarrow \theta = \frac{\pi}{3}$$

For Finding Foot of the Perpendicular from a Given Point

1. Write the coordinates of Q (the foot of the perpendicular) say $(x_1 + ar, y_1 + br, z_1 + cr)$.
2. Write the direction ratio of PQ .
3. Apply condition of perpendicularity, i.e. $PQ \perp AB$.
4. Get the value of r and substitute in step (1) to get Q .

EXAMPLE 5. Find the foot of the perpendicular drawn from the point $P(1, 2, 3)$ to the line

$$\frac{x - 6}{3} = \frac{y - 7}{2} = \frac{z - 7}{-2}.$$

- a. $(3, 2, -5)$ b. $(3, 5, 9)$ c. $(4, 2, -3)$ d. None of these

Sol. Any point on the line is $3r + 6, 2r + 7, -2r + 7$

Let it to be Q .

Direction ratios of PQ are $(3r + 6 - 1), (2r + 7 - 2),$

$(-2r + 7 - 3)$

i.e. $(3r + 5), (2r + 5), (-2r + 4)$

Direction ratios of line are $3, 2, -2$.

$$\therefore 3(3r + 5) + 2(2r + 5) - 2(-2r + 4) = 0$$

$$\Rightarrow 17r + 17 = 0 \Rightarrow r = -1$$

$$\therefore Q \text{ is } (3, 5, 9)$$

$[\because PQ \perp AB]$

PLANE

A plane is a surface such that any two points lying on it when joined by a line lies completely on it.

Equations of Plane in Different Form

- The general equation of the first degree in x, y, z , i.e. $ax + by + cz + d = 0$, represents a plane in which a, b, c are constants, and $a^2 + b^2 + c^2 \neq 0$, i.e. $a, b, c \neq 0$.
- The equation of the plane passing through the origin is given by $ax + by + cz = 0$.
- Equation of a plane through point (x_1, y_1, z_1) is

$$a(x - x_1) + b(y - y_1) + c(z - z_1) = 0$$

- If l, m, n are the direction cosines of the normal to the plane and p is the perpendicular distance of the plane from origin, then the equation of the plane ABC will be

$$lx + my + nz = p$$

- Let the plane ABC cut the axes OX, OY, OZ at A, B, C respectively.

Let $OA = a, OB = b, OC = c$. Then, $\frac{x}{a} + \frac{y}{b} + \frac{z}{c} = 1$

is the required intercept form of the plane.

- Equation of XY -plane is $z = 0$.
- Equation of YZ -plane is $x = 0$.
- Equation of XZ -plane is $y = 0$.
- Equation of plane parallel to YZ -plane and at a distance a is $x = a$.
- Equation of plane parallel to ZX -plane and at a distance b is $y = b$.
- Equation of plane parallel to XY -plane and at a distance c is $z = c$.
- Equation of plane passing through the three points $A(x_1, y_1, z_1), B(x_2, y_2, z_2)$ and $C(x_3, y_3, z_3)$ is

$$\begin{vmatrix} x - x_1 & y - y_1 & z - z_1 \\ x - x_2 & y - y_2 & z - z_2 \\ x - x_3 & y - y_3 & z - z_3 \end{vmatrix} = 0$$

EXAMPLE 6. What is the equation of the plane passing through (x_1, y_1, z_1) and normal to the line with $\langle a, b, c \rangle$ as direction ratios?

- $ax + by + cz = ax_1 + by_1 + cz_1$
- $a(x + x_1) + b(y + y_1) + c(z + z_1) = 0$
- $ax + by + cz = 0$
- $ax + by + cz = x_1 + y_1 + z_1$

Sol. The equation of the plane passing through (x_1, y_1, z_1) and normal to the line with $\langle a, b, c \rangle$ as direction ratios, is

$$\begin{aligned} & a(x - x_1) + b(y - y_1) + c(z - z_1) = 0 \\ \Rightarrow & ax - ax_1 + by - by_1 + cz - cz_1 = 0 \\ \Rightarrow & ax + by + cz = ax_1 + by_1 + cz_1 \end{aligned}$$

which is required equation of plane.

Angle between Two Planes

Let the two planes be $a_1x + b_1y + c_1z + d = 0$... (i)

and $a_2x + b_2y + c_2z + d = 0$... (ii)

where (a_1, b_1, c_1) and (a_2, b_2, c_2) are the DR's of normal to the planes (i) and (ii), respectively.

Let θ be the angle between the planes (i) and (ii), then

$$\cos \theta = \pm \frac{a_1a_2 + b_1b_2 + c_1c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}}$$

If given planes are perpendicular to each other, then

$$\begin{aligned} \theta = 90^\circ & \Rightarrow \cos \theta = 0 \\ \text{i.e. } & \boxed{a_1a_2 + b_1b_2 + c_1c_2 = 0} \end{aligned}$$

If the given planes are parallel, then their normals are also parallel, i.e. the direction cosines of the normal are proportional

$$\text{i.e. } \frac{a_1}{a_2} = \frac{b_1}{b_2} = \frac{c_1}{c_2}$$

Distance of a Plane from a Point

Distance or perpendicular distance of a plane $ax + by + cz + d = 0$ from a point $P(x_1, y_1, z_1)$ is given by

$$P = \left| \frac{ax_1 + by_1 + cz_1 + d}{\sqrt{a^2 + b^2 + c^2}} \right|$$

Distance between Two Parallel Planes

Distance between two parallel planes $ax + by + cz + d_1 = 0$
